Mr. Redgrave gives very full details as to the Russian cotton factories. The data were given him by an English manager until recently employed there. On this Russian soil, so fruitful of all infamies, the old horrors of the early days of English factories are in full swing. The managers are, of course, English, as the native Russian capitalist is of no use in factory business. Despite all over-work, continued day and night, despite the most shameful under-payment of the workpeople, Russian manufacture manages to vegetate only by prohibition of foreign competition.

I give, in conclusion, a comparative table of Mr. Redgrave's, on the average number of spindles per factory and per spinner in the different countries of Europe. He himself remarks that he had collected these figures a few years ago, and that since that time the size of the factories and the number of spindles per labourer in England has increased. He supposes, however, an approximately equal progress in the continental countries mentioned, so that the numbers given would still have their value for purposes of comparison.

| <b>AVERAGE NUMBER OF SPINDLES PER FACTORY</b>               |                                  |
|---|----------------------------------|
| <b>England</b> , <i>average of spindles per factory</i>     | 12,600                           |
| <b>France</b> , <i>average of spindles per factory</i>      | 1,500                            |
| <b>Prussia</b> , <i>average of spindles per factory</i>     | 1,500                            |
| <b>Belgium</b> , <i>average of spindles per factory</i>     | 4,000                            |
| <b>Saxony</b> , <i>average of spindles per factory</i>      | 4,500                            |
| <b>Austria</b> , <i>average of spindles per factory</i>     | 7,000                            |
| <b>Switzerland</b> , <i>average of spindles per factory</i> | 8,000                            |
| <b>AVERAGE NUMBER OF PERSONS EMPLOYED TO SPINDLES</b>       |                                  |
| <b>France</b>   | <i>one person to 14 spindles</i> |
| <b>Russia</b>   | <i>one person to 28 spindles</i> |
| <b>Prussia</b>  | <i>one person to 37 spindles</i> |
| <b>Bavaria</b>  | <i>one person to 46 spindles</i> |
| <b>Austria</b>  | <i>one person to 49 spindles</i> |
| <b>Belgium</b>  | <i>one person to 50 spindles</i> |
| <b>Saxony</b>   | <i>one person to 50 spindles</i> |

|                                  |                                  |
|----------------------------------|----------------------------------|
| <b>Switzerland</b>               | <i>one person to 55 spindles</i> |
| <b>Smaller States of Germany</b> | <i>one person to 55 spindles</i> |
| <b>Great Britain</b>             | <i>one person to 74 spindles</i> |

“This comparison,” says Mr. Redgrave, “is yet more unfavorable to Great Britain, inasmuch as there is so large a number of factories in which weaving by power is carried on in conjunction with spinning” (whilst in the table the weavers are not deducted), “and the factories abroad are chiefly spinning factories; if it were possible to compare like with like, strictly, I could find many cotton spinning factories in my district in which mules containing 2,200 spindles are minded by one man (the minder) and two assistants only, turning off daily 220 lbs. of yarn, measuring 400 miles in length.”<sup>5</sup>

It is well known that in Eastern Europe, as well as in Asia, English companies have undertaken the construction of railways, and have, in making them, employed side by side with the native labourers, a certain number of English working-men. Compelled by practical necessity, they thus have had to take into account the national difference in the intensity of labour, but this has brought them no loss. Their experience shows that even if the height of wages corresponds more or less with the average intensity of labour, the relative price of labour varies generally in the inverse direction.

In an “Essay on the Rate of Wages,”<sup>6</sup> one of his first economic writings, H. Carey tries to prove that the wages of the different nations are directly proportional to the degree of productiveness of the national working days, in order to draw from this international relation the conclusion that wages everywhere rise and fall in proportion to the productiveness of labour. The whole of our analysis of the production of surplus-value shows the absurdity of this conclusion, even if Carey himself had proved his premises instead of, after his usual uncritical and superficial fashion, shuffling to and fro a confused mass of statistical materials. The best of it is that he does not assert that things actually are as they ought to be according to his theory. For State intervention has falsified the natural economic relations. The different national wages must be reckoned, therefore, as if that part of each that goes to the State in the form of taxes, came to the labourer himself. Ought not Mr. Carey to consider further whether those “State expenses” are not the “natural” fruits of capitalistic development? The reasoning is quite worthy of the man who first declared the relations of capitalist production to be eternal laws of nature and reason, whose free, harmonious working is only disturbed by the intervention of the State, in order afterwards to discover that the diabolical influence of England on the world market (an influence which, it appears, does not spring from the natural laws of capitalist production) necessitates State intervention, i.e., the protection of those laws of nature and reason by the State, alias the System of Protection. He discovered further that the theorems of Ricardo and others, in which existing social antagonisms and contradictions are formulated, are not the ideal product of the real economic movement, but on the contrary, that the real antagonisms of capitalist production in England and elsewhere are the result of the theories of Ricardo and others! Finally he discovered that it is, in the last resort, commerce that destroys the inborn beauties and harmonies of the capitalist mode of production. A step further and he will, perhaps, discover that the one evil in capitalist production is capital itself. Only a man with such atrocious want of the critical faculty and such spurious erudition deserved, in spite of his Protectionist heresy, to become the secret source of the harmonious wisdom of a Bastiat, and of all the other Free-trade optimists of today.

---

<sup>1</sup> “It is not accurate to say that wages” (he deals here with their money expression) “are increased, because they purchase more of a cheaper article.” (David Buchanan in his edition of Adam Smith’s “Wealth of Nations,” 1814, Vol. 1, p. 417, note.)

<sup>2</sup> We shall inquire, in another place, what circumstances in relation to productivity may modify this law for individual branches of industry.

<sup>3</sup> James Anderson remarks in his polemic against Adam Smith: “It deserves, likewise, to be remarked, that although the apparent price of Labour is usually lower in poor countries, where the produce of the soil, and grain in general, is cheap; yet it is in fact for the most part really higher than in other countries. For it is not the wages that is given to the labourer per day that constitutes the real price of labour, although it is its apparent price. The real price is that which a certain quantity of work performed actually costs the employer; and considered in this light, labour is in almost all cases cheaper in rich countries than in those that are poorer, although the price of grain and other provisions is usually much lower in the last than in the first.... Labour estimated by the day is much lower in Scotland than in England.... Labour by the piece is generally cheaper in England.” (James Anderson, “Observations on the Means of Exciting a Spirit of National Industry,” &c., Edin. 1777, pp. 350, 351.) On the contrary, lowness of wages produces, in its turn, dearness of labour. “Labour being dearer in Ireland than it is in England ... because the wages are so much lower.” (N. 2079 in “Royal Commission on Railways, Minutes,” 1867.)

## Part 7: The Accumulation of Capital

The conversion of a sum of money into means of production and labour-power, is the first step taken by the quantum of value that is going to function as capital. This conversion takes place in the market, within the sphere of circulation. The second step, the process of production, is complete so soon as the means of production have been converted into commodities whose value exceeds that of their component parts, and, therefore, contains the capital originally advanced, plus a surplus-value. These commodities must then be thrown into circulation. They must be sold, their value realised in money, this money afresh converted into capital, and so over and over again. This circular movement, in which the same phases are continually gone through in succession, forms the circulation of capital.

The first condition of accumulation is that the capitalist must have contrived to sell his commodities, and to reconvert into capital the greater part of the money so received. In the following pages we shall assume that capital circulates in its normal way. The detailed analysis of the process will be found in Book II.

The capitalist who produces surplus-value – *i.e.*, who extracts unpaid labour directly from the labourers, and fixes it in commodities, is, indeed, the first appropriator, but by no means the ultimate owner, of this surplus-value. He has to share it with capitalists, with landowners, &c., who fulfil other functions in the complex of social production. Surplus-value, therefore, splits up into various parts. Its fragments fall to various categories of persons, and take various forms, independent the one of the other, such as profit, interest, merchants' profit, rent, &c. It is only in Book III. that we can take in hand these modified forms of surplus-value.

On the one hand, then, we assume that the capitalist sells at their value the commodities he has produced, without concerning ourselves either about the new forms that capital assumes while in the sphere of circulation, or about the concrete conditions of reproduction hidden under these forms. On the other hand, we treat the capitalist producer as owner of the entire surplus-value, or, better perhaps, as the representative of all the sharers with him in the booty. We, therefore, first of all consider accumulation from an abstract point of view – *i.e.*, as a mere phase in the actual process of production.

So far as accumulation takes place, the capitalist must have succeeded in selling his commodities, and in reconverting the sale-money into capital. Moreover, the breaking-up of surplus-value into fragments neither alters its nature nor the conditions under which it becomes an element of accumulation. Whatever be the proportion of surplus-value which the industrial capitalist retains for himself, or yields up to others, he is the one who, in the first instance, appropriates it. We, therefore, assume no more than what actually takes place. On the other hand, the simple fundamental form of the process of accumulation is obscured by the incident of the circulation which brings it about, and by the splitting up of surplus-value. An exact analysis of the process, therefore, demands that we should, for a time, disregard all phenomena that hide the play of its inner mechanism.

## Chapter 23: Simple Reproduction

Whatever the form of the process of production in a society, it must be a continuous process, must continue to go periodically through the same phases. A society can no more cease to produce than it can cease to consume. When viewed, therefore, as a connected whole, and as flowing on with incessant renewal, every social process of production is, at the same time, a process of reproduction.

The conditions of production are also those of reproduction. No society can go on producing, in other words, no society can reproduce, unless it constantly reconverts a part of its products into means of production, or elements of fresh products. All other circumstances remaining the same, the only mode by which it can reproduce its wealth, and maintain it at one level, is by replacing the means of production – *i.e.*, the instruments of labour, the raw material, and the auxiliary substances consumed in the course of the year – by an equal quantity of the same kind of articles; these must be separated from the mass of the yearly products, and thrown afresh into the process of production. Hence, a definite portion of each year's product belongs to the domain of production. Destined for productive consumption from the very first, this portion exists, for the most part, in the shape of articles totally unfitted for individual consumption.

If production be capitalistic in form, so, too, will be reproduction. Just as in the former the labour process figures but as a means towards the self-expansion of capital, so in the latter it figures but as a means of reproducing as capital – *i.e.*, as self-expanding value – the value advanced. It is only because his money constantly functions as capital that the economic guise of a capitalist attaches to a man. If, for instance, a sum of £100 has this year been converted into capital, and produced a surplus-value of £20, it must continue during next year, and subsequent years, to repeat the same operation. As a periodic increment of the capital advanced, or periodic fruit of capital in process, surplus-value acquires the form of a revenue flowing out of capital.<sup>1</sup>

If this revenue serve the capitalist only as a fund to provide for his consumption, and be spent as periodically as it is gained, then, *caeteris paribus*, simple reproduction will take place. And although this reproduction is a mere repetition of the process of production on the old scale, yet this mere repetition, or continuity, gives a new character to the process, or, rather, causes the disappearance of some apparent characteristics which it possessed as an isolated discontinuous process.

The purchase of labour-power for a fixed period is the prelude to the process of production; and this prelude is constantly repeated when the stipulated term comes to an end, when a definite period of production, such as a week or a month, has elapsed. But the labourer is not paid until after he has expended his labour-power, and realised in commodities not only its value, but surplus-value. He has, therefore, produced not only surplus-value, which we for the present regard as a fund to meet the private consumption of the capitalist, but he has also produced, before it flows back to him in the shape of wages, the fund out of which he himself is paid, the variable capital; and his employment lasts only so long as he continues to reproduce this fund. Hence, that formula of the economists, referred to in Chapter XVIII, which represents wages as a share in the product itself.<sup>2</sup> What flows back to the labourer in the shape of wages is a portion of the product that is continuously reproduced by him. The capitalist, it is true, pays him in money, but this money is merely the transmuted form of the product of his labour. While he is converting a portion of the means of production into products, a portion of his former product is being turned into money. It is his labour of last week, or of last year, that pays for his labour-power this week

or this year. The illusion begotten by the intervention of money vanishes immediately, if, instead of taking a single capitalist and a single labourer, we take the class of capitalists and the class of labourers as a whole. The capitalist class is constantly giving to the labouring class order-notes, in the form of money, on a portion of the commodities produced by the latter and appropriated by the former. The labourers give these order-notes back just as constantly to the capitalist class, and in this way get their share of their own product. The transaction is veiled by the commodity form of the product and the money form of the commodity.

Variable capital is therefore only a particular historical form of appearance of the fund for providing the necessaries of life, or the labour-fund which the labourer requires for the maintenance of himself and family, and which, whatever be the system of social production, he must himself produce and reproduce. If the labour-fund constantly flows to him in the form of money that pays for his labour, it is because the product he has created moves constantly away from him in the form of capital. But all this does not alter the fact, that it is the labourer's own labour, realised in a product, which is advanced to him by the capitalist.<sup>3</sup> Let us take a peasant liable to do compulsory service for his lord. He works on his own land, with his own means of production, for, say, 3 days a week. The 3 other days he does forced work on the lord's domain. He constantly reproduces his own labour-fund, which never, in his case, takes the form of a money payment for his labour, advanced by another person. But in return, his unpaid forced labour for the lord, on its side, never acquires the character of voluntary paid labour. If one fine morning the lord appropriates to himself the land, the cattle, the seed, in a word, the means of production of this peasant, the latter will thenceforth be obliged to sell his labour-power to the lord. He will, *ceteris paribus*, labour 6 days a week as before, 3 for himself, 3 for his lord, who thenceforth becomes a wages-paying capitalist. As before, he will use up the means of production as means of production, and transfer their value to the product. As before, a definite portion of the product will be devoted to reproduction. But from the moment that the forced labour is changed into wage labour, from that moment the labour-fund, which the peasant himself continues as before to produce and reproduce, takes the form of a capital advanced in the form of wages by the lord. The bourgeois economist whose narrow mind is unable to separate the form of appearance from the thing that appears, shuts his eyes to the fact, that it is but here and there on the face of the earth, that even nowadays the labour fund crops up in the form of capital.<sup>4</sup>

Variable capital, it is true, only then loses its character of a value advanced out of the capitalist's funds,<sup>5</sup> when we view the process of capitalist production in the flow of its constant renewal. But that process must have had a beginning of some kind. From our present standpoint it therefore seems likely that the capitalist, once upon a time, became possessed of money, by some accumulation that took place independently of the unpaid labour of others, and that this was, therefore, how he was enabled to frequent the market as a buyer of labour-power. However this may be, the mere continuity of the process, the simple reproduction, brings about some other wonderful changes, which affect not only the variable, but the total capital.

If a capital of £1,000 beget yearly a surplus-value of £200, and if this surplus-value be consumed every year, it is clear that at the end of 5 years the surplus-value consumed will amount to  $5 \times £200$  or the £1,000 originally advanced. If only a part, say one half, were consumed, the same result would follow at the end of 10 years, since  $10 \times £100 = £1,000$ . General Rule: The value of the capital advanced divided by the surplus-value annually consumed, gives the number of years, or reproduction periods, at the expiration of which the capital originally advanced has been consumed by the capitalist and has disappeared. The capitalist thinks, that he is consuming the produce of the unpaid labour of others, *i.e.*, the surplus-value, and is keeping intact his original capital; but what he thinks cannot alter facts. After the lapse of a certain number of years, the

capital value he then possesses is equal to the sum total of the surplus-value appropriated by him during those years, and the total value he has consumed is equal to that of his original capital. It is true, he has in hand a capital whose amount has not changed, and of which a part, viz., the buildings, machinery, &c., were already there when the work of his business began. But what we have to do with here, is not the material elements, but the value, of that capital. When a person gets through all his property, by taking upon himself debts equal to the value of that property, it is clear that his property represents nothing but the sum total of his debts. And so it is with the capitalist; when he has consumed the equivalent of his original capital, the value of his present capital represents nothing but the total amount of the surplus-value appropriated by him without payment. Not a single atom of the value of his old capital continues to exist.

Apart then from all accumulation, the mere continuity of the process of production, in other words simple reproduction, sooner or later, and of necessity, converts every capital into accumulated capital, or capitalised surplus-value. Even if that capital was originally acquired by the personal labour of its employer, it sooner or later becomes value appropriated without an equivalent, the unpaid labour of others materialised either in money or in some other object. We saw in Chapt. IV.-VI. that in order to convert money into capital something more is required than the production and circulation of commodities. We saw that on the one side the possessor of value or money, on the other, the possessor of the value-creating substance; on the one side, the possessor of the means of production and subsistence, on the other, the possessor of nothing but labour-power, must confront one another as buyer and seller. The separation of labour from its product, of subjective labour-power from the objective conditions of labour, was therefore the real foundation in fact, and the starting-point of capitalist production.

But that which at first was but a starting-point, becomes, by the mere continuity of the process, by simple reproduction, the peculiar result, constantly renewed and perpetuated, of capitalist production. On the one hand, the process of production incessantly converts material wealth into capital, into means of creating more wealth and means of enjoyment for the capitalist. On the other hand, the labourer, on quitting the process, is what he was on entering it, a source of wealth, but devoid of all means of making that wealth his own. Since, before entering on the process, his own labour has already been alienated from himself by the sale of his labour-power, has been appropriated by the capitalist and incorporated with capital, it must, during the process, be realised in a product that does not belong to him. Since the process of production is also the process by which the capitalist consumes labour-power, the product of the labourer is incessantly converted, not only into commodities, but into capital, into value that sucks up the value-creating power, into means of subsistence that buy the person of the labourer, into means of production that command the producers.<sup>6</sup> The labourer therefore constantly produces material, objective wealth, but in the form of capital, of an alien power that dominates and exploits him; and the capitalist as constantly produces labour-power, but in the form of a subjective source of wealth, separated from the objects in and by which it can alone be realised; in short he produces the labourer, but as a wage labourer.<sup>7</sup> This incessant reproduction, this perpetuation of the labourer, is the *sine qua non* of capitalist production.

The labourer consumes in a two-fold way. While producing he consumes by his labour the means of production, and converts them into products with a higher value than that of the capital advanced. This is his productive consumption. It is at the same time consumption of his labour-power by the capitalist who bought it. On the other hand, the labourer turns the money paid to him for his labour-power, into means of subsistence: this is his individual consumption. The labourer's productive consumption, and his individual consumption, are therefore totally distinct. In the former, he acts as the motive power of capital, and belongs to the capitalist. In the latter, he

belongs to himself, and performs his necessary vital functions outside the process of production. The result of the one is, that the capitalist lives; of the other, that the labourer lives.

When treating of the working day, we saw that the labourer is often compelled to make his individual consumption a mere incident of production. In such a case, he supplies himself with necessaries in order to maintain his labour-power, just as coal and water are supplied to the steam-engine and oil to the wheel. His means of consumption, in that case, are the mere means of consumption required by a means of production; his individual consumption is directly productive consumption. This, however, appears to be an abuse not essentially appertaining to capitalist production.<sup>8</sup>

The matter takes quite another aspect, when we contemplate, not the single capitalist, and the single labourer, but the capitalist class and the labouring class, not an isolated process of production, but capitalist production in full swing, and on its actual social scale. By converting part of his capital into labour-power, the capitalist augments the value of his entire capital. He kills two birds with one stone. He profits, not only by what he receives from, but by what he gives to, the labourer. The capital given in exchange for labour-power is converted into necessaries, by the consumption of which the muscles, nerves, bones, and brains of existing labourers are reproduced, and new labourers are begotten. Within the limits of what is strictly necessary, the individual consumption of the working class is, therefore, the reconversion of the means of subsistence given by capital in exchange for labour-power, into fresh labour-power at the disposal of capital for exploitation. It is the production and reproduction of that means of production so indispensable to the capitalist: the labourer himself. The individual consumption of the labourer, whether it proceed within the workshop or outside it, whether it be part of the process of production or not, forms therefore a factor of the production and reproduction of capital; just as cleaning machinery does, whether it be done while the machinery is working or while it is standing. The fact that the labourer consumes his means of subsistence for his own purposes, and not to please the capitalist, has no bearing on the matter. The consumption of food by a beast of burden is none the less a necessary factor in the process of production, because the beast enjoys what it eats. The maintenance and reproduction of the working class is, and must ever be, a necessary condition to the reproduction of capital. But the capitalist may safely leave its fulfilment to the labourer's instincts of self-preservation and of propagation. All the capitalist cares for, is to reduce the labourer's individual consumption as far as possible to what is strictly necessary, and he is far away from imitating those brutal South Americans, who force their labourers to take the more substantial, rather than the less substantial, kind of food.<sup>9</sup>

Hence both the capitalist and his ideological representative, the political economist, consider that part alone of the labourer's individual consumption to be productive, which is requisite for the perpetuation of the class, and which therefore must take place in order that the capitalist may have labour-power to consume; what the labourer consumes for his own pleasure beyond that part, is unproductive consumption.<sup>10</sup> If the accumulation of capital were to cause a rise of wages and an increase in the labourer's consumption, unaccompanied by increase in the consumption of labour-power by capital, the additional capital would be consumed unproductively.<sup>11</sup> In reality, the individual consumption of the labourer is unproductive as regards himself, for it reproduces nothing but the needy individual; it is productive to the capitalist and to the State, since it is the production of the power that creates their wealth.<sup>12</sup>

From a social point of view, therefore, the working class, even when not directly engaged in the labour process, is just as much an appendage of capital as the ordinary instruments of labour. Even its individual consumption is, within certain limits, a mere factor in the process of production. That process, however, takes good care to prevent these self-conscious instruments

from leaving it in the lurch, for it removes their product, as fast as it is made, from their pole to the opposite pole of capital. Individual consumption provides, on the one hand, the means for their maintenance and reproduction: on the other hand, it secures by the annihilation of the necessaries of life, the continued re-appearance of the workman in the labour-market. The Roman slave was held by fetters: the wage labourer is bound to his owner by invisible threads. The appearance of independence is kept up by means of a constant change of employers, and by the fictio juris of a contract.

In former times, capital resorted to legislation, whenever necessary, to enforce its proprietary rights over the free labourer. For instance, down to 1815, the emigration of mechanics employed in machine making was, in England, forbidden, under grievous pains and penalties.

The reproduction of the working class carries with it the accumulation of skill, that is handed down from one generation to another.<sup>13</sup> To what extent the capitalist reckons the existence of such a skilled class among the factors of production that belong to him by right, and to what extent he actually regards it as the reality of his variable capital, is seen so soon as a crisis threatens him with its loss. In consequence of the civil war in the United States and of the accompanying cotton famine, the majority of the cotton operatives in Lancashire were, as is well known, thrown out of work. Both from the working class itself, and from other ranks of society, there arose a cry for State aid, or for voluntary national subscriptions, in order to enable the “superfluous” hands to emigrate to the colonies or to the United States. Thereupon, *The Times* published on the 24th March, 1863, a letter from Edmund Potter, a former president of the Manchester Chamber of Commerce. This letter was rightly called in the House of Commons, the manufacturers’ manifesto.<sup>14</sup> We cull here a few characteristic passages, in which the proprietary rights of capital over labour-power are unblushingly asserted.

“He” (the man out of work) “may be told the supply of cotton-workers is too large ... and ... must ... in fact be reduced by a third, perhaps, and that then there will be a healthy demand for the remaining two-thirds.... Public opinion... urges emigration.... The master cannot willingly see his labour supply being removed; he may think, and perhaps justly, that it is both wrong and unsound.... But if the public funds are to be devoted to assist emigration, he has a right to be heard, and perhaps to protest.”

Mr. Potter then shows how useful the cotton trade is, how the “trade has undoubtedly drawn the surplus-population from Ireland and from the agricultural districts,” how immense is its extent, how in the year 1860 it yielded 5/13ths of the total English exports, how, after a few years, it will again expand by the extension of the market, particularly of the Indian market, and by calling forth a plentiful supply of cotton at 6d. per lb. He then continues:

“Some time ...,one, two, or three years, it may be, will produce the quantity.... The question I would put then is this – Is the trade worth retaining? Is it worth while to keep the machinery (he means the living labour machines) in order, and is it not the greatest folly to think of parting with that? I think it is. I allow that the workers are not a property, not the property of Lancashire and the masters; but they are the strength of both; they are the mental and trained power which cannot be replaced for a generation; the mere machinery which they work might much of it be beneficially replaced, nay improved, in a twelvemonth <sup>15</sup> Encourage or allow (!) the working-power to emigrate, and what of the capitalist?... Take away the cream of the workers, and fixed capital will depreciate in a great degree, and the floating will not subject itself to a struggle with the short supply of inferior labour.... We are told the workers wish it” (emigration). “Very natural it is that they should do

so.... Reduce, compress the cotton trade by taking away its working power and reducing their wages expenditure, say one-fifth, or five millions, and what then would happen to the class above, the small shopkeepers; and what of the rents, the cottage rents.... Trace out the effects upwards to the small farmer, the better householder, and ... the landowner, and say if there could be any suggestion more suicidal to all classes of the country than by enfeebling a nation by exporting the best of its manufacturing population, and destroying the value of some of its most productive capital and enrichment .... I advise a loan (of five or six millions sterling), ... extending it may be over two or three years, administered by special commissioners added to the Boards of Guardians in the cotton districts, under special legislative regulations, enforcing some occupation or labour, as a means of keeping up at least the moral standard of the recipients of the loan... can anything be worse for landowners or masters than parting with the best of the workers, and demoralising and disappointing the rest by an extended depletive emigration, a depletion of capital and value in an entire province?"

Potter, the chosen mouthpiece of the manufacturers, distinguishes two sorts of "machinery," each of which belongs to the capitalist, and of which one stands in his factory, the other at night-time and on Sundays is housed outside the factory, in cottages. The one is inanimate, the other living. The inanimate machinery not only wears out and depreciates from day to day, but a great part of it becomes so quickly superannuated, by constant technical progress, that it can be replaced with advantage by new machinery after a few months. The living machinery, on the contrary gets better the longer it lasts, and in proportion as the skill, handed from one generation to another, accumulates. *The Times* answered the cotton lord as follows:

"Mr. Edmund Potter is so impressed with the exceptional and supreme importance of the cotton masters that, in order to preserve this class and perpetuate their profession, he would keep half a million of the labouring class confined in a great moral workhouse against their will. 'Is the trade worth retaining?' asks Mr. Potter. 'Certainly by all honest means it is,' we answer. 'Is it worth while keeping the machinery in order?' again asks Mr. Potter. Here we hesitate. By the 'machinery' Mr. Potter means the human machinery, for he goes on to protest that he does not mean to use them as an absolute property. We must confess that we do not think it 'worth while,' or even possible, to keep the human machinery in order – that is to shut it up and keep it oiled till it is wanted. Human machinery will rust under inaction, oil and rub it as you may. Moreover, the human machinery will, as we have just seen, get the steam up of its own accord, and burst or run amuck in our great towns. It might, as Mr. Potter says, require some time to reproduce the workers, but, having machinists and capitalists at hand, we could always find thrifty, hard, industrious men wherewith to improvise more master manufacturers than we can ever want. Mr. Potter talks of the trade reviving 'in one, two, or three years,' and he asks us not 'to encourage or allow (!) the working power to emigrate.'<sup>16</sup> He says that it is very natural the workers should wish to emigrate; but he thinks that in spite of their desire, the nation ought to keep this half million of workers with their 700,000 dependents, shut up in the cotton districts; and as a necessary consequence, he must of course think that the nation ought to keep down their discontent by force, and sustain them by alms – and upon the chance that the cotton masters may some day want them.... The time is come when the great public opinion of these islands must operate to save this 'working power'

from those who would deal with it as they would deal with iron, and coal, and cotton.”

*The Times*' article was only a jeu d'esprit. The “great public opinion” was, in fact, of Mr. Potter's opinion, that the factory operatives are part of the movable fittings of a factory. Their emigration was prevented. They were locked up in that “moral workhouse,” the cotton districts, and they form, as before, “the strength” of the cotton manufacturers of Lancashire.

Capitalist production, therefore, of itself reproduces the separation between labour-power and the means of labour. It thereby reproduces and perpetuates the condition for exploiting the labourer. It incessantly forces him to sell his labour-power in order to live, and enables the capitalist to purchase labour-power in order that he may enrich himself.<sup>17</sup> It is no longer a mere accident, that capitalist and labourer confront each other in the market as buyer and seller. It is the process itself that incessantly hurls back the labourer on to the market as a vendor of his labour-power, and that incessantly converts his own product into a means by which another man can purchase him. In reality, the labourer belongs to capital before he has sold himself to capital. His economic bondage<sup>18</sup> is both brought about and concealed by the periodic sale of himself, by his change of masters, and by the oscillations in the market-price of labour-power.<sup>19</sup>

Capitalist production, therefore, under its aspect of a continuous connected process, of a process of reproduction, produces not only commodities, not only surplus-value, but it also produces and reproduces the capitalist relation; on the one side the capitalist, on the other the wage labourer.<sup>20</sup>

---

<sup>1</sup> “Mais ces riches, qui consomment les produits du travail des autres, ne peuvent les obtenir que par des échanges [purchases of commodities]. S'ils donnent cependant leur richesse acquise et accumulée en retour contre ces produits nouveaux qui sont l'objet de leur fantaisie, ils semblent exposés à épuiser bientôt leur fonds de réserve; ils ne travaillent point, avons-nous dit, et ils ne peuvent même travailler; on croirait donc que chaque jour doit voir diminuer leurs vieilles richesses, et que lorsqu'il ne leur en restera plus, rien ne sera offert en échange aux ouvriers qui travaillent exclusivement pour eux.... Mais dans l'ordre social, la richesse a acquis la propriété de se reproduire par le travail d'autrui, et sans que son propriétaire y concoure. La richesse, comme le travail, et par le travail, donne un fruit annuel qui peut être détruit chaque année sans que le riche en devienne plus pauvre. Ce fruit est le *revenu* qui naît du *capital*.” [The rich, who consume the labour of others, can only obtain them by making exchanges ... By giving away their acquired and accumulated wealth in exchange for the new products which are the object of their capricious wishes, they seem to be exposed to an early exhaustion of their reserve fund; we have already said that they do not work and are unable to work; therefore it could be assumed with full justification that their former wealth would be diminishing with every day and that, finally, a day would come when they would have nothing, and they would have nothing to offer to the workers, who work exclusively for them. ... But, in the social order, wealth has acquired the power of reproducing itself through the labour of others, without the help of its owners. Wealth, like labour, and by means of labour, bears fruit every year, but this fruit can be destroyed every year without making the rich man any poorer thereby. This fruit is the *revenue* which arises out of *capital*.] (Sismondi: “Nouv. Princ. d'Econ. Pol.” Paris, 1819, t. I, pp. 81-82.)

<sup>2</sup> “Wages as well as profits are to be considered, each of them, as really a portion of the finished product.” (Ramsay, l. c., p. 142.) “The share of the product which comes to the labourer in the form of wages.” (J. Mill, “Eléments, &c.” Translated by Parissot. Paris, 1823, p. 34.)

<sup>3</sup> “When capital is employed in advancing to the workman his wages, it adds nothing to the funds for the maintenance of labour.” (Cazenove in note to his edition of Malthus' “Definitions in Pol. Econ.” London, 1853, p. 22.)

<sup>4</sup> “The wages of labour are advanced by capitalists in the case of less than one fourth of the labourers of the earth.” (Rich. Jones: “Textbook of Lectures on the Pol. Econ. of Nations.” Hertford, 1852, p. 36.)

<sup>5</sup> “Though the manufacturer” (i.e., the labourer) “has his wages advanced to him by his master, he in reality costs him no expense, the value of these wages being generally reserved, together with a profit, in the improved value of the subject upon which his labour is bestowed.” (A. Smith, l. c., Book II. ch. III, p. 311.)

<sup>6</sup> “This is a remarkably peculiar property of productive labour. Whatever is productively consumed is capital and it becomes capital by consumption.” (James Mill, l. c., p. 242.) James Mill, however, never got on the track of this “remarkably peculiar property.”

<sup>7</sup> “It is true indeed, that the first introducing a manufacture employs many poor, but they cease not to be so, and the continuance of it makes many.” (“Reasons for a Limited Exportation of Wool.” London, 1677, p. 19.) “The farmer now absurdly asserts, that he keeps the poor. They are indeed kept in misery.” (“Reasons for the Late Increase of the Poor Rates: or a Comparative View of the Prices of Labour and Provisions.” London, 1777, p. 31.)

<sup>8</sup> Rossi would not declaim so emphatically against this, had he really penetrated the secret of “productive consumption.”

<sup>9</sup> “The labourers in the mines of S. America, whose daily task (the heaviest perhaps in the world) consists in bringing to the surface on their shoulders a load of metal weighing from 180 to 200 pounds, from a depth of 450 feet, live on bread and beans only; they themselves would prefer the bread alone for food, but their masters, who have found out that the men cannot work so hard on bread, treat them like horses, and compel them to eat beans; beans, however, are relatively much richer in bone-earth (phosphate of lime) than is bread.” (Liebig, l. c., vol. 1., p. 194, note.)

<sup>10</sup> James Mill, l. c., p. 238

<sup>11</sup> “If the price of labour should rise so high that, notwithstanding the increase of capital, no more could be employed, I should say that such increase of capital would be still unproductively consumed.” (Ricardo, l. c., p. 163.)

<sup>12</sup> “The only productive consumption, properly so called, is the consumption or destruction of wealth” (he alludes to the means of production) “by capitalists with a view to reproduction.... The workman ... is a productive consumer to the person who employs him, and to the State, but not, strictly speaking, to himself.” (Malthus’ “Definitions, &c.,” p. 30.)

<sup>13</sup> “The only thing, of which one can say, that it is stored up and prepared beforehand, is the skill of the labourer.... The accumulation and storage of skilled labour, that most important operation, is, as regards the great mass of labourers, accomplished without any capital whatever.” (Th. Hodgskin: “Labour Defended, &c.,” p. 13.)

<sup>14</sup> “That letter might be looked upon as the manifesto of the manufacturers.” (Ferrand: “Motion on the Cotton Famine.” H.o.C., 27th April, 1863.)

<sup>15</sup> It will not be forgotten that this same capital sings quite another song, under ordinary circumstances, when there is a question of reducing wages. Then the masters exclaim with one voice: “The factory operatives should keep in wholesome remembrance the fact that theirs is really a low species of skilled labour, and that there is none which is more easily acquired, or of its quality more amply remunerated, or which, by a short training of the least expert, can be more quickly, as well as abundantly, acquired ... The master’s machinery” (which we now learn can be replaced with advantage in 12 months,) “really plays a far more important part in the business of production than the labour and skill of the operative” (who cannot now be replaced under 30 years), “which six months’ education can reach, and a common labourer can learn.” (See ante, p. 423.)

<sup>16</sup> Parliament did not vote a single farthing in aid of emigration, but simply passed some Acts empowering the municipal corporations to keep the operatives in a half-starved state, *i.e.*, to exploit them at less than the normal wages. On the other hand, when 3 years later, the cattle disease broke out, Parliament broke wildly through its usages and voted, straight off, millions for indemnifying the millionaire landlords, whose farmers in any event came off without loss, owing to the rise in the price of meat. The bull-like bellow of the landed proprietors at the opening of Parliament, in 1866, showed that a man can worship the cow Sabala without being a Hindu, and can change himself into an ox without being a Jupiter.

<sup>17</sup> “L’ouvrier demandait de la subsistance pour vivre, le chef demandait du travail pour gagner.” [The worker required the means of subsistence to live, the boss required labour to make a profit] (Sismondi, *l. c.*, p. 91.)

<sup>18</sup> A boorishly clumsy form of this bondage exists in the county of Durham. This is one of the few counties, in which circumstances do not secure to the farmer undisputed proprietary rights over the agricultural labourer. The mining industry allows the latter some choice. In this county, the farmer, contrary to the custom elsewhere, rents only such farms as have on them labourers’ cottages. The rent of the cottage is a part of the wages. These cottages are known as “hinds’ houses.” They are let to the labourers in consideration of certain feudal services, under a contract called “bondage,” which, amongst other things, binds the labourer, during the time he is employed elsewhere, to leave some one, say his daughter, &c., to supply his place. The labourer himself is called a “bondsman.” The relationship here set up also shows how individual consumption by the labourer becomes consumption on behalf of capital - or productive consumption - from quite a new point of view: “It is curious to observe that the very dung of the hind and bondsman is the perquisite of the calculating lord ... and the lord will allow no privy but his own to exist in the neighbourhood, and will rather give a bit of manure here and there for a garden than bate any part of his seigneurial right.” (“Public Health, Report VII., 1864,” p. 188.)

<sup>19</sup> It will not be forgotten, that, with respect to the labour of children, &c., even the formality of a voluntary sale disappears.

<sup>20</sup> “Capital pre-supposes wage labour, and wage labour pre-supposes capital. One is a necessary condition to the existence of the other; they mutually call each other into existence. Does an operative in a cotton-factory produce nothing but cotton goods? No, he produces capital. He produces values that give fresh command over his labour, and that, by means of such command, create fresh values.” (Karl Marx: “Lohnarbeit und Kapital,” in the *Neue Rheinische Zeitung*: No. 266, 7th April, 1849.) The articles published under the above title in the *N. Rh. Z.* are parts of some lectures given by me on that subject, in 1847, in the German “Arbeiter-Verein” at Brussels, the publication of which was interrupted by the revolution of February.

# Chapter 24: Conversion of Surplus-Value into Capital

## Section 1: Capitalist Production on a Progressively Increasing Scale. Transition of the Laws of Property that Characterise Production of Commodities into Laws of Capitalist Appropriation

Hitherto we have investigated how surplus-value emanates from capital; we have now to see how capital arises from surplus-value. Employing surplus-value as capital, reconverting it into capital, is called accumulation of capital.<sup>1</sup>

First let us consider this transaction from the standpoint of the individual capitalist. Suppose a spinner to have advanced a capital of £10,000, of which four-fifths (£8,000) are laid out in cotton, machinery, &c., and one-fifth (£2,000) in wages. Let him produce 240,000 lbs. of yarn annually, having a value of £2,000. The rate of surplus-value being 100%, the surplus-value lies in the surplus or net product of 40,000 lbs. of yarn, one-sixth of the gross product, with a value of £2,000 which will be realised by a sale. £2,000 is £2,000. We can neither see nor smell in this sum of money a trace of surplus-value. When we know that a given value is surplus-value, we know how its owner came by it; but that does not alter the nature either of value or of money.

In order to convert this additional sum of £2,000 into capital, the master-spinner will, all circumstances remaining as before, advance four-fifths of it (£1,600) in the purchase of cotton, &c., and one-fifth (£400) in the purchase of additional spinners, who will find in the market the necessaries of life whose value the master has advanced to them.

Then the new capital of £2,000 functions in the spinning mill, and brings in, in its turn, a surplus-value of £400.

The capital value was originally advanced in the money form. The surplus-value on the contrary is, originally, the value of a definite portion of the gross product. If this gross product be sold, converted into money, the capital value regains its original form. From this moment the capital value and the surplus-value are both of them sums of money, and their reconversion into capital takes place in precisely the same way. The one, as well as the other, is laid out by the capitalist in the purchase of commodities that place him in a position to begin afresh the fabrication of his goods, and this time, on an extended scale. But in order to be able to buy those commodities, he must find them ready in the market.

His own yarns circulate, only because he brings his annual product to market, as all other capitalists likewise do with their commodities. But these commodities, before coming to market, were part of the general annual product, part of the total mass of objects of every kind, into which the sum of the individual capitals, *i.e.*, the total capital of society, had been converted in the course of the year, and of which each capitalist had in hand only an aliquot part. The transactions in the market effectuate only the interchange of the individual components of this annual product, transfer them from one hand to another, but can neither augment the total annual production, nor alter the nature of the objects produced. Hence the use that can be made of the total annual product, depends entirely upon its own composition, but in no way upon circulation.

The annual production must in the first place furnish all those objects (use values) from which the material components of capital, used up in the course of the year, have to be replaced. Deducting these there remains the net or surplus-product, in which the surplus-value lies. And of what does this surplus-product consist? Only of things destined to satisfy the wants and desires of the capitalist class, things which, consequently, enter into the consumption fund of the capitalists? Were that the case, the cup of surplus-value would be drained to the very dregs, and nothing but simple reproduction would ever take place.

To accumulate it is necessary to convert a portion of the surplus-product into capital. But we cannot, except by a miracle, convert into capital anything but such articles as can be employed in the labour process (*i.e.*, means of production), and such further articles as are suitable for the sustenance of the labourer (*i.e.*, means of subsistence). Consequently, a part of the annual surplus labour must have been applied to the production of additional means of production and subsistence, over and above the quantity of these things required to replace the capital advanced. In one word, surplus-value is convertible into capital solely because the surplus-product, whose value it is, already comprises the material elements of new capital.<sup>2</sup>

Now in order to allow of these elements actually functioning as capital, the capitalist class requires additional labour. If the exploitation of the labourers already employed do not increase, either extensively or intensively, then additional labour-power must be found. For this the mechanism of capitalist production provides beforehand, by converting the working class into a class dependent on wages, a class whose ordinary wages suffice, not only for its maintenance, but for its increase. It is only necessary for capital to incorporate this additional labour-power, annually supplied by the working class in the shape of labourers of all ages, with the surplus means of production comprised in the annual produce, and the conversion of surplus-value into capital is complete. From a concrete point of view, accumulation resolves itself into the reproduction of capital on a progressively increasing scale. The circle in which simple reproduction moves, alters its form, and, to use Sismondi's expression, changes into a spiral.<sup>3</sup>

Let us now return to our illustration. It is the old story: Abraham begat Isaac, Isaac begat Jacob, and so on. The original capital of £10,000 brings in a surplus-value of £2,000, which is capitalised. The new capital of £2,000 brings in a surplus-value of £400, and this, too, is capitalised, converted into a second additional capital, which, in its turn, produces a further surplus-value of £80. And so the ball rolls on.

We here leave out of consideration the portion of the surplus-value consumed by the capitalist. Just as little does it concern us, for the moment, whether the additional capital is joined on to the original capital, or is separated from it to function independently; whether the same capitalist, who accumulated it employs it, or whether he hands it over to another. This only we must not forget, that by the side of the newly-formed capital, the original capital continues to reproduce itself, and to produce surplus-value, and that this is also true of all accumulated capital, and the additional capital engendered by it.

The original capital was formed by the advance of £10,000. How did the owner become possessed of it? "By his own labour and that of his forefathers," answer unanimously the spokesmen of Political Economy.<sup>4</sup> And, in fact, their supposition appears the only one consonant with the laws of the production of commodities.

But it is quite otherwise with regard to the additional capital of £2,000. How that originated we know perfectly well. There is not one single atom of its value that does not owe its existence to unpaid labour. The means of production, with which the additional labour-power is incorporated, as well as the necessaries with which the labourers are sustained, are nothing but component parts of the surplus-product, of the tribute annually exacted from the working class by the capitalist

class. Though the latter with a portion of that tribute purchases the additional labour-power even at its full price, so that equivalent is exchanged for equivalent, yet the transaction is for all that only the old dodge of every conqueror who buys commodities from the conquered with the money he has robbed them of.

If the additional capital employs the person who produced it, this producer must not only continue to augment the value of the original capital, but must buy back the fruits of his previous labour with more labour than they cost. When viewed as a transaction between the capitalist class and the working class, it makes no difference that additional labourers are employed by means of the unpaid labour of the previously employed labourers. The capitalist may even convert the additional capital into a machine that throws the producers of that capital out of work, and that replaces them by a few children. In every case the working class creates by the surplus labour of one year the capital destined to employ additional labour in the following year.<sup>5</sup> And this is what is called: creating capital out of capital.

The accumulation of the first additional capital of £2,000 presupposes a value of £10,000 belonging to the capitalist by virtue of his “primitive labour,” and advanced by him. The second additional capital of £400 presupposes, on the contrary, only the previous accumulation of the £2,000, of which the £400 is the surplus-value capitalised. The ownership of past unpaid labour is thenceforth the sole condition for the appropriation of living unpaid labour on a constantly increasing scale. The more the capitalist has accumulated, the more is he able to accumulate.

In so far as the surplus-value, of which the additional capital, No. 1, consists, is the result of the purchase of labour-power with part of the original capital, a purchase that conformed to the laws of the exchange of commodities, and that, from a legal standpoint, presupposes nothing beyond the free disposal, on the part of the labourer, of his own capacities, and on the part of the owner of money or commodities, of the values that belong to him; in so far as the additional capital, No. 2, &c., is the mere result of No. 1, and, therefore, a consequence of the above conditions; in so far as each single transaction invariably conforms to the laws of the exchange of commodities, the capitalist buying labour-power, the labourer selling it, and we will assume at its real value; in so far as all this is true, it is evident that the laws of appropriation or of private property, laws that are based on the production and circulation of commodities, become by their own inner and inexorable dialectic changed into their very opposite. The exchange of equivalents, the original operation with which we started, has now become turned round in such a way that there is only an apparent exchange. This is owing to the fact, first, that the capital which is exchanged for labour-power is itself but a portion of the product of others' labour appropriated without an equivalent; and, secondly, that this capital must not only be replaced by its producer, but replaced together with an added surplus. The relation of exchange subsisting between capitalist and labourer becomes a mere semblance appertaining to the process of circulation, a mere form, foreign to the real nature of the transaction, and only mystifying it. The ever repeated purchase and sale of labour-power is now the mere form; what really takes place is this – the capitalist again and again appropriates, without equivalent, a portion of the previously materialised labour of others, and exchanges it for a greater quantity of living labour. At first the rights of property seemed to us to be based on a man's own labour. At least, some such assumption was necessary since only commodity-owners with equal rights confronted each other, and the sole means by which a man could become possessed of the commodities of others, was by alienating his own commodities; and these could be replaced by labour alone. Now, however, property turns out to be the right, on the part of the capitalist, to appropriate the unpaid labour of others or its product, and to be the impossibility, on the part of the labourer, of appropriating his own product. The separation of

property from labour has become the necessary consequence of a law that apparently originated in their identity.<sup>6</sup>

Therefore,<sup>7</sup> however much the capitalist mode of appropriation may seem to fly in the face of the original laws of commodity production, it nevertheless arises, not from a violation, but, on the contrary, from the application of these laws. Let us make this clear once more by briefly reviewing the consecutive phases of motion whose culminating point is capitalist accumulation.

We saw, in the first place, that the original conversion of a sum of values into capital was achieved in complete accordance with the laws of exchange. One party to the contract sells his labour-power, the other buys it. The former receives the value of his commodity, whose use value – labour – is thereby alienated to the buyer. Means of production which already belong to the latter are then transformed by him, with the aid of labour equally belonging to him, into a new product which is likewise lawfully his.

The value of this product includes: first, the value of the used-up means of production. Useful labour cannot consume these means of production without transferring their value to the new product, but, to be saleable, labour-power must be capable of supplying useful labour in the branch of industry in which it is to be employed.

The value of the new product further includes: the equivalent of the value of the labour-power together with a surplus-value. This is so because the value of the labour-power – sold for a definite length of time, say a day, a week, etc. – is less than the value created by its use during that time. But the worker has received payment for the exchange-value of his labour-power and by so doing has alienated its use value – this being the case in every sale and purchase.

The fact that this particular commodity, labour-power, possesses the peculiar use value of supplying labour, and therefore of creating value, cannot affect the general law of commodity production. If, therefore, the magnitude of value advanced in wages is not merely found again in the product, but is found there augmented by a surplus-value, this is not because the seller has been defrauded, for he has really received the value of his commodity; it is due solely to the fact that this commodity has been used up by the buyer.

The law of exchange requires equality only between the exchange-values of the commodities given in exchange for one another. From the very outset it presupposes even a difference between their use values and it has nothing whatever to do with their consumption, which only begins after the deal is closed and executed.

Thus the original conversion of money into capital is achieved in the most exact accordance with the economic laws of commodity production and with the right of property derived from them. Nevertheless, its result is:

- (1) that the product belongs to the capitalist and not to the worker;
- (2) that the value of this product includes, besides the value of the capital advanced, a surplus-value which costs the worker labour but the capitalist nothing, and which none the less becomes the legitimate property of the capitalist;
- (3) that the worker has retained his labour-power and can sell it anew if he can find a buyer.

Simple reproduction is only the periodical repetition of this first operation; each time money is converted afresh into capital. Thus the law is not broken; on the contrary, it is merely enabled to operate continuously. “Several successive acts of exchange have only made the last represent the first” (Sismondi, “Nouveaux Principes, etc.,” p. 70).

And yet we have seen that simple reproduction suffices to stamp this first operation, in so far as it is conceived as an isolated process, with a totally changed character. “Of those who share the

national income among themselves, the one side (the workers) acquire every year a fresh right to their share by fresh work; the others (the capitalists) have already acquired, by work done originally, a permanent right to their share” (Sismondi, l. c., pp. 110, 111). It is indeed notorious that the sphere of labour is not the only one in which primogeniture works miracles.

Nor does it matter if simple reproduction is replaced by reproduction on an extended scale, by accumulation. In the former case the capitalist squanders the whole surplus-value in dissipation, in the latter he demonstrates his bourgeois virtue by consuming only a portion of it and converting the rest into money.

The surplus-value is his property; it has never belonged to anyone else. If he advances it for the purposes of production, the advances made come from his own funds, exactly as on the day when he first entered the market. The fact that on this occasion the funds are derived from the unpaid labour of his workers makes absolutely no difference. If worker B is paid out of the surplus-value which worker A produced, then, in the first place, A furnished that surplus-value without having the just price of his commodity cut by a half-penny, and, in the second place, the transaction is no concern of B’s whatever. What B claims, and has a right to claim, is that the capitalist should pay him the value of his labour-power. “Both were still gainers: the worker because he was advanced the fruits of his labour” (should read: of the unpaid labour of other workers) “before the work was done” (should read: before his own labour had borne fruit); “the employer (*le maître*), because the labour of this worker was worth more than his wages” (should read: produced more value than the value of his wages). (Sismondi, l. c., p. 135.)

To be sure, the matter looks quite different if we consider capitalist production in the uninterrupted flow of its renewal, and if, in place of the individual capitalist and the individual worker, we view in their totality, the capitalist class and the working class confronting each other. But in so doing we should be applying standards entirely foreign to commodity production.

Only buyer and seller, mutually independent, face each other in commodity production. The relations between them cease on the day when the term stipulated in the contract they concluded expires. If the transaction is repeated, it is repeated as the result of a new agreement which has nothing to do with the previous one and which only by chance brings the same seller together again with the same buyer.

If, therefore, commodity production, or one of its associated processes, is to be judged according to its own economic laws, we must consider each act of exchange by itself, apart from any connexion with the act of exchange preceding it and that following it. And since sales and purchases are negotiated solely between particular individuals, it is not admissible to seek here for relations between whole social classes.

However long a series of periodical reproductions and preceding accumulations the capital functioning today may have passed through, it always preserves its original virginity. So long as the laws of exchange are observed in every single act of exchange the mode of appropriation can be completely revolutionised without in any way affecting the property rights which correspond to commodity production. These same rights remain in force both at the outset, when the product belongs to its producer, who, exchanging equivalent for equivalent, can enrich himself only by his own labour, and also in the period of capitalism, when social wealth becomes to an ever-increasing degree the property of those who are in a position to appropriate continually and ever afresh the unpaid labour of others.

This result becomes inevitable from the moment there is a free sale, by the labourer himself, of labour-power as a commodity. But it is also only from then onwards that commodity production is generalised and becomes the typical form of production; it is only from then onwards that, from

the first, every product is produced for sale and all wealth produced goes through the sphere of circulation. Only when and where wage labour is its basis does commodity production impose itself upon society as a whole; but only then and there also does it unfold all its hidden potentialities. To say that the supervision of wage labour adulterates commodity production is to say that commodity production must not develop if it is to remain unadulterated. To the extent that commodity production, in accordance with its own inherent laws, develops further, into capitalist production, the property laws of commodity production change into the laws of capitalist appropriation.<sup>8</sup>

We have seen that even in the case of simple reproduction, all capital, whatever its original source, becomes converted into accumulated capital, capitalised surplus-value. But in the flood of production all the capital originally advanced becomes a vanishing quantity (*magnitudo evanescens*, in the mathematical sense), compared with the directly accumulated capital, *i.e.*, with the surplus-value or surplus-product that is reconverted into capital, whether it functions in the hands of its accumulator, or in those of others. Hence, Political Economy describes capital in general as “accumulated wealth” (converted surplus-value or revenue), “that is employed over again in the production of surplus-value,”<sup>9</sup> and the capitalist as “the owner of surplus-value.”<sup>10</sup> It is merely another way of expressing the same thing to say that all existing capital is accumulated or capitalised interest, for interest is a mere fragment of surplus-value.<sup>11</sup>

## **Section 2: Erroneous Conception, by Political Economy, of Reproduction on a Progressively Increasing Scale**

Before we further investigate accumulation or the reconversion of surplus-value into capital, we must brush on one side an ambiguity introduced by the classical economists.

Just as little as the commodities that the capitalist buys with a part of the surplus-value for his own consumption, serve the purpose of production and of creation of value, so little is the labour that he buys for the satisfaction of his natural and social requirements, productive labour. Instead of converting surplus-value into capital, he, on the contrary, by the purchase of those commodities and that labour, consumes or expends it as revenue. In the face of the habitual mode of life of the old feudal nobility, which, as Hegel rightly says, “consists in consuming what is in hand,” and more especially displays itself in the luxury of personal retainers, it was extremely important for bourgeois economy to promulgate the doctrine that accumulation of capital is the first duty of every citizen, and to preach without ceasing, that a man cannot accumulate, if he eats up all his revenue, instead of spending a good part of it in the acquisition of additional productive labourers, who bring in more than they cost. On the other hand the economists had to contend against the popular prejudice, that confuses capitalist production with hoarding,<sup>12</sup> and fancies that accumulated wealth is either wealth that is rescued from being destroyed in its existing form, *i.e.*, from being consumed, or wealth that is withdrawn from circulation. Exclusion of money from circulation would also exclude absolutely its self-expansion as capital, while accumulation of a hoard in the shape of commodities would be sheer tomfoolery.<sup>13</sup> The accumulation of commodities in great masses is the result either of over-production or of a stoppage of circulation.<sup>14</sup> It is true that the popular mind is impressed by the sight, on the one hand, of the mass of goods that are stored up for gradual consumption by the rich,<sup>15</sup> and on the other hand, by the formation of reserve stocks; the latter, a phenomenon that is common to all modes of production, and on which we shall dwell for a moment, when we come to analyse circulation. Classical economy is therefore quite right, when it maintains that the consumption of surplus-products by productive, instead of by unproductive labourers, is a characteristic feature of the

process of accumulation. But at this point the mistakes also begin. Adam Smith has made it the fashion, to represent accumulation as nothing more than consumption of surplus products by productive labourers, which amounts to saying, that the capitalising of surplus-value consists in merely turning surplus-value into labour-power.

Let us see what Ricardo, *e.g.*, says:

“It must be understood that all the productions of a country are consumed; but it makes the greatest difference imaginable whether they are consumed by those who reproduce, or by those who do not reproduce another value. When we say that revenue is saved, and added to capital, what we mean is, that the portion of revenue, so said to be added to capital, is consumed by productive instead of unproductive labourers. There can be no greater error than in supposing that capital is increased by non-consumption.”<sup>16</sup>

There can be no greater error than that which Ricardo and all subsequent economists repeat after A. Smith, *viz.*, that

“the part of revenue, of which it is said, it has been added to capital, is consumed by productive labourers.”

According to this, all surplus-value that is changed into capital becomes variable capital. So far from this being the case, the surplus-value, like the original capital, divides itself into constant capital and variable capital, into means of production and labour-power. Labour-power is the form under which variable capital exists during the process of production. In this process the labour-power is itself consumed by the capitalist while the means of production are consumed by the labour-power in the exercise of its function, labour. At the same time, the money paid for the purchase of the labour-power, is converted into necessaries, that are consumed, not by “productive labour,” but by the “productive labourer.” Adam Smith, by a fundamentally perverted analysis, arrives at the absurd conclusion, that even though each individual capital is divided into a constant and a variable part, the capital of society resolves itself only into variable capital, *i.e.*, is laid out exclusively in payment of wages. For instance, suppose a cloth manufacturer converts £2,000 into capital. One portion he lays out in buying weavers, the other in woollen yarn, machinery, &c. But the people, from whom he buys the yarn and the machinery, pay for labour with a part of the purchase money, and so on until the whole £2,000 are spent in the payment of wages, *i.e.*, until the entire product represented by the £2,000 has been consumed by productive labourers. It is evident that the whole gist of this argument lies in the words “and so on,” which send us from pillar to post. In truth, Adam Smith breaks his investigation off, just where its difficulties begin.<sup>17</sup>

The annual process of reproduction is easily understood, so long as we keep in view merely the sum total of the year’s production. But every single component of this product must be brought into the market as a commodity, and there the difficulty begins. The movements of the individual capitals, and of the personal revenues, cross and intermingle and are lost in the general change of places, in the circulation of the wealth of society; this dazes the sight, and propounds very complicated problems for solution. In the third part of Book II. I shall give the analysis of the real bearings of the facts. It is one of the great merits of the Physiocrats, that in their *Tableau économique* they were the first to attempt to depict the annual production in the shape in which it is presented to us after passing through the process of circulation.<sup>18</sup>

For the rest, it is a matter of course, that Political Economy, acting in the interests of the capitalist class, has not failed to exploit the doctrine of Adam Smith, *viz.*, that the whole of that part of the surplus-product which is converted into capital, is consumed by the working class.

### Section 3: Separation of Surplus-Value into Capital and Revenue. The Abstinence Theory

In the last preceding chapter, we treated surplus-value (or the surplus-product) solely as a fund for supplying the individual consumption of the capitalist. In this chapter we have, so far, treated it solely as a fund for accumulation. It is, however, neither the one nor the other, but is both together. One portion is consumed by the capitalist as revenue,<sup>19</sup> the other is employed as capital, is accumulated.

Given the mass of surplus-value, then, the larger the one of these parts, the smaller is the other. *Caeteris paribus*, the ratio of these parts determines the magnitude of the accumulation. But it is by the owner of the surplus-value, by the capitalist alone, that the division is made. It is his deliberate act. That part of the tribute exacted by him which he accumulates, is said to be saved by him, because he does not eat it, *i.e.*, because he performs the function of a capitalist, and enriches himself.

Except as personified capital, the capitalist has no historical value, and no right to that historical existence, which, to use an expression of the witty Lichnowsky, “hasn’t got no date.” And so far only is the necessity for his own transitory existence implied in the transitory necessity for the capitalist mode of production. But, so far as he is personified capital, it is not values in use and the enjoyment of them, but exchange-value and its augmentation, that spur him into action. Fanatically bent on making value expand itself, he ruthlessly forces the human race to produce for production’s sake; he thus forces the development of the productive powers of society, and creates those material conditions, which alone can form the real basis of a higher form of society, a society in which the full and free development of every individual forms the ruling principle. Only as personified capital is the capitalist respectable. As such, he shares with the miser the passion for wealth as wealth. But that which in the miser is a mere idiosyncrasy, is, in the capitalist, the effect of the social mechanism, of which he is but one of the wheels. Moreover, the development of capitalist production makes it constantly necessary to keep increasing the amount of the capital laid out in a given industrial undertaking, and competition makes the immanent laws of capitalist production to be felt by each individual capitalist, as external coercive laws. It compels him to keep constantly extending his capital, in order to preserve it, but extend it he cannot, except by means of progressive accumulation.

So far, therefore, as his actions are a mere function of capital – endowed as capital is, in his person, with consciousness and a will – his own private consumption is a robbery perpetrated on accumulation, just as in book-keeping by double entry, the private expenditure of the capitalist is placed on the debtor side of his account against his capital. To accumulate, is to conquer the world of social wealth, to increase the mass of human beings exploited by him, and thus to extend both the direct and the indirect sway of the capitalist.<sup>20</sup>

But original sin is at work everywhere. As capitalist production, accumulation, and wealth, become developed, the capitalist ceases to be the mere incarnation of capital. He has a fellow-feeling for his own Adam, and his education gradually enables him to smile at the rage for asceticism, as a mere prejudice of the old-fashioned miser. While the capitalist of the classical type brands individual consumption as a sin against his function, and as “abstinence” from accumulating, the modernised capitalist is capable of looking upon accumulation as “abstinence” from pleasure.

“Two souls, alas, do dwell with in his breast;  
The one is ever parting from the other.”<sup>21</sup>

At the historical dawn of capitalist production, – and every capitalist upstart has personally to go through this historical stage – avarice, and desire to get rich, are the ruling passions. But the progress of capitalist production not only creates a world of delights; it lays open, in speculation and the credit system, a thousand sources of sudden enrichment. When a certain stage of development has been reached, a conventional degree of prodigality, which is also an exhibition of wealth, and consequently a source of credit, becomes a business necessity to the “unfortunate” capitalist. Luxury enters into capital’s expenses of representation. Moreover, the capitalist gets rich, not like the miser, in proportion to his personal labour and restricted consumption, but at the same rate as he squeezes out the labour-power of others, and enforces on the labourer abstinence from all life’s enjoyments. Although, therefore, the prodigality of the capitalist never possesses the bona fide character of the open-handed feudal lord’s prodigality, but, on the contrary, has always lurking behind it the most sordid avarice and the most anxious calculation, yet his expenditure grows with his accumulation, without the one necessarily restricting the other. But along with this growth, there is at the same time developed in his breast, a Faustian conflict between the passion for accumulation, and the desire for enjoyment.

Dr. Aikin says in a work published in 1795:

“The trade of Manchester may be divided into four periods. First, when manufacturers were obliged to work hard for their livelihood.”

They enriched themselves chiefly by robbing the parents, whose children were bound as apprentices to them; the parents paid a high premium, while the apprentices were starved. On the other hand, the average profits were low, and to accumulate, extreme parsimony was requisite. They lived like misers and were far from consuming even the interest on their capital.

“The second period, when they had begun to acquire little fortunes, but worked as hard as before,” – for direct exploitation of labour costs labour, as every slave-driver knows – “and lived in as plain a manner as before.... The third, when luxury began, and the trade was pushed by sending out riders for orders into every market town in the Kingdom.... It is probable that few or no capitals of £3,000 to £4,000 acquired by trade existed here before 1690. However, about that time, or a little later, the traders had got money beforehand, and began to build modern brick houses, instead of those of wood and plaster.”

Even in the early part of the 18th century, a Manchester manufacturer, who placed a pint of foreign wine before his guests, exposed himself to the remarks and headshakings of all his neighbours. Before the rise of machinery, a manufacturer’s evening expenditure at the public house where they all met, never exceeded sixpence for a glass of punch, and a penny for a screw of tobacco. It was not till 1758, and this marks an epoch, that a person actually engaged in business was seen with an equipage of his own.

“The fourth period,” the last 30 years of the 18th century, “is that in which expense and luxury have made great progress, and was supported by a trade extended by means of riders and factors through every part of Europe.”<sup>22</sup>

What would the good Dr. Aikin say if he could rise from his grave and see the Manchester of today?

Accumulate, accumulate! That is Moses and the prophets! “Industry furnishes the material which saving accumulates.”<sup>23</sup> Therefore, save, save, *i.e.*, reconvert the greatest possible portion of surplus-value, or surplus-product into capital! Accumulation for accumulation’s sake, production for production’s sake: by this formula classical economy expressed the historical mission of the bourgeoisie, and did not for a single instant deceive itself over the birth-throes of wealth.<sup>24</sup> But

what avails lamentation in the face of historical necessity? If to classical economy, the proletarian is but a machine for the production of surplus-value; on the other hand, the capitalist is in its eyes only a machine for the conversion of this surplus-value into additional capital. Political Economy takes the historical function of the capitalist in bitter earnest. In order to charm out of his bosom the awful conflict between the desire for enjoyment and the chase after riches, Malthus, about the year 1820, advocated a division of labour, which assigns to the capitalist actually engaged in production, the business of accumulating, and to the other sharers in surplus-value, to the landlords, the place-men, the beneficed clergy, &c., the business of spending. It is of the highest importance, he says,

“to keep separate the passion for expenditure and the passion for accumulation.”<sup>25</sup>

The capitalists having long been good livers and men of the world, uttered loud cries. What, exclaimed one of their spokesmen, a disciple of Ricardo, Mr. Malthus preaches high rents, heavy taxes, &c., so that the pressure of the spur may constantly be kept on the industrious by unproductive consumers! By all means, production, production on a constantly increasing scale, runs the shibboleth; but

“production will, by such a process, be far more curbed in than spurred on. Nor is it quite fair thus to maintain in idleness a number of persons, only to pinch others, who are likely, from their characters, if you can force them to work, to work with success.”<sup>26</sup>

Unfair as he finds it to spur on the industrial capitalist, by depriving his bread of its butter, yet he thinks it necessary to reduce the labourer’s wages to a minimum “to keep him industrious.” Nor does he for a moment conceal the fact, that the appropriation of unpaid labour is the secret of surplus-value.

“Increased demand on the part of the labourers means nothing more than their willingness to take less of their own product for themselves, and leave a greater part of it to their employers; and if it be said, that this begets glut, by lessening consumption” (on the part of the labourers), “I can only reply that glut is synonymous with large profits.”<sup>27</sup>

The learned disputation, how the booty pumped out of the labourer may be divided, with most advantage to accumulation, between the industrial capitalist and the rich idler, was hushed in face of the revolution of July. Shortly afterwards, the town proletariat at Lyons sounded the tocsin of revolution, and the country proletariat in England began to set fire to farm-yards and corn-stacks. On this side of the Channel Owenism began to spread; on the other side, St. Simonism and Fourierism. The hour of vulgar economy had struck. Exactly a year before Nassau W. Senior discovered at Manchester, that the profit (including interest) of capital is the product of the last hour of the twelve, he had announced to the world another discovery.

“I substitute,” he proudly says, “for the word capital, considered as an instrument of production, the word abstinence.”

An unparalleled sample this, of the discoveries of vulgar economy! It substitutes for an economic category, a sycophantic phrase – *voilà tout*. [that’s all]

“When the savage,” says Senior, “makes bows, he exercises an industry, but he does not practise abstinence.”<sup>28</sup>

This explains how and why, in the earlier states of society, the implements of labour were fabricated without abstinence on the part of the capitalist.

“The more society progresses, the more abstinence is demanded,”<sup>29</sup>

Namely, from those who ply the industry of appropriating the fruits of others' industry. All the conditions for carrying on the labour process are suddenly converted into so many acts of abstinence on the part of the capitalist. If the corn is not all eaten, but part of it also sown – abstinence of the capitalist. If the wine gets time to mature – abstinence of the capitalist<sup>30</sup> The capitalist robs his own self, whenever he “lends (!) the instruments of production to the labourer,” that is, whenever by incorporating labour-power with them, he uses them to extract surplus-value out of that labour-power, instead of eating them up, steam-engines, cotton, railways, manure, horses, and all; or as the vulgar economist childishly puts it, instead of dissipating “their value” in luxuries and other articles of consumption.<sup>31</sup> How the capitalists as a class are to perform that feat, is a secret that vulgar economy has hitherto obstinately refused to divulge. Enough, that the world still jogs on, solely through the self-chastisement of this modern penitent of Vishnu, the capitalist. Not only accumulation, but the simple “conservation of a capital requires a constant effort to resist the temptation of consuming it.”<sup>32</sup> The simple dictates of humanity therefore plainly enjoin the release of the capitalist from this martyrdom and temptation, in the same way that the Georgian slave-owner was lately delivered, by the abolition of slavery, from the painful dilemma, whether to squander the surplus-product, lashed out of his niggers, entirely in champagne, or whether to reconvert a part of it into more niggers and more land.

In economic forms of society of the most different kinds, there occurs, not only simple reproduction, but, in varying degrees, reproduction on a progressively increasing scale. By degrees more is produced and more consumed, and consequently more products have to be converted into means of production. This process, however, does not present itself as accumulation of capital, nor as the function of a capitalist, so long as the labourer's means of production, and with them, his product and means of subsistence, do not confront him in the shape of capital.<sup>33</sup> Richard Jones, who died a few years ago, and was the successor of Malthus in the chair of Political Economy at Haileybury College, discusses this point well in the light of two important facts. Since the great mass of the Hindu population are peasants cultivating their land themselves, their products, their instruments of labour and means of subsistence never take “the shape of a fund saved from revenue, which fund has, therefore, gone through a previous process of accumulation.”<sup>34</sup> On the other hand, the non-agricultural labourers in those provinces where the English rule has least disturbed the old system, are directly employed by the magnates, to whom a portion of the agricultural surplus-product is rendered in the shape of tribute or rent. One portion of this product is consumed by the magnates in kind, another is converted, for their use, by the labourers, into articles of luxury and such like things, while the rest forms the wages of the labourers, who own their implements of labour. Here, production and reproduction on a progressively increasing scale, go on their way without any intervention from that queer saint, that knight of the woeful countenance, the capitalist “abstainer.”

**Section 4: Circumstances that, Independently of the Proportional Division of Surplus-Value into Capital and Revenue, Determine the Amount of Accumulation. Degree of Exploitation of Labour-Power. Productivity of Labour. Growing Difference in Amount Between Capital Employed and Capital Consumed. Magnitude of Capital Advanced**

The proportion in which surplus-value breaks up into capital and revenue being given, the magnitude of the capital accumulated clearly depends on the absolute magnitude of the surplus-value. Suppose that 80 per cent. were capitalised and 20 per cent. eaten up, the accumulated capital will be £2,400 or £200, according as the total surplus-value has amounted to £3,000 or £500. Hence all the circumstances that determine the mass of surplus-value operate to determine the magnitude of the accumulation. We sum them up once again, but only in so far as they afford new points of view in regard to accumulation.

It will be remembered that the rate of surplus-value depends, in the first place, on the degree of exploitation of labour-power. Political Economy values this fact so highly, that it occasionally identifies the acceleration of accumulation due to increased productiveness of labour, with its acceleration due to increased exploitation of the labourer.<sup>35</sup> In the chapters on the production of surplus-value it was constantly presupposed that wages are at least equal to the value of labour-power. Forcible reduction of wages below this value plays, however, in practice too important a part, for us not to pause upon it for a moment. It, in fact, transforms, within certain limits, the labourer's necessary consumption fund into a fund for the accumulation of capital.

“Wages,” says John Stuart Mill, “have no productive power; they are the price of a productive power. Wages do not contribute, along with labour, to the production of commodities, no more than the price of tools contributes along with the tools themselves. If labour could be had without purchase, wages might be dispensed with.”<sup>36</sup>

But if the labourers could live on air they could not be bought at any price. The zero of their cost is therefore a limit in a mathematical sense, always beyond reach, although we can always approximate more and more nearly to it. The constant tendency of capital is to force the cost of labour back towards this zero. A writer of the 18th century, often quoted already, the author of the “Essay on Trade and Commerce,” only betrays the innermost secret soul of English capitalism, when he declares the historic mission of England to be the forcing down of English wages to the level of the French and the Dutch.<sup>37</sup> With other things he says naively:

“But if our poor” (technical term for labourers) “will live luxuriously ... then labour must, of course, be dear ... When it is considered what luxuries the manufacturing populace consume, such as brandy, gin, tea, sugar, foreign fruit, strong beer, printed linens, snuff, tobacco, &c.”<sup>38</sup>

He quotes the work of a Northamptonshire manufacturer, who, with eyes squinting heavenward moans:

“Labour is one-third cheaper in France than in England; for their poor work hard, and fare hard, as to their food and clothing. Their chief diet is bread, fruit, herbs, roots, and dried fish; for they very seldom eat flesh; and when wheat is dear, they

eat very little bread.”<sup>39</sup> “To which may be added,” our essayist goes on, “that their drink is either water or other small liquors, so that they spend very little money.... These things are very difficult to be brought about; but they are not impracticable, since they have been effected both in France and in Holland.”<sup>40</sup>

Twenty years later, an American humbug, the baronised Yankee, Benjamin Thompson (*alias* Count Rumford) followed the same line of philanthropy to the great satisfaction of God and man. His “Essays” are a cookery book with receipts of all kinds for replacing by some succedaneum the ordinary dear food of the labourer. The following is a particularly successful receipt of this wonderful philosopher:

“5 lbs. of barleymeal, 7½d.; 5 lbs. of Indian corn, 6¼d.; 3d. worth of red herring, 1d. salt, 1d. vinegar, 2d. pepper and sweet herbs, in all 20¾.; make a soup for 64 men, and at the medium price of barley and of Indian corn ... this soup may be provided at ¼d., the portion of 20 ounces.”<sup>41</sup>

With the advance of capitalistic production, the adulteration of food rendered Thompson’s ideal superfluous.<sup>42</sup> At the end of the 18th and during the first ten years of the 19th century, the English farmers and landlords enforced the absolute minimum of wage, by paying the agricultural labourers less than the minimum in the form of wages, and the remainder in the shape of parochial relief. An example of the waggish way in which the English Dogberries acted in their “legal” fixing of a wages tariff:

“The squires of Norfolk had dined, says Mr. Burke, when they fixed the rate of wages; the squires of Berks evidently thought the labourers ought not to do so, when they fixed the rate of wages at Speenhamland, 1795.... There they decide that ‘income (weekly) should be 3s. for a man,’ when the gallon or half-peck loaf of 8 lbs. 11 oz. is at 1s., and increase regularly till bread is 1s. 5d.; when it is above that sum decrease regularly till it be at 2s., and then his food *should be* 1/5 th less.”<sup>43</sup>

Before the Committee of Inquiry of the House of Lords, 1814, a certain A. Bennett, a large farmer, magistrate, poor-law guardian, and wage-regulator, was asked:

“Has any proportion of the value of daily labour been made up to the labourers out of the poors’ rate?” Answer: “Yes, it has; the weekly income of every family is made up to the gallon loaf (8 lbs. 11 oz.), and 3d. per head!... The gallon loaf per week is what we suppose sufficient for the maintenance of every person in the family for the week; and the 3d. is for clothes, and if the parish think proper to find clothes; the 3d. is deducted. This practice goes through all the western part of Wiltshire, and, I believe, throughout the country.”<sup>44</sup> “For years,” exclaims a bourgeois author of that time, “they (the farmers) have degraded a respectable class of their countrymen, by forcing them to have recourse to the workhouse ... the farmer, while increasing his own gains, has prevented any accumulation on the part of his labouring dependents.”<sup>45</sup>

The part played in our days by the direct robbery from the labourer’s necessary consumption fund in the formation of surplus-value, and, therefore, of the accumulation fund of capital, the so-called domestic industry has served to show. (Ch. xv., sect. 8, c.) Further facts on this subject will be given later.

Although in all branches of industry that part of the constant capital consisting of instruments of labour must be sufficient for a certain number of labourers (determined by the magnitude of the undertaking), it by no means always necessarily increases in the same proportion as the quantity

of labour employed. In a factory, suppose that 100 labourers working 8 hours a day yield 800 working-hours. If the capitalist wishes to raise this sum by one half, he can employ 50 more workers; but then he must also advance more capital, not merely for wages, but for instruments of labour. But he might also let the 100 labourers work 12 hours instead of 8, and then the instruments of labour already to hand would be enough. These would then simply be more rapidly consumed. Thus additional labour, begotten of the greater tension of labour-power, can augment surplus-product and surplus-value (i.e., the subject-matter of accumulation), without corresponding augmentation in the constant part of capital.

In the extractive industries, mines, &c., the raw materials form no part of the capital advanced. The subject of labour is in this case not a product of previous labour, but is furnished by Nature gratis, as in the case of metals, minerals, coal, stone, &c. In these cases the constant capital consists almost exclusively of instruments of labour, which can very well absorb an increased quantity of labour (day and night shifts of labourers, *e.g.*). All other things being equal, the mass and value of the product will rise in direct proportion to the labour expended. As on the first day of production, the original produce-formers, now turned into the creators of the material elements of capital – man and Nature – still work together. Thanks to the elasticity of labour-power, the domain of accumulation has extended without any previous enlargement of constant capital.

In agriculture the land under cultivation cannot be increased without the advance of more seed and manure. But this advance once made, the purely mechanical working of the soil itself produces a marvellous effect on the amount of the product. A greater quantity of labour, done by the same number of labourers as before, thus increases the fertility, without requiring any new advance in the instruments of labour. It is once again the direct action of man on Nature which becomes an immediate source of greater accumulation, without the intervention of any new capital.

Finally, in what is called manufacturing industry, every additional expenditure of labour presupposes a corresponding additional expenditure of raw materials, but not necessarily of instruments of labour. And as extractive industry and agriculture supply manufacturing industry with its raw materials and those of its instruments of labour, the additional product the former have created without additional advance of capital, tells also in favour of the latter.

General result: by incorporating with itself the two primary creators of wealth, labour-power and the land, capital acquires a power of expansion that permits it to augment the elements of its accumulation beyond the limits apparently fixed by its own magnitude, or by the value and the mass of the means of production, already produced, in which it has its being.

Another important factor in the accumulation of capital is the degree of productivity of social labour.

With the productive power of labour increases the mass of the products, in which a certain value, and, therefore, a surplus-value of a given magnitude, is embodied. The rate of surplus-value remaining the same or even falling, so long as it only falls more slowly, than the productive power of labour rises, the mass of the surplus-product increases. The division of this product into revenue and additional capital remaining the same, the consumption of the capitalist may, therefore, increase without any decrease in the fund of accumulation. The relative magnitude of the accumulation fund may even increase at the expense of the consumption fund, whilst the cheapening of commodities places at the disposal of the capitalist as many means of enjoyment as formerly, or even more than formerly. But hand-in-hand with the increasing productivity of labour, goes, as we have seen, the cheapening of the labourer, therefore a higher rate of surplus-value, even when the real wages are rising. The latter never rise proportionally to the productive power of labour. The same value in variable capital therefore sets in movement more labour-

power, and, therefore, more labour. The same value in constant capital is embodied in more means of production, *i.e.*, in more instruments of labour, materials of labour and auxiliary materials; it therefore also supplies more elements for the production both of use value and of value, and with these more absorbers of labour. The value of the additional capital, therefore, remaining the same or even diminishing, accelerated accumulation still takes place. Not only does the scale of reproduction materially extend, but the production of surplus-value increases more rapidly than the value of the additional capital.

The development of the productive power of labour reacts also on the original capital already engaged in the process of production. A part of the functioning constant capital consists of instruments of labour, such as machinery, &c., which are not consumed, and therefore not reproduced, or replaced by new ones of the same kind, until after long periods of time. But every year a part of these instruments of labour perishes or reaches the limit of its productive function. It reaches, therefore, in that year, the time for its periodical reproduction, for its replacement by new ones of the same kind. If the productiveness of labour has, during the using up of these instruments of labour, increased (and it develops continually with the uninterrupted advance of science and technology), more efficient and (considering their increased efficiency), cheaper machines, tools, apparatus, &c., replace the old. The old capital is reproduced in a more productive form, apart from the constant detail improvements in the instruments of labour already in use. The other part of the constant capital, raw material and auxiliary substances, is constantly reproduced in less than a year; those produced by agriculture, for the most part annually. Every introduction of improved methods, therefore, works almost simultaneously on the new capital and on that already in action. Every advance in Chemistry not only multiplies the number of useful materials and the useful applications of those already known, thus extending with the growth of capital its sphere of investment. It teaches at the same time how to throw the excrements of the processes of production and consumption back again into the circle of the process of reproduction, and thus, without any previous outlay of capital, creates new matter for capital. Like the increased exploitation of natural wealth by the mere increase in the tension of labour-power, science and technology give capital a power of expansion independent of the given magnitude of the capital actually functioning. They react at the same time on that part of the original capital which has entered upon its stage of renewal. This, in passing into its new shape, incorporates gratis the social advance made while its old shape was being used up. Of course, this development of productive power is accompanied by a partial depreciation of functioning capital. So far as this depreciation makes itself acutely felt in competition, the burden falls on the labourer, in the increased exploitation of whom the capitalist looks for his indemnification.

Labour transmits to its product the value of the means of production consumed by it. On the other hand, the value and mass of the means of production set in motion by a given quantity of labour increase as the labour becomes more productive. Though the same quantity of labour adds always to its products only the same sum of new value, still the old capital value, transmitted by the labour to the products, increases with the growing productivity of labour.

An English and a Chinese spinner, *e.g.*, may work the same number of hours with the same intensity; then they will both in a week create equal values. But in spite of this equality, an immense difference will obtain between the value of the week's product of the Englishman, who works with a mighty automaton, and that of the Chinaman, who has but a spinning-wheel. In the same time as the Chinaman spins one pound of cotton, the Englishman spins several hundreds of pounds. A sum, many hundred times as great, of old values swells the value of his product, in which those re-appear in a new, useful form, and can thus function anew as capital.

“In 1782,” as Frederick Engels teaches us, “all the wool crop in England of the three preceding years, lay untouched for want of labourers, and so it must have lain, if newly invented machinery had not come to its aid and spun it.”<sup>46</sup>

Labour embodied in the form of machinery of course did not directly force into life a single man, but it made it possible for a smaller number of labourers, with the addition of relatively less living labour, not only to consume the wool productively, and put into it new value, but to preserve in the form of yarn, &c., its old value. At the same time, it caused and stimulated increased reproduction of wool. It is the natural property of living labour, to transmit old value, whilst it creates new. Hence, with the increase in efficacy, extent and value of its means of production, consequently with the accumulation that accompanies the development of its productive power, labour keeps up and eternises an always increasing capital value in a form ever new.”<sup>47</sup> This natural power of labour takes the appearance of an intrinsic property of capital, in which it is incorporated, just as the productive forces of social labour take the appearance of inherent properties of capital, and as the constant appropriation of surplus labour by the capitalists, takes that of a constant self-expansion of capital.

With the increase of capital, the difference between the capital employed and the capital consumed increases. In other words, there is increase in the value and the material mass of the instruments of labour, such as buildings, machinery, drain-pipes, working-cattle, apparatus of every kind that function for a longer or shorter time in processes of production constantly repeated, or that serve for the attainment of particular useful effects, whilst they themselves only gradually wear out, therefore only lose their value piecemeal, therefore transfer that value to the product only bit by bit. In the same proportion as these instruments of labour serve as product-formers without adding value to the product, *i.e.*, in the same proportion as they are wholly employed but only partly consumed, they perform, as we saw earlier, the same gratuitous service as the natural forces, water, steam, air, electricity, etc. This gratuitous service of past labour, when seized and filled with a soul by living labour, increases with the advancing stages of accumulation.

Since past labour always disguises itself as capital, *i.e.*, since the passive of the labour of A, B, C, etc., takes the form of the active of the non-labourer X, bourgeois and political economists are full of praises of the services of dead and gone labour, which, according to the Scotch genius MacCulloch, ought to receive a special remuneration in the shape of interest, profit, etc.<sup>48</sup> The powerful and ever-increasing assistance given by past labour to the living labour process under the form of means of production is, therefore, attributed to that form of past labour in which it is alienated, as unpaid labour, from the worker himself, *i.e.*, to its capitalistic form. The practical agents of capitalistic production and their pettifogging ideologists are as unable to think of the means of production as separate from the antagonistic social mask they wear today, as a slave-owner to think of the worker himself as distinct from his character as a slave.

With a given degree of exploitation of labour-power, the mass of the surplus-value produced is determined by the number of workers simultaneously exploited; and this corresponds, although in varying proportions, with the magnitude of the capital. The more, therefore, capital increases by means of successive accumulations, the more does the sum of the value increase that is divided into consumption fund and accumulation fund. The capitalist can, therefore, live a more jolly life, and at the same time show more “abstinence.” And, finally, all the springs of production act with greater elasticity, the more its scale extends with the mass of the capital advanced.

## Section 5: The So-Called Labour Fund

It has been shown in the course of this inquiry that capital is not a fixed magnitude, but is a part of social wealth, elastic and constantly fluctuating with the division of fresh surplus-value into revenue and additional capital. It has been seen further that, even with a given magnitude of functioning capital, the labour-power, the science, and the land (by which are to be understood, economically, all conditions of labour furnished by Nature independently of man), embodied in it, form elastic powers of capital, allowing it, within certain limits, a field of action independent of its own magnitude. In this inquiry we have neglected all effects of the process of circulation, effects which may produce very different degrees of efficiency in the same mass of capital. And as we presupposed the limits set by capitalist production, that is to say, presupposed the process of social production in a form developed by purely spontaneous growth, we neglected any more rational combination, directly and systematically practicable with the means of production, and the mass of labour-power at present disposable. Classical economy always loved to conceive social capital as a fixed magnitude of a fixed degree of efficiency. But this prejudice was first established as a dogma by the arch-Philistine, Jeremy Bentham, that insipid, pedantic, leather-tongued oracle of the ordinary bourgeois intelligence of the 19th century.<sup>49</sup> Bentham is among philosophers what Martin Tupper is among poets. Both could only have been manufactured in England.<sup>50</sup> In the light of his dogma the commonest phenomena of the process of production, as, *e.g.*, its sudden expansions and contractions, nay, even accumulation itself, become perfectly inconceivable.<sup>51</sup> The dogma was used by Bentham himself, as well as by Malthus, James Mill, MacCulloch, etc., for an apologetic purpose, and especially in order to represent one part of capital, namely, variable capital, or that part convertible into labour-power, as a fixed magnitude. The material of variable capital, *i.e.*, the mass of the means of subsistence it represents for the labourer, or the so-called labour fund, was fabled as a separate part of social wealth, fixed by natural laws and unchangeable. To set in motion the part of social wealth which is to function as constant capital, or, to express it in a material form, as means of production, a definite mass of living labour is required. This mass is given technologically. But neither is the number of labourers required to render fluid this mass of labour-power given (it changes with the degree of exploitation of the individual labour-power), nor is the price of this labour-power given, but only its minimum limit, which is moreover very variable. The facts that lie at the bottom of this dogma are these: on the one hand, the labourer has no right to interfere in the division of social wealth into means of enjoyment for the non-labourer and means of production.<sup>52</sup> On the other hand, only in favourable and exceptional cases, has he the power to enlarge the so-called labour fund at the expense of the “revenue” of the wealthy.

What silly tautology results from the attempt to represent the capitalistic limits of the labour fund as its natural and social limits may be seen, *e.g.*, in Professor Fawcett.<sup>53</sup>

“The circulating capital of a country,” he says, “is its wage-fund. Hence, if we desire to calculate the average money wages received by each labourer, we have simply to divide the amount of this capital by the number of the labouring population.”<sup>54</sup>

That is to say, we first add together the individual wages actually paid, and then we affirm that the sum thus obtained, forms the total value of the “labour fund” determined and vouchsafed to us by God and Nature. Lastly, we divide the sum thus obtained by the number of labourers to find out again how much may come to each on the average. An uncommonly knowing dodge this. It did not prevent Mr. Fawcett saying in the same breath:

“The aggregate wealth which is annually saved in England, is divided into two portions; one portion is employed as capital to maintain our industry, and the other portion is exported to foreign countries... Only a portion, and perhaps, not a large portion of the wealth which is annually saved in this country, is invested in our own industry.”<sup>55</sup>

The greater part of the yearly accruing surplus-product, embezzled, because abstracted without return of an equivalent, from the English labourer, is thus used as capital, not in England, but in foreign countries. But with the additional capital thus exported, a part of the “labour fund” invented by God and Bentham is also exported.<sup>56</sup>

---

<sup>1</sup> “Accumulation of capital; the employment of a portion of revenue as capital.” (Malthus: “Definitions, &c.,” ed. Cazenove, p. 11.) “Conversion of revenue into capital,” (Malthus: “Princ. of Pol. Econ” 2nd Ed., Lond., 1836, p. 320.)

<sup>2</sup> We here take no account of export trade, by means of which a nation can change articles of luxury either into means of production or means of subsistence, and *vice versa*. In order to examine the object of our investigation in its integrity, free from all disturbing subsidiary circumstances, we must treat the whole world as one nation, and assume that capitalist production is everywhere established and has possessed itself of every branch of industry.

<sup>3</sup> Sismondi’s analysis of accumulation suffers from the great defect, that he contents himself, to too great an extent, with the phrase “conversion of revenue into capital,” without fathoming the material conditions of this operation.

<sup>4</sup> “Le travail primitif auquel son capital a dû sa naissance.” [the original labour, to which his capital owed its origin] Sismondi, l. c., ed. Paris, t. I., p. 109.

<sup>5</sup> “Labour creates capital before capital employs labour.” E. G. Wakefield, “England and America,” Lond., 1833, Vol. II, p. 110.

<sup>6</sup> The property of the capitalist in the product of the labour of others “is a strict consequence of the law of appropriation, the fundamental principle of which was, on the contrary, the exclusive title of every labourer to the product of his own labour.” (Cherbuliez, “Richesse ou Pauvreté,” Paris, 1841, p. 58, where, however, the dialectical reversal is not properly developed.)

<sup>7</sup> The following passage (to p. 551 “laws of capitalist appropriation.”) has been added to the English text in conformity with the 4th German edition.

<sup>8</sup> We may well, therefore, feel astonished at the cleverness of Proudhon, who would abolish capitalistic property by enforcing the eternal laws of property that are based on commodity production!

<sup>9</sup> “Capital, viz., accumulated wealth employed with a view to profit.” (Malthus, l. c.) “Capital ... consists of wealth saved from revenue, and used with a view to profit.” (R. Jones: “An Introductory Lecture on Polit. Econ.,” Lond., 1833, p. 16.)

<sup>10</sup> “The possessors of surplus-produce or capital.” (“The Source and Remedy of the National Difficulties. A Letter to Lord John Russell.” Lond., 1821.)

<sup>11</sup> “Capital, with compound interest on every portion of capital saved, is so all engrossing that all the wealth in the world from which income is derived, has long ago become the interest on capital.” (London, *Economist*, 19th July, 1851.)

<sup>12</sup> “No political economist of the present day can by saving mean mere hoarding: and beyond this contracted and insufficient proceeding, no use of the term in reference to the national wealth can well be imagined, but that which must arise from a different application of what is saved, founded upon a real distinction between the different kinds of labour maintained by it.” (Malthus, l. c., pp. 38, 39.)

<sup>13</sup> Thus for instance, Balzac, who so thoroughly studied every shade of avarice, represents the old usurer Gobseck as in his second childhood when he begins to heap up a hoard of commodities.

<sup>14</sup> “Accumulation of stocks ... non-exchange ... over-production.” (Th. Corbet. l. c., p. 104.)

<sup>15</sup> In this sense Necker speaks of the “objets de faste et de somptuosité,” [things of pomp and luxury] of which “le temps a grossi l’accumulation,” [accumulation has grown with time] and which “les lois de propriété ont rassemblés dans une seule classe de la société.” [the laws of property have brought into the hands of one class of society alone] (*Oeuvres de M. Necker*, Paris and Lausanne, 1789, t. ii., p. 291.)

<sup>16</sup> Ricardo, l.c., p. 163, note.

<sup>17</sup> In spite of his “Logic,” John St. Mill never detects even such faulty analysis as this when made by his predecessors, an analysis which, even from the bourgeois standpoint of the science, cries out for rectification. In every case he registers with the dogmatism of a disciple, the confusion of his master’s thoughts. So here: “The capital itself in the long run becomes entirely wages, and when replaced by the sale of produce becomes wages again.”

<sup>18</sup> In his description of the process of reproduction, and of accumulation, Adam Smith, in many ways, not only made no advance, but even lost considerable ground, compared with his predecessors, especially by the Physiocrats. Connected with the illusion mentioned in the text, is the really wonderful dogma, left by him as an inheritance to Political Economy, the dogma, that the price of commodities is made up of wages, profit (interest) and rent, *i.e.*, of wages and surplus-value. Starting from this basis, Storch naively confesses, “Il est impossible de résoudre le prix nécessaire dans ses éléments les plus simples.” [... it is impossible to resolve the necessary price into its simplest elements] (Storch, l. c., Petersb. Edit., 1815, t. ii., p. 141, note.) A fine science of economy this, which declares it impossible to resolve the price of a commodity into its simplest elements! This point will be further investigated in the seventh part of Book iii.

<sup>19</sup> The reader will notice, that the word revenue is used in a double sense: first, to designate surplus-value so far as it is the fruit periodically yielded by capital; secondly, to designate the part of that fruit which is periodically consumed by the capitalist, or added to the fund that supplies his private consumption. I have retained this double meaning because it harmonises with the language of the English and French economists.

<sup>20</sup> Taking the usurer, that old-fashioned but ever renewed specimen of the capitalist for his text, Luther shows very aptly that the love of power is an element in the desire to get rich. “The heathen were able, by the light of reason, to conclude that a usurer is a double-dyed thief and murderer. We Christians, however, hold them in such honour, that we fairly worship them for the sake of their money.... Whoever eats up, robs, and steals the nourishment of another, that man commits as great a murder (so far as in him lies) as he who starves a man or utterly undoes him. Such does a usurer, and sits the while safe on his stool, when he ought rather to be hanging on the gallows, and be eaten by as many ravens as he has stolen guilders, if only there were so much flesh on him, that so many ravens could stick their beaks in and share it. Meanwhile, we hang the small thieves.... Little thieves are put in the stocks, great thieves go flaunting in gold and silk.... Therefore is there, on this earth, no greater enemy of man (after the devil) than a gripe-money, and usurer, for he wants to be God over all men. Turks, soldiers, and tyrants are also bad men, yet must they let the people live, and Confess that they are bad, and enemies, and do, nay, must, now and then show pity to some. But a usurer and money-glutton, such a one would have the whole world perish of hunger and thirst, misery and want, so far as in him lies, so that he may have all to himself, and every one may receive from him as from a God, and be his serf for ever. To wear fine cloaks, golden chains, rings, to wipe his mouth, to be deemed and taken for a worthy, pious man .... Usury is a great huge monster, like a werewolf, who lays waste all, more than any Cacus, Gerion or Antus. And yet decks himself out, and would be thought pious, so that people

may not see where the oxen have gone, that he drags backwards into his den. But Hercules shall hear the cry of the oxen and of his prisoners, and shall seek Cacus even in cliffs and among rocks, and shall set the oxen loose again from the villain. For Cacus means the villain that is a pious usurer, and steals, robs, eats everything. And will not own that he has done it, and thinks no one will find him out, because the oxen, drawn backwards into his den, make it seem, from their foot-prints, that they have been let out. So the usurer would deceive the world, as though he were of use and gave the world oxen, which he, however, rends, and eats all alone... And since we break on the wheel, and behead highwaymen, murderers and housebreakers, how much more ought we to break on the wheel and kill... hunt down, curse and behead all usurers.” (Martin Luther, l. c.)

<sup>21</sup> See Goethe’s “Faust.”

<sup>23</sup> A. Smith, l. c., bk. iii., ch. iii.

<sup>24</sup> Even J. B. Say says: “Les épargnes des riches se font aux dépens des pauvres.” [the savings of the rich are made at the expense of the poor] “The Roman proletarian lived almost entirely at the expense of society.... It can almost be said that modern society lives at the expense of the proletarians, on what it keeps out of the remuneration of labour.” (Sismondi: “études, &c.,” t. i., p. 24.)

<sup>25</sup> Malthus, l. c., pp. 319, 320.

<sup>26</sup> “An Inquiry into those Principles Respecting the Nature of Demand, &c.,” p. 67.

<sup>27</sup> l. c., p. 59.

<sup>28</sup> (Senior, “Principes fondamentaux del’Écon. Pol.” trad. Arrivabene. Paris, 1836, p. 308.) This was rather too much for the adherents of the old classical school. “Mr. Senior has substituted for it” (the expression, labour and profit) “the expression labour and Abstinence. He who converts his revenue abstains from the enjoyment which its expenditure would afford him. It is not the capital, but the use of the capital productively, which is the cause of profits.” (John Cazenove, l. c., p. 130, Note.) John St. Mill, on the contrary, accepts on the one hand Ricardo’s theory of profit, and annexes on the other hand Senior’s “remuneration of abstinence.” He is as much at home in absurd contradictions, as he feels at sea in the Hegelian contradiction, the source of all dialectic. It has never occurred to the vulgar economist to make the simple reflexion, that every human action may be viewed, as “abstinence” from its opposite. Eating is abstinence from fasting, walking, abstinence from standing still, working, abstinence from idling, idling, abstinence from working, &c. These gentlemen would do well, to ponder, once in a while, over Spinoza’s: “Determinatio est Negatio.”

<sup>29</sup> Senior, l. c., p. 342.

<sup>30</sup> “No one ... will sow his wheat, for instance, and allow it to remain a twelve month in the ground, or leave his wine in a cellar for years, instead of consuming these things or their equivalent at once ... unless he expects to acquire additional value, &c.” (Scrope, “Polit. Econ.,” edit. by A. Potter, New York, 1841, pp. 133-134.)

<sup>31</sup> “La privation que s’impose le capitaliste, en prêtant [The deprivation the capitalist imposes on himself by lending ...] (this euphemism used, for the purpose of identifying, according to the approved method of vulgar economy, the labourer who is exploited, with the industrial capitalist who exploits, and to whom other capitalists lend money) ses instruments de production au travailleur, au lieu d’en consacrer la valeur à son propre usage, en la transformant en objets d’utilité ou d’agrément.” [his instruments of production to the worker, instead of devoting their value to his own consumption, by transforming them into objects of utility or pleasure] (G. de Molinari, l. c., p. 36.)

<sup>32</sup> “La conservation d’un capital exige ... un effort constant pour résister a la tentation de le consommer.” (Courcelle-Seneuil, l. c., p. 57.)

<sup>33</sup> “The particular classes of income which yield the most abundantly to the progress of national capital, change at different stages of their progress, and are, therefore, entirely different in nations occupying different positions in that progress.... Profits ... unimportant source of accumulation, compared with wages and rents, in the earlier stages of society.... When a considerable advance in the powers of national industry has actually taken place, profits rise into comparative importance as a source of accumulation.” (Richard Jones, “Textbook, &c.,” pp. 16, 21.)

<sup>34</sup> l. c., p. 36, sq.

<sup>35</sup> “Ricardo says: ‘In different stages of society the accumulation of capital or of the means of employing’ (i.e., exploiting) ‘labour is more or less rapid, and must in all cases depend on the productive powers of labour. The productive powers of labour are generally greatest where there is an abundance of fertile land.’ If, in the first sentence, the productive powers of labour mean the smallness of that aliquot part of any produce that goes to those whose manual labour produced it, the sentence is nearly identical, because the remaining aliquot part is the fund whence capital can, if the *owner pleases*, be accumulated. But then this does not generally happen, where there is most fertile land.” (“Observations on Certain Verbal Disputes, &c.” pp. 74, 75.)

<sup>36</sup> J. Stuart Mill: “Essays on Some Unsettled Questions of Political Economy,” Lond., 1844, p. 90.

<sup>37</sup> “An Essay on Trade and Commerce,” Lond., 1770, P. 44. *The Times* of December, 1866, and January, 1867, in like manner published certain outpourings of the heart of the English mine-owner, in which the happy lot of the Belgian miners was pictured, who asked and received no more than was strictly necessary for them to live for their “masters.” The Belgian labourers have to suffer much, but to figure in *The Times* as model labourers! In the beginning of February, 1867, came the answer: strike of the Belgian miners at Marchienne, put down by powder and lead.

<sup>38</sup> l. c., pp. 44, 46.

<sup>39</sup> The Northamptonshire manufacturer commits a pious fraud, pardonable in one whose heart is so full. He nominally compares the life of the English and French manufacturing labourer, but in the words just quoted he is painting, as he himself confesses in his confused way, the French agricultural labourers.

<sup>40</sup> l. c., pp. 70, 71. *Note in the 3rd German edition*: today, thanks to the competition on the world-market, established since then, we have advanced much further. “If China,” says Mr. Stapleton, M.P., to his constituents, “should become a great manufacturing country, I do not see how the manufacturing population of Europe could sustain the contest without descending to the level of their competitors.” (*Times*, Sept. 3, 1873, p. 8.) The wished-for goal of English capital is no longer Continental wages but Chinese.

<sup>41</sup> Benjamin Thompson: “Essays, Political, Economical, and Philosophical, &c.,” 3 vols., Lond, 1796-1802, vol. i., p. 294. In his “The State of the Poor, or an History of the Labouring Classes in England, &c.,” Sir F. M. Eden strongly recommends the Rumfordian beggar-soup to workhouse overseers, and reproachfully warns the English labourers that “many poor people, particularly in Scotland, live, and that very comfortably, for months together, upon oat-meal and barley-meal, mixed with only water and salt.” (l. c., vol. i, book i., ch. 2, p. 503.) The same sort of hints in the 19th century. “The most wholesome mixtures of flour having been refused (by the English agricultural labourer)... in Scotland, where education is better, this prejudice is, probably, unknown.” (Charles H. Parry, M. D., “The Question of the Necessity of the Existing Corn Laws Considered.” London, 1816, p. 69.) This same Parry, however, complains that the English labourer is now (1815) in a much worse condition than in Eden’s time (1797.)

<sup>42</sup> From the reports of the last Parliamentary Commission on adulteration of means of subsistence, it will be seen that the adulteration even of medicines is the rule, not the exception in England. E.g., the

examination of 34 specimens of opium, purchased of as many different chemists in London, showed that 31 were adulterated with poppy heads, wheat-flour, gum, clay, sand, &c. Several did not contain an atom of morphia.

<sup>43</sup> G. B. Newnham (barrister-at-law): “A Review of the Evidence before the Committee of the two Houses of Parliament on the Corn Laws.” Lond., 1815, p. 20, *note*.

<sup>44</sup> *l. c.*, pp. 19, 20.

<sup>45</sup> C. H. Parry, *l. c.*, pp. 77, 69. The landlords, on their side, not only “indemnified” themselves for the Anti-Jacobin War, which they waged in the name of England, but enriched themselves enormously. Their rents doubled, trebled, quadrupled, “and in one instance, increased sixfold in eighteen years.” (*l. c.*, pp. 100, 101.)

<sup>46</sup> Friedrich Engels, “Lage der arbeitenden Klasse in England,” p. 20.

<sup>47</sup> Classic economy has, on account of a deficient analysis of the labour process, and of the process of creating value, never properly grasped this weighty element of reproduction, as may be seen in Ricardo; he says, *e.g.*, whatever the change in productive power, “a million men always produce in manufactures the same value.” This is accurate, if the extension and degree of intensity of their labour are given. But it does not prevent (this Ricardo overlooks in certain conclusions he draws) a million men with different powers of productivity in their labour, turning into products very different masses of the means of production, and therefore preserving in their products very different masses of value; in consequence of which the values of the products yielded may vary considerably. Ricardo has, it may be noted in passing, tried in vain to make clear to J. B. Say, by that very example, the difference between use value (which he here calls wealth or material riches) and exchange-value. Say answers: “Quant à la difficulté qu’élève Mr. Ricardo en disant que, par des procédés mieux entendus un million de personnes peuvent produire deux fois, trois fois autant de richesses, sans produire plus de valeurs, cette difficulté n’est pas une lorsque l’on considère, ainsi qu’on le doit, la production comme un échange dans lequel on donne les services productifs de son travail, de sa terre, et de ses capitaux, pour obtenir des produits. C’est par le moyen de ces services productifs, que nous acquérons tous les produits qui sont au monde. Or... nous sommes d’autant plus riches, nos services productifs ont d’autant plus de valeur qu’ils obtiennent dans l’échange appelé production une plus grande quantité de choses utiles.” [As for the difficulty raised by Ricardo when he says that, by using better methods of production, a million people can produce two or three times as much wealth, without producing any more value, this difficulty disappears when one bears in mind, as one should, that production is like an exchange in which a man contributes the productive services of his labour, his land, and his capital, in order to obtain products. It is by means of these productive services that we acquire all the products existing in the world. Therefore ... we are richer, our productive services have the more value, the greater the quantity of useful things they bring in through the exchange which is called production] (J. B. Say, “Lettres à M. Malthus,” Paris, 1820, pp. 168, 169.) The “difficulté” — it exists for him, not for Ricardo — that Say means to clear up is this: Why does not the exchange-value of the use values increase, when their quantity increases in consequence of increased productive power of labour? Answer: the difficulty is met by calling use value, exchange-value, if you please. Exchange-value is a thing that is connected one way or another with exchange. If therefore production is called an exchange of labour and means of production against the product, it is clear as day that you obtain more exchange-value in proportion as the production yields more use value. In other words, the more use values, *e.g.*, stockings, a working day yields to the stocking-manufacturer, the richer is he in stockings. Suddenly, however, Say recollects that “with a greater quantity” of stockings their “price” (which of course has nothing to do with their exchange-value!) falls “parce que la concurrence les (les producteurs) oblige à donner les produits pour ce qu’ils leur coûtent... [because competition obliges them (the producers) to sell their products for what they cost to make] But whence does the profit

come, if the capitalist sells the commodities at cost-price? Never mind! Say declares that, in consequence of increased productivity, every one now receives in return for a given equivalent two pairs of stockings instead of one as before. The result he arrives at, is precisely that proposition of Ricardo that he aimed at disproving. After this mighty effort of thought, he triumphantly apostrophises Malthus in the words: “Telle est, monsieur, la doctrine bien liée, sans laquelle il est impossible, je le déclare, d’expliquer les plus grandes difficultés de l’économie politique, et notamment, comment il se peut qu’une nation soit plus riche lorsque ses produits diminuent de valeur, quoique la richesse soit de la valeur.” [This, Sir, is the well-founded doctrine without which it is impossible, I say, to explain the greatest difficulties in political economy, and, in particular, to explain why it is that a nation can be richer when its products fall in value, even though wealth is value] (l. c., p. 170.) An English economist remarks upon the conjuring tricks of the same nature that appear in Say’s “Lettres”: “Those affected ways of talking make up in general that which M. Say is pleased to call his doctrine and which he earnestly urges Malthus to teach at Hertford, as it is already taught ‘dans plusieurs parties de l’Europe.’ He says, ‘Si vous trouvez une physionomie de paradoxe à toutes ces propositions, voyez les choses qu’elles expriment, et j’ose croire qu’elles vous paraîtront fort simples et fort raisonnables.’ [in numerous parts of Europe ... If all those propositions appear paradoxical to you, look at the things they express, and I venture to believe that they will then appear very simple and very rational] Doubtless, and in consequence of the same process, they will appear everything else, except original.” (“An Inquiry into those Principles Respecting the Nature of Demand, &c.,” pp. 116, 110.)

<sup>48</sup> MacCulloch took out a patent for “wages of past labour,” long before Senior did for “wages of abstinence.”

<sup>49</sup> Compare among others, Jeremy Bentham: “Théorie des Peines et des Récompenses,” traduct. d’Et. Dumont, 3ème édit. Paris, 1826, t. II, L. IV., ch. II.

<sup>50</sup> Bentham is a purely English phenomenon. Not even excepting our philosopher, Christian Wolff, in no time and in no country has the most homespun commonplace ever strutted about in so self-satisfied a way. The principle of utility was no discovery of Bentham. He simply reproduced in his dull way what Helvétius and other Frenchmen had said with esprit in the 18th century. To know what is useful for a dog, one must study dog-nature. This nature itself is not to be deduced from the principle of utility. Applying this to man, he that would criticise all human acts, movements, relations, etc., by the principle of utility, must first deal with human nature in general, and then with human nature as modified in each historical epoch. Bentham makes short work of it. With the driest naïveté he takes the modern shopkeeper, especially the English shopkeeper, as the normal man. Whatever is useful to this queer normal man, and to his world, is absolutely useful. This yard-measure, then, he applies to past, present, and future. The Christian religion, e.g., is “useful,” “because it forbids in the name of religion the same faults that the penal code condemns in the name of the law.” Artistic criticism is “harmful,” because it disturbs worthy people in their enjoyment of Martin Tupper, etc. With such rubbish has the brave fellow, with his motto, “nuila dies sine line!,” piled up mountains of books. Had I the courage of my friend, Heinrich Heine, I should call Mr. Jeremy a genius in the way of bourgeois stupidity.

<sup>51</sup> “Political economists are too apt to consider a certain quantity of capital and a certain number of labourers as productive instruments of uniform power, or operating with a certain uniform intensity.... Those... who maintain ... that commodities are the sole agents of production ... prove that production could never be enlarged, for it requires as an indispensable condition to such an enlargement that food, raw materials, and tools should be previously augmented; which is in fact maintaining that no increase of production can take place without a previous increase, or, in other words, that an increase is impossible.” (S. Bailey: “Money and its Vicissitudes,” pp. 58 and 70.) Bailey criticises the dogma mainly from the point of view of the process of circulation.

---

<sup>52</sup> John Stuart Mill, in his “Principles of Political Economy,” says: “The really exhausting and the really repulsive labours instead of being better paid than others, are almost invariably paid the worst of all... The more revolting the occupation, the more certain it is to receive the minimum of remuneration.... The hardships and the earnings, instead of being directly proportional, as in any just arrangements of society they would be, are generally in an inverse ratio to one another.” To avoid misunderstanding, let me say that although men like John Stuart Mill are to blame for the contradiction between their traditional economic dogmas and their modern tendencies, it would be very wrong to class them with the herd of vulgar economic apologists.

<sup>53</sup> H. Fawcett, Professor of Political Economy at Cambridge. “The Economic position of the British labourer.” London, 1865, p. 120.

<sup>54</sup> I must here remind the reader that the categories, “variable and constant capital,” were first used by me. Political Economy since the time of Adam Smith has confusedly mixed up the essential distinctions involved in these categories, with the mere formal differences, arising out of the process of circulation, of fixed and circulating capital. For further details on this point, see Book II., Part II.

<sup>55</sup> Fawcett, l. c., pp. 122, 123.

<sup>56</sup> It might be said that not only capital, but also labourers, in the shape of emigrants, are annually exported from England. In the text, however, there is no question of the peculium of the emigrants, who are in great part not labourers. The sons of farmers make up a great part of them. The additional capital annually transported abroad to be put out at interest is in much greater proportion to the annual accumulation than the yearly emigration is to the yearly increase of population.

# Chapter 25: The General Law of Capitalist Accumulation

## Section 1: The Increased Demand for labour power that Accompanies Accumulation, the Composition of Capital Remaining the same

In this chapter we consider the influence of the growth of capital on the lot of the labouring class. The most important factor in this inquiry is the composition of capital and the changes it undergoes in the course of the process of accumulation.

The composition of capital is to be understood in a two-fold sense. On the side of value, it is determined by the proportion in which it is divided into constant capital or value of the means of production, and variable capital or value of labour power, the sum total of wages. On the side of material, as it functions in the process of production, all capital is divided into means of production and living labour power. This latter composition is determined by the relation between the mass of the means of production employed, on the one hand, and the mass of labour necessary for their employment on the other. I call the former the *value-composition*, the latter the *technical composition* of capital.

Between the two there is a strict correlation. To express this, I call the value composition of capital, in so far as it is determined by its technical composition and mirrors the changes of the latter, the *organic composition* of capital. Wherever I refer to the composition of capital, without further qualification, its organic composition is always understood.

The many individual capitals invested in a particular branch of production have, one with another, more or less different compositions. The average of their individual compositions gives us the composition of the total capital in this branch of production. Lastly, the average of these averages, in all branches of production, gives us the composition of the total social capital of a country, and with this alone are we, in the last resort, concerned in the following investigation.

Growth of capital involves growth of its variable constituent or of the part invested in labour power. A part of the surplus-value turned into additional capital must always be re-transformed into variable capital, or additional labour fund. If we suppose that, all other circumstances remaining the same, the composition of capital also remains constant (*i.e.*, that a definite mass of means of production constantly needs the same mass of labour power to set it in motion), then the demand for labour and the subsistence-fund of the labourers clearly increase in the same proportion as the capital, and the more rapidly, the more rapidly the capital increases. Since the capital produces yearly a surplus-value, of which one part is yearly added to the original capital; since this increment itself grows yearly along with the augmentation of the capital already functioning; since lastly, under special stimulus to enrichment, such as the opening of new markets, or of new spheres for the outlay of capital in consequence of newly developed social wants, &c., the scale of accumulation may be suddenly extended, merely by a change in the division of the surplus-value or surplus-product into capital and revenue, the requirements of accumulating capital may exceed the increase of labour power or of the number of labourers; the demand for labourers may exceed the supply, and, therefore, wages may rise. This must, indeed, ultimately be the case if the conditions supposed above continue. For since in each year more labourers are employed than in its predecessor, sooner or later a point must be reached, at which

the requirements of accumulation begin to surpass the customary supply of labour, and, therefore, a rise of wages takes place. A lamentation on this score was heard in England during the whole of the fifteenth, and the first half of the eighteenth centuries. The more or less favourable circumstances in which the wage working class supports and multiplies itself, in no way alter the fundamental character of capitalist production. As simple reproduction constantly reproduces the capital relation itself, *i.e.*, the relation of capitalists on the one hand, and wage workers on the other, so reproduction on a progressive scale, *i.e.*, accumulation, reproduces the capital relation on a progressive scale, more capitalists or larger capitalists at this pole, more wage workers at that. The reproduction of a mass of labour power, which must incessantly re-incorporate itself with capital for that capital's self-expansion; which cannot get free from capital, and whose enslavement to capital is only concealed by the variety of individual capitalists to whom it sells itself, this reproduction of labour power forms, in fact, an essential of the reproduction of capital itself. Accumulation of capital is, therefore, increase of the proletariat.<sup>1</sup>

Classical economy grasped this fact so thoroughly that Adam Smith, Ricardo, &c., as mentioned earlier, inaccurately identified accumulation with the consumption, by the productive labourers, of all the capitalised part of the surplus-product, or with its transformation into additional wage labourers. As early as 1696 John Bellers says:

“For if one had a hundred thousand acres of land and as many pounds in money, and as many cattle, without a labourer, what would the rich man be, but a labourer? And as the labourers make men rich, so the more labourers there will be, the more rich men ... the labour of the poor being the mines of the rich.”<sup>2</sup>

So also Bernard de Mandeville at the beginning of the eighteenth century:

“It would be easier, where property is well secured, to live without money than without poor; for who would do the work? ... As they [the poor] ought to be kept from starving, so they should receive nothing worth saving. If here and there one of the lowest class by uncommon industry, and pinching his belly, lifts himself above the condition he was brought up in, nobody ought to hinder him; nay, it is undeniably the wisest course for every person in the society, and for every private family to be frugal; but it is the interest of all rich nations, that the greatest part of the poor should almost never be idle, and yet continually spend what they get.... Those that get their living by their daily labour ... have nothing to stir them up to be serviceable but their wants which it is prudence to relieve, but folly to cure. The only thing then that can render the labouring man industrious, is a moderate quantity of money, for as too little will, according as his temper is, either dispirit or make him desperate, so too much will make him insolent and lazy.... From what has been said, it is manifest, that, in a free nation, where slaves are not allowed of, the surest wealth consists in a multitude of laborious poor; for besides, that they are the never-failing nursery of fleets and armies, without them there could be no enjoyment, and no product of any country could be valuable. “To make the society” [which of course consists of non-workers] “happy and people easier under the meanest circumstances, it is requisite that great numbers of them should be ignorant as well as poor; knowledge both enlarges and multiplies our desires, and the fewer things a man wishes for, the more easily his necessities may be supplied.”<sup>3</sup>

What Mandeville, an honest, clear-headed man, had not yet seen, is that the mechanism of the process of accumulation itself increases, along with the capital, the mass of “labouring poor,” *i.e.*, the wage labourers, who turn their labour power into an increasing power of self-expansion of the

growing capital, and even by doing so must eternise their dependent relation on their own product, as personified in the capitalists. In reference to this relation of dependence, Sir F. M. Eden in his “The State of the Poor, an History of the Labouring Classes in England,” says,

“the natural produce of our soil is certainly not fully adequate to our subsistence; we can neither be clothed, lodged nor fed but in consequence of some previous labour. A portion at least of the society must be indefatigably employed .... There are others who, though they ‘neither toil nor spin,’ can yet command the produce of industry, but who owe their exemption from labour solely to civilisation and order .... They are peculiarly the creatures of civil institutions,<sup>4</sup> which have recognised that individuals may acquire property by various other means besides the exertion of labour.... Persons of independent fortune ... owe their superior advantages by no means to any superior abilities of their own, but almost entirely ... to the industry of others. It is not the possession of land, or of money, but the command of labour which distinguishes the opulent from the labouring part of the community .... This [scheme approved by Eden] would give the people of property sufficient (but by no means too much) influence and authority over those who ... work for them; and it would place such labourers, not in an abject or servile condition, but in such a state of easy and liberal dependence as all who know human nature, and its history, will allow to be necessary for their own comfort.”<sup>5</sup>

Sir F. M. Eden, it may be remarked in passing, is the only disciple of Adam Smith during the eighteenth century that produced any work of importance.<sup>6</sup>

Under the conditions of accumulation supposed thus far, which conditions are those most favourable to the labourers, their relation of dependence upon capital takes on a form endurable or, as Eden says: “easy and liberal.” Instead of becoming more intensive with the growth of capital, this relation of dependence only becomes more extensive, *i.e.*, the sphere of capital’s exploitation and rule merely extends with its own dimensions and the number of its subjects. A larger part of their own surplus-product, always increasing and continually transformed into additional capital, comes back to them in the shape of means of payment, so that they can extend the circle of their enjoyments; can make some additions to their consumption-fund of clothes, furniture, &c., and can lay by small reserve funds of money. But just as little as better clothing, food, and treatment, and a larger peculium, do away with the exploitation of the slave, so little do they set aside that of the wage worker. A rise in the price of labour, as a consequence of accumulation of capital, only means, in fact, that the length and weight of the golden chain the wage worker has already forged for himself, allow of a relaxation of the tension of it. In the controversies on this subject the chief fact has generally been overlooked, *viz.*, the *differentia specifica* [defining characteristic] of capitalistic production. Labour power is sold today, not with a view of satisfying, by its service or by its product, the personal needs of the buyer. His aim is augmentation of his capital, production of commodities containing more labour than he pays for, containing therefore a portion of value that costs him nothing, and that is nevertheless realised when the commodities are sold. Production of surplus-value is the absolute law of this mode of production. Labour-power is only saleable so far as it preserves the means of production in their capacity of capital, reproduces its own value as capital, and yields in unpaid labour a source of additional capital.<sup>7</sup> The conditions of its sale, whether more or less favourable to the labourer, include therefore the necessity of its constant re-selling, and the constantly extended reproduction of all wealth in the shape of capital. Wages, as we have seen, by their very nature, always imply the performance of a certain quantity of unpaid labour on the part of the labourer. Altogether,

irrespective of the case of a rise of wages with a falling price of labour, &c., such an increase only means at best a quantitative diminution of the unpaid labour that the worker has to supply. This diminution can never reach the point at which it would threaten the system itself. Apart from violent conflicts as to the rate of wages (and Adam Smith has already shown that in such a conflict, taken on the whole, the master is always master), a rise in the price of labour resulting from accumulation of capital implies the following alternative:

Either the price of labour keeps on rising, because its rise does not interfere with the progress of accumulation. In this there is nothing wonderful, for, says Adam Smith, “after these (profits) are diminished, stock may not only continue to increase, but to increase much faster than before.... A great stock, though with small profits, generally increases faster than a small stock with great profits.” (l. c., ii, p. 189.) In this case it is evident that a diminution in the unpaid labour in no way interferes with the extension of the domain of capital. – Or, on the other hand, accumulation slackens in consequence of the rise in the price of labour, because the stimulus of gain is blunted. The rate of accumulation lessens; but with its lessening, the primary cause of that lessening vanishes, *i.e.*, the disproportion between capital and exploitable labour power. The mechanism of the process of capitalist production removes the very obstacles that it temporarily creates. The price of labour falls again to a level corresponding with the needs of the self-expansion of capital, whether the level be below, the same as, or above the one which was normal before the rise of wages took place. We see thus: In the first case, it is not the diminished rate either of the absolute, or of the proportional, increase in labour power, or labouring population, which causes capital to be in excess, but conversely the excess of capital that makes exploitable labour power insufficient. In the second case, it is not the increased rate either of the absolute, or of the proportional, increase in labour power, or labouring population, that makes capital insufficient; but, conversely, the relative diminution of capital that causes the exploitable labour power, or rather its price, to be in excess. It is these absolute movements of the accumulation of capital which are reflected as relative movements of the mass of exploitable labour power, and therefore seem produced by the latter’s own independent movement. To put it mathematically: the rate of accumulation is the independent, not the dependent, variable; the rate of wages, the dependent, not the independent, variable. Thus, when the industrial cycle is in the phase of crisis, a general fall in the price of commodities is expressed as a rise in the value of money, and, in the phase of prosperity, a general rise in the price of commodities, as a fall in the value of money. The so-called currency school concludes from this that with high prices too much, with low prices too little<sup>8</sup> money is in circulation. Their ignorance and complete misunderstanding of facts<sup>9</sup> are worthily paralleled by the economists, who interpret the above phenomena of accumulation by saying that there are now too few, now too many wage labourers.

The law of capitalist production, that is at the bottom of the pretended “natural law of population,” reduces itself simply to this: The correlation between accumulation of capital and rate of wages is nothing else than the correlation between the unpaid labour transformed into capital, and the additional paid labour necessary for the setting in motion of this additional capital. It is therefore in no way a relation between two magnitudes, independent one of the other: on the one hand, the magnitude of the capital; on the other, the number of the labouring population; it is rather, at bottom, only the relation between the unpaid and the paid labour of the same labouring population. If the quantity of unpaid labour supplied by the working class, and accumulated by the capitalist class, increases so rapidly that its conversion into capital requires an extraordinary addition of paid labour, then wages rise, and, all other circumstances remaining equal, the unpaid labour diminishes in proportion. But as soon as this diminution touches the point at which the surplus labour that nourishes capital is no longer supplied in normal quantity, a

reaction sets in: a smaller part of revenue is capitalised, accumulation lags, and the movement of rise in wages receives a check. The rise of wages therefore is confined within limits that not only leave intact the foundations of the capitalistic system, but also secure its reproduction on a progressive scale. The law of capitalistic accumulation, metamorphosed by economists into pretended law of Nature, in reality merely states that the very nature of accumulation excludes every diminution in the degree of exploitation of labour, and every rise in the price of labour, which could seriously imperil the continual reproduction, on an ever-enlarging scale, of the capitalistic relation. It cannot be otherwise in a mode of production in which the labourer exists to satisfy the needs of self-expansion of existing values, instead of, on the contrary, material wealth existing to satisfy the needs of development on the part of the labourer. As, in religion, man is governed by the products of his own brain, so in capitalistic production, he is governed by the products of his own hand.<sup>10</sup>

## **Section 2: Relative Diminution of the Variable Part of Capital Simultaneously with the Progress of Accumulation and of the Concentration that Accompanies it**

According to the economists themselves, it is neither the actual extent of social wealth, nor the magnitude of the capital already functioning, that lead to a rise of wages, but only the constant growth of accumulation and the degree of rapidity of that growth. (Adam Smith, Book I., chapter 8.) So far, we have only considered one special phase of this process, that in which the increase of capital occurs along with a constant technical composition of capital. But the process goes beyond this phase.

Once given the general basis of the capitalistic system, then, in the course of accumulation, a point is reached at which the development of the productivity of social labour becomes the most powerful lever of accumulation.

“The same cause,” says Adam Smith, “which raises the wages of labour, the increase of stock, tends to increase its productive powers, and to make a smaller quantity of labour produce a greater quantity of work.”<sup>11</sup>

Apart from natural conditions, such as fertility of the soil, &c., and from the skill of independent and isolated producers (shown rather qualitatively in the goodness than quantitatively in the mass of their products), the degree of productivity of labour, in a given society, is expressed in the relative extent of the means of production that one labourer, during a given time, with the same tension of labour power, turns into products. The mass of the means of production which he thus transforms, increases with the productiveness of his labour. But those means of production play a double part. The increase of some is a consequence, that of the others a condition of the increasing productivity of labour. *E.g.*, with the division of labour in manufacture, and with the use of machinery, more raw material is worked up in the same time, and, therefore, a greater mass of raw material and auxiliary substances enter into the labour process. That is the consequence of the increasing productivity of labour. On the other hand, the mass of machinery, beasts of burden, mineral manures, drain-pipes, &c., is a condition of the increasing productivity of labour. So also is it with the means of production concentrated in buildings, furnaces, means of transport, &c. But whether condition or consequence, the growing extent of the means of production, as compared with the labour power incorporated with them, is an expression of the growing productiveness of labour. The increase of the latter appears, therefore, in the diminution of the mass of labour in proportion to the mass of means of production moved by it, or in the diminution of the subjective factor of the labour process as compared with the objective factor.

This change in the technical composition of capital, this growth in the mass of means of production, as compared with the mass of the labour power that vivifies them, is reflected again in its value composition, by the increase of the constant constituent of capital at the expense of its variable constituent. There may be, *e.g.*, originally 50 per cent. of a capital laid out in means of production, and 50 per cent. in labour power; later on, with the development of the productivity of labour, 80 per cent. in means of production, 20 per cent. in labour power, and so on. This law of the progressive increase in constant capital, in proportion to the variable, is confirmed at every step (as already shown) by the comparative analysis of the prices of commodities, whether we compare different economic epochs or different nations in the same epoch. The relative magnitude of the element of price, which represents the value of the means of production only, or the constant part of capital consumed, is in direct, the relative magnitude of the other element of price that pays labour (the variable part of capital) is in inverse proportion to the advance of accumulation.

This diminution in the variable part of capital as compared with the constant, or the altered value-composition of the capital, however, only shows approximately the change in the composition of its material constituents. If, *e.g.*, the capital-value employed today in spinning is  $\frac{7}{8}$  constant and  $\frac{1}{8}$  variable, whilst at the beginning of the 18th century it was  $\frac{1}{2}$  constant and  $\frac{1}{2}$  variable, on the other hand, the mass of raw material, instruments of labour, &c., that a certain quantity of spinning labour consumes productively today, is many hundred times greater than at the beginning of the 18th century. The reason is simply that, with the increasing productivity of labour, not only does the mass of the means of production consumed by it increase, but their value compared with their mass diminishes. Their value therefore rises absolutely, but not in proportion to their mass. The increase of the difference between constant and variable capital, is, therefore, much less than that of the difference between the mass of the means of production into which the constant, and the mass of the labour power into which the variable, capital is converted. The former difference increases with the latter, but in a smaller degree.

But, if the progress of accumulation lessens the relative magnitude of the variable part of capital, it by no means, in doing this, excludes the possibility of a rise in its absolute magnitude. Suppose that a capital-value at first is divided into 50 per cent. of constant and 50 per cent. of variable capital; later into 80 per cent. of constant and 20 per cent. of variable. If in the meantime the original capital, say £6,000, has increased to £18,000, its variable constituent has also increased. It was £3,000, it is now £3,600. But where as formerly an increase of capital by 20 per cent. would have sufficed to raise the demand for labour 20 per cent., now this latter rise requires a tripling of the original capital.

In Part IV, it was shown, how the development of the productiveness of social labour presupposes co-operation on a large scale; how it is only upon this supposition that division and combination of labour can be organised, and the means of production economised by concentration on a vast scale; how instruments of labour which, from their very nature, are only fit for use in common, such as a system of machinery, can be called into being; how huge natural forces can be pressed into the service of production; and how the transformation can be effected of the process of production into a technological application of science. On the basis of the production of commodities, where the means of production are the property of private persons, and where the artisan therefore either produces commodities, isolated from and independent of others, or sells his labour power as a commodity, because he lacks the means for independent industry, co-operation on a large scale can realise itself only in the increase of individual capitals, only in proportion as the means of social production and the means of subsistence are transformed into the private property of capitalists. The basis of the production of commodities can admit of

production on a large scale in the capitalistic form alone. A certain accumulation of capital, in the hands of individual producers of commodities, forms therefore the necessary preliminary of the specifically capitalistic mode of production. We had, therefore, to assume that this occurs during the transition from handicraft to capitalistic industry. It may be called primitive accumulation, because it is the historic basis, instead of the historic result of specifically capitalist production. How it itself originates, we need not here inquire as yet. It is enough that it forms the starting point. But all methods for raising the social productive power of labour that are developed on this basis, are at the same time methods for the increased production of surplus-value or surplus-product, which in its turn is the formative element of accumulation. They are, therefore, at the same time methods of the production of capital by capital, or methods of its accelerated accumulation. The continual re-transformation of surplus-value into capital now appears in the shape of the increasing magnitude of the capital that enters into the process of production. This in turn is the basis of an extended scale of production, of the methods for raising the productive power of labour that accompany it, and of accelerated production of surplus-value. If, therefore, a certain degree of accumulation of capital appears as a condition of the specifically capitalist mode of production, the latter causes conversely an accelerated accumulation of capital. With the accumulation of capital, therefore, the specifically capitalistic mode of production develops, and with the capitalist mode of production the accumulation of capital. Both these economic factors bring about, in the compound ratio of the impulses they reciprocally give one another, that change in the technical composition of capital by which the variable constituent becomes always smaller and smaller as compared with the constant.

Every individual capital is a larger or smaller concentration of means of production, with a corresponding command over a larger or smaller labour-army. Every accumulation becomes the means of new accumulation. With the increasing mass of wealth which functions as capital, accumulation increases the concentration of that wealth in the hands of individual capitalists, and thereby widens the basis of production on a large scale and of the specific methods of capitalist production. The growth of social capital is effected by the growth of many individual capitals. All other circumstances remaining the same, individual capitals, and with them the concentration of the means of production, increase in such proportion as they form aliquot parts of the total social capital. At the same time portions of the original capitals disengage themselves and function as new independent capitals. Besides other causes, the division of property, within capitalist families, plays a great part in this. With the accumulation of capital, therefore, the number of capitalists grows to a greater or less extent. Two points characterise this kind of concentration which grows directly out of, or rather is identical with, accumulation. First: The increasing concentration of the social means of production in the hands of individual capitalists is, other things remaining equal, limited by the degree of increase of social wealth. Second: The part of social capital domiciled in each particular sphere of production is divided among many capitalists who face one another as independent commodity-producers competing with each other. Accumulation and the concentration accompanying it are, therefore, not only scattered over many points, but the increase of each functioning capital is thwarted by the formation of new and the sub-division of old capitals. Accumulation, therefore, presents itself on the one hand as increasing concentration of the means of production, and of the command over labour; on the other, as repulsion of many individual capitals one from another.

This splitting-up of the total social capital into many individual capitals or the repulsion of its fractions one from another, is counteracted by their attraction. This last does not mean that simple concentration of the means of production and of the command over labour, which is identical with accumulation. It is concentration of capitals already formed, destruction of their individual

independence, expropriation of capitalist by capitalist, transformation of many small into few large capitals. This process differs from the former in this, that it only presupposes a change in the distribution of capital already to hand, and functioning; its field of action is therefore not limited by the absolute growth of social wealth, by the absolute limits of accumulation. Capital grows in one place to a huge mass in a single hand, because it has in another place been lost by many. This is centralisation proper, as distinct from accumulation and concentration.

The laws of this centralisation of capitals, or of the attraction of capital by capital, cannot be developed here. A brief hint at a few facts must suffice. The battle of competition is fought by cheapening of commodities. The cheapness of commodities demands, *caeteris paribus*, on the productiveness of labour, and this again on the scale of production. Therefore, the larger capitals beat the smaller. It will further be remembered that, with the development of the capitalist mode of production, there is an increase in the minimum amount of individual capital necessary to carry on a business under its normal conditions. The smaller capitals, therefore, crowd into spheres of production which Modern Industry has only sporadically or incompletely got hold of. Here competition rages in direct proportion to the number, and in inverse proportion to the magnitudes, of the antagonistic capitals. It always ends in the ruin of many small capitalists, whose capitals partly pass into the hands of their conquerors, partly vanish. Apart from this, with capitalist production an altogether new force comes into play – the credit system, which in its first stages furtively creeps in as the humble assistant of accumulation, drawing into the hands of individual or associated capitalists, by invisible threads, the money resources which lie scattered, over the surface of society, in larger or smaller amounts; but it soon becomes a new and terrible weapon in the battle of competition and is finally transformed into an enormous social mechanism for the centralisation of capitals.

Commensurately with the development of capitalist production and accumulation there develop the two most powerful levers of centralisation – competition and credit. At the same time the progress of accumulation increases the material amenable to centralisation, *i.e.*, the individual capitals, whilst the expansion of capitalist production creates, on the one hand, the social want, and, on the other, the technical means necessary for those immense industrial undertakings which require a previous centralisation of capital for their accomplishment. Today, therefore, the force of attraction, drawing together individual capitals, and the tendency to centralisation are stronger than ever before. But if the relative extension and energy of the movement towards centralisation is determined, in a certain degree, by the magnitude of capitalist wealth and superiority of economic mechanism already attained, progress in centralisation does not in any way depend upon a positive growth in the magnitude of social capital. And this is the specific difference between centralisation and concentration, the latter being only another name for reproduction on an extended scale. Centralisation may result from a mere change in the distribution of capitals already existing, from a simple alteration in the quantitative grouping of the component parts of social capital. Here capital can grow into powerful masses in a single hand because there it has been withdrawn from many individual hands. In any given branch of industry centralisation would reach its extreme limit if all the individual capitals invested in it were fused into a single capital.<sup>12</sup> In a given society the limit would be reached only when the entire social capital was united in the hands of either a single capitalist or a single capitalist company.

Centralisation completes the work of accumulation by enabling industrial capitalists to extend the scale of their operations. Whether this latter result is the consequence of accumulation or centralisation, whether centralisation is accomplished by the violent method of annexation – when certain capitals become such preponderant centres of attraction for others that they shatter the individual cohesion of the latter and then draw the separate fragments to themselves – or

whether the fusion of a number of capitals already formed or in process of formation takes place by the smoother process of organising joint-stock companies – the economic effect remains the same. Everywhere the increased scale of industrial establishments is the starting point for a more comprehensive organisation of the collective work of many, for a wider development of their material motive forces – in other words, for the progressive transformation of isolated processes of production, carried on by customary methods, into processes of production socially combined and scientifically arranged.

But accumulation, the gradual increase of capital by reproduction as it passes from the circular to the spiral form, is clearly a very slow procedure compared with centralisation, which has only to change the quantitative groupings of the constituent parts of social capital. The world would still be without railways if it had had to wait until accumulation had got a few individual capitals far enough to be adequate for the construction of a railway. Centralisation, on the contrary, accomplished this in the twinkling of an eye, by means of joint-stock companies. And whilst centralisation thus intensifies and accelerates the effects of accumulation, it simultaneously extends and speeds those revolutions in the technical composition of capital which raise its constant portion at the expense of its variable portion, thus diminishing the relative demand for labour.

The masses of capital fused together overnight by centralisation reproduce and multiply as the others do, only more rapidly, thereby becoming new and powerful levers in social accumulation. Therefore, when we speak of the progress of social accumulation we tacitly include – today – the effects of centralisation.

The additional capitals formed in the normal course of accumulation (see Chapter XXIV, Section 1) serve particularly as vehicles for the exploitation of new inventions and discoveries, and industrial improvements in general. But in time the old capital also reaches the moment of renewal from top to toe, when it sheds its skin and is reborn like the others in a perfected technical form, in which a smaller quantity of labour will suffice to set in motion a larger quantity of machinery and raw materials. The absolute reduction in the demand for labour which necessarily follows from this is obviously so much the greater the higher the degree in which the capitals undergoing this process of renewal are already massed together by virtue of the centralisation movement.

On the one hand, therefore, the additional capital formed in the course of accumulation attracts fewer and fewer labourers in proportion to its magnitude. On the other hand, the old capital periodically reproduced with change of composition, repels more and more of the labourers formerly employed by it.

### **Section 3: Progressive Production of a Relative surplus population or Industrial Reserve Army**

The accumulation of capital, though originally appearing as its quantitative extension only, is effected, as we have seen, under a progressive qualitative change in its composition, under a constant increase of its constant, at the expense of its variable constituent.<sup>13</sup>

The specifically capitalist mode of production, the development of the productive power of labour corresponding to it, and the change thence resulting in the organic composition of capital, do not merely keep pace with the advance of accumulation, or with the growth of social wealth. They develop at a much quicker rate, because mere accumulation, the absolute increase of the total social capital, is accompanied by the centralisation of the individual capitals of which that total is made up; and because the change in the technological composition of the additional capital goes

hand in hand with a similar change in the technological composition of the original capital. With the advance of accumulation, therefore, the proportion of constant to variable capital changes. If it was originally say 1:1, it now becomes successively 2:1, 3:1, 4:1, 5:1, 7:1, &c., so that, as the capital increases, instead of  $\frac{1}{2}$  of its total value, only  $\frac{1}{3}$ ,  $\frac{1}{4}$ ,  $\frac{1}{5}$ ,  $\frac{1}{6}$ ,  $\frac{1}{8}$ , &c., is transformed into labour-power, and, on the other hand,  $\frac{2}{3}$ ,  $\frac{3}{4}$ ,  $\frac{4}{5}$ ,  $\frac{5}{6}$ ,  $\frac{7}{8}$  into means of production. Since the demand for labour is determined not by the amount of capital as a whole, but by its variable constituent alone, that demand falls progressively with the increase of the total capital, instead of, as previously assumed, rising in proportion to it. It falls relatively to the magnitude of the total capital, and at an accelerated rate, as this magnitude increases. With the growth of the total capital, its variable constituent or the labour incorporated in it, also does increase, but in a constantly diminishing proportion. The intermediate pauses are shortened, in which accumulation works as simple extension of production, on a given technical basis. It is not merely that an accelerated accumulation of total capital, accelerated in a constantly growing progression, is needed to absorb an additional number of labourers, or even, on account of the constant metamorphosis of old capital, to keep employed those already functioning. In its turn, this increasing accumulation and centralisation becomes a source of new changes in the composition of capital, of a more accelerated diminution of its variable, as compared with its constant constituent. This accelerated relative diminution of the variable constituent, that goes along with the accelerated increase of the total capital, and moves more rapidly than this increase, takes the inverse form, at the other pole, of an apparently absolute increase of the labouring population, an increase always moving more rapidly than that of the variable capital or the means of employment. But in fact, it is capitalistic accumulation itself that constantly produces, and produces in the direct ratio of its own energy and extent, a relatively redundant population of labourers, *i.e.*, a population of greater extent than suffices for the average needs of the self-expansion of capital, and therefore a surplus population.

Considering the social capital in its totality, the movement of its accumulation now causes periodical changes, affecting it more or less as a whole, now distributes its various phases simultaneously over the different spheres of production. In some spheres a change in the composition of capital occurs without increase of its absolute magnitude, as a consequence of simple centralisation; in others the absolute growth of capital is connected with absolute diminution of its variable constituent, or of the labour power absorbed by it; in others again, capital continues growing for a time on its given technical basis, and attracts additional labour power in proportion to its increase, while at other times it undergoes organic change, and lessens its variable constituent; in all spheres, the increase of the variable part of capital, and therefore of the number of labourers employed by it, is always connected with violent fluctuations and transitory production of surplus population, whether this takes the more striking form of the repulsion of labourers already employed, or the less evident but not less real form of the more difficult absorption of the additional labouring population through the usual channels.<sup>14</sup> With the magnitude of social capital already functioning, and the degree of its increase, with the extension of the scale of production, and the mass of the labourers set in motion, with the development of the productiveness of their labour, with the greater breadth and fulness of all sources of wealth, there is also an extension of the scale on which greater attraction of labourers by capital is accompanied by their greater repulsion; the rapidity of the change in the organic composition of capital, and in its technical form increases, and an increasing number of spheres of production becomes involved in this change, now simultaneously, now alternately. The labouring population therefore produces, along with the accumulation of capital produced by it, the means by which it itself is made relatively superfluous, is turned into a relative surplus population; and it does this to an always increasing extent.<sup>15</sup> This is a law of population peculiar to the capitalist mode of

production; and in fact every special historic mode of production has its own special laws of population, historically valid within its limits and only in so far as man has not interfered with them.

But if a surplus labouring population is a necessary product of accumulation or of the development of wealth on a capitalist basis, this surplus population becomes, conversely, the lever of capitalistic accumulation, nay, a condition of existence of the capitalist mode of production. It forms a disposable industrial reserve army, that belongs to capital quite as absolutely as if the latter had bred it at its own cost. Independently of the limits of the actual increase of population, it creates, for the changing needs of the self-expansion of capital, a mass of human material always ready for exploitation. With accumulation, and the development of the productiveness of labour that accompanies it, the power of sudden expansion of capital grows also; it grows, not merely because the elasticity of the capital already functioning increases, not merely because the absolute wealth of society expands, of which capital only forms an elastic part, not merely because credit, under every special stimulus, at once places an unusual part of this wealth at the disposal of production in the form of additional capital; it grows, also, because the technical conditions of the process of production themselves – machinery, means of transport, &c. – now admit of the rapidest transformation of masses of surplus-product into additional means of production. The mass of social wealth, overflowing with the advance of accumulation, and transformable into additional capital, thrusts itself frantically into old branches of production, whose market suddenly expands, or into newly formed branches, such as railways, &c., the need for which grows out of the development of the old ones. In all such cases, there must be the possibility of throwing great masses of men suddenly on the decisive points without injury to the scale of production in other spheres. Overpopulation supplies these masses. The course characteristic of modern industry, *viz.*, a decennial cycle (interrupted by smaller oscillations), of periods of average activity, production at high pressure, crisis and stagnation, depends on the constant formation, the greater or less absorption, and the re-formation of the industrial reserve army or surplus population. In their turn, the varying phases of the industrial cycle recruit the surplus population, and become one of the most energetic agents of its reproduction. This peculiar course of modern industry, which occurs in no earlier period of human history, was also impossible in the childhood of capitalist production. The composition of capital changed but very slowly. With its accumulation, therefore, there kept pace, on the whole, a corresponding growth in the demand for labour. Slow as was the advance of accumulation compared with that of more modern times, it found a check in the natural limits of the exploitable labouring population, limits which could only be got rid of by forcible means to be mentioned later. The expansion by fits and starts of the scale of production is the preliminary to its equally sudden contraction; the latter again evokes the former, but the former is impossible without disposable human material, without an increase, in the number of labourers independently of the absolute growth of the population. This increase is effected by the simple process that constantly “sets free” a part of the labourers; by methods which lessen the number of labourers employed in proportion to the increased production. The whole form of the movement of modern industry depends, therefore, upon the constant transformation of a part of the labouring population into unemployed or half-employed hands. The superficiality of Political Economy shows itself in the fact that it looks upon the expansion and contraction of credit, which is a mere symptom of the periodic changes of the industrial cycle, as their cause. As the heavenly bodies, once thrown into a certain definite motion, always repeat this, so is it with social production as soon as it is once thrown into this movement of alternate expansion and contraction. Effects, in their turn, become causes, and the varying accidents of the whole process, which always reproduces its own conditions, take on the form of periodicity. When this periodicity is once consolidated, even Political Economy then sees

that the production of a relative surplus population – *i.e.*, surplus with regard to the average needs of the self-expansion of capital – is a necessary condition of modern industry.

“Suppose,” says H. Merivale, formerly Professor of Political Economy at Oxford, subsequently employed in the English Colonial Office, “suppose that, on the occasion of some of these crises, the nation were to rouse itself to the effort of getting rid by emigration of some hundreds of thousands of superfluous arms, what would be the consequence? That, at the first returning demand for labour, there would be a deficiency. However rapid reproduction may be, it takes, at all events, the space of a generation to replace the loss of adult labour. Now, the profits of our manufacturers depend mainly on the power of making use of the prosperous moment when demand is brisk, and thus compensating themselves for the interval during which it is slack. This power is secured to them only by the command of machinery and of manual labour. They must have hands ready by them, they must be able to increase the activity of their operations when required, and to slacken it again, according to the state of the market, or they cannot possibly maintain that pre-eminence in the race of competition on which the wealth of the country is founded.”<sup>16</sup>

Even Malthus recognises overpopulation as a necessity of modern industry, though, after his narrow fashion, he explains it by the absolute over-growth of the labouring population, not by their becoming relatively supernumerary. He says:

“Prudential habits with regard to marriage, carried to a considerable extent among the labouring class of a country mainly depending upon manufactures and commerce, might injure it.... From the nature of a population, an increase of labourers cannot be brought into market in consequence of a particular demand till after the lapse of 16 or 18 years, and the conversion of revenue into capital, by saving, may take place much more rapidly: a country is always liable to an increase in the quantity of the funds for the maintenance of labour faster than the increase of population.”<sup>17</sup>

After Political Economy has thus demonstrated the constant production of a relative surplus population of labourers to be a necessity of capitalistic accumulation, she very aptly, in the guise of an old maid, puts in the mouth of her “beau ideal” of a capitalist the following words addressed to those supernumeraries thrown on the streets by their own creation of additional capital: –

“We manufacturers do what we can for you, whilst we are increasing that capital on which you must subsist, and you must do the rest by accommodating your numbers to the means of subsistence.”<sup>18</sup>

Capitalist production can by no means content itself with the quantity of disposable labour power which the natural increase of population yields. It requires for its free play an industrial reserve army independent of these natural limits.

Up to this point it has been assumed that the increase or diminution of the variable capital corresponds rigidly with the increase or diminution of the number of labourers employed.

The number of labourers commanded by capital may remain the same, or even fall, while the variable capital increases. This is the case if the individual labourer yields more labour, and therefore his wages increase, and this although the price of labour remains the same or even falls, only more slowly than the mass of labour rises. Increase of variable capital, in this case, becomes an index of more labour, but not of more labourers employed. It is the absolute interest of every capitalist to press a given quantity of labour out of a smaller, rather than a greater number of

labourers, if the cost is about the same. In the latter case, the outlay of constant capital increases in proportion to the mass of labour set in action; in the former that increase is much smaller. The more extended the scale of production, the stronger this motive. Its force increases with the accumulation of capital.

We have seen that the development of the capitalist mode of production and of the productive power of labour – at once the cause and effect of accumulation – enables the capitalist, with the same outlay of variable capital, to set in action more labour by greater exploitation (extensive or intensive) of each individual labour power. We have further seen that the capitalist buys with the same capital a greater mass of labour power, as he progressively replaces skilled labourers by less skilled, mature labour power by immature, male by female, that of adults by that of young persons or children.

On the one hand, therefore, with the progress of accumulation, a larger variable capital sets more labour in action without enlisting more labourers; on the other, a variable capital of the same magnitude sets in action more labour with the same mass of labour power; and, finally, a greater number of inferior labour powers by displacement of higher.

The production of a relative surplus population, or the setting free of labourers, goes on therefore yet more rapidly than the technical revolution of the process of production that accompanies, and is accelerated by, the advance of accumulation; and more rapidly than the corresponding diminution of the variable part of capital as compared with the constant. If the means of production, as they increase in extent and effective power, become to a less extent means of employment of labourers, this state of things is again modified by the fact that in proportion as the productiveness of labour increases, capital increases its supply of labour more quickly than its demand for labourers. The overwork of the employed part of the working class swells the ranks of the reserve, whilst conversely the greater pressure that the latter by its competition exerts on the former, forces these to submit to overwork and to subjugation under the dictates of capital. The condemnation of one part of the working class to enforced idleness by the overwork of the other part, and the converse, becomes a means of enriching the individual capitalists,<sup>19</sup> and accelerates at the same time the production of the industrial reserve army on a scale corresponding with the advance of social accumulation. How important is this element in the formation of the relative surplus population, is shown by the example of England. Her technical means for saving labour are colossal. Nevertheless, if to-morrow morning labour generally were reduced to a rational amount, and proportioned to the different sections of the working class according to age and sex, the working population to hand would be absolutely insufficient for the carrying on of national production on its present scale. The great majority of the labourers now “unproductive” would have to be turned into “productive” ones.

Taking them as a whole, the general movements of wages are exclusively regulated by the expansion and contraction of the industrial reserve army, and these again correspond to the periodic changes of the industrial cycle. They are, therefore, not determined by the variations of the absolute number of the working population, but by the varying proportions in which the working class is divided into active and reserve army, by the increase or diminution in the relative amount of the surplus population, by the extent to which it is now absorbed, now set free. For Modern Industry with its decennial cycles and periodic phases, which, moreover, as accumulation advances, are complicated by irregular oscillations following each other more and more quickly, that would indeed be a beautiful law, which pretends to make the action of capital dependent on the absolute variation of the population, instead of regulating the demand and supply of labour by the alternate expansion and contraction of capital, the labour-market now appearing relatively under-full, because capital is expanding, now again over-full, because it is contracting. Yet this is

the dogma of the economists. According to them, wages rise in consequence of accumulation of capital. The higher wages stimulate the working population to more rapid multiplication, and this goes on until the labour-market becomes too full, and therefore capital, relatively to the supply of labour, becomes insufficient. Wages fall, and now we have the reverse of the medal. The working population is little by little decimated as the result of the fall in wages, so that capital is again in excess relatively to them, or, as others explain it, falling wages and the corresponding increase in the exploitation of the labourer again accelerates accumulation, whilst, at the same time, the lower wages hold the increase of the working class in check. Then comes again the time, when the supply of labour is less than the demand, wages rise, and so on. A beautiful mode of motion this for developed capitalist production! Before, in consequence of the rise of wages, any positive increase of the population really fit for work could occur, the time would have been passed again and again, during which the industrial campaign must have been carried through, the battle fought and won.

Between 1849 and 1859, a rise of wages practically insignificant, though accompanied by falling prices of corn, took place in the English agricultural districts. In Wiltshire, *e.g.*, the weekly wages rose from 7s. to 8s.; in Dorsetshire from 7s. or 8s., to 9s., &c. This was the result of an unusual exodus of the agricultural surplus population caused by the demands of war, the vast extension of railroads, factories, mines, &c. The lower the wages, the higher is the proportion in which ever so insignificant a rise of them expresses itself. If the weekly wage, *e.g.*, is 20s. and it rises to 22s., that is a rise of 10 per cent.; but if it is only 7s. and it rises to 9s., that is a rise of  $28 \frac{4}{7}$  per cent., which sounds very fine. Everywhere the farmers were howling, and the London *Economist*, with reference to these starvation-wages, prattled quite seriously of “a general and substantial advance.”<sup>20</sup> What did the farmers do now? Did they wait until, in consequence of this brilliant remuneration, the agricultural labourers had so increased and multiplied that their wages must fall again, as prescribed by the dogmatic economic brain? They introduced more machinery, and in a moment the labourers were redundant again in a proportion satisfactory even to the farmers. There was now “more capital” laid out in agriculture than before, and in a more productive form. With this the demand for labour fell, not only relatively, but absolutely.

The above economic fiction confuses the laws that regulate the general movement of wages, or the ratio between the working class – *i.e.*, the total labour power – and the total social capital, with the laws that distribute the working population over the different spheres of production. If, *e.g.*, in consequence of favourable circumstances, accumulation in a particular sphere of production becomes especially active, and profits in it, being greater than the average profits, attract additional capital, of course the demand for labour rises and wages also rise. The higher wages draw a larger part of the working population into the more favoured sphere, until it is glutted with labour power, and wages at length fall again to their average level or below it, if the pressure is too great. Then, not only does the immigration of labourers into the branch of industry in question cease; it gives place to their emigration. Here the political economist thinks he sees the why and wherefore of an absolute increase of workers accompanying an increase of wages, and of a diminution of wages accompanying an absolute increase of labourers. But he sees really only the local oscillation of the labour-market in a particular sphere of production – he sees only the phenomena accompanying the distribution of the working population into the different spheres of outlay of capital, according to its varying needs.

The industrial reserve army, during the periods of stagnation and average prosperity, weighs down the active labour-army; during the periods of over-production and paroxysm, it holds its pretensions in check. Relative surplus population is therefore the pivot upon which the law of

demand and supply of labour works. It confines the field of action of this law within the limits absolutely convenient to the activity of exploitation and to the domination of capital.

This is the place to return to one of the grand exploits of economic apologetics. It will be remembered that if through the introduction of new, or the extension of old, machinery, a portion of variable capital is transformed into constant, the economic apologist interprets this operation which “fixes” capital and by that very act sets labourers “free,” in exactly the opposite way, pretending that it sets free capital for the labourers. Only now can one fully understand the effrontery of these apologists. What are set free are not only the labourers immediately turned out by the machines, but also their future substitutes in the rising generation, and the additional contingent, that with the usual extension of trade on the old basis would be regularly absorbed. They are now all “set free,” and every new bit of capital looking out for employment can dispose of them. Whether it attracts them or others, the effect on the general labour demand will be nil, if this capital is just sufficient to take out of the market as many labourers as the machines threw upon it. If it employs a smaller number, that of the supernumeraries increases; if it employs a greater, the general demand for labour only increases to the extent of the excess of the employed over those “set free.” The impulse that additional capital, seeking an outlet, would otherwise have given to the general demand for labour, is therefore in every case neutralised to the extent of the labourers thrown out of employment by the machine. That is to say, the mechanism of capitalistic production so manages matters that the absolute increase of capital is accompanied by no corresponding rise in the general demand for labour. And this the apologist calls a compensation for the misery, the sufferings, the possible death of the displaced labourers during the transition period that banishes them into the industrial reserve army! The demand for labour is not identical with increase of capital, nor supply of labour with increase of the working class. It is not a case of two independent forces working on one another. Les dés sont pipés.

Capital works on both sides at the same time. If its accumulation, on the one hand, increases the demand for labour, it increases on the other the supply of labourers by the “setting free” of them, whilst at the same time the pressure of the unemployed compels those that are employed to furnish more labour, and therefore makes the supply of labour, to a certain extent, independent of the supply of labourers. The action of the law of supply and demand of labour on this basis completes the despotism of capital. As soon, therefore, as the labourers learn the secret, how it comes to pass that in the same measure as they work more, as they produce more wealth for others, and as the productive power of their labour increases, so in the same measure even their function as a means of the self-expansion of capital becomes more and more precarious for them; as soon as they discover that the degree of intensity of the competition among themselves depends wholly on the pressure of the relative surplus population; as soon as, by Trades’ Unions, &c., they try to organise a regular co-operation between employed and unemployed in order to destroy or to weaken the ruinous effects of this natural law of capitalistic production on their class, so soon capital and its sycophant, Political Economy, cry out at the infringement of the “eternal” and so to say “sacred” law of supply and demand. Every combination of employed and unemployed disturbs the “harmonious” action of this law. But, on the other hand, as soon as (in the colonies, *e.g.*) adverse circumstances prevent the creation of an industrial reserve army and, with it, the absolute dependence of the working class upon the capitalist class, capital, along with its commonplace Sancho Panza, rebels against the “sacred” law of supply and demand, and tries to check its inconvenient action by forcible means and State interference.

## Section 4: Different Forms of the Relative surplus population. The General Law of Capitalistic Accumulation

The relative surplus population exists in every possible form. Every labourer belongs to it during the time when he is only partially employed or wholly unemployed. Not taking into account the great periodically recurring forms that the changing phases of the industrial cycle impress on it, now an acute form during the crisis, then again a chronic form during dull times – it has always three forms, the floating, the latent, the stagnant.

In the centres of modern industry – factories, manufactures, ironworks, mines, &c. – the labourers are sometimes repelled, sometimes attracted again in greater masses, the number of those employed increasing on the whole, although in a constantly decreasing proportion to the scale of production. Here the surplus population exists in the floating form.

In the automatic factories, as in all the great workshops, where machinery enters as a factor, or where only the modern division of labour is carried out, large numbers of boys are employed up to the age of maturity. When this term is once reached, only a very small number continue to find employment in the same branches of industry, whilst the majority are regularly discharged. This majority forms an element of the floating surplus population, growing with the extension of those branches of industry. Part of them emigrates, following in fact capital that has emigrated. One consequence is that the female population grows more rapidly than the male, *teste* England. That the natural increase of the number of labourers does not satisfy the requirements of the accumulation of capital, and yet all the time is in excess of them, is a contradiction inherent to the movement of capital itself. It wants larger numbers of youthful labourers, a smaller number of adults. The contradiction is not more glaring than that other one that there is a complaint of the want of hands, while at the same time many thousands are out of work, because the division of labour chains them to a particular branch of industry.<sup>21</sup>

The consumption of labour power by capital is, besides, so rapid that the labourer, half-way through his life, has already more or less completely lived himself out. He falls into the ranks of the supernumeraries, or is thrust down from a higher to a lower step in the scale. It is precisely among the work-people of modern industry that we meet with the shortest duration of life. Dr. Lee, Medical Officer of Health for Manchester, stated

“that the average age at death of the Manchester ... upper middle class was 38 years, while the average age at death of the labouring class was 17; while at Liverpool those figures were represented as 35 against 15. It thus appeared that the well-to-do classes had a lease of life which was more than double the value of that which fell to the lot of the less favoured citizens.”<sup>22</sup>

In order to conform to these circumstances, the absolute increase of this section of the proletariat must take place under conditions that shall swell their numbers, although the individual elements are used up rapidly. Hence, rapid renewal of the generations of labourers (this law does not hold for the other classes of the population). This social need is met by early marriages, a necessary consequence of the conditions in which the labourers of modern industry live, and by the premium that the exploitation of children sets on their production.

As soon as capitalist production takes possession of agriculture, and in proportion to the extent to which it does so, the demand for an agricultural labouring population falls absolutely, while the accumulation of the capital employed in agriculture advances, without this repulsion being, as in non-agricultural industries, compensated by a greater attraction. Part of the agricultural population is therefore constantly on the point of passing over into an urban or manufacturing

proletariat, and on the look-out for circumstances favourable to this transformation. (Manufacture is used here in the sense of all non-agricultural industries.)<sup>23</sup> This source of relative surplus population is thus constantly flowing. But the constant flow towards the towns pre-supposes, in the country itself, a constant latent surplus population, the extent of which becomes evident only when its channels of outlet open to exceptional width. The agricultural labourer is therefore reduced to the minimum of wages, and always stands with one foot already in the swamp of pauperism.

The third category of the relative surplus population, the stagnant, forms a part of the active labour army, but with extremely irregular employment. Hence it furnishes to capital an inexhaustible reservoir of disposable labour power. Its conditions of life sink below the average normal level of the working class; this makes it at once the broad basis of special branches of capitalist exploitation. It is characterised by maximum of working-time, and minimum of wages. We have learnt to know its chief form under the rubric of “domestic industry.” It recruits itself constantly from the supernumerary forces of modern industry and agriculture, and specially from those decaying branches of industry where handicraft is yielding to manufacture, manufacture to machinery. Its extent grows, as with the extent and energy of accumulation, the creation of a surplus population advances. But it forms at the same time a self-reproducing and self-perpetuating element of the working class, taking a proportionally greater part in the general increase of that class than the other elements. In fact, not only the number of births and deaths, but the absolute size of the families stand in inverse proportion to the height of wages, and therefore to the amount of means of subsistence of which the different categories of labourers dispose. This law of capitalistic society would sound absurd to savages, or even civilised colonists. It calls to mind the boundless reproduction of animals individually weak and constantly hunted down.<sup>24</sup>

The lowest sediment of the relative surplus population finally dwells in the sphere of pauperism. Exclusive of vagabonds, criminals, prostitutes, in a word, the “dangerous” classes, this layer of society consists of three categories. First, those able to work. One need only glance superficially at the statistics of English pauperism to find that the quantity of paupers increases with every crisis, and diminishes with every revival of trade. Second, orphans and pauper children. These are candidates for the industrial reserve army, and are, in times of great prosperity, as 1860, *e.g.*, speedily and in large numbers enrolled in the active army of labourers. Third, the demoralised and ragged, and those unable to work, chiefly people who succumb to their incapacity for adaptation, due to the division of labour; people who have passed the normal age of the labourer; the victims of industry, whose number increases with the increase of dangerous machinery, of mines, chemical works, &c., the mutilated, the sickly, the widows, &c. Pauperism is the hospital of the active labour-army and the dead weight of the industrial reserve army. Its production is included in that of the relative surplus population, its necessity in theirs; along with the surplus population, pauperism forms a condition of capitalist production, and of the capitalist development of wealth. It enters into the *faux frais* of capitalist production; but capital knows how to throw these, for the most part, from its own shoulders on to those of the working class and the lower middle class.

The greater the social wealth, the functioning capital, the extent and energy of its growth, and, therefore, also the absolute mass of the proletariat and the productiveness of its labour, the greater is the industrial reserve army. The same causes which develop the expansive power of capital, develop also the labour power at its disposal. The relative mass of the industrial reserve army increases therefore with the potential energy of wealth. But the greater this reserve army in proportion to the active labour army, the greater is the mass of a consolidated surplus population,

whose misery is in inverse ratio to its torment of labour. The more extensive, finally, the Lazarus layers of the working class, and the industrial reserve army, the greater is official pauperism. *This is the absolute general law of capitalist accumulation.* Like all other laws it is modified in its working by many circumstances, the analysis of which does not concern us here.

The folly is now patent of the economic wisdom that preaches to the labourers the accommodation of their number to the requirements of capital. The mechanism of capitalist production and accumulation constantly effects this adjustment. The first word of this adaptation is the creation of a relative surplus population, or industrial reserve army. Its last word is the misery of constantly extending strata of the active army of labour, and the dead weight of pauperism.

The law by which a constantly increasing quantity of means of production, thanks to the advance in the productiveness of social labour, may be set in movement by a progressively diminishing expenditure of human power, this law, in a capitalist society – where the labourer does not employ the means of production, but the means of production employ the labourer – undergoes a complete inversion and is expressed thus: the higher the productiveness of labour, the greater is the pressure of the labourers on the means of employment, the more precarious, therefore, becomes their condition of existence, *viz.*, the sale of their own labour power for the increasing of another's wealth, or for the self-expansion of capital. The fact that the means of production, and the productiveness of labour, increase more rapidly than the productive population, expresses itself, therefore, capitalistically in the inverse form that the labouring population always increases more rapidly than the conditions under which capital can employ this increase for its own self-expansion.

We saw in Part IV., when analysing the production of relative surplus-value: within the capitalist system all methods for raising the social productiveness of labour are brought about at the cost of the individual labourer; all means for the development of production transform themselves into means of domination over, and exploitation of, the producers; they mutilate the labourer into a fragment of a man, degrade him to the level of an appendage of a machine, destroy every remnant of charm in his work and turn it into a hated toil; they estrange from him the intellectual potentialities of the labour process in the same proportion as science is incorporated in it as an independent power; they distort the conditions under which he works, subject him during the labour process to a despotism the more hateful for its meanness; they transform his life-time into working-time, and drag his wife and child beneath the wheels of the Juggernaut of capital. But all methods for the production of surplus-value are at the same time methods of accumulation; and every extension of accumulation becomes again a means for the development of those methods. It follows therefore that in proportion as capital accumulates, the lot of the labourer, be his payment high or low, must grow worse. The law, finally, that always equilibrates the relative surplus population, or industrial reserve army, to the extent and energy of accumulation, this law rivets the labourer to capital more firmly than the wedges of Vulcan did Prometheus to the rock. It establishes an accumulation of misery, corresponding with accumulation of capital. Accumulation of wealth at one pole is, therefore, at the same time accumulation of misery, agony of toil slavery, ignorance, brutality, mental degradation, at the opposite pole, *i.e.*, on the side of the class that produces its own product in the form of capital.<sup>25</sup> This antagonistic character of capitalistic accumulation is enunciated in various forms by political economists, although by them it is confounded with phenomena, certainly to some extent analogous, but nevertheless essentially distinct, and belonging to pre-capitalistic modes of production.

The Venetian monk Ortes, one of the great economic writers of the 18th century, regards the antagonism of capitalist production as a general natural law of social wealth.

“In the economy of a nation, advantages and evils always balance one another (il bene ed il male economico in una nazione sempre all, istessa misura): the abundance of wealth with some people, is always equal to the want of it with others (la copia dei beni in alcuni sempre eguale alia mancanza di essi in altri): the great riches of a small number are always accompanied by the absolute privation of the first necessities of life for many others. The wealth of a nation corresponds with its population, and its misery corresponds with its wealth. Diligence in some compels idleness in others. The poor and idle are a necessary consequence of the rich and active,” &c.<sup>26</sup>

In a thoroughly brutal way about 10 years after Ortes, the Church of England parson, Townsend, glorified misery as a necessary condition of wealth.

“Legal constraint (to labour) is attended with too much trouble, violence, and noise, whereas hunger is not only a peaceable, silent, unremitted pressure, but as the most natural motive to industry and labour, it calls forth the most powerful exertions.”

Everything therefore depends upon making hunger permanent among the working class, and for this, according to Townsend, the principle of population, especially active among the poor, provides.

“It seems to be a law of Nature that the poor should be to a certain degree improvident” [*i.e.*, so improvident as to be born *without* a silver spoon in the mouth], “that there may always be some to fulfil the most servile, the most sordid, and the most ignoble offices in the community. The stock of human happiness is thereby much increased, whilst the more delicate are not only relieved from drudgery ... but are left at liberty without interruption to pursue those callings which are suited to their various dispositions ... it” [the Poor Law] “tends to destroy the harmony and beauty, the symmetry and order of that system which God and Nature have established in the world.”<sup>27</sup> If the Venetian monk found in the fatal destiny that makes misery eternal, the *raison d’être* of Christian charity, celibacy, monasteries and holy houses, the Protestant prebendary finds in it a pretext for condemning the laws in virtue of which the poor possessed a right to a miserable public relief.

“The progress of social wealth,” says Storch, “begets this useful class of society ... which performs the most wearisome, the vilest, the most disgusting functions, which takes, in a word, on its shoulders all that is disagreeable and servile in life, and procures thus for other classes leisure, serenity of mind and conventional” [c’est bon!] “dignity of character.”<sup>28</sup>

Storch asks himself in what then really consists the progress of this capitalistic civilisation with its misery and its degradation of the masses, as compared with barbarism. He finds but one answer: security!

“Thanks to the advance of industry and science,” says Sismondi, “every labourer can produce every day much more than his consumption requires. But at the same time, whilst his labour produces wealth, that wealth would, were he called on to consume it himself, make him less fit for labour.” According to him, “men” [*i.e.*, non-workers] “would probably prefer to do without all artistic perfection, and all the enjoyments that manufacturers procure for us, if it were necessary that all should buy them by constant toil like that of the labourer.... Exertion today is

separated from its recompense; it is not the same man that first works, and then reposes; but it is because the one works that the other rests.... The indefinite multiplication of the productive powers of labour can then only have for result the increase of luxury and enjoyment of the idle rich.”<sup>29</sup>

Finally Destutt de Tracy, the fish-blooded bourgeois doctrinaire, blurts out brutally:

“In poor nations the people are comfortable, in rich nations they are generally poor.”<sup>30</sup>

## Section 5: Illustrations of the General Law of Capitalist Accumulation

### A. England from 1846-1866

No period of modern society is so favourable for the study of capitalist accumulation as the period of the last 20 years. It is as if this period had found Fortunatus' purse. But of all countries England again furnishes the classical example, because it holds the foremost place in the world-market, because capitalist production is here alone completely developed, and lastly, because the introduction of the Free-trade millennium since 1846 has cut off the last retreat of vulgar economy. The titanic advance of production – the latter half of the 20 years' period again far surpassing the former – has been already pointed out sufficiently in Part IV.

Although the absolute increase of the English population in the last half century was very great, the relative increase or rate of growth fell constantly, as the following table borrowed from the census shows.

Annual increase per cent. of the population of England and Wales in decimal numbers:

|           |       |                  |
|-----------|-------|------------------|
| 1811-1821 | 1.533 | <i>per cent.</i> |
| 1821-1831 | 1.446 | <i>per cent.</i> |
| 1831-1841 | 1.326 | <i>per cent.</i> |
| 1841-1851 | 1.216 | <i>per cent.</i> |
| 1851-1861 | 1.141 | <i>per cent.</i> |

Let us now, on the other hand, consider the increase of wealth. Here the movement of profit, rent of land, &c., that come under the income tax, furnishes the surest basis. The increase of profits liable to income tax (farmers and some other categories not included) in Great Britain from 1853 to 1864 amounted to 50.47% or 4.58% as the annual average,<sup>31</sup> that of the population during the same period to about 12%. The augmentation of the rent of land subject to taxation (including houses, railways, mines, fisheries, &c.), amounted for 1853 to 1864 to 38% or 3 5/12% annually. Under this head the following categories show the greatest increase:

| Excess of annual income of 1864 over that of 1853 |        | Increase per year |
|---|--------|-------------------|
| Houses  | 38.60% | 3.50%             |
| Quarries  | 84.76% | 7.70%             |
| Mines   | 68.85% | 6.26%             |
| Ironworks   | 39.92% | 3.63%             |
| Fisheries   | 57.37% | 5.21%             |

|          |         |        |
|----------|---------|--------|
| Gasworks | 126.02% | 11.45% |
| Railways | 83.29%  | 7.57%  |

If we compare the years from 1853 to 1864 in three sets of four consecutive years each, the rate of augmentation of the income increases constantly.<sup>32</sup> It is, *e.g.*, for that arising from profits between 1853 to 1857, 1.73% yearly; 1857-1861, 2.74%, and for 1861-64, 9.30% yearly. The sum of the incomes of the United Kingdom that come under the income tax was in 1856, £307,068,898; in 1859, £328,127,416; in 1862, £351,745,241; in 1863, £359,142,897; in 1864, £362,462,279; in 1865, £385,530,020.<sup>33</sup>

The accumulation of capital was attended at the same time by its concentration and centralisation. Although no official statistics of agriculture existed for England (they did for Ireland), they were voluntarily given in 10 counties. These statistics gave the result that from 1851 to 1861 the number of farms of less than 100 acres had fallen from 31,583 to 26,597, so that 5,016 had been thrown together into larger farms.<sup>34</sup> From 1815 to 1825 no personal estate of more than £1,000,000 came under the succession duty; from 1825 to 1855, however, 8 did; and 4 from 1856 to June, 1859, *i.e.*, in 4½ years.<sup>35</sup> The centralisation will, however, be best seen from a short analysis of the Income Tax Schedule D (profits, exclusive of farms, &c.), in the years 1864 and 1865. I note beforehand that incomes from this source pay income tax on everything over £60. These incomes liable to taxation in England, Wales and Scotland, amounted in 1864 to £95,844,222, in 1865 to £105,435,579.<sup>36</sup> The number of persons taxed were in 1864, 308,416, out of a population of 23,891,009; in 1865, 332,431 out of a population of 24,127,003. The following table shows the distribution of these incomes in the two years:

|              | Year ending<br>April 5th, 1864. |                       | Year ending<br>April 5th, 1865. |                       |
|--------------|---------------------------------|-----------------------|---------------------------------|-----------------------|
|              | Income from<br>Profits          | Income from<br>People | Income from<br>Profits          | Income from<br>People |
| Total Income | £95,844,222                     | 308,416               | 105,435,738                     | 332,431               |
| of these     | 57,028,289                      | 23,334                | 64,554,297                      | 24,265                |
| of these     | 36,415,225                      | 3,619                 | 42,535,576                      | 4,021                 |
| of these     | 22,809,781                      | 832                   | 27,555,313                      | 973                   |
| of these     | 8,744,762                       | 91                    | 11,077,238                      | 107                   |

In 1855 there were produced in the United Kingdom 61,453,079 tons of coal, of value £16,113,167; in 1864, 92,787,873 tons, of value £23,197,968; in 1855, 3,218,154 tons of pig-iron, of value £8,045,385; 1864, 4,767,951 tons, of value £11,919,877. In 1854 the length of the railroads worked in the United Kingdom was 8,054 miles, with a paid-up capital of £286,068,794; in 1864 the length was 12,789 miles, with capital paid up of £425,719,613. In 1854 the total sum of the exports and imports of the United Kingdom was £268,210,145; in 1865, £489,923,285. The following table shows the movement of the exports:

|                   |             |
|-------------------|-------------|
| 1846              | £58,842,377 |
| 1849              | 63,596,052  |
| 1856              | 115,826,948 |
| 1860              | 135,842,817 |
| 1865              | 165,862,402 |
| 1866 <sup>3</sup> | 188,917,563 |

After these few examples one understands the cry of triumph of the Registrar-General of the British people:

“Rapidly as the population has increased, it has not kept pace with the progress of industry and wealth.”<sup>38</sup>

Let us turn now to the direct agents of this industry, or the producers of this wealth, to the working class.

“It is one of the most melancholy features in the social state of this country,” says Gladstone, “that while there was a decrease in the consuming powers of the people, and while there was an increase in the privations and distress of the labouring class and operatives, there was at the same time a constant accumulation of wealth in the upper classes, and a constant increase of capital.”<sup>39</sup>

Thus spake this unctuous minister in the House of Commons of February 13th, 1843. On April 16th, 1863, 20 years later, in the speech in which he introduced his Budget:

“From 1842 to 1852 the taxable income of the country increased by 6 per cent.... In the 8 years from 1853 to 1861 it had increased from the basis taken in 1853 by 20 per cent.! The fact is so astonishing as to be almost incredible ... this intoxicating augmentation of wealth and power ... entirely confined to classes of property ... must be of indirect benefit to the labouring population, because it cheapens the commodities of general consumption. While the rich have been growing richer, the poor have been growing less poor. At any rate, whether the extremes of poverty are less, I do not presume to say.”<sup>40</sup>

How lame an anti-climax! If the working class has remained “poor,” only “less poor” in proportion as it produces for the wealthy class “an intoxicating augmentation of wealth and power,” then it has remained relatively just as poor. If the extremes of poverty have not lessened, they have increased, because the extremes of wealth have. As to the cheapening of the means of subsistence, the official statistics, *e.g.*, the accounts of the London Orphan Asylum, show an increase in price of 20% for the average of the three years 1860-1862, compared with 1851-1853. In the following three years, 1863-1865, there was a progressive rise in the price of meat, butter, milk, sugar, salt, coals, and a number of other necessary means of subsistence.<sup>41</sup> Gladstone’s next Budget speech of April 7th, 1864, is a Pindaric dithyrambus on the advance of surplus-value-making and the happiness of the people “tempered by poverty.” He speaks of masses “on the border” of pauperism, of branches of trade in which “wages have not increased,” and finally sums up the happiness of the working class in the words:

“human life is but, in nine cases out of ten, a struggle for existence.”<sup>42</sup>

Professor Fawcett, not bound like Gladstone by official considerations, declares roundly:

“I do not, of course, deny that money wages have been augmented by this increase of capital (in the last ten years), but this apparent advantage is to a great extent lost, because many of the necessaries of life are becoming dearer” (he believes because of the fall in value of the precious metals)...“the rich grow rapidly richer, whilst there is no perceptible advance in the comfort enjoyed by the industrial classes.... They (the labourers) become almost the slaves of the tradesman, to whom they owe money.”<sup>43</sup>

In the chapters on the “working day” and “machinery,” the reader has seen under what circumstances the British working class created an “intoxicating augmentation of wealth and

power” for the propertied classes. There we were chiefly concerned with the social functioning of the labourer. But for a full elucidation of the law of accumulation, his condition outside the workshop must also be looked at, his condition as to food and dwelling. The limits of this book compel us to concern ourselves chiefly with the worst paid part of the industrial proletariat, and with the agricultural labourers, who together form the majority of the working class.

But first, one word on official pauperism, or on that part of the working class which has forfeited its condition of existence (the sale of labour power), and vegetates upon public alms. The official list of paupers numbered in England<sup>44</sup> 851,369 persons; in 1856, 877,767; in 1865, 971,433. In consequence of the cotton famine, it grew in the years 1863 and 1864 to 1,079,382 and 1,014,978. The crisis of 1866, which fell most heavily on London, created in this centre of the world market, more populous than the kingdom of Scotland, an increase of pauperism for the year 1866 of 19.5% compared with 1865, and of 24.4% compared with 1864, and a still greater increase for the first months of 1867 as compared with 1866. From the analysis of the statistics of pauperism, two points are to be taken. On the one hand, the fluctuation up and down of the number of paupers, reflects the periodic changes of the industrial cycle. On the other, the official statistics become more and more misleading as to the actual extent of pauperism in proportion as, with the accumulation of capital, the class-struggle, and, therefore, the class consciousness of the working men, develop. *E.g.*, the barbarity in the treatment of the paupers, at which the English Press (*The Times*, *Pall Mall Gazette*, etc.) have cried out so loudly during the last two years, is of ancient date. F. Engels showed in 1844 exactly the same horrors, exactly the same transient canting outcries of “sensational literature.” But frightful increase of “deaths by starvation” in London during the last ten years proves beyond doubt the growing horror in which the working-people hold the slavery of the workhouse, that place of punishment for misery.<sup>45</sup>

## B. The Badly Paid Strata of the British Industrial Class

During the cotton famine of 1862, Dr. Smith was charged by the Privy Council with an inquiry into the conditions of nourishment of the distressed operatives in Lancashire and Cheshire. His observations during many preceding years had led him to the conclusion that “to avert starvation diseases,” the daily food of an average woman ought to contain at least 3,900 grains of carbon with 180 grains of nitrogen; the daily food of an average man, at least 4,300 grains of carbon with 200 grains of nitrogen; for women, about the same quantity of nutritive elements as are contained in 2 lbs. of good wheaten bread, for men 1/9 more; for the weekly average of adult men and women, at least 28,600 grains of carbon and 1,330 grains of nitrogen. His calculation was practically confirmed in a surprising manner by its agreement with the miserable quantity of nourishment to which want had forced down the consumption of the cotton operatives. This was, in December, 1862, 29,211 grains of carbon, and 1,295 grains of nitrogen weekly.

In the year 1863, the Privy Council ordered an inquiry into the state of distress of the worst-nourished part of the English working class. Dr. Simon, medical officer to the Privy Council, chose for this work the above-mentioned Dr. Smith. His inquiry ranges on the one hand over the agricultural labourers, on the other, over silk-weavers, needlewomen, kid-glovers, stocking-weavers, glove-weavers, and shoemakers. The latter categories are, with the exception of the stocking-weavers, exclusively town-dwellers. It was made a rule in the inquiry to select in each category the most healthy families, and those comparatively in the best circumstances.

As a general result it was found that

“in only one of the examined classes of in-door operatives did the average nitrogen supply just exceed, while in another it nearly reached, the estimated standard of bare sufficiency [*i.e.*, sufficient to avert starvation diseases], and that

in two classes there was defect – in one, a very large defect – of both nitrogen and carbon. Moreover, as regards the examined families of the agricultural population, it appeared that more than a fifth were with less than the estimated sufficiency of carbonaceous food, that more than one-third were with less than the estimated sufficiency of nitrogenous food, and that in three counties (Berkshire, Oxfordshire, and Somersetshire), insufficiency of nitrogenous food was the average local diet.”<sup>46</sup>

Among the agricultural labourers, those of England, the wealthiest part of the United Kingdom, were the worst fed.<sup>47</sup> The insufficiency of food among the agricultural labourers, fell, as a rule, chiefly on the women and children, for “the man must eat to do his work.” Still greater penury ravaged the town-workers examined.

“They are so ill fed that assuredly among them there must be many cases of severe and injurious privation.”<sup>48</sup>

(“Privation” of the capitalist all this! *i.e.*, “abstinence” from paying for the means of subsistence absolutely necessary for the mere vegetation of his “hands.”)<sup>49</sup>

The following table shows the conditions of nourishment of the above-named categories of purely town-dwelling work-people, as compared with the minimum assumed by Dr. Smith, and with the food-allowance of the cotton operatives during the time of their greatest distress:

| <b>Both Sexes</b>  | <b>Average weekly carbon</b> | <b>Average weekly nitrogen</b> |
|--|------------------------------|--------------------------------|
| Five in-door occupations   | 28,876 grains                | 1,192 grains                   |
| Unemployed Lancashire Operatives   | 28,211 grains                | 1,295 grains                   |
| Minimum quantity to be allowed to the Lancashire Operatives, equal number of males and females | 28,600 grains                | 1,330 grains                   |

One half, or 60/125, of the industrial labour categories investigated, had absolutely no beer, 28% no milk. The weekly average of the liquid means of nourishment in the families varied from seven ounces in the needle-women to 24¾ ounces in the stocking-makers. The majority of those who did not obtain milk were needle-women in London. The quantity of bread-stuffs consumed weekly varied from 7¾ lbs. for the needle-women to 11½ lbs. for the shoemakers, and gave a total average of 9.9 lbs. per adult weekly. Sugar (treacle, etc.) varied from 4 ounces weekly for the kid-glovers to 11 ounces for the stocking-makers; and the total average per week for all categories was 8 ounces per adult weekly. Total weekly average of butter (fat, etc.) 5 ounces per adult. The weekly average of meat (bacon, etc.) varied from 7¼ ounces for the silk-weavers, to 18¼ ounces for the kid-glovers; total average for the different categories 13.6 ounces. The weekly cost of food per adult, gave the following average figures; silk-weavers 2s. 2½d., needle-women 2s. 7d., kid-glovers 2s. 9½d., shoemakers 2s. 7¾d., stocking-weavers 2s. 6¼d. For the silk-weavers of Macclesfield the average was only 1s. 8½d. The worst categories were the needle-women, silk-weavers and kid-glovers.<sup>50</sup> Of these facts, Dr. Simon in his General Health Report says:

“That cases are innumerable in which defective diet is the cause or the aggravator of disease, can be affirmed by any one who is conversant with poor law medical

practice, or with the wards and out-patient rooms of hospitals.... Yet in this point of view, there is, in my opinion, a very important sanitary context to be added. It must be remembered that privation of food is very reluctantly borne, and that as a rule great poorness of diet will only come when other privations have preceded it. Long before insufficiency of diet is a matter of hygienic concern, long before the physiologist would think of counting the grains of nitrogen and carbon which intervene between life and starvation, the household will have been utterly destitute of material comfort; clothing and fuel will have been even scantier than food – against inclemencies of weather there will have been no adequate protection – dwelling space will have been stinted to the degree in which overcrowding produces or increases disease; of household utensils and furniture there will have been scarcely any – even cleanliness will have been found costly or difficult, and if there still be self-respectful endeavours to maintain it, every such endeavour will represent additional pangs of hunger. The home, too, will be where shelter can be cheapest bought; in quarters where commonly there is least fruit of sanitary supervision, least drainage, least scavenging, least suppression of public nuisances, least or worst water supply, and, if in town, least light and air. Such are the sanitary dangers to which poverty is almost certainly exposed, when it is poverty enough to imply scantiness of food. And while the sum of them is of terrible magnitude against life, the mere scantiness of food is in itself of very serious moment.... These are painful reflections, especially when it is remembered that the poverty to which they advert is not the deserved poverty of idleness. In all cases it is the poverty of working populations. Indeed, as regards the in-door operatives, the work which obtains the scanty pittance of food, is for the most part excessively prolonged. Yet evidently it is only in a qualified sense that the work can be deemed self-supporting.... And on a very large scale the nominal self-support can be only a circuit, longer or shorter, to pauperism.”<sup>51</sup>

The intimate connexion between the pangs of hunger of the most industrious layers of the working class, and the extravagant consumption, coarse or refined, of the rich, for which capitalist accumulation is the basis, reveals itself only when the economic laws are known. It is otherwise with the “housing of the poor.” Every unprejudiced observer sees that the greater the centralisation of the means of production, the greater is the corresponding heaping together of the labourers, within a given space; that therefore the swifter capitalistic accumulation, the more miserable are the dwellings of the working-people. “Improvements” of towns, accompanying the increase of wealth, by the demolition of badly built quarters, the erection of palaces for banks, warehouses, &c., the widening of streets for business traffic, for the carriages of luxury, and for the introduction of tramways, &c., drive away the poor into even worse and more crowded hiding places. On the other hand, every one knows that the dearness of dwellings is in inverse ratio to their excellence, and that the mines of misery are exploited by house speculators with more profit or less cost than ever were the mines of Potosi. The antagonistic character of capitalist accumulation, and therefore of the capitalistic relations of property generally,<sup>52</sup> is here so evident, that even the official English reports on this subject teem with heterodox onslaughts on “property and its rights.” With the development of industry, with the accumulation of capital, with the growth and “improvement” of towns, the evil makes such progress that the mere fear of contagious diseases which do not spare even “respectability,” brought into existence from 1847 to 1864 no less than 10 Acts of Parliament on sanitation, and that the frightened bourgeois in some towns, as Liverpool, Glasgow, &c., took strenuous measures through their municipalities. Nevertheless Dr. Simon, in his report of 1865, says:

“Speaking generally, it may be said that the evils are uncontrolled in England.”

By order of the Privy Council, in 1864, an inquiry was made into the conditions of the housing of the agricultural labourers, in 1865 of the poorer classes in the towns. The results of the admirable work of Dr. Julian Hunter are to be found in the seventh (1865) and eighth (1866) reports on “Public Health.” To the agricultural labourers, I shall come later. On the condition of town dwellings, I quote, as preliminary, a general remark of Dr. Simon.

“Although my official point of view,” he says, “is one exclusively physical, common humanity requires that the other aspect of this evil should not be ignored ... In its higher degrees it [*i.e.*, over-crowding] almost necessarily involves such negation of all delicacy, such unclean confusion of bodies and bodily functions, such exposure of animal and sexual nakedness, as is rather bestial than human. To be subject to these influences is a degradation which must become deeper and deeper for those on whom it continues to work. To children who are born under its curse, it must often be a very baptism into infamy. And beyond all measure hopeless is the wish that persons thus circumstanced should ever in other respects aspire to that atmosphere of civilisation which has its essence in physical and moral cleanliness.”<sup>53</sup>

London takes the first place in over-crowded habitations, absolutely unfit for human beings.

“He feels clear,” says Dr. Hunter, “on two points; first, that there are about 20 large colonies in London, of about 10,000 persons each, whose miserable condition exceeds almost anything he has seen elsewhere in England, and is almost entirely the result of their bad house accommodation; and second, that the crowded and dilapidated condition of the houses of these colonies is much worse than was the case 20 years ago.”<sup>54</sup> “It is not too much to say that life in parts of London and Newcastle is infernal.”<sup>55</sup>

Further, the better-off part of the working class, together with the small shopkeepers and other elements of the lower middle class, falls in London more and more under the curse of these vile conditions of dwelling, in proportion as “improvements,” and with them the demolition of old streets and houses, advance, as factories and the afflux of human beings grow in the metropolis, and finally as house rents rise with the ground-rents.

“Rents have become so heavy that few labouring men can afford more than one room.”<sup>56</sup>

There is almost no house-property in London that is not overburdened with a number of middlemen. For the price of land in London is always very high in comparison with its yearly revenue, and therefore every buyer speculates on getting rid of it again at a jury price (the expropriation valuation fixed by jurymen), or on pocketing an extraordinary increase of value arising from the neighbourhood of some large establishment. As a consequence of this there is a regular trade in the purchase of “fag-ends of leases.”

“Gentlemen in this business may be fairly expected to do as they do – get all they can from the tenants while they have them, and leave as little as they can for their successors.”<sup>57</sup>

The rents are weekly, and these gentlemen run no risk. In consequence of the making of railroads in the City,

“the spectacle has lately been seen in the East of London of a number of families wandering about some Saturday night with their scanty worldly goods on their backs, without any resting place but the workhouse.”<sup>58</sup>

The workhouses are already over-crowded, and the “improvements” already sanctioned by Parliament are only just begun. If labourers are driven away by the demolition of their old houses, they do not leave their old parish, or at most they settle down on its borders, as near as they can get to it.

“They try, of course, to remain as near as possible to their workshops. The inhabitants do not go beyond the same or the next parish, parting their two-room tenements into single rooms, and crowding even those.... Even at an advanced rent, the people who are displaced will hardly be able to get an accommodation so good as the meagre one they have left.... Half the workmen ... of the Strand ... walked two miles to their work.”<sup>59</sup>

This same Strand, a main thoroughfare which gives strangers an imposing idea of the wealth of London, may serve as an example of the packing together of human beings in that town. In one of its parishes, the Officer of Health reckoned 581 persons per acre, although half the width of the Thames was reckoned in. It will be self-understood that every sanitary measure, which, as has been the case hitherto in London, hunts the labourers from one quarter, by demolishing uninhabitable houses, serves only to crowd them together yet more closely in another.

“Either,” says Dr. Hunter, “the whole proceeding will of necessity stop as an absurdity, or the public compassion (!) be effectually aroused to the obligation which may now be without exaggeration called national, of supplying cover to those who by reason of their having no capital, cannot provide it for themselves, though they can by periodical payments reward those who will provide it for them.”<sup>60</sup>

Admire this capitalistic justice! The owner of land, of houses, the businessman, when expropriated by “improvements” such as railroads, the building of new streets, &c., not only receives full indemnity. He must, according to law, human and divine, be comforted for his enforced “abstinence” over and above this by a thumping profit. The labourer, with his wife and child and chattels, is thrown out into the street, and – if he crowds in too large numbers towards quarters of the town where the vestries insist on decency, he is prosecuted in the name of sanitation!

Except London, there was at the beginning of the 19th century no single town in England of 100,000 inhabitants. Only five had more than 50,000. Now there are 28 towns with more than 50,000 inhabitants.

“The result of this change is not only that the class of town people is enormously increased, but the old close-packed little towns are now centres, built round on every side, open nowhere to air, and being no longer agreeable to the rich are abandoned by them for the pleasanter outskirts. The successors of these rich are occupying the larger houses at the rate of a family to each room [... and find accommodation for two or three lodgers ...] and a population, for which the houses were not intended and quite unfit, has been created, whose surroundings are truly degrading to the adults and ruinous to the children.”<sup>61</sup>

The more rapidly capital accumulates in an industrial or commercial town, the more rapidly flows the stream of exploitable human material, the more miserable are the improvised dwellings of the labourers.

Newcastle-on-Tyne, as the centre of a coal and iron district of growing productiveness, takes the next place after London in the housing inferno. Not less than 34,000 persons live there in single rooms. Because of their absolute danger to the community, houses in great numbers have lately

been destroyed by the authorities in Newcastle and Gateshead. The building of new houses progresses very slowly, business very quickly. The town was, therefore, in 1865, more full than ever. Scarcely a room was to let. Dr. Embleton, of the Newcastle Fever Hospital, says:

“There can be little doubt that the great cause of the continuance and spread of the typhus has been the over-crowding of human beings, and the uncleanliness of their dwellings. The rooms, in which labourers in many cases live, are situated in confined and unwholesome yards or courts, and for space, light, air, and cleanliness, are models of insufficiency and insalubrity, and a disgrace to any civilised community; in them men, women, and children lie at night huddled together: and as regards the men, the night-shift succeed the day-shift, and the day-shift the night-shift in unbroken series for some time together, the beds having scarcely time to cool; the whole house badly supplied with water and worse with privies; dirty, unventilated, and pestiferous.”<sup>62</sup>

The price per week of such lodgings ranges from 8d. to 3s.

“The town of Newcastle-on-Tyne,” says Dr. Hunter, “contains a sample of the finest tribe of our countrymen, often sunk by external circumstances of house and street into an almost savage degradation.”<sup>63</sup>

As a result of the ebbing and flowing of capital and labour, the state of the dwellings of an industrial town may today be bearable, tomorrow hideous. Or the aedileship of the town may have pulled itself together for the removal of the most shocking abuses. Tomorrow, like a swarm of locusts, come crowding in masses of ragged Irishmen or decayed English agricultural labourers. They are stowed away in cellars and lofts, or the hitherto respectable labourer's dwelling is transformed into a lodging house whose *personnel* changes as quickly as the billets in the 30 years' war. Example: Bradford (Yorkshire). There the municipal philistine was just busied with urban improvements. Besides, there were still in Bradford, in 1861, 1,751 uninhabited houses. But now comes that revival of trade which the mildly liberal Mr. Forster, the negro's friend, recently crowed over with so much grace. With the revival of trade came of course an overflow from the waves of the ever fluctuating “reserve army” or “relative surplus population.” The frightful cellar habitations and rooms registered in the list,<sup>64</sup> which Dr. Hunter obtained from the agent of an Insurance Company, were for the most part inhabited by well-paid labourers. They declared that they would willingly pay for better dwellings if they were to be had. Meanwhile, they become degraded, they fall ill, one and all, whilst the mildly liberal Forster, M. P., sheds tears over the blessings of Free Trade, and the profits of the eminent men of Bradford who deal in worsted. In the Report of September, 1865, Dr. Bell, one of the poor law doctors of Bradford, ascribes the frightful mortality of fever-patients in his district to the nature of their dwellings.

“In one small cellar measuring 1,500 cubic feet ... there are ten persons .... Vincent Street, Green Aire Place, and the Leys include 223 houses having 1,450 inhabitants, 435 beds, and 36 privies.... The beds – and in that term I include any roll of dirty old rags, or an armful of shavings – have an average of 3.3 persons to each, many have 5 and 6 persons to each, and some people, I am told, are absolutely without beds; they sleep in their ordinary clothes, on the bare boards – young men and women, married and unmarried, all together. I need scarcely add that many of these dwellings are dark, damp, dirty, stinking holes, utterly unfit for human habitations; they are the centres from which disease and death are distributed amongst those in better circumstances, who have allowed them thus to fester in our midst.”<sup>65</sup>

Bristol takes the third place after London in the misery of its dwellings.

“Bristol, where the blankest poverty and domestic misery abound in the wealthiest town of Europe.”<sup>66</sup>

### C. The Nomad Population

We turn now to a class of people whose origin is agricultural, but whose occupation is in great part industrial. They are the light infantry of capital, thrown by it, according to its needs, now to this point, now to that. When they are not on the march, they “camp.” Nomad labour is used for various operations of building and draining, brick-making, lime-burning, railway-making, &c. A flying column of pestilence, it carries into the places in whose neighbourhood it pitches its camp, small-pox, typhus, cholera, scarlet fever, &c.<sup>67</sup> In undertakings that involve much capital outlay, such as railways, &c., the contractor himself generally provides his army with wooden huts and the like, thus improvising villages without any sanitary provisions, outside the control of the local boards, very profitable to the contractor, who exploits the labourers in two-fold fashion – as soldiers of industry and as tenants. According as the wooden hut contains 1, 2, or 3 holes, its inhabitant, navvy, or whatever he may be, has to pay 1, 3, or 4 shillings weekly.<sup>68</sup> One example will suffice. In September, 1864, Dr. Simon reports that the Chairman of the Nuisances Removal Committee of the parish of Sevenoaks sent the following denunciation to Sir George Grey, Home Secretary: –

“Small-pox cases were rarely heard of in this parish until about twelve months ago. Shortly before that time, the works for a railway from Lewisham to Tunbridge were commenced here, and, in addition to the principal works being in the immediate neighbourhood of this town, here was also established the depôt for the whole of the works, so that a large number of persons was of necessity employed here. As cottage accommodation could not be obtained for them all, huts were built in several places along the line of the works by the contractor, Mr. Jay, for their especial occupation. These huts possessed no ventilation nor drainage, and, besides, were necessarily over-crowded, because each occupant had to accommodate lodgers, whatever the number in his own family might be, although there were only two rooms to each tenement. The consequences were, according to the medical report we received, that in the night-time these poor people were compelled to endure all the horror of suffocation to avoid the pestiferous smells arising from the filthy, stagnant water, and the privies close under their windows. Complaints were at length made to the Nuisances Removal Committee by a medical gentleman who had occasion to visit these huts, and he spoke of their condition as dwellings in the most severe terms, and he expressed his fears that some very serious consequences might ensue, unless some sanitary measures were adopted. About a year ago, Mr. Jay promised to appropriate a hut, to which persons in his employ, who were suffering from contagious diseases, might at once be removed. He repeated that promise on the 23rd July last, but although since the date of the last Promise there have been several cases of small-pox in his huts, and two deaths from the same disease, yet he has taken no steps whatever to carry out his promise. On the 9th September instant, Mr. Kelson, surgeon, reported to me further cases of small-pox in the same huts, and he described their condition as most disgraceful. I should add, for your (the Home Secretary’s) information that an isolated house, called the Pest-house, which is set apart for parishioners who might be suffering from infectious diseases, has been continually occupied by such patients for many months past, and is also now

occupied; that in one family five children died from small-pox and fever; that from the 1st April to the 1st September this year, a period of five months, there have been no fewer than ten deaths from small-pox in the parish, four of them being in the huts already referred to; that it is impossible to ascertain the exact number of persons who have suffered from that disease although they are known to be many, from the fact of the families keeping it as private as possible.”<sup>69</sup>

The labourers in coal and other mines belong to the best paid categories of the British proletariat. The price at which they buy their wages was shown on an earlier page.<sup>70</sup> Here I merely cast a hurried glance over the conditions of their dwellings. As a rule, the exploiter of a mine, whether its owner or his tenant, builds a number of cottages for his hands. They receive cottages and coal for firing “for nothing” – *i.e.*, these form part of their wages, paid in kind. Those who are not lodged in this way receive in compensation £4 per annum. The mining districts attract with rapidity a large population, made up of the miners themselves, and the artisans, shopkeepers, &c., that group themselves around them. The ground-rents are high, as they are generally where population is dense. The master tries, therefore, to run up, within the smallest space possible at the mouth of the pit, just so many cottages as are necessary to pack together his hands and their families. If new mines are opened in the neighbourhood, or old ones are again set working, the pressure increases. In the construction of the cottages, only one point of view is of moment, the “abstinence” of the capitalist from all expenditure that is not absolutely unavoidable.

“The lodging which is obtained by the pitman and other labourers connected with the collieries of Northumberland and Durham,” says Dr. Julian Hunter, “is perhaps, on the whole, the worst and the dearest of which any large specimens can be found in England, the similar parishes of Monmouthshire excepted.... The extreme badness is in the high number of men found in one room, in the smallness of the ground-plot on which a great number of houses are thrust, the want of water, the absence of privies, and the frequent placing of one house on the top of another, or distribution into flats, ... the lessee acts as if the whole colony were encamped, not resident.”<sup>71</sup>

“In pursuance of my instructions,” says Dr. Stevens, “I visited most of the large colliery villages in the Durham Union.... With very few exceptions, the general statement that no means are taken to secure the health of the inhabitants would be true of all of them.... All colliers are bound [‘bound,’ an expression which, like bondage, dates from the age of serfdom] to the colliery lessee or owner for twelve months.... If the colliers express discontent, or in any way annoy the ‘viewer,’ a mark of memorandum is made against their names, and, at the annual ‘binding,’ such men are turned off... It appears to me that no part of the ‘truck system’ could be worse than what obtains in these densely-populated districts. The collier is bound to take as part of his hiring a house surrounded with pestiferous influences; he cannot help himself, and it appears doubtful whether anyone else can help him except his proprietor (he is, to all intents and purposes, a serf), and his proprietor first consults his balance-sheet, and the result is tolerably certain. The collier is also often supplied with water by the proprietor, which, whether it be good or bad, he has to pay for, or rather he suffers a deduction for from his wages.”<sup>72</sup>

In conflict with “public opinion,” or even with the Officers of Health, capital makes no difficulty about “justifying” the conditions partly dangerous, partly degrading, to which it confines the working and domestic life of the labourer, on the ground that they are necessary for profit. It is the same thing when capital “abstains” from protective measures against dangerous machinery in

the factory, from appliances for ventilation and for safety in mines, &c. It is the same here with the housing of the miners. Dr. Simon, medical officer of the Privy Council, in his official Report says:

“In apology for the wretched household accommodation ... it is alleged that miners are commonly worked on lease; that the duration of the lessee’s interest (which in collieries is commonly for 21 years), is not so long that he should deem it worth his while to create good accommodation for his labourers, and for the tradespeople and others whom the work attracts; that even if he were disposed to act liberally in the matter, this disposition would commonly be defeated by his landlord’s tendency to fix on him, as ground-rent, an exorbitant additional charge for the privilege of having on the surface of the ground the decent and comfortable village which the labourers of the subterranean property ought to inhabit, and that prohibitory price (if not actual prohibition) equally excludes others who might desire to build. It would be foreign to the purpose of this report to enter upon any discussion of the merits of the above apology. Nor here is it even needful to consider where it would be that, if decent accommodation were provided, the cost ... would eventually fall – whether on landlord, or lessee, or labourer, or public. But in presence of such shameful facts as are vouched for in the annexed reports [those of Dr. Hunter, Dr. Stevens, &c.] a remedy may well be claimed.... Claims of landlordship are being so used as to do great public wrong. The landlord in his capacity of mine-owner invites an industrial colony to labour on his estate, and then in his capacity of surface-owner makes it impossible that the labourers whom he collects, should find proper lodging where they must live. The lessee [the capitalist exploiter] meanwhile has no pecuniary motive for resisting that division of the bargain; well knowing that if its latter conditions be exorbitant, the consequences fall, not on him, that his labourers on whom they fall have not education enough to know the value of their sanitary rights, that neither obscenest lodging nor foulest drinking water will be appreciable inducements towards a ‘strike.’”<sup>73</sup>

#### D. Effect of Crises on the Best Paid Part of the working class

Before I turn to the regular agricultural labourers, I may be allowed to show, by one example, how industrial revulsions affect even the best-paid, the aristocracy, of the working class. It will be remembered that the year 1857 brought one of the great crises with which the industrial cycle periodically ends. The next termination of the cycle was due in 1866. Already discounted in the regular factory districts by the cotton famine, which threw much capital from its wonted sphere into the great centres of the money-market, the crisis assumed, at this time, an especially financial character. Its outbreak in 1866 was signalled by the failure of a gigantic London Bank, immediately followed by the collapse of countless swindling companies. One of the great London branches of industry involved in the catastrophe was iron shipbuilding. The magnates of this trade had not only over-produced beyond all measure during the overtrading time, but they had, besides, engaged in enormous contracts on the speculation that credit would be forthcoming to an equivalent extent. Now, a terrible reaction set in, that even at this hour

(the end of March, 1867) continues in this and other London industries.<sup>74</sup> To show the condition of the labourers, I quote the following from the circumstantial report of a correspondent of the *Morning Star*, who, at the end of 1866, and beginning of 1867, visited the chief centres of distress:

“In the East End districts of Poplar, Millwall, Greenwich, Deptford, Limehouse and Canning Town, at least 15,000 workmen and their families were in a state of utter destitution, and 3,000 skilled mechanics were breaking stones in the workhouse yard (after distress of over half a year’s duration)... I had great difficulty in reaching the workhouse door, for a hungry crowd besieged it.... They were waiting for their tickets, but the time had not yet arrived for the distribution. The yard was a great square place with an open shed running all round it, and several large heaps of snow covered the paving-stones in the middle. In the middle, also, were little wicker-fenced spaces, like sheep pens, where in finer weather the men worked; but on the day of my visit the pens were so snowed up that nobody could sit in them. Men were busy, however, in the open shed breaking paving-stones into macadam. Each man had a big paving-stone for a seat, and he chipped away at the rime-covered granite with a big hammer until he had broken up, and think! five bushels of it, and then he had done his day’s work, and got his day’s pay – threepence and an allowance of food. In another part of the yard was a rickety little wooden house, and when we opened the door of it, we found it filled with men who were huddled together shoulder to shoulder for the warmth of one another’s bodies and breath. They were picking oakum and disputing the while as to which could work the longest on a given quantity of food – for endurance was the point of honour. Seven thousand ... in this one workhouse ... were recipients of relief ... many hundreds of them ... it appeared, were, six or eight months ago, earning the highest wages paid to artisans.... Their number would be more than doubled by the count of those who, having exhausted all their savings, still refuse to apply to the parish, because they have a little left to pawn. Leaving the workhouse, I took a walk through the streets, mostly of little one-storey houses, that abound in the neighbourhood of Poplar. My guide was a member of the Committee of the Unemployed.... My first call was on an ironworker who had been seven and twenty weeks out of employment. I found the man with his family sitting in a little back room. The room was not bare of furniture, and there was a fire in it. This was necessary to keep the naked feet of the young children from getting frost bitten, for it was a bitterly cold day. On a tray in front of the fire lay a quantity of oakum, which the wife and children were picking in return for their allowance from the parish. The man worked in the stone yard of the workhouse for a certain ration of food, and threepence per day. He had now come home to dinner quite hungry, as he told us with a melancholy smile, and his dinner consisted of a couple of slices of bread and dripping, and a cup of milkless tea.... The next door at which we knocked was opened by a middle-aged woman, who, without saying a word, led us into a little back parlour, in which sat all her family, silent and fixedly staring at a rapidly dying fire. Such desolation, such hopelessness was about these people and their little room, as I should not care to witness again. ‘Nothing have they done, sir,’ said the woman, pointing to her boys, ‘for six and twenty weeks; and all our money gone – all the twenty pounds

that me and father saved when times were better, thinking it would yield a little to keep us when we got past work. Look at it,' she said, almost fiercely, bringing out a bank-book with all its well kept entries of money paid in, and money taken out, so that we could see how the little fortune had begun with the first five shilling deposit, and had grown by little and little to be twenty pounds, and how it had melted down again till the sum in hand got from pounds to shillings, and the last entry made the book as worthless as a blank sheet. This family received relief from the workhouse, and it furnished them with just one scanty meal per day.... Our next visit was to an iron labourer's wife, whose husband had worked in the yards. We found her ill from want of food, lying on a mattress in her clothes, and just covered with a strip of carpet, for all the bedding had been pawned. Two wretched children were tending her, themselves looking as much in need of nursing as their mother. Nineteen weeks of enforced idleness had brought them to this pass, and while the mother told the history of that bitter past, she moaned as if all her faith in a future that should atone for it were dead.... On getting outside a young fellow came running after us, and asked us to step inside his house and see if anything could be done for him. A young wife, two pretty children, a cluster of pawn-tickets, and a bare room were all he had to show."

On the after pains of the crisis of 1866, the following extract from a Tory newspaper. It must not be forgotten that the East-end of London, which is here dealt with, is not only the seat of the iron shipbuilding mentioned above, but also of a so-called "home-industry" always underpaid.

"A frightful spectacle was to be seen yesterday in one part of the metropolis. Although the unemployed thousands of the East-end did not parade with their black flags *en masse*, the human torrent was imposing enough. Let us remember what these people suffer. They are dying of hunger. That is the simple and terrible fact. There are 40,000 of them.... In our presence, in one quarter of this wonderful metropolis, are packed – next door to the most enormous accumulation of wealth the world ever saw – cheek by jowl with this are 40,000 helpless, starving people. These thousands are now breaking in upon the other quarters; always half-starving, they cry their misery in our ears, they cry to Heaven, they tell us from their miserable dwellings, that it is impossible for them to find work, and useless for them to beg. The local ratepayers themselves are driven by the parochial charges to the verge of pauperism." – (*Standard*, 5th April, 1867.)

As it is the fashion amongst English capitalists to quote Belgium as the Paradise of the labourer because "freedom of labour," or what is the same thing, "freedom of capital," is there limited neither by the despotism of Trades' Unions, nor by Factory Acts, a word or two on the "happiness" of the Belgian labourer. Assuredly no one was more thoroughly initiated in the mysteries of this happiness than the late M. Ducpétiaux, inspector-general of Belgian prisons and charitable institutions, and member of the central commission of Belgian statistics. Let us take his work: "Budgets économiques des classes ouvrières de la Belgique," Bruxelles, 1855. Here we find among other matters, a normal Belgian labourer's family, whose yearly income and expenditure he calculates on very exact data, and whose conditions of nourishment are then compared with those of the soldier, sailor, and prisoner. The family "consists of father, mother, and four children." Of these 6 persons "four may be usefully employed the whole year through." It is assumed that "there is no sick person nor one incapable of work, among them," nor are there "expenses for religious, moral, and intellectual purposes, except a very small sum for church sittings," nor "contributions to savings banks or benefit societies," nor "expenses due to luxury or

the result of improvidence.” The father and eldest son, however, allow themselves “the use of tobacco,” and on Sundays “go to the *cabaret*,” for which a whole 86 centimes a week are reckoned.

“From a general compilation of wages allowed to the labourers in different trades, it follows that the highest average of daily wage is 1 franc 56c., for men, 89 centimes for women, 56 centimes for boys, and 55 centimes for girls. Calculated at this rate, the resources of the family would amount, at the maximum, to 1,068 francs a-year.... In the family ... taken as typical we have calculated all possible resources. But in ascribing wages to the mother of the family we *raise the question of the direction of the household*. How will its internal economy be cared for? Who will look after the young children? Who will get ready the meals, do the washing and mending? This is the dilemma incessantly presented to the labourers.”

According to this the budget of the family is:

|            |                              |                 |
|------------|------------------------------|-----------------|
| The father | 300 working days at fr. 1.56 | fr. 468         |
| mother     | 300 working days at fr. 0.89 | fr. 267         |
| boy        | 300 working days at fr. 0.56 | fr. 168         |
| girl       | 300 working days at fr. 0.55 | fr. 165         |
|            |                              | Total fr. 1,068 |

The annual expenditure of the family would cause a deficit upon the hypothesis that the labourer has the food of:

|                      |           |                 |
|----------------------|-----------|-----------------|
| The man-of-war's man | fr. 1,828 | Deficit fr. 760 |
| The soldier          | fr. 1,473 | Deficit fr. 405 |
| The prisoner         | fr. 1,112 | Deficit fr. 44  |

“We see that few labouring families can reach, we will not say the average of the sailor or soldier, but even that of the prisoner. The general average (of the cost of each prisoner in the different prisons during the period 1847-1849), has been 63 centimes for all prisons. This figure, compared with that of the daily maintenance of the labourer, shows a difference of 13 centimes. It must be remarked further, that if in the prisons it is necessary to set down in the account the expenses of administration and surveillance, on the other hand, the prisoners have not to pay for their lodging; that the purchases they make at the canteens are not included in the expenses of maintenance, and that these expenses are greatly lowered in consequence of the large number of persons that make up the establishments, and of contracting for or buying wholesale, the food and other things that enter into their consumption.... How comes it, however, that a great number, we might say, a great majority, of labourers, live in a more economical way? It is ... by adopting expedients, the secret of which only the labourer knows; by reducing his daily rations; by substituting rye-bread for wheat; by eating less meat, or even none at all, and the same with butter and condiments; by contenting themselves with one or two rooms where the family is crammed together, where boys and girls sleep side by side, often on the same pallet; by economy of clothing, washing, decency;

by giving up the Sunday diversions; by, in short, resigning themselves to the most painful privations. Once arrived at this extreme limit, the least rise in the price of food, stoppage of work, illness, increases the labourer's distress and determines his complete ruin; debts accumulate, credit fails, the most necessary clothes and furniture are pawned, and finally, the family asks to be enrolled on the list of paupers." (Ducpétiaux, l. c., pp. 151, 154, 155.)

In fact, in this "Paradise of capitalists" there follows, on the smallest change in the price of the most essential means of subsistence, a change in the number of deaths and crimes! (See Manifesto of the Maatschappij: "De Vlamingen Vooruit!" Brussels, 1860, pp. 15, 16.) In all Belgium are 930,000 families, of whom, according to the official statistics, 90,000 are wealthy and on the list of voters = 450,000 persons; 390,000 families of the lower middle-class in towns and villages, the greater part of them constantly sinking into the proletariat, = 1,950,000 persons. Finally, 450,000 working class families = 2,250,000 persons, of whom the model ones enjoy the happiness depicted by Ducpétiaux. Of the 450,000 working class families, over 200,000 are on the pauper list.

### E. The British Agricultural Proletariat

Nowhere does the antagonistic character of capitalistic production and accumulation assert itself more brutally than in the progress of English agriculture (including cattle-breeding) and the retrogression of the English agricultural labourer. Before I turn to his present situation, a rapid retrospect. Modern agriculture dates in England from the middle of the 18th century, although the revolution in landed property, from which the changed mode of production starts as a basis, has a much earlier date.

If we take the statements of Arthur Young, a careful observer, though a superficial thinker, as to the agricultural labourer of 1771, the latter plays a very pitiable part compared with his predecessor of the end of the 14th century,

"when the labourer ... could live in plenty, and accumulate wealth,"<sup>75</sup>

not to speak of the 15th century, "the golden age of the English labourer in town and country." We need not, however, go back so far. In a very instructive work of the year 1777 we read:

"The great farmer is nearly mounted to a level with him [the gentleman]; while the poor labourer is depressed almost to the earth. His unfortunate situation will fully appear, by taking a comparative view of it, only forty years ago, and at present... Landlord and tenant ... have both gone hand in hand in keeping the labourer down."<sup>76</sup>

It is then proved in detail that the real agricultural wages between 1737 and 1777 fell nearly ¼ or 25 per cent.

"Modern policy," says Dr. Richard Price also, "is, indeed, more favourable to the higher classes of people; and the consequences may in time prove that the whole kingdom will consist of only gentry and beggars, or of grandees and slaves."<sup>77</sup>

Nevertheless, the position of the English agricultural labourer from 1770 to 1780, with regard to his food and dwelling, as well as to his self-respect, amusements, &c., is an ideal never attained again since that time. His average wage expressed in pints of wheat was from 1770 to 1771, 90 pints, in Eden's time (1797) only 65, in 1808 but 60.<sup>78</sup>

The state of the agricultural labourer at the end of the Anti-Jacobin War, during which landed proprietors, farmers, manufacturers, merchants, bankers, stockbrokers, army-contractors, &c., enriched themselves so extraordinarily, has been already indicated above. The nominal wages

rose in consequence partly of the bank-note depreciation, partly of a rise in the price of the primary means of subsistence independent of this depreciation. But the actual wage-variation can be evidenced in a very simple way, without entering into details that are here unnecessary. The Poor Law and its administration were in 1795 and 1814 the same. It will be remembered how this law was carried out in the country districts: in the form of alms the parish made up the nominal wage to the nominal sum required for the simple vegetation of the labourer. The ratio between the wages paid by the farmer, and the wage-deficit made good by the parish, shows us two things. First, the falling of wages below their minimum; second, the degree in which the agricultural labourer was a compound of wage labourer and pauper, or the degree in which he had been turned into a serf of his parish. Let us take one county that represents the average condition of things in all counties. In Northamptonshire, in 1795, the average weekly wage was 7s. 6d.; the total yearly expenditure of a family of 6 persons, £36 12s. 5d.; their total income, £29 18s.; deficit made good by the parish, £6 14s. 5d. In 1814, in the same county, the weekly wage was 12s. 2d.; the total yearly expenditure of a family of 5 persons, £54 18s. 4d.; their total income, £36, 2s.; deficit made good by the parish, £18 6s. 4d.<sup>79</sup> In 1795 the deficit was less than 1/4 the wage, in 1814, more than half. It is self-evident that, under these circumstances, the meagre comforts that Eden still found in the cottage of the agricultural labourer, had vanished by 1814.<sup>80</sup> Of all the animals kept by the farmer, the labourer, the *instrumentum vocale*, was, thenceforth, the most oppressed, the worst nourished, the most brutally treated.

The same state of things went on quietly until

“the Swing riots, in 1830, revealed to us (*i.e.*, the ruling classes) by the light of blazing corn-stacks, that misery and black mutinous discontent smouldered quite as fiercely under the surface of agricultural as of manufacturing England.”<sup>81</sup>

At this time, Sadler, in the House of Commons, christened the agricultural labourers “white slaves,” and a Bishop echoed the epithet in the Upper House. The most notable political economist of that period – E. G. Wakefield – says:

“The peasant of the South of England ... is not a freeman, nor is he a slave; he is a pauper.”<sup>82</sup>

The time just before the repeal of the Corn Laws threw new light on the condition of the agricultural labourers. On the one hand, it was to the interest of the middle-class agitators to prove how little the Corn Laws protected the actual producers of the corn. On the other hand, the industrial bourgeoisie foamed with sullen rage at the denunciations of the factory system by the landed aristocracy, at the pretended sympathy with the woes of the factory operatives, of those utterly corrupt, heartless, and genteel loafers, and at their “diplomatic zeal” for factory legislation. It is an old English proverb that “when thieves fall out, honest men come by their own,” and, in fact, the noisy, passionate quarrel between the two fractions of the ruling class about the question, which of the two exploited the labourers the more shamefully, was on each hand the midwife of the truth. Earl Shaftesbury, then Lord Ashley, was commander-in-chief in the aristocratic, philanthropic, anti-factory campaign. He was, therefore, in 1845, a favourite subject in the revelations of the *Morning Chronicle* on the condition of the agricultural labourers. This journal, then the most important Liberal organ, sent special commissioners into the agricultural districts, who did not content themselves with mere general descriptions and statistics, but published the names both of the labouring families examined and of their landlords. The following list gives the wages paid in three villages in the neighbourhood of Blandford, Wimbourne, and Poole. The villages are the property of Mr. G. Bankes and of the Earl of Shaftesbury. It will be noted that, just like Bankes, this “low church pope,” this head of English pietists, pockets a great part of the miserable wages of the labourers under the pretext of house-rent: –

| <b>FIRST VILLAGE</b>                           |            |             |            |            |              |             |

The repeal of the Corn Laws gave a marvellous impulse to English agriculture.<sup>84</sup> Drainage on the most extensive scale, new methods of stall-feeding, and of the artificial cultivation of green crops, introduction of mechanical manuring apparatus, new treatment of clay soils, increased use of mineral manures, employment of the steam-engine, and of all kinds of new machinery, more intensive cultivation generally, characterised this epoch. Mr. Pusey, Chairman of the Royal Agricultural Society, declares that the (relative) expenses of farming have been reduced nearly one half by the introduction of new machinery. On the other hand, the actual return of the soil rose rapidly. Greater outlay of capital per acre, and, as a consequence, more rapid concentration of farms, were essential conditions of the new method.<sup>85</sup> At the same time, the area under cultivation increased, from 1846 to 1856, by 464,119 acres, without reckoning the great area in the Eastern Counties which was transformed from rabbit warrens and poor pastures into magnificent corn-fields. It has already been seen that, at the same time, the total number of persons employed in agriculture fell. As far as the actual agricultural labourers of both sexes and of all ages are concerned, their number fell from 1,241,396, in 1851, to 1,163, 217 in 1861.<sup>86</sup> If the English Registrar-General, therefore, rightly remarks:

“The increase of farmers and farm-labourers, since 1801, bears no kind of proportion ... to the increase of agricultural produce,”<sup>87</sup>

this disproportion obtains much more for the last period, when a positive decrease of the agricultural population went hand in hand with increase of the area under cultivation, with more intensive cultivation, unheard-of accumulation of the capital incorporated with the soil, and devoted to its working, an augmentation in the products of the soil without parallel in the history of English agriculture, plethoric rent-rolls of landlords, and growing wealth of the capitalist farmers. If we take this, together with the swift, unbroken extension of the markets, *viz.*, the towns, and the reign of Free Trade, then the agricultural labourer was at last, *post tot discrimina rerum*, placed in circumstances that ought, *secundum artem*, to have made him drunk with happiness.

But Professor Rogers comes to the conclusion that the lot of the English agricultural labourer of today, not to speak of his predecessor in the last half of the 14th and in the 15th century, but only compared with his predecessor from 1770 to 1780, has changed for the worse to an extraordinary

extent, that “the peasant has again become a serf,” and a serf worse fed and worse clothed.<sup>88</sup> Dr. Julian Hunter, in his epoch making report on the dwellings of the agricultural labourers, says:

“The cost of the hind” (a name for the agricultural labourer, inherited from the time of serfdom) “is fixed at the lowest possible amount on which he can live ... the supplies of wages and shelter are not calculated on the profit to be derived from him. He is a zero in farming calculations ...<sup>89</sup> The means [of subsistence] being always supposed to be a fixed quantity.<sup>90</sup> As to any further reduction of his income, he may say, *nihil habeo nihil curo*. He has no fears for the future, because he has now only the spare supply necessary to keep him. He has reached the zero from which are dated the calculations of the farmer. Come what will, he has no share either in prosperity or adversity.”<sup>91</sup>

In the year 1863, an official inquiry took place into the conditions of nourishment and labour of the criminals condemned to transportation and penal servitude. The results are recorded in two voluminous Blue books. Among other things it is said:

“From an elaborate comparison between the diet of convicts in the convict prisons in England, and that of paupers in workhouses and of free labourers in the same country ... it certainly appears that the former are much better fed than either of the two other classes,”<sup>92</sup> whilst “the amount of labour required from an ordinary convict under penal servitude is about one half of what would be done by an ordinary day-labourer.”<sup>93</sup>

A few characteristic depositions of witnesses: John Smith, governor of the Edinburgh prison, deposes:

No. 5056. “The diet of the English prisons [is] superior to that of ordinary labourers in England.” No 50. “It is the fact ... that the ordinary agricultural labourers in Scotland very seldom get any meat at all.” Answer No. 3047. “Is there anything that you are aware of to account for the necessity of feeding them very much better than ordinary labourers? – Certainly not.” No. 3048. “Do you think that further experiments ought to be made in order to ascertain whether a dietary might not be hit upon for prisoners employed on public works nearly approaching to the dietary of free labourers? ...”<sup>94</sup> “He [the agricultural labourer] might say: ‘I work hard, and have not enough to eat, and when in prison I did not work harder where I had plenty to eat, and therefore it is better for me to be in prison again than here.’”<sup>95</sup>

From the tables appended to the first volume of the Report I have compiled the annexed comparative summary.

| WEEKLY AMOUNT OF NUTRIENTS          |                                     |   |                            |        |
|-------------------------------------|-------------------------------------|---|----------------------------|--------|
|                                     | Quantity Of Nitrogenous Ingredients | Quantity Of Non-Nitrogenous Ingredients | Quantity Of Mineral Matter | TOTAL  |
|                                     | Ounces                              | Ounces                                  | Ounces                     | Ounces |
| Portland (convict)                  | 28.95                               | 150.06                                  | 4.68                       | 183.69 |
| Sailor in the Navy                  | 29.63                               | 152.91                                  | 4.52                       | 187.06 |
| Soldier                             | 25.55                               | 114.49                                  | 3.94                       | 143.98 |
| Working Coachmaker                  | 24.53                               | 162.06                                  | 4.23                       | 190.82 |
| Compositor                          | 21.24                               | 100.83                                  | 3.12                       | 125.19 |
| Agricultural labourer <sup>96</sup> | 17.73                               | 118.06                                  | 3.29                       | 139.08 |

The general result of the inquiry by the medical commission of 1863 on the food of the lowest fed classes, is already known to the reader. He will remember that the diet of a great part of the agricultural labourers' families is below the minimum necessary "to arrest starvation diseases." This is especially the case in all the purely rural districts of Cornwall, Devon, Somerset, Wilts, Stafford, Oxford, Berks, and Herts.

"The nourishment obtained by the labourer himself," says Dr. E. Smith, "is larger than the average quantity indicates, since he eats a larger share ... necessary to enable him to perform his labour ... of food than the other members of the family, including in the poorer districts nearly all the meat and bacon.... The quantity of food obtained by the wife and also by the children at the period of rapid growth, is in many cases, in almost every county, deficient, and particularly in nitrogen."<sup>97</sup>

The male and female servants living with the farmers themselves are sufficiently nourished. Their number fell from 288,277 in 1851, to 204,962 in 1861.

"The labour of women in the fields," says Dr. Smith, "whatever may be its disadvantages, ... is under present circumstances of great advantage to the family, since it adds that amount of income which ... provides shoes and clothing and pays the rent, and thus enables the family to be better fed."<sup>98</sup>

One of the most remarkable results of the inquiry was that the agricultural labourer of England, as compared with other parts of the United Kingdom, "is considerably the worst fed," as the appended table shows:

Quantities of Carbon and Nitrogen weekly consumed by an average agricultural adult:

|                       | Carbon, grains | Nitrogen, grains |
|-----------------------|----------------|------------------|
| England               | 46,673         | 1,594            |
| Wales                 | 48,354         | 2,031            |
| Scotland              | 48,980         | 2,348            |
| Ireland <sup>99</sup> | 43,366         | 2,434            |

"To the insufficient quantity and miserable quality of the house accommodation generally had," says Dr. Simon, in his official Health Report, "by our agricultural

labourers, almost every page of Dr. Hunter's report bears testimony. And gradually, for many years past, the state of the labourer in these respects has been deteriorating, house-room being now greatly more difficult for him to find, and, when found, greatly less suitable to his needs than, perhaps, for centuries had been the case. Especially within the last twenty or thirty years, the evil has been in very rapid increase, and the household circumstances of the labourer are now in the highest degree deplorable. Except in so far as they whom his labour enriches, see fit to treat him with a kind of pitiful indulgence, he is quite peculiarly helpless in the matter. Whether he shall find house-room on the land which he contributes to till, whether the house-room which he gets shall be human or swinish, whether he shall have the little space of garden that so vastly lessens the pressure of his poverty – all this does not depend on his willingness and ability to pay reasonable rent for the decent accommodation he requires, but depends on the use which others may see fit to make of their 'right to do as they will with their own.' However large may be a farm, there is no law that a certain proportion of labourers' dwellings (much less of decent dwellings) shall be upon it; nor does any law reserve for the labourer ever so little right in that soil to which his industry is as needful as sun and rain.... An extraneous element weighs the balance heavily against him ... the influence of the Poor Law in its provisions concerning settlement and chargeability.<sup>100</sup> Under this influence, each parish has a pecuniary interest in reducing to a minimum the number of its resident labourers: – for, unhappily, agricultural labour instead of implying a safe and permanent independence for the hardworking labourer and his family, implies for the most part only a longer or shorter circuit to eventual pauperism – a pauperism which, during the whole circuit, is so near, that any illness or temporary failure of occupation necessitates immediate recourse to parochial relief – and thus all residence of agricultural population in a parish is glaringly an addition to its poor-rates .... Large proprietors<sup>101</sup> ... have but to resolve that there shall be no labourers' dwellings on their estates, and their estates will thenceforth be virtually free from half their responsibility for the poor. How far it has been intended, in the English constitution and law, that this kind of unconditional property in land should be acquirable, and that a landlord 'doing as he wills with his own,' should be able to treat the cultivators of the soil as aliens, whom he may expel from his territory, is a question which I do not pretend to discuss.... For that (power) of eviction ... does not exist only in theory. On a very large scale it prevails in practice – prevails ... as a main governing condition in the household circumstances of agricultural labour.... As regards the extent of the evil, it may suffice to refer to the evidence which Dr. Hunter has compiled from the last census, that destruction of houses, notwithstanding increased local demands for them, had, during the last ten years, been in progress in 821 separate parishes or townships of England, so that irrespectively of persons who had been forced to become non-resident (that is in the parishes in which they work), these parishes and townships were receiving in 1861, as compared with 1851, a population 5 1/3 per cent. greater, into houseroom 4½ per cent. less... When the process of depopulation has completed itself, the result, says Dr. Hunter, is a show-village where the cottages have been reduced to a few, and where none but persons who are needed as shepherds, gardeners, or game-keepers, are allowed to live; regular servants who receive the good treatment usual to their class.<sup>102</sup> But the land

requires cultivation, and it will be found that the labourers employed upon it are not the tenants of the owner, but that they come from a neighbouring open village, perhaps three miles off, where a numerous small proprietary had received them when their cottages were destroyed in the close villages around. Where things are tending to the above result, often the cottages which stand, testify, in their unrepaired and wretched condition, to the extinction to which they are doomed. They are seen standing in the various stages of natural decay. While the shelter holds together, the labourer is permitted to rent it, and glad enough he will often be to do so, even at the price of decent lodging. But no repair, no improvement shall it receive, except such as its penniless occupants can supply. And when at last it becomes quite uninhabitable – uninhabitable even to the humblest standard of serfdom – it will be but one more destroyed cottage, and future poor-rates will be somewhat lightened. While great owners are thus escaping from poor-rates through the depopulation of lands over which they have control, the nearest town or open village receive the evicted labourers: the nearest, I say, but this “nearest” may mean three or four miles distant from the farm where the labourer has his daily toil. To that daily toil there will then have to be added, as though it were nothing, the daily need of walking six or eight miles for power of earning his bread. And whatever farm work is done by his wife and children, is done at the same disadvantage. Nor is this nearly all the toil which the distance occasions him. In the open village, cottage-speculators buy scraps of land, which they throng as densely as they can with the cheapest of all possible hovels. And into those wretched habitations (which, even if they adjoin the open country, have some of the worst features of the worst town residences) crowd the agricultural labourers of England.<sup>103</sup> .... Nor on the other hand must it be supposed that even when the labourer is housed upon the lands which he cultivates, his household circumstances are generally such as his life of productive industry would seem to deserve. Even on princely estates ... his cottage ... may be of the meanest description. There are landlords who deem any sty good enough for their labourer and his family, and who yet do not disdain to drive with him the hardest possible bargain for rent.<sup>104</sup> It may be but a ruinous one-bedroomed hut, having no fire-grate, no privy, no opening window, no water supply but the ditch, no garden – but the labourer is helpless against the wrong.... And the Nuisances Removal Acts ... are ... a mere dead letter ... in great part dependent for their working on such cottage-owners as the one from whom his (the labourer’s) hovel is rented.... From brighter, but exceptional scenes, it is requisite in the interests of justice, that attention should again be drawn to the overwhelming preponderance of facts which are a reproach to the civilisation of England. Lamentable indeed, must be the case, when, notwithstanding all that is evident with regard to the quality of the present accommodation, it is the common conclusion of competent observers that even the general badness of dwellings is an evil infinitely less urgent than their mere numerical insufficiency. For years the over-crowding of rural labourers’ dwellings has been a matter of deep concern, not only to persons who care for sanitary good, but to persons who care for decent and moral life. For, again and again in phrases so uniform that they seem stereotyped, reporters on the spread of epidemic disease in rural districts, have insisted on the extreme importance of that over-crowding, as an influence which renders it a quite hopeless task, to attempt the limiting of any infection which is introduced. And again and again it has been

pointed out that, notwithstanding the many salubrious influences which there are in country life, the crowding which so favours the extension of contagious disease, also favours the origination of disease which is not contagious. And those who have denounced the over-crowded state of our rural population have not been silent as to a further mischief. Even where their primary concern has been only with the injury to health, often almost perforce they have referred to other relations on the subject. In showing how frequently it happens that adult persons of both sexes, married and unmarried, are huddled together in single small sleeping rooms, their reports have carried the conviction that, under the circumstances they describe, decency must always be outraged, and morality almost of necessity must suffer.<sup>105</sup> Thus, for instance, in the appendix of my last annual report, Dr. Ord, reporting on an outbreak of fever at Wing, in Buckinghamshire, mentions how a young man who had come thither from Wingrave with fever, “in the first days of his illness slept in a room with nine other persons. Within a fortnight several of these persons were attacked, and in the course of a few weeks five out of the nine had fever, and one died...” From Dr. Harvey, of St. George’s Hospital, who, on private professional business, visited Wing during the time of the epidemic, I received information exactly in the sense of the above report.... “A young woman having fever, lay at night in a room occupied by her father and mother, her bastard child, two young men (her brothers), and her two sisters, each with a bastard child – 10 persons in all. A few weeks ago 13 persons slept in it.”<sup>106</sup>

Dr. Hunter investigated 5,375 cottages of agricultural labourers, not only in the purely agricultural districts, but in all counties of England. Of these, 2,195 had only one bedroom (often at the same time used as living-room), 2,930 only two, and 250, more than two. I will give a few specimens culled from a dozen counties.

#### (1.) Bedfordshire

*Wrestlingworth.* Bedrooms about 12 feet long and 10 broad, although many are smaller than this. The small, one-storied cots are often divided by partitions into two bedrooms, one bed frequently in a kitchen, 5 feet 6 inches in height. Rent, £3 a year. The tenants have to make their own privies, the landlord only supplies a hole. As soon as one has made a privy, it is made use of by the whole neighbourhood. One house, belonging to a family called Richardson, was of quite unapproachable beauty. “Its plaster walls bulged very like a lady’s dress in a curtsy. One gable end was convex, the other concave, and on this last, unfortunately, stood the chimney, a curved tube of clay and wood like an elephant’s trunk. A long stick served as prop to prevent the chimney from falling. The doorway and window were rhomboidal.” Of 17 houses visited, only 4 had more than one bedroom, and those four overcrowded. The cots with one bedroom sheltered 3 adults and 3 children, a married couple with 6 children, &c.

*Dunton.* High rents, from £4 to £5; weekly wages of the man, 10s. They hope to pay the rent by the straw-plaiting of the family. The higher the rent, the greater the number that must work together to pay it. Six adults, living with 4 children in one sleeping apartment, pay £3 10s. for it. The cheapest house in Dunton, 15 feet long externally, 10 broad, let for £3. Only one of the houses investigated had 2 bedrooms. A little outside the village, a house whose “tenants dinged against the house-side,” the lower 9 inches of the door eaten away through sheer rottenness; the doorway, a single opening closed at night by a few bricks, ingeniously pushed up after shutting and covered with some matting. Half a window, with glass and frame, had gone the way of all

flesh. Here, without furniture, huddled together were 3 adults and 5 children. Dunton is not worse than the rest of Biggleswade Union.

(2.) Berkshire

*Beenham.* In June, 1864, a man, his wife and 4 children lived in a cot (one-storied cottage). A daughter came home from service with scarlet fever. She died. One child sickened and died. The mother and one child were down with typhus when Dr. Hunter was called in. The father and one child slept outside, but the difficulty of securing isolation was seen here, for in the crowded market of the miserable village lay the linen of the fever-stricken household, waiting for the wash. The rent of H.'s house, 1s. a-week; one bedroom for man, wife, and 6 children. One house let for 8d. a-week, 14 feet 6 inches long, 7 feet broad, kitchen, 6 feet high; the bedroom without window, fire-place, door, or opening, except into the lobby; no garden. A man lived here for a little while, with two grown-up daughters and one grown-up son; father and son slept on the bed, the girls in the passage. Each of the latter had a child while the family was living here, but one went to the workhouse for her confinement and then came home.

(3.) Buckinghamshire

30 cottages – on 1,000 acres of land – contained here about 130-140 persons. The parish of *Bradenham* comprises 1,000 acres; it numbered, in 1851, 36 houses and a population of 84 males and 54 females. This inequality of the sexes was partly remedied in 1861, when they numbered 98 males and 87 females; increase in 10 years of 14 men and 33 women. Meanwhile, the number of houses was one less.

*Winslow.* Great part of this newly built in good style; demand for houses appears very marked, since very miserable cots let at 1s. to 1s. 3d. per week.

*Water Eaton.* Here the landlords, in view of the increasing population, have destroyed about 20 per cent. of the existing houses. A poor labourer, who had to go about 4 miles to his work, answered the question, whether he could not find a cot nearer: "No; they know better than to take a man in with my large family."

*Tinker's End,* near Winslow. A bedroom in which were 4 adults and 4 children; 11 feet long, 9 feet broad, 6 feet 5 inches high at its highest part; another 11 feet 3 inches by 9 feet, 5 feet 10 inches high, sheltered 6 persons. Each of these families had less space than is considered necessary for a convict. No house had more than one bedroom, not one of them a back-door; water very scarce; weekly rent from 1s. 4d. to 2s. In 16 of the houses visited, only 1 man that earned 10s. a-week. The quantity of air for each person under the circumstances just described corresponds to that which he would have if he were shut up in a box of 4 feet measuring each way, the whole night. But then, the ancient dens afforded a certain amount of unintentional ventilation.

(4.) Cambridgeshire

*Gamblingay* belongs to several landlords. It contains the wretchedest cots to be found anywhere. Much straw-plaiting. "A deadly lassitude, a hopeless surrendering up to filth," reigns in *Gamblingay*. The neglect in its centre, becomes mortification at its extremities, north and south, where the houses are rotting to pieces. The absentee landlords bleed this poor rookery too freely. The rents are very high; 8 or 9 persons packed in one sleeping apartment, in 2 cases 6 adults, each with 1 or 2 children in one small bedroom.

(5.) Essex

In this county, diminutions in the number of persons and of cottages go, in many parishes, hand in hand. In not less than 22 parishes, however, the destruction of houses has not prevented increase

of population, or has not brought about that expulsion which, under the name “migration to towns,” generally occurs. In Fingringhoe, a parish of 3,443 acres, were in 1851, 145 houses; in 1861, only 110. But the people did not wish to go away, and managed even to increase under these circumstances. In 1851, 252 persons inhabited 61 houses, but in 1861, 262 persons were squeezed into 49 houses. In Basilden, in 1851, 157 persons lived on 1,827 acres, in 35 houses; at the end of ten years, 180 persons in 27 houses. In the parishes of Fingringhoe, South Fambridge, Widford, Basilden, and Ramsden Crag, in 1851, 1,392 persons were living on 8,449 acres in 316 houses; in 1861, on the same area, 1,473 persons in 249 houses.

(6.) Herefordshire

This little county has suffered more from the “eviction-spirit” than any other in England. At Nadby, overcrowded cottages generally, with only 2 bedrooms, belonging for the most part to the farmers. They easily let them for £3 or £4 a-year, and paid a weekly wage of 9s.

(7.) Huntingdon

*Hartford* had, in 1851, 87 houses; shortly after this, 19 cottages were destroyed in this small parish of 1,720 acres; population in 1831, 452; in 1852, 382; and in 1861, 341. 14 cottages, each with 1 bedroom, were visited. In one, a married couple, 3 grown-up sons, 1 grown-up daughter, 4 children – in all 10 in another, 3 adults, 6 children. One of these rooms, in which 8 people slept, was 12 feet 10 inches long, 12 feet 2 inches broad, 6 feet 9 inches high: the average, without making any deduction for projections into the apartment, gave about 130 cubic feet per head. In the 14 sleeping rooms, 34 adults and 33 children. These cottages are seldom provided with gardens, but many of the inmates are able to farm small allotments at 10s. or 12s. per rood. These allotments are at a distance from the houses, which are without privies. The family “must either go to the allotment to deposit their ordures,” or, as happens in this place, saving your presence, “use a closet with a trough set like a drawer in a chest of drawers, and drawn out weekly and conveyed to the allotment to be emptied where its contents were wanted.” In Japan, the circle of life-conditions moves more decently than this.

(8.) Lincolnshire

*Langtoft*. A man lives here, in Wright’s house, with his wife, her mother, and 5 children; the house has a front kitchen, scullery, bedroom over the front kitchen; front kitchen and bedroom, 12 feet 2 inches by 9 feet 5 inches; the whole ground floor, 21 feet 2 inches by 9 feet 5 inches. The bedroom is a garret: the walls run together into the roof like a sugar-loaf, a dormer-window opening in front. “Why did he live here? On account of the garden? No; it is very small. Rent? High, 1s. 3d. per week. Near his work? No; 6 miles away, so that he walks daily, to and fro, 12 miles. He lived there, because it was a tenable cot,” and because he wanted to have a cot for himself alone, anywhere, at any price, and in any conditions. The following are the statistics of 12 houses in Langtoft, with 12 bedrooms, 38 adults, and 36 children.

| TWELVE HOUSES IN LANGTOFT |        |        |        |        |        |        |        |        |        |         |         |         |
|---------------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------|---------|---------|
| House                     | No. 1. | No. 2. | No. 3. | No. 4. | No. 5. | No. 6. | No. 7. | No. 8. | No. 9. | No. 10. | No. 11. | No. 12. |
| Bedrooms.                 | 1      | 1      | 1      | 1      | 1      | 1      | 1      | 1      | 1      | 1       | 1       | 1       |
| Adults.                   | 3      | 4      | 4      | 5      | 2      | 5      | 3      | 3      | 2      | 2       | 3       | 2       |
| Children.                 | 5      | 3      | 4      | 4      | 2      | 3      | 3      | 2      | 0      | 3       | 3       | 4       |
| Number of Persons.        | 8      | 7      | 8      | 9      | 4      | 8      | 6      | 5      | 2      | .5      | 6       | 6       |

## (9.) Kent

*Kennington*, very seriously over-populated in 1859, when diphtheria appeared, and the parish doctor instituted a medical inquiry into the condition of the poorer classes. He found that in this locality, where much labour is employed, various cots had been destroyed and no new ones built. In one district stood four houses, named birdcages; each had 4 rooms of the following dimensions in feet and inches:

|           |                                |
|-----------|--------------------------------|
| Kitchen:  | 9 ft. 5 by 8 ft. 11 by 6 ft. 6 |
| Scullery: | 8 ft. 6 by 4 ft. 6 by 6 ft. 6  |
| Bedroom:  | 8 ft. 5 by 5 ft. 10 by 6 ft. 3 |
| Bedroom:  | 8 ft. 3 by 8 ft. 4 by 6 ft. 3  |

## (10.) Northamptonshire

*Brinworth, Pickford and Floore*: in these villages in the winter 20-30 men were lounging about the streets from want of work. The farmers do not always till sufficiently the corn and turnip lands, and the landlord has found it best to throw all his farms together into 2 or 3. Hence want of employment. Whilst on one side of the wall, the land calls for labour, on the other side the defrauded labourers are casting at it longing glances. Feverishly overworked in summer, and half-starved in winter, it is no wonder if they say in their peculiar dialect, "the parson and gentlefolk seem frit to death at them."

At Floore, instances, in one bedroom of the smallest size, of couples with 4, 5, 6 children; 3 adults with 5 children; a couple with grandfather and 6 children down with scarlet fever, &c.; in two houses with two bedrooms, two families of 8 and 9 adults respectively.

## (11.) Wiltshire

*Stratton*. 31 houses visited, 8 with only one bedroom. Pentill, in the same parish: a cot let at Is. 3d. weekly with 4 adults and 4 children, had nothing good about it, except the walls, from the floor of rough-hewn pieces of stones to the roof of worn-out thatch.

## (12.) Worcestershire

House-destruction here not quite so excessive; yet from 1851 to 1861, the number of inhabitants to each house on the average, has risen from 4.2 to 4.6.

*Badsey*. Many cots and little gardens here. Some of the farmers declare that the cots are "a great nuisance here, because they bring the poor." On the statement of one gentleman:

"The poor are none the better for them; if you build 500 they will let fast enough, in fact, the more you build, the more they want"

(according to him the houses give birth to the inhabitants, who then by a law of Nature press on "the means of housing"). Dr. Hunter remarks:

"Now these poor must come from somewhere, and as there is no particular attraction, such as doles, at Badsey, it must be repulsion from some other unfit place, which will send them here. If each could find an allotment near his work, he would not prefer Badsey, where he pays for his scrap of ground twice as much as the farmer pays for his."

The continual emigration to the towns, the continual formation of surplus population in the country through the concentration of farms, conversion of arable land into pasture, machinery, &c., and the continual eviction of the agricultural population by the destruction of their cottages, go hand in hand. The more empty the district is of men, the greater is its "relative surplus population," the greater is their pressure on the means of employment, the greater is the absolute

excess of the agricultural population over the means for housing it, the greater, therefore, in the villages is the local surplus population and the most pestilential packing together of human beings. The packing together of knots of men in scattered little villages and small country towns corresponds to the forcible draining of men from the surface of the land. The continuous superseding of the agricultural labourers, in spite of their diminishing number and the increasing mass of their products, gives birth to their pauperism. Their pauperism is ultimately a motive to their eviction and the chief source of their miserable housing which breaks down their last power of resistance, and makes them more slaves of the landed proprietors and the farmers.<sup>107</sup> Thus the minimum of wages becomes a law of Nature to them. On the other hand, the land, in spite of its constant "relative surplus population," is at the same time underpopulated. This is seen, not only locally at the points where the efflux of men to towns, mines, railroad-making, &c., is most marked. It is to be seen everywhere, in harvest-time as well as in spring and summer, at those frequently recurring times when English agriculture, so careful and intensive, wants extra hands. There are always too many agricultural labourers for the ordinary, and always too few for the exceptional or temporary needs of the cultivation of the soil.<sup>108</sup> Hence we find in the official documents contradictory complaints from the same places of deficiency and excess of labour simultaneously. The temporary or local want of labour brings about no rise in wages, but a forcing of the women and children into the fields, and exploitation at an age constantly lowered. As soon as the exploitation of the women and children takes place on a larger scale, it becomes in turn a new means of making a surplus population of the male agricultural labourer and of keeping down his wage. In the east of England thrives a beautiful fruit of this vicious circle – the so-called gang-system, to which I must briefly return here.<sup>109</sup>

The gang-system obtains almost exclusively in the counties of Lincoln, Huntingdon, Cambridge, Norfolk, Suffolk, and Nottingham, here and there in the neighbouring counties of Northampton, Bedford, and Rutland. Lincolnshire will serve us as an example. A large part of this county is new land, marsh formerly, or even, as in others of the eastern counties just named, won lately from the sea. The steam-engine has worked wonders in the way of drainage. What were once fens and sandbanks, bear now a luxuriant sea of corn and the highest of rents. The same thing holds of the alluvial lands won by human endeavour, as in the island of Axholme and other parishes on the banks of the Trent. In proportion as the new farms arose, not only were no new cottages built: old ones were demolished, and the supply of labour had to come from open villages, miles away, by long roads that wound along the sides of the hills. There alone had the population formerly found shelter from the incessant floods of the winter-time. The labourers that dwell on the farms of 400-1,000 acres (they are called "confined labourers") are solely employed on such kinds of agricultural work as is permanent, difficult, and carried on by aid of horses. For every 100 acres there is, on an average, scarcely one cottage. A fen farmer, e.g., gave evidence before the Commission of Inquiry:

"I farm 320 acres, all arable land. I have not one cottage on my farm. I have only one labourer on my farm now. I have four horsemen lodging about. We get light work done by gangs."<sup>110</sup>

The soil requires much light field labour, such as weeding, hoeing, certain processes of manuring, removing of stones, &c. This is done by the gangs, or organised bands that dwell in the open villages.

The gang consists of 10 to 40 or 50 persons, women, young persons of both sexes (13-18 years of age, although the boys are for the most part eliminated at the age of 13), and children of both sexes (6-13 years of age). At the head is the gang master, always an ordinary agricultural labourer, generally what is called a bad lot, a scapegrace, unsteady, drunken, but with a dash of

enterprise and *savoir-faire*. He is the recruiting-sergeant for the gang, which works under him, not under the farmer. He generally arranges with the latter for piece-work, and his income, which on the average is not very much above that of an ordinary agricultural labourer,<sup>111</sup> depends almost entirely upon the dexterity with which he manages to extract within the shortest time the greatest possible amount of labour from his gang. The farmers have discovered that women work steadily only under the direction of men, but that women and children, once set going, impetuously spend their life-force – as Fourier knew – while the adult male labourer is shrewd enough to economise his as much as he can. The gang-master goes from one farm to another, and thus employs his gang from 6 to 8 months in the year. Employment by him is, therefore, much more lucrative and more certain for the labouring families, than employment by the individual farmer, who only employs children occasionally. This circumstance so completely rivets his influence in the open villages that children are generally only to be hired through his instrumentality. The lending out of these individually, independently of the gang, is his second trade.

The “drawbacks” of the system are the overwork of the children and young persons, the enormous marches that they make daily to and from the farms, 5, 6, and sometimes 7 miles distant, finally, the demoralisation of the gang. Although the gang-master, who, in some districts is called “the driver,” is armed with a long stick, he uses it but seldom, and complaints of brutal treatment are exceptional. He is a democratic emperor, or a kind of Pied Piper of Hamelin. He must therefore be popular with his subjects, and he binds them to himself by the charms of the gipsy life under his direction. Coarse freedom, a noisy jollity, and obscenest impudence give attractions to the gang. Generally the gangmaster pays up in a public house; then he returns home at the head of the procession reeling drunk, propped up right and left by a stalwart virago, while children and young persons bring up the rear, boisterous, and singing chaffing and bawdy songs. On the return journey what Fourier calls “phanerogamie,” is the order of the day. The getting with child of girls of 13 and 14 by their male companions of the same age, is common. The open villages which supply the contingent of the gang, become Sodoms and Gomorrah,<sup>112</sup> and have twice as high a rate of illegitimate births as the rest of the kingdom. The moral character of girls bred in these schools, when married women, was shown above. Their children, when opium does not give them the finishing stroke, are born recruits of the gang.

The gang in its classical form just described, is called the public, common, or tramping gang. For there are also private gangs. These are made up in the same way as the common gang, but count fewer members, and work, not under a gang-master, but under some old farm servant, whom the farmer does not know how to employ in any better way. The gipsy fun has vanished here, but according to all witnesses, the payment and treatment of the children is worse.

The gang-system, which during the last years has steadily increased,<sup>113</sup> clearly does not exist for the sake of the gang-master. It exists for the enrichment of the large farmers,<sup>114</sup> and indirectly of the landlords.<sup>115</sup> For the farmer there is no more ingenious method of keeping his labourers well below the normal level, and yet of always having an extra hand ready for extra work, of extracting the greatest possible amount of labour with the least possible amount of money<sup>116</sup> and of making adult male labour “redundant.” From the exposition already made, it will be understood why, on the one hand, a greater or less lack of employment for the agricultural labourer is admitted, while on the other, the gang-system is at the same time declared “necessary” on account of the want of adult male labour and its migration to the towns.<sup>117</sup> The cleanly weeded land, and the uncleanly human weeds, of Lincolnshire, are pole and counterpole of capitalistic production.<sup>118</sup>

## F. Ireland

In concluding this section, we must travel for a moment to Ireland. First, the main facts of the case.

The population of Ireland had, in 1841, reached 8,222,664; in 1851, it had dwindled to 6,623,985; in 1861, to 5,850,309; in 1866, to 5½ millions, nearly to its level in 1801. The diminution began with the famine year, 1846, so that Ireland, in less than twenty years, lost more than 5/16 ths of its people. <sup>119</sup> Its total emigration from May, 1851, to July, 1865, numbered 1,591,487: the emigration during the years 1861-1865 was more than half-a-million. The number of inhabited houses fell, from 1851-1861, by 52,990. From 1851-1861, the number of holdings of 15 to 30 acres increased 61,000, that of holdings over 30 acres, 109,000, whilst the total number of all farms fell 120,000, a fall, therefore, solely due to the suppression of farms under 15 acres – *i.e.*, to their centralisation.

| <i>Table A</i> |              |          |              |          |          |              |          |          |              |          |          |
|----------------|--------------|----------|--------------|----------|----------|--------------|----------|----------|--------------|----------|----------|
| LIVE-STOCK     |              |          |              |          |          |              |          |          |              |          |          |
| Year           | Horses       |          | Cattle       |          |          | Sheep        |          |          | Pigs         |          |          |
|                | Total Number | Decrease | Total Number | Decrease | Increase | Total Number | Decrease | Increase | Total Number | Decrease | Increase |
| 1860           | 619,811      | –        | 3,606,374    | –        | –        | 3,542,080    | –        | –        | 1,271,072    | –        | –        |
| 1861           | 614,232      | 5,579    | 3,471,688    | 134,686  | –        | 3,556,050    | –        | 13,970   | 1,102,042    | 169,030  | –        |
| 1862           | 602,894      | 11,338   | 3,254,890    | 216,798  | –        | 3,456,132    | 99,918   | –        | 1,154,324    | –        | 52,282   |
| 1863           | 579,978      | 22,916   | 3,144,231    | 110,659  | –        | 3,308,204    | 147,982  | –        | 1,067,458    | 86,866   | –        |
| 1864           | 562,158      | 17,820   | 3,262,294    | –        | 118,063  | 3,366,941    | –        | 58,737   | 1,058,480    | 8,978    | –        |
| 1865           | 547,867      | 14,291   | 3,493,414    | –        | 231,120  | 3,688,742    | –        | 321,801  | 1,299,893    | –        | 241,413  |

The decrease of the population was naturally accompanied by a decrease in the mass of products. For our purpose, it suffices to consider the 5 years from 1861-1865 during which over half-a-million emigrated, and the absolute number of people sank by more than 1/3 of a million. From the above table it results: –

| Horses            | Cattle            | Sheep             | Pigs                  |
|-------------------|-------------------|-------------------|-----------------------|
| Absolute Decrease | Absolute Decrease | Absolute Increase | Absolute Increase     |
| 71,944            | 112,960           | 146,662           | 28,821 <sup>120</sup> |

Let us now turn to agriculture, which yields the means of subsistence for cattle and for men. In the following table is calculated the decrease or increase for each separate year, as compared with its immediate predecessor. The Cereal Crops include wheat, oats, barley, rye, beans, and peas; the Green Crops, potatoes, turnips, marigolds, beet-root, cabbages, carrots, parsnips, vetches. &c.

*Table B*

INCREASE OR DECREASE IN THE AREA UNDER CROPS AND GRASS IN ACREAGE

| Year    | Cereal Crops     | Green Crops      |                  | Grass and Clover |                  | Flax             |                  | Total Cultivated Land |                  |
|---------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|-----------------------|------------------|
|         | Decrease (Acres) | Decrease (Acres) | Increase (Acres) | Decrease (Acres) | Increase (Acres) | Decrease (Acres) | Increase (Acres) | Decrease (Acres)      | Increase (Acres) |
| 1861    | 15,701           | 36,974           | –                | 47,969           | –                | –                | 19,271           | 81,373                | –                |
| 1862    | 72,734           | 74,785           | –                | –                | 6,623            | –                | 2,055            | 138,841               | –                |
| 1863    | 144,719          | 19,358           | –                | –                | 7,724            | –                | 63,922           | 92,431                | –                |
| 1864    | 122,437          | 2,317            | –                | –                | 47,486           | –                | 87,761           | –                     | 10,493           |
| 1865    | 72,450           | –                | 25,241           | –                | 68,970           | 50,159           | –                | 28,398                | –                |
| 1861-65 | 428,041          | 108,193          | –                | –                | 82,834           | –                | 122,8501         | 330,350               | –                |

In the year 1865, 127,470 additional acres came under the heading “grass land,” chiefly because the area under the heading of “bog and waste unoccupied,” decreased by 101,543 acres. If we compare 1865 with 1864, there is a decrease in cereals of 246,667 qrs., of which 48,999 were wheat, 160,605 oats, 29,892 barley, &c.: the decrease in potatoes was 446,398 tons, although the area of their cultivation increased in 1865.

From the movement of population and the agricultural produce of Ireland, we pass to the movement in the purse of its landlords, larger farmers, and industrial capitalists. It is reflected in the rise and fall of the Income-tax. It may be remembered that Schedule D. (profits with the exception of those of farmers), includes also the so-called, “professional” profits – *i.e.*, the incomes of lawyers, doctors, &c.; and the Schedules C. and E., in which no special details are given, include the incomes of employees, officers, State sinecurists, State fundholders, &c.

*Table C*<sup>121</sup>

**INCREASE OR DECREASE IN THE AREA UNDER CULTIVATION,  
PRODUCT PER ACRE, AND TOTAL PRODUCT OF 1865 COMPARED WITH 1864**

| Product            | Acres of Cultivated Land |           |                            |        | Product per Acre        |      |                            |     | Total Product     |                   |                            |                 |

*Table D*

**THE INCOME-TAX ON THE SUBJOINED INCOMES IN POUNDS STERLING  
(Tenth Report of the Commissioners of Inland Revenue, Lond. 1866.)**

|   | 1860       | 1861       | 1862       | 1863       | 1864       | 1865       |
|---|------------|------------|------------|------------|------------|------------|
| <i>Schedule A.</i><br>Rent of Land                | 13,893,829 | 13,003,554 | 13,398,938 | 13,494,091 | 13,470,700 | 13,801,616 |
| <i>Schedule B.</i><br>Farmers' Profits.           | 2,765,387  | 2,773,644  | 2,937,899  | 2,938,923  | 2,930,874  | 2,946,072  |
| <i>Schedule D.</i><br>Industrial,<br>&c., Profits | 4,891,652  | 4,836,203  | 4,858,800  | 4,846,497  | 4,546,147  | 4,850,199  |
| Total Schedules<br>A to E                         | 22,962,885 | 22,998,394 | 23,597,574 | 23,658,631 | 23,236,298 | 23,930,340 |

Under Schedule D., the average annual increase of income from 1853-1864 was only 0.93; whilst, in the same period, in Great Britain, it was 4.58. The following table shows the distribution of the profits (with the exception of those of farmers) for the years 1864 and 1865: –

*Table E*<sup>122</sup>

| SCHEDULE D.<br>INCOME FROM PROFITS (OVER £60) IN IRELAND |   |   |
|--|---|---|
|  | 1864<br>£                               | 1865<br>£                               |
| Total yearly income of                                   | 4,368,610 divided among 17,467 persons. | 4,669,979 divided among 18,081 persons. |
| Yearly income over £60 and under £100                    | 238,726 divided among 5,015 persons.    | 222,575 divided among 4,703 persons.    |
| Of the yearly total income                               | 1,979,066 divided among 11,321 persons. | 2,028,571 divided among 12,184 persons. |
| Remainder of the total yearly income                     | 2,150,818 divided among 1,131 persons.  | 2,418,833 divided among 1,194 persons.  |
|  |   |   |
|  | 1,073,906 divided among 1,010 persons.  | 1,097,927 divided among 1,044 persons.  |
|  | 1,076,912 divided among 121 persons.    | 1,320,906 divided among 150 persons.    |
| Of these   | 430,535 divided among 95 persons.       | 584,458 divided among 2 persons.        |
|  | 646,377 divided among 26                | 736,448 divided among 28                |
|  | 262,819 divided among 3                 | 274,528 divided among 3                 |

England, a country with fully developed capitalist production, and pre-eminently industrial, would have bled to death with such a drain of population as Ireland has suffered. But Ireland is at present only an agricultural district of England, marked off by a wide channel from the country to which it yields corn, wool, cattle, industrial and military recruits.

The depopulation of Ireland has thrown much of the land out of cultivation, has greatly diminished the produce of the soil,<sup>123</sup> and, in spite of the greater area devoted to cattle breeding, has brought about, in some of its branches, an absolute diminution, in others, an advance scarcely worthy of mention, and constantly interrupted by retrogressions. Nevertheless, with the fall in numbers of the population, rents and farmers' profits rose, although the latter not as steadily as the former. The reason of this is easily comprehensible. On the one hand, with the throwing of small holdings into large ones, and the change of arable into pasture land, a larger part of the whole produce was transformed into surplus-produce. The surplus-produce increased, although the total produce, of which it formed a fraction, decreased. On the other hand, the money value of this surplus-produce increased yet more rapidly than its mass, in consequence of the rise in the English market price of meat, wool, &c., during the last 20, and especially during the last 10, years.

The scattered means of production that serve the producers themselves as means of employment and of subsistence, without expanding their own value by the incorporation of the labour of others, are no more capital than a product consumed by its own producer is a commodity. If, with the mass of the population, that of the means of production employed in agriculture also diminished, the mass of the capital employed in agriculture increased, because a part of the means of production that were formerly scattered, was concentrated and turned into capital.

The total capital of Ireland outside agriculture, employed in industry and trade, accumulated during the last two decades slowly, and with great and constantly recurring fluctuations; so much the more rapidly did the concentration of its individual constituents develop. And, however small its absolute increase, in proportion to the dwindling population it had increased largely.

Here, then, under our own eyes and on a large scale, a process is revealed, than which nothing more excellent could be wished for by orthodox economy for the support of its dogma: that misery springs from absolute surplus population, and that equilibrium is re-established by depopulation. This is a far more important experiment than was the plague in the middle of the 14th century so belauded of Malthusians. Note further: If only the naïveté of the schoolmaster could apply, to the conditions of production and population of the nineteenth century, the standard of the 14th, this naïveté, into the bargain, overlooked the fact that whilst, after the plague and the decimation that accompanied it, followed on this side of the Channel, in England, enfranchisement and enrichment of the agricultural population, on that side, in France, followed greater servitude and more misery.<sup>124</sup>

The Irish famine of 1846 killed more than 1,000,000 people, but it killed poor devils only. To the wealth of the country it did not the slightest damage. The exodus of the next 20 years, an exodus still constantly increasing, did not, as, *e.g.*, the Thirty Years' War, decimate, along with the human beings, their means of production. Irish genius discovered an altogether new way of spiring a poor people thousands of miles away from the scene of its misery. The exiles transplanted to the United States, send home sums of money every year as travelling expenses for those left behind. Every troop that emigrates one year, draws another after it the next. Thus, instead of costing Ireland anything, emigration forms one of the most lucrative branches of its export trade. Finally, it is a systematic process, which does not simply make a passing gap in the population, but sucks out of it every year more people than are replaced by the births, so that the absolute level of the population falls year by year.<sup>125</sup>

What were the consequences for the Irish labourers left behind and freed from the surplus population? That the relative surplus population is today as great as before 1846; that wages are just as low, that the oppression of the labourers has increased, that misery is forcing the country towards a new crisis. The facts are simple. The revolution in agriculture has kept pace with emigration. The production of relative surplus population has more than kept pace with the absolute depopulation. A glance at table C. shows that the change of arable to pasture land must work yet more acutely in Ireland than in England. In England the cultivation of green crops increases with the breeding of cattle; in Ireland, it decreases. Whilst a large number of acres, that were formerly tilled, lie idle or are turned permanently into grass-land, a great part of the waste land and peat bogs that were unused formerly, become of service for the extension of cattle-breeding. The smaller and medium farmers – I reckon among these all who do not cultivate more than 100 acres – still make up about 8/10ths of the whole number.<sup>126</sup> They are one after the other, and with a degree of force unknown before, crushed by the competition of an agriculture managed by capital, and therefore they continually furnish new recruits to the class of wage labourers. The one great industry of Ireland, linen-manufacture, requires relatively few adult men and only employs altogether, in spite of its expansion since the price of cotton rose in 1861-1866,

a comparatively insignificant part of the population. Like all other great modern industries, it constantly produces, by incessant fluctuations, a relative surplus population within its own sphere, even with an absolute increase in the mass of human beings absorbed by it. The misery of the agricultural population forms the pedestal for gigantic shirt-factories, whose armies of labourers are, for the most part, scattered over the country. Here, we encounter again the system described above of domestic industry, which in underpayment and overwork, possesses its own systematic means for creating supernumerary labourers. Finally, although the depopulation has not such destructive consequences as would result in a country with fully developed capitalistic production, it does not go on without constant reaction upon the home-market. The gap which emigration causes here, limits not only the local demand for labour, but also the incomes of small shopkeepers, artisans, tradespeople generally. Hence the diminution in incomes between £60 and £100 in Table E.

A clear statement of the condition of the agricultural labourers in Ireland is to be found in the Reports of the Irish Poor Law Inspectors (1870).<sup>127</sup> Officials of a government which is maintained only by bayonets and by a state of siege, now open, now disguised, they have to observe all the precautions of language that their colleagues in England disdain. In spite of this, however, they do not let their government cradle itself in illusions. According to them the rate of wages in the country, still very low, has within the last 20 years risen 50-60 per cent., and stands now, on the average, at 6s. to 9s. per week. But behind this apparent rise, is hidden an actual fall in wages, for it does not correspond at all to the rise in price of the necessary means of subsistence that has taken place in the meantime. For proof, the following extract from the official accounts of an Irish workhouse.

| AVERAGE WEEKLY COST PER HEAD |                             |           |             |
|------------------------------|-----------------------------|-----------|-------------|
| Year ended                   | Provisions and Necessaries. | Clothing. | TOTAL.      |
| 29th Sept., 1849.            | 1s. 3 1/4d.                 | 3d.       | 1s. 6 1/4d. |
| 29th Sept., 1869.            | 2s. 7 1/4d.                 | 6d.       | 3s. 1 1/4d. |

The price of the necessary means of subsistence is therefore fully twice, and that of clothing exactly twice, as much as they were 20 years before.

Even apart from this disproportion, the mere comparison of the rate of wages expressed in gold would give a result far from accurate. Before the famine, the great mass of agricultural wages were paid in kind, only the smallest part in money; today, payment in money is the rule. From this it follows that, whatever the amount of the real wage, its money rate must rise.

“Previous to the famine, the labourer enjoyed his cabin ... with a rood, or half-acre or acre of land, and facilities for ... a crop of potatoes. He was able to rear his pig and keep fowl.... But they now have to buy bread, and they have no refuse upon which they can feed a pig or fowl, and they have consequently no benefit from the sale of a pig, fowl, or eggs.”<sup>128</sup>

In fact, formerly, the agricultural labourers were but the smallest of the small farmers, and formed for the most part a kind of rear-guard of the medium and large farms on which they found employment. Only since the catastrophe of 1846 have they begun to form a fraction of the class of purely wage labourers, a special class, connected with its wage-masters only by monetary relations.

We know what were the conditions of their dwellings in 1846. Since then they have grown yet worse. A part of the agricultural labourers, which, however, grows less day by day, dwells still on

the holdings of the farmers in over-crowded huts, whose hideousness far surpasses the worst that the English agricultural labourers offered us in this way. And this holds generally with the exception of certain tracts of Ulster; in the south, in the counties of Cork, Limerick, Kilkenny, &c.; in the east, in Wicklow, Wexford, &c.; in the centre of Ireland, in King's and Queen's County, Dublin, &c.; in the west, in Sligo, Roscommon, Mayo, Galway, &c.

“The agricultural labourers' huts,” an inspector cries out, “are a disgrace to the Christianity and to the civilisation of this country.”<sup>129</sup>

In order to increase the attractions of these holes for the labourers, the pieces of land belonging thereto from time immemorial, are systematically confiscated.

“The mere sense that they exist subject to this species of ban, on the part of the landlords and their agents, has ... given birth in the minds of the labourers to corresponding sentiments of antagonism and dissatisfaction towards those by whom they are thus led to regard themselves as being treated as ... a proscribed race.”<sup>130</sup>

The first act of the agricultural revolution was to sweep away the huts situated on the field of labour. This was done on the largest scale, and as if in obedience to a command from on high. Thus many labourers were compelled to seek shelter in villages and towns. There they were thrown like refuse into garrets, holes, cellars and corners, in the worst back slums. Thousands of Irish families, who according to the testimony of the English, eaten up as these are with national prejudice, are notable for their rare attachment to the domestic hearth, for their gaiety and the purity of their home-life, found themselves suddenly transplanted into hotbeds of vice. The men are now obliged to seek work of the neighbouring farmers and are only hired by the day, and therefore under the most precarious form of wage. Hence

“they sometimes have long distances to go to and from work, often get wet, and suffer much hardship, not unfrequently ending in sickness, disease and want.”<sup>131</sup>

“The towns have had to receive from year to year what was deemed to be the surplus labour of the rural division,”<sup>132</sup> and then people still wonder “there is still a surplus of labour in the towns and villages, and either a scarcity or a threatened scarcity in some of the country divisions.”<sup>133</sup> The truth is that this want only becomes perceptible “in harvest-time, or during spring, or at such times as agricultural operations are carried on with activity; at other periods of the year many hands are idle;”<sup>134</sup> that “from the digging out of the main crop of potatoes in October until the early spring following ... there is no employment for them;”<sup>135</sup> and further, that during the active times they “are subject to broken days and to all kinds of interruptions.”<sup>136</sup>

These results of the agricultural revolution – *i.e.*, the change of arable into pasture land, the use of machinery, the most rigorous economy of labour, &c., are still further aggravated by the model landlords, who, instead of spending their rents in other countries, condescend to live in Ireland on their demesnes. In order that the law of supply and demand may not be broken, these gentlemen draw their

“labour-supply ... chiefly from their small tenants, who are obliged to attend when required to do the landlord's work, at rates of wages, in many instances, considerably under the current rates paid to ordinary labourers, and without regard to the inconvenience or loss to the tenant of being obliged to neglect his own business at critical periods of sowing or reaping.”<sup>137</sup>

The uncertainty and irregularity of employment, the constant return and long duration of gluts of labour, all these symptoms of a relative surplus population, figure therefore in the reports of the Poor Law administration, as so many hardships of the agricultural proletariat. It will be remembered that we met, in the English agricultural proletariat, with a similar spectacle. But the difference is that in England, an industrial country, the industrial reserve recruits itself from the country districts, whilst in Ireland, an agricultural country, the agricultural reserve recruits itself from the towns, the cities of refuge of the expelled agricultural labourers. In the former, the supernumeraries of agriculture are transformed into factory operatives; in the latter, those forced into the towns, whilst at the same time they press on the wages in towns, remain agricultural labourers, and are constantly sent back to the country districts in search of work.

The official inspectors sum up the material condition of the agricultural labourer as follows:

“Though living with the strictest frugality, his own wages are barely sufficient to provide food for an ordinary family and pay his rent” and he depends upon other sources for the means of clothing himself, his wife, and children.... The atmosphere of these cabins, combined with the other privations they are subjected to, has made this class particularly susceptible to low fever and pulmonary consumption.”<sup>138</sup>

After this, it is no wonder that, according to the unanimous testimony of the inspectors, a sombre discontent runs through the ranks of this class, that they long for the return of the past, loathe the present, despair of the future, give themselves up “to the evil influence of agitators,” and have only one fixed idea, to emigrate to America. This is the land of Cockaigne, into which the great Malthusian panacea, depopulation, has transformed green Erin.

What a happy life the Irish factory operative leads one example will show:

“On my recent visit to the North of Ireland,” says the English Factory Inspector, Robert Baker, “I met with the following evidence of effort in an Irish skilled workman to afford education to his children; and I give his evidence verbatim, as I took it from his mouth. That he was a skilled factory hand, may be understood when I say that he was employed on goods for the Manchester market. ‘Johnson. – I am a beetler and work from 6 in the morning till 11 at night, from Monday to Friday. Saturday we leave off at 6 p. m., and get three hours of it (for meals and rest). I have five children in all. For this work I get 10s. 6d. a week; my wife works here also, and gets 5s. a week. The oldest girl who is 12, minds the house. She is also cook, and all the servant we have. She gets the young ones ready for school. A girl going past the house wakes me at half past five in the morning. My wife gets up and goes along with me. We get nothing (to eat) before we come to work. The child of 12 takes care of the little children all the day, and we get nothing till breakfast at eight. At eight we go home. We get tea once a week; at other times we get stirabout, sometimes of oat-meal, sometimes of Indian meal, as we are able to get it. In the winter we get a little sugar and water to our Indian meal. In the summer we get a few potatoes, planting a small patch ourselves; and when they are done we get back to stirabout. Sometimes we get a little milk as it may be. So we go on from day to day, Sunday and week day, always the same the year round. I am always very much tired when I have done at night. We may see a bit of flesh meat sometimes, but very seldom. Three of our children attend school, for whom we pay 1d. a week a head. Our rent is 9d. a week. Peat for firing costs 1s. 6d. a fortnight at the very lowest.’”<sup>139</sup>

Such are Irish wages, such is Irish life!

In fact the misery of Ireland is again the topic of the day in England. At the end of 1866 and the beginning of 1867, one of the Irish land magnates, Lord Dufferin, set about its solution in *The Times*. “Wie menschlich von solch grossem Herrn!”

From Table E. we saw that, during 1864, of £4,368,610 of total profits, three surplus-value makers pocketed only £262,819; that in 1865, however, out of £4,669,979 total profits, the same three virtuosi of “abstinence” pocketed £274,528; in 1864, 26 surplus-value makers reached to £646,377; in 1865, 28 surplus-value makers reached to £736,448; in 1864, 121 surplus-value makers, £1,076,912; in 1865, 150 surplus-value makers, £1,320,906; in 1864, 1,131 surplus-value makers £2,150,818, nearly half of the total annual profit; in 1865, 1,194 surplus-value makers, £2,418,833, more than half of the total annual profit. But the lion’s share, which an inconceivably small number of land magnates in England, Scotland and Ireland swallow up of the yearly national rental, is so monstrous that the wisdom of the English State does not think fit to afford the same statistical materials about the distribution of rents as about the distribution of profits. Lord Dufferin is one of those land magnates. That rent-rolls and profits can ever be “excessive,” or that their plethora is in any way connected with plethora of the people’s misery is, of course, an idea as “disreputable” as “unsound.” He keeps to facts. The fact is that, as the Irish population diminishes, the Irish rent-rolls swell; that depopulation benefits the landlords, therefore also benefits the soil, and, therefore, the people, that mere accessory of the soil. He declares, therefore, that Ireland is still over-populated, and the stream of emigration still flows too lazily. To be perfectly happy, Ireland must get rid of at least one-third of a million of labouring men. Let no man imagine that this lord, poetic into the bargain, is a physician of the school of Sangrado, who as often as he did not find his patient better, ordered phlebotomy and again phlebotomy, until the patient lost his sickness at the same time as his blood. Lord Dufferin demands a new blood-letting of one-third of a million only, instead of about two millions; in fact, without the getting rid of these, the millennium in Erin is not to be. The proof is easily given.

|  | No.     | Acres      |
|--|---------|------------|
| (1) Farms not over 1 acre.             | 48,653  | 25,394     |
| (2) Farms over 1, not over 5 acres.    | 82,037  | 288,916    |
| (3) Farms over 5, not over 15 acres.   | 176,368 | 1,836,310  |
| (4) Farms over 15, not over 30 acres.  | 136,578 | 3,051,343  |
| (5) Farms over 30, not over 50 acres.  | 71,961  | 2,906,274  |
| (6) Farms over 50, not over 100 acres. | 54,247  | 3,983,880  |
| (7) Farms over 100 acres.              | 31,927  | 8,227,807  |
| (8) TOTAL AREA.                        | –       | 26,319,924 |

Centralisation has from 1851 to 1861 destroyed principally farms of the first three categories, under 1 and not over 15 acres. These above all must disappear. This gives 307,058 “supernumerary” farmers, and reckoning the families the low average of 4 persons, 1,228,232 persons. On the extravagant supposition that, after the agricultural revolution is complete one-fourth of these are again absorbable, there remain for emigration 921,174 persons. Categories 4, 5, 6, of over 15 and not over 100 acres, are, as was known long since in England, too small for capitalistic cultivation of corn, and for sheep-breeding are almost vanishing quantities. On the same supposition as before, therefore, there are further 788,761 persons to emigrate; total, 1,709,532. And as l'appétit vient en mangeant, Rentroll's eyes will soon discover that Ireland, with 3½ millions, is still always miserable, and miserable because she is overpopulated. Therefore her depopulation must go yet further, that thus she may fulfil her true destiny, that of an English sheep-walk and cattle-pasture.”<sup>141</sup>

Like all good things in this bad world, this profitable method has its drawbacks. With the accumulation of rents in Ireland, the accumulation of the Irish in America keeps pace. The Irishman, banished by sheep and ox, re-appears on the other side of the ocean as a Fenian, and face to face with the old queen of the seas rises, threatening and more threatening, the young giant Republic:

*Acerba fata Romanos agunt*

*Scelusque fraternae necis.*

[A cruel fate torments the Romans,  
and the crime of fratricide]

---

<sup>1</sup> Karl Marx, l. c., “A égalité d'oppression des masses, plus un pays a de prolétaires et plus il est riche.” (Colins, “L'Economie Politique. Source des Révolutions et des Utopies, prétendues Socialistes.” Paris, 1857, t. III., p. 331.) Our “proletarian” is economically none other than the wage labourer, who produces and increases capital, and is thrown out on the streets, as soon as he is superfluous for the needs of aggrandisement of “Monsieur capital,” as Pecqueur calls this person. “The sickly proletarian of the primitive forest,” is a pretty Roscherian fancy. The primitive forester is owner of the primitive forest, and uses the primitive forest as his property with the freedom of an orang-outang. He is not, therefore, a proletarian. This would only be the case, if the primitive forest exploited him, instead of being exploited by him. As far as his health is concerned, such a man would well bear comparison, not only with the modern proletarian, but also with the syphilitic and scrofulous upper classes. But, no doubt, Herr Wilhelm Roscher, by “primitive forest” means his native heath of Lüneburg.

<sup>3</sup> Bernard de Mandeville: “The Fable of the Bees,” 5th edition, London, 1728. Remarks, pp. 212, 213, 328. “Temperate living and constant employment is the direct road, for the poor, to rational happiness” [by which he most probably means long working days and little means of subsistence], “and to riches and strength for the state” (*viz.*, for the landlords, capitalists, and their political dignitaries and agents). (“An Essay on Trade and Commerce,” London, 1770, p. 54.)

<sup>4</sup> Eden should have asked, whose creatures then are “the civil institutions”? From his standpoint of juridical illusion, he does not regard the law as a product of the material relations of production, but conversely the relations of production as products of the law. Linguet overthrew Montesquieu's illusory “Esprit des lois” with one word: “L'esprit des lois, c'est la propriété.” [The spirit of laws is property]

<sup>5</sup> Eden, l. c., Vol. 1, book I, chapter 1, pp. 1, 2, and preface, p. xx.

<sup>6</sup> If the reader reminds me of Malthus, whose “Essay on Population” appeared in 1798, I remind him that this work in its first form is nothing more than a schoolboyish, superficial plagiarism of De Foe, Sir James Steuart, Townsend, Franklin, Wallace, &c., and does not contain a single sentence thought out by himself. The great sensation this pamphlet caused, was due solely to party interest. The French Revolution had found passionate defenders in the United Kingdom; the “principle of population,” slowly worked out in the eighteenth century, and then, in the midst of a great social crisis, proclaimed with drums and trumpets as the infallible antidote to the teachings of Condorcet, &c., was greeted with jubilation by the English oligarchy as the great destroyer of all hankerings after human development. Malthus, hugely astonished at his success, gave himself to stuffing into his book materials superficially compiled, and adding to it new matter, not discovered but annexed by him. Note further: Although Malthus was a parson of the English State Church, he had taken the monastic vow of celibacy — one of the conditions of holding a Fellowship in Protestant Cambridge University: “Socios collegiorum maritos esse non permittimus, sed statim postquam quis uxorem duxerit socius collegii desinat esse.” (“Reports of Cambridge University Commission,” p. 172.) This circumstance favourably distinguishes Malthus from the other Protestant parsons, who have shuffled off the command enjoining celibacy of the priesthood and have taken, “Be fruitful and multiply,” as their special Biblical mission in such a degree that they generally contribute to the increase of population to a really unbecoming extent, whilst they preach at the same time to the labourers the “principle of population.” It is characteristic that the economic fall of man, the Adam’s apple, the urgent appetite, “the checks which tend to blunt the shafts of Cupid,” as Parson Townsend waggishly puts it, that this delicate question was and is monopolised by the Reverends of Protestant Theology, or rather of the Protestant Church. With the exception of the Venetian monk, Ortes, an original and clever writer, most of the population theory teachers are Protestant parsons. For instance, Bruckner, “Théorie du Système animal,” Leyde, 1767, in which the whole subject of the modern population theory is exhausted, and to which the passing quarrel between Quesnay and his pupil, the elder Mirabeau, furnished ideas on the same topic; then Parson Wallace, Parson Townsend, Parson Malthus and his pupil, the arch-Parson Thomas Chalmers, to say nothing of lesser reverend scribblers in this line. Originally, Political Economy was studied by philosophers like Hobbes, Locke, Hume; by businessmen and statesmen, like Thomas More, Temple, Sully, De Witt, North, Law, Vanderlint, Cantillon, Franklin; and especially, and with the greatest success, by medical men like Petty, Barbon, Mandeville, Quesnay. Even in the middle of the eighteenth century, the Rev. Mr. Tucker, a notable economist of his time, excused himself for meddling with the things of Mammon. Later on, and in truth with this very “Principle of population,” struck the hour of the Protestant parsons. Petty, who regarded the population as the basis of wealth, and was, like Adam Smith, an outspoken foe to parsons, says, as if he had a presentiment of their bungling interference, “that Religion best flourishes when the Priests are most mortified, as was before said of the Law, which best flourisheth when lawyers have least to do.” He advises the Protestant priests, therefore, if they, once for all, will not follow the Apostle Paul and “mortify” themselves by celibacy, “not to breed more Churchmen than the Benefices, as they now stand shared out, will receive, that is to say, if there be places for about twelve thousand in England and Wales, it will not be safe to breed up 24,000 ministers, for then the twelve thousand which are unprovided for, will seek ways how to get themselves a livelihood, which they cannot do more easily than by persuading the people that the twelve thousand incumbents do poison or starve their souls, and misguide them in their way to Heaven.” (Petty: “A Treatise of Taxes and Contributions,” London, 1667, p. 57.) Adam Smith’s position with the Protestant priesthood of his time is shown by the following. In “A Letter to A. Smith, L.L.D. On the Life, Death, and Philosophy of his Friend, David Hume. By one of the People called Christians,” 4th Edition, Oxford, 1784, Dr. Horne, Bishop of Norwich, reproves Adam Smith, because in a published letter to Mr. Strahan, he “embalmed his friend David” (sc. Hume); because he told the world how “Hume amused himself on his deathbed with Lucian and Whist,” and because he even had the impudence to write of Hume: “I

have always considered him, both in his life-time and since his death, as approaching as nearly to the idea of a perfectly wise and virtuous man, as, perhaps, the nature of human frailty will permit." The bishop cries out, in a passion: "Is it right in you, Sir, to hold up to our view as 'perfectly wise and virtuous,' the *character* and *conduct* of one, who seems to have been possessed with an incurable antipathy to all that is called *Religion*; and who strained every nerve to explode, suppress and extirpate the spirit of it among men, that its very name, if he could effect it, might no more be had in remembrance?" (l. c., p. 8.) "But let not the lovers of truth be discouraged. Atheism cannot be of long continuance." (P. 17.) Adam Smith, "had the atrocious wickedness to propagate atheism through the land (viz., by his "Theory of Moral Sentiments"). Upon the whole, Doctor, your meaning is good; but I think you will not succeed this time. You would persuade us, by the example of *David Hume, Esq.*, that atheism is the only cordial for low spirits, and the proper antidote against the fear of death.... You may smile over *Babylon* in ruins and congratulate the hardened *Pharaoh* on his overthrow in the Red Sea." (l. c., pp. 21, 22.) One orthodox individual, amongst Adam Smith's college friends, writes after his death: "Smith's well-placed affection for Hume ... hindered him from being a Christian.... When he met with honest men whom he liked ... he would believe almost anything they said. Had he been a friend of the worthy ingenious Horrox he would have believed that the moon some times disappeared in a clear sky without the interposition of a cloud.... He approached to republicanism in his political principles." ("The Bee." By James Anderson, 18 Vols., Vol. 3, pp. 166, 165, Edinburgh, 1791-93.) Parson Thomas Chalmers has his suspicions as to Adam Smith having invented the category of "unproductive labourers," solely for the Protestant parsons, in spite of their blessed work in the vineyard of the Lord.

<sup>7</sup> "The limit, however, to the employment of both the operative and the labourer is the same; namely, the possibility of the employer realising a *profit* on the produce of their industry. If the rate of wages is such as to reduce the master's gains below the average profit of capital, he will cease to employ them, or he will only employ them on condition of submission to a reduction of wages." (John Wade, l. c., p. 241.)

<sup>8</sup> Note by the Institute of Marxism-Leninism to the Russian edition: The MS in the first case says "little" and in the second case "much"; the correction has been introduced according to the authorised French translation.

<sup>9</sup> Cf. Karl Marx: "Zur Kritik der Politischen Oekonomie," pp. 166, seq.

<sup>10</sup> "If we now return to our first inquiry, wherein it was shown that capital itself is only the result of human labour... it seems quite incomprehensible that man can have fallen under the domination of capital, his own product; can be subordinated to it; and as in reality this is beyond dispute the case, involuntarily the question arises: How has the labourer been able to pass from being master of capital — as its creator — to being its slave?" (Von Thünen, "Der isolierte Staat" Part ii., Section ii., Rostock, 1863, pp. 5, 6.) It is Thünen's merit to have asked this question. His answer is simply childish.

<sup>11</sup> Adam Smith, "Enquiry into the Nature of ...", Volume I.

<sup>12</sup> *Note in the 4th German edition.* — The latest English and American "trusts" are already striving to attain this goal by attempting to unite at least all the large-scale concerns in one branch of industry into one great joint-stock company with a practical monopoly. *F. E.*

<sup>13</sup> *Note in the 3rd German edition.* — In Marx's copy there is here the marginal note: "Here note for working out later; if the extension is only quantitative, then for a greater and a smaller capital in the same branch of business the profits are as the magnitudes of the capitals advanced. If the quantitative extension induces qualitative change, then the rate of profit on the larger capital rises simultaneously." *F. E.*

<sup>14</sup> The census of England and Wales shows: all persons employed in agriculture (landlords, farmers, gardeners, shepherds, &c., included): 1851, 2,011,447; 1861, 1,924,110. Fall, 87,337. Worsted manufacture: 1851, 102,714 persons; 1861, 79,242. Silk weaving: 1851, 111,940; 1861, 101,678. Calico-printing: 1851, 12,098; 1861, 12,556. A small rise that, in the face of the enormous extension of this industry and implying a great fall proportionally in the number of labourers employed. Hat-making: 1851, 15,957; 1861, 13,814. Straw-hat and bonnet-making: 1851, 20,393; 1861, 18,176. Malting: 1851, 10,566; 1861, 10,677. Chandlery, 1851, 4,949; 1861, 4,686. This fall is due, besides other causes, to the increase in lighting by gas. Comb-making: 1851, 2,038; 1861, 1,478. Sawyers: 1851, 30,552; 1861, 31,647 — a small rise in consequence of the increase of sawing-machines. Nail-making: 1851, 26,940; 1861, 26,130 — fall in consequence of the competition of machinery. Tin and copper-mining: 1851, 31,360; 1861, 32,041. On the other hand: Cotton-spinning and weaving: 1851, 371,777; 1861, 456,646. Coal-mining: 1851, 183,389, 1861, 246,613, “The increase of labourers is generally greatest, since 1851, in such branches of industry in which machinery has not up to the present been employed with success.” (Census of England and Wales for 1861. Vol. III. London, 1863, p. 36.)

<sup>15</sup> *Added in the 4th German edition.* — The law of progressive diminution of the relative magnitude of variable capital and its effect on the condition of the class of wage workers is conjectured rather than understood by some of the prominent economists of the classical school. The greatest service was rendered here by John Barton, although he, like all the rest, lumps together constant and fixed capital, variable and circulating capital. He says:

“The demand for labour depends on the increase of circulating, and not of fixed capital. Were it true that the proportion between these two sorts of capital is the same at all times, and in all circumstances, then, indeed, it follows that the number of labourers employed is in proportion to the wealth of the state. But such a proposition has not the semblance of probability. As arts are cultivated, and civilisation is extended, fixed capital bears a larger and larger proportion to circulating capital. The amount of fixed capital employed in the production of a piece of British muslin is at least a hundred, probably a thousand times greater than that employed in a similar piece of Indian muslin. And the proportion of circulating capital is a hundred or thousand times less ... the whole of the annual savings, added to the fixed capital, would have no effect in increasing the demand for labour.” (John Barton, “Observations on the Circumstances which Influence the Condition of the Labouring Classes of Society.” London, 1817, pp. 16, 17.) “The same cause which may increase the net revenue of the country may at the same time render the population redundant, and deteriorate the condition of the labourer.” (Ricardo, *l. c.*, p. 469.) With increase of capital, “the demand [for labour] will be in a diminishing ratio.” (Ibid., p. 480, Note.) “The amount of capital devoted to the maintenance of labour may vary, independently of any changes in the whole amount of capital.... Great fluctuations in the amount of employment, and great suffering may become more frequent as capital itself becomes more plentiful.” (Richard Jones, “An Introductory Lecture on Pol. Econ.,” Lond. 1833, p. 13) “Demand [for labour] will rise ... not in proportion to the accumulation of the general capital. ... Every augmentation, therefore, in the national stock destined for reproduction, comes, in the progress of society, to have less and less influence upon the condition of the labourer.” (Ramsay, *l. c.*, pp. 90, 91.)

<sup>16</sup> H. Merivale. “Lectures on Colonisation and Colonies,” 1841, Vol. I, p. 146.

<sup>17</sup> Malthus, “Principles of Political Economy,” pp. 215, 319, 320. In this work, Malthus finally discovers, with the help of Sismondi, the beautiful Trinity of capitalistic production: over-production, over-population, over-consumption — three very delicate monsters, indeed. Cf. F. Engels, “Umriss zu einer Kritik der Nationalökonomie,” *l. c.*, p. 107, et seq.

<sup>18</sup> Harriet Martineau, “A Manchester Strike,” 1832, p. 101.

<sup>19</sup> Even in the cotton famine of 1863 we find, in a pamphlet of the operative cotton-spinners of Blackburn, fierce denunciations of overwork, which, in consequence of the Factory Acts, of course only affected adult male labourers. “The adult operatives at this mill have been asked to work from 12 to 13 hours per day, while there are hundreds who are compelled to be idle who would willingly work partial time, in order to maintain their families and save their brethren from a premature grave through being overworked.... We,” it goes on to say, “would ask if the practice of working overtime by a number of hands, is likely to create a good feeling between masters and servants. Those who are worked overtime feel the injustice equally with those who are condemned to forced idleness. There is in the district almost sufficient work to give to all partial employment if fairly distributed. We are only asking what is right in requesting the masters generally to pursue a system of short hours, particularly until a better state of things begins to dawn upon us, rather than to work a portion of the hands overtime, while others, for want of work, are compelled to exist upon charity.” (“Reports of Insp. of Fact., Oct. 31, 1863,” p. 8.) The author of the “Essay on Trade and Commerce” grasps the effect of a relative surplus population on the employed labourers with his usual unerring bourgeois instinct. “Another cause of idleness in this kingdom is the want of a sufficient number of labouring hands .... Whenever from an extraordinary demand for manufactures, labour grows scarce, the labourers feel their own consequence, and will make their masters feel it likewise — it is amazing; but so depraved are the dispositions of these people, that in such cases a set of workmen have combined to distress the employer by idling a whole day together.” (“Essay, &c.,” pp. 27, 28.) The fellows in fact were hankering after a rise in wages.

<sup>20</sup> *Economist*, Jan. 21. 1860.

<sup>21</sup> Whilst during the last six months of 1866, 80-90,000 working people in London were thrown out of work, the Factory Report for that same half year says: “It does not appear absolutely true to say that demand will always produce supply just at the moment when it is needed. It has not done so with labour, for much machinery has been idle last year for want of hands.” (“Rep. of Insp. of Fact., 31st Oct., 1866,” p. 81.)

<sup>22</sup> Opening address to the Sanitary Conference, Birmingham, January 15th, 1875, by J. Chamberlain, Mayor of the town, now (1883) President of the Board of Trade.

<sup>23</sup> 781 towns given in the census for 1861 for England and Wales “contained 10,960,998 inhabitants, while the villages and country parishes contained 9,105,226. In 1851, 580 towns were distinguished, and the population in them and in the surrounding country was nearly equal. But while in the subsequent ten years the population in the villages and the country increased half a million, the population in the 580 towns increased by a million and a half (1,554,067). The increase of the population of the country parishes is 6.5 per cent., and of the towns 17.3 per cent. The difference in the rates of increase is due to the migration from country to town. Three-fourths of the total increase of population has taken place in the towns.” (“Census. &c.,” pp. 11 and 12.)

<sup>24</sup> “Poverty seems favourable to generation.” (A. Smith.) This is even a specially wise arrangement of God, according to the gallant and witty Abbé Galiani “Iddio af che gli uomini che esercitano mestieri di prima utilità nascono abbondantemente.” (Galiani, l. c., p. 78.) [God ordains that men who carry on trades of primary utility are born in abundance] “Misery up to the extreme point of famine and pestilence, instead of checking, tends to increase population.” (S. Laing, “National Distress,” 1844, p. 69.) After Laing has illustrated this by statistics, he continues: “If the people were all in easy circumstances, the world would soon be depopulated.”

<sup>25</sup> “De jour en jour il devient donc plus clair que les rapports de production dans lesquels se meut la bourgeoisie n’ont pas un caractère un, un caractère simple, mais un caractère de duplicité; que dans les mêmes rapports dans lesquels se produit la richesse, la misère se produit aussi; que dans les mêmes rapports dans lesquels il y a développement des forces productives, il y a une force productive de

r pression; que ces rapports ne produisent la richesse bourgeoise, c'est- -dire la richesse de la classe bourgeoise, qu'en an tantissant continuellement la richesse des membres int grants de cette classe et en produisant un prol tariat toujours croissant." [From day to day it thus becomes clearer that the production relations in which the bourgeoisie moves have not a simple, uniform character, but a dual character; that in the selfsame relations in which wealth is produced, poverty is produced also; that in the selfsame relations in which there is a development of productive forces, there is also a force producing repression; that these relations produce bourgeois wealth, i.e., the wealth of the bourgeois class, only by continually annihilating the wealth of the individual members of this class and by producing an evergrowing proletariat] (Karl Marx: "Mis re de la Philosophie," p. 116.)

<sup>26</sup> G. Ortes: "Delia Economia Nazionale libri sei, 1777," in Custodi, Parte Moderna, t. xxi, pp. 6, 9, 22, 25, etc. Ortes says, l. c., p. 32: "In luoco di progettar sistemi inutili per la felicit  de'popoli, mi limiter  a investigare la regione della loro infelicit ." [Instead of projecting useless systems for achieving the happiness of people, I shall limit myself to investigating the reasons for their unhappiness]

<sup>27</sup> "A Dissertation on the Poor Laws. By a Well-wisher of Mankind. (The Rev. J. Townsend) 1786," republished Lond. 1817, pp. 15, 39, 41. This "delicate" parson, from whose work just quoted, as well as from his "Journey through Spain," Malthus often copies whole pages, himself borrowed the greater part of his doctrine from Sir James Steuart, whom he however alters in the borrowing. *E.g.*, when Steuart says: "Here, in slavery, was a forcible method of making mankind diligent," [for the non-workers] ... "Men were then forced to work" [*i.e.*, to work gratis for others], "because they were slaves of others; men are now forced to work" [*i.e.*, to work gratis for non-workers] "because they are the slaves of their necessities," he does not thence conclude, like the fat holder of benefices, that the wage labourer must always go fasting. He wishes, on the contrary, to increase their wants and to make the increasing number of their wants a stimulus to their labour for the "more delicate."

<sup>28</sup> Storch, l. c., t. iii, p. 223.

<sup>29</sup> Sismondi, l. c., pp. 79, 80, 85.

<sup>30</sup> Destutt de Tracy, l. c., p. 231: "Les nations pauvres, c'est l    il est ordinairement pauvre." [The poor nations are those where the people are comfortably off; and the rich nations, those where the people are generally poor]

<sup>31</sup> "Tenth Report of the Commissioners of H. M. Inland Revenue." Lond., 1866. p. 38.

<sup>32</sup> *Ibidem*.

<sup>33</sup> These figures are sufficient for comparison, but, taken absolutely, are false, since, perhaps,  100,000,000 of income are annually not declared. The complaints of the Inland Revenue Commissioners of systematic fraud, especially on the part of the commercial and industrial classes, are repeated in each of their reports. So *e.g.*, "A Joint-stock company returns  6,000 as assessable profits, the surveyor raises the amount to  88,000, and upon that sum duty is ultimately paid. Another company which returns  190,000 is finally compelled to admit that the true return should be  250,000." (*Ibid.*, p. 42.)

<sup>34</sup> "Census, &c.," l. c., p. 29. John Bright's assertion that 150 landlords own half of England, and 12 half the Scotch soil, has never been refuted.

<sup>35</sup> "Fourth Report, &c., of Inland Revenue." Lond., 1860, p. 17.

<sup>36</sup> these are the net incomes after certain legally authorised abatements.

<sup>37</sup> At this moment, March, 1867, the Indian and Chinese market is again overstocked by the consignments of the British cotton manufacturers. In 1866 a reduction in wages of 5 per cent. took place amongst the cotton operatives. In 1867, as consequence of a similar operation, there was a strike

of 20,000 men at Preston. [*Added in the 4th German edition.* — That was the prelude to the crisis which broke out immediately afterwards. — *F. E.*]

<sup>38</sup> “Census, &c.,” l. c., P. 11.

<sup>39</sup> Gladstone in the House of Commons, Feb. 13th, 1843. *Times*, Feb. 14th, 1843 — “It is one of the most melancholy features in the social state of this country that we see, beyond the possibility of denial, that while there is at this moment a decrease in the consuming powers of the people, an increase of the pressure of privations and distress; there is at the same time a constant accumulation of wealth in the upper classes, an increase of the luxuriousness of their habits, and of their means of enjoyment.” (Hansard, 13th Feb.)

<sup>40</sup> Gladstone in the House of Commons, April 16th, 1863. *Morning Star*, April 17th.

<sup>41</sup> See the official accounts in the Blue book: “Miscellaneous Statistics of the United Kingdom,” Part vi., London, 1866, pp. 260-273, *passim*. Instead of the statistics of orphan asylums, &c., the declamations of the ministerial journals in recommending dowries for the Royal children might also serve. The greater dearness of the means of subsistence is never forgotten there.

<sup>42</sup> Gladstone, House of Commons, 7th April, 1864. — “The Hansard version runs: ‘Again, and yet more at large — what is human life, but, in the majority of cases, a struggle for existence.’ The continual crying contradictions in Gladstone’s Budget speeches of 1863 and 1864 were characterised by an English writer by the following quotation from Boileau:

“Voilà l’homme en effet. Il va du blanc au noir,  
Il condamne au matin ses sentiments du soir.  
Importun à tout autre, à soi-même incommode,  
Il change à tout moment d’esprit comme de mode.”

[Such is the man: he goes from black to white. / He condemns in the morning what he felt in the evening. / A nuisance to everyone else, and an inconvenience to himself, / he changes his way of thinking as easily as he changes his way of dressing]

(“The Theory of Exchanges, &c.,” London, 1864, p. 135.)

<sup>43</sup> H. Fawcett, l. c., pp. 67-82. As to the increasing dependence of labourers on the retail shopkeepers, this is the consequence of the frequent oscillations and interruptions of their employment.

<sup>44</sup> Wales here is always included in England.

<sup>45</sup> A peculiar light is thrown on the advance made since the time of Adam Smith, by the fact that by him the word “workhouse” is still occasionally used as synonymous with “manufactory”; *e.g.*, the opening of his chapter on the division of labour; “those employed in every different branch of the work can often be collected into the same workhouse.”

<sup>67</sup> “Public Health. Seventh Report. 1865,” p. 18.

<sup>68</sup> l. c., p. 165.

<sup>69</sup> l. c., p. 18, Note. — The Relieving Officer of the Chapel-en-le-Frith Union reported to the Registrar-General as follows: — “At Doveholes, a number of small excavations have been made into a large hillock of lime ashes (the refuse of lime-kilns), and which are used as dwellings, and occupied by labourers and others employed in the construction of a railway now in course of construction through that neighbourhood. The excavations are small and damp, and have no drains or privies about them, and not the slightest means of ventilation except up a hole pulled through the top, and used for a chimney. In consequence of this defect, small-pox has been raging for some time, and some deaths [amongst the troglodytes] have been caused by it.” (l. c., note 2.)

<sup>70</sup> The details given at the end of Part IV. refer especially to the labourers in coal mines. On the still worse condition in metal mines, see the very conscientious Report of the Royal Commission of 1864.

<sup>72</sup> l. c., pp. 515, 517.

<sup>73</sup> l. c., p. 16.

<sup>74</sup> “Wholesale starvation of the London Poor.... Within the last few days the walls of London have been placarded with large posters, bearing the following remarkable announcement: — ‘Fat oxen! Starving men! The fat oxen from their palace of glass have gone to feed the rich in their luxurious abode, while the starving men are left to rot and die in their wretched dens.’ The placards bearing these ominous words are put up at certain intervals. No sooner has one set been defaced or covered over, than a fresh set is placarded in the former, or some equally public place.... This ... reminds one of the secret revolutionary associations which prepared the French people for the events of 1789.... At this moment, while English workmen with their wives and children are dying of cold and hunger, there are millions of English gold — the produce of English labour — being invested in Russian, Spanish, Italian, and other foreign enterprises.” —*Reynolds’ Newspaper*, January 20th, 1867.

<sup>75</sup> James E. Thorold Rogers. (Prof. of Polit. Econ. in the University of Oxford.) “A History of Agriculture and Prices in England.” Oxford, 1866, v. 1, p. 690. This work, the fruit of patient and diligent labour, contains in the two volumes that have so far appeared, only the period from 1259 to 1400. The second volume contains simply statistics. It is the first authentic “History of Prices” of the time that we possess.

<sup>76</sup> “Reasons for the Late Increase of the Poor-Rates: or a comparative view of the prices of labour and provisions.” Lond., 1777, pp. 5, 11.

<sup>77</sup> Dr. Richard Price: “Observations on Reversionary Payments,” 6th Ed. By W. Morgan, Lond., 1803, v. II., pp. 158, 159. Price remarks on p. 159: “The nominal price of day-labour is at present no more than about four times, or, at most, five times higher than it was in the year 1514. But the price of corn is seven times, and of flesh-meat and raiment about fifteen times higher. So far, therefore, has the price of labour been even from advancing in proportion to the increase in the expenses of living, that it does not appear that it bears now half the proportion to those expenses that it did bear.”

<sup>78</sup> Barton, l. c., p. 26. For the end of the 18th century cf. Eden, l. c.

<sup>79</sup> Parry, l. c., p. 86.

<sup>82</sup> “England and America.” Lond., 1833, Vol. 1, p. 47.

<sup>83</sup> London *Economist*, May 29th, 1845, p. 290.

<sup>84</sup> The landed aristocracy advanced themselves to this end, of course per Parliament, funds from the State Treasury, at a very low rate of interest, which the farmers have to make good at a much higher rate.

<sup>85</sup> The decrease of the middle-class farmers can be seen especially in the census category: "Farmer's son, grandson, brother, nephew, daughter, granddaughter, sister, niece"; in a word, the members of his own family, employed by the farmer. This category numbered, in 1851, 216,851 persons; in 1861, only 176,151. From 1851 to 1871, the farms under 20 acres fell by more than 900 in number; those between 50 and 75 acres fell from 8,253 to 6,370; the same thing occurred with all other farms under 100 acres. On the other hand, during the same twenty years, the number of large farms increased; those of 300-500 acres rose from 7,771 to 8,410, those of more than 500 acres from 2,755 to 3,914, those of more than 1,000 acres from 492 to 582.

<sup>86</sup> The number of shepherds increased from 12,517 to 25,559.

<sup>87</sup> Census, I. c., p. 36.

<sup>88</sup> Rogers, I. c., p. 693, p. 10. Mr. Rogers belongs to the Liberal School, is a personal friend of Cobden and Bright, and therefore no *laudator temporis acti*.

<sup>89</sup> "Public Health. Seventh Report," 1865, p. 242. It is therefore nothing unusual either for the landlord to raise a labourer's rent as soon as he hears that he is earning a little more, or for the farmer to lower the wage of the labourer, "because his wife has found a trade," I. c.

<sup>90</sup> I. c., p. 135.

<sup>91</sup> I. c., p. 134.

<sup>98</sup> I. c., p. 262.

<sup>99</sup> I. c., p. 17. The English agricultural labourer receives only 1/4 as much milk, and 1/2 as much bread as the Irish. Arthur Young in his "Tour in Ireland," at the beginning of this century, already noticed the better nourishment of the latter. The reason is simply this, that the poor Irish farmer is incomparably more humane than the rich English. As regards Wales, that which is said in the text holds only for the southwest. All the doctors there agree that the increase of the death-rate through tuberculosis, scrofula, etc., increases in intensity with the deterioration of the physical condition of the population, and all ascribe this deterioration to poverty. "His (the farm labourer's) keep is reckoned at about five pence a day, but in many districts it was said to be of much less cost to the farmer" [himself very poor].... "A morsel of the salt meat or bacon, ... salted and dried to the texture of mahogany, and hardly worth the difficult process of assimilation ... is used to flavour a large quantity of broth or gruel, of meal and leeks, and day after day this is the labourer's dinner." The advance of industry resulted for him, in this harsh and damp climate, in "the abandonment of the solid homespun clothing in favour of the cheap and so-called cotton goods," and of stronger drinks for so-called tea. "The agriculturist, after several hours' exposure to wind and rain, pins his cottage to sit by a fire of peat or of balls of clay and small coal kneaded together, from which volumes of carbonic and sulphurous acids are poured forth. His walls are of mud and stones, his floor the bare earth which was there before the hut was built, his roof a mass of loose and sodden thatch. Every crevice is topped to maintain

warmth, and in an atmosphere of diabolic odour, with a mud floor, with his only clothes drying on his back, he often sups and sleeps with his wife and children. Obstetricians who have passed parts of the night in such cabins have described how they found their feet sinking in the mud of the floor, and they were forced (easy task) to drill a hole through the wall to effect a little private respiration. It was attested by numerous witnesses in various grades of life, that to these insanitary influences, and many more, the underfed peasant was nightly exposed, and of the result, a debilitated and scrofulous people, there was no want of evidence.... The statements of the relieving officers of Carmarthenshire and Cardiganshire show in a striking way the same state of things. There is besides “a plague more horrible still, the great number of idiots.” Now a word on the climatic conditions. “A strong south-west wind blows over the whole country for 8 or 9 months in the year, bringing with it torrents of rain, which discharge principally upon the western slopes of the hills. Trees are rare, except in sheltered places, and where not protected, are blown out of all shape. The cottages generally crouch under some bank, or often in a ravine or quarry, and none but the smallest sheep and native cattle can live on the pastures.... The young people migrate to the eastern mining districts of Glamorgan and Monmouth. Carmarthenshire is the breeding ground of the mining population and their hospital. The population can therefore barely maintain its numbers.” Thus in Cardiganshire:

|         |        |        |
|---------|--------|--------|
|         | 1851   | 1861   |
| Males   | 45,155 | 44,446 |

|         | 97,614 | 97,401 |

Dr. Hunter’s Report in “Public Health, Seventh Report. 1865,” pp. 498-502, *passim*.

<sup>100</sup> In 1865 this law was improved to some extent. It will soon be learnt from experience that tinkering of this sort is of no use.

<sup>101</sup> In order to understand that which follows, we must remember that “Close Villages” are those whose owners are one or two large landlords. “Open villages,” those whose soil belongs to many smaller landlords. It is in the latter that building speculators can build cottages and lodging-houses.

<sup>102</sup> A show-village of this kind looks very nice, but is as unreal as the villages that Catherine II. saw on her journey to the Crimea. In recent times the shepherd also has often been banished from these show-villages; *e.g.*, near Market Harboro is sheep-farm of about 500 acres, which only employs the labour of one man. To reduce the long trudges over these wide plains, the beautiful pastures of Leicester and Northampton, the shepherd used to get a cottage on the farm. Now they give him a thirteenth shilling a week for lodging, that he must find far away in an open village.

<sup>103</sup> “The labourers’ houses (in the open villages, which, of course, are always overcrowded) are usually in rows, built with their backs against the extreme edge of the plot of land which the builder could call his, and on this account are not allowed light and air, except from the front.” (Dr. Hunter’s Report, l. c., p. 135.) Very often the beerseller or grocer of the village is at the same time the letter of its houses. In this case the agricultural labourer finds in him a second master, besides the farmer. He must be his customer as well as his tenant. “The hind with his 10s. a week, minus a rent of £4 a year ... is obliged to buy at the seller’s own terms, his modicum of tea, sugar, flour, soap, candles, and beer.” (l. c., p. 132.) These open villages form, in fact, the “penal settlements” of the English agricultural proletariat. Many of the cottages are simply lodging-houses, through which all the rabble of the neighbourhood passes. The country labourer and his family who had often, in a way truly wonderful, preserved, under the foulest conditions, a thoroughness and purity of character, go, in these, utterly to the devil. It is, of course, the fashion amongst the aristocratic shylocks to shrug their shoulders pharisaically at the building speculators, the small landlords, and the open villages. They know well enough that their “close villages” and “show-villages” are the birth-places of the open villages, and could not exist without them. “The labourers ... were it not for the small owners, would, for by far the

most part, have to sleep under the trees of the farms on which they work.” (l. c., p. 135.) The system of “open” and “closed” villages obtains in all the Midland counties and throughout the East of England.

<sup>104</sup> “The employer ... is ... directly or indirectly securing to himself the profit on a man employed at 10s. a week, and receiving from this poor hind £4 or £5 annual rent for houses not worth £20 in a really free market, but maintained at their artificial value by the power of the owner to say ‘Use my house, or go seek a hiring elsewhere without a character from me....’ Does a man wish to better himself, to go as a plate-layer on the railway, or to begin quarry-work, the same power is ready with ‘Work for me at this low rate of wages or begone at a week’s notice; take your pig with you, and get what you can for the potatoes growing in your garden.’ Should his interest appear to be better served by it, an enhanced rent is sometimes preferred in these cases by the owner (*i.e.*, the farmer) as the penalty for leaving his service.” (Dr. Hunter, l. c., p. 132.)

<sup>105</sup> “New married couples are no edifying study for grown-up brothers and sisters: and though instances must not be recorded, sufficient data are remembered to warrant the remark, that great depression and sometimes death are the lot of the female participator in the offence of incest.” (Dr. Hunter, l. c., p. 137.) A member of the rural police who had for many years been a detective in the worst quarters of London, says of the girls of his village: “their boldness and shamelessness I never saw equalled during some years of police life and detective duty in the worst parts of London .... They live like pigs, great boys and girls, mothers and fathers, all sleeping in one room, in many instances.” (“Child. Empl. Com. Sixth Report, 1867,” p. 77 sq. 155.)

<sup>106</sup> “Public Health. Seventh Report, 1865,” pp. 9, 14 *passim*.

<sup>107</sup> “The heaven-born employment of the hind gives dignity even to his position. He is not a slave, but a soldier of peace, and deserves his place in married men’s quarters to be provided by the landlord, who has claimed a power of enforced labour similar to that the country demands of the soldier. He no more receives market-price for his work than does the soldier. Like the soldier he is caught young, ignorant, knowing only his own trade, and his own locality. Early marriage and the operation of the various laws of settlement affect the one as enlistment and the Mutiny Act affect the other.” (Dr. Hunter, l. c., p. 132.) Sometimes an exceptionally soft-hearted landlord relents as the solitude he has created. “It is a melancholy thing to stand alone in one’s country,” said Lord Leicester, when complimented on the completion of Hookham. “I look around and not a house is to be seen but mine. I am the giant of Giant Castle, and have eat up all my neighbours.”

<sup>108</sup> A similar movement is seen during the last ten years in France; in proportion as capitalist production there takes possession of agriculture, it drives the “surplus” agricultural population into the towns. Here also we find deterioration in the housing and other conditions at the source of the surplus population. On the special “*prolétariat foncier*,” to which this system of parcelling out the land has given rise, see, among others, the work of Colins, already quoted, and Karl Marx “*Der Achtzehnte Brumaire des Louis Bonaparte*.” 2nd edition. Hamburg, 1869, pp. 56, &c. In 1846, the town population in France was represented by 24.42, the agricultural by 75.58; in 1861, the town by 28.86, the agricultural by 71.14 per cent. During the last 5 years, the diminution of the agricultural percentage of the population has been yet more marked. As early as 1846, Pierre Dupont in his “*Ouvriers*” sang:

Mal vêtus, logés dans des trous,  
Sous les combles, dans les décombres,  
Nous vivons avec les hiboux  
Et les larrons, amis des ombres.

[Badly clothed, living in holes, under the eaves, in the ruins, with the owls and the thieves,  
companions of the shadows]

<sup>109</sup> “Sixth and last Report of the Children’s Employment Commission,” published at the end of March, 1867. It deals solely with the agricultural gang-system.

<sup>110</sup> “Child. Emp. Comm., VI. Report.” Evidence 173, p. 37.

<sup>111</sup> Some gang-masters, however, have worked themselves up to the position of farmers of 500 acres, or proprietors of whole rows of houses.

<sup>112</sup> “Half the girls of Ludford have been ruined by going out” (in gangs). *l. c.*, p. 6, § 32.

<sup>113</sup> “They (gangs) have greatly increased of late years. In some places they are said to have been introduced at comparatively late dates; in others where gangs ... have been known for many years ... more and younger children are employed in them.” (*l. c.*, p. 79, § 174).

<sup>114</sup> “Small farmers never employ gangs.” “It is not on poor land, but on land which affords rent of from 40 to 50 shillings, that women and children are employed in the greatest numbers.” (*l. c.*, pp. 17, 14.)

<sup>115</sup> To one of these gentlemen the taste of his rent was so grateful that he indignantly declared to the Commission of Inquiry that the whole hubbub was only due to the name of the system. If instead of “gang” it were called “the Agricultural Juvenile Industrial Self-supporting Association,” everything would be all right.

<sup>116</sup> “Gang work is cheaper than other work; that is why they are employed,” says a former gang-master (*l. c.*, p. 17, § 14 ). “The gang-system is decidedly the cheapest for the farmer, and decidedly the worst for the children,” says a farmer (*l. c.*, p. 16, § 3.)

<sup>117</sup> “Undoubtedly much of the work now done by children in gangs used to be done by men and women. More men are out of work now where children and women are employed than formerly.” (*l. c.*, p. 43, n. 202.) On the other hand, “the labour question in some agricultural districts, particularly the arable, is becoming so serious in consequence of emigration, and the facility afforded by railways for getting to large towns that I (the “I” is the steward of a great lord) think the services of children are most indispensable,” (*l. c.*, p. 80, n. 180.) For the “labour question” in English agricultural districts, differently from the rest of the civilised world, means the landlords’ and farmers’ question, *viz.*, how is it possible, despite an always increasing exodus of the agricultural folk, to keep up a sufficient relative surplus population in the country, and by means of it keep the wages of the agricultural labourer at a minimum?

<sup>118</sup> The “Public Health Report,” where in dealing with the subject of children’s mortality, the gang-system is treated in passing, remains unknown to the press, and, therefore, to the English public. On the other hand, the last report of the “Child. Empl. Comm.” afforded the press sensational copy always welcome. Whilst the Liberal press asked how the fine gentlemen and ladies, and the well-paid clergy of the State Church, with whom Lincolnshire swarms, could allow such a system to arise on their estates, under their very eyes, they who send out expressly missions to the Antipodes, “for the improvement of the morals of South Sea Islanders” — the more refined press confined itself to reflections on the coarse degradation of the agricultural population who are capable of selling their children into such slavery! Under the accursed conditions to which these “delicate” people condemn the agricultural labourer, it would not be surprising if he ate his own children. What is really wonderful is the healthy integrity of character, he has, in great part, retained. The official reports prove that the parents, even in the gang districts, loathe the gang-system. “There is much in the evidence that shows that the parents of the children would, in many instances, be glad to be aided by the requirements of a legal obligation, to resist the pressure and the temptations to which they are often subject. They are liable to be urged, at times by the parish officers, at times by employers, under threats of being themselves discharged, to be taken to work at an age when ... school attendance ... would be manifestly to their greater advantage.... All that time and strength wasted; all the suffering

from extra and unprofitable fatigue produced to the labourer and to his children; every instance in which the parent may have traced the moral ruin of his child to the undermining of delicacy by the over-crowding of cottages, or to the contaminating influences of the public gang, must have been so many incentives to feelings in the minds of the labouring poor which can be well understood, and which it would be needless to particularise. They must be conscious that much bodily and mental pain has thus been inflicted upon them from causes for which they were in no way answerable; to which, had it been in their power, they would have in no way consented; and against which they were powerless to struggle." (l. c., p. xx., § 82, and xxiii., n. 96.)

<sup>119</sup> Population of Ireland, 1801, 5,319,867 persons; 1811, 6,084,996; 1821, 6,869,544; 1831, 7,828,347; 1841, 8,222,664.

<sup>120</sup> The result would be found yet more unfavourable if we went further back. Thus: Sheep in 1865, 3,688,742, but in 1856, 3,694,294. Pigs in 1865, 1,299,893, but in 1858, 1,409,883

<sup>121</sup> The data of the text are put together from the materials of the "Agricultural Statistics, Ireland, General Abstracts, Dublin," for the years 1860, *et seq.*, and "Agricultural Statistics, Ireland. Tables showing the estimated average produce, &c., Dublin, 1866." These statistics are official, and laid before Parliament annually.

*Note to 2nd edition.* The official statistics for the year 1872 show, as compared with 1871, a decrease in area under cultivation of 134,915 acres. An increase occurred in the cultivation of green crops, turnips, mangold-wurzel, and the like; a decrease in the area under cultivation for wheat of 16,000 acres; oats, 14,000; barley and rye, 4,000; potatoes, 66,632; flax, 34,667; grass, clover, vetches, rape-seed, 30,000. The soil under cultivation for wheat shows for the last 5 years the following stages of decrease: — 1868, 285,000 acres; 1869, 280,000; 1870, 259,000; 1871, 244,000; 1872, 228,000. For 1872 we find, in round numbers, an increase of 2,600 horses, 80,000 horned cattle, 68,609 sheep, and a decrease of 236,000 pigs.

<sup>122</sup> The total yearly income under Schedule D. is different in this table from that which appears in the preceding ones, because of certain deductions allowed by law.

<sup>123</sup> If the product also diminishes relatively per acre, it must not be forgotten that for a century and a half England has indirectly exported the soil of Ireland, without as much as allowing its cultivators the means for making up the constituents of the soil that had been exhausted.

<sup>124</sup> As Ireland is regarded as the promised land of the "principle of population," Th. Sadler, before the publication of his work on population, issued his famous book, "Ireland, its Evils and their Remedies." 2nd edition, London, 1829. Here, by comparison of the statistics of the individual provinces, and of the individual counties in each province, he proves that the misery there is not, as Malthus would have it, in proportion to the number of the population, but in inverse ratio to this.

<sup>125</sup> Between 1851 and 1874, the total number of emigrants amounted to 2,325,922.

<sup>126</sup> According to a table in Murphy's "Ireland Industrial, Political and Social," 1870, 94.6 per cent. of the holdings do not reach 100 acres, 5.4 exceed 100 acres.

<sup>127</sup> "Reports from the Poor Law Inspectors on the Wages of Agricultural Labourers in Dublin," 1870. See also "Agricultural labourers (Ireland). Return, etc." 8 March, 1861, London, 1862.

<sup>139</sup> “Rept. of Insp. of Fact., 31st Oct., 1866,” p. 96.

<sup>140</sup> The total area includes also peat, bogs, and waste land.

<sup>141</sup> How the famine and its consequences have been deliberately made the most of, both by the individual landlords and by the English legislature, to forcibly carry out the agricultural revolution and to thin the population of Ireland down to the proportion satisfactory to the landlords, I shall show more fully in Vol. III. of this work, in the section on landed property. There also I return to the condition of the small farmers and the agricultural labourers. At present, only one quotation. Nassau W. Senior says, with other things, in his posthumous work, “Journals, Conversations and Essays relating to Ireland.” 2 vols. London, 1868; Vol. II., p. 282. “Well,” said Dr. G., “we have got our Poor Law and it is a great instrument for giving the victory to the landlords. Another, and a still more powerful instrument is emigration.... No friend to Ireland can wish the war to be prolonged [between the landlords and the small Celtic farmers] — still less, that it should end by the victory of the tenants. The sooner it is over — the sooner Ireland becomes a grazing country, with the comparatively thin population which a grazing country requires, the better for all classes.” The English Corn Laws of 1815 secured Ireland the monopoly of the free importation of corn into Great Britain. They favoured artificially, therefore, the cultivation of corn. With the abolition of the Corn Laws in 1846, this monopoly was suddenly removed. Apart from all other circumstances, this event alone was sufficient to give a great impulse to the turning of Irish arable into pasture land, to the concentration of farms, and to the eviction of small cultivators. After the fruitfulness of the Irish soil had been praised from 1815 to 1846, and proclaimed loudly as by Nature herself destined for the cultivation of wheat, English agronomists, economists, politicians, discover suddenly that it is good for nothing but to produce forage. M. Léonce de Lavergne has hastened to repeat this on the other side of the Channel. It takes a “serious” man, à la Lavergne, to be caught by such childishness.

## **Part 8: Primitive Accumulation**

## Chapter 26: The Secret of Primitive Accumulation

We have seen how money is changed into capital; how through capital surplus-value is made, and from surplus-value more capital. But the accumulation of capital presupposes surplus-value; surplus-value presupposes capitalistic production; capitalistic production presupposes the pre-existence of considerable masses of capital and of labour power in the hands of producers of commodities. The whole movement, therefore, seems to turn in a vicious circle, out of which we can only get by supposing a primitive accumulation (previous accumulation of Adam Smith) preceding capitalistic accumulation; an accumulation not the result of the capitalistic mode of production, but its starting point.

This primitive accumulation plays in Political Economy about the same part as original sin in theology. Adam bit the apple, and thereupon sin fell on the human race. Its origin is supposed to be explained when it is told as an anecdote of the past. In times long gone by there were two sorts of people; one, the diligent, intelligent, and, above all, frugal elite; the other, lazy rascals, spending their substance, and more, in riotous living. The legend of theological original sin tells us certainly how man came to be condemned to eat his bread in the sweat of his brow; but the history of economic original sin reveals to us that there are people to whom this is by no means essential. Never mind! Thus it came to pass that the former sort accumulated wealth, and the latter sort had at last nothing to sell except their own skins. And from this original sin dates the poverty of the great majority that, despite all its labour, has up to now nothing to sell but itself, and the wealth of the few that increases constantly although they have long ceased to work. Such insipid childishness is every day preached to us in the defence of property. M. Thiers, *e.g.*, had the assurance to repeat it with all the solemnity of a statesman to the French people, once so *spirituel*. But as soon as the question of property crops up, it becomes a sacred duty to proclaim the intellectual food of the infant as the one thing fit for all ages and for all stages of development. In actual history it is notorious that conquest, enslavement, robbery, murder, briefly force, play the great part. In the tender annals of Political Economy, the idyllic reigns from time immemorial. Right and "labour" were from all time the sole means of enrichment, the present year of course always excepted. As a matter of fact, the methods of primitive accumulation are anything but idyllic.

In themselves money and commodities are no more capital than are the means of production and of subsistence. They want transforming into capital. But this transformation itself can only take place under certain circumstances that centre in this, *viz.*, that two very different kinds of commodity-possessors must come face to face and into contact; on the one hand, the owners of money, means of production, means of subsistence, who are eager to increase the sum of values they possess, by buying other people's labour power; on the other hand, free labourers, the sellers of their own labour power, and therefore the sellers of labour. Free labourers, in the double sense that neither they themselves form part and parcel of the means of production, as in the case of slaves, bondsmen, &c., nor do the means of production belong to them, as in the case of peasant-proprietors; they are, therefore, free from, unencumbered by, any means of production of their own. With this polarisation of the market for commodities, the fundamental conditions of capitalist production are given. The capitalist system presupposes the complete separation of the labourers from all property in the means by which they can realize their labour. As soon as capitalist production is once on its own legs, it not only maintains this separation, but reproduces it on a continually extending scale. The process, therefore, that clears the way for the capitalist

system, can be none other than the process which takes away from the labourer the possession of his means of production; a process that transforms, on the one hand, the social means of subsistence and of production into capital, on the other, the immediate producers into wage labourers. The so-called primitive accumulation, therefore, is nothing else than the historical process of divorcing the producer from the means of production. It appears as primitive, because it forms the prehistoric stage of capital and of the mode of production corresponding with it.

The economic structure of capitalist society has grown out of the economic structure of feudal society. The dissolution of the latter set free the elements of the former.

The immediate producer, the labourer, could only dispose of his own person after he had ceased to be attached to the soil and ceased to be the slave, serf, or bondsman of another. To become a free seller of labour power, who carries his commodity wherever he finds a market, he must further have escaped from the regime of the guilds, their rules for apprentices and journeymen, and the impediments of their labour regulations. Hence, the historical movement which changes the producers into wage-workers, appears, on the one hand, as their emancipation from serfdom and from the fetters of the guilds, and this side alone exists for our bourgeois historians. But, on the other hand, these new freedmen became sellers of themselves only after they had been robbed of all their own means of production, and of all the guarantees of existence afforded by the old feudal arrangements. And the history of this, their expropriation, is written in the annals of mankind in letters of blood and fire.

The industrial capitalists, these new potentates, had on their part not only to displace the guild masters of handicrafts, but also the feudal lords, the possessors of the sources of wealth. In this respect, their conquest of social power appears as the fruit of a victorious struggle both against feudal lordship and its revolting prerogatives, and against the guilds and the fetters they laid on the free development of production and the free exploitation of man by man. The *chevaliers d'industrie*, however, only succeeded in supplanting the *chevaliers of the sword* by making use of events of which they themselves were wholly innocent. They have risen by means as vile as those by which the Roman freedman once on a time made himself the master of his *patronus*.

The starting point of the development that gave rise to the wage labourer as well as to the capitalist, was the servitude of the labourer. The advance consisted in a change of form of this servitude, in the transformation of feudal exploitation into capitalist exploitation. To understand its march, we need not go back very far. Although we come across the first beginnings of capitalist production as early as the 14th or 15th century, sporadically, in certain towns of the Mediterranean, the capitalistic era dates from the 16th century. Wherever it appears, the abolition of serfdom has been long effected, and the highest development of the middle ages, the existence of sovereign towns, has been long on the wane.

In the history of primitive accumulation, all revolutions are epoch-making that act as levers for the capital class in course of formation; but, above all, those moments when great masses of men are suddenly and forcibly torn from their means of subsistence, and hurled as free and "unattached" proletarians on the labour-market. The expropriation of the agricultural producer, of the peasant, from the soil, is the basis of the whole process. The history of this expropriation, in different countries, assumes different aspects, and runs through its various phases in different orders of succession, and at different periods. In England alone, which we take as our example, has it the classic form.<sup>1</sup>

---

<sup>1</sup>In Italy, where capitalistic production developed earliest, the dissolution of serfdom also took place earlier than elsewhere. The serf was emancipated in that country before he had acquired any

---

prescriptive right to the soil. His emancipation at once transformed him into a free proletarian, who, moreover, found his master ready waiting for him in the towns, for the most part handed down as legacies from the Roman time. When the revolution of the world-market, about the end of the 15th century, annihilated Northern Italy's commercial supremacy, a movement in the reverse direction set in. The labourers of the towns were driven *en masse* into the country, and gave an impulse, never before seen, to the *petite culture*, carried on in the form of gardening.

## Chapter 27: Expropriation of the Agricultural Population From the Land

In England, serfdom had practically disappeared in the last part of the 14th century. The immense majority of the population<sup>1</sup> consisted then, and to a still larger extent, in the 15th century, of free peasant proprietors, whatever was the feudal title under which their right of property was hidden. In the larger seignorial domains, the old bailiff, himself a serf, was displaced by the free farmer. The wage labourers of agriculture consisted partly of peasants, who utilised their leisure time by working on the large estates, partly of an independent special class of wage labourers, relatively and absolutely few in numbers. The latter also were practically at the same time peasant farmers, since, besides their wages, they had allotted to them arable land to the extent of 4 or more acres, together with their cottages. Besides they, with the rest of the peasants, enjoyed the usufruct of the common land, which gave pasture to their cattle, furnished them with timber, fire-wood, turf, &c.<sup>2</sup> In all countries of Europe, feudal production is characterised by division of the soil amongst the greatest possible number of subfeudatories. The might of the feudal lord, like that of the sovereign, depended not on the length of his rent roll, but on the number of his subjects, and the latter depended on the number of peasant proprietors.<sup>3</sup> Although, therefore, the English land, after the Norman Conquest, was distributed in gigantic baronies, one of which often included some 900 of the old Anglo-Saxon lordships, it was bestrewn with small peasant properties, only here and there interspersed with great seignorial domains. Such conditions, together with the prosperity of the towns so characteristic of the 15th century, allowed of that wealth of the people which Chancellor Fortescue so eloquently paints in his "Laudes legum Angliae;" but it excluded the possibility of capitalistic wealth.

The prelude of the revolution that laid the foundation of the capitalist mode of production, was played in the last third of the 15th, and the first decade of the 16th century. A mass of free proletarians was hurled on the labour market by the breaking-up of the bands of feudal retainers, who, as Sir James Steuart well says, "everywhere uselessly filled house and castle." Although the royal power, itself a product of bourgeois development, in its strife after absolute sovereignty forcibly hastened on the dissolution of these bands of retainers, it was by no means the sole cause of it. In insolent conflict with king and parliament, the great feudal lords created an incomparably larger proletariat by the forcible driving of the peasantry from the land, to which the latter had the same feudal right as the lord himself, and by the usurpation of the common lands. The rapid rise of the Flemish wool manufactures, and the corresponding rise in the price of wool in England, gave the direct impulse to these evictions. The old nobility had been devoured by the great feudal wars. The new nobility was the child of its time, for which money was the power of all powers. Transformation of arable land into sheep-walks was, therefore, its cry. Harrison, in his "Description of England, prefixed to Holinshed's Chronicles," describes how the expropriation of small peasants is ruining the country. "What care our great encroachers?" The dwellings of the peasants and the cottages of the labourers were razed to the ground or doomed to decay. "If," says Harrison, "the old records of euerie manour be sought... it will soon appear that in some manour seventeene, eighteene, or twentie houses are shrunk... that England was neuer less furnished with people than at the present... Of cities and townes either utterly decaied or more than a quarter or half diminished, though some one be a little increased here or there; of townes pulled downe for sheepe-walks, and no more but the lordships now standing in them... I could saie somewhat." The complaints of these old chroniclers are always exaggerated, but they reflect faithfully the

impression made on contemporaries by the revolution in the conditions of production. A comparison of the writings of Chancellor Fortescue and Thomas More reveals the gulf between the 15th and 16th century. As Thornton rightly has it, the English working class was precipitated without any transition from its golden into its iron age.

Legislation was terrified at this revolution. It did not yet stand on that height of civilisation where the “wealth of the nation” (i.e., the formation of capital, and the reckless exploitation and impoverishing of the mass of the people) figure as the *ultima Thule* of all state-craft. In his history of Henry VII., Bacon says: “Inclosures at that time (1489) began to be more frequent, whereby arable land (which could not be manured without people and families) was turned into pasture, which was easily rid by a few herdsmen; and tenancies for years, lives, and at will (whereupon much of the yeomanry lived) were turned into demesnes. This bred a decay of people, and (by consequence) a decay of towns, churches, tithes, and the like... In remedying of this inconvenience the king’s wisdom was admirable, and the parliament’s at that time... they took a course to take away depopulating enclosures, and depopulating pasturage.” An Act of Henry VII., 1489, cap. 19, forbade the destruction of all “houses of husbandry” to which at least 20 acres of land belonged. By an Act, 25 Henry VIII., the same law was renewed. It recites, among other things, that many farms and large flocks of cattle, especially of sheep, are concentrated in the hands of a few men, whereby the rent of land has much risen and tillage has fallen off, churches and houses have been pulled down, and marvellous numbers of people have been deprived of the means wherewith to maintain themselves and their families. The Act, therefore, ordains the rebuilding of the decayed farmsteads, and fixes a proportion between corn land and pasture land, &c. An Act of 1533 recites that some owners possess 24,000 sheep, and limits the number to be owned to 2,000.<sup>4</sup> The cry of the people and the legislation directed, for 150 years after Henry VII., against the expropriation of the small farmers and peasants, were alike fruitless. The secret of their inefficiency Bacon, without knowing it, reveals to us. “The device of King Henry VII.,” says Bacon, in his “Essays, Civil and Moral,” Essay 29, “was profound and admirable, in making farms and houses of husbandry of a standard; that is, maintained with such a proportion of land unto them as may breed a subject to live in convenient plenty, and no servile condition, and to keep the plough in the hands of the owners and not mere hirelings.”<sup>5</sup> What the capitalist system demanded was, on the other hand, a degraded and almost servile condition of the mass of the people, the transformation of them into mercenaries, and of their means of labour into capital. During this transformation period, legislation also strove to retain the 4 acres of land by the cottage of the agricultural wage labourer, and forbade him to take lodgers into his cottage. In the reign of James I., 1627, Roger Crocker of Front Mill, was condemned for having built a cottage on the manor of Front Mill without 4 acres of land attached to the same in perpetuity. As late as Charles I.’s reign, 1638, a royal commission was appointed to enforce the carrying out of the old laws, especially that referring to the 4 acres of land. Even in Cromwell’s time, the building of a house within 4 miles of London was forbidden unless it was endowed with 4 acres of land. As late as the first half of the 18th century complaint is made if the cottage of the agricultural labourer has not an adjunct of one or two acres of land. Nowadays he is lucky if it is furnished with a little garden, or if he may rent, far away from his cottage, a few roods. “Landlords and farmers,” says Dr. Hunter, “work here hand in hand. A few acres to the cottage would make the labourers too independent.”<sup>6</sup>

The process of forcible expropriation of the people received in the 16th century a new and frightful impulse from the Reformation, and from the consequent colossal spoliation of the church property. The Catholic church was, at the time of the Reformation, feudal proprietor of a great part of the English land. The suppression of the monasteries, &c., hurled their inmates into the

proletariat. The estates of the church were to a large extent given away to rapacious royal favourites, or sold at a nominal price to speculating farmers and citizens, who drove out, *en masse*, the hereditary sub-tenants and threw their holdings into one. The legally guaranteed property of the poorer folk in a part of the church's tithes was tacitly confiscated.<sup>7</sup> "Pauper ubique jacet," cried Queen Elizabeth, after a journey through England. In the 43rd year of her reign the nation was obliged to recognise pauperism officially by the introduction of a poor-rate. "The authors of this law seem to have been ashamed to state the grounds of it, for [contrary to traditional usage] it has no preamble whatever."<sup>8</sup> By the 16th of Charles I., ch. 4, it was declared perpetual, and in fact only in 1834 did it take a new and harsher form.<sup>9</sup> These immediate results of the Reformation were not its most lasting ones. The property of the church formed the religious bulwark of the traditional conditions of landed property. With its fall these were no longer tenable.<sup>10</sup>

Even in the last decade of the 17th century, the yeomanry, the class of independent peasants, were more numerous than the class of farmers. They had formed the backbone of Cromwell's strength, and, even according to the confession of Macaulay, stood in favourable contrast to the drunken squires and to their servants, the country clergy, who had to marry their masters' cast-off mistresses. About 1750, the yeomanry had disappeared,<sup>11</sup> and so had, in the last decade of the 18th century, the last trace of the common land of the agricultural labourer. We leave on one side here the purely economic causes of the agricultural revolution. We deal only with the forcible means employed.

After the restoration of the Stuarts, the landed proprietors carried, by legal means, an act of usurpation, effected everywhere on the Continent without any legal formality. They abolished the feudal tenure of land, *i.e.*, they got rid of all its obligations to the State, "indemnified" the State by taxes on the peasantry and the rest of the mass of the people, vindicated for themselves the rights of modern private property in estates to which they had only a feudal title, and, finally, passed those laws of settlement, which, *mutatis mutandis*, had the same effect on the English agricultural labourer, as the edict of the Tartar Boris Godunof on the Russian peasantry.

The "glorious Revolution" brought into power, along with William of Orange, the landlord and capitalist appropriators of surplus-value.<sup>12</sup> They inaugurated the new era by practising on a colossal scale thefts of state lands, thefts that had been hitherto managed more modestly. These estates were given away, sold at a ridiculous figure, or even annexed to private estates by direct seizure.<sup>13</sup> All this happened without the slightest observation of legal etiquette. The Crown lands thus fraudulently appropriated, together with the robbery of the Church estates, as far as these had not been lost again during the republican revolution, form the basis of the today princely domains of the English oligarchy.<sup>14</sup> The bourgeois capitalists favoured the operation with the view, among others, to promoting free trade in land, to extending the domain of modern agriculture on the large farm-system, and to increasing their supply of the free agricultural proletarians ready to hand. Besides, the new landed aristocracy was the natural ally of the new bankocracy, of the newly-hatched *haute finance*, and of the large manufacturers, then depending on protective duties. The English bourgeoisie acted for its own interest quite as wisely as did the Swedish bourgeoisie who, reversing the process, hand in hand with their economic allies, the peasantry, helped the kings in the forcible resumption of the Crown lands from the oligarchy. This happened since 1604 under Charles X. and Charles XI.

Communal property – always distinct from the State property just dealt with – was an old Teutonic institution which lived on under cover of feudalism. We have seen how the forcible usurpation of this, generally accompanied by the turning of arable into pasture land, begins at the end of the 15th and extends into the 16th century. But, at that time, the process was carried on by

means of individual acts of violence against which legislation, for a hundred and fifty years, fought in vain. The advance made by the 18th century shows itself in this, that the law itself becomes now the instrument of the theft of the people's land, although the large farmers make use of their little independent methods as well.<sup>15</sup> The parliamentary form of the robbery is that of Acts for enclosures of Commons, in other words, decrees by which the landlords grant themselves the people's land as private property, decrees of expropriation of the people. Sir F. M. Eden refutes his own crafty special pleading, in which he tries to represent communal property as the private property of the great landlords who have taken the place of the feudal lords, when he, himself, demands a "general Act of Parliament for the enclosure of Commons" (admitting thereby that a parliamentary *coup d'état* is necessary for its transformation into private property), and moreover calls on the legislature for the indemnification for the expropriated poor.<sup>16</sup>

Whilst the place of the independent yeoman was taken by tenants at will, small farmers on yearly leases, a servile rabble dependent on the pleasure of the landlords, the systematic robbery of the Communal lands helped especially, next to the theft of the State domains, to swell those large farms, that were called in the 18th century capital farms<sup>17</sup> or merchant farms,<sup>18</sup> and to "set free" the agricultural population as proletarians for manufacturing industry.

The 18th century, however, did not yet recognise as fully as the 19th, the identity between national wealth and the poverty of the people. Hence the most vigorous polemic, in the economic literature of that time, on the "enclosure of commons." From the mass of materials that lie before me, I give a few extracts that will throw a strong light on the circumstances of the time. "In several parishes of Hertfordshire," writes one indignant person, "24 farms, numbering on the average 50-150 acres, have been melted up into three farms."<sup>19</sup> "In Northamptonshire and Leicestershire the enclosure of common lands has taken place on a very large scale, and most of the new lordships, resulting from the enclosure, have been turned into pasturage, in consequence of which many lordships have not now 50 acres ploughed yearly, in which 1,500 were ploughed formerly. The ruins of former dwelling-houses, barns, stables, &c.," are the sole traces of the former inhabitants. "An hundred houses and families have in some open-field villages dwindled to eight or ten.... The landholders in most parishes that have been enclosed only 15 or 20 years, are very few in comparison of the numbers who occupied them in their open-field state. It is no uncommon thing for 4 or 5 wealthy graziers to engross a large enclosed lordship which was before in the hands of 20 or 30 farmers, and as many smaller tenants and proprietors. All these are hereby thrown out of their livings with their families and many other families who were chiefly employed and supported by them."<sup>20</sup> It was not only the land that lay waste, but often land cultivated either in common or held under a definite rent paid to the community, that was annexed by the neighbouring landlords under pretext of enclosure. "I have here in view enclosures of open fields and lands already improved. It is acknowledged by even the writers in defence of enclosures that these diminished villages increase the monopolies of farms, raise the prices of provisions, and produce depopulation ... and even the enclosure of waste lands (as now carried on) bears hard on the poor, by depriving them of a part of their subsistence, and only goes towards increasing farms already too large."<sup>21</sup> "When," says Dr. Price, "this land gets into the hands of a few great farmers, the consequence must be that the little farmers" (earlier designated by him "a multitude of little proprietors and tenants, who maintain themselves and families by the produce of the ground they occupy by sheep kept on a common, by poultry, hogs, &c., and who therefore have little occasion to purchase any of the means of subsistence") "will be converted into a body of men who earn their subsistence by working for others, and who will be under a necessity of going to market for all they want.... There will, perhaps, be more labour, because there will be more compulsion to it.... Towns and manufactures will increase, because more will

be driven to them in quest of places and employment. This is the way in which the engrossing of farms naturally operates. And this is the way in which, for many years, it has been actually operating in this kingdom.”<sup>22</sup> He sums up the effect of the enclosures thus: “Upon the whole, the circumstances of the lower ranks of men are altered in almost every respect for the worse. From little occupiers of land, they are reduced to the state of day-labourers and hirelings; and, at the same time, their subsistence in that state has become more difficult.”<sup>23</sup> In fact, usurpation of the common lands and the revolution in agriculture accompanying this, told so acutely on the agricultural labourers that, even according to Eden, between 1765 and 1780, their wages began to fall below the minimum, and to be supplemented by official poor-law relief. Their wages, he says, “were not more than enough for the absolute necessities of life.”

Let us hear for a moment a defender of enclosures and an opponent of Dr. Price. “Not is it a consequence that there must be depopulation, because men are not seen wasting their labour in the open field.... If, by converting the little farmers into a body of men who must work for others, more labour is produced, it is an advantage which the nation” (to which, of course, the “converted” ones do not belong) “should wish for ... the produce being greater when their joint labours are employed on one farm, there will be a surplus for manufactures, and by this means manufactures, one of the mines of the nation, will increase, in proportion to the quantity of corn produced.”<sup>24</sup>

The stoical peace of mind with which the political economist regards the most shameful violation of the “sacred rights of property” and the grossest acts of violence to persons, as soon as they are necessary to lay the foundations of the capitalistic mode of production, is shown by Sir F. M. Eden, philanthropist and tory to boot. The whole series of thefts, outrages, and popular misery, that accompanied the forcible expropriation of the people, from the last third of the 15th to the end of the 18th century, lead him merely to the comfortable conclusion: “The due proportion between arable land and pasture had to be established. During the whole of the 14th and the greater part of the 15th century, there was one acre of pasture to 2, 3, and even 4 of arable land. About the middle of the 16th century the proportion was changed of 2 acres of pasture to 2, later on, of 2 acres of pasture to one of arable, until at last the just proportion of 3 acres of pasture to one of arable land was attained.”

In the 19th century, the very memory of the connexion between the agricultural labourer and the communal property had, of course, vanished. To say nothing of more recent times, have the agricultural population received a farthing of compensation for the 3,511,770 acres of common land which between 1801 and 1831 were stolen from them and by parliamentary devices presented to the landlords by the landlords?

The last process of wholesale expropriation of the agricultural population from the soil is, finally, the so-called clearing of estates, *i.e.*, the sweeping men off them. All the English methods hitherto considered culminated in “clearing.” As we saw in the picture of modern conditions given in a former chapter, where there are no more independent peasants to get rid of, the “clearing” of cottages begins; so that the agricultural labourers do not find on the soil cultivated by them even the spot necessary for their own housing. But what “clearing of estates” really and properly signifies, we learn only in the promised land of modern romance, the Highlands of Scotland. There the process is distinguished by its systematic character, by the magnitude of the scale on which it is carried out at one blow (in Ireland landlords have gone to the length of sweeping away several villages at once; in Scotland areas as large as German principalities are dealt with), finally by the peculiar form of property, under which the embezzled lands were held.

The Highland Celts were organised in clans, each of which was the owner of the land on which it was settled. The representative of the clan, its chief or “great man,” was only the titular owner of

this property, just as the Queen of England is the titular owner of all the national soil. When the English government succeeded in suppressing the intestine wars of these “great men,” and their constant incursions into the Lowland plains, the chiefs of the clans by no means gave up their time-honoured trade as robbers; they only changed its form. On their own authority they transformed their nominal right into a right of private property, and as this brought them into collision with their clansmen, resolved to drive them out by open force. “A king of England might as well claim to drive his subjects into the sea,” says Professor Newman.<sup>25</sup> This revolution, which began in Scotland after the last rising of the followers of the Pretender, can be followed through its first phases in the writings of Sir James Steuart<sup>26</sup> and James Anderson.<sup>27</sup> In the 18th century the hunted-out Gaels were forbidden to emigrate from the country, with a view to driving them by force to Glasgow and other manufacturing towns.<sup>28</sup> As an example of the method<sup>29</sup> obtaining in the 19th century, the “clearing” made by the Duchess of Sutherland will suffice here. This person, well instructed in economy, resolved, on entering upon her government, to effect a radical cure, and to turn the whole country, whose population had already been, by earlier processes of the like kind, reduced to 15,000, into a sheep-walk. From 1814 to 1820 these 15,000 inhabitants, about 3,000 families, were systematically hunted and rooted out. All their villages were destroyed and burnt, all their fields turned into pasturage. British soldiers enforced this eviction, and came to blows with the inhabitants. One old woman was burnt to death in the flames of the hut, which she refused to leave. Thus this fine lady appropriated 794,000 acres of land that had from time immemorial belonged to the clan. She assigned to the expelled inhabitants about 6,000 acres on the sea-shore – 2 acres per family. The 6,000 acres had until this time lain waste, and brought in no income to their owners. The Duchess, in the nobility of her heart, actually went so far as to let these at an average rent of 2s. 6d. per acre to the clansmen, who for centuries had shed their blood for her family. The whole of the stolen clanland she divided into 29 great sheep farms, each inhabited by a single family, for the most part imported English farm-servants. In the year 1835 the 15,000 Gaels were already replaced by 131,000 sheep. The remnant of the aborigines flung on the sea-shore tried to live by catching fish. They became amphibious and lived, as an English author says, half on land and half on water, and withal only half on both.<sup>30</sup>

But the brave Gaels must expiate yet more bitterly their idolatry, romantic and of the mountains, for the “great men” of the clan. The smell of their fish rose to the noses of the great men. They scented some profit in it, and let the sea-shore to the great fishmongers of London. For the second time the Gaels were hunted out.<sup>31</sup>

But, finally, part of the sheep-walks are turned into deer preserves. Every one knows that there are no real forests in England. The deer in the parks of the great are demurely domestic cattle, fat as London aldermen. Scotland is therefore the last refuge of the “noble passion.” “In the Highlands,” says Somers in 1848, “new forests are springing up like mushrooms. Here, on one side of Gaick, you have the new forest of Glenfeshie; and there on the other you have the new forest of Ardverikie. In the same line you have the Black Mount, an immense waste also recently erected. From east to west – from the neighbourhood of Aberdeen to the crags of Oban – you have now a continuous line of forests; while in other parts of the Highlands there are the new forests of Loch Archaig, Glengarry, Glenmoriston, &c. Sheep were introduced into glens which had been the seats of communities of small farmers; and the latter were driven to seek subsistence on coarser and more sterile tracks of soil. Now deer are supplanting sheep; and these are once more dispossessing the small tenants, who will necessarily be driven down upon still coarser land and to more grinding penury. Deer-forests<sup>32</sup> and the people cannot co-exist. One or other of the two must yield. Let the forests be increased in number and extent during the next quarter of a century, as they have been in the last, and the Gaels will perish from their native soil... This

movement among the Highland proprietors is with some a matter of ambition... with some love of sport... while others, of a more practical cast, follow the trade in deer with an eye solely to profit. For it is a fact, that a mountain range laid out in forest is, in many cases, more profitable to the proprietor than when let as a sheep-walk. ... The huntsman who wants a deer-forest limits his offers by no other calculation than the extent of his purse.... Sufferings have been inflicted in the Highlands scarcely less severe than those occasioned by the policy of the Norman kings. Deer have received extended ranges, while men have been hunted within a narrower and still narrower circle.... One after one the liberties of the people have been cloven down.... And the oppressions are daily on the increase.... The clearance and dispersion of the people is pursued by the proprietors as a settled principle, as an agricultural necessity, just as trees and brushwood are cleared from the wastes of America or Australia; and the operation goes on in a quiet, business-like way, &c.”<sup>33</sup>

The spoliation of the church’s property, the fraudulent alienation of the State domains, the robbery of the common lands, the usurpation of feudal and clan property, and its transformation into modern private property under circumstances of reckless terrorism, were just so many idyllic methods of primitive accumulation. They conquered the field for capitalistic agriculture, made the soil part and parcel of capital, and created for the town industries the necessary supply of a “free” and outlawed proletariat.

---

<sup>1</sup> “The petty proprietors who cultivated their own fields with their own hands, and enjoyed a modest competence.... then formed a much more important part of the nation than at present. If we may trust the best statistical writers of that age, not less than 160,000 proprietors who, with their families, must have made up more than a seventh of the whole population, derived their subsistence from little freehold estates. The average income of these small landlords... was estimated at between £60 and £70 a year. It was computed that the number of persons who tilled their own land was greater than the number of those who farmed the land of others.” Macaulay: “History of England,” 10th ed., 1854, I. pp. 333, 334. Even in the last third of the 17th century, 4/5 of the English people were agricultural. (l. c., p. 413.) I quote Macaulay, because as systematic falsifier of history he minimises as much as possible facts of this kind.

<sup>2</sup> We must never forget that even the serf was not only the owner, if but a tribute-paying owner, of the piece of land attached to his house, but also a co-possessor of the common land. “Le paysan (in Silesia, under Frederick II.) est serf.” Nevertheless, these serfs possess common lands. “On n’a pas pu encore engager les Silésiens au partage des communes, tandis que dans la Nouvelle Marche, il n’y a guère de village où ce partage ne soit exécuté avec le plus grand succès.” [The peasant ... is a serf. ... It has not yet been possible to persuade the Silesians to partition the common lands, whereas in the Neumark there is scarcely a village where the partition has not been implemented with very great success] (Mirabeau: “De la Monarchie Prussienne.” Londres, 1788, t. ii, pp. 125, 126.)

<sup>3</sup> Japan, with its purely feudal organisation of landed property and its developed *petite culture*, gives a much truer picture of the European middle ages than all our history books, dictated as these are, for the most part, by bourgeois prejudices. It is very convenient to be “liberal” at the expense of the middle ages.

<sup>4</sup> In his “Utopia,” Thomas More says, that in England “your shepe that were wont to be so meke and tame, and so smal eaters, now, as I heare saye, be become so great devourers and so wylde that they eate up, and swallow downe, the very men themselves.” “Utopia,” transl. by Robinson, ed. Arber, Lond., 1869, p. 41.

<sup>5</sup> Bacon shows the connexion between a free, well-to-do peasantry and good infantry. “This did wonderfully concern the might and mannerhood of the kingdom to have farms as it were of a standard

sufficient to maintain an able body out of penury, and did in effect amortise a great part of the lands of the kingdom unto the hold and occupation of the yeomanry or middle people, of a condition between gentlemen, and cottagers and peasants.... For it hath been held by the general opinion of men of best judgment in the wars.... that the principal strength of an army consisteth in the infantry or foot. And to make good infantry it requireth men bred, not in a servile or indigent fashion, but in some free and plentiful manner. Therefore, if a state run most to noblemen and gentlemen, and that the husbandman and ploughmen be but as their workfolk and labourers, or else mere cottagers (which are but hous'd beggars), you may have a good cavalry, but never good stable bands of foot.... And this is to be seen in France, and Italy, and some other parts abroad, where in effect all is noblesse or peasantry.... insomuch that they are inforced to employ mercenary bands of Switzers and the like, for their battalions of foot; whereby also it comes to pass that those nations have much people and few soldiers." ("The Reign of Henry VII." Verbatim reprint from Kennet's England. Ed. 1719. Lond., 1870, p. 308.)

<sup>6</sup> Dr. Hunter, l. c., p. 134. "The quantity of land assigned (in the old laws) would now be judged too great for labourers, and rather as likely to convert them into small farmers." (George Roberts: "The Social History of the People of the Southern Counties of England in Past Centuries." Lond., 1856, pp. 184-185.)

<sup>7</sup> "The right of the poor to share in the tithe, is established by the tenour of ancient statutes." (Tuckett, l. c., Vol. II., pg. 804-805.)

<sup>8</sup> William Cobbett: "A History of the Protestant Reformation," § 471.

<sup>9</sup> The "spirit" of Protestantism may be seen from the following, among other things. In the south of England certain landed proprietors and well-to-do farmers put their heads together and propounded ten questions as to the right interpretation of the poor-law of Elizabeth. These they laid before a celebrated jurist of that time, Sergeant Snigge (later a judge under James I.) for his opinion. "Question 9 — Some of the more wealthy farmers in the parish have devised a skilful mode by which all the trouble of executing this Act (the 43rd of Elizabeth) might be avoided. They have proposed that we shall erect a prison in the parish, and then give notice to the neighbourhood, that if any persons are disposed to farm the poor of this parish, they do give in sealed proposals, on a certain day, of the lowest price at which they will take them off our hands; and that they will be authorised to refuse to any one unless he be shut up in the aforesaid prison. The proposers of this plan conceive that there will be found in the adjoining counties, persons, who, being unwilling to labour and not possessing substance or credit to take a farm or ship, so as to live without labour, may be induced to make a very advantageous offer to the parish. If any of the poor perish under the contractor's care, the sin will lie at his door, as the parish will have done its duty by them. We are, however, apprehensive that the present Act (43rd of Elizabeth) will not warrant a prudential measure of this kind; but you are to learn that the rest of the freeholders of the county, and of the adjoining county of B, will very readily join in instructing their members to propose an Act to enable the parish to contract with a person to lock up and work the poor; and to declare that if any person shall refuse to be so locked up and worked, he shall be entitled to no relief. This, it is hoped, will prevent persons in distress from wanting relief, and be the means of keeping down parishes." (R. Blakey: "The History of Political Literature from the Earliest Times." Lond., 1855, Vol. II., pp. 84-85.) In Scotland, the abolition of serfdom took place some centuries later than in England. Even in 1698, Fletcher of Saltoun, declared in the Scotch parliament, "The number of beggars in Scotland is reckoned at not less than 200,000. The only remedy that I, a republican on principle, can suggest, is to restore the old state of serfdom, to make slaves of all those who are unable to provide for their own subsistence." Eden, l. c., Book I., ch. 1, pp. 60-61, says, "The decrease of villenage seems necessarily to have been the era of the origin of the poor. Manufactures and commerce are the two parents of our national poor." Eden, like our Scotch republican on principle, errs only in this: not the abolition of villenage, but the abolition of the property of the agricultural

labourer in the soil made him a proletarian, and eventually a pauper. In France, where the expropriation was effected in another way, the ordonnance of Moulins, 1571, and the Edict of 1656, correspond to the English poor-laws.

<sup>10</sup> Professor Rogers, although formerly Professor of Political Economy in the University of Oxford, the hotbed of Protestant orthodoxy, in his preface to the "History of Agriculture" lays stress on the fact of the pauperisation of the mass of the people by the Reformation.

<sup>11</sup> "A Letter to Sir T. C. Bunbury, Bart., on the High Price of Provisions. By a Suffolk Gentleman." Ipswich, 1795, p. 4. Even the fanatical advocate of the system of large farms, the author of the "Inquiry into the Connexion between the Present Price of Provisions," London, 1773, p. 139, says: "I most lament the loss of our yeomanry, that set of men who really kept up the independence of this nation; and sorry I am to see their lands now in the hands of monopolising lords, tenanted out to small farmers, who hold their leases on such conditions as to be little better than vassals ready to attend a summons on every mischievous occasion."

<sup>12</sup> On the private moral character of this bourgeois hero, among other things: "The large grant of lands in Ireland to Lady Orkney, in 1695, is a public instance of the king's affection, and the lady's influence... Lady Orkney's endearing offices are supposed to have been — *foeda laborum ministeria*." (In the Sloane Manuscript Collection, at the British Museum, No. 4224. The Manuscript is entitled: "The character and behaviour of King William, Sunderland, etc., as represented in Original Letters to the Duke of Shrewsbury from Somers Halifax, Oxford, Secretary Vernon, etc." It is full of *curiosa*.)

<sup>13</sup> "The illegal alienation of the Crown Estates, partly by sale and partly by gift, is a scandalous chapter in English history... a gigantic fraud on the nation." (F. W. Newman, "Lectures on Political Economy." London, 1851, pp. 129, 130.) [For details as to how the present large landed proprietors of England came into their possessions see "Our Old Nobility. By Noblesse Oblige." London, 1879. — *F. E.*]

<sup>14</sup> Read, *e.g.*, E. Burke's Pamphlet on the ducal house of Bedford, whose offshoot was Lord John Russell, the "tomtit of Liberalism."

<sup>15</sup> "The farmers forbid cottagers to keep any living creatures besides themselves and children, under the pretence that if they keep any beasts or poultry, they will steal from the farmers' barns for their support; they also say, keep the cottagers poor and you will keep them industrious, &c., but the real fact I believe, is that the farmers may have the whole right of common to themselves." ("A Political Inquiry into the Consequences of Enclosing Waste Lands." London, 1785, p. 75.)

<sup>19</sup> Thomas Wright: "A Short Address to the Public on the Monopoly of Large Farms," 1779, pp. 2, 3.

<sup>20</sup> Rev. Addington: "Inquiry into the Reasons for or against Enclosing Open Fields," London, 1772, pp. 37, 43 *passim*.

<sup>21</sup> Dr. R. Price, *l. c.*, v. ii., p. 155, Forster, Addington, Kent, Price, and James Anderson, should be read and compared with the miserable prattle of Sycophant MacCulloch in his catalogue: "The Literature of Political Economy," London, 1845.

<sup>22</sup> Price, *l. c.*, p. 147.

<sup>23</sup> Price, l. c., p. 159. We are reminded of ancient Rome. "The rich had got possession of the greater part of the undivided land. They trusted in the conditions of the time, that these possessions would not be again taken from them, and bought, therefore, some of the pieces of land lying near theirs, and belonging to the poor, with the acquiescence of their owners, and took some by force, so that they now were cultivating widely extended domains, instead of isolated fields. Then they employed slaves in agriculture and cattle-breeding, because freemen would have been taken from labour for military service. The possession of slaves brought them great gain, inasmuch as these, on account of their immunity from military service, could freely multiply and have a multitude of children. Thus the powerful men drew all wealth to themselves, and all the land swarmed with slaves. The Italians, on the other hand, were always decreasing in number, destroyed as they were by poverty, taxes, and military service. Even when times of peace came, they were doomed to complete inactivity, because the rich were in possession of the soil, and used slaves instead of freemen in the tilling of it." (Appian: "Civil Wars," I.7.) This passage refers to the time before the Licinian rogations. Military service, which hastened to so great an extent the ruin of the Roman plebeians, was also the chief means by which, as in a forcing-house, Charlemagne brought about the transformation of free German peasants into serfs and bondsmen.

<sup>24</sup> "An Inquiry into the Connexion between the Present Price of Provisions, &c.," pp. 124, 129. To the like effect, but with an opposite tendency: "Working-men are driven from their cottages and forced into the towns to seek for employment; but then a larger surplus is obtained, and thus capital is augmented." ("The Perils of the Nation," 2nd ed. London., 1843, p. 14.)

<sup>25</sup> l. c., p. 132.

<sup>26</sup> Steuart says: "If you compare the rent of these lands" (he erroneously includes in this economic category the tribute of the taskmen to the clanchief) "with the extent, it appears very small. If you compare it with the numbers fed upon the farm, you will find that an estate in the Highlands maintains, perhaps, ten times as many people as another of the same value in a good and fertile province." (l. c., vol. i., ch. xvi., p. 104.)

<sup>27</sup> James Anderson: "Observations on the Means of Exciting a Spirit of National Industry, &c.," Edinburgh, 1777.

<sup>28</sup> In 1860 the people expropriated by force were exported to Canada under false pretences. Some fled to the mountains and neighbouring islands. They were followed by the police, came to blows with them and escaped.

<sup>29</sup> "In the Highlands of Scotland," says Buchanan, the commentator on Adam Smith, 1814, "the ancient state of property is daily subverted.... The landlord, without regard to the hereditary tenant (a category used in error here), now offers his land to the highest bidder, who, if he is an improver, instantly adopts a new system of cultivation. The land, formerly overspread with small tenants or labourers, was peopled in proportion to its produce, but under the new system of improved cultivation and increased rents, the largest possible produce is obtained at the least possible expense: and the useless hands being, with this view, removed, the population is reduced, not to what the land will maintain, but to what it will employ. "The dispossessed tenants either seek a subsistence in the neighbouring towns," &c. (David Buchanan: "Observations on, &c., A. Smith's Wealth of Nations." Edinburgh, 1814, vol. iv., p. 144.) "The Scotch grandees dispossessed families as they would grub up coppice-wood, and they treated villages and their people as Indians harassed with wild beasts do, in their vengeance, a jungle with tigers.... Man is bartered for a fleece or a carcase of mutton, nay, held cheaper.... Why, how much worse is it than the intention of the Moguls, who, when they had broken into the northern provinces of China, proposed in council to exterminate the inhabitants, and convert the land into pasture. This proposal many Highland proprietors have effected in their own country

against their own countrymen.” (George Ensor: “An Inquiry Concerning the Population of Nations.” Lond., 1818, pp. 215, 216.)

<sup>30</sup> When the present Duchess of Sutherland entertained Mrs. Beecher Stowe, authoress of “Uncle Tom’s Cabin,” with great magnificence in London to show her sympathy for the Negro slaves of the American republic — a sympathy that she prudently forgot, with her fellow-aristocrats, during the civil war, in which every “noble” English heart beat for the slave-owner — I gave in the *New York Tribune* the facts about the Sutherland slaves. (Epitomised in part by Carey in “The Slave Trade.” Philadelphia, 1853, pp. 203, 204.) My article was reprinted in a Scotch newspaper, and led to a pretty polemic between the latter and the sycophants of the Sutherlands.

<sup>31</sup> Interesting details on this fish trade will be found in Mr. David Urquhart’s Portfolio, new series. — Nassau W. Senior, in his posthumous work, already quoted, terms “the proceedings in Sutherlandshire one of the most beneficent clearings since the memory of man.” (l. c.)

<sup>32</sup> The deer-forests of Scotland contain not a single tree. The sheep are driven from, and then the deer driven to, the naked hills, and then it is called a deer-forest. Not even timber-planting and real forest culture.

<sup>33</sup> Robert Somers: “Letters from the Highlands: or the Famine of 1847.” London, 1848, pp. 12-28 passim. These letters originally appeared in *The Times*. The English economists of course explained the famine of the Gaels in 1847, by their over-population. At all events, they “were pressing on their food-supply.” The “clearing of estates,” or as it is called in Germany, “Bauernlegen,” occurred in Germany especially after the 30 years’ war, and led to peasant-revolts as late as 1790 in Kursachsen. It obtained especially in East Germany. In most of the Prussian provinces, Frederick II. for the first time secured right of property for the peasants. After the conquest of Silesia he forced the landlords to rebuild the huts, barns, etc., and to provide the peasants with cattle and implements. He wanted soldiers for his army and tax-payers for his treasury. For the rest, the pleasant life that the peasant led under Frederick’s system of finance and hodge-podge rule of despotism, bureaucracy and feudalism, may be seen from the following quotation from his admirer, Mirabeau: “Le lin fait donc une des grandes richesses du cultivateur dans le Nord de l’Allemagne. Malheureusement pour l’espèce humaine, ce n’est qu’une ressource contre la misère et non un moyen de bien-être. Les impôts directs, les corvées, les servitudes de tout genre, écrasent le cultivateur allemand, qui paie encore des impôts indirects dans tout ce qu’il achète.... et pour comble de ruine, il n’ose pas vendre ses productions où et comme il le veut; il n’ose pas acheter ce dont il a besoin aux marchands qui pourraient le lui livrer au meilleur prix. Toutes ces causes le ruinent insensiblement, et il se trouverait hors d’état de payer les impôts directs à l’échéance sans la filerie; elle lui offre une ressource, en occupant utilement sa femme, ses enfants, ses servants, ses valets, et lui-même; mais quelle pénible vie, même aidée de ce secours. En été, il travaille comme un forçat au labourage et à la récolte; il se couche à 9 heures et se lève à deux, pour suffire aux travaux; en hiver il devrait réparer ses forces par un plus grand repos; mais il manquera de grains pour le pain et les semailles, s’il se défait des denrées qu’il faudrait vendre pour payer les impôts. Il faut donc filer pour suppléer à ce vide.... il faut y apporter la plus grande assiduité. Aussi le paysan se couche-t-il en hiver à minuit, une heure, et se lève à cinq ou six; ou bien il se couche à neuf, et se lève à deux, et cela tous les jours de la vie si ce n’est le dimanche. Ces excès de veille et de travail usent la nature humaine, et de là vient qu’hommes et femmes vieillissent beaucoup plutôt dans les campagnes que dans les villes.” [Flax represents one of the greatest sources of wealth for the peasant of North Germany. Unfortunately for the human race, this is only a resource against misery and not a means towards well-being. Direct taxes, forced labour service, obligations of all kinds crush the German peasant, especially as he still has to pay indirect taxes on everything he buys, ... and to complete his ruin he dare not sell his produce where and as he wishes; he dare not buy what he needs from the merchants who could sell it to him at a cheaper price. He is slowly ruined by all those factors, and when the direct taxes fall due, he would find himself incapable of paying them

without his spinning-wheel; it offers him a last resort, while providing useful occupation for his wife, his children, his maids, his farm-hands, and himself; but what a painful life he leads, even with this extra resource! In summer, he works like a convict with the plough and at harvest; he goes to bed at nine o'clock and rises at two to get through all his work; in winter he ought to be recovering his strength by sleeping longer; but he would run short of corn for his bread and next year's sowing if he got rid of the products that he needs to sell in order to pay the taxes. He therefore has to spin to fill up this gap ... and indeed he must do so most assiduously. Thus the peasant goes to bed at midnight or one o'clock in winter, and gets up at five or six; or he goes to bed at nine and gets up at two, and this he does every day of his life except Sundays. These excessively short hours of sleep and long hours of work consume a person's strength and hence it happens that men and women age much more in the country than in the towns] (Mirabeau, l. c., t.III. pp. 212 sqq.)

*Note to the second edition.* In April 1866, 18 years after the publication of the work of Robert Somers quoted above, Professor Leone Levi gave a lecture before the Society of Arts on the transformation of sheep-walks into deer-forest, in which he depicts the advance in the devastation of the Scottish Highlands. He says, with other things: "Depopulation and transformation into sheep-walks were the most convenient means for getting an income without expenditure... A deer-forest in place of a sheep-walk was a common change in the Highlands. The landowners turned out the sheep as they once turned out the men from their estates, and welcomed the new tenants — the wild beasts and the feathered birds.... One can walk from the Earl of Dalhousie's estates in Forfarshire to John O'Groats, without ever leaving forest land.... In many of these woods the fox, the wild cat, the marten, the polecat, the weasel and the Alpine hare are common; whilst the rabbit, the squirrel and the rat have lately made their way into the country. Immense tracts of land, much of which is described in the statistical account of Scotland as having a pasturage in richness and extent of very superior description, are thus shut out from all cultivation and improvement, and are solely devoted to the sport of a few persons for a very brief period of the year." The London *Economist* of June 2, 1866, says, "Amongst the items of news in a Scotch paper of last week, we read... 'One of the finest sheep farms in Sutherlandshire, for which a rent of £1,200 a year was recently offered, on the expiry of the existing lease this year, is to be converted into a deer-forest.' Here we see the modern instincts of feudalism ... operating pretty much as they did when the Norman Conqueror... destroyed 36 villages to create the New Forest.... Two millions of acres... totally laid waste, embracing within their area some of the most fertile lands of Scotland. The natural grass of Glen Tilt was among the most nutritive in the county of Perth. The deer-forest of Ben Alder was by far the best grazing ground in the wide district of Badenoch; a part of the Black Mount forest was the best pasture for black-faced sheep in Scotland. Some idea of the ground laid waste for purely sporting purposes in Scotland may be formed from the fact that it embraced an area larger than the whole county of Perth. The resources of the forest of Ben Alder might give some idea of the loss sustained from the forced desolations. The ground would pasture 15,000 sheep, and as it was not more than one-thirtieth part of the old forest ground in Scotland ... it might, &c., ... All that forest land is as totally unproductive.... It might thus as well have been submerged under the waters of the German Ocean.... Such extemporised wildernesses or deserts ought to be put down by the decided interference of the Legislature."

## Chapter 28: Bloody Legislation Against the Expropriated, from the End of the 15th Century. Forcing Down of Wages by Acts of Parliament

The proletariat created by the breaking up of the bands of feudal retainers and by the forcible expropriation of the people from the soil, this “free” proletariat could not possibly be absorbed by the nascent manufactures as fast as it was thrown upon the world. On the other hand, these men, suddenly dragged from their wonted mode of life, could not as suddenly adapt themselves to the discipline of their new condition. They were turned *en masse* into beggars, robbers, vagabonds, partly from inclination, in most cases from stress of circumstances. Hence at the end of the 15th and during the whole of the 16th century, throughout Western Europe a bloody legislation against vagabondage. The fathers of the present working class were chastised for their enforced transformation into vagabonds and paupers. Legislation treated them as “voluntary” criminals, and assumed that it depended on their own good will to go on working under the old conditions that no longer existed.

In England this legislation began under Henry VII.

**Henry VIII. 1530:** Beggars old and unable to work receive a beggar’s licence. On the other hand, whipping and imprisonment for sturdy vagabonds. They are to be tied to the cart-tail and whipped until the blood streams from their bodies, then to swear an oath to go back to their birthplace or to where they have lived the last three years and to “put themselves to labour.” What grim irony! In 27 Henry VIII. the former statute is repeated, but strengthened with new clauses. For the second arrest for vagabondage the whipping is to be repeated and half the ear sliced off; but for the third relapse the offender is to be executed as a hardened criminal and enemy of the common weal.

**Edward VI.:** A statute of the first year of his reign, 1547, ordains that if anyone refuses to work, he shall be condemned as a slave to the person who has denounced him as an idler. The master shall feed his slave on bread and water, weak broth and such refuse meat as he thinks fit. He has the right to force him to do any work, no matter how disgusting, with whip and chains. If the slave is absent a fortnight, he is condemned to slavery for life and is to be branded on forehead or back with the letter S; if he runs away thrice, he is to be executed as a felon. The master can sell him, bequeath him, let him out on hire as a slave, just as any other personal chattel or cattle. If the slaves attempt anything against the masters, they are also to be executed. Justices of the peace, on information, are to hunt the rascals down. If it happens that a vagabond has been idling about for three days, he is to be taken to his birthplace, branded with a red-hot iron with the letter V on the breast and be set to work, in chains, in the streets or at some other labour. If the vagabond gives a false birthplace, he is then to become the slave for life of this place, of its inhabitants, or its corporation, and to be branded with an S. All persons have the right to take away the children of the vagabonds and to keep them as apprentices, the young men until the 24th year, the girls until the 20th. If they run away, they are to become up to this age the slaves of their masters, who can put them in irons, whip them, &c., if they like. Every master may put an iron ring round the neck, arms or legs of his slave, by which to know him more easily and to be more certain of him. <sup>1</sup> The last part of this statute provides, that certain poor people may be employed by a place or by persons, who are willing to give them food and drink and to find them work. This kind of parish slaves was kept up in England until far into the 19th century under the name of “roundsmen.”

**Elizabeth, 1572:** Unlicensed beggars above 14 years of age are to be severely flogged and branded on the left ear unless some one will take them into service for two years; in case of a repetition of the offence, if they are over 18, they are to be executed, unless some one will take them into service for two years; but for the third offence they are to be executed without mercy as felons. Similar statutes: 18 Elizabeth, c. 13, and another of 1597.<sup>2</sup>

**James 1:** Any one wandering about and begging is declared a rogue and a vagabond. Justices of the peace in petty sessions are authorised to have them publicly whipped and for the first offence to imprison them for 6 months, for the second for 2 years. Whilst in prison they are to be whipped as much and as often as the justices of the peace think fit... Incurrible and dangerous rogues are to be branded with an R on the left shoulder and set to hard labour, and if they are caught begging again, to be executed without mercy. These statutes, legally binding until the beginning of the 18th century, were only repealed by 12 Anne, c. 23.

Similar laws in France, where by the middle of the 17th century a kingdom of vagabonds (truands) was established in Paris. Even at the beginning of Louis XVI.'s reign (Ordinance of July 13th, 1777) every man in good health from 16 to 60 years of age, if without means of subsistence and not practising a trade, is to be sent to the galleys. Of the same nature are the statute of Charles V. for the Netherlands (October, 1537), the first edict of the States and Towns of Holland (March 10, 1614), the "Plakaat" of the United Provinces (June 26, 1649), &c.

Thus were the agricultural people, first forcibly expropriated from the soil, driven from their homes, turned into vagabonds, and then whipped, branded, tortured by laws grotesquely terrible, into the discipline necessary for the wage system.

It is not enough that the conditions of labour are concentrated in a mass, in the shape of capital, at the one pole of society, while at the other are grouped masses of men, who have nothing to sell but their labour-power. Neither is it enough that they are compelled to sell it voluntarily. The advance of capitalist production develops a working class, which by education, tradition, habit, looks upon the conditions of that mode of production as self-evident laws of Nature. The organisation of the capitalist process of production, once fully developed, breaks down all resistance. The constant generation of a relative surplus-population keeps the law of supply and demand of labour, and therefore keeps wages, in a rut that corresponds with the wants of capital. The dull compulsion of economic relations completes the subjection of the labourer to the capitalist. Direct force, outside economic conditions, is of course still used, but only exceptionally. In the ordinary run of things, the labourer can be left to the "natural laws of production," *i.e.*, to his dependence on capital, a dependence springing from, and guaranteed in perpetuity by, the conditions of production themselves. It is otherwise during the historic genesis of capitalist production. The bourgeoisie, at its rise, wants and uses the power of the state to "regulate" wages, *i.e.*, to force them within the limits suitable for surplus-value making, to lengthen the working day and to keep the labourer himself in the normal degree of dependence. This is an essential element of the so-called primitive accumulation.

The class of wage labourers, which arose in the latter half of the 14th century, formed then and in the following century only a very small part of the population, well protected in its position by the independent peasant proprietary in the country and the guild-organisation in the town. In country and town master and workmen stood close together socially. The subordination of labour to capital was only formal – *i.e.*, the mode of production itself had as yet no specific capitalistic character. Variable capital preponderated greatly over constant. The demand for wage labour grew, therefore, rapidly with every accumulation of capital, whilst the supply of wage labour followed but slowly. A large part of the national product, changed later into a fund of capitalist accumulation, then still entered into the consumption-fund of the labourer.

Legislation on wage labour (from the first, aimed at the exploitation of the labourer and, as it advanced, always equally hostile to him),<sup>3</sup> is started in England by the Statute of Labourers, of Edward III., 1349. The ordinance of 1350 in France, issued in the name of King John, corresponds with it. English and French legislation run parallel and are identical in purport. So far as the labour-statutes aim at compulsory extension of the working day, I do not return to them, as this point was treated earlier (Chap. X., Section 5).

The Statute of Labourers was passed at the urgent instance of the House of Commons. A Tory says naively:

“Formerly the poor demanded such *high* wages as to threaten industry and wealth. Next, their wages are so *low* as to threaten industry and wealth equally and perhaps more, but in another way.”<sup>4</sup> A tariff of wages was fixed by law for town and country, for piece-work and day-work. The agricultural labourers were to hire themselves out by the year, the town ones “in open market.” It was forbidden, under pain of imprisonment, to pay higher wages than those fixed by the statute, but the taking of higher wages was more severely punished than the giving them. [So also in Sections 18 and 19 of the Statute of Apprentices of Elizabeth, ten days’ imprisonment is decreed for him that pays the higher wages, but twenty-one days for him that receives them.] A statute of 1360 increased the penalties and authorised the masters to extort labour at the legal rate of wages by corporal punishment. All combinations, contracts, oaths, &c., by which masons and carpenters reciprocally bound themselves, were declared null and void. Coalition of the labourers is treated as a heinous crime from the 14th century to 1825, the year of the repeal of the laws against Trades’ Unions. The spirit of the Statute of Labourers of 1349 and of its offshoots comes out clearly in the fact, that indeed a maximum of wages is dictated by the State, but on no account a minimum.

In the 16th century, the condition of the labourers had, as we know, become much worse. The money wage rose, but not in proportion to the depreciation of money and the corresponding rise in the prices of commodities. Wages, therefore, in reality fell. Nevertheless, the laws for keeping them down remained in force, together with the ear-clipping and branding of those “whom no one was willing to take into service.” By the Statute of Apprentices 5 Elizabeth, c. 3, the justices of the peace were empowered to fix certain wages and to modify them according to the time of the year and the price of commodities. James I. extended these regulations of labour also to weavers, spinners, and all possible categories of workers.<sup>5</sup> George II. extended the laws against coalitions of labourers to manufactures. In the manufacturing period *par excellence*, the capitalist mode of production had become sufficiently strong to render legal regulation of wages as impracticable as it was unnecessary; but the ruling classes were unwilling in case of necessity to be without the weapons of the old arsenal. Still, 8 George II. forbade a higher day’s wage than 2s. 7½d. for journeymen tailors in and around London, except in cases of general mourning; still, 13 George III., c. 68, gave the regulation of the wages of silk-weavers to the justices of the peace; still, in 1706, it required two judgments of the higher courts to decide, whether the mandates of justices of the peace as to wages held good also for non-agricultural labourers; still, in 1799, an act of Parliament ordered that the wages of the Scotch miners should continue to be regulated by a statute of Elizabeth and two Scotch acts of 1661 and 1671. How completely in the meantime circumstances had changed, is proved by an occurrence unheard-of before in the English Lower House. In that place, where for more than 400 years laws had been made for the maximum, beyond which wages absolutely must not rise, Whitbread in 1796 proposed a legal minimum wage for agricultural labourers. Pitt opposed this, but confessed that the “condition of the poor

was cruel.” Finally, in 1813, the laws for the regulation of wages were repealed. They were an absurd anomaly, since the capitalist regulated his factory by his private legislation, and could by the poor-rates make up the wage of the agricultural labourer to the indispensable minimum. The provisions of the labour statutes as to contracts between master and workman, as to giving notice and the like, which only allow of a civil action against the contract-breaking master, but on the contrary permit a criminal action against the contract-breaking workman, are to this hour (1873) in full force. The barbarous laws against Trades’ Unions fell in 1825 before the threatening bearing of the proletariat. Despite this, they fell only in part. Certain beautiful fragments of the old statute vanished only in 1859. Finally, the act of Parliament of June 29, 1871, made a pretence of removing the last traces of this class of legislation by legal recognition of Trades’ Unions. But an act of Parliament of the same date (an act to amend the criminal law relating to violence, threats, and molestation), re-established, in point of fact, the former state of things in a new shape. By this Parliamentary escamotage the means which the labourers could use in a strike or lock-out were withdrawn from the laws common to all citizens, and placed under exceptional penal legislation, the interpretation of which fell to the masters themselves in their capacity as justices of the peace. Two years earlier, the same House of Commons and the same Mr. Gladstone in the well-known straightforward fashion brought in a bill for the abolition of all exceptional penal legislation against the working class. But this was never allowed to go beyond the second reading, and the matter was thus protracted until at last the “great Liberal party,” by an alliance with the Tories, found courage to turn against the very proletariat that had carried it into power. Not content with this treachery, the “great Liberal party” allowed the English judges, ever complaisant in the service of the ruling classes, to dig up again the earlier laws against “conspiracy,” and to apply them to coalitions of labourers. We see that only against its will and under the pressure of the masses did the English Parliament give up the laws against Strikes and Trades’ Unions, after it had itself, for 500 years, held, with shameless egoism, the position of a permanent Trades’ Union of the capitalists against the labourers.

During the very first storms of the revolution, the French bourgeoisie dared to take away from the workers the right of association but just acquired. By a decree of June 14, 1791, they declared all coalition of the workers as “an attempt against liberty and the declaration of the rights of man,” punishable by a fine of 500 livres, together with deprivation of the rights of an active citizen for one year.<sup>6</sup> This law which, by means of State compulsion, confined the struggle between capital and labour within limits comfortable for capital, has outlived revolutions and changes of dynasties. Even the Reign of Terror left it untouched. It was but quite recently struck out of the Penal Code. Nothing is more characteristic than the pretext for this bourgeois *coup d’état*. “Granting,” says Chapelier, the reporter of the Select Committee on this law, “that wages ought to be a little higher than they are, ... that they ought to be high enough for him that receives them, to be free from that state of absolute dependence due to the want of the necessaries of life, and which is almost that of slavery,” yet the workers must not be allowed to come to any understanding about their own interests, nor to act in common and thereby lessen their “absolute dependence, which is almost that of slavery;” because, forsooth, in doing this they injure “the freedom of their cidevant masters, the present entrepreneurs,” and because a coalition against the despotism of the quondam masters of the corporations is – guess what! – is a restoration of the corporations abolished by the French constitution.<sup>7</sup>

---

<sup>1</sup> The author of the “Essay on Trade, etc.,” 1770, says, “In the reign of Edward VI. indeed the English seem to have set, in good earnest, about encouraging manufactures and employing the poor. This we learn from a remarkable statute which runs thus: “That all vagrants shall be branded, &c.”” 1. c., p. 5.

<sup>2</sup> Thomas More says in his "Utopia": "Therefore that on covetous and unsatiable cormaraunte and very plage of his native contrey maye compasse aboute and inclose many thousand akers of grounde together within one pale or hedge, the husbandman be thrust owte of their owne, or els either by coneyne and fraude, or by violent oppression they be put besydes it, or by wrongs and iniuries thei be so weried that they be compelled to sell all: by one meanes, therefore, or by other, either by hooke or crooke they muste needes departe awaye, poore, selye, wretched soules, men, women, husbands, wiues, fatherlesse children, widowes, wofull mothers with their yonge babes, and their whole household smal in substance, and mucche in numbere, as husbandrye requireth many handes. Awaye thei trudge, I say, owte of their knowen accustomed houses, fyndynge no place to reste in. All their housholde stuffe, which is very little woorthe, thoughe it might well abide the sale: yet beeynge sodainely thruste owte, they be constrayned to sell it for a thing of nought. And when they haue wandered abrode tyll that be spent, what cant they then els doe but steale, and then iustly pardy be hanged, or els go about beggyng. And yet then also they be caste in prison as vagaboundes, because they go aboute and worke not: whom no man wyl set a worke though thei neuer so willyngly profre themselues therto." Of these poor fugitives of whom Thomas More says that they were forced to thieve, "7,200 great and petty thieves were put to death," in the reign of Henry VIII. (Holinshed, "Description of England," Vol. 1, p. 186.) In Elizabeth's time, "rogues were trussed up apace, and that there was not one year commonly wherein three or four hundred were not devoured and eaten up by the gallows." (Strype's "Annals of the Reformation and Establishment of Religion and other Various Occurrences in the Church of England during Queen Elizabeth's Happy Reign." Second ed., 1725, Vol. 2.) According to this same Strype, in Somersetshire, in one year, 40 persons were executed, 35 robbers burnt in the hand, 37 whipped, and 183 discharged as "incorrigible vagabonds." Nevertheless, he is of opinion that this large number of prisoners does not comprise even a fifth of the actual criminals, thanks to the negligence of the justices and the foolish compassion of the people; and the other counties of England were not better off in this respect than Somersetshire, while some were even worse.

<sup>3</sup> "Whenever the legislature attempts to regulate the differences between masters and their workmen, its counsellors are always the masters," says A. Smith. "L'esprit des lois, c'est la propriété," says Linguet.

<sup>4</sup> "Sophisms of Free Trade." By a Barrister. Lond., 1850, p. 206. He adds maliciously: "We were ready enough to interfere for the employer, can nothing now be done for the employed?"

<sup>5</sup> From a clause of Statute 2 James I., c. 6, we see that certain clothmakers took upon themselves to dictate, in their capacity of justices of the peace, the official tariff of wages in their own shops. In Germany, especially after the Thirty Years' War, statutes for keeping down wages were general. "The want of servants and labourers was very troublesome to the landed proprietors in the depopulated districts. All villagers were forbidden to let rooms to single men and women; all the latter were to be reported to the authorities and cast into prison if they were unwilling to become servants, even if they were employed at any other work, such as sowing seeds for the peasants at a daily wage, or even buying and selling corn. (Imperial privileges and sanctions for Silesia, I., 25.) For a whole century in the decrees of the small German potentates a bitter cry goes up again and again about the wicked and impertinent rabble that will not reconcile itself to its hard lot, will not be content with the legal wage; the individual landed proprietors are forbidden to pay more than the State had fixed by a tariff. And yet the conditions of service were at times better after war than 100 years later; the farm servants of Silesia had, in 1652, meat twice a week, whilst even in our century, districts are known where they have it only three times a year. Further, wages after the war were higher than in the following century." (G. Freytag.)

<sup>6</sup> Article I. of this law runs: "L'anéantissement de toute espèce de corporations du même état et profession étant l'une des bases fondamentales de la constitution française, il est défendu de les

---

rétablir de fait sous quelque prétexte et sous quelque forme que ce soit.” Article IV. declares, that if “des citoyens attachés aux mêmes professions, arts et métiers prenaient des délibérations, faisaient entre eux des conventions tendantes à refuser de concert ou à n’accorder qu’à un prix déterminé le secours de leur industrie ou de leurs travaux, les dites délibérations et conventions... seront déclarées inconstitutionnelles, attentatoires à la liberté et à la déclaration des droits de l’homme, &c.,” felony, therefore, as in the old labour-statutes. [As the abolition of any form of association between citizens of the same estate and profession is one of the foundations of the French constitution, it is forbidden to re-establish them under any pretext or in any form, whatever they might be. ... citizens belonging to the same profession, craft or trade have joint discussions and make joint decisions with the intention of refusing together to perform their trade or insisting together on providing the services of their trade or their labours only at a particular price, then the said deliberations and agreements ... shall be declared unconstitutional, derogatory to liberty and the declaration of the rights of man, etc.] (“Révolutions de Paris,” Paris, 1791, t. III, p. 523.)

<sup>7</sup> Buchez et Roux: “Histoire Parlementaire,” t. x., p. 195.

## Chapter 29: Genesis of the Capitalist Farmer

Now that we have considered the forcible creation of a class of outlawed proletarians, the bloody discipline that turned them into wage labourers, the disgraceful action of the State which employed the police to accelerate the accumulation of capital by increasing the degree of exploitation of labour, the question remains: whence came the capitalists originally? For the expropriation of the agricultural population creates, directly, none but the greatest landed proprietors. As far, however, as concerns the genesis of the farmer, we can, so to say, put our hand on it, because it is a slow process evolving through many centuries. The serfs, as well as the free small proprietors, held land under very different tenures, and were therefore emancipated under very different economic conditions. In England the first form of the farmer is the bailiff, himself a serf. His position is similar to that of the old Roman *villicus*, only in a more limited sphere of action. During the second half of the 14th century he is replaced by a farmer, whom the landlord provided with seed, cattle and implements. His condition is not very different from that of the peasant. Only he exploits more wage labour. Soon he becomes a metayer, a half-farmer. He advances one part of the agricultural stock, the landlord the other. The two divide the total product in proportions determined by contract. This form quickly disappears in England, to give the place to the farmer proper, who makes his own capital breed by employing wage labourers, and pays a part of the surplus-product, in money or in kind, to the landlord as rent. So long, during the 15th century, as the independent peasant and the farm-labourer working for himself as well as for wages, enriched themselves by their own labour, the circumstances of the farmer, and his field of production, were equally mediocre. The agricultural revolution which commenced in the last third of the 15th century, and continued during almost the whole of the 16th (excepting, however, its last decade), enriched him just as speedily as it impoverished the mass of the agricultural people.<sup>1</sup>

The usurpation of the common lands allowed him to augment greatly his stock of cattle, almost without cost, whilst they yielded him a richer supply of manure for the tillage of the soil. To this was added in the 16th century a very important element. At that time the contracts for farms ran for a long time, often for 99 years. The progressive fall in the value of the precious metals, and therefore of money, brought the farmers golden fruit. Apart from all the other circumstances discussed above, it lowered wages. A portion of the latter was now added to the profits of the farm. The continuous rise in the price of corn, wool, meat, in a word of all agricultural produce, swelled the money capital of the farm without any action on his part, whilst the rent he paid (being calculated on the old value of money) diminished in reality.<sup>2</sup> Thus they grew rich at the expense both of their labourers and their landlords. No wonder, therefore, that England, at the end of the 16th century, had a class of capitalist farmers, rich, considering the circumstances of the time.<sup>3</sup>

---

<sup>1</sup> Harrison in his "Description of England," says "although peradventure foure pounds of old rent be improved to fortie, toward the end of his term, if he have not six or seven yeares rent lieng by him, fiftie or a hundred pounds, yet will the farmer thinke his gaines verie small."

<sup>2</sup> On the influence of the depreciation of money in the 16th century, on the different classes of society, see "A Compendium of Briefe Examination of Certayne Ordinary Complaints of Divers of our Countrymen in these our Days," by W. S. Gentleman (London 1581). The dialogue form of this work led people for a long time to ascribe it to Shakespeare, and even in 1751, it was published under his

name. Its author is William Stafford. In one place the knight reasons as follows: *Knight*: You, my neighbor, the husbandman, you Maister Mercer, and you Goodman Cooper, with other artificers, may save yourselves metely well. For as much as all things are dearer than they were, so much do you arise in the pryce of your wares and occupations that ye sell agayne. But we have nothing to sell whereby we might advance ye price there of, to countervaile those things that we must buy agayne.” In another place, the knight asks the doctor: “I pray you, what be those sorts that ye meane. And first, of those that ye thinke should have no losse thereby? *Doctor*: I mean all those that live by buying and selling, for as they buy deare, they sell thereafter. *Knight*: What is the next sort that ye say would win by it? *Doctor*: Marry, all such as have takings of fearmes in their owne manurance [cultivation] at the old rent, for where they pay after the olde rate they sell after the newe — that is, they paye for their lande good cheape, and sell all things growing thereof deare. *Knight*: What sorte is that which, ye sayde should have greater losse hereby, than these men had profit? *Doctor*: It is all noblemen, gentlemen, and all other that live either by a stinted rent or stypend, or do not manure [cultivate] the ground, or doe occupy no buying and selling.”

<sup>3</sup> In France, the *régisseur*, steward, collector of dues for the feudal lords during the earlier part of the middle ages, soon became an *homme d'affaires*, who by extortion, cheating, &c., swindled himself into a capitalist. These *régisseurs* themselves were sometimes noblemen. *E.g.*, “C'est li compte que messire Jacques de Thoraine, chevalier chastelain sor Besançon rent és-seigneur tenant les comptes à Dijon pour monseigneur le duc et comte de Bourgoigne, des rentes appartenant à la dite chastellenie, depuis xxve jour de décembre MCCCCLIX jusqu'au xxviiiie jour de décembre MCCCCLX.” [This is the account given by M. Jacques de Thoraise, knight, and Lord of a manor near Besançon, to the lord who administers the accounts at Dijon for his highness the Duke and Count of Burgundy, of the rents appurtenant to the above-mentioned manor, from the 25th day of December 1359 to the 28th day of December 1360] (Alexis Monteil: “*Traité de Matériaux Manuscrits etc.*,” pp. 234, 235.) Already it is evident here how in all spheres of social life the lion's share falls to the middleman. In the economic domain, *e.g.*, financiers, stock-exchange speculators, merchants, shopkeepers skim the cream; in civil matters, the lawyer fleeces his clients; in politics the representative is of more importance than the voters, the minister than the sovereign; in religion, God is pushed into the background by the “Mediator,” and the latter again is shoved back by the priests, the inevitable middlemen between the good shepherd and his sheep. In France, as in England, the great feudal territories were divided into innumerable small homesteads, but under conditions incomparably more favorable for the people. During the 14th century arose the farms or *terriers*. Their number grew constantly, far beyond 100,000. They paid rents varying from 1/12 to 1/5 of the product in money or in kind. These farms were fiefs, sub-fiefs, &c., according the value and extent of the domains, many of them only containing a few acres. But these farmers had rights of jurisdiction in some degree over the dwellers on the soil; there were four grades. The oppression of the agricultural population under all these petty tyrants will be understood. Monteil says that there were once in France 160,000 judges, where today, 4,000 tribunals, including justices of the peace, suffice.

## Chapter 30: Reaction of the Agricultural Revolution on Industry. Creation of the Home-Market for Industrial Capital

The expropriation and expulsion of the agricultural population, intermittent but renewed again and again, supplied, as we saw, the town industries with a mass of proletarians entirely unconnected with the corporate guilds and unfettered by them; a fortunate circumstance that makes old A. Anderson (not to be confounded with James Anderson), in his "History of Commerce," believe in the direct intervention of Providence. We must still pause a moment on this element of primitive accumulation. The thinning-out of the independent, self-supporting peasants not only brought about the crowding together of the industrial proletariat, in the way that Geoffrey Saint Hilaire explained the condensation of cosmical matter at one place, by its rarefaction at another.<sup>1</sup> In spite of the smaller number of its cultivators, the soil brought forth as much or more produce, after as before, because the revolution in the conditions of landed property was accompanied by improved methods of culture, greater co-operation, concentration of the means of production, &c., and because not only were the agricultural wage labourers put on the strain more intensely<sup>2</sup>, but the field of production on which they worked for themselves became more and more contracted. With the setting free of a part of the agricultural population, therefore, their former means of nourishment were also set free. They were now transformed into material elements of variable capital. The peasant, expropriated and cast adrift, must buy their value in the form of wages, from his new master, the industrial capitalist. That which holds good of the means of subsistence holds with the raw materials of industry dependent upon home agriculture. They were transformed into an element of constant capital. Suppose, *e.g.*, a part of the Westphalian peasants, who, at the time of Frederick II, all spun flax, forcibly expropriated and hunted from the soil; and the other part that remained, turned into day labourers of large farmers. At the same time arise large establishments for flax-spinning and weaving, in which the men "set free" now work for wages. The flax looks exactly as before. Not a fibre of it is changed, but a new social soul has popped into its body. It forms now a part of the constant capital of the master manufacturer. Formerly divided among a number of small producers, who cultivated it themselves and with their families spun it in retail fashion, it is now concentrated in the hand of one capitalist, who sets others to spin and weave it for him. The extra labour expended in flax-spinning realised itself formerly in extra income to numerous peasant families, or maybe, in Frederick II's time, in taxes pour le roi de Prusse. It realises itself now in profit for a few capitalists. The spindles and looms, formerly scattered over the face of the country, are now crowded together in a few great labour-barracks, together with the labourers and the raw material. And spindles, looms, raw material, are now transformed from means of independent existence for the spinners and weavers, into means for commanding them and sucking out of them unpaid labour.<sup>3</sup> One does not perceive, when looking at the large manufactories and the large farms, that they have originated from the throwing into one of many small centres of production, and have been built up by the expropriation of many small independent producers. Nevertheless, the popular intuition was not at fault. In the time of Mirabeau, the lion of the Revolution, the great manufactories were still called manufactures réunies, workshops thrown into one, as we speak of fields thrown into one. Says Mirabeau:

"We are only paying attention to the grand manufactories, in which hundreds of men work under a director and which are commonly called *manufactures réunies*."

Those where a very large number of labourers work, each separately and on his own account, are hardly considered; they are placed at an infinite distance from the others. This is a great error, as the latter alone make a really important object of national prosperity.... The large workshop (manufacture réunie) will enrich prodigiously one or two entrepreneurs, but the labourers will only be journeymen, paid more or less, and will not have any share in the success of the undertaking. In the discrete workshop (manufacture séparée), on the contrary, no one will become rich, but many labourers will be comfortable; the saving and the industrious will be able to amass a little capital, to put by a little for a birth of a child, for an illness, for themselves or their belongings. The number of saving and industrious labourers will increase, because they will see in good conduct, in activity, a means of essentially bettering their condition, and not of obtaining a small rise in wages that can never be of any importance of the future, and whose sole result is to place men in the position to live a little better, but only from day to day.... The large workshops, undertakings of certain private persons who pay labourers from day to day to work for their gain, may be able to put these private individuals at their ease, but they will never be an object worth the attention of governments. Discrete workshops, for the most part combined with cultivation of small holdings, are the only free ones."<sup>4</sup> The expropriation and eviction of a part of the agricultural population not only set free for industrial capital, the labourers, their means of subsistence, and material for labour; it also created the home-market.

In fact, the events that transformed the small peasants into wage labourers, and their means of subsistence and of labour into material elements of capital, created, at the same time, a home-market for the latter. Formerly, the peasant family produced the means of subsistence and the raw materials, which they themselves, for the most part, consumed. These raw materials and means of subsistence have now become commodities; the large farmer sells them, he finds his market in manufactures. Yarn, linen, coarse woollen stuffs – things whose raw materials had been within the reach of every peasant family, had been spun and woven by it for its own use – were now transformed into articles of manufacture, to which the country districts at once served for markets. The many scattered customers, whom stray artisans until now had found in the numerous small producers working on their own account, concentrate themselves now into one great market provided for by industrial capital.<sup>5</sup> Thus, hand in hand with the expropriation of the self-supporting peasants, with their separation from their means of production, goes the destruction of rural domestic industry, the process of separation between manufacture and agriculture. And only the destruction of rural domestic industry can give the internal market of a country that extension and consistence which the capitalist mode of production requires. Still the manufacturing period, properly so called, does not succeed in carrying out this transformation radically and completely. It will be remembered that manufacture, properly so called, conquers but partially the domain of national production, and always rests on the handicrafts of the town and the domestic industry of the rural districts as its ultimate basis. If it destroys these in one form, in particular branches, at certain points, it calls them up again elsewhere, because it needs them for the preparation of raw material up to a certain point. It produces, therefore, a new class of small villagers who, while following the cultivation of the soil as an accessory calling, find their chief occupation in industrial labour, the products of which they sell to the manufacturers directly, or through the medium of merchants. This is one, though not the chief, cause of a phenomenon which, at first, puzzles the student of English history.<sup>6</sup> From the last third of the 15th century he finds continually complaints, only interrupted at certain intervals, about the encroachment of capitalist farming in the country districts, and the progressive destruction of the

peasantry. On the other hand, he always finds this peasantry turning up again, although in diminished number, and always under worse conditions. The chief reason is: England is at one time chiefly a cultivator of corn, at another chiefly a breeder of cattle, in alternate periods, and with these the extent of peasant cultivation fluctuates. Modern Industry alone, and finally, supplies, in machinery, the lasting basis of capitalistic agriculture, expropriates radically the enormous majority of the agricultural population, and completes the separation between agriculture and rural domestic industry, whose roots – spinning and weaving – it tears up.<sup>7</sup> It therefore also, for the first time, conquers for industrial capital the entire home market.<sup>8</sup>

---

<sup>1</sup> In his “Notions de Philosophie Naturelle.” Paris, 1838.

<sup>2</sup> A point that Sir James Steuart emphasises.

<sup>3</sup> “Je permettrai,” says the capitalist, “que vous ayez l’honneur de me servir, à condition que vous me donniez le peu qui vous reste pour la peine que je prends de vous commander.” [I will allow you ... to have the honour of serving me, on condition that, in return for the pains I take in commanding you, you give me the little that remains to you] (J. J. Rousseau: “Discours sur l’Economie Politique.”)

<sup>4</sup> Mirabeau, l.c., t.III, pp.20-109 passim. That Mirabeau considers the separate workshops more economical and productive than the “combined,” and sees in the latter merely artificial exotics under government cultivation, is explained by the position at that time of a great part of the continental manufactures.

<sup>5</sup> “Twenty pounds of wool converted unobtrusively into yearly clothing of a labourer’s family by its own industry in the intervals of other works — this makes no show; but bring it to market, send it to the factory, thence to the broker, thence to the dealer, and you will have great commercial operations, and nominal capital engaged to the amount of twenty times its value.... The working-class is thus emersed to support a wretched factory population, a parastical shop-keeping class, and a fictitious commercial, monetary, and financial system.” (David Urquhart, l.c., p.120.)

<sup>6</sup> Cromwell’s time forms an exception. So long as the Republic lasted, the mass of the English people of all grades rose from the degradation into which they had sunk under the Tudors.

<sup>7</sup> Tuckett is aware that the modern woollen industry has sprung, with the introduction of machinery, from manufacture proper and from the destruction of rural and domestic industries.

“The plough, the yoke, were ‘the invention of gods, and the occupation of heroes’; are the loom, the spindle, the distaff, of less noble parentage. You sever the distaff and the plough, the spindle and the yoke, and you get factories and poor-houses, credit and panics, two hostile nations, agriculture and commercial.” (David Urquhart, l.c., p.122.)

But now comes Carey, and cries out upon England, surely not with unreason, that it is trying to turn every other country into a mere agricultural nation, whose manufacturer is to be England. He pretends that in this way Turkey has been ruined, because “the owners and occupants of land have never been permitted by England to strengthen themselves by the formation of that natural alliance between the plough and the loom, the hammer and the harrow.” (“The Slave Trade,” p.125.) According to him, Urquhart himself is one of the chief agents in the ruin of Turkey, where he had made Free-trade propaganda in the English interest. The best of it is that Carey, a great Russophile by the way, wants to prevent the process of separation by that very system of protection which accelerates it.

<sup>8</sup> Philanthropic English economists, like Mill, Rogers, Goldwin Smith, Fawcett, &c., and liberal manufacturers like John Bright & Co., ask the English landed proprietors, as God asked Cain after Abel, Where are our thousands of freeholders gone? But where do *you* come from, then? From the destruction of those freeholders. Why don’t you ask further, where are the independent weavers, spinners, and artisans gone?

## Chapter 31: The Genesis of the Industrial Capitalist

The genesis of the industrial\* capitalist did not proceed in such a gradual way as that of the farmer. Doubtless many small guild-masters, and yet more independent small artisans, or even wage labourers, transformed themselves into small capitalists, and (by gradually extending exploitation of wage labour and corresponding accumulation) into full-blown capitalists. In the infancy of capitalist production, things often happened as in the infancy of medieval towns, where the question, which of the escaped serfs should be master and which servant, was in great part decided by the earlier or later date of their flight. The snail's pace of this method corresponded in no wise with the commercial requirements of the new world market that the great discoveries of the end of the 15th century created. But the middle ages had handed down two distinct forms of capital, which mature in the most different economic social formations, and which before the era of the capitalist mode of production, are considered as capital *quand même* [all the same] – usurer's capital and merchant's capital.

“At present, all the wealth of society goes first into the possession of the capitalist ... he pays the landowner his rent, the labourer his wages, the tax and tithes gather their claims, and keeps a large, indeed the largest, and a continually augmenting share, of the annual produce of labour for himself. The capitalist may now be said to be the first owner of all the wealth of the community, though no law has conferred on him the right to this property... this change has been effected by the taking of interest on capital ... and it is not a little curious that all the law-givers of Europe endeavoured to prevent this by statutes, viz., statutes against usury.... The power of the capitalist over all the wealth of the country is a complete change in the right of property, and by what law, or series of laws, was it effected?”<sup>2</sup>

The author should have remembered that revolutions are not made by laws.

The money capital formed by means of usury and commerce was prevented from turning into industrial capital, in the country by the feudal constitution, in the towns by the guild organisation.<sup>3</sup> These fetters vanished with the dissolution of feudal society, with the expropriation and partial eviction of the country population. The new manufactures were established at sea-ports, or at inland points beyond the control of the old municipalities and their guilds. Hence in England an embittered struggle of the corporate towns against these new industrial nurseries.

The discovery of gold and silver in America, the extirpation, enslavement and entombment in mines of the aboriginal population, the beginning of the conquest and looting of the East Indies, the turning of Africa into a warren for the commercial hunting of black-skins, signalled the rosy dawn of the era of capitalist production. These idyllic proceedings are the chief momenta of primitive accumulation. On their heels treads the commercial war of the European nations, with the globe for a theatre. It begins with the revolt of the Netherlands from Spain, assumes giant dimensions in England's Anti-Jacobin War, and is still going on in the opium wars against China, &c.

---

\* Industrial here in contradistinction to agricultural. In the “categoric” sense the farmer is an industrial capitalist as much as the manufacturer.

The different momenta of primitive accumulation distribute themselves now, more or less in chronological order, particularly over Spain, Portugal, Holland, France, and England. In England at the end of the 17th century, they arrive at a systematical combination, embracing the colonies, the national debt, the modern mode of taxation, and the protectionist system. These methods depend in part on brute force, *e.g.*, the colonial system. But, they all employ the power of the State, the concentrated and organised force of society, to hasten, hot-house fashion, the process of transformation of the feudal mode of production into the capitalist mode, and to shorten the transition. Force is the midwife of every old society pregnant with a new one. It is itself an economic power.

Of the Christian colonial system, W. Howitt, a man who makes a speciality of Christianity, says:

“The barbarities and desperate outrages of the so-called Christian race, throughout every region of the world, and upon every people they have been able to subdue, are not to be paralleled by those of any other race, however fierce, however untaught, and however reckless of mercy and of shame, in any age of the earth.”<sup>4</sup>

The history of the colonial administration of Holland – and Holland was the head capitalistic nation of the 17th century –

“is one of the most extraordinary relations of treachery, bribery, massacre, and meanness”<sup>5</sup>

Nothing is more characteristic than their system of stealing men, to get slaves for Java. The men stealers were trained for this purpose. The thief, the interpreter, and the seller, were the chief agents in this trade, native princes the chief sellers. The young people stolen, were thrown into the secret dungeons of Celebes, until they were ready for sending to the slave-ships. An official report says:

“This one town of Macassar, *e.g.*, is full of secret prisons, one more horrible than the other, crammed with unfortunates, victims of greed and tyranny fettered in chains, forcibly torn from their families.”

To secure Malacca, the Dutch corrupted the Portuguese governor. He let them into the town in 1641. They hurried at once to his house and assassinated him, to “abstain” from the payment of £21,875, the price of his treason. Wherever they set foot, devastation and depopulation followed. Banjuwangi, a province of Java, in 1750 numbered over 80,000 inhabitants, in 1811 only 18,000. Sweet commerce!

The English East India Company, as is well known, obtained, besides the political rule in India, the exclusive monopoly of the tea-trade, as well as of the Chinese trade in general, and of the transport of goods to and from Europe. But the coasting trade of India and between the islands, as well as the internal trade of India, were the monopoly of the higher employés of the company. The monopolies of salt, opium, betel and other commodities, were inexhaustible mines of wealth. The employés themselves fixed the price and plundered at will the unhappy Hindus. The Governor-General took part in this private traffic. His favourites received contracts under conditions whereby they, cleverer than the alchemists, made gold out of nothing. Great fortunes sprang up like mushrooms in a day; primitive accumulation went on without the advance of a shilling. The trial of Warren Hastings swarms with such cases. Here is an instance. A contract for opium was given to a certain Sullivan at the moment of his departure on an official mission to a part of India far removed from the opium district. Sullivan sold his contract to one Binn for £40,000; Binn sold it the same day for £60,000, and the ultimate purchaser who carried out the contract declared that after all he realised an enormous gain. According to one of the lists laid before Parliament, the Company and its employés from 1757-1766 got £6,000,000 from the Indians as gifts. Between 1769 and 1770, the English manufactured a famine by buying up all the rice and refusing to sell it again, except at fabulous prices.<sup>6</sup>

The treatment of the aborigines was, naturally, most frightful in plantation-colonies destined for export trade only, such as the West Indies, and in rich and well-populated countries, such as Mexico and India, that were given over to plunder. But even in the colonies properly so called, the Christian character of primitive accumulation did not belie itself. Those sober virtuosi of Protestantism, the Puritans of New England, in 1703, by decrees of their assembly set a premium of £40 on every Indian scalp and every captured red-skin: in 1720 a premium of £100 on every scalp; in 1744, after Massachusetts-Bay had proclaimed a certain tribe as rebels, the following prices: for a male scalp of 12 years and upwards £100 (new currency), for a male prisoner £105, for women and children prisoners £50, for scalps of women and children £50. Some decades later, the colonial system took its revenge on the descendants of the pious pilgrim fathers, who had grown seditious in the meantime. At English instigation and for English pay they were tomahawked by red-skins. The British Parliament proclaimed bloodhounds and scalping as “means that God and Nature had given into its hand.”

The colonial system ripened, like a hot-house, trade and navigation. The “societies Monopolia” of Luther were powerful levers for concentration of capital. The colonies secured a market for the budding manufactures, and, through the monopoly of the market, an increased accumulation. The treasures captured outside Europe by undisguised looting, enslavement, and murder, floated back to the mother-country and were there turned into capital. Holland, which first fully developed the colonial system, in 1648 stood already in the acme of its commercial greatness. It was

“in almost exclusive possession of the East Indian trade and the commerce between the south-east and north-west of Europe. Its fisheries, marine, manufactures, surpassed those of any other country. The total capital of the Republic was probably more important than that of all the rest of Europe put together.” Gülich forgets to add that by 1648, the people of Holland were more over-worked, poorer and more brutally oppressed than those of all the rest of Europe put together.

Today industrial supremacy implies commercial supremacy. In the period of manufacture properly so called, it is, on the other hand, the commercial supremacy that gives industrial predominance. Hence the preponderant rôle that the colonial system plays at that time. It was “the strange God” who perched himself on the altar cheek by jowl with the old Gods of Europe, and one fine day with a shove and a kick chucked them all of a heap. It proclaimed surplus-value making as the sole end and aim of humanity.

The system of public credit, *i.e.*, of national debts, whose origin we discover in Genoa and Venice as early as the Middle Ages, took possession of Europe generally during the manufacturing period. The colonial system with its maritime trade and commercial wars served as a forcing-house for it. Thus it first took root in Holland. National debts, *i.e.*, the alienation of the state – whether despotic, constitutional or republican – marked with its stamp the capitalistic era. The only part of the so-called national wealth that actually enters into the collective possessions of modern peoples is their national debt.<sup>7</sup> Hence, as a necessary consequence, the modern doctrine that a nation becomes the richer the more deeply it is in debt. Public credit becomes the *credo* of capital. And with the rise of national debt-making, want of faith in the national debt takes the place of the blasphemy against the Holy Ghost, which may not be forgiven.

The public debt becomes one of the most powerful levers of primitive accumulation. As with the stroke of an enchanter’s wand, it endows barren money with the power of breeding and thus turns it into capital, without the necessity of its exposing itself to the troubles and risks inseparable from its employment in industry or even in usury. The state creditors actually give nothing away, for the sum lent is transformed into public bonds, easily negotiable, which go on functioning in their hands just as so much hard cash would. But further, apart from the class of lazy annuitants

thus created, and from the improvised wealth of the financiers, middlemen between the government and the nation – as also apart from the tax-farmers, merchants, private manufacturers, to whom a good part of every national loan renders the service of a capital fallen from heaven – the national debt has given rise to joint-stock companies, to dealings in negotiable effects of all kinds, and to agiotage, in a word to stock-exchange gambling and the modern bankocracy.

At their birth the great banks, decorated with national titles, were only associations of private speculators, who placed themselves by the side of governments, and, thanks to the privileges they received, were in a position to advance money to the State. Hence the accumulation of the national debt has no more infallible measure than the successive rise in the stock of these banks, whose full development dates from the founding of the Bank of England in 1694. The Bank of England began with lending its money to the Government at 8%; at the same time it was empowered by Parliament to coin money out of the same capital, by lending it again to the public in the form of banknotes. It was allowed to use these notes for discounting bills, making advances on commodities, and for buying the precious metals. It was not long ere this credit-money, made by the bank itself, became the coin in which the Bank of England made its loans to the State, and paid, on account of the State, the interest on the public debt. It was not enough that the bank gave with one hand and took back more with the other; it remained, even whilst receiving, the eternal creditor of the nation down to the last shilling advanced. Gradually it became inevitably the receptacle of the metallic hoard of the country, and the centre of gravity of all commercial credit. What effect was produced on their contemporaries by the sudden uprising of this brood of bankocrats, financiers, rentiers, brokers, stock-jobbers, &c., is proved by the writings of that time, *e.g.*, by Bolingbroke's.<sup>8</sup>

With the national debt arose an international credit system, which often conceals one of the sources of primitive accumulation in this or that people. Thus the villainies of the Venetian thieving system formed one of the secret bases of the capital-wealth of Holland to whom Venice in her decadence lent large sums of money. So also was it with Holland and England. By the beginning of the 18th century the Dutch manufactures were far outstripped. Holland had ceased to be the nation preponderant in commerce and industry. One of its main lines of business, therefore, from 1701-1776, is the lending out of enormous amounts of capital, especially to its great rival England. The same thing is going on today between England and the United States. A great deal of capital, which appears today in the United States without any certificate of birth, was yesterday, in England, the capitalised blood of children.

As the national debt finds its support in the public revenue, which must cover the yearly payments for interest, &c., the modern system of taxation was the necessary complement of the system of national loans. The loans enable the government to meet extraordinary expenses, without the tax-payers feeling it immediately, but they necessitate, as a consequence, increased taxes. On the other hand, the raising of taxation caused by the accumulation of debts contracted one after another, compels the government always to have recourse to new loans for new extraordinary expenses. Modern fiscality, whose pivot is formed by taxes on the most necessary means of subsistence (thereby increasing their price), thus contains within itself the germ of automatic progression. Overtaxation is not an incident, but rather a principle. In Holland, therefore, where this system was first inaugurated, the great patriot, DeWitt, has in his "Maxims" extolled it as the best system for making the wage labourer submissive, frugal, industrious, and overburdened with labour. The destructive influence that it exercises on the condition of the wage labourer concerns us less however, here, than the forcible expropriation, resulting from it, of peasants, artisans, and in a word, all elements of the lower middle class. On this there are not two opinions, even among the bourgeois economists. Its expropriating efficacy is still further heightened by the system of protection, which forms one of its integral parts.

The great part that the public debt, and the fiscal system corresponding with it, has played in the capitalisation of wealth and the expropriation of the masses, has led many writers, like Cobbett, Doubleday and others, to seek in this, incorrectly, the fundamental cause of the misery of the modern peoples.

The system of protection was an artificial means of manufacturing manufacturers, of expropriating independent labourers, of capitalising the national means of production and subsistence, of forcibly abbreviating the transition from the medieval to the modern mode of production. The European states tore one another to pieces about the patent of this invention, and, once entered into the service of the surplus-value makers, did not merely lay under contribution in the pursuit of this purpose their own people, indirectly through protective duties, directly through export premiums. They also forcibly rooted out, in their dependent countries, all industry, as, *e.g.*, England did. with the Irish woollen manufacture. On the continent of Europe, after Colbert's example, the process was much simplified. The primitive industrial capital, here, came in part directly out of the state treasury. "Why," cries Mirabeau, "why go so far to seek the cause of the manufacturing glory of Saxony before the war? 180,000,000 of debts contracted by the sovereigns!"<sup>9</sup>

Colonial system, public debts, heavy taxes, protection, commercial wars, &c., these children of the true manufacturing period, increase gigantically during the infancy of Modern Industry. The birth of the latter is heralded by a great slaughter of the innocents. Like the royal navy, the factories were recruited by means of the press-gang. Blasé as Sir F. M. Eden is as to the horrors of the expropriation of the agricultural population from the soil, from the last third of the 15th century to his own time; with all the self-satisfaction with which he rejoices in this process, "essential" for establishing capitalistic agriculture and "the due proportion between arable and pasture land" – he does not show, however, the same economic insight in respect to the necessity of child-stealing and child-slavery for the transformation of manufacturing exploitation into factory exploitation, and the establishment of the "true relation" between capital and labour-power. He says:

"It may, perhaps, be worthy the attention of the public to consider, whether any manufacture, which, in order to be carried on successfully, requires that cottages and workhouses should be ransacked for poor children; that they should be employed by turns during the greater part of the night and robbed of that rest which, though indispensable to all, is most required by the young; and that numbers of both sexes, of different ages and dispositions, should be collected together in such a manner that the contagion of example cannot but lead to profligacy and debauchery; will add to the sum of individual or national felicity?"<sup>10</sup>

"In the counties of Derbyshire, Nottinghamshire, and more particularly in Lancashire," says Fielden, "the newly-invented machinery was used in large factories built on the sides of streams capable of turning the water-wheel. Thousands of hands were suddenly required in these places, remote from towns; and Lancashire, in particular, being, till then, comparatively thinly populated and barren, a population was all that she now wanted. The small and nimble fingers of little children being by very far the most in request, the custom instantly sprang up of procuring *apprentices* from the different parish workhouses of London, Birmingham, and elsewhere. Many, many thousands of these little, hapless creatures were sent down into the north, being from the age of 7 to the age of 13 or 14 years old. The custom was for the master to clothe his apprentices and to feed and lodge them in an "apprentice house" near the factory; overseers were

appointed to see to the works, whose interest it was to work the children to the utmost, because their pay was in proportion to the quantity of work that they could exact. Cruelty was, of course, the consequence. ... In many of the manufacturing districts, but particularly, I am afraid, in the guilty county to which I belong [Lancashire], cruelties the most heart-rending were practised upon the unoffending and friendless creatures who were thus consigned to the charge of master-manufacturers; they were harassed to the brink of death by excess of labour ... were flogged, fettered and tortured in the most exquisite refinement of cruelty; ... they were in many cases starved to the bone while flogged to their work and ... even in some instances ... were driven to commit suicide.... The beautiful and romantic valleys of Derbyshire, Nottinghamshire and Lancashire, secluded from the public eye, became the dismal solitudes of torture, and of many a murder. The profits of manufacturers were enormous; but this only whetted the appetite that it should have satisfied, and therefore the manufacturers had recourse to an expedient that seemed to secure to them those profits without any possibility of limit; they began the practice of what is termed “night-working,” that is, having tired one set of hands, by working them throughout the day, they had another set ready to go on working throughout the night; the day-set getting into the beds that the night-set had just quitted, and in their turn again, the night-set getting into the beds that the day-set quitted in the morning. It is a common tradition in Lancashire, that the beds *never get cold.*”<sup>11</sup>

With the development of capitalist production during the manufacturing period, the public opinion of Europe had lost the last remnant of shame and conscience. The nations bragged cynically of every infamy that served them as a means to capitalistic accumulation. Read, *e.g.*, the naïve *Annals of Commerce* of the worthy A. Anderson. Here it is trumpeted forth as a triumph of English statecraft that at the Peace of Utrecht, England extorted from the Spaniards by the Asiento Treaty the privilege of being allowed to ply the negro trade, until then only carried on between Africa and the English West Indies, between Africa and Spanish America as well. England thereby acquired the right of supplying Spanish America until 1743 with 4,800 negroes yearly. This threw, at the same time, an official cloak over British smuggling. Liverpool waxed fat on the slave trade. This was its method of primitive accumulation. And, even to the present day, Liverpool “respectability” is the Pindar of the slave trade which – compare the work of Aikin [1795] already quoted – “has coincided with that spirit of bold adventure which has characterised the trade of Liverpool and rapidly carried it to its present state of prosperity; has occasioned vast employment for shipping and sailors, and greatly augmented the demand for the manufactures of the country” (p. 339). Liverpool employed in the slave-trade, in 1730, 15 ships; in 1751, 53; in 1760, 74; in 1770, 96; and in 1792, 132.<sup>12</sup>

Whilst the cotton industry introduced child-slavery in England, it gave in the United States a stimulus to the transformation of the earlier, more or less patriarchal slavery, into a system of commercial exploitation. In fact, the veiled slavery of the wage workers in Europe needed, for its pedestal, slavery pure and simple in the new world.

Tantae molis erat, to establish the “eternal laws of Nature” of the capitalist mode of production, to complete the process of separation between labourers and conditions of labour, to transform, at one pole, the social means of production and subsistence into capital, at the opposite pole, the mass of the population into wage labourers, into “free labouring poor,” that artificial product of modern society.<sup>13</sup> If money, according to Augier,<sup>14</sup> “comes into the world with a congenital blood-stain on one cheek,” capital comes dripping from head to foot, from every pore, with blood and dirt.<sup>15</sup>

<sup>6</sup> In the year 1866 more than a million Hindus died of hunger in the province of Orissa alone. Nevertheless, the attempt was made to enrich the Indian treasury by the price at which the necessaries of life were sold to the starving people.

<sup>7</sup> William Cobbett remarks that in England all public institutions are designated “royal”; as compensation for this, however, there is the “national” debt.

<sup>8</sup> “Si les Tartares inondaient l’Europe aujourd’hui, il faudrait bien des affaires pour leur faire entendre ce que c’est qu’un financier parmi nous.” [if the Tartars were to flood into Europe today, it would be a difficult job to make them understand what a financier is with us] Montesquieu, “Esprit des lois,” t. iv., p. 33, ed. Londres, 1769.

<sup>9</sup> Mirabeau, l. c., t. vi., p. 101.

<sup>10</sup> Eden, l. c., Vol. I., Book II., Ch. 1., p. 421.

<sup>11</sup> John Fielden, l. c., pp. 5, 6. On the earlier infamies of the factory system, cf. Dr. Aikin (1795), l. c., p. 219. and Gisborne: “Enquiry into the Duties of Men,” 1795 Vol. II. When the steam-engine transplanted the factories from the country waterfalls to the middle of towns, the “abstemious” surplus-value maker found the child-material ready to his hand, without being forced to seek slaves from the workhouses. When Sir R. Peel (father of the “minister of plausibility”), brought in his bill for the protection of children, in 1815, Francis Homer, lumen of the Billion Committee and intimate friend of Ricardo, said in the House of Commons: “It is notorious, that with a bankrupt’s effects, a gang, if he might use the word, of these children had been put up to sale, and were advertised publicly as part of the property. A most atrocious instance had been brought before the Court of King’s Bench two years before, in which a number of these boys, apprenticed by a parish in London to one manufacturer, had been transferred to another, and had been found by some benevolent persons in a state of absolute famine. Another case more horrible had come to his knowledge while on a [Parliamentary] Committee ... that not many years ago, an agreement had been made between a London parish and a Lancashire manufacturer, by which it was stipulated, that with every 20 sound children one idiot should be taken.”

<sup>12</sup> In 1790, there were in the English West Indies ten slaves for one free man, in the French fourteen for one, in the Dutch twenty-three for one. (Henry Brougham: “An Inquiry into the Colonial Policy of the European Powers.” Edin. 1803, vol. II., p. 74.)

<sup>13</sup> The phrase, “labouring poor,” is found in English legislation from the moment when the class of wage labourers becomes noticeable. This term is used in opposition, on the one hand, to the “idle poor,” beggars, etc., on the other, to the out and out vulgar bourgeois. “The laws of commerce are the laws of Nature, and therefore the laws of God.” (E. Burke, l. c., pp. 31, 32.) No wonder that, true to the laws of God and of Nature, he always sold himself in the best market. A very good portrait of this Edmund Burke, during his liberal time, is to be found in the writings of the Rev. Mr. Tucker. Tucker was a parson and a Tory, but, for the rest, an honourable man and a competent political economist. In face of the infamous cowardice of character that reigns today, and believes most devoutly in “the laws of

---

commerce,” it is our bounden duty again and again to brand the Burkes, who only differ from their successors in one thing — talent.

<sup>14</sup> Marie Angier: “Du Crédit Public.” Paris, 1842.

<sup>15</sup> “Capital is said by a Quarterly Reviewer to fly turbulence and strife, and to be timid, which is very true; but this is very incompletely stating the question. Capital eschews no profit, or very small profit, just as Nature was formerly said to abhor a vacuum. With adequate profit, capital is very bold. A certain 10 per cent. will ensure its employment anywhere; 20 per cent. certain will produce eagerness; 50 per cent., positive audacity; 100 per cent. will make it ready to trample on all human laws; 300 per cent., and there is not a crime at which it will scruple, nor a risk it will not run, even to the chance of its owner being hanged. If turbulence and strife will bring a profit, it will freely encourage both. Smuggling and the slave-trade have amply proved all that is here stated.” (T. J. Dunning, l. c., pp. 35, 36.)

## Chapter 32: Historical Tendency of Capitalist Accumulation

What does the primitive accumulation of capital, *i.e.*, its historical genesis, resolve itself into? In so far as it is not immediate transformation of slaves and serfs into wage labourers, and therefore a mere change of form, it only means the expropriation of the immediate producers, *i.e.*, the dissolution of private property based on the labour of its owner. Private property, as the antithesis to social, collective property, exists only where the means of labour and the external conditions of labour belong to private individuals. But according as these private individuals are labourers or not labourers, private property has a different character. The numberless shades, that it at first sight presents, correspond to the intermediate stages lying between these two extremes. The private property of the labourer in his means of production is the foundation of petty industry, whether agricultural, manufacturing, or both; petty industry, again, is an essential condition for the development of social production and of the free individuality of the labourer himself. Of course, this petty mode of production exists also under slavery, serfdom, and other states of dependence. But it flourishes, it lets loose its whole energy, it attains its adequate classical form, only where the labourer is the private owner of his own means of labour set in action by himself: the peasant of the land which he cultivates, the artisan of the tool which he handles as a virtuoso. This mode of production presupposes parcelling of the soil and scattering of the other means of production. As it excludes the concentration of these means of production, so also it excludes co-operation, division of labour within each separate process of production, the control over, and the productive application of the forces of Nature by society, and the free development of the social productive powers. It is compatible only with a system of production, and a society, moving within narrow and more or less primitive bounds. To perpetuate it would be, as Pecqueur rightly says, "to decree universal mediocrity". At a certain stage of development, it brings forth the material agencies for its own dissolution. From that moment new forces and new passions spring up in the bosom of society; but the old social organisation fetters them and keeps them down. It must be annihilated; it is annihilated. Its annihilation, the transformation of the individualised and scattered means of production into socially concentrated ones, of the pigmy property of the many into the huge property of the few, the expropriation of the great mass of the people from the soil, from the means of subsistence, and from the means of labour, this fearful and painful expropriation of the mass of the people forms the prelude to the history of capital. It comprises a series of forcible methods, of which we have passed in review only those that have been epoch-making as methods of the primitive accumulation of capital. The expropriation of the immediate producers was accomplished with merciless Vandalism, and under the stimulus of passions the most infamous, the most sordid, the pettiest, the most meanly odious. Self-earned private property, that is based, so to say, on the fusing together of the isolated, independent labouring individual with the conditions of his labour, is supplanted by capitalistic private property, which rests on exploitation of the nominally free labour of others, *i.e.*, on wage labour.<sup>1</sup>

As soon as this process of transformation has sufficiently decomposed the old society from top to bottom, as soon as the labourers are turned into proletarians, their means of labour into capital, as soon as the capitalist mode of production stands on its own feet, then the further socialisation of labour and further transformation of the land and other means of production into socially exploited and, therefore, common means of production, as well as the further expropriation of private proprietors, takes a new form. That which is now to be expropriated is no longer the labourer working for himself, but the capitalist exploiting many labourers. This expropriation is accomplished by the action of the immanent laws of capitalistic production itself, by the

centralisation of capital. One capitalist always kills many. Hand in hand with this centralisation, or this expropriation of many capitalists by few, develop, on an ever-extending scale, the co-operative form of the labour process, the conscious technical application of science, the methodical cultivation of the soil, the transformation of the instruments of labour into instruments of labour only usable in common, the economising of all means of production by their use as means of production of combined, socialised labour, the entanglement of all peoples in the net of the world market, and with this, the international character of the capitalistic regime. Along with the constantly diminishing number of the magnates of capital, who usurp and monopolise all advantages of this process of transformation, grows the mass of misery, oppression, slavery, degradation, exploitation; but with this too grows the revolt of the working class, a class always increasing in numbers, and disciplined, united, organised by the very mechanism of the process of capitalist production itself. The monopoly of capital becomes a fetter upon the mode of production, which has sprung up and flourished along with, and under it. Centralisation of the means of production and socialisation of labour at last reach a point where they become incompatible with their capitalist integument. This integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated.

The capitalist mode of appropriation, the result of the capitalist mode of production, produces capitalist private property. This is the first negation of individual private property, as founded on the labour of the proprietor. But capitalist production begets, with the inexorability of a law of Nature, its own negation. It is the negation of negation. This does not re-establish private property for the producer, but gives him individual property based on the acquisition of the capitalist era: *i.e.*, on co-operation and the possession in common of the land and of the means of production.

The transformation of scattered private property, arising from individual labour, into capitalist private property is, naturally, a process, incomparably more protracted, violent, and difficult, than the transformation of capitalistic private property, already practically resting on socialised production, into socialised property. In the former case, we had the expropriation of the mass of the people by a few usurpers; in the latter, we have the expropriation of a few usurpers by the mass of the people.

2

---

<sup>1</sup> “Nous sommes dans une condition tout-à-fait nouvelle de la société... nous tendons à séparer toute espèce de propriété d’avec toute espèce de travail.” [We are in a situation which is entirely new for society ... we are striving to separate every kind of property from every kind of labour] (Sismondi: “Nouveaux Principes d’Econ. Polit.” t.II, p.434.)

<sup>2</sup> The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces, above all, are its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable.... Of all the classes that stand face-to-face with the bourgeoisie today, the proletariat alone is a really revolutionary class. The other classes perish and disappear in the face of Modern Industry, the proletariat is its special and essential product.... The lower middle classes, the small manufacturers, the shopkeepers, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle class... they are reactionary, for they try to roll back the wheel of history. Karl Marx and Friedrich Engels, “Manifest der Kommunistischen Partei,” London, 1848, pp. 9, 11.

## Chapter 33: The Modern Theory of Colonisation<sup>1</sup>

Political economy confuses on principle two very different kinds of private property, of which one rests on the producers' own labour, the other on the employment of the labour of others. It forgets that the latter not only is the direct antithesis of the former, but absolutely grows on its tomb only. In Western Europe, the home of Political Economy, the process of primitive accumulation is more or less accomplished. Here the capitalist regime has either directly conquered the whole domain of national production, or, where economic conditions are less developed, it, at least, indirectly controls those strata of society which, though belonging to the antiquated mode of production, continue to exist side by side with it in gradual decay. To this ready-made world of capital, the political economist applies the notions of law and of property inherited from a pre-capitalistic world with all the more anxious zeal and all the greaterunction, the more loudly the facts cry out in the face of his ideology. It is otherwise in the colonies. There the capitalist regime everywhere comes into collision with the resistance of the producer, who, as owner of his own conditions of labour, employs that labour to enrich himself, instead of the capitalist. The contradiction of these two diametrically opposed economic systems, manifests itself here practically in a struggle between them. Where the capitalist has at his back the power of the mother-country, he tries to clear out of his way by force the modes of production and appropriation based on the independent labour of the producer. The same interest, which compels the sycophant of capital, the political economist, in the mother-country, to proclaim the theoretical identity of the capitalist mode of production with its contrary, that same interest compels him in the colonies to make a clean breast of it, and to proclaim aloud the antagonism of the two modes of production. To this end, he proves how the development of the social productive power of labour, co-operation, division of labour, use of machinery on a large scale, &c., are impossible without the expropriation of the labourers, and the corresponding transformation of their means of production into capital. In the interest of the so-called national wealth, he seeks for artificial means to ensure the poverty of the people. Here his apologetic armor crumbles off, bit by bit, like rotten touchwood. It is the great merit of E.G. Wakefield to have discovered, not anything new about the Colonies<sup>2</sup>, but to have discovered in the Colonies the truth as to the conditions of capitalist production in the mother country. As the system of protection at its origin<sup>3</sup> attempted to manufacture capitalists artificially in the mother-country, so Wakefield's colonisation theory, which England tried for a time to enforce by Acts of Parliament, attempted to effect the manufacture of wage-workers in the Colonies. This he calls "systematic colonisation."

First of all, Wakefield discovered that in the Colonies, property in money, means of subsistence, machines, and other means of production, does not as yet stamp a man as a capitalist if there be wanting the correlative – the wage-worker, the other man who is compelled to sell himself of his own free will. He discovered that capital is not a thing, but a social relation between persons, established by the instrumentality of things.<sup>4</sup> Mr. Peel, he moans, took with him from England to Swan River, West Australia, means of subsistence and of production to the amount of £50,000. Mr. Peel had the foresight to bring with him, besides, 300 persons of the working class, men, women, and children. Once arrived at his destination, "Mr. Peel was left without a servant to make his bed or fetch him water from the river."<sup>5</sup> Unhappy Mr. Peel who provided for everything except the export of English modes of production to Swan River!

For the understanding of the following discoveries of Wakefield, two preliminary remarks: We know that the means of production and subsistence, while they remain the property of the immediate producer, are not capital. They become capital only under circumstances in which they

serve at the same time as means of exploitation and subjection of the labourer. But this capitalist soul of theirs is so intimately wedded, in the head of the political economist, to their material substance, that he christens them capital under all circumstances, even when they are its exact opposite. Thus is it with Wakefield. Further: the splitting up of the means of production into the individual property of many independent labourers, working on their own account, he calls equal division of capital. It is with the political economist as with the feudal jurist. The latter stuck on to pure monetary relations the labels supplied by feudal law.

“If,” says Wakefield, “all members of the society are supposed to possess equal portions of capital... no man would have a motive for accumulating more capital than he could use with his own hands. This is to some extent the case in new American settlements, where a passion for owning land prevents the existence of a class of labourers for hire.”<sup>6</sup> So long, therefore, as the labourer can accumulate for himself – and this he can do so long as he remains possessor of his means of production – capitalist accumulation and the capitalistic mode of production are impossible. The class of wage labourers, essential to these, is wanting. How, then, in old Europe, was the expropriation of the labourer from his conditions of labour, i.e., the co-existence of capital and wage labour, brought about? By a social contract of a quite original kind. “Mankind have adopted a... simple contrivance for promoting the accumulation of capital,” which, of course, since the time of Adam, floated in their imagination, floated in their imagination as the sole and final end of their existence: “they have divided themselves into owners of capital and owners of labour.... The division was the result of concert and combination.”<sup>7</sup> In one word: the mass of mankind expropriated itself in honour of the “accumulation of capital.” Now, one would think that this instinct of self-denying fanaticism would give itself full fling especially in the Colonies, where alone exist the men and conditions that could turn a social contract from a dream to a reality. But why, then, should “systematic colonisation” be called in to replace its opposite, spontaneous, unregulated colonisation? But - but - “In the Northern States of the American Union; it may be doubted whether so many as a tenth of the people would fall under the description of hired labourers.... In England... the labouring class compose the bulk of the people.”<sup>8</sup> Nay, the impulse to self-expropriation on the part of labouring humanity for the glory of capital, exists so little that slavery, according to Wakefield himself, is the sole natural basis of Colonial wealth. His systematic colonisation is a mere *pis aller*, since he unfortunately has to do with free men, not with slaves. “The first Spanish settlers in Saint Domingo did not obtain labourers from Spain. But, without labourers, their capital must have perished, or at least, must soon have been diminished to that small amount which each individual could employ with his own hands. This has actually occurred in the last Colony founded by England – the Swan River Settlement – where a great mass of capital, of seeds, implements, and cattle, has perished for want of labourers to use it, and where no settler has preserved much more capital than he can employ with his own hands.”<sup>9</sup>

We have seen that the expropriation of the mass of the people from the soil forms the basis of the capitalist mode of production. The essence of a free colony, on the contrary, consists in this – that the bulk of the soil is still public property, and every settler on it therefore can turn part of it into his private property and individual means of production, without hindering the later settlers in the same operation.<sup>10</sup> This is the secret both of the prosperity of the colonies and of their inveterate vice – opposition to the establishment of capital. “Where land is very cheap and all men are free, where every one who so pleases can easily obtain a piece of land for himself, not only is labour very dear, as respects the labourer’s share of the produce, but the difficulty is to obtain combined labour at any price.”<sup>11</sup>

As in the colonies the separation of the labourer from the conditions of labour and their root, the soil, does not exist, or only sporadically, or on too limited a scale, so neither does the separation of agriculture from industry exist, nor the destruction of the household industry of the peasantry.

Whence then is to come the internal market for capital? “No part of the population of America is exclusively agricultural, excepting slaves and their employers who combine capital and labour in particular works. Free Americans, who cultivate the soil, follow many other occupations. Some portion of the furniture and tools which they use is commonly made by themselves. They frequently build their own houses, and carry to market, at whatever distance, the produce of their own industry. They are spinners and weavers; they make soap and candles, as well as, in many cases, shoes and clothes for their own use. In America the cultivation of land is often the secondary pursuit of a blacksmith, a miller or a shopkeeper.”<sup>12</sup> With such queer people as these, where is the “field of abstinence” for the capitalists?

The great beauty of capitalist production consists in this – that it not only constantly reproduces the wage-worker as wage-worker, but produces always, in proportion to the accumulation of capital, a relative surplus-population of wage-workers. Thus the law of supply and demand of labour is kept in the right rut, the oscillation of wages is penned within limits satisfactory to capitalist exploitation, and lastly, the social dependence of the labourer on the capitalist, that indispensable requisite, is secured; an unmistakable relation of dependence, which the smug political economist, at home, in the mother-country, can transmogrify into one of free contract between buyer and seller, between equally independent owners of commodities, the owner of the commodity capital and the owner of the commodity labour. But in the colonies, this pretty fancy is torn asunder. The absolute population here increases much more quickly than in the mother-country, because many labourers enter this world as ready-made adults, and yet the labour-market is always understocked. The law of supply and demand of labour falls to pieces. On the one hand, the old world constantly throws in capital, thirsting after exploitation and “abstinence”; on the other, the regular reproduction of the wage labourer as wage labourer comes into collision with impediments the most impertinent and in part invincible. What becomes of the production of wage-labourers, supernumerary in proportion to the accumulation of capital? The wage-worker of to-day is to-morrow an independent peasant, or artisan, working for himself. He vanishes from the labour-market, but not into the workhouse. This constant transformation of the wage-labourers into independent producers, who work for themselves instead of for capital, and enrich themselves instead of the capitalist gentry, reacts in its turn very perversely on the conditions of the labour-market. Not only does the degree of exploitation of the wage labourer remain indecently low. The wage labourer loses into the bargain, along with the relation of dependence, also the sentiment of dependence on the abstemious capitalist. Hence all the inconveniences that our E. G. Wakefield pictures so doughtily, so eloquently, so pathetically. The supply of wage labour, he complains, is neither constant, nor regular, nor sufficient. “The supply of labour is always not only small but uncertain.”<sup>13</sup> “Though the produce divided between the capitalist and the labourer be large, the labourer takes so great a share that he soon becomes a capitalist.... Few, even those whose lives are unusually long, can accumulate great masses of wealth.”<sup>14</sup> The labourers most distinctly decline to allow the capitalist to abstain from the payment of the greater part of their labour. It avails him nothing, if he is so cunning as to import from Europe, with his own capital, his own wage-workers. They soon “cease... to be labourers for hire; they... become independent landowners, if not competitors with their former masters in the labour-market.”<sup>15</sup> Think of the horror! The excellent capitalist has imported bodily from Europe, with his own good money, his own competitors! The end of the world has come! No wonder Wakefield laments the absence of all dependence and of all sentiment of dependence on the part of the wage-workers in the colonies. On account of the high wages, says his disciple, Merivale, there is in the colonies “the urgent desire for cheaper and more subservient labourers – for a class to whom the capitalist might dictate terms, instead of being dictated to by them.... In ancient civilised countries the labourer, though free, is by a law of Nature dependent on capitalists; in colonies this dependence must be created by artificial means.”<sup>16</sup>

What is now, according to Wakefield, the consequence of this unfortunate state of things in the colonies? A “barbarising tendency of dispersion” of producers and national wealth.<sup>17</sup> The parcelling-out of the means of production among innumerable owners, working on their own account, annihilates, along with the centralisation of capital, all the foundation of combined labour. Every long-winded undertaking, extending over several years and demanding outlay of fixed capital, is prevented from being carried out. In Europe, capital invests without hesitating a moment, for the working class constitutes its living appurtenance, always in excess, always at disposal. But in the colonies! Wakefield tells an extremely doleful anecdote. He was talking with some capitalists of Canada and the state of New York, where the immigrant wave often becomes stagnant and deposits a sediment of “supernumerary” labourers. “Our capital,” says one of the characters in the melodrama, “was ready for many operations which require a considerable period of time for their completion; but we could not begin such operations with labour which, we knew, would soon leave us. If we had been sure of retaining the labour of such emigrants, we should have been glad to have engaged it at once, and for a high price: and we should have engaged it, even though we had been sure it would leave us, provided we had been sure of a fresh supply whenever we might need it.”<sup>18</sup>

After Wakefield has constructed the English capitalist agriculture and its “combined” labour with the scattered cultivation of American peasants, he unwittingly gives us a glimpse at the reverse of the medal. He depicts the mass of the American people as well-to-do, independent, enterprising, and comparatively cultured, whilst “the English agricultural labourer is miserable wretch, a pauper.... In what country, except North America and some new colonies, do the wages of free labour employed in agriculture much exceed a bare subsistence for the labourer? ... Undoubtedly, farm-horses in England, being a valuable property, are better fed than English peasants.”<sup>19</sup> But, never mind, national wealth is, once again, by its very nature, identical with misery of the people.

How, then, to heal the anti-capitalistic cancer of the colonies? If men were willing, at a blow, to turn all the soil from public into private property, they would destroy certainly the root of the evil, but also – the colonies. The trick is how to kill two birds with one stone. Let the Government put upon the virgin soil an artificial price, independent of the law of supply and demand, a price that compels the immigrant to work a long time for wages before he can earn enough money to buy land, and turn himself into an independent peasant.<sup>20</sup> The fund resulting from the sale of land at a price relatively prohibitory for the wage-workers, this fund of money extorted from the wages of labour by violation of the sacred law of supply and demand, the Government is to employ, on the other hand, in proportion as it grows; to import have-nothings from Europe into the colonies, and thus keep the wage labour market full for the capitalists. Under these circumstances, tout sera pour le mieux dans le meilleur des mondes possibles. This is the great secret of “systematic colonisation.” By this plan, Wakefield cries in triumph, “the supply of labour *must* be constant and regular, because, first, as no labourer would be able to procure land until he had worked for money, all immigrant labourers, working for a time for wages and in combination, would produce capital for the employment of more labourers; secondly, because every labourer who left off working for wages and became a landowner would, by purchasing land, provide a fund for bringing fresh labour to the colony.”<sup>21</sup> The price of the soil imposed by the State must, of course, be a “sufficient price” – *i.e.*, so high “as to prevent the labourers from becoming independent landowners until others had followed to take their place.”<sup>22</sup> This “sufficient price for the land” is nothing but a euphemistic circumlocution for the ransom which the labourer pays to the capitalist for leave to retire from the wage labour market to the land. First, he must create for the capitalist “capital,” with which the latter may be able to exploit more labourers; then he must place, at his own expense, a *locum tenens* [placeholder] on the labour market, whom the Government forwards across the sea for the benefit of his old master, the capitalist.

It is very characteristic that the English Government for years practised this method of “primitive accumulation” prescribed by Mr. Wakefield expressly for the use of the colonies. The fiasco was, of course, as complete as that of Sir Robert Peel’s Bank Act. The stream of emigration was only diverted from the English colonies to the United States. Meanwhile, the advance of capitalistic production in Europe, accompanied by increasing Government pressure, has rendered Wakefield’s recipe superfluous. On the one hand, the enormous and ceaseless stream of men, year after year driven upon America, leaves behind a stationary sediment in the east of the United States, the wave of immigration from Europe throwing men on the labour-market there more rapidly than the wave of emigration westwards can wash them away. On the other hand, the American Civil War brought in its train a colossal national debt, and, with it, pressure of taxes, the rise of the vilest financial aristocracy, the squandering of a huge part of the public land on speculative companies for the exploitation of railways, mines, &c., in brief, the most rapid centralisation of capital. The great republic has, therefore, ceased to be the promised land for emigrant labourers. Capitalistic production advances there with giant strides, even though the lowering of wages and the dependence of the wage-worker are yet far from being brought down to the normal European level. The shameless lavishing of uncultivated colonial land on aristocrats and capitalists by the Government, so loudly denounced even by Wakefield, has produced, especially in Australia<sup>23</sup>, in conjunction with the stream of men that the gold diggings attract, and with the competition that the importation of English-commodities causes even to the smallest artisan, an ample “relative surplus labouring population,” so that almost every mail brings the Job’s news of a “glut of the Australia labour-market,” and the prostitution in some places flourishes as wantonly as in the London Haymarket.

However, we are not concerned here with the conditions of the colonies. The only thing that interests us is the secret discovered in the new world by the Political Economy of the old world, and proclaimed on the housetops: that the capitalist mode of production and accumulation, and therefore capitalist private property, have for their fundamental condition the annihilation of self-earned private property; in other words, the expropriation of the labourer.

## End of Book I

---

<sup>1</sup> We treat here of real Colonies, virgins soils, colonized by free immigrants. The United States are, speaking economically, still only a Colony of Europe. Besides, to this category belong such old plantations as those in which the abolition of slavery has completely altered the earlier conditions.

<sup>2</sup> Wakefield’s few glimpses on the subject of Modern Colonisation are fully anticipated by Mirabeau Pere, the physiocrat, and even much earlier by English economists.

<sup>3</sup> Later, it became a temporary necessity in the international competitive struggle. But, whatever its motive, the consequences remain the same.

<sup>4</sup> “A negro is a negro. In certain circumstances he becomes a slave. A mule is a machine for spinning cotton. Only under certain circumstances does it become capital. Outside these circumstances, it is no more capital than gold is intrinsically money, or sugar is the price of sugar... Capital is a social relation of production. It is a historical relation of production.” (Karl Marx, “Lohnarbeit und Kapital,” *N. Rh. Z.*, No.266, April 7, 1849.)

<sup>5</sup> E. G. Wakefield: “England and America,” vol.ii. p.33.

<sup>6</sup> *l.c.*, p.17.

<sup>7</sup> *l.c.*, vol.i, p.18.

<sup>8</sup> I.c., pp.42, 43, 44.

<sup>9</sup> I.c., vol.ii, p.5.

<sup>10</sup> “Land, to be an element of colonisation, must not only be waste, but it must be public property, liable to be converted into private property.” (I.c., Vol.II, p.125.)

<sup>11</sup> I.c., Vol.I, p.247.

<sup>12</sup> I.c., pp.21, 22.

<sup>13</sup> I.c., Vol.II, p.116

<sup>14</sup> I.c., Vol.I, p.131.

<sup>15</sup> I.c., Vol.II, p.5.

<sup>16</sup> Merivale, I.c., Vol.II, pp.235-314 passim. Even the mild, Free Trade, vulgar economist, Molinari, says: “Dans les colonies où l’esclavage a été aboli sans que le travail forcé se trouvait remplacé par une quantité équivalente de travail libre, on a vu s’opérer la contre-partie du fait qui se réalise tous les jours sous nos yeux. On a vu les simples travailleurs exploiter à leur tour les entrepreneurs d’industrie, exiger d’eux des salaires hors de toute proportion avec la part légitime qui leur revenait dans le produit. Les planteurs, ne pouvant obtenir de leurs sucres un prix suffisant pour couvrir la hausse de salaire, ont été obligés de fournir l’excédant, d’abord sur leurs profits, ensuite sur leurs capitaux mêmes. Une foule de planteurs ont été ruinés de la sorte, d’autres ont fermé leurs ateliers pour échapper à une ruine imminente.... Sans doute, il vaut mieux voir périr des accumulations de capitaux que des générations d’hommes [how generous Mr. Molinari!]; mais ne vaudrait-il pas mieux que ni les uns ni les autres périssent? [In the colonies where slavery has been abolished without the compulsory labour being replaced with an equivalent quantity of free labour, there has occurred the opposite of what happens every day before our eyes. Simple workers have been seen to exploit in their turn the industrial entrepreneurs, demanding from them wages which bear absolutely no relation to the legitimate share in the product which they ought to receive. The planters were unable to obtain for their sugar for a sufficient price to cover the increase in wages, and were obliged to furnish the extra amount, at first out of their profits, and then out of their very capital. A considerable amount of planters have been ruined as a result, while others have closed down their businesses in order to avoid the ruin which threatened them ... It is doubtless better that these accumulations of capital should be destroyed than that generations of men should perish ... but would it not be better if both survived?] (Molinari, I.c., pp.51,52.) Mr. Molinari, Mr. Molinari! What then becomes of the ten commandments, of Moses and the prophets, of the law of supply and demand, if in Europe the “entrepreneur” can cut down the labourer’s legitimate part, and in the West Indies, the labourer can cut down the entrepreneur’s? And what, if you please, is this “legitimate part,” which on your own showing the capitalist in Europe daily neglects to pay? Over yonder, in the colonies where the labourers are so “simple” as to “exploit” the capitalist, Mr. Molinari feels a strong itching to set the law of supply and demand, that works elsewhere automatically, on the right road by means of the police.

<sup>22</sup> l.c., p.45.

<sup>23</sup> As soon as Australia became her own law-giver, she passed, of course, laws favorable to the settlers, but the squandering of the land, already accomplished by the English Government, stands in the way. "The first and main object at which new Land Act of 1862 aims is to give increased facilities for the settlement of the people." ("The Land Law of Victoria," by the Hon. C. G. Duffy, Minister of Public Lands, Lond., 1862.)

# Second Treatise of Government

John Locke

The background of the lower half of the page is a teal color. It features a complex, abstract pattern of thick purple lines and shapes. These include horizontal, vertical, and diagonal lines, some of which are connected to form a network. There are also several solid purple triangles of various sizes and orientations, some pointing up and some pointing down. The overall effect is a modern, geometric design.

MDCCLXIII

TWO TREATISES OF GOVERNMENT. IN THE FORMER THE FALSE PRINCIPLES AND FOUNDATION OF SIR ROBERT FILMER AND HIS FOLLOWERS ARE DETECTED AND OVERTHROWN. THE LATTER IS AN ESSAY CONCERNING THE TRUE ORIGINAL EXTENT AND END OF CIVIL GOVERNMENT.

1764 EDITOR'S NOTE The present Edition of this Book has not only been collated with the first three Editions, which were published during the Author's Life, but also has the Advantage of his last Corrections and Improvements, from a Copy delivered by him to Mr. Peter Coste, communicated to the Editor, and now lodged in Christ College, Cambridge.

**CHAPTER: I., II., III., IV., V., VI., VII., VIII., IX., X., XI., XII., XIII., XIV., XV., XVI., XVII., XVIII., XIX.**

## PREFACE

Reader, thou hast here the beginning and end of a discourse concerning government; what fate has otherwise disposed of the papers that should have filled up the middle, and were more than all the rest, it is not worth while to tell thee. These, which remain, I hope are sufficient to establish the throne of our great restorer, our present King William; to make good his title, in the consent of the people, which being the only one of all lawful governments, he has more fully and clearly, than any prince in Christendom; and to justify to the world the people of England, whose love of their just and natural rights, with their resolution to preserve them, saved the nation when it was on the very brink of slavery and ruin. If these papers have that evidence, I flatter myself is to be found in them, there will be no great miss of those which are lost, and my reader may be satisfied without them: for I imagine, I shall have neither the time, nor inclination to repeat my pains, and fill up the wanting part of my answer, by tracing Sir Robert again, through all the windings and obscurities, which are to be met with in the several branches of his wonderful system. The king, and body of the nation, have since so thoroughly confuted his Hypothesis, that I suppose no body hereafter will have either the confidence to appear against our common safety, and be again an advocate for slavery; or the weakness to be deceived with contradictions dressed up in a popular stile, and well-turned periods: for if any one will be at the pains, himself, in those parts, which are here untouched, to strip Sir Robert's discourses of the flourish of doubtful expressions, and endeavour to reduce his words to direct, positive, intelligible propositions, and then compare them one with another, he will quickly be satisfied, there was never so much glib nonsense put together in well-sounding English. If he think it not worth while to examine his works all thro', let him make an experiment in that part, where he treats of usurpation; and let him try, whether he can, with all his skill, make Sir Robert intelligible, and consistent with himself, or common sense. I should not speak so plainly of a gentleman, long since past answering, had not the pulpit, of late years, publicly owned his doctrine, and made it the current divinity of the times. It is necessary those men, who taking on them to be teachers, have so dangerously misled others, should be openly shewed of what authority this their Patriarch is, whom they have so blindly followed, that so they may either retract what upon so ill grounds they have vented,

and cannot be maintained; or else justify those principles which they preached up for gospel; though they had no better an author than an English courtier: for I should not have writ against Sir Robert, or taken the pains to shew his mistakes, inconsistencies, and want of (what he so much boasts of, and pretends wholly to build on) scripture-proofs, were there not men amongst us, who, by crying up his books, and espousing his doctrine, save me from the reproach of writing against a dead adversary. They have been so zealous in this point, that, if I have done him any wrong, I cannot hope they should spare me. I wish, where they have done the truth and the public wrong, they would be as ready to redress it, and allow its just weight to this reflection, viz. that there cannot be done a greater mischief to prince and people, than the propagating wrong notions concerning government; that so at last all times might not have reason to complain of the Drum Ecclesiastic. If any one, concerned really for truth, undertake the confutation of my Hypothesis, I promise him either to recant my mistake, upon fair conviction; or to answer his difficulties. But he must remember two things.

First, That cavilling here and there, at some expression, or little incident of my discourse, is not an answer to my book.

Secondly, That I shall not take railing for arguments, nor think either of these worth my notice, though I shall always look on myself as bound to give satisfaction to any one, who shall appear to be conscientiously scrupulous in the point, and shall shew any just grounds for his scruples.

I have nothing more, but to advertise the reader, that Observations stands for Observations on Hobbs, Milton, &c. and that a bare quotation of pages always means pages of his Patriarcha, Edition 1680.

---

## Book II

## CHAPTER. I.

### AN ESSAY CONCERNING THE TRUE ORIGINAL, EXTENT AND END OF CIVIL GOVERNMENT

Sect. 1. It having been shewn in the foregoing discourse,

(1). That Adam had not, either by natural right of fatherhood, or by positive donation from God, any such authority over his children, or dominion over the world, as is pretended:

(2). That if he had, his heirs, yet, had no right to it:

(3). That if his heirs had, there being no law of nature nor positive law of God that determines which is the right heir in all cases that may arise, the right of succession, and consequently of bearing rule, could not have been certainly determined:

(4). That if even that had been determined, yet the knowledge of which is the eldest line of Adam's posterity, being so long since utterly lost, that in the races of mankind and families of the world, there remains not to one above another, the least pretence to be the eldest house, and to have the right of inheritance:

All these premises having, as I think, been clearly made out, it is impossible that the rulers now on earth should make any benefit, or derive any the least shadow of authority from that, which is held to be the fountain of all power, Adam's private dominion and paternal jurisdiction; so that he that will not give just occasion to think that all government in the world is the product only of force and violence, and that men live together by no other rules but that of beasts, where the strongest carries it, and so lay a foundation for perpetual disorder and mischief, tumult, sedition and rebellion, (things that the followers of that hypothesis so loudly cry out against) must of necessity find out another rise of government, another original of political power, and another way of designing and knowing the persons that have it, than what Sir Robert Filmer hath taught us.

Sect. 2. To this purpose, I think it may not be amiss, to set down what I take to be political power; that the power of a MAGISTRATE over a

subject may be distinguished from that of a FATHER over his children, a MASTER over his servant, a HUSBAND over his wife, and a LORD over his slave. All which distinct powers happening sometimes together in the same man, if he be considered under these different relations, it may help us to distinguish these powers one from wealth, a father of a family, and a captain of a galley.

Sect. 3. POLITICAL POWER, then, I take to be a RIGHT of making laws with penalties of death, and consequently all less penalties, for the regulating and preserving of property, and of employing the force of the community, in the execution of such laws, and in the defence of the commonwealth from foreign injury; and all this only for the public good.

---

## **CHAPTER. II.**

### **OF THE STATE OF NATURE.**

Sect. 4. TO understand political power right, and derive it from its original, we must consider, what state all men are naturally in, and that is, a state of perfect freedom to order their actions, and dispose of their possessions and persons, as they think fit, within the bounds of the law of nature, without asking leave, or depending upon the will of any other man.

A state also of equality, wherein all the power and jurisdiction is reciprocal, no one having more than another; there being nothing more evident, than that creatures of the same species and rank, promiscuously born to all the same advantages of nature, and the use of the same faculties, should also be equal one amongst another without subordination or subjection, unless the lord and master of them all should, by any manifest declaration of his will, set one above another, and confer on him, by an evident and clear appointment, an undoubted right to dominion and sovereignty.

Sect. 5. This equality of men by nature, the judicious Hooker looks upon as so evident in itself, and beyond all question, that he makes it the foundation of that obligation to mutual love amongst men, on which he builds the duties they owe one another, and from whence he derives the great maxims of justice and charity. His words are,

The like natural inducement hath brought men to know that it is no less their duty, to love others than themselves; for seeing those things which are equal, must needs all have one measure; if I cannot but wish to receive good, even as much at every man's hands, as any man can wish unto his own soul, how should I look to have any part of my desire herein satisfied, unless myself be careful to satisfy the like desire, which is undoubtedly in other men, being of one and the same nature? To have any thing offered them repugnant to this desire, must needs in all respects grieve them as much as me; so that if I do harm, I must look to suffer, there being no reason that others should shew greater measure of love to me, than they have by me shewed unto them: my desire therefore to be loved of my equals in nature as much as possible may be, imposeth upon me a natural duty of bearing to them-ward fully the like affection; from which relation of equality between ourselves and them that are as ourselves, what several rules and canons natural reason hath drawn, for direction of life, no man is ignorant, Eccl. Pol. Lib. 1.

Sect. 6. But though this be a state of liberty, yet it is not a state of licence: though man in that state have an uncontroulable liberty to dispose of his person or possessions, yet he has not liberty to destroy himself, or so much as any creature in his possession, but where some nobler use than its bare preservation calls for it. The state of nature has a law of nature to govern it, which obliges every one: and reason, which is that law, teaches all mankind, who will but consult it, that being all equal and independent, no one ought to harm another in his life, health, liberty, or possessions: for men being all the workmanship of one omnipotent, and infinitely wise maker; all the servants of one sovereign master, sent into the world by his order, and about his business; they are his property, whose workmanship they are, made to last during his, not one another's pleasure: and being furnished with like

faculties, sharing all in one community of nature, there cannot be supposed any such subordination among us, that may authorize us to destroy one another, as if we were made for one another's uses, as the inferior ranks of creatures are for our's. Every one, as he is bound to preserve himself, and not to quit his station wilfully, so by the like reason, when his own preservation comes not in competition, ought he, as much as he can, to preserve the rest of mankind, and may not, unless it be to do justice on an offender, take away, or impair the life, or what tends to the preservation of the life, the liberty, health, limb, or goods of another.

Sect. 7. And that all men may be restrained from invading others rights, and from doing hurt to one another, and the law of nature be observed, which willeth the peace and preservation of all mankind, the execution of the law of nature is, in that state, put into every man's hands, whereby every one has a right to punish the transgressors of that law to such a degree, as may hinder its violation: for the law of nature would, as all other laws that concern men in this world be in vain, if there were no body that in the state of nature had a power to execute that law, and thereby preserve the innocent and restrain offenders. And if any one in the state of nature may punish another for any evil he has done, every one may do so: for in that state of perfect equality, where naturally there is no superiority or jurisdiction of one over another, what any may do in prosecution of that law, every one must needs have a right to do.

Sect. 8. And thus, in the state of nature, one man comes by a power over another; but yet no absolute or arbitrary power, to use a criminal, when he has got him in his hands, according to the passionate heats, or boundless extravagancy of his own will; but only to retribute to him, so far as calm reason and conscience dictate, what is proportionate to his transgression, which is so much as may serve for reparation and restraint: for these two are the only reasons, why one man may lawfully do harm to another, which is that we call punishment. In transgressing the law of nature, the offender declares himself to live by another rule than that of reason and common equity, which is that measure God has set to the actions of men, for their mutual security; and so he becomes dangerous to mankind, the tye, which is to secure them from injury and violence, being slighted and broken by him. Which being a trespass against the whole species, and the peace and safety of it, provided for by the law of nature, every man upon this score, by the

right he hath to preserve mankind in general, may restrain, or where it is necessary, destroy things noxious to them, and so may bring such evil on any one, who hath transgressed that law, as may make him repent the doing of it, and thereby deter him, and by his example others, from doing the like mischief. And in the case, and upon this ground, EVERY MAN HATH A RIGHT TO PUNISH THE OFFENDER, AND BE EXECUTIONER OF THE LAW OF NATURE.

Sect. 9. I doubt not but this will seem a very strange doctrine to some men: but before they condemn it, I desire them to resolve me, by what right any prince or state can put to death, or punish an alien, for any crime he commits in their country. It is certain their laws, by virtue of any sanction they receive from the promulgated will of the legislative, reach not a stranger: they speak not to him, nor, if they did, is he bound to hearken to them. The legislative authority, by which they are in force over the subjects of that commonwealth, hath no power over him. Those who have the supreme power of making laws in England, France or Holland, are to an Indian, but like the rest of the world, men without authority: and therefore, if by the law of nature every man hath not a power to punish offences against it, as he soberly judges the case to require, I see not how the magistrates of any community can punish an alien of another country; since, in reference to him, they can have no more power than what every man naturally may have over another.

Sect. 10. Besides the crime which consists in violating the law, and varying from the right rule of reason, whereby a man so far becomes degenerate, and declares himself to quit the principles of human nature, and to be a noxious creature, there is commonly injury done to some person or other, and some other man receives damage by his transgression: in which case he who hath received any damage, has, besides the right of punishment common to him with other men, a particular right to seek reparation from him that has done it: and any other person, who finds it just, may also join with him that is injured, and assist him in recovering from the offender so much as may make satisfaction for the harm he has suffered.

Sect. 11. From these two distinct rights, the one of punishing the crime for restraint, and preventing the like offence, which right of punishing is in every body; the other of taking reparation, which belongs only to the

injured party, comes it to pass that the magistrate, who by being magistrate hath the common right of punishing put into his hands, can often, where the public good demands not the execution of the law, remit the punishment of criminal offences by his own authority, but yet cannot remit the satisfaction due to any private man for the damage he has received. That, he who has suffered the damage has a right to demand in his own name, and he alone can remit: the damnified person has this power of appropriating to himself the goods or service of the offender, by right of self-preservation, as every man has a power to punish the crime, to prevent its being committed again, by the right he has of preserving all mankind, and doing all reasonable things he can in order to that end: and thus it is, that every man, in the state of nature, has a power to kill a murderer, both to deter others from doing the like injury, which no reparation can compensate, by the example of the punishment that attends it from every body, and also to secure men from the attempts of a criminal, who having renounced reason, the common rule and measure God hath given to mankind, hath, by the unjust violence and slaughter he hath committed upon one, declared war against all mankind, and therefore may be destroyed as a lion or a tyger, one of those wild savage beasts, with whom men can have no society nor security: and upon this is grounded that great law of nature, Whoso sheddeth man's blood, by man shall his blood be shed. And Cain was so fully convinced, that every one had a right to destroy such a criminal, that after the murder of his brother, he cries out, Every one that findeth me, shall slay me; so plain was it writ in the hearts of all mankind.

Sect. 12. By the same reason may a man in the state of nature punish the lesser breaches of that law. It will perhaps be demanded, with death? I answer, each transgression may be punished to that degree, and with so much severity, as will suffice to make it an ill bargain to the offender, give him cause to repent, and terrify others from doing the like. Every offence, that can be committed in the state of nature, may in the state of nature be also punished equally, and as far forth as it may, in a commonwealth: for though it would be besides my present purpose, to enter here into the particulars of the law of nature, or its measures of punishment; yet, it is certain there is such a law, and that too, as intelligible and plain to a rational creature, and a studier of that law, as the positive laws of commonwealths; nay, possibly plainer; as much as reason is easier to be understood, than the

fancies and intricate contrivances of men, following contrary and hidden interests put into words; for so truly are a great part of the municipal laws of countries, which are only so far right, as they are founded on the law of nature, by which they are to be regulated and interpreted.

Sect. 13. To this strange doctrine, viz. That in the state of nature every one has the executive power of the law of nature, I doubt not but it will be objected, that it is unreasonable for men to be judges in their own cases, that self-love will make men partial to themselves and their friends: and on the other side, that ill nature, passion and revenge will carry them too far in punishing others; and hence nothing but confusion and disorder will follow, and that therefore God hath certainly appointed government to restrain the partiality and violence of men. I easily grant, that civil government is the proper remedy for the inconveniencies of the state of nature, which must certainly be great, where men may be judges in their own case, since it is easy to be imagined, that he who was so unjust as to do his brother an injury, will scarce be so just as to condemn himself for it: but I shall desire those who make this objection, to remember, that absolute monarchs are but men; and if government is to be the remedy of those evils, which necessarily follow from men's being judges in their own cases, and the state of nature is therefore not to be endured, I desire to know what kind of government that is, and how much better it is than the state of nature, where one man, commanding a multitude, has the liberty to be judge in his own case, and may do to all his subjects whatever he pleases, without the least liberty to any one to question or controul those who execute his pleasure? and in whatsoever he doth, whether led by reason, mistake or passion, must be submitted to? much better it is in the state of nature, wherein men are not bound to submit to the unjust will of another: and if he that judges, judges amiss in his own, or any other case, he is answerable for it to the rest of mankind.

Sect. 14. It is often asked as a mighty objection, where are, or ever were there any men in such a state of nature? To which it may suffice as an answer at present, that since all princes and rulers of independent governments all through the world, are in a state of nature, it is plain the world never was, nor ever will be, without numbers of men in that state. I have named all governors of independent communities, whether they are, or are not, in league with others: for it is not every compact that puts an end to

the state of nature between men, but only this one of agreeing together mutually to enter into one community, and make one body politic; other promises, and compacts, men may make one with another, and yet still be in the state of nature. The promises and bargains for truck, &c. between the two men in the desert island, mentioned by Garcilasso de la Vega, in his history of Peru; or between a Swiss and an Indian, in the woods of America, are binding to them, though they are perfectly in a state of nature, in reference to one another: for truth and keeping of faith belongs to men, as men, and not as members of society.

Sect. 15. To those that say, there were never any men in the state of nature, I will not only oppose the authority of the judicious Hooker, Eccl. Pol. lib. i. sect. 10, where he says,

The laws which have been hitherto mentioned, i.e. the laws of nature, do bind men absolutely, even as they are men, although they have never any settled fellowship, never any solemn agreement amongst themselves what to do, or not to do: but forasmuch as we are not by ourselves sufficient to furnish ourselves with competent store of things, needful for such a life as our nature doth desire, a life fit for the dignity of man; therefore to supply those defects and imperfections which are in us, as living single and solely by ourselves, we are naturally induced to seek communion and fellowship with others: this was the cause of men's uniting themselves at first in politic societies.

But I moreover affirm, that all men are naturally in that state, and remain so, till by their own consents they make themselves members of some politic society; and I doubt not in the sequel of this discourse, to make it very clear.

---

### CHAPTER. III.

## OF THE STATE OF WAR.

Sect. 16. THE state of war is a state of enmity and destruction: and therefore declaring by word or action, not a passionate and hasty, but a sedate settled design upon another man's life, puts him in a state of war with him against whom he has declared such an intention, and so has exposed his life to the other's power to be taken away by him, or any one that joins with him in his defence, and espouses his quarrel; it being reasonable and just, I should have a right to destroy that which threatens me with destruction: for, by the fundamental law of nature, man being to be preserved as much as possible, when all cannot be preserved, the safety of the innocent is to be preferred: and one may destroy a man who makes war upon him, or has discovered an enmity to his being, for the same reason that he may kill a wolf or a lion; because such men are not under the ties of the commonlaw of reason, have no other rule, but that of force and violence, and so may be treated as beasts of prey, those dangerous and noxious creatures, that will be sure to destroy him whenever he falls into their power.

Sect. 17. And hence it is, that he who attempts to get another man into his absolute power, does thereby put himself into a state of war with him; it being to be understood as a declaration of a design upon his life: for I have reason to conclude, that he who would get me into his power without my consent, would use me as he pleased when he had got me there, and destroy me too when he had a fancy to it; for no body can desire to have me in his absolute power, unless it be to compel me by force to that which is against the right of my freedom, i.e. make me a slave. To be free from such force is the only security of my preservation; and reason bids me look on him, as an enemy to my preservation, who would take away that freedom which is the fence to it; so that he who makes an attempt to enslave me, thereby puts himself into a state of war with me. He that, in the state of nature, would take away the freedom that belongs to any one in that state, must necessarily be supposed to have a design to take away every thing else, that freedom being the foundation of all the rest; as he that, in the state of society, would take away the freedom belonging to those of that society or commonwealth, must be supposed to design to take away from them every thing else, and so be looked on as in a state of war.

Sect. 18. This makes it lawful for a man to kill a thief, who has not in the least hurt him, nor declared any design upon his life, any farther than, by the use of force, so to get him in his power, as to take away his money, or what he pleases, from him; because using force, where he has no right, to get me into his power, let his pretence be what it will, I have no reason to suppose, that he, who would take away my liberty, would not, when he had me in his power, take away every thing else. And therefore it is lawful for me to treat him as one who has put himself into a state of war with me, i.e. kill him if I can; for to that hazard does he justly expose himself, whoever introduces a state of war, and is aggressor in it.

Sect. 19. And here we have the plain difference between the state of nature and the state of war, which however some men have confounded, are as far distant, as a state of peace, good will, mutual assistance and preservation, and a state of enmity, malice, violence and mutual destruction, are one from another. Men living together according to reason, without a common superior on earth, with authority to judge between them, is properly the state of nature. But force, or a declared design of force, upon the person of another, where there is no common superior on earth to appeal to for relief, is the state of war: and it is the want of such an appeal gives a man the right of war even against an aggressor, tho' he be in society and a fellow subject. Thus a thief, whom I cannot harm, but by appeal to the law, for having stolen all that I am worth, I may kill, when he sets on me to rob me but of my horse or coat; because the law, which was made for my preservation, where it cannot interpose to secure my life from present force, which, if lost, is capable of no reparation, permits me my own defence, and the right of war, a liberty to kill the aggressor, because the aggressor allows not time to appeal to our common judge, nor the decision of the law, for remedy in a case where the mischief may be irreparable. Want of a common judge with authority, puts all men in a state of nature: force without right, upon a man's person, makes a state of war, both where there is, and is not, a common judge.

Sect. 20. But when the actual force is over, the state of war ceases between those that are in society, and are equally on both sides subjected to the fair determination of the law; because then there lies open the remedy of appeal for the past injury, and to prevent future harm: but where no such appeal is, as in the state of nature, for want of positive laws, and judges with authority

to appeal to, the state of war once begun, continues, with a right to the innocent party to destroy the other whenever he can, until the aggressor offers peace, and desires reconciliation on such terms as may repair any wrongs he has already done, and secure the innocent for the future; nay, where an appeal to the law, and constituted judges, lies open, but the remedy is denied by a manifest perverting of justice, and a barefaced wresting of the laws to protect or indemnify the violence or injuries of some men, or party of men, there it is hard to imagine any thing but a state of war: for wherever violence is used, and injury done, though by hands appointed to administer justice, it is still violence and injury, however coloured with the name, pretences, or forms of law, the end whereof being to protect and redress the innocent, by an unbiassed application of it, to all who are under it; wherever that is not bona fide done, war is made upon the sufferers, who having no appeal on earth to right them, they are left to the only remedy in such cases, an appeal to heaven.

Sect. 21. To avoid this state of war (wherein there is no appeal but to heaven, and wherein every the least difference is apt to end, where there is no authority to decide between the contenders) is one great reason of men's putting themselves into society, and quitting the state of nature: for where there is an authority, a power on earth, from which relief can be had by appeal, there the continuance of the state of war is excluded, and the controversy is decided by that power. Had there been any such court, any superior jurisdiction on earth, to determine the right between Jephtha and the Ammonites, they had never come to a state of war: but we see he was forced to appeal to heaven. The Lord the Judge (says he) be judge this day between the children of Israel and the children of Ammon, Judg. xi. 27. and then prosecuting, and relying on his appeal, he leads out his army to battle: and therefore in such controversies, where the question is put, who shall be judge? It cannot be meant, who shall decide the controversy; every one knows what Jephtha here tells us, that the Lord the Judge shall judge. Where there is no judge on earth, the appeal lies to God in heaven. That question then cannot mean, who shall judge, whether another hath put himself in a state of war with me, and whether I may, as Jephtha did, appeal to heaven in it? of that I myself can only be judge in my own conscience, as I will answer it, at the great day, to the supreme judge of all men.

---

## CHAPTER. IV.

### OF SLAVERY.

Sect. 22. THE natural liberty of man is to be free from any superior power on earth, and not to be under the will or legislative authority of man, but to have only the law of nature for his rule. The liberty of man, in society, is to be under no other legislative power, but that established, by consent, in the commonwealth; nor under the dominion of any will, or restraint of any law, but what that legislative shall enact, according to the trust put in it. Freedom then is not what Sir Robert Filmer tells us, Observations, A. 55. a liberty for every one to do what he lists, to live as he pleases, and not to be tied by any laws: but freedom of men under government is, to have a standing rule to live by, common to every one of that society, and made by the legislative power erected in it; a liberty to follow my own will in all things, where the rule prescribes not; and not to be subject to the inconstant, uncertain, unknown, arbitrary will of another man: as freedom of nature is, to be under no other restraint but the law of nature.

Sect. 23. This freedom from absolute, arbitrary power, is so necessary to, and closely joined with a man's preservation, that he cannot part with it, but by what forfeits his preservation and life together: for a man, not having the power of his own life, cannot, by compact, or his own consent, enslave himself to any one, nor put himself under the absolute, arbitrary power of another, to take away his life, when he pleases. No body can give more power than he has himself; and he that cannot take away his own life, cannot give another power over it. Indeed, having by his fault forfeited his own life, by some act that deserves death; he, to whom he has forfeited it, may (when he has him in his power) delay to take it, and make use of him to his own service, and he does him no injury by it: for, whenever he finds the hardship of his slavery outweigh the value of his life, it is in his power, by resisting the will of his master, to draw on himself the death he desires.

Sect. 24. This is the perfect condition of slavery, which is nothing else, but the state of war continued, between a lawful conqueror and a captive: for, if once compact enter between them, and make an agreement for a limited power on the one side, and obedience on the other, the state of war and

slavery ceases, as long as the compact endures: for, as has been said, no man can, by agreement, pass over to another that which he hath not in himself, a power over his own life.

I confess, we find among the Jews, as well as other nations, that men did sell themselves; but, it is plain, this was only to drudgery, not to slavery: for, it is evident, the person sold was not under an absolute, arbitrary, despotical power: for the master could not have power to kill him, at any time, whom, at a certain time, he was obliged to let go free out of his service; and the master of such a servant was so far from having an arbitrary power over his life, that he could not, at pleasure, so much as maim him, but the loss of an eye, or tooth, set him free, *Exod. xxi.*

---

## **CHAPTER. V.**

### **OF PROPERTY.**

Sect. 25. Whether we consider natural reason, which tells us, that men, being once born, have a right to their preservation, and consequently to meat and drink, and such other things as nature affords for their subsistence: or revelation, which gives us an account of those grants God made of the world to Adam, and to Noah, and his sons, it is very clear, that God, as king David says, *Psal. cxv. 16.* has given the earth to the children of men; given it to mankind in common. But this being supposed, it seems to some a very great difficulty, how any one should ever come to have a property in any thing: I will not content myself to answer, that if it be difficult to make out property, upon a supposition that God gave the world to Adam, and his posterity in common, it is impossible that any man, but one universal monarch, should have any property upon a supposition, that God gave the world to Adam, and his heirs in succession, exclusive of all the rest of his posterity. But I shall endeavour to shew, how men might come to have a

property in several parts of that which God gave to mankind in common, and that without any express compact of all the commoners.

Sect. 26. God, who hath given the world to men in common, hath also given them reason to make use of it to the best advantage of life, and convenience. The earth, and all that is therein, is given to men for the support and comfort of their being. And tho' all the fruits it naturally produces, and beasts it feeds, belong to mankind in common, as they are produced by the spontaneous hand of nature; and no body has originally a private dominion, exclusive of the rest of mankind, in any of them, as they are thus in their natural state: yet being given for the use of men, there must of necessity be a means to appropriate them some way or other, before they can be of any use, or at all beneficial to any particular man. The fruit, or venison, which nourishes the wild Indian, who knows no enclosure, and is still a tenant in common, must be his, and so his, i.e. a part of him, that another can no longer have any right to it, before it can do him any good for the support of his life.

Sect. 27. Though the earth, and all inferior creatures, be common to all men, yet every man has a property in his own person: this no body has any right to but himself. The labour of his body, and the work of his hands, we may say, are properly his. Whatsoever then he removes out of the state that nature hath provided, and left it in, he hath mixed his labour with, and joined to it something that is his own, and thereby makes it his property. It being by him removed from the common state nature hath placed it in, it hath by this labour something annexed to it, that excludes the common right of other men: for this labour being the unquestionable property of the labourer, no man but he can have a right to what that is once joined to, at least where there is enough, and as good, left in common for others.

Sect. 28. He that is nourished by the acorns he picked up under an oak, or the apples he gathered from the trees in the wood, has certainly appropriated them to himself. No body can deny but the nourishment is his. I ask then, when did they begin to be his? when he digested? or when he eat? or when he boiled? or when he brought them home? or when he picked them up? and it is plain, if the first gathering made them not his, nothing else could. That labour put a distinction between them and common: that added something to them more than nature, the common mother of all, had

done; and so they became his private right. And will any one say, he had no right to those acorns or apples, he thus appropriated, because he had not the consent of all mankind to make them his? Was it a robbery thus to assume to himself what belonged to all in common? If such a consent as that was necessary, man had starved, notwithstanding the plenty God had given him. We see in commons, which remain so by compact, that it is the taking any part of what is common, and removing it out of the state nature leaves it in, which begins the property; without which the common is of no use. And the taking of this or that part, does not depend on the express consent of all the commoners. Thus the grass my horse has bit; the turfs my servant has cut; and the ore I have digged in any place, where I have a right to them in common with others, become my property, without the assignation or consent of any body. The labour that was mine, removing them out of that common state they were in, hath fixed my property in them.

Sect. 29. By making an explicit consent of every commoner, necessary to any one's appropriating to himself any part of what is given in common, children or servants could not cut the meat, which their father or master had provided for them in common, without assigning to every one his peculiar part. Though the water running in the fountain be every one's, yet who can doubt, but that in the pitcher is his only who drew it out? His labour hath taken it out of the hands of nature, where it was common, and belonged equally to all her children, and hath thereby appropriated it to himself.

Sect. 30. Thus this law of reason makes the deer that Indian's who hath killed it; it is allowed to be his goods, who hath bestowed his labour upon it, though before it was the common right of every one. And amongst those who are counted the civilized part of mankind, who have made and multiplied positive laws to determine property, this original law of nature, for the beginning of property, in what was before common, still takes place; and by virtue thereof, what fish any one catches in the ocean, that great and still remaining common of mankind; or what ambergrise any one takes up here, is by the labour that removes it out of that common state nature left it in, made his property, who takes that pains about it. And even amongst us, the hare that any one is hunting, is thought his who pursues her during the chase: for being a beast that is still looked upon as common, and no man's private possession; whoever has employed so much labour about any of that

kind, as to find and pursue her, has thereby removed her from the state of nature, wherein she was common, and hath begun a property.

Sect. 31. It will perhaps be objected to this, that if gathering the acorns, or other fruits of the earth, &c. makes a right to them, then any one may ingross as much as he will. To which I answer, Not so. The same law of nature, that does by this means give us property, does also bound that property too. God has given us all things richly, 1 Tim. vi. 12. is the voice of reason confirmed by inspiration. But how far has he given it us? To enjoy. As much as any one can make use of to any advantage of life before it spoils, so much he may by his labour fix a property in: whatever is beyond this, is more than his share, and belongs to others. Nothing was made by God for man to spoil or destroy. And thus, considering the plenty of natural provisions there was a long time in the world, and the few spenders; and to how small a part of that provision the industry of one man could extend itself, and ingross it to the prejudice of others; especially keeping within the bounds, set by reason, of what might serve for his use; there could be then little room for quarrels or contentions about property so established.

Sect. 32. But the chief matter of property being now not the fruits of the earth, and the beasts that subsist on it, but the earth itself; as that which takes in and carries with it all the rest; I think it is plain, that property in that too is acquired as the former. As much land as a man tills, plants, improves, cultivates, and can use the product of, so much is his property. He by his labour does, as it were, inclose it from the common. Nor will it invalidate his right, to say every body else has an equal title to it; and therefore he cannot appropriate, he cannot inclose, without the consent of all his fellow-commoners, all mankind. God, when he gave the world in common to all mankind, commanded man also to labour, and the penury of his condition required it of him. God and his reason commanded him to subdue the earth, i.e. improve it for the benefit of life, and therein lay out something upon it that was his own, his labour. He that in obedience to this command of God, subdued, tilled and sowed any part of it, thereby annexed to it something that was his property, which another had no title to, nor could without injury take from him.

Sect. 33. Nor was this appropriation of any parcel of land, by improving it, any prejudice to any other man, since there was still enough, and as good left; and more than the yet unprovided could use. So that, in effect, there was never the less left for others because of his enclosure for himself: for he that leaves as much as another can make use of, does as good as take nothing at all. No body could think himself injured by the drinking of another man, though he took a good draught, who had a whole river of the same water left him to quench his thirst: and the case of land and water, where there is enough of both, is perfectly the same.

Sect. 34. God gave the world to men in common; but since he gave it them for their benefit, and the greatest conveniencies of life they were capable to draw from it, it cannot be supposed he meant it should always remain common and uncultivated. He gave it to the use of the industrious and rational, (and labour was to be his title to it;) not to the fancy or covetousness of the quarrelsome and contentious. He that had as good left for his improvement, as was already taken up, needed not complain, ought not to meddle with what was already improved by another's labour: if he did, it is plain he desired the benefit of another's pains, which he had no right to, and not the ground which God had given him in common with others to labour on, and whereof there was as good left, as that already possessed, and more than he knew what to do with, or his industry could reach to.

Sect. 35. It is true, in land that is common in England, or any other country, where there is plenty of people under government, who have money and commerce, no one can inclose or appropriate any part, without the consent of all his fellow-commoners; because this is left common by compact, i.e. by the law of the land, which is not to be violated. And though it be common, in respect of some men, it is not so to all mankind; but is the joint property of this country, or this parish. Besides, the remainder, after such enclosure, would not be as good to the rest of the commoners, as the whole was when they could all make use of the whole; whereas in the beginning and first peopling of the great common of the world, it was quite otherwise. The law man was under, was rather for appropriating. God commanded, and his wants forced him to labour. That was his property which could not be taken from him where-ever he had fixed it. And hence subduing or cultivating the earth, and having dominion, we see are joined

together. The one gave title to the other. So that God, by commanding to subdue, gave authority so far to appropriate: and the condition of human life, which requires labour and materials to work on, necessarily introduces private possessions.

Sect. 36. The measure of property nature has well set by the extent of men's labour and the conveniencies of life: no man's labour could subdue, or appropriate all; nor could his enjoyment consume more than a small part; so that it was impossible for any man, this way, to intrench upon the right of another, or acquire to himself a property, to the prejudice of his neighbour, who would still have room for as good, and as large a possession (after the other had taken out his) as before it was appropriated. This measure did confine every man's possession to a very moderate proportion, and such as he might appropriate to himself, without injury to any body, in the first ages of the world, when men were more in danger to be lost, by wandering from their company, in the then vast wilderness of the earth, than to be straitened for want of room to plant in. And the same measure may be allowed still without prejudice to any body, as full as the world seems: for supposing a man, or family, in the state they were at first peopling of the world by the children of Adam, or Noah; let him plant in some inland, vacant places of America, we shall find that the possessions he could make himself, upon the measures we have given, would not be very large, nor, even to this day, prejudice the rest of mankind, or give them reason to complain, or think themselves injured by this man's incroachment, though the race of men have now spread themselves to all the corners of the world, and do infinitely exceed the small number was at the beginning. Nay, the extent of ground is of so little value, without labour, that I have heard it affirmed, that in Spain itself a man may be permitted to plough, sow and reap, without being disturbed, upon land he has no other title to, but only his making use of it. But, on the contrary, the inhabitants think themselves beholden to him, who, by his industry on neglected, and consequently waste land, has increased the stock of corn, which they wanted. But be this as it will, which I lay no stress on; this I dare boldly affirm, that the same rule of propriety, (viz.) that every man should have as much as he could make use of, would hold still in the world, without straitening any body; since there is land enough in the world to suffice double the inhabitants, had not the invention of money, and the tacit agreement of men to put a value on it, introduced

(by consent) larger possessions, and a right to them; which, how it has done, I shall by and by shew more at large.

Sect. 37. This is certain, that in the beginning, before the desire of having more than man needed had altered the intrinsic value of things, which depends only on their usefulness to the life of man; or had agreed, that a little piece of yellow metal, which would keep without wasting or decay, should be worth a great piece of flesh, or a whole heap of corn; though men had a right to appropriate, by their labour, each one of himself, as much of the things of nature, as he could use: yet this could not be much, nor to the prejudice of others, where the same plenty was still left to those who would use the same industry. To which let me add, that he who appropriates land to himself by his labour, does not lessen, but increase the common stock of mankind: for the provisions serving to the support of human life, produced by one acre of inclosed and cultivated land, are (to speak much within compass) ten times more than those which are yielded by an acre of land of an equal richness lying waste in common. And therefore he that incloses land, and has a greater plenty of the conveniencies of life from ten acres, than he could have from an hundred left to nature, may truly be said to give ninety acres to mankind: for his labour now supplies him with provisions out of ten acres, which were but the product of an hundred lying in common. I have here rated the improved land very low, in making its product but as ten to one, when it is much nearer an hundred to one: for I ask, whether in the wild woods and uncultivated waste of America, left to nature, without any improvement, tillage or husbandry, a thousand acres yield the needy and wretched inhabitants as many conveniencies of life, as ten acres of equally fertile land do in Devonshire, where they are well cultivated?

Before the appropriation of land, he who gathered as much of the wild fruit, killed, caught, or tamed, as many of the beasts, as he could; he that so employed his pains about any of the spontaneous products of nature, as any way to alter them from the state which nature put them in, by placing any of his labour on them, did thereby acquire a propriety in them: but if they perished, in his possession, without their due use; if the fruits rotted, or the venison putrified, before he could spend it, he offended against the common law of nature, and was liable to be punished; he invaded his neighbour's

share, for he had no right, farther than his use called for any of them, and they might serve to afford him conveniencies of life.

Sect. 38. The same measures governed the possession of land too: whatsoever he tilled and reaped, laid up and made use of, before it spoiled, that was his peculiar right; whatsoever he enclosed, and could feed, and make use of, the cattle and product was also his. But if either the grass of his enclosure rotted on the ground, or the fruit of his planting perished without gathering, and laying up, this part of the earth, notwithstanding his enclosure, was still to be looked on as waste, and might be the possession of any other. Thus, at the beginning, Cain might take as much ground as he could till, and make it his own land, and yet leave enough to Abel's sheep to feed on; a few acres would serve for both their possessions. But as families increased, and industry enlarged their stocks, their possessions enlarged with the need of them; but yet it was commonly without any fixed property in the ground they made use of, till they incorporated, settled themselves together, and built cities; and then, by consent, they came in time, to set out the bounds of their distinct territories, and agree on limits between them and their neighbours; and by laws within themselves, settled the properties of those of the same society: for we see, that in that part of the world which was first inhabited, and therefore like to be best peopled, even as low down as Abraham's time, they wandered with their flocks, and their herds, which was their substance, freely up and down; and this Abraham did, in a country where he was a stranger. Whence it is plain, that at least a great part of the land lay in common; that the inhabitants valued it not, nor claimed property in any more than they made use of. But when there was not room enough in the same place, for their herds to feed together, they by consent, as Abraham and Lot did, Gen. xiii. 5. separated and enlarged their pasture, where it best liked them. And for the same reason Esau went from his father, and his brother, and planted in mount Seir, Gen. xxxvi. 6.

Sect. 39. And thus, without supposing any private dominion, and property in Adam, over all the world, exclusive of all other men, which can no way be proved, nor any one's property be made out from it; but supposing the world given, as it was, to the children of men in common, we see how labour could make men distinct titles to several parcels of it, for their private uses; wherein there could be no doubt of right, no room for quarrel.

Sect. 40. Nor is it so strange, as perhaps before consideration it may appear, that the property of labour should be able to over-balance the community of land: for it is labour indeed that puts the difference of value on every thing; and let any one consider what the difference is between an acre of land planted with tobacco or sugar, sown with wheat or barley, and an acre of the same land lying in common, without any husbandry upon it, and he will find, that the improvement of labour makes the far greater part of the value. I think it will be but a very modest computation to say, that of the products of the earth useful to the life of man nine tenths are the effects of labour: nay, if we will rightly estimate things as they come to our use, and cast up the several expences about them, what in them is purely owing to nature, and what to labour, we shall find, that in most of them ninety-nine hundredths are wholly to be put on the account of labour.

Sect. 41. There cannot be a clearer demonstration of any thing, than several nations of the Americans are of this, who are rich in land, and poor in all the comforts of life; whom nature having furnished as liberally as any other people, with the materials of plenty, i.e. a fruitful soil, apt to produce in abundance, what might serve for food, raiment, and delight; yet for want of improving it by labour, have not one hundredth part of the conveniencies we enjoy: and a king of a large and fruitful territory there, feeds, lodges, and is clad worse than a day-labourer in England.

Sect. 42. To make this a little clearer, let us but trace some of the ordinary provisions of life, through their several progresses, before they come to our use, and see how much they receive of their value from human industry. Bread, wine and cloth, are things of daily use, and great plenty; yet notwithstanding, acorns, water and leaves, or skins, must be our bread, drink and cloathing, did not labour furnish us with these more useful commodities: for whatever bread is more worth than acorns, wine than water, and cloth or silk, than leaves, skins or moss, that is wholly owing to labour and industry; the one of these being the food and raiment which unassisted nature furnishes us with; the other, provisions which our industry and pains prepare for us, which how much they exceed the other in value, when any one hath computed, he will then see how much labour makes the far greatest part of the value of things we enjoy in this world: and the ground which produces the materials, is scarce to be reckoned in, as any, or at most, but a very small part of it; so little, that even amongst us, land that

is left wholly to nature, that hath no improvement of pasturage, tillage, or planting, is called, as indeed it is, waste; and we shall find the benefit of it amount to little more than nothing.

This shews how much numbers of men are to be preferred to largeness of dominions; and that the increase of lands, and the right employing of them, is the great art of government: and that prince, who shall be so wise and godlike, as by established laws of liberty to secure protection and encouragement to the honest industry of mankind, against the oppression of power and narrowness of party, will quickly be too hard for his neighbours: but this by the by.

To return to the argument in hand.

Sect. 43. An acre of land, that bears here twenty bushels of wheat, and another in America, which, with the same husbandry, would do the like, are, without doubt, of the same natural intrinsic value: but yet the benefit mankind receives from the one in a year, is worth 5l. and from the other possibly not worth a penny, if all the profit an Indian received from it were to be valued, and sold here; at least, I may truly say, not one thousandth. It is labour then which puts the greatest part of value upon land, without which it would scarcely be worth any thing: it is to that we owe the greatest part of all its useful products; for all that the straw, bran, bread, of that acre of wheat, is more worth than the product of an acre of as good land, which lies waste, is all the effect of labour: for it is not barely the plough-man's pains, the reaper's and thresher's toil, and the baker's sweat, is to be counted into the bread we eat; the labour of those who broke the oxen, who digged and wrought the iron and stones, who felled and framed the timber employed about the plough, mill, oven, or any other utensils, which are a vast number, requisite to this corn, from its being feed to be sown to its being made bread, must all be charged on the account of labour, and received as an effect of that: nature and the earth furnished only the almost worthless materials, as in themselves. It would be a strange catalogue of things, that industry provided and made use of, about every loaf of bread, before it came to our use, if we could trace them; iron, wood, leather, bark, timber, stone, bricks, coals, lime, cloth, dying drugs, pitch, tar, masts, ropes, and all the materials made use of in the ship, that brought any of the

commodities made use of by any of the workmen, to any part of the work; all which it would be almost impossible, at least too long, to reckon up.

Sect. 44. From all which it is evident, that though the things of nature are given in common, yet man, by being master of himself, and proprietor of his own person, and the actions or labour of it, had still in himself the great foundation of property; and that, which made up the great part of what he applied to the support or comfort of his being, when invention and arts had improved the conveniencies of life, was perfectly his own, and did not belong in common to others.

Sect. 45. Thus labour, in the beginning, gave a right of property, wherever any one was pleased to employ it upon what was common, which remained a long while the far greater part, and is yet more than mankind makes use of. Men, at first, for the most part, contented themselves with what unassisted nature offered to their necessities: and though afterwards, in some parts of the world, (where the increase of people and stock, with the use of money, had made land scarce, and so of some value) the several communities settled the bounds of their distinct territories, and by laws within themselves regulated the properties of the private men of their society, and so, by compact and agreement, settled the property which labour and industry began; and the leagues that have been made between several states and kingdoms, either expressly or tacitly disowning all claim and right to the land in the others possession, have, by common consent, given up their pretences to their natural common right, which originally they had to those countries, and so have, by positive agreement, settled a property amongst themselves, in distinct parts and parcels of the earth; yet there are still great tracts of ground to be found, which (the inhabitants thereof not having joined with the rest of mankind, in the consent of the use of their common money) lie waste, and are more than the people who dwell on it do, or can make use of, and so still lie in common; tho' this can scarce happen amongst that part of mankind that have consented to the use of money.

Sect. 46. The greatest part of things really useful to the life of man, and such as the necessity of subsisting made the first commoners of the world look after, as it doth the Americans now, are generally things of short duration; such as, if they are not consumed by use, will decay and perish of

themselves: gold, silver and diamonds, are things that fancy or agreement hath put the value on, more than real use, and the necessary support of life. Now of those good things which nature hath provided in common, every one had a right (as hath been said) to as much as he could use, and property in all that he could effect with his labour; all that his industry could extend to, to alter from the state nature had put it in, was his. He that gathered a hundred bushels of acorns or apples, had thereby a property in them, they were his goods as soon as gathered. He was only to look, that he used them before they spoiled, else he took more than his share, and robbed others. And indeed it was a foolish thing, as well as dishonest, to hoard up more than he could make use of. If he gave away a part to any body else, so that it perished not uselessly in his possession, these he also made use of. And if he also bartered away plums, that would have rotted in a week, for nuts that would last good for his eating a whole year, he did no injury; he wasted not the common stock; destroyed no part of the portion of goods that belonged to others, so long as nothing perished uselessly in his hands. Again, if he would give his nuts for a piece of metal, pleased with its colour; or exchange his sheep for shells, or wool for a sparkling pebble or a diamond, and keep those by him all his life he invaded not the right of others, he might heap up as much of these durable things as he pleased; the exceeding of the bounds of his just property not lying in the largeness of his possession, but the perishing of any thing uselessly in it.

Sect. 47. And thus came in the use of money, some lasting thing that men might keep without spoiling, and that by mutual consent men would take in exchange for the truly useful, but perishable supports of life.

Sect. 48. And as different degrees of industry were apt to give men possessions in different proportions, so this invention of money gave them the opportunity to continue and enlarge them: for supposing an island, separate from all possible commerce with the rest of the world, wherein there were but an hundred families, but there were sheep, horses and cows, with other useful animals, wholesome fruits, and land enough for corn for a hundred thousand times as many, but nothing in the island, either because of its commonness, or perishableness, fit to supply the place of money; what reason could any one have there to enlarge his possessions beyond the use of his family, and a plentiful supply to its consumption, either in what their own industry produced, or they could barter for like perishable, useful

commodities, with others? Where there is not some thing, both lasting and scarce, and so valuable to be hoarded up, there men will not be apt to enlarge their possessions of land, were it never so rich, never so free for them to take: for I ask, what would a man value ten thousand, or an hundred thousand acres of excellent land, ready cultivated, and well stocked too with cattle, in the middle of the inland parts of America, where he had no hopes of commerce with other parts of the world, to draw money to him by the sale of the product? It would not be worth the enclosing, and we should see him give up again to the wild common of nature, whatever was more than would supply the conveniencies of life to be had there for him and his family.

Sect. 49. Thus in the beginning all the world was America, and more so than that is now; for no such thing as money was any where known. Find out something that hath the use and value of money amongst his neighbours, you shall see the same man will begin presently to enlarge his possessions.

Sect. 50. But since gold and silver, being little useful to the life of man in proportion to food, raiment, and carriage, has its value only from the consent of men, whereof labour yet makes, in great part, the measure, it is plain, that men have agreed to a disproportionate and unequal possession of the earth, they having, by a tacit and voluntary consent, found out, a way how a man may fairly possess more land than he himself can use the product of, by receiving in exchange for the overplus gold and silver, which may be hoarded up without injury to any one; these metals not spoiling or decaying in the hands of the possessor. This partage of things in an inequality of private possessions, men have made practicable out of the bounds of society, and without compact, only by putting a value on gold and silver, and tacitly agreeing in the use of money: for in governments, the laws regulate the right of property, and the possession of land is determined by positive constitutions.

Sect. 51. And thus, I think, it is very easy to conceive, without any difficulty, how labour could at first begin a title of property in the common things of nature, and how the spending it upon our uses bounded it. So that there could then be no reason of quarrelling about title, nor any doubt about the largeness of possession it gave. Right and conveniency went together;

for as a man had a right to all he could employ his labour upon, so he had no temptation to labour for more than he could make use of. This left no room for controversy about the title, nor for encroachment on the right of others; what portion a man carved to himself, was easily seen; and it was useless, as well as dishonest, to carve himself too much, or take more than he needed.

---

## **CHAPTER. VI.**

### **OF PATERNAL POWER.**

Sect. 52. IT may perhaps be censured as an impertinent criticism, in a discourse of this nature, to find fault with words and names, that have obtained in the world: and yet possibly it may not be amiss to offer new ones, when the old are apt to lead men into mistakes, as this of paternal power probably has done, which seems so to place the power of parents over their children wholly in the father, as if the mother had no share in it; whereas, if we consult reason or revelation, we shall find, she hath an equal title. This may give one reason to ask, whether this might not be more properly called parental power? for whatever obligation nature and the right of generation lays on children, it must certainly bind them equal to both the concurrent causes of it. And accordingly we see the positive law of God every where joins them together, without distinction, when it commands the obedience of children, Honour thy father and thy mother, Exod. xx. 12. Whosoever curseth his father or his mother, Lev. xx. 9. Ye shall fear every man his mother and his father, Lev. xix. 3. Children, obey your parents, &c. Eph. vi. 1. is the stile of the Old and New Testament.

Sect. 53. Had but this one thing been well considered, without looking any deeper into the matter, it might perhaps have kept men from running into those gross mistakes, they have made, about this power of parents; which, however it might, without any great harshness, bear the name of absolute

dominion, and regal authority, when under the title of paternal power it seemed appropriated to the father, would yet have founded but oddly, and in the very name shewn the absurdity, if this supposed absolute power over children had been called parental; and thereby have discovered, that it belonged to the mother too: for it will but very ill serve the turn of those men, who contend so much for the absolute power and authority of the fatherhood, as they call it, that the mother should have any share in it; and it would have but ill supported the monarchy they contend for, when by the very name it appeared, that that fundamental authority, from whence they would derive their government of a single person only, was not placed in one, but two persons jointly. But to let this of names pass.

Sect. 54. Though I have said above, Chap. II. That all men by nature are equal, I cannot be supposed to understand all sorts of equality: age or virtue may give men a just precedency: excellency of parts and merit may place others above the common level: birth may subject some, and alliance or benefits others, to pay an observance to those to whom nature, gratitude, or other respects, may have made it due: and yet all this consists with the equality, which all men are in, in respect of jurisdiction or dominion one over another; which was the equality I there spoke of, as proper to the business in hand, being that equal right, that every man hath, to his natural freedom, without being subjected to the will or authority of any other man.

Sect. 55. Children, I confess, are not born in this full state of equality, though they are born to it. Their parents have a sort of rule and jurisdiction over them, when they come into the world, and for some time after; but it is but a temporary one. The bonds of this subjection are like the swaddling clothes they are wrapt up in, and supported by, in the weakness of their infancy: age and reason as they grow up, loosen them, till at length they drop quite off, and leave a man at his own free disposal.

Sect. 56. Adam was created a perfect man, his body and mind in full possession of their strength and reason, and so was capable, from the first instant of his being to provide for his own support and preservation, and govern his actions according to the dictates of the law of reason which God had implanted in him. From him the world is peopled with his descendants, who are all born infants, weak and helpless, without knowledge or understanding: but to supply the defects of this imperfect state, till the

improvement of growth and age hath removed them, Adam and Eve, and after them all parents were, by the law of nature, under an obligation to preserve, nourish, and educate the children they had begotten; not as their own workmanship, but the workmanship of their own maker, the Almighty, to whom they were to be accountable for them.

Sect. 57. The law, that was to govern Adam, was the same that was to govern all his posterity, the law of reason. But his offspring having another way of entrance into the world, different from him, by a natural birth, that produced them ignorant and without the use of reason, they were not presently under that law; for no body can be under a law, which is not promulgated to him; and this law being promulgated or made known by reason only, he that is not come to the use of his reason, cannot be said to be under this law; and Adam's children, being not presently as soon as born under this law of reason, were not presently free: for law, in its true notion, is not so much the limitation as the direction of a free and intelligent agent to his proper interest, and prescribes no farther than is for the general good of those under that law: could they be happier without it, the law, as an useless thing, would of itself vanish; and that ill deserves the name of confinement which hedges us in only from bogs and precipices. So that, however it may be mistaken, the end of law is not to abolish or restrain, but to preserve and enlarge freedom: for in all the states of created beings capable of laws, where there is no law, there is no freedom: for liberty is, to be free from restraint and violence from others; which cannot be, where there is no law: but freedom is not, as we are told, a liberty for every man to do what he lists: (for who could be free, when every other man's humour might domineer over him?) but a liberty to dispose, and order as he lists, his person, actions, possessions, and his whole property, within the allowance of those laws under which he is, and therein not to be subject to the arbitrary will of another, but freely follow his own.

Sect. 58. The power, then, that parents have over their children, arises from that duty which is incumbent on them, to take care of their off-spring, during the imperfect state of childhood. To inform the mind, and govern the actions of their yet ignorant nonage, till reason shall take its place, and ease them of that trouble, is what the children want, and the parents are bound to: for God having given man an understanding to direct his actions, has allowed him a freedom of will, and liberty of acting, as properly belonging thereunto, within the bounds of that law he is under. But whilst he is in an estate, wherein he has not understanding of his own to direct his will, he is not to have any will of his own to follow: he that understands for him, must will for him too; he must prescribe to his will, and regulate his actions; but when he comes to the estate that made his father a freeman, the son is a freeman too.

Sect. 59. This holds in all the laws a man is under, whether natural or civil. Is a man under the law of nature? What made him free of that law? what gave him a free disposing of his property, according to his own will, within the compass of that law? I answer, a state of maturity wherein he might be supposed capable to know that law, that so he might keep his actions within the bounds of it. When he has acquired that state, he is presumed to know how far that law is to be his guide, and how far he may make use of his freedom, and so comes to have it; till then, some body else must guide him, who is presumed to know how far the law allows a liberty. If such a state of reason, such an age of discretion made him free, the same shall make his son free too. Is a man under the law of England? What made him free of that law? that is, to have the liberty to dispose of his actions and possessions according to his own will, within the permission of that law? A capacity of knowing that law; which is supposed by that law, at the age of one and twenty years, and in some cases sooner. If this made the father free, it shall make the son free too. Till then we see the law allows the son to have no will, but he is to be guided by the will of his father or guardian, who is to understand for him. And if the father die, and fail to substitute a deputy in his trust; if he hath not provided a tutor, to govern his son, during his minority, during his want of understanding, the law takes care to do it; some other must govern him, and be a will to him, till he hath attained to a state of freedom, and his understanding be fit to take the government of his will. But after that, the father and son are equally free as much as tutor and pupil

after nonage; equally subjects of the same law together, without any dominion left in the father over the life, liberty, or estate of his son, whether they be only in the state and under the law of nature, or under the positive laws of an established government.

Sect. 60. But if, through defects that may happen out of the ordinary course of nature, any one comes not to such a degree of reason, wherein he might be supposed capable of knowing the law, and so living within the rules of it, he is never capable of being a free man, he is never let loose to the disposal of his own will (because he knows no bounds to it, has not understanding, its proper guide) but is continued under the tuition and government of others, all the time his own understanding is incapable of that charge. And so lunatics and idiots are never set free from the government of their parents;

children, who are not as yet come unto those years whereat they may have; and innocents which are excluded by a natural defect from ever having; thirdly, madmen, which for the present cannot possibly have the use of right reason to guide themselves, have for their guide, the reason that guideth other men which are tutors over them, to seek and procure their good for them,

says Hooker, Eccl. Pol. lib. i. sec. 7. All which seems no more than that duty, which God and nature has laid on man, as well as other creatures, to preserve their offspring, till they can be able to shift for themselves, and will scarce amount to an instance or proof of parents regal authority.

Sect. 61. Thus we are born free, as we are born rational; not that we have actually the exercise of either: age, that brings one, brings with it the other too. And thus we see how natural freedom and subjection to parents may consist together, and are both founded on the same principle. A child is free by his father's title, by his father's understanding, which is to govern him till he hath it of his own. The freedom of a man at years of discretion, and the subjection of a child to his parents, whilst yet short of that age, are so consistent, and so distinguishable, that the most blinded contenders for monarchy, by right of fatherhood, cannot miss this difference; the most obstinate cannot but allow their consistency: for were their doctrine all true,

were the right heir of Adam now known, and by that title settled a monarch in his throne, invested with all the absolute unlimited power Sir Robert Filmer talks of; if he should die as soon as his heir were born, must not the child, notwithstanding he were never so free, never so much sovereign, be in subjection to his mother and nurse, to tutors and governors, till age and education brought him reason and ability to govern himself and others? The necessities of his life, the health of his body, and the information of his mind, would require him to be directed by the will of others, and not his own; and yet will any one think, that this restraint and subjection were inconsistent with, or spoiled him of that liberty or sovereignty he had a right to, or gave away his empire to those who had the government of his nonage? This government over him only prepared him the better and sooner for it. If any body should ask me, when my son is of age to be free? I shall answer, just when his monarch is of age to govern. But at what time, says the judicious Hooker, Eccl. Pol. l. i. sect. 6. a man may be said to have attained so far forth the use of reason, as sufficeth to make him capable of those laws whereby he is then bound to guide his actions: this is a great deal more easy for sense to discern, than for any one by skill and learning to determine.

Sect. 62. Common-wealths themselves take notice of, and allow, that there is a time when men are to begin to act like free men, and therefore till that time require not oaths of fealty, or allegiance, or other public owning of, or submission to the government of their countries.

Sect. 63. The freedom then of man, and liberty of acting according to his own will, is grounded on his having reason, which is able to instruct him in that law he is to govern himself by, and make him know how far he is left to the freedom of his own will. To turn him loose to an unrestrained liberty, before he has reason to guide him, is not the allowing him the privilege of his nature to be free; but to thrust him out amongst brutes, and abandon him to a state as wretched, and as much beneath that of a man, as their's. This is that which puts the authority into the parents hands to govern the minority of their children. God hath made it their business to employ this care on their offspring, and hath placed in them suitable inclinations of tenderness and concern to temper this power, to apply it, as his wisdom designed it, to the children's good, as long as they should need to be under it.

Sect. 64. But what reason can hence advance this care of the parents due to their off-spring into an absolute arbitrary dominion of the father, whose power reaches no farther, than by such a discipline, as he finds most effectual, to give such strength and health to their bodies, such vigour and rectitude to their minds, as may best fit his children to be most useful to themselves and others; and, if it be necessary to his condition, to make them work, when they are able, for their own subsistence. But in this power the mother too has her share with the father.

Sect. 65. Nay, this power so little belongs to the father by any peculiar right of nature, but only as he is guardian of his children, that when he quits his care of them, he loses his power over them, which goes along with their nourishment and education, to which it is inseparably annexed; and it belongs as much to the foster-father of an exposed child, as to the natural father of another. So little power does the bare act of begetting give a man over his issue; if all his care ends there, and this be all the title he hath to the name and authority of a father. And what will become of this paternal power in that part of the world, where one woman hath more than one husband at a time? or in those parts of America, where, when the husband and wife part, which happens frequently, the children are all left to the mother, follow her, and are wholly under her care and provision? If the father die whilst the children are young, do they not naturally every where owe the same obedience to their mother, during their minority, as to their father were he alive? and will any one say, that the mother hath a legislative power over her children? that she can make standing rules, which shall be of perpetual obligation, by which they ought to regulate all the concerns of their property, and bound their liberty all the course of their lives? or can she enforce the observation of them with capital punishments? for this is the proper power of the magistrate, of which the father hath not so much as the shadow. His command over his children is but temporary, and reaches not their life or property: it is but a help to the weakness and imperfection of their nonage, a discipline necessary to their education: and though a father may dispose of his own possessions as he pleases, when his children are out of danger of perishing for want, yet his power extends not to the lives or goods, which either their own industry, or another's bounty has made their's; nor to their liberty neither, when they are once arrived to the enfranchisement of the years of discretion. The father's empire then ceases,

and he can from thence forwards no more dispose of the liberty of his son, than that of any other man: and it must be far from an absolute or perpetual jurisdiction, from which a man may withdraw himself, having license from divine authority to leave father and mother, and cleave to his wife.

Sect. 66. But though there be a time when a child comes to be as free from subjection to the will and command of his father, as the father himself is free from subjection to the will of any body else, and they are each under no other restraint, but that which is common to them both, whether it be the law of nature, or municipal law of their country; yet this freedom exempts not a son from that honour which he ought, by the law of God and nature, to pay his parents. God having made the parents instruments in his great design of continuing the race of mankind, and the occasions of life to their children; as he hath laid on them an obligation to nourish, preserve, and bring up their offspring; so he has laid on the children a perpetual obligation of honouring their parents, which containing in it an inward esteem and reverence to be shewn by all outward expressions, ties up the child from any thing that may ever injure or affront, disturb or endanger, the happiness or life of those from whom he received his; and engages him in all actions of defence, relief, assistance and comfort of those, by whose means he entered into being, and has been made capable of any enjoyments of life: from this obligation no state, no freedom can absolve children. But this is very far from giving parents a power of command over their children, or an authority to make laws and dispose as they please of their lives or liberties. It is one thing to owe honour, respect, gratitude and assistance; another to require an absolute obedience and submission. The honour due to parents, a monarch in his throne owes his mother; and yet this lessens not his authority, nor subjects him to her government.

Sect. 67. The subjection of a minor places in the father a temporary government, which terminates with the minority of the child: and the honour due from a child, places in the parents a perpetual right to respect, reverence, support and compliance too, more or less, as the father's care, cost, and kindness in his education, has been more or less. This ends not with minority, but holds in all parts and conditions of a man's life. The want of distinguishing these two powers, viz. that which the father hath in the right of tuition, during minority, and the right of honour all his life, may perhaps have caused a great part of the mistakes about this matter: for to

speaking properly of them, the first of these is rather the privilege of children, and duty of parents, than any prerogative of paternal power. The nourishment and education of their children is a charge so incumbent on parents for their children's good, that nothing can absolve them from taking care of it: and though the power of commanding and chastising them go along with it, yet God hath woven into the principles of human nature such a tenderness for their off-spring, that there is little fear that parents should use their power with too much rigour; the excess is seldom on the severe side, the strong bias of nature drawing the other way. And therefore God almighty when he would express his gentle dealing with the Israelites, he tells them, that though he chastened them, he chastened them as a man chastens his son, Deut. viii. 5. i.e. with tenderness and affection, and kept them under no severer discipline than what was absolutely best for them, and had been less kindness to have slackened. This is that power to which children are commanded obedience, that the pains and care of their parents may not be increased, or ill rewarded.

Sect. 68. On the other side, honour and support, all that which gratitude requires to return for the benefits received by and from them, is the indispensable duty of the child, and the proper privilege of the parents. This is intended for the parents advantage, as the other is for the child's; though education, the parents duty, seems to have most power, because the ignorance and infirmities of childhood stand in need of restraint and correction; which is a visible exercise of rule, and a kind of dominion. And that duty which is comprehended in the word honour, requires less obedience, though the obligation be stronger on grown, than younger children: for who can think the command, Children obey your parents, requires in a man, that has children of his own, the same submission to his father, as it does in his yet young children to him; and that by this precept he were bound to obey all his father's commands, if, out of a conceit of authority, he should have the indiscretion to treat him still as a boy?

Sect. 69. The first part then of paternal power, or rather duty, which is education, belongs so to the father, that it terminates at a certain season; when the business of education is over, it ceases of itself, and is also alienable before: for a man may put the tuition of his son in other hands; and he that has made his son an apprentice to another, has discharged him, during that time, of a great part of his obedience both to himself and to his

mother. But all the duty of honour, the other part, remains never the less entire to them; nothing can cancel that: it is so inseparable from them both, that the father's authority cannot dispossess the mother of this right, nor can any man discharge his son from honouring her that bore him. But both these are very far from a power to make laws, and enforcing them with penalties, that may reach estate, liberty, limbs and life. The power of commanding ends with nonage; and though, after that, honour and respect, support and defence, and whatsoever gratitude can oblige a man to, for the highest benefits he is naturally capable of, be always due from a son to his parents; yet all this puts no scepter into the father's hand, no sovereign power of commanding. He has no dominion over his son's property, or actions; nor any right, that his will should prescribe to his son's in all things; however it may become his son in many things, not very inconvenient to him and his family, to pay a deference to it.

Sect. 70. A man may owe honour and respect to an ancient, or wise man; defence to his child or friend; relief and support to the distressed; and gratitude to a benefactor, to such a degree, that all he has, all he can do, cannot sufficiently pay it: but all these give no authority, no right to any one, of making laws over him from whom they are owing. And it is plain, all this is due not only to the bare title of father; not only because, as has been said, it is owing to the mother too; but because these obligations to parents, and the degrees of what is required of children, may be varied by the different care and kindness, trouble and expence, which is often employed upon one child more than another.

Sect. 71. This shews the reason how it comes to pass, that parents in societies, where they themselves are subjects, retain a power over their children, and have as much right to their subjection, as those who are in the state of nature. Which could not possibly be, if all political power were only paternal, and that in truth they were one and the same thing: for then, all paternal power being in the prince, the subject could naturally have none of it. But these two powers, political and paternal, are so perfectly distinct and separate; are built upon so different foundations, and given to so different ends, that every subject that is a father, has as much a paternal power over his children, as the prince has over his: and every prince, that has parents, owes them as much filial duty and obedience, as the meanest of his subjects

do to their's; and can therefore contain not any part or degree of that kind of dominion, which a prince or magistrate has over his subject.

Sect. 72. Though the obligation on the parents to bring up their children, and the obligation on children to honour their parents, contain all the power on the one hand, and submission on the other, which are proper to this relation, yet there is another power ordinarily in the father, whereby he has a tie on the obedience of his children; which tho' it be common to him with other men, yet the occasions of shewing it, almost constantly happening to fathers in their private families, and the instances of it elsewhere being rare, and less taken notice of, it passes in the world for a part of paternal jurisdiction. And this is the power men generally have to bestow their estates on those who please them best; the possession of the father being the expectation and inheritance of the children, ordinarily in certain proportions, according to the law and custom of each country; yet it is commonly in the father's power to bestow it with a more sparing or liberal hand, according as the behaviour of this or that child hath comported with his will and humour.

Sect. 73. This is no small tie on the obedience of children: and there being always annexed to the enjoyment of land, a submission to the government of the country, of which that land is a part; it has been commonly supposed, that a father could oblige his posterity to that government, of which he himself was a subject, and that his compact held them; whereas, it being only a necessary condition annexed to the land, and the inheritance of an estate which is under that government, reaches only those who will take it on that condition, and so is no natural tie or engagement, but a voluntary submission: for every man's children being by nature as free as himself, or any of his ancestors ever were, may, whilst they are in that freedom, choose what society they will join themselves to, what commonwealth they will put themselves under. But if they will enjoy the inheritance of their ancestors, they must take it on the same terms their ancestors had it, and submit to all the conditions annexed to such a possession. By this power indeed fathers oblige their children to obedience to themselves, even when they are past minority, and most commonly too subject them to this or that political power: but neither of these by any peculiar right of fatherhood, but by the reward they have in their hands to enforce and recompence such a compliance; and is no more power than what a French man has over an

English man, who by the hopes of an estate he will leave him, will certainly have a strong tie on his obedience: and if, when it is left him, he will enjoy it, he must certainly take it upon the conditions annexed to the possession of land in that country where it lies, whether it be France or England.

Sect. 74. To conclude then, tho' the father's power of commanding extends no farther than the minority of his children, and to a degree only fit for the discipline and government of that age; and tho' that honour and respect, and all that which the Latins called piety, which they indispensably owe to their parents all their life-time, and in all estates, with all that support and defence is due to them, gives the father no power of governing, i.e. making laws and enacting penalties on his children; though by all this he has no dominion over the property or actions of his son: yet it is obvious to conceive how easy it was, in the first ages of the world, and in places still, where the thinness of people gives families leave to separate into unpossessed quarters, and they have room to remove or plant themselves in yet vacant habitations, for the father of the family to become the prince of it;\* he had been a ruler from the beginning of the infancy of his children: and since without some government it would be hard for them to live together, it was likeliest it should, by the express or tacit consent of the children when they were grown up, be in the father, where it seemed without any change barely to continue; when indeed nothing more was required to it, than the permitting the father to exercise alone, in his family, that executive power of the law of nature, which every free man naturally hath, and by that permission resigning up to him a monarchical power, whilst they remained in it. But that this was not by any paternal right, but only by the consent of his children, is evident from hence, that no body doubts, but if a stranger, whom chance or business had brought to his family, had there killed any of his children, or committed any other fact, he might condemn and put him to death, or other-wise have punished him, as well as any of his children; which it was impossible he should do by virtue of any paternal authority over one who was not his child, but by virtue of that executive power of the law of nature, which, as a man, he had a right to: and he alone could punish him in his family, where the respect of his children had laid by the exercise of such a power, to give way to the dignity and authority they were willing should remain in him, above the rest of his family.

(\*It is no improbable opinion therefore, which the archphilosopher was of, that the chief person in every household was always, as it were, a king: so when numbers of households joined themselves in civil societies together, kings were the first kind of governors amongst them, which is also, as it seemeth, the reason why the name of fathers continued still in them, who, of fathers, were made rulers; as also the ancient custom of governors to do as Melchizedec, and being kings, to exercise the office of priests, which fathers did at the first, grew perhaps by the same occasion. Howbeit, this is not the only kind of regiment that has been received in the world. The inconveniences of one kind have caused sundry others to be devised; so that in a word, all public regiment, of what kind soever, seemeth evidently to have risen from the deliberate advice, consultation and composition between men, judging it convenient and behoveful; there being no impossibility in nature considered by itself, but that man might have lived without any public regiment, Hooker's Eccl. Pol. lib. i. sect. 10.)

Sect. 75. Thus it was easy, and almost natural for children, by a tacit, and scarce avoidable consent, to make way for the father's authority and government. They had been accustomed in their childhood to follow his direction, and to refer their little differences to him, and when they were men, who fitter to rule them? Their little properties, and less covetousness, seldom afforded greater controversies; and when any should arise, where could they have a fitter umpire than he, by whose care they had every one been sustained and brought up, and who had a tenderness for them all? It is no wonder that they made no distinction betwixt minority and full age; nor looked after one and twenty, or any other age that might make them the free disposers of themselves and fortunes, when they could have no desire to be out of their pupilage: the government they had been under, during it, continued still to be more their protection than restraint; and they could no where find a greater security to their peace, liberties, and fortunes, than in the rule of a father.

Sect. 76. Thus the natural fathers of families, by an insensible change, became the politic monarchs of them too: and as they chanced to live long, and leave able and worthy heirs, for several successions, or otherwise; so they laid the foundations of hereditary, or elective kingdoms, under several constitutions and manners, according as chance, contrivance, or occasions happened to mould them. But if princes have their titles in their fathers

right, and it be a sufficient proof of the natural right of fathers to political authority, because they commonly were those in whose hands we find, de facto, the exercise of government: I say, if this argument be good, it will as strongly prove, that all princes, nay princes only, ought to be priests, since it is as certain, that in the beginning, the father of the family was priest, as that he was ruler in his own household.

---

## **CHAPTER. VII.**

### **OF POLITICAL OR CIVIL SOCIETY.**

Sect. 77. GOD having made man such a creature, that in his own judgment, it was not good for him to be alone, put him under strong obligations of necessity, convenience, and inclination to drive him into society, as well as fitted him with understanding and language to continue and enjoy it. The first society was between man and wife, which gave beginning to that between parents and children; to which, in time, that between master and servant came to be added: and though all these might, and commonly did meet together, and make up but one family, wherein the master or mistress of it had some sort of rule proper to a family; each of these, or all together, came short of political society, as we shall see, if we consider the different ends, ties, and bounds of each of these.

Sect. 78. Conjugal society is made by a voluntary compact between man and woman; and tho' it consist chiefly in such a communion and right in one another's bodies as is necessary to its chief end, procreation; yet it draws with it mutual support and assistance, and a communion of interests too, as necessary not only to unite their care and affection, but also necessary to their common off-spring, who have a right to be nourished, and maintained by them, till they are able to provide for themselves.

Sect. 79. For the end of conjunction, between male and female, being not barely procreation, but the continuation of the species; this conjunction betwixt male and female ought to last, even after procreation, so long as is necessary to the nourishment and support of the young ones, who are to be sustained by those that got them, till they are able to shift and provide for themselves. This rule, which the infinite wise maker hath set to the works of his hands, we find the inferior creatures steadily obey. In those viviparous animals which feed on grass, the conjunction between male and female lasts no longer than the very act of copulation; because the teat of the dam being sufficient to nourish the young, till it be able to feed on grass, the male only begets, but concerns not himself for the female or young, to whose sustenance he can contribute nothing. But in beasts of prey the conjunction lasts longer: because the dam not being able well to subsist herself, and nourish her numerous off-spring by her own prey alone, a more laborious, as well as more dangerous way of living, than by feeding on grass, the assistance of the male is necessary to the maintenance of their common family, which cannot subsist till they are able to prey for themselves, but by the joint care of male and female. The same is to be observed in all birds, (except some domestic ones, where plenty of food excuses the cock from feeding, and taking care of the young brood) whose young needing food in the nest, the cock and hen continue mates, till the young are able to use their wing, and provide for themselves.

Sect. 80. And herein I think lies the chief, if not the only reason, why the male and female in mankind are tied to a longer conjunction than other creatures, viz. because the female is capable of conceiving, and de facto is commonly with child again, and brings forth too a new birth, long before the former is out of a dependency for support on his parents help, and able to shift for himself, and has all the assistance is due to him from his parents: whereby the father, who is bound to take care for those he hath begot, is under an obligation to continue in conjugal society with the same woman longer than other creatures, whose young being able to subsist of themselves, before the time of procreation returns again, the conjugal bond dissolves of itself, and they are at liberty, till Hymen at his usual anniversary season summons them again to chuse new mates. Wherein one cannot but admire the wisdom of the great Creator, who having given to man foresight, and an ability to lay up for the future, as well as to supply

the present necessity, hath made it necessary, that society of man and wife should be more lasting, than of male and female amongst other creatures; that so their industry might be encouraged, and their interest better united, to make provision and lay up goods for their common issue, which uncertain mixture, or easy and frequent solutions of conjugal society would mightily disturb.

Sect. 81. But tho' these are ties upon mankind, which make the conjugal bonds more firm and lasting in man, than the other species of animals; yet it would give one reason to enquire, why this compact, where procreation and education are secured, and inheritance taken care for, may not be made determinable, either by consent, or at a certain time, or upon certain conditions, as well as any other voluntary compacts, there being no necessity in the nature of the thing, nor to the ends of it, that it should always be for life; I mean, to such as are under no restraint of any positive law, which ordains all such contracts to be perpetual.

Sect. 82. But the husband and wife, though they have but one common concern, yet having different understandings, will unavoidably sometimes have different wills too; it therefore being necessary that the last determination, i. e. the rule, should be placed somewhere; it naturally falls to the man's share, as the abler and the stronger. But this reaching but to the things of their common interest and property, leaves the wife in the full and free possession of what by contract is her peculiar right, and gives the husband no more power over her life than she has over his; the power of the husband being so far from that of an absolute monarch, that the wife has in many cases a liberty to separate from him, where natural right, or their contract allows it; whether that contract be made by themselves in the state of nature, or by the customs or laws of the country they live in; and the children upon such separation fall to the father or mother's lot, as such contract does determine.

Sect. 83. For all the ends of marriage being to be obtained under politic government, as well as in the state of nature, the civil magistrate doth not abridge the right or power of either naturally necessary to those ends, viz. procreation and mutual support and assistance whilst they are together; but only decides any controversy that may arise between man and wife about them. If it were otherwise, and that absolute sovereignty and power of life

and death naturally belonged to the husband, and were necessary to the society between man and wife, there could be no matrimony in any of those countries where the husband is allowed no such absolute authority. But the ends of matrimony requiring no such power in the husband, the condition of conjugal society put it not in him, it being not at all necessary to that state. Conjugal society could subsist and attain its ends without it; nay, community of goods, and the power over them, mutual assistance and maintenance, and other things belonging to conjugal society, might be varied and regulated by that contract which unites man and wife in that society, as far as may consist with procreation and the bringing up of children till they could shift for themselves; nothing being necessary to any society, that is not necessary to the ends for which it is made.

Sect. 84. The society betwixt parents and children, and the distinct rights and powers belonging respectively to them, I have treated of so largely, in the foregoing chapter, that I shall not here need to say any thing of it. And I think it is plain, that it is far different from a politic society.

Sect. 85. Master and servant are names as old as history, but given to those of far different condition; for a freeman makes himself a servant to another, by selling him, for a certain time, the service he undertakes to do, in exchange for wages he is to receive: and though this commonly puts him into the family of his master, and under the ordinary discipline thereof; yet it gives the master but a temporary power over him, and no greater than what is contained in the contract between them. But there is another sort of servants, which by a peculiar name we call slaves, who being captives taken in a just war, are by the right of nature subjected to the absolute dominion and arbitrary power of their masters. These men having, as I say, forfeited their lives, and with it their liberties, and lost their estates; and being in the state of slavery, not capable of any property, cannot in that state be considered as any part of civil society; the chief end whereof is the preservation of property.

Sect. 86. Let us therefore consider a master of a family with all these subordinate relations of wife, children, servants, and slaves, united under the domestic rule of a family; which, what resemblance soever it may have in its order, offices, and number too, with a little commonwealth, yet is very far from it, both in its constitution, power and end: or if it must be thought a

monarchy, and the paterfamilias the absolute monarch in it, absolute monarchy will have but a very shattered and short power, when it is plain, by what has been said before, that the master of the family has a very distinct and differently limited power, both as to time and extent, over those several persons that are in it; for excepting the slave (and the family is as much a family, and his power as paterfamilias as great, whether there be any slaves in his family or no) he has no legislative power of life and death over any of them, and none too but what a mistress of a family may have as well as he. And he certainly can have no absolute power over the whole family, who has but a very limited one over every individual in it. But how a family, or any other society of men, differ from that which is properly political society, we shall best see, by considering wherein political society itself consists.

Sect. 87. Man being born, as has been proved, with a title to perfect freedom, and an uncontrouled enjoyment of all the rights and privileges of the law of nature, equally with any other man, or number of men in the world, hath by nature a power, not only to preserve his property, that is, his life, liberty and estate, against the injuries and attempts of other men; but to judge of, and punish the breaches of that law in others, as he is persuaded the offence deserves, even with death itself, in crimes where the heinousness of the fact, in his opinion, requires it. But because no political society can be, nor subsist, without having in itself the power to preserve the property, and in order thereunto, punish the offences of all those of that society; there, and there only is political society, where every one of the members hath quitted this natural power, resigned it up into the hands of the community in all cases that exclude him not from appealing for protection to the law established by it. And thus all private judgment of every particular member being excluded, the community comes to be umpire, by settled standing rules, indifferent, and the same to all parties; and by men having authority from the community, for the execution of those rules, decides all the differences that may happen between any members of that society concerning any matter of right; and punishes those offences which any member hath committed against the society, with such penalties as the law has established: whereby it is easy to discern, who are, and who are not, in political society together. Those who are united into one body, and have a common established law and judicature to appeal to, with authority to

decide controversies between them, and punish offenders, are in civil society one with another: but those who have no such common appeal, I mean on earth, are still in the state of nature, each being, where there is no other, judge for himself, and executioner; which is, as I have before shewed it, the perfect state of nature.

Sect. 88. And thus the commonwealth comes by a power to set down what punishment shall belong to the several transgressions which they think worthy of it, committed amongst the members of that society, (which is the power of making laws) as well as it has the power to punish any injury done unto any of its members, by any one that is not of it, (which is the power of war and peace;) and all this for the preservation of the property of all the members of that society, as far as is possible. But though every man who has entered into civil society, and is become a member of any commonwealth, has thereby quitted his power to punish offences, against the law of nature, in prosecution of his own private judgment, yet with the judgment of offences, which he has given up to the legislative in all cases, where he can appeal to the magistrate, he has given a right to the commonwealth to employ his force, for the execution of the judgments of the commonwealth, whenever he shall be called to it; which indeed are his own judgments, they being made by himself, or his representative. And herein we have the original of the legislative and executive power of civil society, which is to judge by standing laws, how far offences are to be punished, when committed within the commonwealth; and also to determine, by occasional judgments founded on the present circumstances of the fact, how far injuries from without are to be vindicated; and in both these to employ all the force of all the members, when there shall be need.

Sect. 89. Where-ever therefore any number of men are so united into one society, as to quit every one his executive power of the law of nature, and to resign it to the public, there and there only is a political, or civil society. And this is done, where-ever any number of men, in the state of nature, enter into society to make one people, one body politic, under one supreme government; or else when any one joins himself to, and incorporates with any government already made: for hereby he authorizes the society, or which is all one, the legislative thereof, to make laws for him, as the public good of the society shall require; to the execution whereof, his own assistance (as to his own decrees) is due. And this puts men out of a state of

nature into that of a commonwealth, by setting up a judge on earth, with authority to determine all the controversies, and redress the injuries that may happen to any member of the commonwealth; which judge is the legislative, or magistrates appointed by it. And where-ever there are any number of men, however associated, that have no such decisive power to appeal to, there they are still in the state of nature.

Sect. 90. Hence it is evident, that absolute monarchy, which by some men is counted the only government in the world, is indeed inconsistent with civil society, and so can be no form of civil-government at all: for the end of civil society, being to avoid, and remedy those inconveniencies of the state of nature, which necessarily follow from every man's being judge in his own case, by setting up a known authority, to which every one of that society may appeal upon any injury received, or controversy that may arise, and which every one of the society ought to obey;\* where-ever any persons are, who have not such an authority to appeal to, for the decision of any difference between them, there those persons are still in the state of nature; and so is every absolute prince, in respect of those who are under his dominion.

(\*The public power of all society is above every soul contained in the same society; and the principal use of that power is, to give laws unto all that are under it, which laws in such cases we must obey, unless there be reason shewed which may necessarily enforce, that the law of reason, or of God, doth enjoin the contrary, Hook. Eccl. Pol. l. i. sect. 16.)

Sect. 91. For he being supposed to have all, both legislative and executive power in himself alone, there is no judge to be found, no appeal lies open to any one, who may fairly, and indifferently, and with authority decide, and from whose decision relief and redress may be expected of any injury or inconviency, that may be suffered from the prince, or by his order: so that such a man, however intitled, Czar, or Grand Seignior, or how you please, is as much in the state of nature, with all under his dominion, as he is with the rest of mankind: for where-ever any two men are, who have no standing rule, and common judge to appeal to on earth, for the determination of controversies of right betwixt them, there they are still in the state of\* nature, and under all the inconveniencies of it, with only this woful difference to the subject, or rather slave of an absolute prince: that whereas,

in the ordinary state of nature, he has a liberty to judge of his right, and according to the best of his power, to maintain it; now, whenever his property is invaded by the will and order of his monarch, he has not only no appeal, as those in society ought to have, but as if he were degraded from the common state of rational creatures, is denied a liberty to judge of, or to defend his right; and so is exposed to all the misery and inconveniencies, that a man can fear from one, who being in the unrestrained state of nature, is yet corrupted with flattery, and armed with power.

(\*To take away all such mutual grievances, injuries and wrongs, i.e. such as attend men in the state of nature, there was no way but only by growing into composition and agreement amongst themselves, by ordaining some kind of government public, and by yielding themselves subject thereunto, that unto whom they granted authority to rule and govern, by them the peace, tranquillity and happy estate of the rest might be procured. Men always knew that where force and injury was offered, they might be defenders of themselves; they knew that however men may seek their own commodity, yet if this were done with injury unto others, it was not to be suffered, but by all men, and all good means to be withstood. Finally, they knew that no man might in reason take upon him to determine his own right, and according to his own determination proceed in maintenance thereof, in as much as every man is towards himself, and them whom he greatly affects, partial; and therefore that strifes and troubles would be endless, except they gave their common consent, all to be ordered by some, whom they should agree upon, without which consent there would be no reason that one man should take upon him to be lord or judge over another, Hooker's Eccl. Pol. l. i. sect. 10.)

Sect. 92. For he that thinks absolute power purifies men's blood, and corrects the baseness of human nature, need read but the history of this, or any other age, to be convinced of the contrary. He that would have been insolent and injurious in the woods of America, would not probably be much better in a throne; where perhaps learning and religion shall be found out to justify all that he shall do to his subjects, and the sword presently silence all those that dare question it: for what the protection of absolute monarchy is, what kind of fathers of their countries it makes princes to be and to what a degree of happiness and security it carries civil society, where

this sort of government is grown to perfection, he that will look into the late relation of Ceylon, may easily see.

Sect. 93. In absolute monarchies indeed, as well as other governments of the world, the subjects have an appeal to the law, and judges to decide any controversies, and restrain any violence that may happen betwixt the subjects themselves, one amongst another. This every one thinks necessary, and believes he deserves to be thought a declared enemy to society and mankind, who should go about to take it away. But whether this be from a true love of mankind and society, and such a charity as we owe all one to another, there is reason to doubt: for this is no more than what every man, who loves his own power, profit, or greatness, may and naturally must do, keep those animals from hurting, or destroying one another, who labour and drudge only for his pleasure and advantage; and so are taken care of, not out of any love the master has for them, but love of himself, and the profit they bring him: for if it be asked, what security, what fence is there, in such a state, against the violence and oppression of this absolute ruler? the very question can scarce be borne. They are ready to tell you, that it deserves death only to ask after safety. Betwixt subject and subject, they will grant, there must be measures, laws and judges, for their mutual peace and security: but as for the ruler, he ought to be absolute, and is above all such circumstances; because he has power to do more hurt and wrong, it is right when he does it. To ask how you may be guarded from harm, or injury, on that side where the strongest hand is to do it, is presently the voice of faction and rebellion: as if when men quitting the state of nature entered into society, they agreed that all of them but one, should be under the restraint of laws, but that he should still retain all the liberty of the state of nature, increased with power, and made licentious by impunity. This is to think, that men are so foolish, that they take care to avoid what mischiefs may be done them by pole-cats, or foxes; but are content, nay, think it safety, to be devoured by lions.

Sect. 94. But whatever flatterers may talk to amuse people's understandings, it hinders not men from feeling; and when they perceive, that any man, in what station soever, is out of the bounds of the civil society which they are of, and that they have no appeal on earth against any harm, they may receive from him, they are apt to think themselves in the state of nature, in respect of him whom they find to be so; and to take care, as soon

as they can, to have that safety and security in civil society, for which it was first instituted, and for which only they entered into it. And therefore, though perhaps at first, (as shall be shewed more at large hereafter in the following part of this discourse) some one good and excellent man having got a pre-eminency amongst the rest, had this deference paid to his goodness and virtue, as to a kind of natural authority, that the chief rule, with arbitration of their differences, by a tacit consent devolved into his hands, without any other caution, but the assurance they had of his uprightness and wisdom; yet when time, giving authority, and (as some men would persuade us) sacredness of customs, which the negligent, and unforeseeing innocence of the first ages began, had brought in successors of another stamp, the people finding their properties not secure under the government, as then it was, (whereas government has no other end but the preservation of\* property) could never be safe nor at rest, nor think themselves in civil society, till the legislature was placed in collective bodies of men, call them senate, parliament, or what you please. By which means every single person became subject, equally with other the meanest men, to those laws, which he himself, as part of the legislative, had established; nor could any one, by his own authority; avoid the force of the law, when once made; nor by any pretence of superiority plead exemption, thereby to license his own, or the miscarriages of any of his dependents.\*\* No man in civil society can be exempted from the laws of it: for if any man may do what he thinks fit, and there be no appeal on earth, for redress or security against any harm he shall do; I ask, whether he be not perfectly still in the state of nature, and so can be no part or member of that civil society; unless any one will say, the state of nature and civil society are one and the same thing, which I have never yet found any one so great a patron of anarchy as to affirm.

(\*At the first, when some certain kind of regiment was once appointed, it may be that nothing was then farther thought upon for the manner of governing, but all permitted unto their wisdom and discretion, which were to rule, till by experience they found this for all parts very inconvenient, so as the thing which they had devised for a remedy, did indeed but increase the sore, which it should have cured. They saw, that to live by one man's will, became the cause of all men's misery. This constrained them to come

unto laws, wherein all men might see their duty beforehand, and know the penalties of transgressing them. Hooker's Eccl. Pol. l. i. sect. 10.)

(\*\*Civil law being the act of the whole body politic, doth therefore over-rule each several part of the same body. Hooker, *ibid.*)

---

## **CHAPTER. VIII.**

### **OF THE BEGINNING OF POLITICAL SOCIETIES.**

Sect. 95. MEN being, as has been said, by nature, all free, equal, and independent, no one can be put out of this estate, and subjected to the political power of another, without his own consent. The only way whereby any one divests himself of his natural liberty, and puts on the bonds of civil society, is by agreeing with other men to join and unite into a community for their comfortable, safe, and peaceable living one amongst another, in a secure enjoyment of their properties, and a greater security against any, that are not of it. This any number of men may do, because it injures not the freedom of the rest; they are left as they were in the liberty of the state of nature. When any number of men have so consented to make one community or government, they are thereby presently incorporated, and make one body politic, wherein the majority have a right to act and conclude the rest.

Sect. 96. For when any number of men have, by the consent of every individual, made a community, they have thereby made that community one body, with a power to act as one body, which is only by the will and determination of the majority: for that which acts any community, being only the consent of the individuals of it, and it being necessary to that which is one body to move one way; it is necessary the body should move that way whither the greater force carries it, which is the consent of the majority: or else it is impossible it should act or continue one body, one

community, which the consent of every individual that united into it, agreed that it should; and so every one is bound by that consent to be concluded by the majority. And therefore we see, that in assemblies, impowered to act by positive laws, where no number is set by that positive law which impowers them, the act of the majority passes for the act of the whole, and of course determines, as having, by the law of nature and reason, the power of the whole.

Sect. 97. And thus every man, by consenting with others to make one body politic under one government, puts himself under an obligation, to every one of that society, to submit to the determination of the majority, and to be concluded by it; or else this original compact, whereby he with others incorporates into one society, would signify nothing, and be no compact, if he be left free, and under no other ties than he was in before in the state of nature. For what appearance would there be of any compact? what new engagement if he were no farther tied by any decrees of the society, than he himself thought fit, and did actually consent to? This would be still as great a liberty, as he himself had before his compact, or any one else in the state of nature hath, who may submit himself, and consent to any acts of it if he thinks fit.

Sect. 98. For if the consent of the majority shall not, in reason, be received as the act of the whole, and conclude every individual; nothing but the consent of every individual can make any thing to be the act of the whole: but such a consent is next to impossible ever to be had, if we consider the infirmities of health, and avocations of business, which in a number, though much less than that of a commonwealth, will necessarily keep many away from the public assembly. To which if we add the variety of opinions, and contrariety of interests, which unavoidably happen in all collections of men, the coming into society upon such terms would be only like Cato's coming into the theatre, only to go out again. Such a constitution as this would make the mighty Leviathan of a shorter duration, than the feeblest creatures, and not let it outlast the day it was born in: which cannot be supposed, till we can think, that rational creatures should desire and constitute societies only to be dissolved: for where the majority cannot conclude the rest, there they cannot act as one body, and consequently will be immediately dissolved again.

Sect. 99. Whosoever therefore out of a state of nature unite into a community, must be understood to give up all the power, necessary to the ends for which they unite into society, to the majority of the community, unless they expressly agreed in any number greater than the majority. And this is done by barely agreeing to unite into one political society, which is all the compact that is, or needs be, between the individuals, that enter into, or make up a commonwealth. And thus that, which begins and actually constitutes any political society, is nothing but the consent of any number of freemen capable of a majority to unite and incorporate into such a society. And this is that, and that only, which did, or could give beginning to any lawful government in the world.

Sect. 100. To this I find two objections made. First, That there are no instances to be found in story, of a company of men independent, and equal one amongst another, that met together, and in this way began and set up a government.

Secondly, It is impossible of right, that men should do so, because all men being born under government, they are to submit to that, and are not at liberty to begin a new one.

Sect. 101. To the first there is this to answer, That it is not at all to be wondered, that history gives us but a very little account of men, that lived together in the state of nature. The inconveniences of that condition, and the love and want of society, no sooner brought any number of them together, but they presently united and incorporated, if they designed to continue together. And if we may not suppose men ever to have been in the state of nature, because we hear not much of them in such a state, we may as well suppose the armies of Salmanasser or Xerxes were never children, because we hear little of them, till they were men, and embodied in armies. Government is every where antecedent to records, and letters seldom come in amongst a people till a long continuation of civil society has, by other more necessary arts, provided for their safety, ease, and plenty: and then they begin to look after the history of their founders, and search into their original, when they have outlived the memory of it: for it is with commonwealths as with particular persons, they are commonly ignorant of their own births and infancies: and if they know any thing of their original, they are beholden for it, to the accidental records that others have kept of it.

And those that we have, of the beginning of any polities in the world, excepting that of the Jews, where God himself immediately interposed, and which favours not at all paternal dominion, are all either plain instances of such a beginning as I have mentioned, or at least have manifest footsteps of it.

Sect. 102. He must shew a strange inclination to deny evident matter of fact, when it agrees not with his hypothesis, who will not allow, that the beginning of Rome and Venice were by the uniting together of several men free and independent one of another, amongst whom there was no natural superiority or subjection. And if Josephus Acosta's word may be taken, he tells us, that in many parts of America there was no government at all.

There are great and apparent conjectures, says he, that these men, speaking of those of Peru, for a long time had neither kings nor commonwealths, but lived in troops, as they do this day in Florida, the Cheriquanas, those of Brazil, and many other nations, which have no certain kings, but as occasion is offered, in peace or war, they choose their captains as they please, 1. i. c. 25.

If it be said, that every man there was born subject to his father, or the head of his family; that the subjection due from a child to a father took not away his freedom of uniting into what political society he thought fit, has been already proved. But be that as it will, these men, it is evident, were actually free; and whatever superiority some politicians now would place in any of them, they themselves claimed it not, but by consent were all equal, till by the same consent they set rulers over themselves. So that their politic societies all began from a voluntary union, and the mutual agreement of men freely acting in the choice of their governors, and forms of government.

Sect. 103. And I hope those who went away from Sparta with Palantus, mentioned by Justin, 1. iii. c. 4. will be allowed to have been freemen independent one of another, and to have set up a government over themselves, by their own consent. Thus I have given several examples, out of history, of people free and in the state of nature, that being met together incorporated and began a commonwealth. And if the want of such instances be an argument to prove that government were not, nor could not be so

begun, I suppose the contenders for paternal empire were better let it alone, than urge it against natural liberty: for if they can give so many instances, out of history, of governments begun upon paternal right, I think (though at best an argument from what has been, to what should of right be, has no great force) one might, without any great danger, yield them the cause. But if I might advise them in the case, they would do well not to search too much into the original of governments, as they have begun de facto, lest they should find, at the foundation of most of them, something very little favourable to the design they promote, and such a power as they contend for.

Sect. 104. But to conclude, reason being plain on our side, that men are naturally free, and the examples of history shewing, that the governments of the world, that were begun in peace, had their beginning laid on that foundation, and were made by the consent of the people; there can be little room for doubt, either where the right is, or what has been the opinion, or practice of mankind, about the first erecting of governments.

Sect. 105. I will not deny, that if we look back as far as history will direct us, towards the original of commonwealths, we shall generally find them under the government and administration of one man. And I am also apt to believe, that where a family was numerous enough to subsist by itself, and continued entire together, without mixing with others, as it often happens, where there is much land, and few people, the government commonly began in the father: for the father having, by the law of nature, the same power with every man else to punish, as he thought fit, any offences against that law, might thereby punish his transgressing children, even when they were men, and out of their pupillage; and they were very likely to submit to his punishment, and all join with him against the offender, in their turns, giving him thereby power to execute his sentence against any transgression, and so in effect make him the law-maker, and governor over all that remained in conjunction with his family. He was fittest to be trusted; paternal affection secured their property and interest under his care; and the custom of obeying him, in their childhood, made it easier to submit to him, rather than to any other. If therefore they must have one to rule them, as government is hardly to be avoided amongst men that live together; who so likely to be the man as he that was their common father; unless negligence, cruelty, or any other defect of mind or body made him unfit for it? But

when either the father died, and left his next heir, for want of age, wisdom, courage, or any other qualities, less fit for rule; or where several families met, and consented to continue together; there, it is not to be doubted, but they used their natural freedom, to set up him, whom they judged the ablest, and most likely, to rule well over them. Conformable hereunto we find the people of America, who (living out of the reach of the conquering swords, and spreading domination of the two great empires of Peru and Mexico) enjoyed their own natural freedom, though, *caeteris paribus*, they commonly prefer the heir of their deceased king; yet if they find him any way weak, or uncapable, they pass him by, and set up the stoutest and bravest man for their ruler.

Sect. 106. Thus, though looking back as far as records give us any account of peopling the world, and the history of nations, we commonly find the government to be in one hand; yet it destroys not that which I affirm, viz. that the beginning of politic society depends upon the consent of the individuals, to join into, and make one society; who, when they are thus incorporated, might set up what form of government they thought fit. But this having given occasion to men to mistake, and think, that by nature government was monarchical, and belonged to the father, it may not be amiss here to consider, why people in the beginning generally pitched upon this form, which though perhaps the father's pre-eminency might, in the first institution of some commonwealths, give a rise to, and place in the beginning, the power in one hand; yet it is plain that the reason, that continued the form of government in a single person, was not any regard, or respect to paternal authority; since all petty monarchies, that is, almost all monarchies, near their original, have been commonly, at least upon occasion, elective.

Sect. 107. First then, in the beginning of things, the father's government of the childhood of those sprung from him, having accustomed them to the rule of one man, and taught them that where it was exercised with care and skill, with affection and love to those under it, it was sufficient to procure and preserve to men all the political happiness they sought for in society. It was no wonder that they should pitch upon, and naturally run into that form of government, which from their infancy they had been all accustomed to; and which, by experience, they had found both easy and safe. To which, if we add, that monarchy being simple, and most obvious to men, whom

neither experience had instructed in forms of government, nor the ambition or insolence of empire had taught to beware of the encroachments of prerogative, or the inconveniences of absolute power, which monarchy in succession was apt to lay claim to, and bring upon them, it was not at all strange, that they should not much trouble themselves to think of methods of restraining any exorbitances of those to whom they had given the authority over them, and of balancing the power of government, by placing several parts of it in different hands. They had neither felt the oppression of tyrannical dominion, nor did the fashion of the age, nor their possessions, or way of living, (which afforded little matter for covetousness or ambition) give them any reason to apprehend or provide against it; and therefore it is no wonder they put themselves into such a frame of government, as was not only, as I said, most obvious and simple, but also best suited to their present state and condition; which stood more in need of defence against foreign invasions and injuries, than of multiplicity of laws. The equality of a simple poor way of living, confining their desires within the narrow bounds of each man's small property, made few controversies, and so no need of many laws to decide them, or variety of officers to superintend the process, or look after the execution of justice, where there were but few trespasses, and few offenders. Since then those, who like one another so well as to join into society, cannot but be supposed to have some acquaintance and friendship together, and some trust one in another; they could not but have greater apprehensions of others, than of one another: and therefore their first care and thought cannot but be supposed to be, how to secure themselves against foreign force. It was natural for them to put themselves under a frame of government which might best serve to that end, and chuse the wisest and bravest man to conduct them in their wars, and lead them out against their enemies, and in this chiefly be their ruler.

Sect. 108. Thus we see, that the kings of the Indians in America, which is still a pattern of the first ages in Asia and Europe, whilst the inhabitants were too few for the country, and want of people and money gave men no temptation to enlarge their possessions of land, or contest for wider extent of ground, are little more than generals of their armies; and though they command absolutely in war, yet at home and in time of peace they exercise very little dominion, and have but a very moderate sovereignty, the resolutions of peace and war being ordinarily either in the people, or in a

council. Tho' the war itself, which admits not of plurality of governors, naturally devolves the command into the king's sole authority.

Sect. 109. And thus in Israel itself, the chief business of their judges, and first kings, seems to have been to be captains in war, and leaders of their armies; which (besides what is signified by going out and in before the people, which was, to march forth to war, and home again in the heads of their forces) appears plainly in the story of Jephtha. The Ammonites making war upon Israel, the Gileadites in fear send to Jephtha, a bastard of their family whom they had cast off, and article with him, if he will assist them against the Ammonites, to make him their ruler; which they do in these words, And the people made him head and captain over them, Judg. xi. 11. which was, as it seems, all one as to be judge. And he judged Israel, Judg. xii. 7. that is, was their captain-general six years. So when Jotham upbraids the Shechemites with the obligation they had to Gideon, who had been their judge and ruler, he tells them, He fought for you, and adventured his life far, and delivered you out of the hands of Midian, Judg. ix. 17. Nothing mentioned of him but what he did as a general: and indeed that is all is found in his history, or in any of the rest of the judges. And Abimelech particularly is called king, though at most he was but their general. And when, being weary of the ill conduct of Samuel's sons, the children of Israel desired a king, like all the nations to judge them, and to go out before them, and to fight their battles, I. Sam viii. 20. God granting their desire, says to Samuel, I will send thee a man, and thou shalt anoint him to be captain over my people Israel, that he may save my people out of the hands of the Philistines, ix. 16. As if the only business of a king had been to lead out their armies, and fight in their defence; and accordingly at his inauguration pouring a vial of oil upon him, declares to Saul, that the Lord had anointed him to be captain over his inheritance, x. 1. And therefore those, who after Saul's being solemnly chosen and saluted king by the tribes at Mispah, were unwilling to have him their king, made no other objection but this, How shall this man save us? v. 27. as if they should have said, this man is unfit to be our king, not having skill and conduct enough in war, to be able to defend us. And when God resolved to transfer the government to David, it is in these words, But now thy kingdom shall not continue: the Lord hath sought him a man after his own heart, and the Lord hath commanded him to be captain over his people, xiii. 14. As if the whole kingly authority were

nothing else but to be their general: and therefore the tribes who had stuck to Saul's family, and opposed David's reign, when they came to Hebron with terms of submission to him, they tell him, amongst other arguments they had to submit to him as to their king, that he was in effect their king in Saul's time, and therefore they had no reason but to receive him as their king now. Also (say they) in time past, when Saul was king over us, thou wast he that reddest out and broughtest in Israel, and the Lord said unto thee, Thou shalt feed my people Israel, and thou shalt be a captain over Israel.

Sect. 110. Thus, whether a family by degrees grew up into a commonwealth, and the fatherly authority being continued on to the elder son, every one in his turn growing up under it, tacitly submitted to it, and the easiness and equality of it not offending any one, every one acquiesced, till time seemed to have confirmed it, and settled a right of succession by prescription: or whether several families, or the descendants of several families, whom chance, neighbourhood, or business brought together, uniting into society, the need of a general, whose conduct might defend them against their enemies in war, and the great confidence the innocence and sincerity of that poor but virtuous age, (such as are almost all those which begin governments, that ever come to last in the world) gave men one of another, made the first beginners of commonwealths generally put the rule into one man's hand, without any other express limitation or restraint, but what the nature of the thing, and the end of government required: which ever of those it was that at first put the rule into the hands of a single person, certain it is no body was intrusted with it but for the public good and safety, and to those ends, in the infancies of commonwealths, those who had it commonly used it. And unless they had done so, young societies could not have subsisted; without such nursing fathers tender and careful of the public weal, all governments would have sunk under the weakness and infirmities of their infancy, and the prince and the people had soon perished together.

Sect. 111. But though the golden age (before vain ambition, and amor sceleratus habendi, evil concupiscence, had corrupted men's minds into a mistake of true power and honour) had more virtue, and consequently better governors, as well as less vicious subjects, and there was then no stretching prerogative on the one side, to oppress the people; nor consequently on the

other, any dispute about privilege, to lessen or restrain the power of the magistrate, and so no contest betwixt rulers and people about governors or government: yet, when ambition and luxury in future ages\* would retain and increase the power, without doing the business for which it was given; and aided by flattery, taught princes to have distinct and separate interests from their people, men found it necessary to examine more carefully the original and rights of government; and to find out ways to restrain the exorbitances, and prevent the abuses of that power, which they having intrusted in another's hands only for their own good, they found was made use of to hurt them.

(\*At first, when some certain kind of regiment was once approved, it may be nothing was then farther thought upon for the manner of governing, but all permitted unto their wisdom and discretion which were to rule, till by experience they found this for all parts very inconvenient, so as the thing which they had devised for a remedy, did indeed but increase the sore which it should have cured. They saw, that to live by one man's will, became the cause of all men's misery. This constrained them to come unto laws wherein all men might see their duty before hand, and know the penalties of transgressing them. Hooker's Eccl. Pol. l. i. sect. 10.)

Sect. 112. Thus we may see how probable it is, that people that were naturally free, and by their own consent either submitted to the government of their father, or united together out of different families to make a government, should generally put the rule into one man's hands, and chuse to be under the conduct of a single person, without so much as by express conditions limiting or regulating his power, which they thought safe enough in his honesty and prudence; though they never dreamed of monarchy being lure Divino, which we never heard of among mankind, till it was revealed to us by the divinity of this last age; nor ever allowed paternal power to have a right to dominion, or to be the foundation of all government. And thus much may suffice to shew, that as far as we have any light from history, we have reason to conclude, that all peaceful beginnings of government have been laid in the consent of the people. I say peaceful, because I shall have occasion in another place to speak of conquest, which some esteem a way of beginning of governments.

The other objection I find urged against the beginning of polities, in the way I have mentioned, is this, viz.

Sect. 113. That all men being born under government, some or other, it is impossible any of them should ever be free, and at liberty to unite together, and begin a new one, or ever be able to erect a lawful government.

If this argument be good; I ask, how came so many lawful monarchies into the world? for if any body, upon this supposition, can shew me any one man in any age of the world free to begin a lawful monarchy, I will be bound to shew him ten other free men at liberty, at the same time to unite and begin a new government under a regal, or any other form; it being demonstration, that if any one, born under the dominion of another, may be so free as to have a right to command others in a new and distinct empire, every one that is born under the dominion of another may be so free too, and may become a ruler, or subject, of a distinct separate government. And so by this their own principle, either all men, however born, are free, or else there is but one lawful prince, one lawful government in the world. And then they have nothing to do, but barely to shew us which that is; which when they have done, I doubt not but all mankind will easily agree to pay obedience to him.

Sect. 114. Though it be a sufficient answer to their objection, to shew that it involves them in the same difficulties that it doth those they use it against; yet I shall endeavour to discover the weakness of this argument a little farther. All men, say they, are born under government, and therefore they cannot be at liberty to begin a new one. Every one is born a subject to his father, or his prince, and is therefore under the perpetual tie of subjection and allegiance. It is plain mankind never owned nor considered any such natural subjection that they were born in, to one or to the other that tied them, without their own consents, to a subjection to them and their heirs.

Sect. 115. For there are no examples so frequent in history, both sacred and profane, as those of men withdrawing themselves, and their obedience, from the jurisdiction they were born under, and the family or community they were bred up in, and setting up new governments in other places; from whence sprang all that number of petty commonwealths in the beginning of ages, and which always multiplied, as long as there was room enough, till the stronger, or more fortunate, swallowed the weaker; and those great ones

again breaking to pieces, dissolved into lesser dominions. All which are so many testimonies against paternal sovereignty, and plainly prove, that it was not the natural right of the father descending to his heirs, that made governments in the beginning, since it was impossible, upon that ground, there should have been so many little kingdoms; all must have been but only one universal monarchy, if men had not been at liberty to separate themselves from their families, and the government, be it what it will, that was set up in it, and go and make distinct commonwealths and other governments, as they thought fit.

Sect. 116. This has been the practice of the world from its first beginning to this day; nor is it now any more hindrance to the freedom of mankind, that they are born under constituted and ancient polities, that have established laws, and set forms of government, than if they were born in the woods, amongst the unconfined inhabitants, that run loose in them: for those, who would persuade us, that by being born under any government, we are naturally subjects to it, and have no more any title or pretence to the freedom of the state of nature, have no other reason (bating that of paternal power, which we have already answered) to produce for it, but only, because our fathers or progenitors passed away their natural liberty, and thereby bound up themselves and their posterity to a perpetual subjection to the government, which they themselves submitted to. It is true, that whatever engagements or promises any one has made for himself, he is under the obligation of them, but cannot, by any compact whatsoever, bind his children or posterity: for his son, when a man, being altogether as free as the father, any act of the father can no more give away the liberty of the son, than it can of any body else: he may indeed annex such conditions to the land, he enjoyed as a subject of any commonwealth, as may oblige his son to be of that community, if he will enjoy those possessions which were his father's; because that estate being his father's property, he may dispose, or settle it, as he pleases.

Sect. 117. And this has generally given the occasion to mistake in this matter; because commonwealths not permitting any part of their dominions to be dismembered, nor to be enjoyed by any but those of their community, the son cannot ordinarily enjoy the possessions of his father, but under the same terms his father did, by becoming a member of the society; whereby he puts himself presently under the government he finds there established, as much as any other subject of that commonwealth. And thus the consent of freemen, born under government, which only makes them members of it, being given separately in their turns, as each comes to be of age, and not in a multitude together; people take no notice of it, and thinking it not done at all, or not necessary, conclude they are naturally subjects as they are men.

Sect. 118. But, it is plain, governments themselves understand it otherwise; they claim no power over the son, because of that they had over the father; nor look on children as being their subjects, by their fathers

being so. If a subject of England have a child, by an English woman in France, whose subject is he? Not the king of England's; for he must have leave to be admitted to the privileges of it: nor the king of France's; for how then has his father a liberty to bring him away, and breed him as he pleases? and who ever was judged as a traytor or deserter, if he left, or warred against a country, for being barely born in it of parents that were aliens there? It is plain then, by the practice of governments themselves, as well as by the law of right reason, that a child is born a subject of no country or government. He is under his father's tuition and authority, till he comes to age of discretion; and then he is a freeman, at liberty what government he will put himself under, what body politic he will unite himself to: for if an Englishman's son, born in France, be at liberty, and may do so, it is evident there is no tie upon him by his father's being a subject of this kingdom; nor is he bound up by any compact of his ancestors. And why then hath not his son, by the same reason, the same liberty, though he be born any where else? Since the power that a father hath naturally over his children, is the same, where-ever they be born, and the ties of natural obligations, are not bounded by the positive limits of kingdoms and commonwealths.

Sect. 119. Every man being, as has been shewed, naturally free, and nothing being able to put him into subjection to any earthly power, but only his own consent; it is to be considered, what shall be understood to be a sufficient declaration of a man's consent, to make him subject to the laws of any government. There is a common distinction of an express and a tacit consent, which will concern our present case. No body doubts but an express consent, of any man entering into any society, makes him a perfect member of that society, a subject of that government. The difficulty is, what ought to be looked upon as a tacit consent, and how far it binds, i.e. how far any one shall be looked on to have consented, and thereby submitted to any government, where he has made no expressions of it at all. And to this I say, that every man, that hath any possessions, or enjoyment, of any part of the dominions of any government, doth thereby give his tacit consent, and is as far forth obliged to obedience to the laws of that government, during such enjoyment, as any one under it; whether this his possession be of land, to him and his heirs for ever, or a lodging only for a week; or whether it be barely travelling freely on the highway; and in effect, it reaches as far as the very being of any one within the territories of that government.

Sect. 120. To understand this the better, it is fit to consider, that every man, when he at first incorporates himself into any commonwealth, he, by his uniting himself thereunto, annexed also, and submits to the community, those possessions, which he has, or shall acquire, that do not already belong to any other government: for it would be a direct contradiction, for any one to enter into society with others for the securing and regulating of property; and yet to suppose his land, whose property is to be regulated by the laws of the society, should be exempt from the jurisdiction of that government, to which he himself, the proprietor of the land, is a subject. By the same act therefore, whereby any one unites his person, which was before free, to any commonwealth, by the same he unites his possessions, which were before free, to it also; and they become, both of them, person and possession, subject to the government and dominion of that commonwealth, as long as it hath a being. Whoever therefore, from thenceforth, by inheritance, purchase, permission, or otherways, enjoys any part of the land, so annexed to, and under the government of that commonwealth, must take it with the condition it is under; that is, of submitting to the government of the commonwealth, under whose jurisdiction it is, as far forth as any subject of it.

Sect. 121. But since the government has a direct jurisdiction only over the land, and reaches the possessor of it, (before he has actually incorporated himself in the society) only as he dwells upon, and enjoys that; the obligation any one is under, by virtue of such enjoyment, to submit to the government, begins and ends with the enjoyment; so that whenever the owner, who has given nothing but such a tacit consent to the government, will, by donation, sale, or otherwise, quit the said possession, he is at liberty to go and incorporate himself into any other commonwealth; or to agree with others to begin a new one, in *vacuis locis*, in any part of the world, they can find free and unpossessed: whereas he, that has once, by actual agreement, and any express declaration, given his consent to be of any commonwealth, is perpetually and indispensably obliged to be, and remain unalterably a subject to it, and can never be again in the liberty of the state of nature; unless, by any calamity, the government he was under comes to be dissolved; or else by some public act cuts him off from being any longer a member of it.

Sect. 122. But submitting to the laws of any country, living quietly, and enjoying privileges and protection under them, makes not a man a member of that society: this is only a local protection and homage due to and from all those, who, not being in a state of war, come within the territories belonging to any government, to all parts whereof the force of its laws extends. But this no more makes a man a member of that society, a perpetual subject of that commonwealth, than it would make a man a subject to another, in whose family he found it convenient to abide for some time; though, whilst he continued in it, he were obliged to comply with the laws, and submit to the government he found there. And thus we see, that foreigners, by living all their lives under another government, and enjoying the privileges and protection of it, though they are bound, even in conscience, to submit to its administration, as far forth as any denison; yet do not thereby come to be subjects or members of that commonwealth. Nothing can make any man so, but his actually entering into it by positive engagement, and express promise and compact. This is that, which I think, concerning the beginning of political societies, and that consent which makes any one a member of any commonwealth.

---

## **CHAPTER. IX.**

### **OF THE ENDS OF POLITICAL SOCIETY AND GOVERNMENT.**

Sect. 123. IF man in the state of nature be so free, as has been said; if he be absolute lord of his own person and possessions, equal to the greatest, and subject to no body, why will he part with his freedom? why will he give up this empire, and subject himself to the dominion and controul of any other power? To which it is obvious to answer, that though in the state of nature he hath such a right, yet the enjoyment of it is very uncertain, and constantly exposed to the invasion of others: for all being kings as much as he, every man his equal, and the greater part no strict observers of equity and justice, the enjoyment of the property he has in this state is very unsafe,

very unsecure. This makes him willing to quit a condition, which, however free, is full of fears and continual dangers: and it is not without reason, that he seeks out, and is willing to join in society with others, who are already united, or have a mind to unite, for the mutual preservation of their lives, liberties and estates, which I call by the general name, property.

Sect. 124. The great and chief end, therefore, of men's uniting into commonwealths, and putting themselves under government, is the preservation of their property. To which in the state of nature there are many things wanting.

First, There wants an established, settled, known law, received and allowed by common consent to be the standard of right and wrong, and the common measure to decide all controversies between them: for though the law of nature be plain and intelligible to all rational creatures; yet men being biassed by their interest, as well as ignorant for want of study of it, are not apt to allow of it as a law binding to them in the application of it to their particular cases.

Sect. 125. Secondly, In the state of nature there wants a known and indifferent judge, with authority to determine all differences according to the established law: for every one in that state being both judge and executioner of the law of nature, men being partial to themselves, passion and revenge is very apt to carry them too far, and with too much heat, in their own cases; as well as negligence, and unconcernedness, to make them too remiss in other men's.

Sect. 126. Thirdly, In the state of nature there often wants power to back and support the sentence when right, and to give it due execution, They who by any injustice offended, will seldom fail, where they are able, by force to make good their injustice; such resistance many times makes the punishment dangerous, and frequently destructive, to those who attempt it.

Sect. 127. Thus mankind, notwithstanding all the privileges of the state of nature, being but in an ill condition, while they remain in it, are quickly driven into society. Hence it comes to pass, that we seldom find any number of men live any time together in this state. The inconveniencies that they are therein exposed to, by the irregular and uncertain exercise of the power every man has of punishing the transgressions of others, make them take

sanctuary under the established laws of government, and therein seek the preservation of their property. It is this makes them so willingly give up every one his single power of punishing, to be exercised by such alone, as shall be appointed to it amongst them; and by such rules as the community, or those authorized by them to that purpose, shall agree on. And in this we have the original right and rise of both the legislative and executive power, as well as of the governments and societies themselves.

Sect. 128. For in the state of nature, to omit the liberty he has of innocent delights, a man has two powers.

The first is to do whatsoever he thinks fit for the preservation of himself, and others within the permission of the law of nature: by which law, common to them all, he and all the rest of mankind are one community, make up one society, distinct from all other creatures. And were it not for the corruption and viciousness of degenerate men, there would be no need of any other; no necessity that men should separate from this great and natural community, and by positive agreements combine into smaller and divided associations.

The other power a man has in the state of nature, is the power to punish the crimes committed against that law. Both these he gives up, when he joins in a private, if I may so call it, or particular politic society, and incorporates into any commonwealth, separate from the rest of mankind.

Sect. 129. The first power, viz. of doing whatsoever he thought for the preservation of himself, and the rest of mankind, he gives up to be regulated by laws made by the society, so far forth as the preservation of himself, and the rest of that society shall require; which laws of the society in many things confine the liberty he had by the law of nature.

Sect. 130. Secondly, The power of punishing he wholly gives up, and engages his natural force, (which he might before employ in the execution of the law of nature, by his own single authority, as he thought fit) to assist the executive power of the society, as the law thereof shall require: for being now in a new state, wherein he is to enjoy many conveniencies, from the labour, assistance, and society of others in the same community, as well as protection from its whole strength; he is to part also with as much of his natural liberty, in providing for himself, as the good, prosperity, and safety

of the society shall require; which is not only necessary, but just, since the other members of the society do the like.

Sect. 131. But though men, when they enter into society, give up the equality, liberty, and executive power they had in the state of nature, into the hands of the society, to be so far disposed of by the legislative, as the good of the society shall require; yet it being only with an intention in every one the better to preserve himself, his liberty and property; (for no rational creature can be supposed to change his condition with an intention to be worse) the power of the society, or legislative constituted by them, can never be supposed to extend farther, than the common good; but is obliged to secure every one's property, by providing against those three defects above mentioned, that made the state of nature so unsafe and uneasy. And so whoever has the legislative or supreme power of any commonwealth, is bound to govern by established standing laws, promulgated and known to the people, and not by extemporary decrees; by indifferent and upright judges, who are to decide controversies by those laws; and to employ the force of the community at home, only in the execution of such laws, or abroad to prevent or redress foreign injuries, and secure the community from inroads and invasion. And all this to be directed to no other end, but the peace, safety, and public good of the people.

---

## **CHAPTER. X.**

### **OF THE FORMS OF A COMMON-WEALTH.**

Sect. 132. THE majority having, as has been shewed, upon men's first uniting into society, the whole power of the community naturally in them, may employ all that power in making laws for the community from time to time, and executing those laws by officers of their own appointing; and then the form of the government is a perfect democracy: or else may put the power of making laws into the hands of a few select men, and their heirs or

successors; and then it is an oligarchy: or else into the hands of one man, and then it is a monarchy: if to him and his heirs, it is an hereditary monarchy: if to him only for life, but upon his death the power only of nominating a successor to return to them; an elective monarchy. And so accordingly of these the community may make compounded and mixed forms of government, as they think good. And if the legislative power be at first given by the majority to one or more persons only for their lives, or any limited time, and then the supreme power to revert to them again; when it is so reverted, the community may dispose of it again anew into what hands they please, and so constitute a new form of government: for the form of government depending upon the placing the supreme power, which is the legislative, it being impossible to conceive that an inferior power should prescribe to a superior, or any but the supreme make laws, according as the power of making laws is placed, such is the form of the commonwealth.

Sect. 133. By commonwealth, I must be understood all along to mean, not a democracy, or any form of government, but any independent community, which the Latines signified by the word *civitas*, to which the word which best answers in our language, is commonwealth, and most properly expresses such a society of men, which community or city in English does not; for there may be subordinate communities in a government; and city amongst us has a quite different notion from commonwealth: and therefore, to avoid ambiguity, I crave leave to use the word commonwealth in that sense, in which I find it used by king James the first; and I take it to be its genuine signification; which if any body dislike, I consent with him to change it for a better.

---

## CHAPTER. XI.

### OF THE EXTENT OF THE LEGISLATIVE POWER.

Sect. 134. THE great end of men's entering into society, being the enjoyment of their properties in peace and safety, and the great instrument and means of that being the laws established in that society; the first and fundamental positive law of all commonwealths is the establishing of the legislative power; as the first and fundamental natural law, which is to govern even the legislative itself, is the preservation of the society, and (as far as will consist with the public good) of every person in it. This legislative is not only the supreme power of the commonwealth, but sacred and unalterable in the hands where the community have once placed it; nor can any edict of any body else, in what form soever conceived, or by what power soever backed, have the force and obligation of a law, which has not its sanction from that legislative which the public has chosen and appointed: for without this the law could not have that, which is absolutely necessary to its being a law,\* the consent of the society, over whom no body can have a power to make laws, but by their own consent, and by authority received from them; and therefore all the obedience, which by the most solemn ties any one can be obliged to pay, ultimately terminates in this supreme power, and is directed by those laws which it enacts: nor can any oaths to any foreign power whatsoever, or any domestic subordinate power, discharge any member of the society from his obedience to the legislative, acting pursuant to their trust; nor oblige him to any obedience contrary to the laws so enacted, or farther than they do allow; it being ridiculous to imagine one can be tied ultimately to obey any power in the society, which is not the supreme.

(\*The lawful power of making laws to command whole politic societies of men, belonging so properly unto the same intire societies, that for any prince or potentate of what kind soever upon earth, to exercise the same of himself, and not by express commission immediately and personally received from God, or else by authority derived at the first from their consent, upon whose persons they impose laws, it is no better than mere tyranny. Laws they are not therefore which public approbation hath not made so. Hooker's Eccl. Pol. l. i. sect. 10.

Of this point therefore we are to note, that such men naturally have no full and perfect power to command whole politic multitudes of men, therefore utterly without our consent, we could in such sort be at no man's commandment living. And to be commanded we do consent, when that

society, whereof we be a part, hath at any time before consented, without revoking the same after by the like universal agreement. Laws therefore human, of what kind so ever, are available by consent. Ibid.)

Sect. 135. Though the legislative, whether placed in one or more, whether it be always in being, or only by intervals, though it be the supreme power in every commonwealth; yet:

First, It is not, nor can possibly be absolutely arbitrary over the lives and fortunes of the people: for it being but the joint power of every member of the society given up to that person, or assembly, which is legislator; it can be no more than those persons had in a state of nature before they entered into society, and gave up to the community: for no body can transfer to another more power than he has in himself; and no body has an absolute arbitrary power over himself, or over any other, to destroy his own life, or take away the life or property of another. A man, as has been proved, cannot subject himself to the arbitrary power of another; and having in the state of nature no arbitrary power over the life, liberty, or possession of another, but only so much as the law of nature gave him for the preservation of himself, and the rest of mankind; this is all he doth, or can give up to the commonwealth, and by it to the legislative power, so that the legislative can have no more than this. Their power, in the utmost bounds of it, is limited to the public good of the society. It is a power, that hath no other end but preservation, and therefore can never have a right to destroy, enslave, or designedly to impoverish the subjects.\* The obligations of the law of nature cease not in society, but only in many cases are drawn closer, and have by human laws known penalties annexed to them, to inforce their observation. Thus the law of nature stands as an eternal rule to all men, legislators as well as others. The rules that they make for other men's actions, must, as well as their own and other men's actions, be conformable to the law of nature, i.e. to the will of God, of which that is a declaration, and the fundamental law of nature being the preservation of mankind, no human sanction can be good, or valid against it.

(\*Two foundations there are which bear up public societies; the one a natural inclination, whereby all men desire sociable life and fellowship; the other an order, expresly or secretly agreed upon, touching the manner of their union in living together: the latter is that which we call the law of a

common-weal, the very soul of a politic body, the parts whereof are by law animated, held together, and set on work in such actions as the common good requireth. Laws politic, ordained for external order and regiment amongst men, are never framed as they should be, unless presuming the will of man to be inwardly obstinate, rebellious, and averse from all obedience to the sacred laws of his nature; in a word, unless presuming man to be, in regard of his depraved mind, little better than a wild beast, they do accordingly provide, notwithstanding, so to frame his outward actions, that they be no hindrance unto the common good, for which societies are instituted. Unless they do this, they are not perfect. Hooker's Eccl. Pol. l. i. sect. 10.)

Sect. 136. Secondly, The legislative, or supreme authority, cannot assume to its self a power to rule by extemporary arbitrary decrees, but is bound to dispense justice, and decide the rights of the subject by promulgated standing laws, and known authorized judges:\* for the law of nature being unwritten, and so no where to be found but in the minds of men, they who through passion or interest shall miscite, or misapply it, cannot so easily be convinced of their mistake where there is no established judge: and so it serves not, as it ought, to determine the rights, and fence the properties of those that live under it, especially where every one is judge, interpreter, and executioner of it too, and that in his own case: and he that has right on his side, having ordinarily but his own single strength, hath not force enough to defend himself from injuries, or to punish delinquents. To avoid these inconveniences, which disorder men's properties in the state of nature, men unite into societies, that they may have the united strength of the whole society to secure and defend their properties, and may have standing rules to bound it, by which every one may know what is his. To this end it is that men give up all their natural power to the society which they enter into, and the community put the legislative power into such hands as they think fit, with this trust, that they shall be governed by declared laws, or else their peace, quiet, and property will still be at the same uncertainty, as it was in the state of nature.

(\*Human laws are measures in respect of men whose actions they must direct, howbeit such measures they are as have also their higher rules to be measured by, which rules are two, the law of God, and the law of nature; so that laws human must be made according to the general laws of nature, and

without contradiction to any positive law of scripture, otherwise they are ill made. Hooker's Eccl. Pol. l. iii. sect. 9.

To constrain men to any thing inconvenient doth seem unreasonable. Ibid. l. i. sect. 10.)

Sect. 137. Absolute arbitrary power, or governing without settled standing laws, can neither of them consist with the ends of society and government, which men would not quit the freedom of the state of nature for, and tie themselves up under, were it not to preserve their lives, liberties and fortunes, and by stated rules of right and property to secure their peace and quiet. It cannot be supposed that they should intend, had they a power so to do, to give to any one, or more, an absolute arbitrary power over their persons and estates, and put a force into the magistrate's hand to execute his unlimited will arbitrarily upon them. This were to put themselves into a worse condition than the state of nature, wherein they had a liberty to defend their right against the injuries of others, and were upon equal terms of force to maintain it, whether invaded by a single man, or many in combination. Whereas by supposing they have given up themselves to the absolute arbitrary power and will of a legislator, they have disarmed themselves, and armed him, to make a prey of them when he pleases; he being in a much worse condition, who is exposed to the arbitrary power of one man, who has the command of 100,000, than he that is exposed to the arbitrary power of 100,000 single men; no body being secure, that his will, who has such a command, is better than that of other men, though his force be 100,000 times stronger. And therefore, whatever form the commonwealth is under, the ruling power ought to govern by declared and received laws, and not by extemporary dictates and undetermined resolutions: for then mankind will be in a far worse condition than in the state of nature, if they shall have armed one, or a few men with the joint power of a multitude, to force them to obey at pleasure the exorbitant and unlimited decrees of their sudden thoughts, or unrestrained, and till that moment unknown wills, without having any measures set down which may guide and justify their actions: for all the power the government has, being only for the good of the society, as it ought not to be arbitrary and at pleasure, so it ought to be exercised by established and promulgated laws; that both the people may know their duty, and be safe and secure within the limits of the law; and the rulers too kept within their bounds, and not be

tempted, by the power they have in their hands, to employ it to such purposes, and by such measures, as they would not have known, and own not willingly.

Sect. 138. Thirdly, The supreme power cannot take from any man any part of his property without his own consent: for the preservation of property being the end of government, and that for which men enter into society, it necessarily supposes and requires, that the people should have property, without which they must be supposed to lose that, by entering into society, which was the end for which they entered into it; too gross an absurdity for any man to own. Men therefore in society having property, they have such a right to the goods, which by the law of the community are their's, that no body hath a right to take their substance or any part of it from them, without their own consent: without this they have no property at all; for I have truly no property in that, which another can by right take from me, when he pleases, against my consent. Hence it is a mistake to think, that the supreme or legislative power of any commonwealth, can do what it will, and dispose of the estates of the subject arbitrarily, or take any part of them at pleasure. This is not much to be feared in governments where the legislative consists, wholly or in part, in assemblies which are variable, whose members, upon the dissolution of the assembly, are subjects under the common laws of their country, equally with the rest. But in governments, where the legislative is in one lasting assembly always in being, or in one man, as in absolute monarchies, there is danger still, that they will think themselves to have a distinct interest from the rest of the community; and so will be apt to increase their own riches and power, by taking what they think fit from the people: for a man's property is not at all secure, tho' there be good and equitable laws to set the bounds of it between him and his fellow subjects, if he who commands those subjects have power to take from any private man, what part he pleases of his property, and use and dispose of it as he thinks good.

Sect. 139. But government, into whatsoever hands it is put, being, as I have before shewed, intrusted with this condition, and for this end, that men might have and secure their properties; the prince, or senate, however it may have power to make laws, for the regulating of property between the subjects one amongst another, yet can never have a power to take to themselves the whole, or any part of the subjects property, without their

own consent: for this would be in effect to leave them no property at all. And to let us see, that even absolute power, where it is necessary, is not arbitrary by being absolute, but is still limited by that reason, and confined to those ends, which required it in some cases to be absolute, we need look no farther than the common practice of martial discipline: for the preservation of the army, and in it of the whole commonwealth, requires an absolute obedience to the command of every superior officer, and it is justly death to disobey or dispute the most dangerous or unreasonable of them; but yet we see, that neither the serjeant, that could command a soldier to march up to the mouth of a cannon, or stand in a breach, where he is almost sure to perish, can command that soldier to give him one penny of his money; nor the general, that can condemn him to death for deserting his post, or for not obeying the most desperate orders, can yet, with all his absolute power of life and death, dispose of one farthing of that soldier's estate, or seize one jot of his goods; whom yet he can command any thing, and hang for the least disobedience; because such a blind obedience is necessary to that end, for which the commander has his power, viz. the preservation of the rest; but the disposing of his goods has nothing to do with it.

Sect. 140. It is true, governments cannot be supported without great charge, and it is fit every one who enjoys his share of the protection, should pay out of his estate his proportion for the maintenance of it. But still it must be with his own consent, i.e. the consent of the majority, giving it either by themselves, or their representatives chosen by them: for if any one shall claim a power to lay and levy taxes on the people, by his own authority, and without such consent of the people, he thereby invades the fundamental law of property, and subverts the end of government: for what property have I in that, which another may by right take, when he pleases, to himself?

Sect. 141. Fourthly, The legislative cannot transfer the power of making laws to any other hands: for it being but a delegated power from the people, they who have it cannot pass it over to others. The people alone can appoint the form of the commonwealth, which is by constituting the legislative, and appointing in whose hands that shall be. And when the people have said, We will submit to rules, and be governed by laws made by such men, and in such forms, no body else can say other men shall make laws for them; nor

can the people be bound by any laws, but such as are enacted by those whom they have chosen, and authorized to make laws for them. The power of the legislative, being derived from the people by a positive voluntary grant and institution, can be no other than what that positive grant conveyed, which being only to make laws, and not to make legislators, the legislative can have no power to transfer their authority of making laws, and place it in other hands.

Sect. 142. These are the bounds which the trust, that is put in them by the society, and the law of God and nature, have set to the legislative power of every commonwealth, in all forms of government.

First, They are to govern by promulgated established laws, not to be varied in particular cases, but to have one rule for rich and poor, for the favourite at court, and the country man at plough.

Secondly, These laws also ought to be designed for no other end ultimately, but the good of the people.

Thirdly, They must not raise taxes on the property of the people, without the consent of the people, given by themselves, or their deputies. And this properly concerns only such governments where the legislative is always in being, or at least where the people have not reserved any part of the legislative to deputies, to be from time to time chosen by themselves.

Fourthly, The legislative neither must nor can transfer the power of making laws to any body else, or place it any where, but where the people have.

---

## **CHAPTER. XII.**

### **OF THE LEGISLATIVE, EXECUTIVE, AND FEDERATIVE POWER OF THE COMMON-WEALTH.**

Sect. 143. THE legislative power is that, which has a right to direct how the force of the commonwealth shall be employed for preserving the community and the members of it. But because those laws which are constantly to be executed, and whose force is always to continue, may be made in a little time; therefore there is no need, that the legislative should be always in being, not having always business to do. And because it may be too great a temptation to human frailty, apt to grasp at power, for the same persons, who have the power of making laws, to have also in their hands the power to execute them, whereby they may exempt themselves from obedience to the laws they make, and suit the law, both in its making, and execution, to their own private advantage, and thereby come to have a distinct interest from the rest of the community, contrary to the end of society and government: therefore in wellordered commonwealths, where the good of the whole is so considered, as it ought, the legislative power is put into the hands of divers persons, who duly assembled, have by themselves, or jointly with others, a power to make laws, which when they have done, being separated again, they are themselves subject to the laws they have made; which is a new and near tie upon them, to take care, that they make them for the public good.

Sect. 144. But because the laws, that are at once, and in a short time made, have a constant and lasting force, and need a perpetual execution, or an attendance thereunto; therefore it is necessary there should be a power always in being, which should see to the execution of the laws that are made, and remain in force. And thus the legislative and executive power come often to be separated.

Sect. 145. There is another power in every commonwealth, which one may call natural, because it is that which answers to the power every man naturally had before he entered into society: for though in a commonwealth the members of it are distinct persons still in reference to one another, and as such as governed by the laws of the society; yet in reference to the rest of mankind, they make one body, which is, as every member of it before was, still in the state of nature with the rest of mankind. Hence it is, that the controversies that happen between any man of the society with those that are out of it, are managed by the public; and an injury done to a member of their body, engages the whole in the reparation of it. So that under this

consideration, the whole community is one body in the state of nature, in respect of all other states or persons out of its community.

Sect. 146. This therefore contains the power of war and peace, leagues and alliances, and all the transactions, with all persons and communities without the commonwealth, and may be called federative, if any one pleases. So the thing be understood, I am indifferent as to the name.

Sect. 147. These two powers, executive and federative, though they be really distinct in themselves, yet one comprehending the execution of the municipal laws of the society within its self, upon all that are parts of it; the other the management of the security and interest of the public without, with all those that it may receive benefit or damage from, yet they are always almost united. And though this federative power in the well or ill management of it be of great moment to the commonwealth, yet it is much less capable to be directed by antecedent, standing, positive laws, than the executive; and so must necessarily be left to the prudence and wisdom of those, whose hands it is in, to be managed for the public good: for the laws that concern subjects one amongst another, being to direct their actions, may well enough precede them. But what is to be done in reference to foreigners, depending much upon their actions, and the variation of designs and interests, must be left in great part to the prudence of those, who have this power committed to them, to be managed by the best of their skill, for the advantage of the commonwealth.

Sect. 148. Though, as I said, the executive and federative power of every community be really distinct in themselves, yet they are hardly to be separated, and placed at the same time, in the hands of distinct persons: for both of them requiring the force of the society for their exercise, it is almost impracticable to place the force of the commonwealth in distinct, and not subordinate hands; or that the executive and federative power should be placed in persons, that might act separately, whereby the force of the public would be under different commands: which would be apt some time or other to cause disorder and ruin.

---

## CHAPTER. XIII.

### OF THE SUBORDINATION OF THE POWERS OF THE COMMON-WEALTH.

Sect. 149. THOUGH in a constituted commonwealth, standing upon its own basis, and acting according to its own nature, that is, acting for the preservation of the community, there can be but one supreme power, which is the legislative, to which all the rest are and must be subordinate, yet the legislative being only a fiduciary power to act for certain ends, there remains still in the people a supreme power to remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them: for all power given with trust for the attaining an end, being limited by that end, whenever that end is manifestly neglected, or opposed, the trust must necessarily be forfeited, and the power devolve into the hands of those that gave it, who may place it anew where they shall think best for their safety and security. And thus the community perpetually retains a supreme power of saving themselves from the attempts and designs of any body, even of their legislators, whenever they shall be so foolish, or so wicked, as to lay and carry on designs against the liberties and properties of the subject: for no man or society of men, having a power to deliver up their preservation, or consequently the means of it, to the absolute will and arbitrary dominion of another; when ever any one shall go about to bring them into such a slavish condition, they will always have a right to preserve, what they have not a power to part with; and to rid themselves of those, who invade this fundamental, sacred, and unalterable law of self-preservation, for which they entered into society. And thus the community may be said in this respect to be always the supreme power, but not as considered under any form of government, because this power of the people can never take place till the government be dissolved.

Sect. 150. In all cases, whilst the government subsists, the legislative is the supreme power: for what can give laws to another, must needs be superior to him; and since the legislative is no otherwise legislative of the society, but by the right it has to make laws for all the parts, and for every member of the society, prescribing rules to their actions, and giving power of execution, where they are transgressed, the legislative must needs be the

supreme, and all other powers, in any members or parts of the society, derived from and subordinate to it.

Sect. 151. In some commonwealths, where the legislative is not always in being, and the executive is vested in a single person, who has also a share in the legislative; there that single person in a very tolerable sense may also be called supreme: not that he has in himself all the supreme power, which is that of law-making; but because he has in him the supreme execution, from whom all inferior magistrates derive all their several subordinate powers, or at least the greatest part of them: having also no legislative superior to him, there being no law to be made without his consent, which cannot be expected should ever subject him to the other part of the legislative, he is properly enough in this sense supreme. But yet it is to be observed, that tho' oaths of allegiance and fealty are taken to him, it is not to him as supreme legislator, but as supreme executor of the law, made by a joint power of him with others; allegiance being nothing but an obedience according to law, which when he violates, he has no right to obedience, nor can claim it otherwise than as the public person vested with the power of the law, and so is to be considered as the image, phantom, or representative of the commonwealth, acted by the will of the society, declared in its laws; and thus he has no will, no power, but that of the law. But when he quits this representation, this public will, and acts by his own private will, he degrades himself, and is but a single private person without power, and without will, that has any right to obedience; the members owing no obedience but to the public will of the society.

Sect. 152. The executive power, placed any where but in a person that has also a share in the legislative, is visibly subordinate and accountable to it, and may be at pleasure changed and displaced; so that it is not the supreme executive power, that is exempt from subordination, but the supreme executive power vested in one, who having a share in the legislative, has no distinct superior legislative to be subordinate and accountable to, farther than he himself shall join and consent; so that he is no more subordinate than he himself shall think fit, which one may certainly conclude will be but very little. Of other ministerial and subordinate powers in a commonwealth, we need not speak, they being so multiplied with infinite variety, in the different customs and constitutions of distinct commonwealths, that it is impossible to give a particular account of them all. Only thus much, which

is necessary to our present purpose, we may take notice of concerning them, that they have no manner of authority, any of them, beyond what is by positive grant and commission delegated to them, and are all of them accountable to some other power in the commonwealth.

Sect. 153. It is not necessary, no, nor so much as convenient, that the legislative should be always in being; but absolutely necessary that the executive power should, because there is not always need of new laws to be made, but always need of execution of the laws that are made. When the legislative hath put the execution of the laws, they make, into other hands, they have a power still to resume it out of those hands, when they find cause, and to punish for any maladministration against the laws. The same holds also in regard of the federative power, that and the executive being both ministerial and subordinate to the legislative, which, as has been shewed, in a constituted commonwealth is the supreme. The legislative also in this case being supposed to consist of several persons, (for if it be a single person, it cannot but be always in being, and so will, as supreme, naturally have the supreme executive power, together with the legislative) may assemble, and exercise their legislature, at the times that either their original constitution, or their own adjournment, appoints, or when they please; if neither of these hath appointed any time, or there be no other way prescribed to convoke them: for the supreme power being placed in them by the people, it is always in them, and they may exercise it when they please, unless by their original constitution they are limited to certain seasons, or by an act of their supreme power they have adjourned to a certain time; and when that time comes, they have a right to assemble and act again.

Sect. 154. If the legislative, or any part of it, be made up of representatives chosen for that time by the people, which afterwards return into the ordinary state of subjects, and have no share in the legislature but upon a new choice, this power of chusing must also be exercised by the people, either at certain appointed seasons, or else when they are summoned to it; and in this latter case the power of convoking the legislative is ordinarily placed in the executive, and has one of these two limitations in respect of time: that either the original constitution requires their assembling and acting at certain intervals, and then the executive power does nothing but ministerially issue directions for their electing and assembling, according to due forms; or else it is left to his prudence to call them by new elections,

when the occasions or exigencies of the public require the amendment of old, or making of new laws, or the redress or prevention of any inconveniencies, that lie on, or threaten the people.

Sect. 155. It may be demanded here, What if the executive power, being possessed of the force of the commonwealth, shall make use of that force to hinder the meeting and acting of the legislative, when the original constitution, or the public exigencies require it? I say, using force upon the people without authority, and contrary to the trust put in him that does so, is a state of war with the people, who have a right to reinstate their legislative in the exercise of their power: for having erected a legislative, with an intent they should exercise the power of making laws, either at certain set times, or when there is need of it, when they are hindered by any force from what is so necessary to the society, and wherein the safety and preservation of the people consists, the people have a right to remove it by force. In all states and conditions, the true remedy of force without authority, is to oppose force to it. The use of force without authority, always puts him that uses it into a state of war, as the aggressor, and renders him liable to be treated accordingly.

Sect. 156. The power of assembling and dismissing the legislative, placed in the executive, gives not the executive a superiority over it, but is a fiduciary trust placed in him, for the safety of the people, in a case where the uncertainty and variableness of human affairs could not bear a steady fixed rule: for it not being possible, that the first framers of the government should, by any foresight, be so much masters of future events, as to be able to prefix so just periods of return and duration to the assemblies of the legislative, in all times to come, that might exactly answer all the exigencies of the commonwealth; the best remedy could be found for this defect, was to trust this to the prudence of one who was always to be present, and whose business it was to watch over the public good. Constant frequent meetings of the legislative, and long continuations of their assemblies, without necessary occasion, could not but be burdensome to the people, and must necessarily in time produce more dangerous inconveniencies, and yet the quick turn of affairs might be sometimes such as to need their present help: any delay of their convening might endanger the public; and sometimes too their business might be so great, that the limited time of their sitting might be too short for their work, and rob the public of that benefit

which could be had only from their mature deliberation. What then could be done in this case to prevent the community from being exposed some time or other to eminent hazard, on one side or the other, by fixed intervals and periods, set to the meeting and acting of the legislative, but to intrust it to the prudence of some, who being present, and acquainted with the state of public affairs, might make use of this prerogative for the public good? and where else could this be so well placed as in his hands, who was intrusted with the execution of the laws for the same end? Thus supposing the regulation of times for the assembling and sitting of the legislative, not settled by the original constitution, it naturally fell into the hands of the executive, not as an arbitrary power depending on his good pleasure, but with this trust always to have it exercised only for the public weal, as the occurrences of times and change of affairs might require. Whether settled periods of their convening, or a liberty left to the prince for convoking the legislative, or perhaps a mixture of both, hath the least inconvenience attending it, it is not my business here to inquire, but only to shew, that though the executive power may have the prerogative of convoking and dissolving such conventions of the legislative, yet it is not thereby superior to it.

Sect. 157. Things of this world are in so constant a flux, that nothing remains long in the same state. Thus people, riches, trade, power, change their stations, flourishing mighty cities come to ruin, and prove in times neglected desolate corners, whilst other unfrequented places grow into populous countries, filled with wealth and inhabitants. But things not always changing equally, and private interest often keeping up customs and privileges, when the reasons of them are ceased, it often comes to pass, that in governments, where part of the legislative consists of representatives chosen by the people, that in tract of time this representation becomes very unequal and disproportionate to the reasons it was at first established upon. To what gross absurdities the following of custom, when reason has left it, may lead, we may be satisfied, when we see the bare name of a town, of which there remains not so much as the ruins, where scarce so much housing as a sheepcote, or more inhabitants than a shepherd is to be found, sends as many representatives to the grand assembly of law-makers, as a whole county numerous in people, and powerful in riches. This strangers stand amazed at, and every one must confess needs a remedy; tho' most

think it hard to find one, because the constitution of the legislative being the original and supreme act of the society, antecedent to all positive laws in it, and depending wholly on the people, no inferior power can alter it. And therefore the people, when the legislative is once constituted, having, in such a government as we have been speaking of, no power to act as long as the government stands; this inconvenience is thought incapable of a remedy.

Sect. 158. *Salus populi suprema lex*, is certainly so just and fundamental a rule, that he, who sincerely follows it, cannot dangerously err. If therefore the executive, who has the power of convoking the legislative, observing rather the true proportion, than fashion of representation, regulates, not by old custom, but true reason, the number of members, in all places that have a right to be distinctly represented, which no part of the people however incorporated can pretend to, but in proportion to the assistance which it affords to the public, it cannot be judged to have set up a new legislative, but to have restored the old and true one, and to have rectified the disorders which succession of time had insensibly, as well as inevitably introduced: For it being the interest as well as intention of the people, to have a fair and equal representative; whoever brings it nearest to that, is an undoubted friend to, and establisher of the government, and cannot miss the consent and approbation of the community; prerogative being nothing but a power, in the hands of the prince, to provide for the public good, in such cases, which depending upon unforeseen and uncertain occurrences, certain and unalterable laws could not safely direct; whatsoever shall be done manifestly for the good of the people, and the establishing the government upon its true foundations, is, and always will be, just prerogative, The power of erecting new corporations, and therewith new representatives, carries with it a supposition, that in time the measures of representation might vary, and those places have a just right to be represented which before had none; and by the same reason, those cease to have a right, and be too inconsiderable for such a privilege, which before had it. 'Tis not a change from the present state, which perhaps corruption or decay has introduced, that makes an inroad upon the government, but the tendency of it to injure or oppress the people, and to set up one part or party, with a distinction from, and an unequal subjection of the rest. Whatsoever cannot but be acknowledged to be of advantage to the society, and people in general, upon just and lasting measures, will always, when done, justify

itself; and whenever the people shall chuse their representatives upon just and undeniably equal measures, suitable to the original frame of the government, it cannot be doubted to be the will and act of the society, whoever permitted or caused them so to do.

---

## **CHAPTER. XIV.**

### **OF PREROGATIVE.**

Sect. 159. WHERE the legislative and executive power are in distinct hands, (as they are in all moderated monarchies, and well-framed governments) there the good of the society requires, that several things should be left to the discretion of him that has the executive power: for the legislators not being able to foresee, and provide by laws, for all that may be useful to the community, the executor of the laws having the power in his hands, has by the common law of nature a right to make use of it for the good of the society, in many cases, where the municipal law has given no direction, till the legislative can conveniently be assembled to provide for it. Many things there are, which the law can by no means provide for; and those must necessarily be left to the discretion of him that has the executive power in his hands, to be ordered by him as the public good and advantage shall require: nay, it is fit that the laws themselves should in some cases give way to the executive power, or rather to this fundamental law of nature and government, viz. That as much as may be, all the members of the society are to be preserved: for since many accidents may happen, wherein a strict and rigid observation of the laws may do harm; (as not to pull down an innocent man's house to stop the fire, when the next to it is burning) and a man may come sometimes within the reach of the law, which makes no distinction of persons, by an action that may deserve reward and pardon; 'tis fit the ruler should have a power, in many cases, to mitigate the severity of the law, and pardon some offenders: for the end of government being the

preservation of all, as much as may be, even the guilty are to be spared, where it can prove no prejudice to the innocent.

Sect. 160. This power to act according to discretion, for the public good, without the prescription of the law, and sometimes even against it, is that which is called prerogative: for since in some governments the lawmaking power is not always in being, and is usually too numerous, and so too slow, for the dispatch requisite to execution; and because also it is impossible to foresee, and so by laws to provide for, all accidents and necessities that may concern the public, or to make such laws as will do no harm, if they are executed with an inflexible rigour, on all occasions, and upon all persons that may come in their way; therefore there is a latitude left to the executive power, to do many things of choice which the laws do not prescribe.

Sect. 161. This power, whilst employed for the benefit of the community, and suitably to the trust and ends of the government, is undoubted prerogative, and never is questioned: for the people are very seldom or never scrupulous or nice in the point; they are far from examining prerogative, whilst it is in any tolerable degree employed for the use it was meant, that is, for the good of the people, and not manifestly against it: but if there comes to be a question between the executive power and the people, about a thing claimed as a prerogative; the tendency of the exercise of such prerogative to the good or hurt of the people, will easily decide that question.

Sect. 162. It is easy to conceive, that in the infancy of governments, when commonwealths differed little from families in number of people, they differed from them too but little in number of laws: and the governors, being as the fathers of them, watching over them for their good, the government was almost all prerogative. A few established laws served the turn, and the discretion and care of the ruler supplied the rest. But when mistake or flattery prevailed with weak princes to make use of this power for private ends of their own, and not for the public good, the people were fain by express laws to get prerogative determined in those points wherein they found disadvantage from it: and thus declared limitations of prerogative were by the people found necessary in cases which they and their ancestors had left, in the utmost latitude, to the wisdom of those

princes who made no other but a right use of it, that is, for the good of their people.

Sect. 163. And therefore they have a very wrong notion of government, who say, that the people have encroached upon the prerogative, when they have got any part of it to be defined by positive laws: for in so doing they have not pulled from the prince any thing that of right belonged to him, but only declared, that that power which they indefinitely left in his or his ancestors hands, to be exercised for their good, was not a thing which they intended him when he used it otherwise: for the end of government being the good of the community, whatsoever alterations are made in it, tending to that end, cannot be an encroachment upon any body, since no body in government can have a right tending to any other end: and those only are encroachments which prejudice or hinder the public good. Those who say otherwise, speak as if the prince had a distinct and separate interest from the good of the community, and was not made for it; the root and source from which spring almost all those evils and disorders which happen in kingly governments. And indeed, if that be so, the people under his government are not a society of rational creatures, entered into a community for their mutual good; they are not such as have set rulers over themselves, to guard, and promote that good; but are to be looked on as an herd of inferior creatures under the dominion of a master, who keeps them and works them for his own pleasure or profit. If men were so void of reason, and brutish, as to enter into society upon such terms, prerogative might indeed be, what some men would have it, an arbitrary power to do things hurtful to the people.

Sect. 164. But since a rational creature cannot be supposed, when free, to put himself into subjection to another, for his own harm; (though, where he finds a good and wise ruler, he may not perhaps think it either necessary or useful to set precise bounds to his power in all things) prerogative can be nothing but the people's permitting their rulers to do several things, of their own free choice, where the law was silent, and sometimes too against the direct letter of the law, for the public good; and their acquiescing in it when so done: for as a good prince, who is mindful of the trust put into his hands, and careful of the good of his people, cannot have too much prerogative, that is, power to do good; so a weak and ill prince, who would claim that power which his predecessors exercised without the direction of the law, as

a prerogative belonging to him by right of his office, which he may exercise at his pleasure, to make or promote an interest distinct from that of the public, gives the people an occasion to claim their right, and limit that power, which, whilst it was exercised for their good, they were content should be tacitly allowed.

Sect. 165. And therefore he that will look into the history of England, will find, that prerogative was always largest in the hands of our wisest and best princes; because the people, observing the whole tendency of their actions to be the public good, contested not what was done without law to that end: or, if any human frailty or mistake (for princes are but men, made as others) appeared in some small declinations from that end; yet 'twas visible, the main of their conduct tended to nothing but the care of the public. The people therefore, finding reason to be satisfied with these princes, whenever they acted without, or contrary to the letter of the law, acquiesced in what they did, and, without the least complaint, let them enlarge their prerogative as they pleased, judging rightly, that they did nothing herein to the prejudice of their laws, since they acted conformable to the foundation and end of all laws, the public good.

Sect. 166. Such god-like princes indeed had some title to arbitrary power by that argument, that would prove absolute monarchy the best government, as that which God himself governs the universe by; because such kings partake of his wisdom and goodness. Upon this is founded that saying, That the reigns of good princes have been always most dangerous to the liberties of their people: for when their successors, managing the government with different thoughts, would draw the actions of those good rulers into precedent, and make them the standard of their prerogative, as if what had been done only for the good of the people was a right in them to do, for the harm of the people, if they so pleased; it has often occasioned contest, and sometimes public disorders, before the people could recover their original right, and get that to be declared not to be prerogative, which truly was never so; since it is impossible that any body in the society should ever have a right to do the people harm; though it be very possible, and reasonable, that the people should not go about to set any bounds to the prerogative of those kings, or rulers, who themselves transgressed not the bounds of the public good: for prerogative is nothing but the power of doing public good without a rule.

Sect. 167. The power of calling parliaments in England, as to precise time, place, and duration, is certainly a prerogative of the king, but still with this trust, that it shall be made use of for the good of the nation, as the exigencies of the times, and variety of occasions, shall require: for it being impossible to foresee which should always be the fittest place for them to assemble in, and what the best season; the choice of these was left with the executive power, as might be most subservient to the public good, and best suit the ends of parliaments.

Sect. 168. The old question will be asked in this matter of prerogative, But who shall be judge when this power is made a right use of one answer: between an executive power in being, with such a prerogative, and a legislative that depends upon his will for their convening, there can be no judge on earth; as there can be none between the legislative and the people, should either the executive, or the legislative, when they have got the power in their hands, design, or go about to enslave or destroy them. The people have no other remedy in this, as in all other cases where they have no judge on earth, but to appeal to heaven: for the rulers, in such attempts, exercising a power the people never put into their hands, (who can never be supposed to consent that any body should rule over them for their harm) do that which they have not a right to do. And where the body of the people, or any single man, is deprived of their right, or is under the exercise of a power without right, and have no appeal on earth, then they have a liberty to appeal to heaven, whenever they judge the cause of sufficient moment. And therefore, though the people cannot be judge, so as to have, by the constitution of that society, any superior power, to determine and give effective sentence in the case; yet they have, by a law antecedent and paramount to all positive laws of men, reserved that ultimate determination to themselves which belongs to all mankind, where there lies no appeal on earth, viz. to judge, whether they have just cause to make their appeal to heaven. And this judgment they cannot part with, it being out of a man's power so to submit himself to another, as to give him a liberty to destroy him; God and nature never allowing a man so to abandon himself, as to neglect his own preservation: and since he cannot take away his own life, neither can he give another power to take it. Nor let any one think, this lays a perpetual foundation for disorder; for this operates not, till the inconveniency is so great, that the majority feel it, and are weary of it, and

find a necessity to have it amended. But this the executive power, or wise princes, never need come in the danger of: and it is the thing, of all others, they have most need to avoid, as of all others the most perilous.

---

## **CHAPTER. XV.**

### **OF PATERNAL, POLITICAL, AND DESPOTICAL POWER, CONSIDERED TOGETHER.**

Sect. 169. THOUGH I have had occasion to speak of these separately before, yet the great mistakes of late about government, having, as I suppose, arisen from confounding these distinct powers one with another, it may not, perhaps, be amiss to consider them here together.

Sect. 170. First, then, Paternal or parental power is nothing but that which parents have over their children, to govern them for the children's good, till they come to the use of reason, or a state of knowledge, wherein they may be supposed capable to understand that rule, whether it be the law of nature, or the municipal law of their country, they are to govern themselves by: capable, I say, to know it, as well as several others, who live as freemen under that law. The affection and tenderness which God hath planted in the breast of parents towards their children, makes it evident, that this is not intended to be a severe arbitrary government, but only for the help, instruction, and preservation of their offspring. But happen it as it will, there is, as I have proved, no reason why it should be thought to extend to life and death, at any time, over their children, more than over any body else; neither can there be any pretence why this parental power should keep the child, when grown to a man, in subjection to the will of his parents, any farther than having received life and education from his parents, obliges him to respect, honour, gratitude, assistance and support, all his life, to both father and mother. And thus, 'tis true, the paternal is a natural government, but not at all extending itself to the ends and jurisdictions of that which is

political. The power of the father doth not reach at all to the property of the child, which is only in his own disposing.

Sect. 171. Secondly, Political power is that power, which every man having in the state of nature, has given up into the hands of the society, and therein to the governors, whom the society hath set over itself, with this express or tacit trust, that it shall be employed for their good, and the preservation of their property: now this power, which every man has in the state of nature, and which he parts with to the society in all such cases where the society can secure him, is to use such means, for the preserving of his own property, as he thinks good, and nature allows him; and to punish the breach of the law of nature in others, so as (according to the best of his reason) may most conduce to the preservation of himself, and the rest of mankind. So that the end and measure of this power, when in every man's hands in the state of nature, being the preservation of all of his society, that is, all mankind in general, it can have no other end or measure, when in the hands of the magistrate, but to preserve the members of that society in their lives, liberties, and possessions; and so cannot be an absolute, arbitrary power over their lives and fortunes, which are as much as possible to be preserved; but a power to make laws, and annex such penalties to them, as may tend to the preservation of the whole, by cutting off those parts, and those only, which are so corrupt, that they threaten the sound and healthy, without which no severity is lawful. And this power has its original only from compact and agreement, and the mutual consent of those who make up the community.

Sect. 172. Thirdly, Despotical power is an absolute, arbitrary power one man has over another, to take away his life, whenever he pleases. This is a power, which neither nature gives, for it has made no such distinction between one man and another; nor compact can convey: for man not having such an arbitrary power over his own life, cannot give another man such a power over it; but it is the effect only of forfeiture, which the aggressor makes of his own life, when he puts himself into the state of war with another: for having quitted reason, which God hath given to be the rule betwixt man and man, and the common bond whereby human kind is united into one fellowship and society; and having renounced the way of peace which that teaches, and made use of the force of war, to compass his unjust ends upon another, where he has no right; and so revolting from his own

kind to that of beasts, by making force, which is their's, to be his rule of right, he renders himself liable to be destroyed by the injured person, and the rest of mankind, that will join with him in the execution of justice, as any other wild beast, or noxious brute, with whom mankind can have neither society nor security\*. And thus captives, taken in a just and lawful war, and such only, are subject to a despotical power, which, as it arises not from compact, so neither is it capable of any, but is the state of war continued: for what compact can be made with a man that is not master of his own life? what condition can he perform? and if he be once allowed to be master of his own life, the despotical, arbitrary power of his master ceases. He that is master of himself, and his own life, has a right too to the means of preserving it; so that as soon as compact enters, slavery ceases, and he so far quits his absolute power, and puts an end to the state of war, who enters into conditions with his captive.

(\*Another copy corrected by Mr. Locke, has it thus, Noxious brute that is destructive to their being.)

Sect. 173. Nature gives the first of these, viz. paternal power to parents for the benefit of their children during their minority, to supply their want of ability, and understanding how to manage their property. (By property I must be understood here, as in other places, to mean that property which men have in their persons as well as goods.) Voluntary agreement gives the second, viz. political power to governors for the benefit of their subjects, to secure them in the possession and use of their properties. And forfeiture gives the third despotical power to lords for their own benefit, over those who are stripped of all property.

Sect. 174. He, that shall consider the distinct rise and extent, and the different ends of these several powers, will plainly see, that paternal power comes as far short of that of the magistrate, as despotical exceeds it; and that absolute dominion, however placed, is so far from being one kind of civil society, that it is as inconsistent with it, as slavery is with property. Paternal power is only where minority makes the child incapable to manage his property; political, where men have property in their own disposal; and despotical, over such as have no property at all.

---

## CHAPTER. XVI.

### OF CONQUEST.

Sect. 175. THOUGH governments can originally have no other rise than that before mentioned, nor polities be founded on any thing but the consent of the people; yet such have been the disorders ambition has filled the world with, that in the noise of war, which makes so great a part of the history of mankind, this consent is little taken notice of: and therefore many have mistaken the force of arms for the consent of the people, and reckon conquest as one of the originals of government. But conquest is as far from setting up any government, as demolishing an house is from building a new one in the place. Indeed, it often makes way for a new frame of a commonwealth, by destroying the former; but, without the consent of the people, can never erect a new one.

Sect. 176. That the aggressor, who puts himself into the state of war with another, and unjustly invades another man's right, can, by such an unjust war, never come to have a right over the conquered, will be easily agreed by all men, who will not think, that robbers and pyrates have a right of empire over whomsoever they have force enough to master; or that men are bound by promises, which unlawful force extorts from them. Should a robber break into my house, and with a dagger at my throat make me seal deeds to convey my estate to him, would this give him any title? Just such a title, by his sword, has an unjust conqueror, who forces me into submission. The injury and the crime is equal, whether committed by the wearer of a crown, or some petty villain. The title of the offender, and the number of his followers, make no difference in the offence, unless it be to aggravate it. The only difference is, great robbers punish little ones, to keep them in their obedience; but the great ones are rewarded with laurels and triumphs, because they are too big for the weak hands of justice in this world, and have the power in their own possession, which should punish offenders. What is my remedy against a robber, that so broke into my house? Appeal

to the law for justice. But perhaps justice is denied, or I am crippled and cannot stir, robbed and have not the means to do it. If God has taken away all means of seeking remedy, there is nothing left but patience. But my son, when able, may seek the relief of the law, which I am denied: he or his son may renew his appeal, till he recover his right. But the conquered, or their children, have no court, no arbitrator on earth to appeal to. Then they may appeal, as Jephtha did, to heaven, and repeat their appeal till they have recovered the native right of their ancestors, which was, to have such a legislative over them, as the majority should approve, and freely acquiesce in. If it be objected, This would cause endless trouble; I answer, no more than justice does, where she lies open to all that appeal to her. He that troubles his neighbour without a cause, is punished for it by the justice of the court he appeals to: and he that appeals to heaven must be sure he has right on his side; and a right too that is worth the trouble and cost of the appeal, as he will answer at a tribunal that cannot be deceived, and will be sure to retribute to every one according to the mischiefs he hath created to his fellow subjects; that is, any part of mankind: from whence it is plain, that he that conquers in an unjust war can thereby have no title to the subjection and obedience of the conquered.

Sect. 177. But supposing victory favours the right side, let us consider a conqueror in a lawful war, and see what power he gets, and over whom.

First, It is plain he gets no power by his conquest over those that conquered with him. They that fought on his side cannot suffer by the conquest, but must at least be as much freemen as they were before. And most commonly they serve upon terms, and on condition to share with their leader, and enjoy a part of the spoil, and other advantages that attend the conquering sword; or at least have a part of the subdued country bestowed upon them. And the conquering people are not, I hope, to be slaves by conquest, and wear their laurels only to shew they are sacrifices to their leaders triumph. They that found absolute monarchy upon the title of the sword, make their heroes, who are the founders of such monarchies, arrant Draw-can-sirs, and forget they had any officers and soldiers that fought on their side in the battles they won, or assisted them in the subduing, or shared in possessing, the countries they mastered. We are told by some, that the English monarchy is founded in the Norman conquest, and that our princes have thereby a title to absolute dominion: which if it were true, (as

by the history it appears otherwise) and that William had a right to make war on this island; yet his dominion by conquest could reach no farther than to the Saxons and Britons, that were then inhabitants of this country. The Normans that came with him, and helped to conquer, and all descended from them, are freemen, and no subjects by conquest; let that give what dominion it will. And if I, or any body else, shall claim freedom, as derived from them, it will be very hard to prove the contrary: and it is plain, the law, that has made no distinction between the one and the other, intends not there should be any difference in their freedom or privileges.

Sect. 178. But supposing, which seldom happens, that the conquerors and conquered never incorporate into one people, under the same laws and freedom; let us see next what power a lawful conqueror has over the subdued: and that I say is purely despotical. He has an absolute power over the lives of those who by an unjust war have forfeited them; but not over the lives or fortunes of those who engaged not in the war, nor over the possessions even of those who were actually engaged in it.

Sect. 179. Secondly, I say then the conqueror gets no power but only over those who have actually assisted, concurred, or consented to that unjust force that is used against him: for the people having given to their governors no power to do an unjust thing, such as is to make an unjust war, (for they never had such a power in themselves) they ought not to be charged as guilty of the violence and injustice that is committed in an unjust war, any farther than they actually abet it; no more than they are to be thought guilty of any violence or oppression their governors should use upon the people themselves, or any part of their fellow subjects, they having empowered them no more to the one than to the other. Conquerors, it is true, seldom trouble themselves to make the distinction, but they willingly permit the confusion of war to sweep all together: but yet this alters not the right; for the conquerors power over the lives of the conquered, being only because they have used force to do, or maintain an injustice, he can have that power only over those who have concurred in that force; all the rest are innocent; and he has no more title over the people of that country, who have done him no injury, and so have made no forfeiture of their lives, than he has over any other, who, without any injuries or provocations, have lived upon fair terms with him.

Sect. 180. Thirdly, The power a conqueror gets over those he overcomes in a just war, is perfectly despotical: he has an absolute power over the lives of those, who, by putting themselves in a state of war, have forfeited them; but he has not thereby a right and title to their possessions. This I doubt not, but at first sight will seem a strange doctrine, it being so quite contrary to the practice of the world; there being nothing more familiar in speaking of the dominion of countries, than to say such an one conquered it; as if conquest, without any more ado, conveyed a right of possession. But when we consider, that the practice of the strong and powerful, how universal soever it may be, is seldom the rule of right, however it be one part of the subjection of the conquered, not to argue against the conditions cut out to them by the conquering sword.

Sect. 181. Though in all war there be usually a complication of force and damage, and the aggressor seldom fails to harm the estate, when he uses force against the persons of those he makes war upon; yet it is the use of force only that puts a man into the state of war: for whether by force he begins the injury, or else having quietly, and by fraud, done the injury, he refuses to make reparation, and by force maintains it, (which is the same thing, as at first to have done it by force) it is the unjust use of force that makes the war: for he that breaks open my house, and violently turns me out of doors; or having peaceably got in, by force keeps me out, does in effect the same thing; supposing we are in such a state, that we have no common judge on earth, whom I may appeal to, and to whom we are both obliged to submit: for of such I am now speaking. It is the unjust use of force then, that puts a man into the state of war with another; and thereby he that is guilty of it makes a forfeiture of his life: for quitting reason, which is the rule given between man and man, and using force, the way of beasts, he becomes liable to be destroyed by him he uses force against, as any savage ravenous beast, that is dangerous to his being.

Sect. 182. But because the miscarriages of the father are no faults of the children, and they may be rational and peaceable, notwithstanding the brutishness and injustice of the father; the father, by his miscarriages and violence, can forfeit but his own life, but involves not his children in his guilt or destruction. His goods, which nature, that willeth the preservation of all mankind as much as is possible, hath made to belong to the children to keep them from perishing, do still continue to belong to his children: for

supposing them not to have joined in the war, either thro' infancy, absence, or choice, they have done nothing to forfeit them: nor has the conqueror any right to take them away, by the bare title of having subdued him that by force attempted his destruction; though perhaps he may have some right to them, to repair the damages he has sustained by the war, and the defence of his own right; which how far it reaches to the possessions of the conquered, we shall see by and by. So that he that by conquest has a right over a man's person to destroy him if he pleases, has not thereby a right over his estate to possess and enjoy it: for it is the brutal force the aggressor has used, that gives his adversary a right to take away his life, and destroy him if he pleases, as a noxious creature; but it is damage sustained that alone gives him title to another man's goods: for though I may kill a thief that sets on me in the highway, yet I may not (which seems less) take away his money, and let him go: this would be robbery on my side. His force, and the state of war he put himself in, made him forfeit his life, but gave me no title to his goods. The right then of conquest extends only to the lives of those who joined in the war, not to their estates, but only in order to make reparation for the damages received, and the charges of the war, and that too with reservation of the right of the innocent wife and children.

Sect. 183. Let the conqueror have as much justice on his side, as could be supposed, he has no right to seize more than the vanquished could forfeit: his life is at the victor's mercy; and his service and goods he may appropriate, to make himself reparation; but he cannot take the goods of his wife and children; they too had a title to the goods he enjoyed, and their shares in the estate he possessed: for example, I in the state of nature (and all commonwealths are in the state of nature one with another) have injured another man, and refusing to give satisfaction, it comes to a state of war, wherein my defending by force what I had gotten unjustly, makes me the aggressor. I am conquered: my life, it is true, as forfeit, is at mercy, but not my wife's and children's. They made not the war, nor assisted in it. I could not forfeit their lives; they were not mine to forfeit. My wife had a share in my estate; that neither could I forfeit. And my children also, being born of me, had a right to be maintained out of my labour or substance. Here then is the case: the conqueror has a title to reparation for damages received, and the children have a title to their father's estate for their subsistence: for as to the wife's share, whether her own labour, or compact, gave her a title to it, it

is plain, her husband could not forfeit what was her's. What must be done in the case? I answer; the fundamental law of nature being, that all, as much as may be, should be preserved, it follows, that if there be not enough fully to satisfy both, viz, for the conqueror's losses, and children's maintenance, he that hath, and to spare, must remit something of his full satisfaction, and give way to the pressing and preferable title of those who are in danger to perish without it.

Sect. 184. But supposing the charge and damages of the war are to be made up to the conqueror, to the utmost farthing; and that the children of the vanquished, spoiled of all their father's goods, are to be left to starve and perish; yet the satisfying of what shall, on this score, be due to the conqueror, will scarce give him a title to any country he shall conquer: for the damages of war can scarce amount to the value of any considerable tract of land, in any part of the world, where all the land is possessed, and none lies waste. And if I have not taken away the conqueror's land, which, being vanquished, it is impossible I should; scarce any other spoil I have done him can amount to the value of mine, supposing it equally cultivated, and of an extent any way coming near what I had overrun of his. The destruction of a year's product or two (for it seldom reaches four or five) is the utmost spoil that usually can be done: for as to money, and such riches and treasure taken away, these are none of nature's goods, they have but a fantastical imaginary value: nature has put no such upon them: they are of no more account by her standard, than the wampompeke of the Americans to an European prince, or the silver money of Europe would have been formerly to an American. And five years product is not worth the perpetual inheritance of land, where all is possessed, and none remains waste, to be taken up by him that is disseized: which will be easily granted, if one do but take away the imaginary value of money, the disproportion being more than between five and five hundred; though, at the same time, half a year's product is more worth than the inheritance, where there being more land than the inhabitants possess and make use of, any one has liberty to make use of the waste: but there conquerors take little care to possess themselves of the lands of the vanquished, No damage therefore, that men in the state of nature (as all princes and governments are in reference to one another) suffer from one another, can give a conqueror power to dispossess the posterity of the vanquished, and turn them out of that inheritance, which

ought to be the possession of them and their descendants to all generations. The conqueror indeed will be apt to think himself master: and it is the very condition of the subdued not to be able to dispute their right. But if that be all, it gives no other title than what bare force gives to the stronger over the weaker: and, by this reason, he that is strongest will have a right to whatever he pleases to seize on.

Sect. 185. Over those then that joined with him in the war, and over those of the subdued country that opposed him not, and the posterity even of those that did, the conqueror, even in a just war, hath, by his conquest, no right of dominion: they are free from any subjection to him, and if their former government be dissolved, they are at liberty to begin and erect another to themselves.

Sect. 186. The conqueror, it is true, usually, by the force he has over them, compels them, with a sword at their breasts, to stoop to his conditions, and submit to such a government as he pleases to afford them; but the enquiry is, what right he has to do so? If it be said, they submit by their own consent, then this allows their own consent to be necessary to give the conqueror a title to rule over them. It remains only to be considered, whether promises extorted by force, without right, can be thought consent, and how far they bind. To which I shall say, they bind not at all; because whatsoever another gets from me by force, I still retain the right of, and he is obliged presently to restore. He that forces my horse from me, ought presently to restore him, and I have still a right to retake him. By the same reason, he that forced a promise from me, ought presently to restore it, i.e. quit me of the obligation of it; or I may resume it myself, i.e. chuse whether I will perform it: for the law of nature laying an obligation on me only by the rules she prescribes, cannot oblige me by the violation of her rules: such is the extorting any thing from me by force. Nor does it at all alter the case to say, I gave my promise, no more than it excuses the force, and passes the right, when I put my hand in my pocket, and deliver my purse myself to a thief, who demands it with a pistol at my breast.

Sect. 187. From all which it follows, that the government of a conqueror, imposed by force on the subdued, against whom he had no right of war, or who joined not in the war against him, where he had right, has no obligation upon them.

Sect. 188. But let us suppose, that all the men of that community, being all members of the same body politic, may be taken to have joined in that unjust war wherein they are subdued, and so their lives are at the mercy of the conqueror.

Sect. 189. I say this concerns not their children who are in their minority: for since a father hath not, in himself, a power over the life or liberty of his child, no act of his can possibly forfeit it. So that the children, whatever may have happened to the fathers, are freemen, and the absolute power of the conqueror reaches no farther than the persons of the men that were subdued by him, and dies with them: and should he govern them as slaves, subjected to his absolute arbitrary power, he has no such right of dominion over their children. He can have no power over them but by their own consent, whatever he may drive them to say or do; and he has no lawfull authority, whilst force, and not choice, compels them to submission.

Sect. 190. Every man is born with a double right: first, a right of freedom to his person, which no other man has a power over, but the free disposal of it lies in himself. Secondly, a right, before any other man, to inherit with his brethren his father's goods.

Sect. 191. By the first of these, a man is naturally free from subjection to any government, tho' he be born in a place under its jurisdiction; but if he disclaim the lawful government of the country he was born in, he must also quit the right that belonged to him by the laws of it, and the possessions there descending to him from his ancestors, if it were a government made by their consent.

Sect. 192. By the second, the inhabitants of any country, who are descended, and derive a title to their estates from those who are subdued, and had a government forced upon them against their free consents, retain a right to the possession of their ancestors, though they consent not freely to the government, whose hard conditions were by force imposed on the possessors of that country: for the first conqueror never having had a title to the land of that country, the people who are the descendants of, or claim under those who were forced to submit to the yoke of a government by constraint, have always a right to shake it off, and free themselves from the usurpation or tyranny which the sword hath brought in upon them, till their

rulers put them under such a frame of government as they willingly and of choice consent to. Who doubts but the Grecian Christians, descendants of the ancient possessors of that country, may justly cast off the Turkish yoke, which they have so long groaned under, whenever they have an opportunity to do it? For no government can have a right to obedience from a people who have not freely consented to it; which they can never be supposed to do, till either they are put in a full state of liberty to chuse their government and governors, or at least till they have such standing laws, to which they have by themselves or their representatives given their free consent, and also till they are allowed their due property, which is so to be proprietors of what they have, that no body can take away any part of it without their own consent, without which, men under any government are not in the state of freemen, but are direct slaves under the force of war.

Sect. 193. But granting that the conqueror in a just war has a right to the estates, as well as power over the persons, of the conquered; which, it is plain, he hath not: nothing of absolute power will follow from hence, in the continuance of the government; because the descendants of these being all freemen, if he grants them estates and possessions to inhabit his country, (without which it would be worth nothing) whatsoever he grants them, they have, so far as it is granted, property in. The nature whereof is, that without a man's own consent it cannot be taken from him.

Sect. 194. Their persons are free by a native right, and their properties, be they more or less, are their own, and at their own dispose, and not at his; or else it is no property. Supposing the conqueror gives to one man a thousand acres, to him and his heirs for ever; to another he lets a thousand acres for his life, under the rent of 50£. or 500£. per ann. has not the one of these a right to his thousand acres for ever, and the other, during his life, paying the said rent? and hath not the tenant for life a property in all that he gets over and above his rent, by his labour and industry during the said term, supposing it be double the rent? Can any one say, the king, or conqueror, after his grant, may by his power of conqueror take away all, or part of the land from the heirs of one, or from the other during his life, he paying the rent? or can he take away from either the goods or money they have got upon the said land, at his pleasure? If he can, then all free and voluntary contracts cease, and are void in the world; there needs nothing to dissolve them at any time, but power enough: and all the grants and promises of men

in power are but mockery and collusion: for can there be any thing more ridiculous than to say, I give you and your's this for ever, and that in the surest and most solemn way of conveyance can be devised; and yet it is to be understood, that I have right, if I please, to take it away from you again to morrow?

Sect. 195. I will not dispute now whether princes are exempt from the laws of their country; but this I am sure, they owe subjection to the laws of God and nature. No body, no power, can exempt them from the obligations of that eternal law. Those are so great, and so strong, in the case of promises, that omnipotency itself can be tied by them. Grants, promises, and oaths, are bonds that hold the Almighty: whatever some flatterers say to princes of the world, who all together, with all their people joined to them, are, in comparison of the great God, but as a drop of the bucket, or a dust on the balance, inconsiderable, nothing!

Sect. 196. The short of the case in conquest is this: the conqueror, if he have a just cause, has a despotical right over the persons of all, that actually aided, and concurred in the war against him, and a right to make up his damage and cost out of their labour and estates, so he injure not the right of any other. Over the rest of the people, if there were any that consented not to the war, and over the children of the captives themselves, or the possessions of either, he has no power; and so can have, by virtue of conquest, no lawful title himself to dominion over them, or derive it to his posterity; but is an aggressor, if he attempts upon their properties, and thereby puts himself in a state of war against them, and has no better a right of principality, he, nor any of his successors, than Hingar, or Hubba, the Danes, had here in England; or Spartacus, had he conquered Italy, would have had; which is to have their yoke cast off, as soon as God shall give those under their subjection courage and opportunity to do it. Thus, notwithstanding whatever title the kings of Assyria had over Judah, by the sword, God assisted Hezekiah to throw off the dominion of that conquering empire. And the lord was with Hezekiah, and he prospered; wherefore he went forth, and he rebelled against the king of Assyria, and served him not, 2 Kings xviii. 7. Whence it is plain, that shaking off a power, which force, and not right, hath set over any one, though it hath the name of rebellion, yet is no offence before God, but is that which he allows and countenances, though even promises and covenants, when obtained by force, have

intervened: for it is very probable, to any one that reads the story of Ahaz and Hezekiah attentively, that the Assyrians subdued Ahaz, and deposed him, and made Hezekiah king in his father's lifetime; and that Hezekiah by agreement had done him homage, and paid him tribute all this time.

---

## **CHAPTER. XVII.**

### **OF USURPATION.**

Sect. 197. AS conquest may be called a foreign usurpation, so usurpation is a kind of domestic conquest, with this difference, that an usurper can never have right on his side, it being no usurpation, but where one is got into the possession of what another has right to. This, so far as it is usurpation, is a change only of persons, but not of the forms and rules of the government: for if the usurper extend his power beyond what of right belonged to the lawful princes, or governors of the commonwealth, it is tyranny added to usurpation.

Sect. 198. In all lawful governments, the designation of the persons, who are to bear rule, is as natural and necessary a part as the form of the government itself, and is that which had its establishment originally from the people; the anarchy being much alike, to have no form of government at all; or to agree, that it shall be monarchical, but to appoint no way to design the person that shall have the power, and be the monarch. Hence all commonwealths, with the form of government established, have rules also of appointing those who are to have any share in the public authority, and settled methods of conveying the right to them: for the anarchy is much alike, to have no form of government at all; or to agree that it shall be monarchical, but to appoint no way to know or design the person that shall have the power, and be the monarch. Whoever gets into the exercise of any part of the power, by other ways than what the laws of the community have prescribed, hath no right to be obeyed, though the form of the

commonwealth be still preserved; since he is not the person the laws have appointed, and consequently not the person the people have consented to. Nor can such an usurper, or any deriving from him, ever have a title, till the people are both at liberty to consent, and have actually consented to allow, and confirm in him the power he hath till then usurped.

---

## CHAPTER. XVIII.

### OF TYRANNY.

Sect. 199. AS usurpation is the exercise of power, which another hath a right to; so tyranny is the exercise of power beyond right, which no body can have a right to. And this is making use of the power any one has in his hands, not for the good of those who are under it, but for his own private separate advantage. When the governor, however intitled, makes not the law, but his will, the rule; and his commands and actions are not directed to the preservation of the properties of his people, but the satisfaction of his own ambition, revenge, covetousness, or any other irregular passion.

Sect. 200. If one can doubt this to be truth, or reason, because it comes from the obscure hand of a subject, I hope the authority of a king will make it pass with him. King James the first, in his speech to the parliament, 1603, tells them thus,

I will ever prefer the weal of the public, and of the whole commonwealth, in making of good laws and constitutions, to any particular and private ends of mine; thinking ever the wealth and weal of the commonwealth to be my greatest weal and worldly felicity; a point wherein a lawful king doth directly differ from a tyrant: for I do acknowledge, that the special and greatest point of difference that is between a rightful king and an usurping tyrant, is this, that whereas the proud and ambitious tyrant doth think his

kingdom and people are only ordained for satisfaction of his desires and unreasonable appetites, the righteous and just king doth by the contrary acknowledge himself to be ordained for the procuring of the wealth and property of his people.

And again, in his speech to the parliament, 1609, he hath these words:

The king binds himself by a double oath, to the observation of the fundamental laws of his kingdom; tacitly, as by being a king, and so bound to protect as well the people, as the laws of his kingdom; and expressly, by his oath at his coronation, so as every just king, in a settled kingdom, is bound to observe that paction made to his people, by his laws, in framing his government agreeable thereunto, according to that paction which God made with Noah after the deluge. Hereafter, seed-time and harvest, and cold and heat, and summer and winter, and day and night, shall not cease while the earth remaineth. And therefore a king governing in a settled kingdom, leaves to be a king, and degenerates into a tyrant, as soon as he leaves off to rule according to his laws.

And a little after,

Therefore all kings that are not tyrants, or perjured, will be glad to bound themselves within the limits of their laws; and they that persuade them the contrary, are vipers, and pests both against them and the commonwealth.

Thus that learned king, who well understood the notion of things, makes the difference betwixt a king and a tyrant to consist only in this, that one makes the laws the bounds of his power, and the good of the public, the end of his government; the other makes all give way to his own will and appetite.

Sect. 201. It is a mistake, to think this fault is proper only to monarchies; other forms of government are liable to it, as well as that: for wherever the power, that is put in any hands for the government of the people, and the

preservation of their properties, is applied to other ends, and made use of to impoverish, harass, or subdue them to the arbitrary and irregular commands of those that have it; there it presently becomes tyranny, whether those that thus use it are one or many. Thus we read of the thirty tyrants at Athens, as well as one at Syracuse; and the intolerable dominion of the Decemviri at Rome was nothing better.

Sect. 202. Where-ever law ends, tyranny begins, if the law be transgressed to another's harm; and whosoever in authority exceeds the power given him by the law, and makes use of the force he has under his command, to compass that upon the subject, which the law allows not, ceases in that to be a magistrate; and, acting without authority, may be opposed, as any other man, who by force invades the right of another. This is acknowledged in subordinate magistrates. He that hath authority to seize my person in the street, may be opposed as a thief and a robber, if he endeavours to break into my house to execute a writ, notwithstanding that I know he has such a warrant, and such a legal authority, as will empower him to arrest me abroad. And why this should not hold in the highest, as well as in the most inferior magistrate, I would gladly be informed. Is it reasonable, that the eldest brother, because he has the greatest part of his father's estate, should thereby have a right to take away any of his younger brothers portions? or that a rich man, who possessed a whole country, should from thence have a right to seize, when he pleased, the cottage and garden of his poor neighbour? The being rightfully possessed of great power and riches, exceedingly beyond the greatest part of the sons of Adam, is so far from being an excuse, much less a reason, for rapine and oppression, which the endamaging another without authority is, that it is a great aggravation of it: for the exceeding the bounds of authority is no more a right in a great, than in a petty officer; no more justifiable in a king than a constable; but is so much the worse in him, in that he has more trust put in him, has already a much greater share than the rest of his brethren, and is supposed, from the advantages of his education, employment, and counsellors, to be more knowing in the measures of right and wrong.

Sect. 203. May the commands then of a prince be opposed? may he be resisted as often as any one shall find himself aggrieved, and but imagine he has not right done him? This will unhinge and overturn all polities, and, instead of government and order, leave nothing but anarchy and confusion.

Sect. 204. To this I answer, that force is to be opposed to nothing, but to unjust and unlawful force; whoever makes any opposition in any other case, draws on himself a just condemnation both from God and man; and so no such danger or confusion will follow, as is often suggested: for,

Sect. 205. First, As, in some countries, the person of the prince by the law is sacred; and so, whatever he commands or does, his person is still free from all question or violence, not liable to force, or any judicial censure or condemnation. But yet opposition may be made to the illegal acts of any inferior officer, or other commissioned by him; unless he will, by actually putting himself into a state of war with his people, dissolve the government, and leave them to that defence which belongs to every one in the state of nature: for of such things who can tell what the end will be? and a neighbour kingdom has shewed the world an odd example. In all other cases the sacredness of the person exempts him from all inconveniencies, whereby he is secure, whilst the government stands, from all violence and harm whatsoever; than which there cannot be a wiser constitution: for the harm he can do in his own person not being likely to happen often, nor to extend itself far; nor being able by his single strength to subvert the laws, nor oppress the body of the people, should any prince have so much weakness, and ill nature as to be willing to do it, the inconveniency of some particular mischiefs, that may happen sometimes, when a heady prince comes to the throne, are well recompensed by the peace of the public, and security of the government, in the person of the chief magistrate, thus set out of the reach of danger: it being safer for the body, that some few private men should be sometimes in danger to suffer, than that the head of the republic should be easily, and upon slight occasions, exposed.

Sect. 206. Secondly, But this privilege, belonging only to the king's person, hinders not, but they may be questioned, opposed, and resisted, who use unjust force, though they pretend a commission from him, which the law authorizes not; as is plain in the case of him that has the king's writ to arrest a man, which is a full commission from the king; and yet he that has it cannot break open a man's house to do it, nor execute this command of the king upon certain days, nor in certain places, though this commission have no such exception in it; but they are the limitations of the law, which if any one transgress, the king's commission excuses him not: for the king's authority being given him only by the law, he cannot empower any one to

act against the law, or justify him, by his commission, in so doing; the commission, or command of any magistrate, where he has no authority, being as void and insignificant, as that of any private man; the difference between the one and the other, being that the magistrate has some authority so far, and to such ends, and the private man has none at all: for it is not the commission, but the authority, that gives the right of acting; and against the laws there can be no authority. But, notwithstanding such resistance, the king's person and authority are still both secured, and so no danger to governor or government.

Sect. 207. Thirdly, Supposing a government wherein the person of the chief magistrate is not thus sacred; yet this doctrine of the lawfulness of resisting all unlawful exercises of his power, will not upon every slight occasion indanger him, or imbroil the government: for where the injured party may be relieved, and his damages repaired by appeal to the law, there can be no pretence for force, which is only to be used where a man is intercepted from appealing to the law: for nothing is to be accounted hostile force, but where it leaves not the remedy of such an appeal; and it is such force alone, that puts him that uses it into a state of war, and makes it lawful to resist him. A man with a sword in his hand demands my purse in the high-way, when perhaps I have not twelve pence in my pocket: this man I may lawfully kill. To another I deliver 100 pounds to hold only whilst I alight, which he refuses to restore me, when I am got up again, but draws his sword to defend the possession of it by force, if I endeavour to retake it. The mischief this man does me is a hundred, or possibly a thousand times more than the other perhaps intended me (whom I killed before he really did me any); and yet I might lawfully kill the one, and cannot so much as hurt the other lawfully. The reason whereof is plain; because the one using force, which threatened my life, I could not have time to appeal to the law to secure it: and when it was gone, it was too late to appeal. The law could not restore life to my dead carcass: the loss was irreparable; which to prevent, the law of nature gave me a right to destroy him, who had put himself into a state of war with me, and threatened my destruction. But in the other case, my life not being in danger, I may have the benefit of appealing to the law, and have reparation for my 100 pounds that way.

Sect. 208. Fourthly, But if the unlawful acts done by the magistrate be maintained (by the power he has got), and the remedy which is due by law,

be by the same power obstructed; yet the right of resisting, even in such manifest acts of tyranny, will not suddenly, or on slight occasions, disturb the government: for if it reach no farther than some private men's cases, though they have a right to defend themselves, and to recover by force what by unlawful force is taken from them; yet the right to do so will not easily engage them in a contest, wherein they are sure to perish; it being as impossible for one, or a few oppressed men to disturb the government, where the body of the people do not think themselves concerned in it, as for a raving mad-man, or heady malcontent to overturn a well settled state; the people being as little apt to follow the one, as the other.

Sect. 209. But if either these illegal acts have extended to the majority of the people; or if the mischief and oppression has lighted only on some few, but in such cases, as the precedent, and consequences seem to threaten all; and they are persuaded in their consciences, that their laws, and with them their estates, liberties, and lives are in danger, and perhaps their religion too; how they will be hindered from resisting illegal force, used against them, I cannot tell. This is an inconvenience, I confess, that attends all governments whatsoever, when the governors have brought it to this pass, to be generally suspected of their people; the most dangerous state which they can possibly put themselves in, wherein they are the less to be pitied, because it is so easy to be avoided; it being as impossible for a governor, if he really means the good of his people, and the preservation of them, and their laws together, not to make them see and feel it, as it is for the father of a family, not to let his children see he loves, and takes care of them.

Sect. 210. But if all the world shall observe pretences of one kind, and actions of another; arts used to elude the law, and the trust of prerogative (which is an arbitrary power in some things left in the prince's hand to do good, not harm to the people) employed contrary to the end for which it was given: if the people shall find the ministers and subordinate magistrates chosen suitable to such ends, and favoured, or laid by, proportionably as they promote or oppose them: if they see several experiments made of arbitrary power, and that religion underhand favoured, (tho' publicly proclaimed against) which is readiest to introduce it; and the operators in it supported, as much as may be; and when that cannot be done, yet approved still, and liked the better: if a long train of actions shew the councils all tending that way; how can a man any more hinder himself from being

persuaded in his own mind, which way things are going; or from casting about how to save himself, than he could from believing the captain of the ship he was in, was carrying him, and the rest of the company, to Algiers, when he found him always steering that course, though cross winds, leaks in his ship, and want of men and provisions did often force him to turn his course another way for some time, which he steadily returned to again, as soon as the wind, weather, and other circumstances would let him?

---

## **CHAPTER. XIX.**

### **OF THE DISSOLUTION OF GOVERNMENT.**

Sect. 211. HE that will with any clearness speak of the dissolution of government, ought in the first place to distinguish between the dissolution of the society and the dissolution of the government. That which makes the community, and brings men out of the loose state of nature, into one politic society, is the agreement which every one has with the rest to incorporate, and act as one body, and so be one distinct commonwealth. The usual, and almost only way whereby this union is dissolved, is the inroad of foreign force making a conquest upon them: for in that case, (not being able to maintain and support themselves, as one intire and independent body) the union belonging to that body which consisted therein, must necessarily cease, and so every one return to the state he was in before, with a liberty to shift for himself, and provide for his own safety, as he thinks fit, in some other society. Whenever the society is dissolved, it is certain the government of that society cannot remain. Thus conquerors swords often cut up governments by the roots, and mangle societies to pieces, separating the subdued or scattered multitude from the protection of, and dependence on, that society which ought to have preserved them from violence. The world is too well instructed in, and too forward to allow of, this way of dissolving of governments, to need any more to be said of it; and there wants not much argument to prove, that where the society is dissolved, the

government cannot remain; that being as impossible, as for the frame of an house to subsist when the materials of it are scattered and dissipated by a whirl-wind, or jumbled into a confused heap by an earthquake.

Sect. 212. Besides this over-turning from without, governments are dissolved from within.

First, When the legislative is altered. Civil society being a state of peace, amongst those who are of it, from whom the state of war is excluded by the umpirage, which they have provided in their legislative, for the ending all differences that may arise amongst any of them, it is in their legislative, that the members of a commonwealth are united, and combined together into one coherent living body. This is the soul that gives form, life, and unity, to the commonwealth: from hence the several members have their mutual influence, sympathy, and connexion: and therefore, when the legislative is broken, or dissolved, dissolution and death follows: for the essence and union of the society consisting in having one will, the legislative, when once established by the majority, has the declaring, and as it were keeping of that will. The constitution of the legislative is the first and fundamental act of society, whereby provision is made for the continuation of their union, under the direction of persons, and bonds of laws, made by persons authorized thereunto, by the consent and appointment of the people, without which no one man, or number of men, amongst them, can have authority of making laws that shall be binding to the rest. When any one, or more, shall take upon them to make laws, whom the people have not appointed so to do, they make laws without authority, which the people are not therefore bound to obey; by which means they come again to be out of subjection, and may constitute to themselves a new legislative, as they think best, being in full liberty to resist the force of those, who without authority would impose any thing upon them. Every one is at the disposal of his own will, when those who had, by the delegation of the society, the declaring of the public will, are excluded from it, and others usurp the place, who have no such authority or delegation.

Sect. 213. This being usually brought about by such in the commonwealth who misuse the power they have; it is hard to consider it aright, and know at whose door to lay it, without knowing the form of government in which it

happens. Let us suppose then the legislative placed in the concurrence of three distinct persons.

(1). A single hereditary person, having the constant, supreme, executive power, and with it the power of convoking and dissolving the other two within certain periods of time.

(2). An assembly of hereditary nobility.

(3). An assembly of representatives chosen, pro tempore, by the people. Such a form of government supposed, it is evident,

Sect. 214. First, That when such a single person, or prince, sets up his own arbitrary will in place of the laws, which are the will of the society, declared by the legislative, then the legislative is changed: for that being in effect the legislative, whose rules and laws are put in execution, and required to be obeyed; when other laws are set up, and other rules pretended, and enforced, than what the legislative, constituted by the society, have enacted, it is plain that the legislative is changed. Whoever introduces new laws, not being thereunto authorized by the fundamental appointment of the society, or subverts the old, disowns and overturns the power by which they were made, and so sets up a new legislative.

Sect. 215. Secondly, When the prince hinders the legislative from assembling in its due time, or from acting freely, pursuant to those ends for which it was constituted, the legislative is altered: for it is not a certain number of men, no, nor their meeting, unless they have also freedom of debating, and leisure of perfecting, what is for the good of the society, wherein the legislative consists: when these are taken away or altered, so as to deprive the society of the due exercise of their power, the legislative is truly altered; for it is not names that constitute governments, but the use and exercise of those powers that were intended to accompany them; so that he, who takes away the freedom, or hinders the acting of the legislative in its due seasons, in effect takes away the legislative, and puts an end to the government.

Sect. 216. Thirdly, When, by the arbitrary power of the prince, the electors, or ways of election, are altered, without the consent, and contrary to the common interest of the people, there also the legislative is altered:

for, if others than those whom the society hath authorized thereunto, do chuse, or in another way than what the society hath prescribed, those chosen are not the legislative appointed by the people.

Sect. 217. Fourthly, The delivery also of the people into the subjection of a foreign power, either by the prince, or by the legislative, is certainly a change of the legislative, and so a dissolution of the government: for the end why people entered into society being to be preserved one intire, free, independent society, to be governed by its own laws; this is lost, whenever they are given up into the power of another.

Sect. 218. Why, in such a constitution as this, the dissolution of the government in these cases is to be imputed to the prince, is evident; because he, having the force, treasure and offices of the state to employ, and often persuading himself, or being flattered by others, that as supreme magistrate he is uncapable of controul; he alone is in a condition to make great advances toward such changes, under pretence of lawful authority, and has it in his hands to terrify or suppress opposers, as factious, seditious, and enemies to the government: whereas no other part of the legislative, or people, is capable by themselves to attempt any alteration of the legislative, without open and visible rebellion, apt enough to be taken notice of, which, when it prevails, produces effects very little different from foreign conquest. Besides, the prince in such a form of government, having the power of dissolving the other parts of the legislative, and thereby rendering them private persons, they can never in opposition to him, or without his concurrence, alter the legislative by a law, his consent being necessary to give any of their decrees that sanction. But yet, so far as the other parts of the legislative any way contribute to any attempt upon the government, and do either promote, or not, what lies in them, hinder such designs, they are guilty, and partake in this, which is certainly the greatest crime which men can partake of one towards another.

Sec. 219. There is one way more whereby such a government may be dissolved, and that is: When he who has the supreme executive power, neglects and abandons that charge, so that the laws already made can no longer be put in execution. This is demonstratively to reduce all to anarchy, and so effectually to dissolve the government: for laws not being made for themselves, but to be, by their execution, the bonds of the society, to keep

every part of the body politic in its due place and function; when that totally ceases, the government visibly ceases, and the people become a confused multitude, without order or connexion. Where there is no longer the administration of justice, for the securing of men's rights, nor any remaining power within the community to direct the force, or provide for the necessities of the public, there certainly is no government left. Where the laws cannot be executed, it is all one as if there were no laws; and a government without laws is, I suppose, a mystery in politics, unconceivable to human capacity, and inconsistent with human society.

Sect. 220. In these and the like cases, when the government is dissolved, the people are at liberty to provide for themselves, by erecting a new legislative, differing from the other, by the change of persons, or form, or both, as they shall find it most for their safety and good: for the society can never, by the fault of another, lose the native and original right it has to preserve itself, which can only be done by a settled legislative, and a fair and impartial execution of the laws made by it. But the state of mankind is not so miserable that they are not capable of using this remedy, till it be too late to look for any. To tell people they may provide for themselves, by erecting a new legislative, when by oppression, artifice, or being delivered over to a foreign power, their old one is gone, is only to tell them, they may expect relief when it is too late, and the evil is past cure. This is in effect no more than to bid them first be slaves, and then to take care of their liberty; and when their chains are on, tell them, they may act like freemen. This, if barely so, is rather mockery than relief; and men can never be secure from tyranny, if there be no means to escape it till they are perfectly under it: and therefore it is, that they have not only a right to get out of it, but to prevent it.

Sect. 221. There is therefore, secondly, another way whereby governments are dissolved, and that is, when the legislative, or the prince, either of them, act contrary to their trust.

First, The legislative acts against the trust reposed in them, when they endeavour to invade the property of the subject, and to make themselves, or any part of the community, masters, or arbitrary disposers of the lives, liberties, or fortunes of the people.

Sect. 222. The reason why men enter into society, is the preservation of their property; and the end why they chuse and authorize a legislative, is, that there may be laws made, and rules set, as guards and fences to the properties of all the members of the society, to limit the power, and moderate the dominion, of every part and member of the society: for since it can never be supposed to be the will of the society, that the legislative should have a power to destroy that which every one designs to secure, by entering into society, and for which the people submitted themselves to legislators of their own making; whenever the legislators endeavour to take away, and destroy the property of the people, or to reduce them to slavery under arbitrary power, they put themselves into a state of war with the people, who are thereupon absolved from any farther obedience, and are left to the common refuge, which God hath provided for all men, against force and violence. Whensoever therefore the legislative shall transgress this fundamental rule of society; and either by ambition, fear, folly or corruption, endeavour to grasp themselves, or put into the hands of any other, an absolute power over the lives, liberties, and estates of the people; by this breach of trust they forfeit the power the people had put into their hands for quite contrary ends, and it devolves to the people, who have a right to resume their original liberty, and, by the establishment of a new legislative, (such as they shall think fit) provide for their own safety and security, which is the end for which they are in society. What I have said here, concerning the legislative in general, holds true also concerning the supreme executor, who having a double trust put in him, both to have a part in the legislative, and the supreme execution of the law, acts against both, when he goes about to set up his own arbitrary will as the law of the society. He acts also contrary to his trust, when he either employs the force, treasure, and offices of the society, to corrupt the representatives, and gain them to his purposes; or openly preengages the electors, and prescribes to their choice, such, whom he has, by sollicitations, threats, promises, or otherwise, won to his designs; and employs them to bring in such, who have promised before-hand what to vote, and what to enact. Thus to regulate candidates and electors, and new-model the ways of election, what is it but to cut up the government by the roots, and poison the very fountain of public security? for the people having reserved to themselves the choice of their representatives, as the fence to their properties, could do it for no other end, but that they might always be freely chosen, and so chosen, freely act,

and advise, as the necessity of the commonwealth, and the public good should, upon examination, and mature debate, be judged to require. This, those who give their votes before they hear the debate, and have weighed the reasons on all sides, are not capable of doing. To prepare such an assembly as this, and endeavour to set up the declared abettors of his own will, for the true representatives of the people, and the law-makers of the society, is certainly as great a breach of trust, and as perfect a declaration of a design to subvert the government, as is possible to be met with. To which, if one shall add rewards and punishments visibly employed to the same end, and all the arts of perverted law made use of, to take off and destroy all that stand in the way of such a design, and will not comply and consent to betray the liberties of their country, it will be past doubt what is doing. What power they ought to have in the society, who thus employ it contrary to the trust went along with it in its first institution, is easy to determine; and one cannot but see, that he, who has once attempted any such thing as this, cannot any longer be trusted.

Sect. 223. To this perhaps it will be said, that the people being ignorant, and always discontented, to lay the foundation of government in the unsteady opinion and uncertain humour of the people, is to expose it to certain ruin; and no government will be able long to subsist, if the people may set up a new legislative, whenever they take offence at the old one. To this I answer, Quite the contrary. People are not so easily got out of their old forms, as some are apt to suggest. They are hardly to be prevailed with to amend the acknowledged faults in the frame they have been accustomed to. And if there be any original defects, or adventitious ones introduced by time, or corruption; it is not an easy thing to get them changed, even when all the world sees there is an opportunity for it. This slowness and aversion in the people to quit their old constitutions, has, in the many revolutions which have been seen in this kingdom, in this and former ages, still kept us to, or, after some interval of fruitless attempts, still brought us back again to our old legislative of king, lords and commons: and whatever provocations have made the crown be taken from some of our princes heads, they never carried the people so far as to place it in another line.

Sect. 224. But it will be said, this hypothesis lays a ferment for frequent rebellion. To which I answer,

First, No more than any other hypothesis: for when the people are made miserable, and find themselves exposed to the ill usage of arbitrary power, cry up their governors, as much as you will, for sons of Jupiter; let them be sacred and divine, descended, or authorized from heaven; give them out for whom or what you please, the same will happen. The people generally ill treated, and contrary to right, will be ready upon any occasion to ease themselves of a burden that sits heavy upon them. They will wish, and seek for the opportunity, which in the change, weakness and accidents of human affairs, seldom delays long to offer itself. He must have lived but a little while in the world, who has not seen examples of this in his time; and he must have read very little, who cannot produce examples of it in all sorts of governments in the world.

Sect. 225. Secondly, I answer, such revolutions happen not upon every little mismanagement in public affairs. Great mistakes in the ruling part, many wrong and inconvenient laws, and all the slips of human frailty, will be born by the people without mutiny or murmur. But if a long train of abuses, prevarications and artifices, all tending the same way, make the design visible to the people, and they cannot but feel what they lie under, and see whither they are going; it is not to be wondered, that they should then rouse themselves, and endeavour to put the rule into such hands which may secure to them the ends for which government was at first erected; and without which, ancient names, and specious forms, are so far from being better, that they are much worse, than the state of nature, or pure anarchy; the inconveniencies being all as great and as near, but the remedy farther off and more difficult.

Sect. 226. Thirdly, I answer, that this doctrine of a power in the people of providing for their safety a-new, by a new legislative, when their legislators have acted contrary to their trust, by invading their property, is the best fence against rebellion, and the probablest means to hinder it: for rebellion being an opposition, not to persons, but authority, which is founded only in the constitutions and laws of the government; those, whoever they be, who by force break through, and by force justify their violation of them, are truly and properly rebels: for when men, by entering into society and civil-government, have excluded force, and introduced laws for the preservation of property, peace, and unity amongst themselves, those who set up force again in opposition to the laws, do rebellare, that is, bring back again the

state of war, and are properly rebels: which they who are in power, (by the pretence they have to authority, the temptation of force they have in their hands, and the flattery of those about them) being likeliest to do; the properest way to prevent the evil, is to shew them the danger and injustice of it, who are under the greatest temptation to run into it.

Sect. 227. In both the fore-mentioned cases, when either the legislative is changed, or the legislators act contrary to the end for which they were constituted; those who are guilty are guilty of rebellion: for if any one by force takes away the established legislative of any society, and the laws by them made, pursuant to their trust, he thereby takes away the umpirage, which every one had consented to, for a peaceable decision of all their controversies, and a bar to the state of war amongst them. They, who remove, or change the legislative, take away this decisive power, which no body can have, but by the appointment and consent of the people; and so destroying the authority which the people did, and no body else can set up, and introducing a power which the people hath not authorized, they actually introduce a state of war, which is that of force without authority: and thus, by removing the legislative established by the society, (in whose decisions the people acquiesced and united, as to that of their own will) they untie the knot, and expose the people a-new to the state of war, And if those, who by force take away the legislative, are rebels, the legislators themselves, as has been shewn, can be no less esteemed so; when they, who were set up for the protection, and preservation of the people, their liberties and properties, shall by force invade and endeavour to take them away; and so they putting themselves into a state of war with those who made them the protectors and guardians of their peace, are properly, and with the greatest aggravation, rebellantes, rebels.

Sect. 228. But if they, who say it lays a foundation for rebellion, mean that it may occasion civil wars, or intestine broils, to tell the people they are absolved from obedience when illegal attempts are made upon their liberties or properties, and may oppose the unlawful violence of those who were their magistrates, when they invade their properties contrary to the trust put in them; and that therefore this doctrine is not to be allowed, being so destructive to the peace of the world: they may as well say, upon the same ground, that honest men may not oppose robbers or pirates, because this may occasion disorder or bloodshed. If any mischief come in such

cases, it is not to be charged upon him who defends his own right, but on him that invades his neighbours. If the innocent honest man must quietly quit all he has, for peace sake, to him who will lay violent hands upon it, I desire it may be considered, what a kind of peace there will be in the world, which consists only in violence and rapine; and which is to be maintained only for the benefit of robbers and oppressors. Who would not think it an admirable peace betwix the mighty and the mean, when the lamb, without resistance, yielded his throat to be torn by the imperious wolf? Polyphemus's den gives us a perfect pattern of such a peace, and such a government, wherein Ulysses and his companions had nothing to do, but quietly to suffer themselves to be devoured. And no doubt Ulysses, who was a prudent man, preached up passive obedience, and exhorted them to a quiet submission, by representing to them of what concernment peace was to mankind; and by shewing the inconveniences might happen, if they should offer to resist Polyphemus, who had now the power over them.

Sect. 229. The end of government is the good of mankind; and which is best for mankind, that the people should be always exposed to the boundless will of tyranny, or that the rulers should be sometimes liable to be opposed, when they grow exorbitant in the use of their power, and employ it for the destruction, and not the preservation of the properties of their people?

Sect. 230. Nor let any one say, that mischief can arise from hence, as often as it shall please a busy head, or turbulent spirit, to desire the alteration of the government. It is true, such men may stir, whenever they please; but it will be only to their own just ruin and perdition: for till the mischief be grown general, and the ill designs of the rulers become visible, or their attempts sensible to the greater part, the people, who are more disposed to suffer than right themselves by resistance, are not apt to stir. The examples of particular injustice, or oppression of here and there an unfortunate man, moves them not. But if they universally have a persuasion, grounded upon manifest evidence, that designs are carrying on against their liberties, and the general course and tendency of things cannot but give them strong suspicions of the evil intention of their governors, who is to be blamed for it? Who can help it, if they, who might avoid it, bring themselves into this suspicion? Are the people to be blamed, if they have the sense of rational creatures, and can think of things no otherwise than as they find and feel

them? And is it not rather their fault, who put things into such a posture, that they would not have them thought to be as they are? I grant, that the pride, ambition, and turbulency of private men have sometimes caused great disorders in commonwealths, and factions have been fatal to states and kingdoms. But whether the mischief hath oftener begun in the peoples wantonness, and a desire to cast off the lawful authority of their rulers, or in the rulers insolence, and endeavours to get and exercise an arbitrary power over their people; whether oppression, or disobedience, gave the first rise to the disorder, I leave it to impartial history to determine. This I am sure, whoever, either ruler or subject, by force goes about to invade the rights of either prince or people, and lays the foundation for overturning the constitution and frame of any just government, is highly guilty of the greatest crime, I think, a man is capable of, being to answer for all those mischiefs of blood, rapine, and desolation, which the breaking to pieces of governments bring on a country. And he who does it, is justly to be esteemed the common enemy and pest of mankind, and is to be treated accordingly.

Sect. 231. That subjects or foreigners, attempting by force on the properties of any people, may be resisted with force, is agreed on all hands. But that magistrates, doing the same thing, may be resisted, hath of late been denied: as if those who had the greatest privileges and advantages by the law, had thereby a power to break those laws, by which alone they were set in a better place than their brethren: whereas their offence is thereby the greater, both as being ungrateful for the greater share they have by the law, and breaking also that trust, which is put into their hands by their brethren.

Sect. 232. Whosoever uses force without right, as every one does in society, who does it without law, puts himself into a state of war with those against whom he so uses it; and in that state all former ties are cancelled, all other rights cease, and every one has a right to defend himself, and to resist the aggressor. This is so evident, that Barclay himself, that great assertor of the power and sacredness of kings, is forced to confess, That it is lawful for the people, in some cases, to resist their king; and that too in a chapter, wherein he pretends to shew, that the divine law shuts up the people from all manner of rebellion. Whereby it is evident, even by his own doctrine, that, since they may in some cases resist, all resisting of princes is not rebellion. His words are these. *Quod si quis dicat, Ergone populus*

tyrannicae crudelitati & furori jugulum semper praebebit? Ergone multitudine civitates suas fame, ferro, & flamma vastari, seque, conjuges, & liberos fortunae ludibrio & tyranni libidini exponi, inque omnia vitae pericula omnesque miserias & molestias a rege deduci patientur? Num illis quod omni animantium generi est a natura tributum, denegari debet, ut sc. vim vi repellant, seseq; ab injuria, tueantur? Huic breviter responsum sit, Populo universo negari defensionem, quae juris naturalis est, neque ultionem quae praeter naturam est adversus regem concedi debere. Quapropter si rex non in singulares tantum personas aliquot privatum odium exerceat, sed corpus etiam reipublicae, cujus ipse caput est, i.e. totum populum, vel insignem aliquam ejus partem immani & intoleranda saevitia seu tyrannide divexet; populo, quidem hoc casu resistendi ac tuendi se ab injuria potestas competit, sed tuendi se tantum, non enim in principem invadendi: & restituendae injuriae illatae, non recedendi a debita reverentia propter acceptam injuriam. Praesentem denique impetum propulsandi non vim praeteritam ulciscendi jus habet. Horum enim alterum a natura est, ut vitam scilicet corpusque tueamur. Alterum vero contra naturam, ut inferior de superiori supplicium sumat. Quod itaque populus malum, antequam factum sit, impedire potest, ne fiat, id postquam factum est, in regem authorem sceleris vindicare non potest: populus igitur hoc amplius quam privatus quispiam habet: quod huic, vel ipsis adversariis iudicibus, excepto Buchananano, nullum nisi in patientia remedium superest. Cum ille si intolerabilis tyrannus est (modicum enim ferre omnino debet) resistere cum reverentia possit, Barclay contra Monarchom. 1. iii. c. 8.

In English thus:

Sect. 233. But if any one should ask, Must the people then always lay themselves open to the cruelty and rage of tyranny? Must they see their cities pillaged, and laid in ashes, their wives and children exposed to the tyrant's lust and fury, and themselves and families reduced by their king to ruin, and all the miseries of want and oppression, and yet sit still? Must men alone be debarred the common privilege of opposing force with force, which nature allows so freely to all other creatures for their preservation from injury? I answer: Self-defence is a part of the law of nature; nor can it be denied the community, even against the king himself: but to revenge themselves upon him, must by no means be allowed them; it being not agreeable to that law. Wherefore if the king shall shew an hatred, not only

to some particular persons, but sets himself against the body of the commonwealth, whereof he is the head, and shall, with intolerable ill usage, cruelly tyrannize over the whole, or a considerable part of the people, in this case the people have a right to resist and defend themselves from injury: but it must be with this caution, that they only defend themselves, but do not attack their prince: they may repair the damages received, but must not for any provocation exceed the bounds of due reverence and respect. They may repulse the present attempt, but must not revenge past violences: for it is natural for us to defend life and limb, but that an inferior should punish a superior, is against nature. The mischief which is designed them, the people may prevent before it be done; but when it is done, they must not revenge it on the king, though author of the villany. This therefore is the privilege of the people in general, above what any private person hath; that particular men are allowed by our adversaries themselves (Buchanan only excepted) to have no other remedy but patience; but the body of the people may with respect resist intolerable tyranny; for when it is but moderate, they ought to endure it.

Sect. 234. Thus far that great advocate of monarchical power allows of resistance.

Sect. 235. It is true, he has annexed two limitations to it, to no purpose:

First, He says, it must be with reverence.

Secondly, It must be without retribution, or punishment; and the reason he gives is, because an inferior cannot punish a superior. First, How to resist force without striking again, or how to strike with reverence, will need some skill to make intelligible. He that shall oppose an assault only with a shield to receive the blows, or in any more respectful posture, without a sword in his hand, to abate the confidence and force of the assailant, will quickly be at an end of his resistance, and will find such a defence serve only to draw on himself the worse usage. This is as ridiculous a way of resisting, as juvenal thought it of fighting; *ubi tu pulsas, ego vapulo tantum*. And the success of the combat will be unavoidably the same he there describes it:

———*Libertas pauperis haec est:  
Pulsatus rogat, et pugnis concisus, adorat,*

Ut liceat paucis cum dentibus inde reverti.

This will always be the event of such an imaginary resistance, where men may not strike again. He therefore who may resist, must be allowed to strike. And then let our author, or any body else, join a knock on the head, or a cut on the face, with as much reverence and respect as he thinks fit. He that can reconcile blows and reverence, may, for aught I know, desire for his pains, a civil, respectful cudgeling where-ever he can meet with it.

Secondly, As to his second, An inferior cannot punish a superior; that is true, generally speaking, whilst he is his superior. But to resist force with force, being the state of war that levels the parties, cancels all former relation of reverence, respect, and superiority: and then the odds that remains, is, that he, who opposes the unjust aggressor, has this superiority over him, that he has a right, when he prevails, to punish the offender, both for the breach of the peace, and all the evils that followed upon it. Barclay therefore, in another place, more coherently to himself, denies it to be lawful to resist a king in any case. But he there assigns two cases, whereby a king may un-king himself. His words are,

Quid ergo, nulline casus incidere possunt quibus populo sese erigere atque in regem impotentius dominantem arma capere & invadere jure suo suaque autoritate liceat? Nulli certe quamdiu rex manet. Semper enim ex divinis id obstat, Regem honorificato; & qui potestati resistit, Dei ordinationi resisit: non alias igitur in eum populo potestas est quam si id committat propter quod ipso jure rex esse desinat. Tunc enim se ipse principatu exiit atque in privatis constituit liber: hoc modo populus & superior efficitur, reverso ad eum sc. jure illo quod ante regem inauguratum in interregno habuit. At sunt paucorum generum commissa ejusmodi quae hunc effectum pariunt. At ego cum plurima animo perlustrem, duo tantum invenio, duos, inquam, casus quibus rex ipso facto ex rege non regem se facit & omni honore & dignitate regali atque in subditos potestate destituit; quorum etiam meminit Winzerus. Horum unus est, Si regnum disperdat, quemadmodum de Nerone fertur, quod is nempe senatum populumque Romanum, atque adeo urbem ipsam ferro flammaque vastare, ac novas sibi sedes quaerere decrevisset. Et de Caligula, quod palam denunciarit se neque civem neque principem senatui amplius fore, inque animo habuerit interempto utriusque ordinis electissimo quoque Alexandriam commigrare, ac ut populum uno

ictu interimeret, unam ei cervicem optavit. Talia cum rex aliquis mediator & molitur serio, omnem regnandi curam & animum ilico abjicit, ac proinde imperium in subditos amittit, ut dominus servi pro derelicto habiti dominium.

Sect. 236. Alter casus est, Si rex in alicujus clientelam se contulit, ac regnum quod liberum a majoribus & populo traditum accepit, alienae ditioni mancipavit. Nam tunc quamvis forte non ea mente id agit populo plane ut incommodet: tamen quia quod praecipuum est regiae dignitatis amifit, ut summus scilicet in regno secundum Deum sit, & solo Deo inferior, atque populum etiam totum ignorantem vel invitum, cujus libertatem sartam & tectam conservare debuit, in alterius gentis ditionem & potestatem dedit; hac velut quadam regni ab alienatione effecit, ut nec quod ipse in regno imperium habuit retineat, nec in eum cui collatum voluit, juris quicquam transferat; atque ita eo facto liberum jam & suae potestatis populum relinquit, cujus rei exemplum unum annales Scotici suppeditant. Barclay contra Monarchom. 1. iii. c. 16.

Which in English runs thus:

Sect. 237. What then, can there no case happen wherein the people may of right, and by their own authority, help themselves, take arms, and set upon their king, imperiously domineering over them? None at all, whilst he remains a king. Honour the king, and he that resists the power, resists the ordinance of God; are divine oracles that will never permit it, The people therefore can never come by a power over him, unless he does something that makes him cease to be a king: for then he divests himself of his crown and dignity, and returns to the state of a private man, and the people become free and superior, the power which they had in the interregnum, before they crowned him king, devolving to them again. But there are but few miscarriages which bring the matter to this state. After considering it well on all sides, I can find but two. Two cases there are, I say, whereby a king, ipso facto, becomes no king, and loses all power and regal authority over his people; which are also taken notice of by Winzerus.

The first is, If he endeavour to overturn the government, that is, if he have a purpose and design to ruin the kingdom and commonwealth, as it is recorded of Nero, that he resolved to cut off the senate and people of Rome, lay the city waste with fire and sword, and then remove to some other place. And of Caligula, that he openly declared, that he would be no longer a head to the people or senate, and that he had it in his thoughts to cut off the worthiest men of both ranks, and then retire to Alexandria: and he wisht that the people had but one neck, that he might dispatch them all at a blow, Such designs as these, when any king harbours in his thoughts, and seriously promotes, he immediately gives up all care and thought of the commonwealth; and consequently forfeits the power of governing his subjects, as a master does the dominion over his slaves whom he hath abandoned.

Sect. 238. The other case is, When a king makes himself the dependent of another, and subjects his kingdom which his ancestors left him, and the people put free into his hands, to the dominion of another: for however perhaps it may not be his intention to prejudice the people; yet because he has hereby lost the principal part of regal dignity, viz. to be next and immediately under God, supreme in his kingdom; and also because he

betrayed or forced his people, whose liberty he ought to have carefully preserved, into the power and dominion of a foreign nation. By this, as it were, alienation of his kingdom, he himself loses the power he had in it before, without transferring any the least right to those on whom he would have bestowed it; and so by this act sets the people free, and leaves them at their own disposal. One example of this is to be found in the Scotch Annals.

Sect. 239. In these cases Barclay, the great champion of absolute monarchy, is forced to allow, that a king may be resisted, and ceases to be a king. That is, in short, not to multiply cases, in whatsoever he has no authority, there he is no king, and may be resisted: for wheresoever the authority ceases, the king ceases too, and becomes like other men who have no authority. And these two cases he instances in, differ little from those above mentioned, to be destructive to governments, only that he has omitted the principle from which his doctrine flows: and that is, the breach of trust, in not preserving the form of government agreed on, and in not intending the end of government itself, which is the public good and preservation of property. When a king has dethroned himself, and put himself in a state of war with his people, what shall hinder them from prosecuting him who is no king, as they would any other man, who has put himself into a state of war with them, Barclay, and those of his opinion, would do well to tell us. This farther I desire may be taken notice of out of Barclay, that he says, The mischief that is designed them, the people may prevent before it be done: whereby he allows resistance when tyranny is but in design. Such designs as these (says he) when any king harbours in his thoughts and seriously promotes, he immediately gives up all care and thought of the commonwealth; so that, according to him, the neglect of the public good is to be taken as an evidence of such design, or at least for a sufficient cause of resistance. And the reason of all, he gives in these words, Because he betrayed or forced his people, whose liberty he ought carefully to have preserved. What he adds, into the power and dominion of a foreign nation, signifies nothing, the fault and forfeiture lying in the loss of their liberty, which he ought to have preserved, and not in any distinction of the persons to whose dominion they were subjected. The peoples right is equally invaded, and their liberty lost, whether they are made slaves to any of their own, or a foreign nation; and in this lies the injury, and against this only have they the right of defence. And there are instances to be found in all

countries, which shew, that it is not the change of nations in the persons of their governors, but the change of government, that gives the offence. Bilson, a bishop of our church, and a great stickler for the power and prerogative of princes, does, if I mistake not, in his treatise of Christian subjection, acknowledge, that princes may forfeit their power, and their title to the obedience of their subjects; and if there needed authority in a case where reason is so plain, I could send my reader to Bracton, Fortescue, and the author of the Mirrour, and others, writers that cannot be suspected to be ignorant of our government, or enemies to it. But I thought Hooker alone might be enough to satisfy those men, who relying on him for their ecclesiastical polity, are by a strange fate carried to deny those principles upon which he builds it. Whether they are herein made the tools of cunninger workmen, to pull down their own fabric, they were best look. This I am sure, their civil policy is so new, so dangerous, and so destructive to both rulers and people, that as former ages never could bear the broaching of it; so it may be hoped, those to come, redeemed from the impositions of these Egyptian under-task-masters, will abhor the memory of such servile flatterers, who, whilst it seemed to serve their turn, resolved all government into absolute tyranny, and would have all men born to, what their mean souls fitted them for, slavery.

Sect. 240. Here, it is like, the common question will be made, Who shall be judge, whether the prince or legislative act contrary to their trust? This, perhaps, ill-affected and factious men may spread amongst the people, when the prince only makes use of his due prerogative. To this I reply, The people shall be judge; for who shall be judge whether his trustee or deputy acts well, and according to the trust reposed in him, but he who deposes him, and must, by having deposed him, have still a power to discard him, when he fails in his trust? If this be reasonable in particular cases of private men, why should it be otherwise in that of the greatest moment, where the welfare of millions is concerned, and also where the evil, if not prevented, is greater, and the redress very difficult, dear, and dangerous?

Sect. 241. But farther, this question, (Who shall be judge?) cannot mean, that there is no judge at all: for where there is no judicature on earth, to decide controversies amongst men, God in heaven is judge. He alone, it is true, is judge of the right. But every man is judge for himself, as in all other

cases, so in this, whether another hath put himself into a state of war with him, and whether he should appeal to the Supreme Judge, as Jephtha did.

Sect. 242. If a controversy arise betwixt a prince and some of the people, in a matter where the law is silent, or doubtful, and the thing be of great consequence, I should think the proper umpire, in such a case, should be the body of the people: for in cases where the prince hath a trust reposed in him, and is dispensed from the common ordinary rules of the law; there, if any men find themselves aggrieved, and think the prince acts contrary to, or beyond that trust, who so proper to judge as the body of the people, (who, at first, lodged that trust in him) how far they meant it should extend? But if the prince, or whoever they be in the administration, decline that way of determination, the appeal then lies no where but to heaven; force between either persons, who have no known superior on earth, or which permits no appeal to a judge on earth, being properly a state of war, wherein the appeal lies only to heaven; and in that state the injured party must judge for himself, when he will think fit to make use of that appeal, and put himself upon it.

Sect. 243. To conclude, The power that every individual gave the society, when he entered into it, can never revert to the individuals again, as long as the society lasts, but will always remain in the community; because without this there can be no community, no commonwealth, which is contrary to the original agreement: so also when the society hath placed the legislative in any assembly of men, to continue in them and their successors, with direction and authority for providing such successors, the legislative can never revert to the people whilst that government lasts; because having provided a legislative with power to continue for ever, they have given up their political power to the legislative, and cannot resume it. But if they have set limits to the duration of their legislative, and made this supreme power in any person, or assembly, only temporary; or else, when by the miscarriages of those in authority, it is forfeited; upon the forfeiture, or at the determination of the time set, it reverts to the society, and the people have a right to act as supreme, and continue the legislative in themselves; or erect a new form, or under the old form place it in new hands, as they think good.

Produced by Dave Gowan.

Updated editions will replace the previous one--the old editions will be renamed.

Creating the works from public domain print editions means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg-tm electronic works to protect the PROJECT GUTENBERG-tm concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for the eBooks, unless you receive specific permission. If you do not charge anything for copies of this eBook, complying with the rules is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. They may be modified and printed and given away--you may do practically ANYTHING with public domain eBooks. Redistribution is subject to the trademark license, especially commercial redistribution.

\*\*\* START: FULL LICENSE \*\*\*

THE FULL PROJECT GUTENBERG LICENSE

PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License (available with this file or online at <http://gutenberg.org/license>).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the

terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the

Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.org](http://www.gutenberg.org)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

#### 1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied

warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

## Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <http://www.pgla.org>.

## Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <http://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email [business@pglaf.org](mailto:business@pglaf.org). Email contact links and up to date contact information can be found at the Foundation's web site and official page at <http://pglaf.org>

For additional contact information:

Dr. Gregory B. Newby  
Chief Executive and Director

gbnewby@pglaf.org

#### Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <http://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: <http://pglaf.org/donate>

#### Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

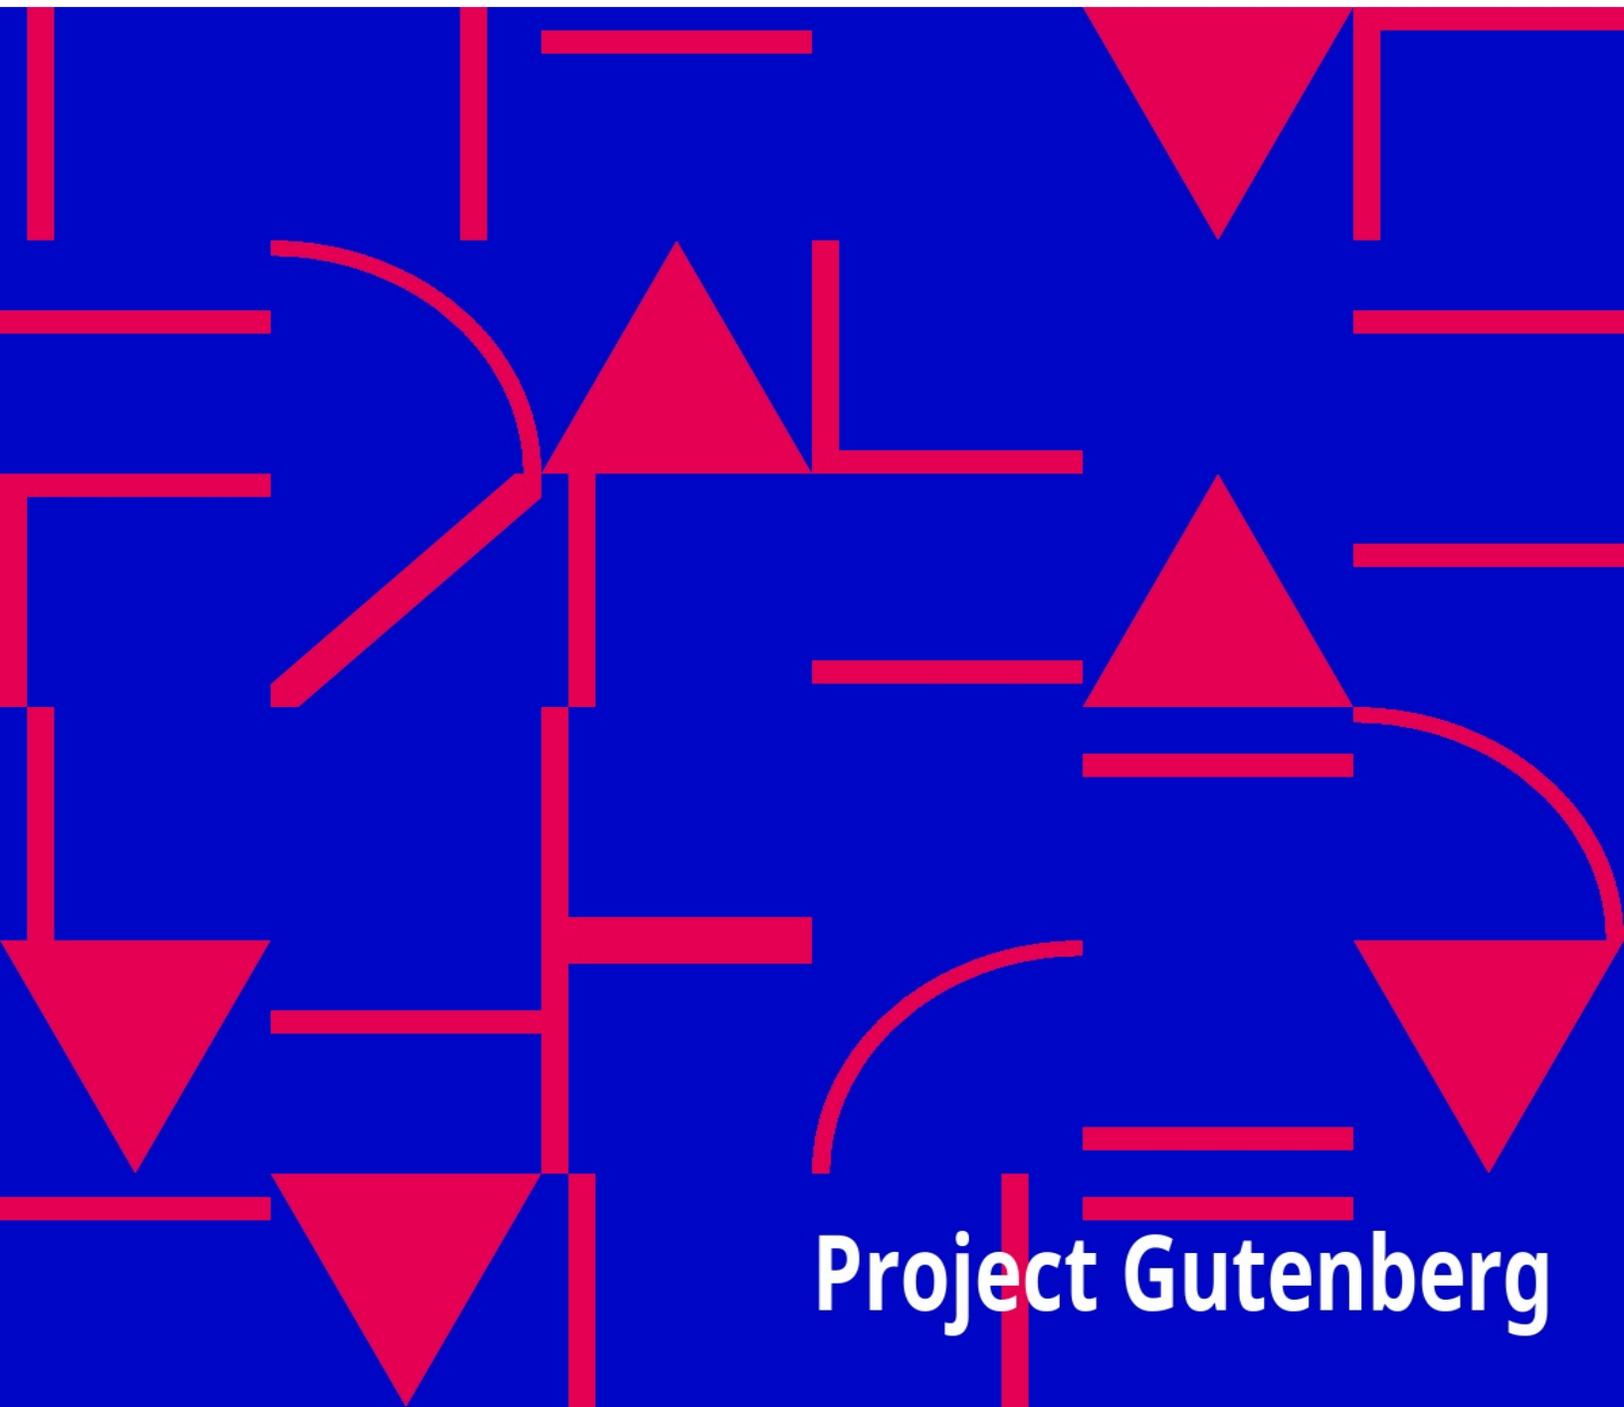

<http://www.gutenberg.org>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

# The Social Contract & Discourses

Jean-Jacques Rousseau

The background of the lower half of the page is a solid blue color. Overlaid on this is a complex, abstract pattern of red geometric shapes. These shapes include various sizes of triangles (some pointing up, some pointing down), horizontal and vertical lines, and curved lines that form partial arcs or segments. The overall effect is a dense, non-representational graphic design.

### INTRODUCTION

For the study of the great writers and thinkers of the past, historical imagination is the first necessity. Without mentally referring to the environment in which they lived, we cannot hope to penetrate below the inessential and temporary to the absolute and permanent value of their thought. Theory, no less than action, is subject to these necessities; the form in which men cast their speculations, no less than the ways in which they behave, are the result of the habits of thought and action which they find around them. Great men make, indeed, individual contributions to the knowledge of their times; but they can never transcend the age in which they live. The questions they try to answer will always be those their contemporaries are asking; their statement of fundamental problems will always be relative to the traditional statements that have been handed down to them. When they are stating what is most startlingly new, they will be most likely to put it in an old-fashioned form, and to use the inadequate ideas and formulae of tradition to express the deeper truths towards which they are feeling their way. They will be most the children of their age, when they are rising most above it.

Rousseau has suffered as much as any one from critics without a sense of history. He has been cried up and cried down by democrats and oppressors with an equal lack of understanding and imagination. His name, a hundred and fifty years after the publication of the *Social Contract*, is still a controversial watchword and a party cry. He is accepted as one of the greatest writers France has produced; but even now men are inclined, as political bias prompts them, to accept or reject his political doctrines as a whole, without sifting them or attempting to understand and discriminate. He is still revered or hated as the author who, above all others, inspired the French Revolution.

At the present day, his works possess a double significance. They are important historically, alike as giving us an insight into the mind of the

eighteenth century, and for the actual influence they have had on the course of events in Europe. Certainly no other writer of the time has exercised such an influence as his. He may fairly be called the parent of the romantic movement in art, letters and life; he affected profoundly the German romantics and Goethe himself; he set the fashion of a new introspection which has permeated nineteenth century literature; he began modern educational theory; and, above all, in political thought he represents the passage from a traditional theory rooted in the Middle Ages to the modern philosophy of the State. His influence on Kant's moral philosophy and on Hegel's philosophy of Right are two sides of the same fundamental contribution to modern thought. He is, in fact, the great forerunner of German and English Idealism.

It would not be possible, in the course of a short introduction, to deal both with the positive content of Rousseau's thought and with the actual influence he has had on practical affairs. The statesmen of the French Revolution, from Robespierre downwards, were throughout profoundly affected by the study of his works. Though they seem often to have misunderstood him, they had on the whole studied him with the attention he demands. In the nineteenth century, men continued to appeal to Rousseau, without, as a rule, knowing him well or penetrating deeply into his meaning. "The *Social Contract*," says M. Dreyfus-Brisac, "is the book of all books that is most talked of and least read." But with the great revival of interest in political philosophy there has come a desire for the better understanding of Rousseau's work. He is again being studied more as a thinker and less as an ally or an opponent; there is more eagerness to sift the true from the false, and to seek in the *Social Contract* the "principles of political right," rather than the great revolutionary's *ipse dixit* in favour of some view about circumstances which he could never have contemplated.

The *Social Contract*, then, may be regarded either as a document of the French Revolution, or as one of the greatest books dealing with political philosophy. It is in the second capacity, as a work of permanent value containing truth, that it finds a place among the world's great books. It is in that capacity also that it will be treated in this introduction. Taking it in this aspect, we have no less need of historical insight than if we came to it as historians pure and simple. To understand its value we must grasp its limitations; when the questions it answers seem unnaturally put, we must

not conclude that they are meaningless; we must see if the answer still holds when the question is put in a more up-to-date form.

First, then, we must always remember that Rousseau is writing in the eighteenth century, and for the most part in France. Neither the French monarchy nor the Genevese aristocracy loved outspoken criticism, and Rousseau had always to be very careful what he said. This may seem a curious statement to make about a man who suffered continual persecution on account of his subversive doctrines; but, although Rousseau was one of the most daring writers of his time, he was forced continually to moderate his language and, as a rule, to confine himself to generalisation instead of attacking particular abuses. Rousseau's theory has often been decried as too abstract and metaphysical. This is in many ways its great strength; but where it is excessively so, the accident of time is to blame. In the eighteenth century it was, broadly speaking, safe to generalise and unsafe to particularise. Scepticism and discontent were the prevailing temper of the intellectual classes, and a short-sighted despotism held that, as long as they were confined to these, they would do little harm. Subversive doctrines were only regarded as dangerous when they were so put as to appeal to the masses; philosophy was regarded as impotent. The intellectuals of the eighteenth century therefore generalised to their hearts' content, and as a rule suffered little for their *lèse-majesté*: Voltaire is the typical example of such generalisation. The spirit of the age favoured such methods, and it was therefore natural for Rousseau to pursue them. But his general remarks had such a way of bearing very obvious particular applications, and were so obviously inspired by a particular attitude towards the government of his day, that even philosophy became in his hands unsafe, and he was attacked for what men read between the lines of his works. It is owing to this faculty of giving his generalisations content and actuality that Rousseau has become the father of modern political philosophy. He uses the method of his time only to transcend it; out of the abstract and general he creates the concrete and universal.

Secondly, we must not forget that Rousseau's theories are to be studied in a wider historical environment. If he is the first of modern political theorists, he is also the last of a long line of Renaissance theorists, who in turn inherit and transform the concepts of mediæval thought. So many critics have spent so much wasted time in proving that Rousseau was not original only

because they began by identifying originality with isolation: they studied first the *Social Contract* by itself, out of relation to earlier works, and then, having discovered that these earlier works resembled it, decided that everything it had to say was borrowed. Had they begun their study in a truly historical spirit, they would have seen that Rousseau's importance lies just in the new use he makes of old ideas, in the transition he makes from old to new in the general conception of politics. No mere innovator could have exercised such an influence or hit on so much truth. Theory makes no great leaps; it proceeds to new concepts by the adjustment and renovation of old ones. Just as theological writers on politics, from Hooker to Bossuet, make use of Biblical terminology and ideas; just as more modern writers, from Hegel to Herbert Spencer, make use of the concept of evolution, Rousseau uses the ideas and terms of the Social Contract theory. We should feel, throughout his work, his struggle to free himself from what is lifeless and outworn in that theory, while he develops out of it fruitful conceptions that go beyond its scope. A too rigid literalism in the interpretation of Rousseau's thought may easily reduce it to the possession of a merely "historical interest": if we approach it in a truly historical spirit, we shall be able to appreciate at once its temporary and its lasting value, to see how it served his contemporaries, and at the same time to disentangle from it what may be serviceable to us and for all time.

Rousseau's *Emile*, the greatest of all works on education, has already been issued in this series. In this volume are contained the most important of his political works. Of these the *Social Contract*, by far the most significant, is the latest in date. It represents the maturity of his thought, while the other works only illustrate his development. Born in 1712, he issued no work of importance till 1750; but he tells us, in the *Confessions*, that in 1743, when he was attached to the Embassy at Venice, he had already conceived the idea of a great work on *Political Institutions*, "which was to put the seal on his reputation." He seems, however, to have made little progress with this work, until in 1749 he happened to light on the announcement of a prize offered by the Academy of Dijon for an answer to the question, "Has the progress of the arts and sciences tended to the purification or to the corruption of morality?" His old ideas came thronging back, and sick at heart of the life he had been leading among the Paris *lumières*, he composed a violent and rhetorical diatribe against civilisation generally. In the following year, this work, having been awarded the prize by the Academy,

was published by its author. His success was instantaneous; he became at once a famous man, the "lion" of Parisian literary circles. Refutations of his work were issued by professors, scribblers, outraged theologians and even by the King of Poland. Rousseau endeavoured to answer them all, and in the course of argument his thought developed. From 1750 to the publication of the *Social Contract* and *Emile* in 1762 he gradually evolved his views: in those twelve years he made his unique contribution to political thought.

The *Discourse on the Arts and Sciences*, the earliest of the works reproduced in this volume, is not in itself of very great importance. Rousseau has given his opinion of it in the *Confessions*. "Full of warmth and force, it is wholly without logic or order; of all my works it is the weakest in argument and the least harmonious. But whatever gifts a man may be born with, he cannot learn the art of writing in a moment." This criticism is just. The first Discourse neither is, nor attempts to be, a reasoned or a balanced production. It is the speech of an advocate, wholly one-sided and arbitrary, but so obviously and naively one-sided, that it is difficult for us to believe in its entire seriousness. At the most, it is only a rather brilliant but flimsy rhetorical effort, a sophistical improvisation, but not a serious contribution to thought. Yet it is certain that this declamation made Rousseau's name, and established his position as a great writer in Parisian circles. D'Alembert even devoted the preface of the *Encyclopædia* to a refutation. The plan of the first Discourse is essentially simple: it sets out from the badness, immorality and misery of modern nations, traces all these ills to the departure from a "natural" state, and then credits the progress of the arts and sciences with being the cause of that departure. In it, Rousseau is already in possession of his idea of "nature" as an ideal; but he has at present made no attempt to discriminate, in what is unnatural, between good and bad. He is merely using a single idea, putting it as strongly as he can, and neglecting all its limitations. The first Discourse is important not for any positive doctrine it contains, but as a key to the development of Rousseau's mind. Here we see him at the beginning of the long journey which was to lead on at last to the theory of the *Social Contract*.

In 1755 appeared the *Discourse on the Origin and Foundation of Inequality among Men*, which is the second of the works given in this volume. With this essay, Rousseau had unsuccessfully competed in 1753 for a second

prize offered by the Academy of Dijon, and he now issued it prefaced by a long Dedication to the Republic of Geneva. In this work, which Voltaire, in thanking him for a presentation copy, termed his "second book against the human race," his style and his ideas have made a great advance; he is no longer content merely to push a single idea to extremes: while preserving the broad opposition between the state of nature and the state of society, which runs through all his work, he is concerned to present a rational justification of his views and to admit that a little at any rate may be said on the other side. Moreover, the idea of "nature" has already undergone a great development; it is no longer an empty opposition to the evils of society; it possesses a positive content. Thus half the *Discourse on Inequality* is occupied by an imaginary description of the state of nature, in which man is shown with ideas limited within the narrowest range, with little need of his fellows, and little care beyond provision for the necessities of the moment. Rousseau declares explicitly that he does not suppose the "state of nature" ever to have existed: it is a pure "idea of reason," a working concept reached by abstraction from the "state of society." The "natural man," as opposed to "man's man," is man stripped of all that society confers upon him, a creature formed by a process of abstraction, and never intended for a historical portrait. The conclusion of the Discourse favours not this purely abstract being, but a state of savagery intermediate between the "natural" and the "social" conditions, in which men may preserve the simplicity and the advantages of nature and at the same time secure the rude comforts and assurances of early society. In one of the long notes appended to the Discourse, Rousseau further explains his position. He does not wish, he says, that modern corrupt society should return to a state of nature: corruption has gone too far for that; he only desires now that men should palliate, by wiser use of the fatal arts, the mistake of their introduction. He recognises society as inevitable and is already feeling his way towards a justification of it. The second Discourse represents a second stage in his political thought: the opposition between the state of nature and the state of society is still presented in naked contrast; but the picture of the former has already filled out, and it only remains for Rousseau to take a nearer view of the fundamental implications of the state of society for his thought to reach maturity.

Rousseau is often blamed, by modern critics, for pursuing in the Discourses a method apparently that of history, but in reality wholly unhistorical. But it

must be remembered that he himself lays no stress on the historical aspect of his work; he gives himself out as constructing a purely ideal picture, and not as depicting any actual stages in human history. The use of false historical concepts is characteristic of the seventeenth and eighteenth centuries, and Rousseau is more to be congratulated on having escaped from giving them too much importance than criticised for employing them at all.

It is doubtful whether the *Discourse on Political Economy*, first printed in the great *Encyclopædia* in 1755, was composed before or after the *Discourse on Inequality*. At first sight the former seems to be far more in the manner of the *Social Contract* and to contain views belonging essentially to Rousseau's constructive period. It would not, however, be safe to conclude from this that its date is really later. The *Discourse on Inequality* still has about it much of the rhetorical looseness of the prize essay; it aims not so much at close reasoning as at effective and popular presentation of a case. But, by reading between the lines, an attentive student can detect in it a great deal of the positive doctrine afterwards incorporated in the *Social Contract*. Especially in the closing section, which lays down the plan of a general treatment of the fundamental questions of politics, we are already to some extent in the atmosphere of the later works. It is indeed almost certain that Rousseau never attempted to put into either of the first two Discourses any of the positive content of his political theory. They were intended, not as final expositions of his point of view, but as partial and preliminary studies, in which his aim was far more destructive than constructive. It is clear that in first conceiving the plan of a work on *Political Institutions*, Rousseau cannot have meant to regard all society as in essence bad. It is indeed evident that he meant, from the first, to study human society and institutions in their rational aspect, and that he was rather diverted from his main purpose by the Academy of Dijon's competition than first induced by it to think about political questions. It need, therefore, cause no surprise that a work probably written before the *Discourse on Inequality* should contain the germs of the theory given in full in the *Social Contract*. The *Discourse on Political Economy* is important as giving the first sketch of the theory of the "General Will." It will readily be seen that Rousseau does not mean by "political economy" exactly what we mean nowadays. He begins with a discussion of the fundamental nature of the State, and the possibility of reconciling its existence with human liberty,

and goes on with an admirable short study of the principles of taxation. He is thinking throughout of "political" in the sense of "public" economy, of the State as the public financier, and not of the conditions governing industry. He conceives the State as a body aiming at the well-being of all its members and subordinates all his views of taxation to that end. He who has only necessaries should not be taxed at all; superfluities should be supertaxed; there should be heavy imposts on every sort of luxury. The first part of the article is still more interesting. Rousseau begins by demolishing the exaggerated parallel so often drawn between the State and the family; he shows that the State is not, and cannot be, patriarchal in nature, and goes on to lay down his view that its real being consists in the General Will of its members. The essential features of the *Social Contract* are present in this Discourse almost as if they were commonplaces, certainly not as if they were new discoveries on which the author had just hit by some happy inspiration. There is every temptation, after reading the *Political Economy*, to suppose that Rousseau's political ideas really reached maturity far earlier than has generally been allowed.

The *Social Contract* finally appeared, along with *Emile*, in 1762. This year, therefore, represents in every respect the culmination of Rousseau's career. Henceforth, he was to write only controversial and confessional works; his theories were now developed, and, simultaneously, he gave to the world his views on the fundamental problems of politics and education. It is now time to ask what Rousseau's system, in its maturity, finally amounted to. The *Social Contract* contains practically the whole of his constructive political theory; it requires to be read, for full understanding, in connection with his other works, especially *Emile* and the *Letters on the Mount* (1764), but in the main it is self-contained and complete. The title sufficiently defines its scope. It is called *The Social Contract or Principles of Political Right*, and the second title explains the first. Rousseau's object is not to deal, in a general way, like Montesquieu, with the actual institutions of existing States, but to lay down the essential principles which must form the basis of every legitimate society. Rousseau himself, in the fifth book of the *Emile*, has stated the difference clearly. "Montesquieu," he says, "did not intend to treat of the principles of political right; he was content to treat of the positive right (or law) of established governments; and no two studies could be more different than these." Rousseau then conceives his object as being something very different from that of the *Spirit of the Laws*, and it is a

wilful error to misconstrue his purpose. When he remarks that "the facts," the actual history of political societies, "do not concern him," he is not contemptuous of facts; he is merely asserting the sure principle that a fact can in no case give rise to a right. His desire is to establish society on a basis of pure right, so as at once to disprove his attack on society generally and to reinforce his criticism of existing societies.

Round this point centres the whole dispute about the methods proper to political theory. There are, broadly speaking, two schools of political theorists, if we set aside the psychologists. One school, by collecting facts, aims at reaching broad generalisations about what actually happens in human societies! the other tries to penetrate to the universal principles at the root of all human combination. For the latter purpose facts may be useful, but in themselves they can prove nothing. The question is not one of fact, but one of right.

Rousseau belongs essentially to this philosophical school. He is not, as his less philosophic critics seem to suppose, a purely abstract thinker generalising from imaginary historical instances; he is a concrete thinker trying to get beyond the inessential and changing to the permanent and invariable basis of human society. Like Green, he is in search of the principle of political obligation, and beside this quest all others fall into their place as secondary and derivative. It is required to find a form of association able to defend and protect with the whole common force the person and goods of every associate, and of such a nature, that each, uniting himself with all, may still obey only himself, and remain as free as before. This is the fundamental problem of which the *Social Contract* provides the solution. The problem of political obligation is seen as including all other political problems, which fall into place in a system based upon it. How, Rousseau asks, can the will of the State help being for me a merely external will, imposing itself upon my own? How can the existence of the State be reconciled with human freedom? How can man, who is born free, rightly come to be everywhere in chains?

No-one could help understanding the central problem of the *Social Contract* immediately, were it not that its doctrines often seem to be strangely formulated. We have seen that this strangeness is due to Rousseau's historical position, to his use of the political concepts current in his own age, and to his natural tendency to build on the foundations laid by his

predecessors. There are a great many people whose idea of Rousseau consists solely of the first words of the opening chapter of the *Social Contract*, "Man is born free, and everywhere he is in chains." But, they tell you, man is not born free, even if he is everywhere in chains. Thus at the very outset we are faced with the great difficulty in appreciating Rousseau. When we should naturally say "man ought to be free," or perhaps "man is born for freedom," he prefers to say "man is born free," by which he means exactly the same thing. There is doubtless, in his way of putting it, an appeal to a "golden age"; but this golden age is admittedly as imaginary as the freedom to which men are born is bound, for most of them, to be. Elsewhere Rousseau puts the point much as we might put it ourselves. "Nothing is more certain than that every man born in slavery is born for slavery.... But if there are slaves by nature, it is because there have been slaves against nature" (*Social Contract*, Book I, chap. ii).

We have seen that the contrast between the "state of nature" and the "state of society" runs through all Rousseau's work. The *Emile* is a plea for "natural" education; the Discourses are a plea for a "naturalisation" of society; the *New Héloïse* is the romantic's appeal for more "nature" in human relationships. What then is the position of this contrast in Rousseau's mature political thought? It is clear that the position is not merely that of the Discourses. In them, he envisaged only the faults of actual societies; now, he is concerned with the possibility of a rational society. His aim is to justify the change from "nature" to "society," although it has left men in chains. He is in search of the true society, which leaves men "as free as before." Altogether, the space occupied by the idea of nature in the *Social Contract* is very small. It is used of necessity in the controversial chapters, in which Rousseau is refuting false theories of social obligation; but when once he has brushed aside the false prophets, he lets the idea of nature go with them, and concerns himself solely with giving society the rational sanction he has promised. It becomes clear that, in political matters at any rate, the "state of nature" is for him only a term of controversy. He has in effect abandoned, in so far as he ever held it, the theory of a human golden age; and where, as in the *Emile*, he makes use of the idea of nature, it is broadened and deepened out of all recognition. Despite many passages in which the old terminology cleaves to him, he means by "nature" in this period not the original state of a thing, nor even its reduction to the simplest terms: he is passing over to the conception of "nature" as identical with the

full development of capacity, with the higher! idea of human freedom. This view may be seen in germ even in the *Discourse on Inequality*, where, distinguishing self-respect (*amour de soi*) from egoism (*amour-propre*), Rousseau makes the former, the property of the "natural" man, consist not in the desire for self-aggrandisement, but in the seeking of satisfaction for reasonable desire accompanied by benevolence; whereas egoism is the preference of our own interests to those of others, self-respect merely puts us on an equal footing with our fellows. It is true that in the *Discourse* Rousseau is pleading against the development of many human faculties; but he is equally advocating the fullest development of those he regards as "natural," by which he means merely "good." The "state of society," as envisaged in the *Social Contract*, is no longer in contradiction to the "state of nature" upheld in the *Emile*, where indeed the social environment is of the greatest importance, and, though the pupil is screened from it, he is none the less being trained for it. Indeed the views given in the *Social Contract* are summarised in the fifth book of the *Emile*, and by this summary the essential unity of Rousseau's system is emphasised.

Rousseau's object, then, in the first words of the *Social Contract*, "is to inquire if, in the civil order, there can be any sure and certain, rule of administration, taking men as they are and laws as they might be." Montesquieu took laws as they were, and saw what sort of men they made: Rousseau, founding his whole system on human freedom, takes man as the basis, and regards him as giving himself what laws he pleases. He takes his stand on the nature of human freedom: on this he bases his whole system, making the will of the members the sole basis of every society.

In working out his theory, Rousseau makes use throughout of three general and, to some extent, alternative conceptions. These are the Social Contract, Sovereignty and the General Will. We shall now have to examine each of these in turn.

The Social Contract theory is as old as the sophists of Greece (see Plato, *Republic*, Book II and the *Gorgias*), and as I elusive. It has been adapted to the most opposite points of view, and used, in different forms, on both sides of every question to which it could conceivably be applied. It is frequent in mediæval writers, a commonplace with the theorists of the Renaissance, and in the eighteenth century already nearing its fall before a wider conception. It would be a long, as well as a thankless, task to trace its

history over again: it may be followed best in D. G. Ritchie's admirable essay on it in *Darwin and Hegel and Other Studies*. For us, it is important only to regard it in its most general aspect, before studying the special use made of it by Rousseau. Obviously, in one form or another, it is a theory very easily arrived at. Wherever any form of government apart from the merest tyranny exists, reflection on the basis of the State cannot but lead to the notion that, in one sense or another, it is based on the consent, tacit or expressed, past or present, of its members. In this alone, the greater part of the Social Contract theory is already latent. Add the desire to find actual justification for a theory in facts, and, especially in an age possessed only of the haziest historical sense, this doctrine of consent will inevitably be given a historical setting. If in addition there is a tendency to regard society as something unnatural to humanity, the tendency will become irresistible. By writers of almost all schools, the State will be represented as having arisen, in some remote age, out of a compact or, in more legal phrase, contract between two or more parties. The only class that will be able to resist the doctrine is that which maintains the divine right of kings, and holds that all existing governments were imposed on the people by the direct interposition of God. All who are not prepared to maintain that will be partisans of some form or other of the Social Contract theory.

It is, therefore, not surprising that we find among its advocates writers of the most opposite points of view. Barely stated, it is a mere formula, which may be filled in with any content from absolutism to pure republicanism. And, in the hands of some at least of its supporters, it turns out to be a weapon that cuts both ways. We shall be in a better position to judge of its usefulness when we have seen its chief varieties at work.

All Social Contract theories that are at all definite fall under one or other of two heads. They represent society as based on an original contract either between the people and the government, or between all the individuals composing the State. Historically, modern theory passes from the first to the second of these forms.

The doctrine that society is founded on a contract between the people and the government is of mediæval origin. It was often supported by references to the Old Testament, which contains a similar view in an unreflective form. It is found in most of the great political writers of the sixteenth century; in Buchanan, and in the writings of James I: it persists into the seventeenth in

the works of Grotius and Puffendorf. Grotius is sometimes held to have stated the theory so as to admit both forms of contract; but it is clear that he is only thinking of the first form as admitting democratic as well as monarchical government. We find it put very clearly by the Convention Parliament of 1688, which accuses James II of having "endeavoured to subvert the constitution of the kingdom by breaking the original contract between king and people." While Hobbes, on the side of the royalists, is maintaining the contract theory in its second form, the Parliamentarian Algernon Sidney adheres to the idea of a contract between the people and the government.

In this form, the theory clearly admits of opposite interpretations. It may be held that the people, having given itself up once for all to its rulers, has nothing more to ask of them, and is bound to submit to any usage they may choose to inflict. This, however, is not the implication most usually drawn from it. The theory, in this form, originated with theologians who were also lawyers. Their view of a contract implied mutual obligations; they regarded the ruler as bound, by its terms, to govern constitutionally. The old idea that a king must not violate the sacred customs of the realm passes easily into the doctrine that he must not violate the terms of the original contract between himself and his people. Just as in the days of the Norman kings, every appeal on the part of the people for more liberties was couched in the form of a demand that the customs of the "good old times" of Edward the Confessor should be respected, so in the seventeenth century every act of popular assertion or resistance was stated as an appeal to the king not to violate the contract. The demand was a good popular cry, and it seemed to have the theorists behind it. Rousseau gives his refutation of this view, which he had, in the *Discourse on Inequality*, maintained in passing, in the sixteenth chapter of the third book of the *Social Contract*. (See also Book I, chap, iv, init.) His attack is really concerned also with the theory of Hobbes, which in some respects resembles, as we shall see, this first view; but, in form at least, it is directed against this form of contract. It will be possible to examine it more closely, when the second view has been considered.

The second view, which may be called the Social Contract theory proper, regards society as originating in, or based on, an agreement between the individuals composing it. It seems to be found first, rather vaguely, in Richard Hooker's *Ecclesiastical Polity*, from which Locke largely

borrowed: and it reappears, in varying forms, in Milton's *Tenure of Kings and Magistrates*, in Hobbes's *Leviathan*, in Locke's *Treatises on Civil Government*, and in Rousseau. The best-known instance of its actual use is by the Pilgrim Fathers on the *Mayflower* in 1620, in whose declaration occurs the phrase, "We do solemnly and mutually, in the presence of God and of one another, covenant and combine ourselves together into a civil body politic." The natural implication of this view would seem to be the corollary of complete popular Sovereignty which Rousseau draws. But before Rousseau's time it had been used to support views as diverse as those which rested on the first form. We saw that, in Grotius's great work, *De Jure Belli et Pacis*, it was already possible to doubt which of the two theories was being advocated. The first theory was, historically, a means of popular protest against royal aggression. As soon as popular government was taken into account, the act of contract between people and government became in effect merely a contract between the individuals composing the society, and readily passed over into the second form.

The second theory, in its ordinary form, expresses only the view that the people is everywhere Sovereign, and that, in the phrase of Milton's treatise, "the power of kings and magistrates is only derivative." Before, however, this view had been worked up into a philosophical theory, it had already been used by Hobbes to support precisely opposite principles. Hobbes agrees that the original contract is one between all the individuals composing the State, and that the government is no party to it; but he regards the people as agreeing, not merely to form a State, but to invest a certain person or certain persons with the government of it. He agrees that the people is naturally supreme, but regards it as alienating its Sovereignty by the contract itself, and delegating its power, wholly and for ever, to the government. As soon, therefore, as the State is set up, the government becomes for Hobbes the Sovereign; there is no more question of popular Sovereignty, but only of passive obedience: the people is bound, by the contract, to obey its ruler, no matter whether he governs well or ill. It has alienated all its rights to the Sovereign, who is, therefore, absolute master. Hobbes, living in a time of civil wars, regards the worst government as better than anarchy, and is, therefore, at pains to find arguments in support of any form of absolutism. It is easy to pick holes in this system, and to see into what difficulties a conscientious Hobbist might be led by a revolution. For as soon as the revolutionaries get the upper hand, he will have to

sacrifice one of his principles: he will have to side against either the actual or the legitimate Sovereign. It is easy also to see that alienation of liberty, even if possible for an individual, which Rousseau denies, cannot bind his posterity. But, with all its faults, the view of Hobbes is on the whole admirably, if ruthlessly, logical, and to it Rousseau owes a great deal.

The special shape given to the second Social Contract theory by Hobbes looks, at first sight, much like a combination, into a single act, of both the contracts. This, however, is not the view he adopts. The theory of a contract between government and people had, as we have seen, been used mainly as a support for popular liberties, a means of assertion against the government. Hobbes, whose whole aim is to make his government Sovereign, can only do this by leaving the government outside the contract: he thus avoids the necessity of submitting it to any obligation whatsoever, and leaves it absolute and irresponsible. He secures, in fact, not merely a State which has unbounded rights against the individual, but a determinate authority with the right to enforce those rights. His theory is not merely Statism (*étatisme*); it is pure despotism.

It is clear that, if such a theory is to be upheld, it can stand only by the view, which Hobbes shares with Grotius, that a man can alienate not merely his own liberty, but also that of his descendants, and that, consequently, a people as a whole can do the same. This is the point at which both Locke and Rousseau attack it. Locke, whose aim is largely to justify the Revolution of 1688, makes government depend, not merely at its institution, but always, on the consent of the governed, and regards all rulers as liable to be displaced if they govern tyrannically. He omits, however, to provide any machinery short of revolution for the expression of popular opinion, and, on the whole, seems to regard the popular consent as something essentially tacit and assumed. He regards the State as existing mainly to protect life and property, and is, in all his assertions of popular rights, so cautious as to reduce them almost to nothing. It is not till we come to Rousseau that the second form of the contract theory is stated in its purest and most logical form.

Rousseau sees clearly the necessity, if popular consent in government is to be more than a name, of giving it some constitutional means of expression. For Locke's theory of tacit consent, he substitutes an active agreement periodically renewed. He looks back with admiration to the city-states of

ancient Greece and, in his own day, reserves his admiration for the Swiss free cities, Berne and, above all, Geneva, his native place. Seeing in the Europe of his day no case in which representative government was working at all democratically, he was unable to conceive that means might be found of giving effect to this active agreement in a nation-state; he therefore held that self-government was impossible except for a city. He wished to break up the nation-states of Europe, and create instead federative leagues of independent city-states.

It matters, however, comparatively little, for the appreciation of Rousseau's political theory in general, that he failed to become the theorist of the modern State. By taking the State, which must have, in essentials, everywhere the same basis, at its simplest, he was able, far better than his predecessors, to bring out the real nature of the "social tie," an alternative name which he often uses for the Social Contract. His doctrine I of the underlying principle of political obligation is that of all great modern writers, from Kant to Mr. Bosanquet. This fundamental unity has been obscured only because critics have failed to put the Social Contract theory in its proper place in Rousseau's system.

This theory was, we have seen, a commonplace. The amount of historical authenticity assigned to the contract almost universally presupposed varied enormously. Generally, the weaker a writer's rational basis, the more he appealed to history—and invented it. It was, therefore, almost inevitable that Rousseau should cast his theory into the contractual form. There were, indeed, writers of his time who laughed at the contract, but they were not writers who constructed a general system of political philosophy. From Cromwell to Montesquieu and Bentham, it was the practically minded man, impatient of unactual hypotheses, who refused to accept the idea of contract. The theorists were as unanimous in its favour as the Victorians were in favour of the "organic" theory. But we, criticising them in the light of later events, are in a better position for estimating the position the Social Contract really took in their political system. We see that Locke's doctrine of tacit consent made popular control so unreal that he was forced, if the State was to have any hold, to make his contract historical and actual, binding posterity for all time, and that he was also led to admit a quasi-contract between people and government, as a second vindication of popular liberties. Rousseau, on the other hand, bases no vital argument on

the historical nature of the contract, in which, indeed, he clearly does not believe. "How," he asks, "did this change [from nature to society] come about?" And he answers that he does not know. Moreover, his aim is to find "a sure and legitimate rule of administration, taking men as they are and laws as they might be"; that is to say, his Social Contract is something which will be found at work in every legitimate society, but which will be in abeyance in all forms of despotism. He clearly means by it no more and no less than the fundamental principle of political association, the basis of the unity which enables us, in the State, to realise political liberty by giving up lawlessness and license. The presentation of this doctrine in the quasi-historical form of the Social Contract theory is due to the accident of the time and place in which Rousseau wrote. At the same time, the importance of the conception is best to be seen in the hard death it dies. Though no-one, for a hundred years or so, has thought of regarding it as historical, it has been found so hard to secure any other phrase explaining as well or better the basis of political union that, to this day, the phraseology of the contract theory largely persists. A conception so vital cannot have been barren.

It is indeed, in Rousseau's own thought, only one of the three different ways in which the basis of political union is stated, according to the preoccupation of his mind. When he is thinking quasi-historically, he describes his doctrine as that of the Social Contract. Modern anthropology, in its attempts to explain the complex by means of the simple, often strays further from the straight paths of history and reason. In a semi-legal aspect, using the terminology, if not the standpoint, of jurisprudence, he restates the same doctrine in the form of popular Sovereignty. This use tends continually to pass over into the more philosophical form which comes third. "Sovereignty is the exercise of the general will." Philosophically, Rousseau's doctrine finds its expression in the view that the State is based not on any original convention, not on, any determinate power, but on the living and sustaining rational will of its members. We have now to examine first Sovereignty and then the General Will, which is ultimately Rousseau's guiding conception.

Sovereignty is, first and foremost, a legal term, and it has often been held that its use in political philosophy merely leads to confusion. In jurisprudence, we are told, it has the perfectly plain meaning given to it in Austin's famous definition. The Sovereign is "a *determinate* human

superior, *not* in a habit of obedience to a like superior, but receiving *habitual* obedience from the *bulk* of a given society." Where Sovereignty is placed is, on this view, a question purely of fact, and never of right. We have only to seek out the determinate human superior in a given society, and we shall have the Sovereign. In answer to this theory, it is not enough, though it is a valuable point, to show that such a determinate superior is rarely to be found. Where, for instance, is the Sovereign of England or of the British Empire? Is it the King, who is called the Sovereign? Or is it the Parliament, which is the legislature (for Austin's Sovereign is regarded as the source of law)? Or is it the electorate, or the whole mass of the population, with or without the right of voting? Clearly all these exercise a certain influence in the making of laws. Or finally, is it now the Cabinet? For Austin, one of these bodies would be ruled out as indeterminate (the mass of the population) and another as responsible (the Cabinet). But are we to regard the House of Commons or those who elect it as forming part of the Sovereign? The search for a determinate Sovereign may be a valuable legal conception; but it has evidently nothing to do with political theory.

It is, therefore, essential to distinguish between the legal Sovereign of jurisprudence, and the political Sovereign of political science and philosophy. Even so, it does not at once become clear what this political Sovereign may be. Is it the body or bodies of persons in whom political power in a State actually resides? Is it merely the complex of actual institutions regarded as embodying the will of the society? This would leave us still in the realm of mere fact, outside both right and philosophy. The Sovereign, in the philosophical sense, is neither the nominal Sovereign, nor the legal Sovereign, nor the political Sovereign of fact and common sense: it is the consequence of the fundamental bond of union, the restatement of the doctrine of Social Contract, the foreshadowing of that of General Will. The Sovereign is that body in the State in which political *power ought* always to reside, and in which the *right* to such power *does* always reside.

The idea at the back of the philosophical conception of Sovereignty is, therefore, essentially the same as that we found to underlie the Social Contract theory. It is the view that the people, whether it can alienate its right or not, is the ultimate director of its own destinies, the final power from which there is no appeal. In a sense, this is recognised even by Hobbes, who makes the power of his absolute Sovereign, the predecessor of

Austin's "determinate human superior," issue first of all from the Social Contract, which is essentially a popular act. The difference between Hobbes and Rousseau on this point is solely that Rousseau regards as inalienable a supreme power which Hobbes makes the people alienate in its first corporate action. That is to say, Hobbes in fact accepts the theory of popular supremacy in name only to destroy it in fact; Rousseau asserts the theory in its only logical form, and is under no temptation to evade it by means of false historical assumptions. In Locke, a distinction is already drawn between the legal and the actual Sovereign, which Locke calls "supreme power"; Rousseau unites the absolute Sovereignty of Hobbes and the "popular consent" of Locke into the philosophic doctrine of popular Sovereignty, which has since been the established form of the theory. His final view represents a return from the perversions of Hobbes to a doctrine already familiar to mediæval and Renaissance writers; but it is not merely a return. In its passage the view has fallen into its place in a complete system of political philosophy.

In a second important respect Rousseau differentiates himself from Hobbes. For Hobbes, the Sovereign is identical with the government. He is so hot for absolutism largely because he regards revolution, the overthrow of the existing government, as at the same time the dissolution of the body politic, and a return to complete anarchy or to the "state of nature." Rousseau and, to some extent, Locke meet this view by sharp division between the supreme power and the government. For Rousseau, they are so clearly distinct that even a completely democratic government is not at the same time the Sovereign; its members are sovereign only in a different capacity and as a different corporate body, just as two different societies may exist for different purposes with exactly the same members. Pure democracy, however, the government of the State by all the people in every detail, is not, as Rousseau says, a possible human institution. All governments are really *mixed* in character; and what we call a democracy is only a more or less democratic government. Government, therefore, will always be to some extent in the hands of selected persons. Sovereignty, on the other hand, is in his view absolute, inalienable, indivisible, and indestructible. It cannot be limited, abandoned, shared or destroyed. It is an essential part of all social life that the right to control the destinies of the State belongs in the last resort to the whole people. There clearly must in the end be somewhere in the society an ultimate court of appeal, whether determinate or not; but,

unless Sovereignty is distinguished from government, the government, passing under the name of Sovereign, will inevitably be regarded as absolute. The only way to avoid the conclusions of Hobbes is, therefore, to establish a clear separation between them.

Rousseau tries to do this by an adaptation of the doctrine of the "three powers." But instead of three independent powers sharing the supreme authority, he gives only two, and makes one of these wholly dependent on the other. He substitutes for the co-ordination of the legislative, the executive, and the judicial authorities, a system in which the legislative power, or Sovereign, is always supreme, the executive, or government, always secondary and derivative, and the judicial power merely a function of government. This division he makes, naturally, one of *will* and *power*. The government is merely to carry out the decrees, or acts of will, of the Sovereign people. Just as the human will transfers a command to its members for execution, so the body politic may give its decisions force by setting up authority which, like the brain, may command its members. In delegating the power necessary for the execution of its will, it is abandoning none of its supreme authority. It remains Sovereign, and can at any moment recall the grants it has made. Government, therefore, exists only at the Sovereign's pleasure, and is always revocable by the sovereign will.

It will be seen, when we come to discuss the nature of the General Will, that this doctrine really contains the most valuable part of Rousseau's theory. Here, we are concerned rather with its limitations. The distinction between legislative and executive functions is in practice very hard to draw. In Rousseau's case, it is further complicated by the presence of a second distinction. The legislative power, the Sovereign, is concerned only with what is general, the executive only with what is particular. This distinction, the full force of which can only be seen in connection with the General Will, means roughly that a matter is general when it concerns the whole community equally, and makes no mention of any particular class; as soon as it refers to any class or person, it becomes particular, and can no longer form the subject matter of an act of Sovereignty. However just this distinction may seem in the abstract, it is clear that its effect is to place all the power in the hands of the executive: modern legislation is almost always concerned with particular classes and interests. It is not, therefore, a long step from the view of Rousseau to the modern theory of democratic

government, in which the people has little power beyond that of removing its rulers if they displease it. As long, however, as we confine our view to the city-state of which Rousseau is thinking, his distinction is capable of preserving for the people a greater actual exercise of will. A city can often generalise where a nation must particularise.

It is in the third book of the *Social Contract*, where Rousseau is discussing the problem of government, that it is most essential to remember that his discussion has in view mainly the city-state and not the nation. Broadly put, his principle of government is that democracy is possible only in small States, aristocracy in those of medium extent, and monarchy in great States (Book III, chap. iii). In considering this view, we have to take into account two things. First, he rejects representative government; will being, in his theory, inalienable, representative Sovereignty is impossible. But, as he regards all general acts as functions of Sovereignty, this means that no general act can be within the competence of a representative assembly. In judging this theory, we must take into account all the circumstances of Rousseau's time. France, Geneva and England were the three States he took most into account. In France, representative government was practically non-existent; in Geneva, it was only partially necessary; in England, it was a mockery, used to support a corrupt oligarchy against a debased monarchy. Rousseau may well be pardoned for not taking the ordinary modern view of it. Nor indeed is it, even in the modern world, so satisfactory an instrument of the popular will that we can afford wholly to discard his criticism. It is one of the problems of the day to find some means of securing effective popular control over a weakened Parliament and a despotic Cabinet.

The second factor is the immense development of local government. It seemed to Rousseau that, in the nation-state, all authority must necessarily pass, as it had in France, to the central power. Devolution was hardly dreamed of; and Rousseau saw the only means of securing effective popular government in a federal system, starting from the small unit as Sovereign. The nineteenth century has proved the falsehood of much of his theory of government; but there are still many wise comments and fruitful suggestions to be found in the third book of the *Social Contract* and in the treatise on the *Government of Poland*, as well as in his adaptation and criticism of the *Polysynodie* of the Abbé de Saint-Pierre, a scheme of local government for France, born out of its due time.

The point in Rousseau's theory of Sovereignty that offers most difficulty is his view (Book II, chap, vii) that, for every State, a *Legislator* is necessary. We shall understand the section only by realising that the legislator is, in fact, in Rousseau's system, the spirit of institutions personified; his place, in a developed society, is taken by the whole complex of social custom, organisation and tradition that has grown up with the State. This is made clearer by the fact that the legislator is not to exercise legislative power; he is merely to submit his suggestions for popular approval. Thus Rousseau recognises that, in the case of institutions and traditions as elsewhere, will, and not force, is the basis of the State.

This may be seen in his treatment of law as a whole (Book II, chap, vi), which deserves very careful attention. He defines laws as "acts of the general will," and, agreeing with Montesquieu in making law the "condition of civil association," goes beyond him only in tracing it more definitely to its origin in an act of will. The Social Contract renders law necessary, and at the same time makes it quite clear that laws can proceed only from the body of citizens who have constituted the State. "Doubtless," says Rousseau, "there is a universal justice emanating from reason alone; but this justice, to be admitted among us, must be mutual. Humbly speaking, in default of natural sanctions, the laws of justice are ineffective among men." Of the law which set up among men this reign of mutual justice the General Will is the source.

We thus come at last to the General Will, the most disputed, and certainly the most fundamental, of all Rousseau's political concepts. No critic of the *Social Contract* has found it easy to say either what precisely its author meant by it, or what is its final value for political philosophy. The difficulty is increased because Rousseau himself sometimes halts in the sense which he assigns to it, and even seems to suggest by it two different ideas. Of its broad meaning, however, there can be no doubt. The effect of the Social Contract is the creation of a new individual. When it has taken place, "at once, in place of the individual personality of each contracting party, the act of association creates a moral and collective body, composed of as many members as the assembly contains voters, and receiving from the act its unity, its common identity (*moi commun*), its life and its will" (Book I, chap. vi). The same doctrine had been stated earlier, in the *Political Economy*, without the historical setting. "The body politic is also a moral

being, possessed of a will, and this general will, which tends always to the preservation and welfare of the whole and of every part, and is the source of the laws, constitutes for all the members of the State, in their relations to one another and to it, the rule of what is just or unjust." It will be seen at once that the second statement, which could easily be fortified by others from the *Social Contract*, says more than the first. It is not apparent that the common will, created by the institution of society, need "tend always to the welfare of the whole." Is not the common will at least as fallible as the will of a single individual? May it not equally be led away from its true interests to the pursuit of pleasure or of something which is really harmful to it? And, if the whole society may vote what conduces to the momentary pleasure of all the members and at the same time to the lasting damage of the State as a whole, is it not still more likely that some of the members will try to secure their private interests in opposition to those of the whole and of others? All these questions, and others like them, have been asked by critics of the conception of the General Will.

Two main points are involved, to one of which Rousseau gives a clear and definite answer. "There is often," he says, "a great deal of difference between the *will of all* and the *general will*; the latter takes account only of the common interest, while the former takes private interest into account, and is no more than a sum of particular wills." "The agreement of all interests is formed by opposition to that of each" (Book II, chap. iii). It is indeed possible for a citizen, when an issue is presented to him, to vote not for the good of the State, but for his own good; but, in such a case, his vote, from the point of view of the General Will, is merely negligible. But "does it follow that the general will is exterminated or corrupted? Not at all: it is always constant, unalterable, and pure; but it is subordinated to other wills which encroach upon its sphere.... The fault [each man] commits [in detaching his interest from the common interest] is that of changing the state of the question, and answering something different from what he is asked. Instead of saying by his vote 'It is to the advantage of the State,' he says, 'It is to the advantage of this or that man or party that this or that view should prevail.' Thus the law of public order in assemblies is not so much to maintain in them the general will as to secure that the question be always put to it, and the answer always given by it" (Book IV, chap. i). These passages, with many others that may be found in the text, make it quite clear that by the General Will Rousseau means something quite distinct

from the Will of All, with which it should never have been confused. The only excuse for such confusion lies in his view that when, *in a city-state*, all particular associations are avoided, votes guided by individual self-interest will always cancel one another, so that majority voting will always result in the General Will. This is clearly not the case, and in this respect we may charge him with pushing the democratic argument too far. The point, however, can be better dealt with at a later stage. Rousseau makes no pretence that the mere voice of a majority is infallible; he only says, at the most, that, given his ideal conditions, it would be so.

The second main point raised by critics of the General Will is whether in defining it as a will directed solely to the common interest, Rousseau means to exclude acts of public immorality and short-sightedness. He answers the questions in different ways. First, an act of public immorality would be merely an unanimous instance of selfishness, different in no particular, from similar acts less unanimous, and therefore forming no part of a General Will. Secondly, a mere ignorance of our own and the State's good, entirely unprompted by selfish desires, does not make our will anti-social or individual. "The general will is always right and tends to the public advantage; but it does not follow that the deliberations of the people are always equally correct. Our will is always for our own good, but we do not always see what that is: the people is never corrupted, but it is often deceived, and on such occasions only does it seem to will what is bad" (Book II, chap. iii). It is impossible to acquit Rousseau in some of the passages in which he treats of the General Will, of something worse than obscurity—positive contradiction. It is probable, indeed, that he never quite succeeded in getting his view clear in his own mind; there is nearly always, in his treatment of it, a certain amount of muddle and fluctuation. These difficulties the student must be left to worry out for himself; it is only possible to present, in outline, what Rousseau meant to convey.

The treatment of the General Will in the *Political Economy* is brief and lucid, and furnishes the best guide to his meaning. The definition of it in this work, which has already been quoted, is followed by a short account of the nature of *general wills* as a whole. "Every political society is composed of other smaller societies of various kinds, each of which has its interest and rules of conduct; but those societies which everybody perceives, because they have an external or authorised form, are not the only ones that actually

exist in the State: all individuals who are united by a common interest compose as many others, either temporary or permanent, whose influence is none the less real because it is less apparent.... The influence of all these tacit or formal associations causes by the influence of their will as many modifications of the public will. The will of these particular societies has always two relations; for the members of the association, it is a general will; for the great society, it is a particular will; and it is often right with regard to the first object and wrong as to the second. The most general will is always the most just, and the voice of the people is, in fact, the voice of God."

The General Will, Rousseau continues in substance, is always for the common good; but it is sometimes divided into smaller general wills, which are wrong in relation to it. The supremacy of the great General Will is "the first principle of public economy and the fundamental rule of government." In this passage, which differs only in clearness and simplicity from others in the *Social Contract* itself, it is easy to see how far Rousseau had in his mind a perfectly definite idea. Every association of several persons creates a new common will; every association of a permanent character has already a "personality" of its own, and in consequence a "general" will; the State, the highest known form of association, is a fully developed moral and collective being with a common will which is, in the highest sense yet known to us, general. All such wills are general only for the members of the associations which exercise them; for outsiders, or rather for other associations, they are purely particular wills. This applies even to the State; "for, in relation to what is outside it, the State becomes a simple being, an individual" (*Social Contract*, Book I. chap. vii). In certain passages in the *Social Contract*, in his criticism of the Abbé de Saint-Pierre's *Project of Perpetual Peace*, and in the second chapter of the original draft of the *Social Contract*, Rousseau takes into account the possibility of a still higher individual, "the federation of the world." In the *Political Economy*, thinking of the nation-state, he affirms what in the *Social Contract* (Book II, chap. iii) he denies of the city, and recognises that the life of a nation is made up of the whole complex of its institutions, and that the existence of lesser general wills is not necessarily a menace to the General Will of the State. In the *Social Contract*, he only treats of these lesser wills in relation to the government, which, he shows, has a will of its own, general for its members, but particular for the State as a whole (Book III, chap. ii). This governmental will he there prefers to call *corporate will*, and by this name

it will be convenient to distinguish the lesser general wills from the General Will of the State that is over them all.

So far, there is no great difficulty; but in discussing the infallibility of the General Will we are on more dangerous ground. Rousseau's treatment here clearly oscillates between regarding it as a purely ideal conception, to which human institutions can only approximate, and holding it to be realised actually in every republican State, *i.e.* wherever the people is the Sovereign in fact as well as in right. Book IV, chap, ii is the most startling passage expressing the latter view. "When in the popular assembly a law is proposed, what the people is asked is not exactly whether it accepts or rejects the proposal, but whether it is in conformity with the general will, which is its will.... When, therefore, the opinion that is contrary to my own prevails, this proves neither more nor less than that I was mistaken, and that what I thought to be the general will was not so." On his own principles laid down elsewhere, Rousseau would have to admit that it proves nothing of the sort, except in so far as the other voters have been guided by the general interest. Though he sometimes affirms the opposite, there is no security on his principles that the will of the majority will be the General Will. At the most it can only be said that there is a greater chance of its being general than of the will of any selected class of persons not being led away by corporate interests. The justification of democracy is not that it is always right, even in intention, but that it is more general than any other kind of supreme power.

Fundamentally, however, the doctrine of the General Will is independent of these contradictions. Apart from Kant's narrow and rigid logic, it is essentially one with his doctrine of the autonomy of the will. Kant takes Rousseau's political theory, and applies it to ethics as a whole. The germ of mis application is already found in Rousseau's own work; for he protests more than once against attempts to treat moral and political philosophy apart, as distinct studies, and asserts their absolute unity. This is brought out clearly in the *Social Contract* (Book I, chap, viii), where he is speaking of the change brought about by the establishment of society. "The passage from the state of nature to the civil state produces a very remarkable change in man, by substituting justice for instinct in his conduct, and giving his actions the morality they had hitherto lacked.... What man loses by the social contract is his natural liberty and an unlimited right to everything he

tries to get and succeeds in getting; what he gains is civil liberty ... which is limited by the general will.... We might, over and above all this, add to what man acquires in the civil state *moral liberty, which alone makes him truly master of himself; for the mere impulse of appetite is slavery, while obedience to a law which we prescribe to ourselves is liberty.*"

This one chapter contains the gist of the Kantian moral philosophy, and makes it quite clear that Rousseau perceived its application to ethics as well as to politics. The morality of our acts consists in their being directed in accordance with universal law; acts in which we are guided merely by our passions are not moral. Further, man can only possess freedom when his whole being is unified in the pursuit of a single end; and, as his whole being can be unified only in pursuit of a rational end, which alone excludes contradiction, only moral acts, only men directing their lives by universal law, are free. In Kantian language, the will is autonomous (*i.e.* prescribes to itself its own law) only when it is directed to a universal end; when it is guided by selfish passions, or particular considerations, it is heteronomous (*i.e.* receives its law from something external to itself), and in bondage. Rousseau, as he says (Book I, chap, viii), was not directly concerned with the ethical sense of the word "liberty," and Kant was, therefore, left to develop the doctrine into a system; but the phrases of this chapter prove false the view that the doctrine of a Real Will arises first in connection with politics, and is only transferred thence to moral philosophy. Rousseau bases his political doctrine throughout on his view of human freedom; it is because man is a free agent capable of being determined by a universal law prescribed by himself that the State is in like manner capable of realising the General Will, that is, of prescribing to itself and its members a similar universal law.

The General Will, then, is the application of human freedom to political institutions. Before the value of this conception can be determined, there is a criticism to be met. The freedom which is realised in the General Will, we are told, is the freedom of the State *as a whole*; but the State exists to secure *individual* freedom for its members. A free State may be tyrannical; a despot may allow his subjects every freedom. What guarantee is there that the State, in freeing itself, will not enslave its members? This criticism has been made with such regularity that it has to be answered in some detail.

"The problem is to find a form of association which will defend and protect with the whole common force the person and goods of each associate, and in which each, while uniting himself with all, may still obey himself alone, and remain as free as before." "The clauses of the contract ... are everywhere the same and everywhere tacitly admitted and recognised.... These clauses, properly understood, may be reduced to one—the total alienation of each associate, together with all his rights, to the whole community...; for, if the individuals retained certain rights, as there would be no common superior to decide between them and the public, each, being on one point his own judge, would ask to be so on all, and the state of nature would continue" (Book I, chap. vi). Rousseau sees clearly that it is impossible to place any limits upon the power of the State; when the people combine into a State, they must in the end submit to be guided in all things by the will of the effective majority. Limited Sovereignty is a contradiction in terms; the Sovereign has a right to all that reason allows it, and as soon as reason demands that the State shall interfere, no appeal to individual rights can be made. What is best for the State must be suffered by the individual. This, however, is very far from meaning that the ruling power ought, or has the moral right, to interfere in every particular case. Rousseau has been subjected to much foolish criticism because, after upholding the State's absolute supremacy, he goes on (Book II, chap, iv) to speak of "the limits of the sovereign power." There is no contradiction whatsoever. Wherever State intervention is for the best, the State has a right to intervene; but it has no moral right, though it must have a legal right, to intervene where it is not for the best. The General Will, being always in the right, will intervene only when intervention is proper. "The Sovereign," therefore, "cannot impose upon its subjects any fetters that are useless to the community, nor can it even wish to do so." As, however, the infallibility of the General Will is not enough to make the State infallible, there still remains an objection. Since the General Will cannot always be arrived at, who is to judge whether an act of intervention is justified? Rousseau's answer fails to satisfy many of his critics. "Each man alienates, I admit, by the social compact, only such part of his powers, goods and liberty as it is important for the community to control; but it must also be granted that the Sovereign is sole judge of what is important." This, we are told, is mere State tyranny over again. But how is it possible to avoid such a conclusion? Rousseau has already given his reasons for objecting to a limited Sovereignty (Book I, chap, vi): it follows

absolutely that we must take the best machinery we can find for the execution of the State's functions. No doubt the machinery will be imperfect; but we can only try to get as near the General Will as possible, without hoping to realise it fully.

The answer, therefore, to the critics who hold that, in securing civil liberty Rousseau has sacrificed the individual may be put after this fashion. Liberty is not a merely negative conception; it does not consist solely in the absence of restraint. The purest individualist, Herbert Spencer for example, would grant that a certain amount of State interference is necessary to *secure* liberty; but as soon as this idea of securing liberty is admitted in the smallest degree, the whole idea has undergone profound modification. It can no longer be claimed that every interference on the part of the State lessens the liberty of the individual; the "liberty-fund" theory is as untenable as that of the "wages-fund": the members of a State may be more free when all are restrained from doing one another mutual damage than when any one is left "free" to enslave another or be himself enslaved. This principle once admitted, the precise amount of State interference that is necessary to secure freedom will be always a matter for particular discussion; every case must be decided on its own merits, and, in right, the Sovereign will be omnipotent, or subject only to the law of reason.

It has often been held that Rousseau cannot really have inspired the French Revolution because this view is totally inconsistent with the "rights of man," which the revolutionaries so fervently proclaimed. If every right is alienated in the Social Contract, what sense can there be in talking of "natural rights" afterwards? This, however, is to misrepresent Rousseau's position. The rights of man as they are preached by the modern individualist, are not the rights of which Rousseau and the revolutionaries were thinking. We have seen that the theory of the *Social Contract* is founded on human freedom: this freedom carries with it, in Rousseau's view, the guarantee of its own permanence; it is inalienable and indestructible. When, therefore, government becomes despotic, it has no more right over its subjects than the master has over his slave (Book I, chap. iv); the question is then purely one of might. In such cases, appeal may be made either to the terms of the Social Contract, or, putting the same idea another way, to the "natural right" of human freedom. This natural right is in no sense inconsistent with the complete alienation supposed in the Contract; for the Contract itself reposes on it and guarantees its maintenance. The Sovereign must, therefore, treat all its members alike; but, so long as it does this, it remains omnipotent. If it leaves the general for the particular, and treats one man better than another, it ceases to be Sovereign; but equality is already presupposed in the terms of the Contract.

It is more profitable to attack Rousseau for his facile identification of the interests of each of the citizens with those of all; but here, too, most of the critics have abused their opportunity. He does not maintain that there can be no opposition between a man's particular interests and the General Will as present in him; on the contrary, he explicitly and consistently affirms the presence of such opposition (Book I, chap. vii). What he asserts is, first, that the Sovereign, as such, cannot have any interest contrary to the interest of the citizens as a whole—that is obvious; and, secondly, that it cannot have an interest contrary to that of any individual. The second point Rousseau proves by showing that the omnipotence of the Sovereign is essential to the preservation of society, which in turn is necessary for the individual. His argument, however, really rests on the fundamental character of the General Will. He would admit that, in any actual State, the apparent interest of the many might often conflict with that of the few; but he would contend that the *real* interest of State and individual alike, being

subject to universal law could not be such as to conflict with any other *real* interest. The interest of the State, in so far as it is directed by the General Will, must be the interest of every individual, in so far as he is guided by his *real* will, that is, in so far as he is acting universally, rationally and autonomously.

Thus the justification of Rousseau's theory of liberty returns to the point from which it set out—the omnipotence of the *real will* in State and individual. It is in this sense that he speaks of man in the State as "forced to be free" by the General Will, much as Kant might speak of a man's lower nature as forced to be free by the universal mandate of his higher, more real and more rational will. It is in this recognition of the State as a moral being, with powers of determination similar to the powers of the individual mind, that the significance of the General Will ultimately lies. Even, however, among those who have recognised its meaning, there are some who deny its value as a conception of political philosophy. If, they say, the General Will is not the Will of All, if it cannot be arrived at by a majority vote or by any system of voting whatsoever, then it is nothing; it is a mere abstraction, neither general, nor a I will. This is, of course, precisely the criticism to which Kant's "real will" is often subjected. Clearly, it must be granted at once that the General Will does not form the whole actual content of the will of every citizen. Regarded as actual, it must always be qualified by "in so far as" or its equivalent. This, however, is so far from destroying the value of the conception that therein lies its whole value. In seeking the universal basis of society, we are not seeking anything that is wholly actualised in any State, though we must be seeking something which exists, more or less perfectly, in every State.

The point of the Social Contract theory, as Rousseau states it, is that legitimate society exists by the consent of the people, and acts by popular will. Active will, and not force or even mere consent, is the basis of the "republican" State, which can only possess this character because individual wills are not really self-sufficient and separate, but complementary and inter-dependent. The answer to the question "Why ought I to obey the General Will?" is that the General Will exists in me and not outside me. I am "obeying only myself," as Rousseau says. The State is not a mere accident of human history, a mere device for the protection of life and property; it responds to a fundamental need of human nature, and is rooted

in the character of the individuals who compose it. The whole complex of human institutions is not a mere artificial structure; it is the expression of the mutual dependence and fellowship of men. If it means anything, the theory of the General Will means that the State is natural, and the "state of nature" an abstraction. Without this basis of will and natural need, no society could for a moment subsist; the State exists and claims our obedience because it is a natural extension of our personality.

The problem, however, still remains of making the General Will, in any particular State, active and conscious. It is clear that there are States in which visible and recognised institutions hardly answer in any respect to its requirements. Even in such States, however, there is a limit to tyranny; deep down, in immemorial customs with which the despot dare not interfere, the General Will is still active and important. It does not reside merely in the outward and visible organisation of social institutions, in that complex of formal associations which we may call the State; its roots go deeper and its branches spread further. It is realised, in greater or less degree, in the whole life of the community, in the entire complex of private and public relations which, in the widest sense, may be called Society. We may recognise it not only in a Parliament, a Church, a University or a Trade Union, but also in the most intimate human relationships, and the most trivial, as well as the most vital, social customs.

But, if all these things go to the making of the General Will in every community, the General Will has, for politics, primarily a narrower sense. The problem here is to secure its supremacy in the official institutions and public councils of the nation. This is the question to which Rousseau chiefly addressed himself. Here, too, we shall find the General Will the best possible conception for the guidance of political endeavour. For the General Will is realised not when that is done which is best for the community, but when, in addition, the community as a whole has willed the doing of it. The General Will demands not only good government, but also self-government—not only rational conduct, but good-will. This is what some of Rousseau's admirers are apt to forget when they use his argument, as he himself was sometimes inclined to use it, in support of pure aristocracy. Rousseau said that aristocracy was the best of all governments, but he said also that it was the worst of all usurpers of Sovereignty. Nor must it be forgotten that he expressly specified elective aristocracy. *There is no General Will unless the*

*people wills the good.* General Will may be embodied in one man willing universally; but it can only be embodied in the State when the mass of the citizens so wills. The will must be "general" in two senses: in the sense in which Rousseau used the word, it must be general in its object, *i.e.* universal; but it must also be generally held, *i.e.* common to all or to the majority.<sup>[1]</sup>

The General Will is, then, above all a universal and, in the Kantian sense, a "rational" will. It would be possible to find in Rousseau many more anticipations of the views of Kant; but it is better here to confine comment to an important difference between them. It is surprising to find in Kant, the originator of modern "intellectualism," and in Rousseau, the great apostle of "sentiment," an essentially similar view on the nature and function of the will. Their views, however, present a difference; for, whereas the moving force of Kant's moral imperative is purely "rational," Rousseau finds the sanction of his General Will in human feeling itself. As we can see from a passage in the original draft of the *Social Contract*, the General Will remains purely rational. "No-one will dispute that the General Will is in each individual a pure act of the understanding, which reasons while the passions are silent on what a man may demand of his neighbour and on what his neighbour has a right to demand of him." The will remains purely rational, but Rousseau feels that it needs an external motive power. "If natural law," he writes, "were written only on the tablets of human reason it would be incapable of guiding the greater part of our actions; but it is also graven on the heart of man in characters that cannot be effaced, and it is there it speaks to him more strongly than all the precepts of the philosophers" (from an unfinished essay on *The State of War*). The nature of this guiding sentiment is explained in the *Discourse on Inequality* (p. 197, note 2), where egoism (*amour-propre*) is contrasted with self-respect (*amour de soi*). Naturally, Rousseau holds, man does not want everything for himself, and nothing for others. "Egoism" and "altruism" are both one-sided qualities arising out of the perversion of man's, "natural goodness." "Man is born good," that is, man's nature really makes him desire only to be treated as one among others, to share equally. This natural love of equality (*amour de soi*) includes love of others as well as love of self, and egoism, loving one's self at the expense of others, is an unnatural and perverted condition. The "rational" precepts of the General Will, therefore, find an echo in the heart of the "natural" man, and, if we can only secure the human

being against perversion by existing societies, the General Will can be made actual.

This is the meeting-point of Rousseau's educational with his political theory. His view as a whole can be studied only by taking together the *Social Contract* and the *Emile* as explained by the *Letters on the Mount* and other works. The fundamental dogma of the natural goodness of man finds no place directly in the *Social Contract*; but it lurks behind the whole of his political theory, and is indeed, throughout, his master-conception. His educational, his religious, his political and his ethical ideas are all inspired by a single consistent attitude. Here we have been attending only to his political theory; in the volume which is to follow, containing the *Letters on the Mount* and other works, some attempt will be made to draw the various threads together and estimate his work as a whole. The political works, however, can be read separately, and the *Social Contract* itself is still by far the best of all text-books of political philosophy. Rousseau's political influence, so far from being dead, is every day increasing; and as new generations and new classes of men come to the study of his work, his conceptions, often hazy and undeveloped, but nearly always of lasting value, will assuredly form the basis of a new political philosophy, in which they will be taken up and transformed. This new philosophy is the work of the future; but, rooted upon the conception of Rousseau, it will stretch far back into the past. Of our time, it will be for all time; its solutions will be at once relatively permanent and ceaselessly progressive.

G. D. H. COLE.

---

[1] The term "general" will means, in Rousseau, not so much "will held by several persons," as will having a general (universal) object. This is often misunderstood; but the mistake matters the less, because the General Will must, in fact, be both.

---

### A NOTE ON BOOKS

There are few good books in English on Rousseau's politics. By far the best treatment is to be found in Mr. Bernard Bosanquet's *Philosophical Theory of the State*. Viscount Morley's *Rousseau* is a good life, but is not of much

use as a criticism of views; Mr. W. Boyd's *The Educational Theory of Rousseau* contains some fairly good chapters on the political views. D. G. Ritchie's *Darwin and Hegel* includes an admirable essay on *The Social Contract Theory* and another on *Sovereignty*. The English translation of Professor Gran's *Rousseau* is an interesting biography.

In French, there is a good cheap edition of Rousseau's complete works published by Hachette in thirteen volumes. M. Dreyfus-Brisac's great edition of the *Contrat Social* is indispensable, and there is a good small edition with notes by M. Georges Beaulavon. M. Faguet's study of Rousseau in his *Dix-huitième siècle—études littéraires* and his *Politique comparée de Montesquieu, Voltaire et Rousseau* are useful, though I am seldom in agreement with them. M. Henri Rodet's *Le Contrat Social et les idées politiques de J. J. Rousseau* is useful, if not inspired, and there are interesting works by MM. Chuquet, Fabre and Lemaître. The French translation of Professor Höffding's little volume on *Rousseau: sa vie et sa philosophie* is admirable.

Miss Foxley's translation of the *Emile*, especially of Book V, should be studied in connection with the *Social Contract*. A companion volume, containing the *Letters on the Mount* and other works, will be issued shortly.

## CONTENTS

INTRODUCTION

THE SOCIAL CONTRACT

## BOOK I

### FOREWORD

*In which it is inquired why man passes from the state of nature to the state of society and what are the essential conditions of the compact.*

- I The Subject of the first Book
- II The first Societies
- III The Right of the Strongest
- IV Slavery
- V That we must always go back to a first Convention
- VI The Social Compact
- VII The Sovereign
- VIII The Civil State
- IX Real Property

## BOOK II

*Which treats of legislation.*

- I That Sovereignty is inalienable
- II That Sovereignty is indivisible
- III Whether the general Will is fallible
- IV The Limits of the Sovereign Power
- V The Right of Life and Death
- VI Law
- VII The Legislator
- VIII The People
- IX The People (*continued*)
- X The People (*continued*)
- XI The various Systems of Legislation
- XII The Division of the Laws

### BOOK III

*Which treats of political laws, that is to say, of the form of government.*

- I Government in General
- II The constituent Principle in the various Forms of Government
- III The Division of Governments
- IV Democracy
- V Aristocracy
- VI Monarchy
- VII Mixed Governments
- VIII That all Forms of Government do not suit all Countries
- IX The Marks of a good Government
- X The Abuse of Government and its Tendency to Degenerate
- XI The Death of the Body Politic
- XII How the Sovereign Authority maintains itself
- XIII How the Sovereign Authority maintains itself (*continued*)
- XIV How the Sovereign Authority maintains itself (*continued*)
- XV Deputies or Representatives
- XVI That the Institution of Government is not a Contract
- XVII The Institution of Government
- XVIII How to check the Usurpations of Government

### BOOK IV

*Which treats further of political laws and sets forth the means of strengthening the Constitution of the State.*

- I That the general Will is indestructible
- II Voting
- III Elections

- IV The Roman Comitia
- V The Tribunate
- VI The Dictatorship
- VII The Censorship
- VIII Civil Religion
- IX Conclusion

A DISCOURSE ON THE ARTS AND SCIENCES  
A DISCOURSE ON THE ORIGIN OF INEQUALITY — Appendix  
A DISCOURSE ON POLITICAL ECONOMY

### FOREWORD

This little treatise is part of a longer work which I began years ago without realising my limitations, and long since abandoned. Of the various fragments that might have been extracted from what I wrote, this is the

most considerable, and, I think, the least unworthy of being offered to the public. The rest no longer exists.

---

## **BOOK I**

I mean to inquire if, in the civil order, there can be any sure and legitimate rule of administration, men being taken as they are and laws as they might be. In this inquiry I shall endeavour always to unite what right sanctions with what is prescribed by interest, in order that justice and utility may in no case be divided.

I enter upon my task without proving the importance of the subject I shall be asked if I am a prince or a legislator, to write on politics. I answer that I am neither, and that is why I do so. If I were a prince or a legislator, I should not waste time in saying what wants doing; I should do it, or hold my peace.

As I was born a citizen of a free State, and a member of the Sovereign, I feel that, however feeble the influence my voice can have on public affairs, the right of voting on them makes it my duty to study them: and I am happy, when I reflect upon governments, to find my inquiries always furnish me with new reasons for loving that of my own country.

---

### **CHAPTER I**

#### **SUBJECT OF THE FIRST BOOK**

Man is born free; and everywhere he is in chains. One thinks himself the master of others, and still remains a greater slave than they. How did this change come about? I do not know. What can make it legitimate? That question I think I can answer.

If I took into account only force, and the effects derived from it, I should say: "As long as a people is compelled to obey, and obeys, it does well; as soon as it can shake off the yoke, and shakes it off, it does still better; for, regaining its liberty by the same right as took it away, either it is justified in resuming it, or there was no justification for those who took it away." But the social order is a sacred right which is the basis of all other rights. Nevertheless, this right does not come from nature, and must therefore be founded on conventions. Before coming to that, I have to prove what I have just asserted.

---

## CHAPTER II

### THE FIRST SOCIETIES

The most ancient of all societies, and the only one that is natural is the family: and even so the children remain attached to the father only so long as they need him for their preservation. As soon as this need ceases, the natural bond is dissolved. The children, released from the obedience they owed to the father, and the father, released from the care he owed his children, return equally to independence. If they remain united, they continue so no longer naturally, but voluntarily; and the family itself is then maintained only by convention.

This common liberty results from the nature of man. His first law is to provide for his own preservation, his first cares are those which he owes to himself; and, as soon as he reaches years of discretion, he is the sole judge of the proper means of preserving himself, and consequently becomes his own master.

The family then may be called the first model of political societies: the ruler corresponds to the father, and the people to the children; and all, being born free and equal, alienate their liberty only for their own advantage. The whole difference is that, in the family, the love of the father for his children repays him for the care he takes of them, while, in the State, the pleasure of

commanding takes the place of the love which the chief cannot have for the peoples under him.

Grotius denies that all human power is established in favour of the governed, and quotes slavery as an example. His usual method of reasoning is constantly to establish right by fact.<sup>[1]</sup> It would be possible to employ a more logical method, but none could be more favourable to tyrants.

It is then, according to Grotius, doubtful whether the human race belongs to a hundred men, or that hundred men to the human race: and, throughout his book, he seems to incline to the former alternative, which is also the view of Hobbes. On this showing, the human species is divided into so many herds of cattle, each with its ruler, who keeps guard over them for the purpose of devouring them.

As a shepherd is of a nature superior to that of his flock, the shepherds of men, *i.e.* their rulers, are of a nature superior to that of the peoples under them. Thus, Philo tells us, the Emperor Caligula reasoned, concluding equally well either that kings were gods, or that men were beasts.

The reasoning of Caligula agrees with that of Hobbes and Grotius. Aristotle, before any of them, had said that men are by no means equal naturally, but that some are born for slavery, and others for dominion.

Aristotle was right; but he took the effect for the cause. Nothing can be more certain than that every man born in slavery is born for slavery. Slaves lose everything in their chains, even the desire of escaping from them: they love their servitude, as the comrades of Ulysses loved their brutish condition.<sup>[2]</sup> If then there are slaves by nature, it is because there have been slaves against nature. Force made the first slaves, and their cowardice perpetuated the condition.

I have said nothing of King Adam, or Emperor Noah, father of the three great monarchs who shared out the universe, like the children of Saturn, whom some scholars have recognised in them. I trust to getting due thanks for my moderation; for, being a direct descendant of one of these princes, perhaps of the eldest branch, how do I know that a verification of titles might not leave me the legitimate king of the human race? In any case, there can be no doubt that Adam was sovereign of the world, as Robinson Crusoe was of his island, as long as he was its only inhabitant; and this

empire had the advantage that the monarch, safe on his throne, had no rebellions, wars, or conspirators to fear.

---

[1] "Learned inquiries into public right are often only the history of past abuses; and troubling to study them too deeply is a profitless infatuation" (*Essay on the Interests of France in Relation to its Neighbours*, by the Marquis d'Argenson). This is exactly what Grotius has done.

[2] See a short treatise of Plutarch's entitled "That Animals Reason."

---

### CHAPTER III

## THE RIGHT OF THE STRONGEST

The strongest is never strong enough to be always the master, unless he transforms strength into right, and obedience into duty. Hence the right of the strongest, which, though to all seeming meant ironically, is really laid down as a fundamental principle. But are we never to have an explanation of this phrase? Force is a physical power, and I fail to see what moral effect it can have. To yield to force is an act of necessity, not of will—at the most, an act of prudence. In what sense can it be a duty?

Suppose for a moment that this so-called "right" exists. I maintain that the sole result is a mass of inexplicable nonsense. For, if force creates right, the effect changes with the cause: every force that is greater than the first succeeds to its right. As soon as it is possible to disobey with impunity, disobedience is legitimate; and, the strongest being always in the right, the only thing that matters is to act so as to become the strongest. But what kind of right is that which perishes when force fails? If we must obey perforce, there is no need to obey because we ought; and if we are not forced to obey, we are under no obligation to do so. Clearly, the word "right" adds nothing to force: in this connection, it means absolutely nothing.

Obey the powers that be. If this means yield to force, it is a good precept, but superfluous: I can answer for its never being violated. All power comes from God, I admit; but so does all sickness: does that mean that we are forbidden to call in the doctor? A brigand surprises me at the edge of a

wood: must I not merely surrender my purse on compulsion; but, even if I could withhold it, am I in conscience bound to give it up? For certainly the pistol he holds is also a power.

Let us then admit that force does not create right, and that we are obliged to obey only legitimate powers. In that case, my original question recurs.

---

## CHAPTER IV

### SLAVERY

Since no man has a natural authority over his fellow, and force creates no right, we must conclude that conventions form the basis of all legitimate authority among men.

If an individual, says Grotius, can alienate his liberty and make himself the slave of a master, why could not a whole people do the same and make itself subject to a king? There are in this passage plenty of ambiguous words which would need explaining; but let us confine ourselves to the word *alienate*. To alienate is to give or to sell. Now, a man who becomes the slave of another does not give himself; he sells himself, at the least for his subsistence: but for what does a people sell itself? A king is so far from furnishing his subjects with their subsistence that he gets his own only from them; and, according to Rabelais, kings do not live on nothing. Do subjects then give their persons on condition that the king takes their goods also? I fail to see what they have left to preserve.

It will be said that the despot assures his subjects civil tranquillity. Granted; but what do they gain, if the wars his ambition brings down upon them, his insatiable avidity, and the vexatious conduct of his ministers press harder on them than their own dissensions would have done? What do they gain, if the very tranquillity they enjoy is one of their miseries? Tranquillity is found also in dungeons; but is that enough to make them desirable places to live in? The Greeks imprisoned in the cave of the Cyclops lived there very tranquilly, while they were awaiting their turn to be devoured.

To say that a man gives himself gratuitously, is to say what is absurd and inconceivable; such an act is null and illegitimate, from the mere fact that he who does it is out of his mind. To say the same of a whole people is to suppose a people of madmen; and madness creates no right.

Even if each man could alienate himself, he could not alienate his children: they are born men and free; their liberty belongs to them, and no one but they has the right to dispose of it. Before they come to years of discretion, the father can, in their name, lay down conditions for their preservation and well-being, but he cannot give them, irrevocably and without conditions: such a gift is contrary to the ends of nature, and exceeds the rights of paternity. It would therefore be necessary, in order to legitimise an arbitrary government, that in every generation the people should be in a position to accept or reject it; but, were this so, the government would be no longer arbitrary.

To renounce liberty is to renounce being a man, to surrender the rights of humanity and even its duties. For him who renounces everything no indemnity is possible. Such a renunciation is incompatible with man's nature; to remove all liberty from his will is to remove all morality from his acts. Finally, it is an empty and contradictory convention that sets up, on the one side, absolute authority, and, on the other, unlimited obedience. Is it not clear that we can be under no obligation to a person from whom we have the right to exact everything? Does not this condition alone, in the absence of equivalence or exchange, in itself involve the nullity of the act? For what right can my slave have against me, when all that he has belongs to me, and, his right being mine, this right of mine against myself is a phrase devoid of meaning?

Grotius and the rest find in war another origin for the so-called right of slavery. The victor having, as they hold, the right of killing the vanquished, the latter can buy back his life at the price of his liberty; and this convention is the more legitimate because it is to the advantage of both parties.

But it is clear that this supposed right to kill the conquered is by no means deducible from the state of war. Men, from the mere fact that, while they are living in their primitive independence, they have no mutual relations stable enough to constitute either the state of peace or the state of war, cannot be naturally enemies. War is constituted by a relation between

things, and not between persons; and, as the state of war cannot arise out of simple personal relations, but only out of real relations, private war, or war of man with man, can exist neither in the state of nature, where there is no constant property, nor in the social state, where everything is under the authority of the laws.

Individual combats, duels and encounters, are acts which cannot constitute a state; while the private wars, authorised by the Establishments of Louis IX, King of France, and suspended by the Peace of God, are abuses of feudalism, in itself an absurd system if ever there was one, and contrary to the principles of natural right and to all good polity.

War then is a relation, not between man and man, but between State and State, and individuals are enemies only accidentally, not as men, nor even as citizens,<sup>[1]</sup> but as soldiers; not as members of their country, but as its defenders. Finally, each State can have for enemies only other States, and not men; for between things disparate in nature there can be no real relation.

Furthermore, this principle is in conformity with the established rules of all times and the constant practice of all civilised peoples. Declarations of war are intimations less to powers than to their subjects. The foreigner, whether king, individual, or people, who robs, kills or detains the subjects, without declaring war on the prince, is not an enemy, but a brigand. Even in real war, a just prince, while laying hands, in the enemy's country, on all that belongs to the public, respects the lives and goods of individuals: he respects rights on which his own are founded. The object of the war being the destruction of the hostile State, the other side has a right to kill its defenders, while they are bearing arms; but as soon as they lay them down and surrender, they cease to be enemies or instruments of the enemy, and become once more merely men, whose life no one has any right to take. Sometimes it is possible to kill the State without killing a single one of its members; and war gives no right which is not necessary to the gaining of its object. These principles are not those of Grotius: they are not based on the authority of poets, but derived from the nature of reality and based on reason.

The right of conquest has no foundation other than the right of the strongest. If war does not give the conqueror the right to massacre the conquered peoples, the right to enslave them cannot be based upon a right

which does not exist No one has a right to kill an enemy except when he cannot make him a slave, and the right to enslave him cannot therefore be derived from the right to kill him. It is accordingly an unfair exchange to make him buy at the price of his liberty his life, over which the victor holds no right. Is it not clear that there is a vicious circle in founding the right of life and death on the right of slavery, and the right of slavery on the right of life and death?

Even if we assume this terrible right to kill everybody, I maintain that a slave made in war, or a conquered people, is under no obligation to a master, except to obey him as far as he is compelled to do so. By taking an equivalent for his life, the victor has not done him a favour; instead of killing him without profit, he has killed him usefully. So far then is he from acquiring over him any authority in addition to that of force, that the state of war continues to subsist between them: their mutual relation is the effect of it, and the usage of the right of war does not imply a treaty of peace. A convention has indeed been made; but this convention, so far from destroying the state of war, presupposes its continuance.

So, from whatever aspect we regard the question, the right of slavery is null and void, not only as being illegitimate, but also because it is absurd and meaningless. The words *slave* and *right* contradict each other, and are mutually exclusive. It will always be equally foolish for a man to say to a man or to a people: "I make with you a convention wholly at your expense and wholly to my advantage; I shall keep it as long as I like, and you will keep it as long as I like."

---

[1] The Romans, who understood and respected the right of war more than any other nation on earth, carried their scruples on this head so far that a citizen was not allowed to serve as a volunteer without engaging himself expressly against the enemy, and against such and such an enemy by name. A legion in which the younger Cato was seeing his first service under Popilius having been reconstructed, the elder Cato wrote to Popilius that, if he wished his son to continue serving under him, he must administer to him a new military oath, because, the first having been annulled, he was no longer able to bear arms against the enemy. The same Cato wrote to his son telling him to take great care not to go into battle before taking this new oath. I know that the siege of Clusium and other isolated events can be quoted against me; but I am citing laws and customs. The Romans are the people that least often transgressed its laws; and no other people has had such good ones.

---

## CHAPTER V

### THAT WE MUST ALWAYS GO BACK TO A FIRST CONVENTION

Even if I granted all that I have been refuting, the friends of despotism would be no better off. There will always be a great difference between subduing a multitude and ruling a society. Even if scattered individuals were successively enslaved by one man, however numerous they might be, I still see no more than a master and his slaves, and certainly not a people and its ruler; I see what may be termed an aggregation, but not an association; there is as yet neither public good nor body politic. The man in question, even if he has enslaved half the world, is still only an individual; his interest, apart from that of others, is still a purely private interest. If this same man comes to die, his empire, after him, remains scattered and without unity, as an oak falls and dissolves into a heap of ashes when the fire has consumed it.

A people, says Grotius, can give itself to a king. Then, according to Grotius, a people is a people before it gives itself. The gift is itself a civil act, and implies public deliberation. It would be better, before examining the act by which a people gives itself to a king, to examine that by which it has become a people; for this act, being necessarily prior to the other, is the true foundation of society.

Indeed, if there were no prior convention, where, unless the election were unanimous, would be the obligation on the minority to submit to the choice of the majority? How have a hundred men who wish for a master the right

to vote on behalf of ten who do not? The law of majority voting is itself something established by convention, and presupposes unanimity, on one occasion at least.

---

## CHAPTER VI

### THE SOCIAL COMPACT

I suppose men to have reached the point at which the obstacles in the way of their preservation in the state of nature show their power of resistance to be greater than the resources at the disposal of each individual for his maintenance in that state. That primitive condition can then subsist no longer; and the human race would perish unless it changed its manner of existence.

But, as men cannot engender new forces, but only unite and direct existing ones, they have no other means of preserving themselves than the formation, by aggregation, of a sum of forces great enough to overcome the resistance. These they have to bring into play by means of a single motive power, and cause to act in concert.

This sum of forces can arise only where several persons come together: but, as the force and liberty of each man are the chief instruments of his self-preservation, how can he pledge them without harming his own interests, and neglecting the care he owes to himself? This difficulty, in its bearing on my present subject, may be stated in the following terms—

"The problem is to find a form of association which will defend and protect with the whole common force the person and goods of each associate, and in which each, while uniting himself with all, may still obey himself alone, and remain as free as before." This is the fundamental problem of which the *Social Contract* provides the solution.

The clauses of this contract are so determined by the nature of the act that the slightest modification would make them vain and ineffective; so that, although they have perhaps never been formally set forth, they are everywhere the same and everywhere tacitly admitted and recognised, until,

on the violation of the social compact, each regains his original rights and resumes his natural liberty, while losing the conventional liberty in favour of which he renounced it.

These clauses, properly understood, may be reduced to one—the total alienation of each associate, together with all his rights, to the whole community for, in the first place, as each gives himself absolutely, the conditions are the same for all; and, this being so, no one has any interest in making them burdensome to others.

Moreover, the alienation being without reserve, the union is as perfect as it can be, and no associate has anything more to demand: for, if the individuals retained certain rights, as there would be no common superior to decide between them and the public, each, being on one point his own judge, would ask to be so on all; the state of nature would thus continue, and the association would necessarily become inoperative or tyrannical.

Finally, each man, in giving himself to all, gives himself to nobody; and as there is no associate over whom he does not acquire the same right as he yields others over himself, he gains an equivalent for everything he loses, and an increase of force for the preservation of what he has.

If then we discard from the social compact what is not of its essence, we shall find that it reduces itself to the following terms—

*"Each of us puts his person and all his power in common under the supreme direction of the general will, and, in our corporate capacity, we receive each member as an indivisible part of the whole."*

At once, in place of the individual personality of each contracting party, this act of association creates a moral and collective body, composed of as many members as the assembly contains votes, and receiving from this act its unity, its common identity, its life and its will. This public person, so formed by the union of all other persons, formerly took the name of *city*,<sup>[1]</sup> and now takes that of *Republic* or *body politic*; it is called by its members *State* when passive, *Sovereign* when active, and *Power* when compared with others like itself. Those who are associated in it take collectively the name of *people*, and severally are called *citizens*, as sharing in the sovereign power, and *subjects*, as being under the laws of the State. But these terms

are often confused and taken one for another: it is enough to know how to distinguish them when they are being used with precision.

---

[1] The real meaning of this word has been almost wholly lost in modern times; most people mistake a town for a city, and a townsman for a citizen. They do not know that houses make a town, but citizens a city. The same mistake long ago cost the Carthaginians dear. I have never read of the title of citizens being given to the subjects of any prince, not even the ancient Macedonians or the English of to-day, though they are nearer liberty than any one else. The French alone everywhere familiarly adopt the name of citizens, because, as can be seen from their dictionaries, they have no idea of its meaning; otherwise they would be guilty in usurping it, of the crime of *lèse-majesté*: among them, the name expresses a virtue, and not a right. When Bodin spoke of our citizens and townsmen, he fell into a bad blunder in taking the one class for the other. M. d'Alembert has avoided the error, and, in his article on Geneva, has clearly distinguished the four orders of men (or even five, counting mere foreigners) who dwell in our town, of which two only compose the Republic. No other French writer, to my knowledge, has understood the real meaning of the word citizen.

---

## CHAPTER VII

### THE SOVEREIGN

This formula shows us that the act of association comprises a mutual undertaking between the public and the individuals, and that each individual, in making a contract, as we may say, with himself, is bound in a double capacity; as a member of the Sovereign he is bound to the individuals, and as a member of the State to the Sovereign. But the maxim of civil right, that no one is bound by undertakings made to himself, does not apply in this case; for there is a great difference between incurring an obligation to yourself and incurring one to a whole of which you form a part.

Attention must further be called to the fact that public deliberation, while competent to bind all the subjects to the Sovereign, because of the two different capacities in which each of them may be regarded, cannot, for the opposite reason, bind the Sovereign to itself; and that it is consequently against the nature of the body politic for the Sovereign to impose on itself a law which it cannot infringe. Being able to regard itself in only one capacity, it is in the position of an individual who makes a contract with

himself; and this makes it clear that there neither is nor can be any kind of fundamental law binding on the body of the people—not even the social contract itself. This does not mean that the body politic cannot enter into undertakings with others, provided the contract is not infringed by them; for in relation to what is external to it, it becomes a simple being, an individual.

But the body politic or the Sovereign, drawing its being wholly from the sanctity of the contract, can never bind itself, even to an outsider, to do anything derogatory to the original act, for instance, to alienate any part of itself, or to submit to another Sovereign. Violation of the act by which it exists would be self-annihilation; and that which is itself nothing can create nothing.

As soon as this multitude is so united in one body, it is impossible to offend against one of the members without attacking the body, and still more to offend against the body without the members resenting it. Duty and interest therefore equally oblige the two contracting parties to give each other help; and the same men should seek to combine, in their double capacity, all the advantages dependent upon that capacity.

Again, the Sovereign, being formed wholly of the individuals who compose it, neither has nor can have any interest contrary to theirs; and consequently the sovereign power need give no guarantee to its subjects, because it is impossible for the body to wish to hurt all its members. We shall also see later on that It cannot hurt any in particular. The Sovereign, merely by virtue of what it is, is always what it should be.

This, however, is not the case with the relation of the subjects to the Sovereign, which, despite the common interest, would have no security that they would fulfil their undertakings, unless it found means to assure itself of their fidelity.

In fact, each individual, as a man, may have a particular will contrary or dissimilar to the general will which he has as a citizen. His particular interest may speak to him quite differently from the common interest: his absolute and naturally independent existence may make him look upon what he owes to the common cause as a gratuitous contribution, the loss of which will do less harm to others than the payment of it is burdensome to himself; and, regarding the moral person which constitutes the State as a *persona ficta*, because not a man, he may wish to enjoy the rights of

citizenship without being ready to fulfil the duties of a subject. The continuance of such an injustice could not but prove the undoing of the body politic.

In order then that the social compact may not be an empty formula, it tacitly includes the undertaking, which alone can give force to the rest, that whoever refuses to obey the general will shall be compelled to do so by the whole body. This means nothing less than that he will be forced to be free; for this is the condition which, by giving each citizen to his country, secures him against all personal dependence. In this lies the key to the working of the political machine; this alone legitimizes civil undertakings, which, without it, would be absurd, tyrannical, and liable to the most frightful abuses.

---

## CHAPTER VIII

### THE CIVIL STATE

The passage from the state of nature to the civil state produces a very remarkable change in man, by substituting justice, for instinct in his conduct, and giving his actions the morality they had formerly lacked. Then only, when the voice of duty takes the place of physical impulses and right of appetite, does *man*, who so far had considered only himself, find that he is forced to act on different principles, and to consult his reason before listening to his inclinations. Although, in this state, he deprives himself of some advantages which he got from nature, he gains in return others so great, his faculties are so stimulated and developed, his ideas so extended, his feelings so ennobled, and his whole soul so uplifted, that, did not the abuses of this new condition often degrade him below that which he left, he would be bound to bless continually the happy moment which took him from it for ever, and, instead of a stupid and unimaginative animal, made him an intelligent being and a man.

Let us draw up the whole account in terms easily commensurable. What man loses by the social contract in his natural liberty and an unlimited right

to everything he tries to get and succeeds in getting; what he gains is civil liberty and the proprietorship of all he possesses. If we are to avoid mistake in weighing one against the other, we must clearly distinguish natural liberty, which is bounded only by the strength of the individual, from civil liberty, which is limited by the general will; and possession, which is merely the effect of force or the right of the first occupier, from property, which can be founded only on a positive title.

We might, over and above all this, add, to what man acquires in the civil state, moral liberty, which alone makes him truly master of himself; for the mere impulse of appetite is slavery, while obedience to a law which we prescribe to ourselves is liberty. But I have already said too much on this head, and the philosophical meaning of the word liberty does not now concern us.

---

## CHAPTER IX

### REAL PROPERTY

Each member of the community gives himself to it, at the moment of its foundation, just as he is, with all the resources at his command, including the goods he possesses. This act does not make possession, in changing hands, change its nature, and becomes property in the hands of the Sovereign; but, as the forces of the city are incomparably greater than those of an individual, public possession is also, in fact, stronger and more irrevocable, without being any more legitimate, at any rate from the point of view of foreigners. For the State, in relation to its members, is master of all their goods by the social contract, which, within the State, is the basis of all rights; but, in relation to other powers, it is so only by the right of the first occupier, which it holds from its members.

The right of the first occupier, though more real than the right of the strongest, becomes a real right only when the right of property has already been established. Every man has naturally a right to everything he needs; but the positive act which makes him proprietor of one thing excludes him

from everything else. Having his share, he ought to keep to it, and can have no further right against the community. This is why the right of the first occupier, which in the state of nature is so weak, claims the respect of every man in civil society. In this right we are respecting not so much what belongs to another as what does not belong to ourselves.

In general, to establish the right of the first occupier over a plot of ground, the following conditions are necessary: first, the land must not yet be inhabited; secondly, a man must occupy only the amount he needs for his subsistence; and, in the third place, possession must be taken, not by an empty ceremony, but by labour and cultivation, the only sign of proprietorship that should be respected by others, in default of a legal title.

In granting the right of first occupancy to necessity and labour, are we not really stretching it as far as it can go? Is it possible to leave such a right unlimited? Is it to be enough to set foot on a plot of common ground, in order to be able to call yourself at once the master of it? Is it to be enough that a man has the strength to expel others for a moment, in order to establish his right to prevent them from ever returning? How can a man or a people seize an immense territory and keep it from the rest of the world except by a punishable usurpation, since all others are being robbed, by such an act, of the place of habitation and the means of subsistence which nature gave them in common? When Nuñez Balbao, standing on the seashore, took possession of the South Seas and the whole of South America in the name of the crown of Castille, was that enough to dispossess all their actual inhabitants, and to shut out from them all the princes of the world? On such a showing, these ceremonies are idly multiplied, and the Catholic King need only take possession all at once, from his apartment, of the whole universe, merely making a subsequent reservation about what was already in the possession of other princes.

We can imagine how the lands of individuals, where they were contiguous and came to be united, became the public territory, and how the right of Sovereignty, extending from the subjects over the lands they held, became at once real and personal. The possessors were thus made more dependent, and the forces at their command used to guarantee their fidelity. The advantage of this does not seem to have been felt by ancient monarchs, who called themselves King of the Persians, Scythians, or Macedonians, and seemed to regard themselves more as rulers of men than as masters of a

country. Those of the present day more cleverly call themselves Kings of France, Spain, England, etc.: thus holding the land, they are quite confident of holding the inhabitants.

The peculiar fact about this alienation is that, in taking over the goods of individuals, the community, so far from despoiling them, only assures them legitimate possession, and changes usurpation into a true right and enjoyment into proprietorship. Thus the possessors, being regarded as depositaries of the public good, and having their rights, respected by all the members of the State and maintained against foreign aggression by all its forces, have, by a cession which benefits both the public and still more themselves, acquired, so to speak, all that they gave up. This paradox may easily be explained by the distinction between the rights which the Sovereign and the proprietor have over the same estate, as we shall see later on. It may also happen that men begin to unite one with another before they possess anything, and that, subsequently occupying a tract of country which is enough for all, they enjoy it in common, or share it out among themselves, either equally or according to a scale fixed by the Sovereign. However the acquisition be made, the right which each individual has to his own estate is always subordinate to the right which the community has over all: without this, there would be neither stability in the social tie, nor real force in the exercise of Sovereignty.

I shall end this chapter and this book by remarking on a fact on which the whole social system should rest: *i.e.* that, instead of destroying natural inequality, the fundamental compact substitutes, for such physical inequality as nature may have set up between men, an equality that is moral and legitimate, and that men, who may be unequal in strength or intelligence, become every one equal by convention and legal right.<sup>[1]</sup>

---

[1] Under bad governments, this equality is only apparent and illusory: it serves only to keep the pauper in his poverty and the rich man in the position he has usurped. In fact, laws are always of use to those who possess and harmful to those who have nothing: from which it follows that the social state is advantageous to men only when all have something and none too much.

---

## BOOK II

---

## CHAPTER I

### THAT SOVEREIGNTY IS INALIENABLE

The first and most important deduction from the principles we have so far laid down is that the general will alone can direct the State according to the object for which it was instituted, *i.e.* the common good: for if the clashing of particular interests made the establishment of societies necessary, the agreement of these very interests made it possible. The common element in these different interests is what forms the social tie; and, were there no point of agreement between them all, no society could exist. It is solely on the basis of this common interest that every society should be governed.

I hold then that Sovereignty, being nothing less than the exercise of the general will, can never be alienated, and that the Sovereign, who is no less than a collective being, cannot be represented except by himself: the power indeed may be transmitted, but not the will.

In reality, if it is not impossible for a particular will to agree on some point with the general will, it is at least impossible for the agreement to be lasting and constant; for the particular will tends, by its very nature, to partiality, while the general will tends to equality. It is even more impossible to have any guarantee of this agreement; for even if it should always exist, it would be the effect not of art, but of chance. The Sovereign may indeed say: "I now will actually what this man wills, or at least what he says he wills"; but it cannot say: "What he wills tomorrow, I too shall will" because it is absurd for the will to bind itself for the future, nor is it incumbent on any will to consent to anything that is not for the good of the being who wills. If then the people promises simply to obey, by that very act it dissolves itself and loses what makes it a people; the moment a master exists, there is no longer a Sovereign, and from that moment the body politic has ceased to exist.

This does not mean that the commands of the rulers cannot pass for general wills, so long as the Sovereign, being free to oppose them, offers no opposition. In such a case, universal silence is taken to imply the consent of the people. This will be explained later on.

---

## CHAPTER II

### THAT SOVEREIGNTY IS INDIVISIBLE

Sovereignty, for the same reason as makes it inalienable, is indivisible; for will either is, or is not, general;<sup>[1]</sup> it is the will either of the body of the people, or only of a part of it. In the first case, the will, when declared, is an act of Sovereignty and constitutes law: in the second, it is merely a particular will, or act of magistracy—at the most a decree.

But our political theorists, unable to divide Sovereignty in principle, divide it according to its object: into force and will; into legislative power and executive power; into rights of taxation, justice and war; into internal administration and power of foreign treaty. Sometimes they confuse all these sections, and sometimes they distinguish them; they turn the Sovereign into a fantastic being composed of several connected pieces: it is as if they were making man of several bodies, one with eyes, one with arms, another with feet, and each with nothing besides. We are told that the jugglers of Japan dismember a child before the eyes of the spectators; then they throw all the members into the air one after another, and the child falls down alive and whole. The conjuring tricks of our political theorists are very like that; they first dismember the body politic by an illusion worthy of a fair, and then join it together again we know not how.

This error is due to a lack of exact notions concerning the Sovereign authority, and to taking for parts of it what are only emanations from it. Thus, for example, the acts of declaring war and making peace have been regarded as acts of Sovereignty; but this is not the case, as these acts do not constitute law, but merely the application of a law, a particular act which decides how the law applies, as we shall see clearly when the idea attached to the word *law* has been defined.

If we examined the other divisions in the same manner, we should find that, whenever Sovereignty seems to be divided, there is an illusion: the rights which are taken as being part of Sovereignty are really all subordinate, and always imply supreme wills of which they only sanction the execution.

It would be impossible to estimate the obscurity this lack of exactness has thrown over the decisions of writers who have dealt with political right,

when they have used the principles laid down by them to pass judgment on the respective rights of kings and peoples. Every one can see, in Chapters III and IV of the First Book of Grotius, how the learned man and his translator, Barbeyrac, entangle and tie themselves up in their own sophistries, for fear of saying too little or too much of what they think, and so offending the interests they have to conciliate. Grotius, a refugee in France, ill-content with his own country, and desirous of paying his court to Louis XIII, to whom his book is dedicated, spares no pains to rob the peoples of all their rights and invest kings with them by every conceivable artifice. This would also have been much to the taste of Barbeyrac, who dedicated his translation to George I of England. But unfortunately the expulsion of James II, which he called his "abdication," compelled him to use all reserve, to shuffle and to tergiversate, in order to avoid making William out a usurper. If these two writers had adopted the true principles, all difficulties would have been removed, and they would have been always consistent; but it would have been a sad truth for them to tell, and would have paid court for them to no-one save the people. Moreover, truth is no road to fortune, and the people dispenses neither ambassadorships, nor professorships, nor pensions.

---

[1] To be general, a will need not always be unanimous; but every vote—must be counted: any exclusion is a breach of generality.

---

### CHAPTER III

#### WHETHER THE GENERAL WILL IS FALLIBLE

It follows from what has gone before that the general will is always right and tends to the public advantage; but it does not follow that the deliberations of the people are always equally correct. Our will is always for our own good, but we do not always see what that is; the people is never corrupted, but it is often deceived, and on such occasions only does it seem to will what is bad.

There is often a great deal of difference between the will of all and the general will; the latter considers only the common interest, while the former takes private interest into account, and is no more than a sum of particular wills: but take away from these same wills the pluses and minuses that cancel one another,<sup>[1]</sup> and the general will remains as the sum of the differences.

If, when the people, being furnished with adequate information, held its deliberations, the citizens had no communication one with another, the grand total of the small differences would always give the general will, and the decision would always be good. But when factions arise, and partial associations are formed at the expense of the great association, the will of each of these associations becomes general in relation to its members, while it remains particular in relation to the State: it may then be said that there are no longer as many votes as there are men, but only as many as there are associations. The differences become less numerous and give a less general result. Lastly, when one of these associations is so great as to prevail over all the rest, the result is no longer a sum of small differences, but a single difference; in this case there is no longer a general will, and the opinion which prevails is purely particular.

It is therefore essential, if the general will is to be able to express itself, that there should be no partial society within the State, and that each citizen should think only his own thoughts:<sup>[2]</sup> which was indeed the sublime and unique system established by the great Lycurgus. But if there are partial societies, it is best to have as many as possible and to prevent them from being unequal, as was done by Solon, Numa and Servius. These precautions are the only ones that can guarantee that the general will shall be always enlightened, and that the people shall in no way deceive itself.

---

[1] "Every interest," says the Marquis d'Argenson, "has different principles. The agreement of two particular interests is formed by opposition to a third." He might have added that the agreement of all interests is formed by opposition to that of each. If there were no different interests, the common interest would be barely felt, as it would encounter no obstacle; all would go on of its own accord, and politics would cease to be an art.

[2] "In fact," says Macchiavelli, "there are some divisions that are harmful to a Republic and some that are advantageous. Those which stir up sects and parties are harmful; those attended by neither are advantageous. Since, then, the founder of a Republic cannot help enmities arising, he ought at

least to prevent them from growing into sects" (*History of Florence*, Book vii). Rousseau quotes the Italian.

---

## CHAPTER IV

### THE LIMITS OF THE SOVEREIGN POWER

If the State is a moral person whose life is in the union of its members, and if the most important of its cares is the care for its own preservation, it must have a universal and compelling force, in order to move and dispose each part as may be most advantageous to the whole. As nature gives each man absolute power over all his members, the social compact gives the body politic absolute power over all its members also; and it is this power which, under the direction of the general will, bears, as I have said, the name of Sovereignty.

But, besides the public person, we have to consider the private persons composing it, whose life and liberty are naturally independent of it. We are bound then to distinguish clearly between the respective rights of the citizens and the Sovereign,<sup>[1]</sup> and between the duties the former have to fulfil as subjects, and the natural rights they should enjoy as men.

Each man alienates, I admit, by the social compact, only such part of his powers, goods and liberty as it is important for the community to control; but it must also be granted that the Sovereign is sole judge of what is important.

Every service a citizen can render the State he ought to render as soon as the Sovereign demands it; but the Sovereign, for its part, cannot impose upon its subjects any fetters that are useless to the community, nor can it even wish to do so; for no more by the law of reason than by the law of nature can anything occur without a cause.

The undertakings which bind us to the social body are obligatory only because they are mutual; and their nature is such that in fulfilling them we cannot work for others without working for ourselves. Why is it that the general will is always in the right, and that all continually will the happiness

of each one, unless it is because there is not a man who does not think of "each" as meaning him, and consider himself in voting for all? This proves that equality of rights and the idea of justice which such equality creates originate in the preference each man gives to himself, and accordingly in the very nature of man. It proves that the general will, to be really such, must be general in its object as well as its essence; that it must both come from all and apply to all; and that it loses its natural rectitude when it is directed to some particular and determinate object, because in such a case we are judging of something foreign to us, and have no true principle of equity to guide us.

Indeed, as soon as a question of particular fact or right arises on a point not previously regulated by a general convention, the matter becomes contentious. It is a case in which the individuals concerned are one party, and the public the other, but in which I can see neither the law that ought to be followed nor the judge who ought to give the decision. In such a case, it would be absurd to propose to refer the question to an express decision of the general will, which can be only the conclusion reached by one of the parties and in consequence will be, for the other party, merely an external and particular will, inclined on this occasion to injustice and subject to error. Thus, just as a particular will cannot stand for the general will, the general will, in turn, changes its nature, when its object is particular, and, as general, cannot pronounce on a man or a fact. When, for instance, the people of Athens nominated or displaced its rulers, decreed honours to one, and imposed penalties on another, and, by a multitude of particular decrees, exercised all the functions of government indiscriminately, it had in such cases no longer a general will in the strict sense; it was acting no longer as Sovereign, but as magistrate. This will seem contrary to current views; but I must be given time to expound my own.

It should be seen from the foregoing that what makes the will general is less the number of voters than the common interest uniting them; for under this system, each necessarily submits to the conditions he imposes on others; and this admirable agreement between interest and justice gives to the common deliberations an equitable character which at once vanishes when any particular question is discussed, in the absence of a common interest to unite and identify the ruling of the judge with that of the party.

From whatever side we approach our principle, we reach the same conclusion, that the social compact sets up among the citizens an equality of such a kind, that they all bind themselves to observe the same conditions and should therefore all enjoy the same rights. Thus, from the very nature of the compact, every "act of Sovereignty", *i.e.* every authentic act of the general will, binds or favours all the citizens equally; so that the Sovereign recognises only the body of the nation, and draws no distinctions between those of whom it is made up. What, then, strictly speaking is an act of Sovereignty? It is not a convention between a superior and an inferior, but a convention between the body and each of its members. It is legitimate, because based on the social contract, and, equitable, because common to all; useful, because it can have no other object than the general good, and stable, because guaranteed by the public force and the supreme power. So long as the subjects have to submit only to conventions of this sort, they obey no-one but their own will; and to ask how far the respective rights of the Sovereign and the citizens extend, is to ask up to what point the latter can enter into undertakings with themselves, each with all, and all with each.

We can see from this that the sovereign power, absolute, sacred and inviolable as it is, does not and cannot exceed the limits of general conventions, and that every man may dispose at will of such goods and liberty as these conventions leave him; so that the Sovereign never has a right to lay more charges on one subject than on another, because, in that case, the question becomes particular, and ceases to be within its competency.

When these distinctions have once been admitted, it is seen to be so untrue that there is, in the social contract, any real renunciation on the part of the individuals, that the position in which they find themselves as a result of the contract is really preferable to that in which they were before. Instead of a renunciation, they have made an advantageous exchange: instead of an uncertain and precarious way of living they have got one that is better and more secure; instead of natural independence they have got liberty, instead of the power to harm others security for themselves, and instead of their strength, which others might overcome, a right which social union makes invincible. Their very life, which they have devoted to the State, is by it constantly protected; and when they risk it in the State's defence, what more

are they doing than giving back what they have received from it? What are they doing that they would not do more often and with greater danger in the state of nature, in which they would inevitably have to fight battles at the peril of their lives in defence of that which is the means of their preservation? All have indeed to fight when their country needs them; but then no one has ever to fight for himself. Do we not gain something by running, on behalf of what gives us our security, only some of the risks we should have to run for ourselves, as soon as we lost it?

---

[1] Attentive readers, do not, I pray, be in a hurry to charge me with contradicting myself. The terminology made it unavoidable, considering the poverty of the language; but wait and see.

---

## CHAPTER V

### THE RIGHT OF LIFE AND DEATH

The question is often asked how individuals, having no right to dispose of their own lives, can transfer to the Sovereign a right which they do not possess. The difficulty of answering this question seems to me to lie in its being wrongly stated. Every man has a right to risk his own life in order to preserve it. Has it ever, been said that a man who throws himself out of the window to escape from a fire is guilty of suicide? Has such a crime ever been laid to the charge of him who perishes in a storm because, when he went on board, he knew of the danger?

The social treaty has for its end the preservation of the contracting parties. He who wills the end wills the means also, and the means must involve some risks, and even some losses. He who wishes to preserve his life at others expense should also, when it is necessary, be ready to give it up for their sake. Furthermore, the citizen is no longer the judge of the dangers to which the law desires him to expose himself; and when the prince says to him: "It is expedient for the State that you should die," he ought to die, because it is only on that condition that he has been living in security up to the present, and because his life is no longer a mere bounty of nature, but a gift made conditionally by the State.

The death-penalty inflicted upon criminals may be looked on in much the same light: it is in order that we may not fall victims to an assassin that we consent to die if we ourselves turn assassins. In this treaty, so far from disposing of our own lives, we think only of securing them, and it is not to be assumed that any of the parties then expects to get hanged.

Again, every malefactor, by attacking social rights, becomes on forfeit a rebel and a traitor to his country; by violating its laws he ceases to be a member of it; he even makes war upon it. In such a case the preservation of the State is inconsistent with his own, and one or the other must perish; in putting the guilty to death, we slay not so much the citizen as an enemy. The trial and the judgment are the proofs that he has broken the social treaty, and is in consequence no longer a member of the State. Since, then, he has recognised himself to be such by living there, he must be removed by exile as a violator of the compact, or by death as a public enemy; for such an enemy is not a moral person, but merely a man; and in such a case the right of war is to kill the vanquished.

But, it will be said, the condemnation of a criminal is a particular act. I admit it: but such condemnation is not a function of the Sovereign; it is a right the Sovereign can confer without being able itself to exert it. All my ideas are consistent, but I cannot expound them all at once.

We may add that frequent punishments are always a sign of weakness or remissness on the part of the government. There is not a single ill-doer who could not be turned to some good. The State has no right to put to death, even for the sake of making an example, any one whom it can leave alive without danger.

The right of pardoning or exempting the guilty from a penalty imposed by the law and pronounced by the judge belongs only to the authority which is superior to both judge and law, *i.e.* the Sovereign; even its right in this matter is far from clear, and the cases for exercising it are extremely rare. In a well-governed State, there are few punishments, not because there are many pardons, but because criminals are rare; it is when a State is in decay that the multitude of crimes is a guarantee of impunity. Under the Roman Republic, neither the Senate nor the Consuls ever attempted to pardon; even the people never did so, though it sometimes revoked its own decision. Frequent pardons mean that crime will soon need them no longer, and no-

one can help seeing whither that leads. But I feel my heart protesting and restraining my pen; let us leave these questions to the just man who has never offended, and would himself stand in no need of pardon.

---

## CHAPTER VI

### LAW

By the social compact we have given the body politic existence and life: we have now by legislation to give it movement and will. For the original act by which the body is formed and united still in no respect determines what it ought to do for its preservation.

What is well and in conformity with order is so by the nature of things and independently of human conventions. All justice comes from God, who is its sole source; but if we knew how to receive so high an inspiration, we should need neither government nor laws. Doubtless, there is a universal justice emanating from reason alone; but this justice, to be admitted among us, must be mutual. Humanly speaking, in default of natural sanctions, the laws of justice are ineffective among men: they merely make for the good of the wicked and the undoing of the just, when the just man observes them towards everybody and nobody observes them towards him. Conventions and laws are therefore needed to join rights to duties and refer justice to its object. In the state of nature, where everything is common, I owe nothing to him whom I have promised nothing; I recognise as belonging to others only what is of no use to me. In the state of society all rights are fixed by law, and the case becomes different.

But what, after all, is a law? As long as we remain satisfied with attaching purely metaphysical ideas to the word, we shall go on arguing without arriving at an understanding; and when we have defined a law of nature, we shall be no nearer the definition of a law of the State.

I have already said that there can be no general will directed to a particular object. Such an object must be either within or outside the State. If outside, a will which is alien to it cannot be, in relation to it, general; if within, it is

part of the State, and in that case there arises a relation between whole and part which makes them two separate beings, of which the part is one, and the whole minus the part the other. But the whole minus a part cannot be the whole; and while this relation persists, there can be no whole, but only two unequal parts; and it follows that the will of one is no longer in any respect general in relation to the other.

But when the whole people decrees for the whole people, it is considering only itself; and if a relation is then formed, it is between two aspects of the entire object, without there being any division of the whole. In that case the matter about which the decree is made is, like the decreeing will general. This act is what I call a law.

When I say that the object of laws is always general, I mean that law considers subjects *en masse* and actions in the abstract, and never a particular person or action. Thus the law may indeed decree that there shall be privileges, but cannot confer them on anybody by name. It may set up several classes of citizens, and even lay down the qualifications for membership of these classes, but it cannot nominate such and such persons as belonging to them; it may establish a monarchical government and hereditary succession, but it cannot choose a king, or nominate a royal family. In a word, no function which has a particular object belongs to the legislative power.

On this view, we at once see that it can no longer be asked whose business it is to make laws, since they are acts of the general will: nor whether the prince is above the law, since he is a member of the State; nor whether the law can be unjust, since no one is unjust to himself; nor how we can be both free and subject to the laws since they are but registers of our wills.

We see further that, as the law unites universality of will with universality of object, what a man, whoever he be, commands of his own motion cannot be a law; and even what the Sovereign commands with regard to a particular matter is no nearer being a law, but is a decree, an act, not of sovereignty, but of magistracy.

I therefore give the name 'Republic' to every State that is governed by laws, no matter what the form of its administration may be: for only in such a case does the public interest govern, and the *res publica* rank as a *reality*.

Every legitimate government is republican;<sup>[1]</sup> what government is I will explain later on.

Laws are, properly speaking, only the conditions of civil association. The people, being subject to the laws, ought to be their author: the conditions of the society ought to be regulated solely by those who come together to form it. But how are they to regulate them? Is it to be by common agreement, by a sudden inspiration? Has the body politic an organ to declare its will? Who can give it the foresight to formulate and announce its acts in advance? Or how is it to announce them in the hour of need? How can a blind multitude, which often does not know what it wills, because it rarely knows what is good for it, carry out for itself so great and difficult an enterprise as a system of legislation? Of itself the people wills always the good, but of itself it by no means always sees it. The general will is always in the right, but the judgment which guides it is not always enlightened. It must be got to see objects as they are, and sometimes as they ought to appear to it; it must be shown the good road it is in search of, secured from the seductive influences of individual wills, taught to see times and spaces as a series, and made to weigh the attractions of present and sensible advantages against the danger of distant and hidden evils. The individuals see the good they reject; the public wills the good it does not see. All stand equally in need of guidance. The former must be compelled to bring their wills into conformity with their reason; the latter must be taught to know what it wills. If that is done, public enlightenment leads to the union of understanding and will in the social body: the parts are made to work exactly together, and the whole is raised to its highest power. This makes a legislator necessary.

---

[1] I understand by this word, not merely an aristocracy or a democracy, but generally any government directed by the general will, which is the law. To be legitimate, the government must be, not one with the Sovereign, but its minister. In such a case even a monarchy is a Republic. This will be made clearer in the following book.

---

## CHAPTER VII

### THE LEGISLATOR

In order to discover the rules of society best suited to nations, a superior intelligence beholding all the passions of men without experiencing any of them would be needed. This intelligence would have to be wholly unrelated to our nature, while knowing it through and through; its happiness would have to be independent of us, and yet ready to occupy itself with ours; and lastly, it would have, in the march of time, to look forward to a distant glory, and, working in one century, to be able to enjoy in the next.<sup>[1]</sup> It would take gods to give men laws.

What Caligula argued from the facts, Plato, in the dialogue called the *Politicus*, argued in defining the civil or kingly man, on the basis of right. But if great princes are rare, how much more so are great legislators? The former have only to follow the pattern which the latter have to lay down. The legislator is the engineer who invents the machine, the prince merely the mechanic who sets it up and makes it go. "At the birth of societies," says Montesquieu, "the rulers of Republics establish institutions, and afterwards the institutions mould the rulers."<sup>[2]</sup>

He who dares to undertake the making of a people's institutions ought to feel himself capable, so to speak, of changing human nature, of transforming each individual, who is by himself a complete and solitary whole, into part of a greater whole from which he in a manner receives his life and being; of altering man's constitution for the purpose of strengthening it; and of substituting a partial and moral existence for the physical and independent existence nature has conferred on us all. He must, in a word, take away from man his own resources and give him instead new ones alien to him, and incapable of being made use of without the help of

other men. The more completely these natural resources are annihilated, the greater and the more lasting are those which he acquires, and the more stable and perfect the new institutions; so that if each citizen is nothing and can do nothing without the rest, and the resources acquired by the whole are equal or superior to the aggregate of the resources of all the individuals, it may be said that legislation is at the highest possible point of perfection.

The legislator occupies in every respect an extraordinary position in the State. If he should do so by reason of his genius, he does so no less by reason of his office, which is neither magistracy, nor Sovereignty. This office, which sets up the Republic, nowhere enters into its constitution; it is an individual and superior function, which has nothing in common with human empire; for if he who holds command over men ought not to have command over the laws, he who has command over the laws ought not any more to have it over men; or else his laws would be the ministers of his passions and would often merely serve to perpetuate his injustices: his private aims would inevitably mar the sanctity of his work.

When Lycurgus gave laws to his country, he began by resigning the throne. It was the custom of most Greek towns to entrust the establishment of their laws to foreigners. The Republics of modern Italy in many cases followed this example; Geneva did the same and profited by it.<sup>[3]</sup> Rome, when it was most prosperous, suffered a revival of all the crimes of tyranny, and was brought to the verge of destruction, because it put the legislative authority and the sovereign power into the same hands.

Nevertheless, the decemvirs themselves never claimed the right to pass any law merely on their own authority. "Nothing we propose to you," they said to the people, "can pass into law without your consent. Romans, be yourselves the authors of the laws which are to make you happy."

He, therefore, who draws up the laws has, or should have, no right of legislation, and the people cannot, even if it wishes, deprive itself of this incommunicable right, because, according to the fundamental compact, only the general will can bind the individuals, and there can be no assurance that a particular will is in conformity with the general will, until it has been put to the free vote of the people. This I have said already; but it is worth while to repeat it.

Thus in the task of legislation we find together two things which appear to be incompatible: an enterprise too difficult for human powers, and, for its execution, an authority that is no authority.

There is a further difficulty that deserves attention. Wise men, if they try to speak their language to the common herd instead of its own, cannot possibly make themselves understood. There are a thousand kinds of ideas which it is impossible to translate into popular language. Conceptions that are too general and objects that are too remote are equally out of its range: each individual, having no taste for any other plan of government than that which suits his particular interest, finds it difficult to realise the advantages he might hope to draw from the continual privations good laws impose. For a young people to be able to relish sound principles of political theory and follow the fundamental rules of statecraft, the effect would have to become the cause; the social spirit, which should be created by these institutions, would have to preside over their very foundation; and men would have to be before law what they should become by means of law. The legislator therefore, being unable to appeal to either force or reason, must have recourse to an authority of a different order capable of constraining without violence and persuading without convincing.

This is what has, in all ages, compelled the fathers of nations to have recourse to divine intervention and credit the gods with their own wisdom, in order that the peoples, submitting to the laws of the State as to those of nature, and recognising the same power in the formation of the city as in that of man, might obey freely, and bear with docility the yoke of the public happiness.

This sublime reason, far above the range of the common herd, is that whose decisions the legislator puts into the mouth of the immortals, in order to constrain by divine authority those whom human prudence could not move.

[4] But it is not anybody who can make the gods speak, or get himself believed when he proclaims himself their interpreter. The great soul of the legislator is the only miracle that can prove his mission. Any man may grave tablets of stone, or buy an oracle; or feign secret intercourse with some divinity, or train a bird to whisper in his ear, or find other vulgar ways of imposing on the people. He whose knowledge goes no further may perhaps gather round him a band of fools; but he will never found an empire, and his extravagances will quickly perish with him. Idle tricks form

a passing tie; only wisdom can make it lasting. The Judaic law, which still subsists, and that of the child of Ishmael, which, for ten centuries, has ruled half the world, still proclaim the great men who laid them down; and, while the pride of philosophy or the blind spirit of faction sees in them no more than lucky impostures, the true political theorist admires, in the institutions they set up, the great and powerful genius which presides over things made to endure.

We should not, with Warburton, conclude from this that politics and religion have among us a common object, but that, in the first periods of nations, the one is used as an instrument for the other.

---

[1] A people becomes famous only when its legislation begins to decline. We do not know for how many centuries the system of Lycurgus made the Spartans happy before the rest of Greece took any notice of it.

[2] Montesquieu, *The Greatness and Decadence of the Romans*, ch. i.

[3] Those who know Calvin only as a theologian much underestimate the extent of his genius. The codification of our wise edicts, in which he played a large part, does him no less honour than his *Institute*. Whatever revolution time may bring in our religion, so long as the spirit of patriotism and liberty still lives among us, the memory of this great man will be for ever blessed.

[4] "In truth," says Macchiavelli, "there has never been, in any country, an extraordinary legislator who has not had recourse to God; for otherwise his laws would not have been accepted: there are, in fact, many useful truths of which a wise man may have knowledge without their having in themselves such clear reasons for their being so as to be able to convince others" (*Discourses on Livy*, Bk. v, ch. xi). (Rousseau quotes the Italian.)

---

## CHAPTER VIII

### THE PEOPLE

As, before putting up a large building, the architect surveys and sounds the site to see if it will bear the weight, the wise legislator does not begin by laying down laws good in themselves, but by investigating the fitness of the people, for which they are destined, to receive them. Plato refused to legislate for the Arcadians and the Cyrenæans, because he knew that both peoples were rich and could not put up with equality; and good laws and

bad men were found together in Crete, because Minos had inflicted discipline on a people already burdened with vice.

A thousand nations have achieved earthly greatness, that could never have endured good laws; even such as could have endured them could have done so only for a very brief period of their long history. Most peoples, like most men, are docile only in youth; as they grow old they become incorrigible. When once customs have become established and prejudices inveterate, it is dangerous and useless to attempt their reformation; the people, like the foolish and cowardly patients who rave at sight of the doctor, can no longer bear that any one should lay hands on its faults to remedy them.

There are indeed times in the history of States when, just as some kinds of illness turn men's heads and make them forget the past, periods of violence and revolutions do to peoples what these crises do to individuals: horror of the past takes the place of forgetfulness, and the State, set on fire by civil wars, is born again, so to speak, from its ashes, and takes on anew, fresh from the jaws of death, the vigour of youth. Such were Sparta at the time of Lycurgus, Rome after the Tarquins, and, in modern times, Holland and Switzerland after the expulsion of the tyrants.

But such events are rare; they are exceptions, the cause of which is always to be found in the particular constitution of the State concerned. They cannot even happen twice to the same people, for it can make itself free as long as it remains barbarous, but not when the civic impulse has lost its vigour. Then disturbances may destroy it, but revolutions cannot mend it: it needs a master, and not a liberator. Free peoples, be mindful of maxim; "Liberty may be gained, but can never be recovered."

Youth is not infancy. There is for nations, as for men, a period of youth, or, shall we say, maturity, before which they should not be made subject to laws; but the maturity of a people is not always easily recognisable, and, if it is anticipated, the work is spoilt. One people is amenable to discipline from the beginning; another, not after ten centuries. Russia will never be really civilised, because it was civilised too soon. Peter had a genius for imitation; but he lacked true genius, which is creative and makes all from nothing. He did some good things, but most of what he did was out of place. He saw that his people was barbarous, but did not see that it was not ripe for civilisation: he wanted to civilise it when it needed only hardening.

His first wish was to make Germans or Englishmen, when he ought to have been making Russians; and he prevented his subjects from ever becoming what they might have been by persuading them that they were what they are not. In this fashion too a French teacher turns out his pupil to be an infant prodigy, and for the rest of his life to be nothing whatsoever. The empire of Russia will aspire to conquer Europe, and will itself be conquered. The Tartars, its subjects or neighbours, will become its masters and ours, by a revolution which I regard as inevitable. Indeed, all the kings of Europe are working in concert to hasten its coming.

---

## CHAPTER IX

### THE PEOPLE (*continued*)

As nature has set bounds to the stature of a well-made man, and, outside those limits, makes nothing but giants or dwarfs, similarly, for the constitution of a State to be at its best, it is possible to fix limits that will make it neither too large for good government, nor too small for self-maintenance. In every body politic there is a *maximum* strength which it cannot exceed and which it only loses by increasing in size. Every extension of the social tie means its relaxation; and, generally speaking, a small State is stronger in proportion than a great one.

A thousand arguments could be advanced in favour of this principle. First, long distances make administration more difficult, just as a weight becomes heavier at the end of a longer lever. Administration therefore becomes more and more burdensome as the distance grows greater; for, in the first place, each city has its own, which is paid for by the people: each district its own, still paid for by the people: then comes each province, and then the great governments, satrapies, and vice-royalties, always costing more the higher you go, and always at the expense of the unfortunate people. Last of all comes the supreme administration, which eclipses all the rest. All these overcharges are a continual drain upon the subjects; so far from being better governed by all these different orders, they are worse governed than if there were only a single authority over them. In the meantime, there scarce

remain resources enough to meet emergencies; and, when recourse must be had to these, the State is always on the eve of destruction.

This is not all; not only has the government less vigour and promptitude for securing the observance of the laws, preventing nuisances, correcting abuses, and guarding against seditious undertakings begun in distant places; the people has less affection for its rulers, whom it never sees, for its country, which, to its eyes, seems like the world, and for its fellow-citizens, most of whom are unknown to it. The same laws cannot suit so many diverse provinces with different customs, situated in the most various climates, and incapable of enduring a uniform government. Different laws lead only to trouble and confusion among peoples which, living under the same rulers and in constant communication one with another, intermingle and intermarry, and, coming under the sway of new customs, never know if they can call their very patrimony their own. Talent is buried, virtue unknown and vice unpunished, among such a multitude of men who do not know one another, gathered together in one place at the seat of the central administration. The leaders, overwhelmed with business, see nothing for themselves; the State is governed by clerks. Finally, the measures which have to be taken to, maintain the general authority, which all these distant officials wish to escape or to impose upon, absorb all the energy of the public, so that there is none left for the happiness of the people. There is hardly enough to defend it when need arises, and thus a body which is too big for its constitution gives way and falls crushed under its own weight.

Again, the State must assure itself a safe foundation, if it is to have stability, and to be able to resist the shocks it cannot help experiencing, as well as the efforts it will be forced to make for its maintenance; for all peoples have a kind of centrifugal force that makes them continually act one against another, and tend to aggrandise themselves at their neighbours' expense, like the vortices of Descartes. Thus the weak run the risk of being soon swallowed up; and it is almost impossible for any one to preserve itself except by putting itself in a state of equilibrium with all, so that the pressure is on all sides practically equal.

It may therefore be seen that there are reasons for expansion and reasons for contraction; and it is no small part of the statesman's skill to hit between them the mean that is most favourable to the preservation of the State. It may be said that the reason for expansion, being merely external and

relative, ought to be subordinate to the reasons for contraction, which are internal and absolute. A strong and healthy constitution is the first thing to look for; and it is better to count on the vigour which comes of good government than on the resources a great territory furnishes.

It may be added that there have been known States so constituted that the necessity of making conquests entered into their very constitution, and that, in order to maintain themselves, they were forced to expand ceaselessly. It may be that they congratulated themselves greatly on this fortunate necessity, which none the less indicated to them, along with the limits of their greatness, the inevitable moment of their fall.

---

## CHAPTER X

### THE PEOPLE (*continued*)

A body politic may be measured in two ways—either by the extent of its territory, or by the number of its people; and there is, between these two measurements, a right relation which makes the State really great. The men make the State, and the territory sustains the men; the right relation therefore is that the land should suffice for the maintenance of the inhabitants, and that there should be as many inhabitants as the land can maintain. In this proportion lies the *maximum* strength of a given number of people; for if there is too much land, it is troublesome to guard and inadequately cultivated, produces more than is needed, and soon gives rise to wars of defence; if there is not enough, the State depends on its neighbours for what it needs over and above, and this soon gives rise to wars of offence. Every people, to which its situation gives no choice save that between commerce and war, is weak in itself: it depends on its neighbours, and on circumstances; its existence can never be more than short and uncertain. It either conquers others, and changes its situation, or it is conquered and becomes nothing. Only insignificance or greatness can keep it free.

No fixed relation can be stated between the extent of the territory and the population that are adequate one to the other, both because of the differences in the quality of land, in its fertility, in the nature of its products, and in the influence of climate, and because of the different tempers of those who inhabit it; for some in a fertile country consume little, and others on an ungrateful soil much. The greater or less fecundity of women, the conditions that are more or less favourable in each country to the growth of population, and the influence the legislator can hope to exercise by his institutions, must also be taken into account. The legislator therefore should not go by what he sees, but by what he foresees; he should stop not so much at the state in which he actually finds the population, as at that to which it ought naturally to attain. Lastly, there are countless cases in which the particular local circumstances demand or allow the acquisition of a greater territory than seems necessary. Thus, expansion will be great in a mountainous country, where the natural products, *i.e.* woods and pastures, need less labour, where we know from experience that women are more fertile than in the plains, and where a great expanse of slope affords only a small level tract that can be counted on for vegetation. On the other hand, contraction is possible on the coast, even in lands of rocks and nearly barren sands, because there fishing makes up to a great extent for the lack of land-produce, because the inhabitants have to congregate together more in order to repel pirates, and further because it is easier to unburden the country of its superfluous inhabitants by means of colonies.

To these conditions of law-giving must be added one other which, though it cannot take the place of the rest, renders them all useless when it is absent. This is the enjoyment of peace and plenty; for the moment at which a State sets its house in order is, like the moment when a battalion is forming up, that when its body is least capable of offering resistance and easiest to destroy. A better resistance could be made at a time of absolute disorganisation than at a moment of fermentation, when each is occupied with his own position and not with the danger. If war, famine, or sedition arises at this time of crisis, the State will inevitably be overthrown.

Not that many governments have not been set up during such storms; but in such cases these governments are themselves the State's destroyers. Usurpers always bring about or select troublous times to get passed, under cover of the public terror, destructive laws, which the people would never

adopt in cold blood. The moment chosen is one of the surest means of distinguishing the work of the legislator from that of the tyrant.

What people, then, is a fit subject for legislation? One which, already bound by some unity of origin, interest, or convention, has never yet felt the real yoke of law; one that has neither customs nor superstitions deeply ingrained, one which stands in no fear of being overwhelmed by sudden invasion; one which, without entering into its neighbours' quarrels, can resist each of them single-handed, or get the help of one to repel another; one in which every member may be known by every other, and there is no need to lay on any man burdens too heavy for a man to bear; one which can do without other peoples, and without which all others can do;<sup>[1]</sup> one which is neither rich nor poor, but self-sufficient; and, lastly, one which unites the consistency of an ancient people with the docility of a new one. Legislation is made difficult less by what it is necessary to build up than by what has to be destroyed; and what makes success so rare is the impossibility of finding natural simplicity together with social requirements. All these conditions are indeed rarely found united, and therefore few States have good constitutions.

There is still in Europe one country capable of being given laws—Corsica. The valour and persistency with which that brave people has regained and defended its liberty well deserves that some wise man should teach it how to preserve what it has won. I have a feeling that some day that little island will astonish Europe.

---

[1] If there were two neighbouring peoples, one of which could not do without the other, it would be very hard on the former, and very dangerous for the latter. Every wise nation, in such a case, would make haste to free the other from dependence. The Republic of Thlascala, enclosed by the Mexican Empire, preferred doing without salt to buying from the Mexicans, or even getting it from them as a gift. The Thlascalans were wise enough to see the snare hidden under such liberality. They kept their freedom, and that little State, shut up in that great Empire, was finally the instrument of its ruin.

---

## CHAPTER XI

# THE VARIOUS SYSTEMS OF LEGISLATION

If we ask in what precisely consists the greatest good of all, which should be the end of every system of legislation, we shall find it reduce itself to two main objects, liberty and equality—liberty, because all particular dependence means so much force taken from the body of the State, and equality, because liberty cannot exist without it.

I have already defined civil liberty; by equality, we should understand, not that the degrees of power and riches are to be absolutely identical for everybody; but that power shall never be great enough for violence, and shall always be exercised by virtue of rank and law; and that, in respect of riches, no citizen shall ever be wealthy enough to buy another, and none poor enough to be forced to sell himself.<sup>[1]</sup> which implies, on the part of the great, moderation in goods and position, and, on the side of the common sort, moderation in avarice and covetousness.

Such equality, we are told, is an unpractical ideal that cannot actually exist. But if its abuse is inevitable, does it follow that we should not at least make regulations concerning it? It is precisely because the force of circumstances tends continually to destroy equality that the force of legislation should always tend to its maintenance.

But these general objects of every good legislative system need modifying in every country in accordance with the local situation and the temper of the inhabitants; and these circumstances should determine, in each case, the particular system of institutions which is best, not perhaps in itself, but for the State for which it is destined. If, for instance, the soil is barren and unproductive, or the land too crowded for its inhabitants, the people should turn to industry and the crafts, and exchange what they produce for the commodities they lack. If, on the other hand, a people dwells in rich plains and fertile slopes, or, in a good land, lacks inhabitants, it should give all its attention to agriculture, which causes men to multiply, and should drive out the crafts, which would only result in depopulation, by grouping in a few localities the few inhabitants there are.<sup>[2]</sup> If a nation dwells on an extensive and convenient coast-line, let it cover the sea with ships and foster commerce and navigation. It will have a life that will be short and glorious. If, on its coasts, the sea washes nothing but almost inaccessible rocks, let it remain barbarous and ichthyophagous: it will have a quieter, perhaps a better, and certainly a happier life. In a word, besides the principles that are common to all, every nation has in itself something that gives them a

particular application, and makes its legislation peculiarly its own. Thus, among the Jews long ago and more recently among the Arabs, the chief object was religion, among the Athenians letters, at Carthage and Tyre commerce, at Rhodes shipping, at Sparta war, at Rome virtue. The author of *The Spirit of the Laws* has shown with many examples by what art the legislator directs the constitution towards each of these objects.

What makes the constitution of a State really solid and lasting is the due observance of what is proper, so that the natural relations are always in agreement with the laws on every point, and law only serves, so to speak, to assure, accompany and rectify them. But if the legislator mistakes his object and adopts a principle other than circumstances naturally direct; if his principle makes for servitude while they make for liberty, or if it makes for riches, while they make for populousness, or if it makes for peace, while they make for conquest—the laws will insensibly lose their influence, the constitution will alter, and the State will have no rest from trouble till it is either destroyed or changed, and nature has resumed her invincible sway.

---

[1] If the object is to give the State consistency, bring the two extremes as near to each other as possible; allow neither rich men nor beggars. These two estates, which are naturally inseparable, are equally fatal to the common good; from the one come the friends of tyranny, and from the other tyrants. It is always between them that public liberty is put up to auction; the one buys, and the other sells.

[2] "Any branch of foreign commerce," says M. d'Argenson, "creates on the whole only apparent advantage for the kingdom in general; it may enrich some individuals, or even some towns; but the nation as a whole gains nothing by it, and the people is no better off."

---

## CHAPTER XII

### THE DIVISION OF THE LAWS

If the whole is to be set in order, and the commonwealth put into the best possible shape, there are various relations to be considered. First, there is the action of the complete body upon itself, the relation of the whole to the whole, of the Sovereign to the State; and this relation, as we shall see, is made up of the relations of the intermediate terms.

The laws which regulate this relation bear the name of political laws, and are also called fundamental laws, not without reason if they are wise. For, if there is, in each State, only one good system, the people that is in possession of it should hold fast to this; but if the established order is bad, why should laws that prevent men from being good be regarded as fundamental? Besides, in any case, a people is always in a position to change its laws, however good; for, if it choose to do itself harm, who can have a right to stop it?

The second relation is that of the members one to another, or to the body as a whole; and this relation should be in the first respect as unimportant, and in the second as important, as possible. Each citizen would then be perfectly independent of all the rest, and at the same time very dependent on the city; which is brought about always by the same means, as the strength of the State can alone secure the liberty of its members. From this second relation arise civil laws.

We may consider also a third kind of relation between the individual and the law, a relation of disobedience to its penalty. This gives rise to the setting up of criminal laws, which, at bottom, are less a particular class of law than the sanction behind all the rest.

Along with these three kinds of law goes a fourth, most important of all, which is not graven on tablets of marble or brass, but on the hearts of the citizens. This forms the real constitution of the State, takes on every day new powers, when other laws decay or die out, restores them or takes their place, keeps a people in the ways in which it was meant to go, and insensibly replaces authority by the force of habit. I am speaking of morality, of custom, above all of public opinion; a power unknown to political thinkers, on which none the less success in everything else depends. With this the great legislator concerns himself in secret, though he seems to confine himself to particular regulations; for these are only the arc of the arch, while manners and morals, slower to arise, form in the end its immovable keystone.

Among the different classes of laws, the political, which determine the form of the government, are alone relevant to my subject.

---

## BOOK III

Before speaking of the different forms of government, let us try to fix the exact sense of the word, which has not yet been very clearly explained.

---

### CHAPTER I

## GOVERNMENT IN GENERAL

I warn the reader that this chapter requires careful reading, and that I am unable to make myself clear to those who refuse to be attentive.

Every free action is produced by the concurrence of two causes; one moral, *i.e.* the will which determines the act; the other physical, *i.e.* the power which executes it. When I walk towards an object, it is necessary first that I should will to go there, and, in the second place, that my feet should carry me. If a paralytic wills to run and an active man wills not to, they will both stay where they are. The body politic has the same motive powers; here too force and will are distinguished, will under the name of legislative power and force under that of executive power. Without their concurrence, nothing is, or should be, done.

We have seen that the legislative power belongs to the people, and can belong to it alone. It may, on the other hand, readily be seen, from the principles laid down above, that the executive power cannot belong to the generality as legislature or Sovereign, because it consists wholly of particular acts which fall outside the competency of the law, and consequently of the Sovereign, whose acts must always be laws.

The public force therefore needs an agent of its own to bind it together and set it to work under the direction of the general will, to serve as a means of communication between the State and the Sovereign, and to do for the collective person more or less what the union of soul and body does for man. Here we have what is, in the State, the basis of government, often wrongly confused with the Sovereign, whose minister it is.

What then is government? An intermediate body set up between the subjects and the Sovereign, to secure their mutual correspondence, charged with the execution of the laws and the maintenance of liberty, both civil and political.

The members of this body are called magistrates or *kings*, that is to say *governors*, and the whole body bears the name *prince*.<sup>[1]</sup> Thus those who hold that the act, by which a people puts itself under a prince, is not a contract, are certainly right. It is simply and solely a commission, an employment, in which the rulers, mere officials of the Sovereign, exercise in their own name the power of which it makes them depositaries. This power it can limit, modify or recover at pleasure; for the alienation of such a right is incompatible with the nature of the social body, and contrary to the end of association.

I call then *government*, or supreme administration, the legitimate exercise of the executive power, and prince or magistrate the man or the body entrusted with that administration.

In government reside the intermediate forces whose relations make up that of the whole to the whole, or of the Sovereign to the State. This last relation may be represented as that between the extreme terms of a continuous proportion, which has government as its mean proportional. The government gets from the Sovereign the orders it gives the people, and, for the State to be properly balanced, there must, when everything is reckoned in, be equality between the product or power of the government taken in itself, and the product or power of the citizens, who are on the one hand sovereign and on the other subject.

Furthermore, none of these three terms can be altered without the equality being instantly destroyed. If the Sovereign desires to govern, or the magistrate to give laws, or if the subjects refuse to obey, disorder takes the place of regularity, force and will no longer act together, and the State is dissolved and falls into despotism or anarchy. Lastly, as there is only one mean proportional between each relation, there is also only one good government possible for a State. But, as countless events may change the relations of a people, not only may different governments be good for different peoples, but also for the same people at different times.

In attempting to give some idea of the various relations that may hold between these two extreme terms, I shall take as an example the number of a people, which is the most easily expressible.

Suppose the State is composed of ten thousand citizens. The Sovereign can only be considered collectively and as a body; but each member, as being a subject, is regarded as an individual: thus the Sovereign is to the subject as ten thousand to one, *i.e.* each member of the State has as his share only a ten-thousandth part of the sovereign authority, although he is wholly under its control. If the people numbers a hundred thousand, the condition of the subject undergoes no change, and each equally is under the whole authority of the laws, while his vote, being reduced to one hundred thousandth part, has ten times less influence in drawing them up. The subject therefore remaining always a unit, the relation between him and the Sovereign increases with the number of the citizens. From this it follows that, the larger the State, the less the liberty.

When I say the relation increases, I mean that it grows more unequal. Thus the greater it is in the geometrical sense, the less relation there is in the ordinary sense of the word. In the former sense, the relation, considered according to quantity, is expressed by the quotient; in the latter, considered according to identity, it is reckoned by similarity.

Now, the less relation the particular wills have to the general will, that is, morals and manners to laws, the more should the repressive force be increased. The government, then, to be good, should be proportionately stronger as the people is more numerous.

On the other hand, as the growth of the State gives the depositaries of the public authority more temptations and chances of abusing their power, the greater the force with which the government ought to be endowed for keeping the people in hand, the greater too should be the force at the disposal of the Sovereign for keeping the government in hand. I am speaking, not of absolute force, but of the relative force of the different parts of the State.

It follows from this double relation that the continuous proportion between the Sovereign, the prince and the people, is by no means an arbitrary idea, but a necessary consequence of the nature of the body politic. It follows further that, one of the extreme terms, *viz.* the people, as subject, being

fixed and represented by unity, whenever the duplicate ratio increases or diminishes, the simple ratio does the same, and is changed accordingly. From this we see that there is not a single unique and absolute form of government, but as many governments differing in nature as there are States differing in size.

If, ridiculing this system, any one were to say that, in order to find the mean proportional and give form to the body of the government, it is only necessary, according to me, to find the square root of the number of the people, I should answer that I am here taking this number only as an instance; that the relations of which I am speaking are not measured by the number of men alone, but generally by the amount of action, which is a combination of a multitude of causes; and that, further, if, to save words, I borrow for a moment the terms of geometry, I am none the less well aware that moral quantities do not allow of geometrical accuracy.

The government is on a small scale what the body politic which includes it is on a great one. It is a moral person endowed with certain faculties, active like the Sovereign and passive like the State, and capable of being resolved into other similar relations. This accordingly gives rise to a new proportion, within which there is yet another, according to the arrangement of the magistracies, till an indivisible middle term is reached, *i.e.* a single ruler or supreme magistrate, who may be represented, in the midst of this progression, as the unity between the fractional and the ordinal series.

Without encumbering ourselves with this multiplication of terms, let us rest content with regarding government as a new body within the State, distinct from the people and the Sovereign, and intermediate between them.

There is between these two bodies this essential difference, that the State exists by itself, and the government only through the Sovereign. Thus the dominant will of the prince is, or should be, nothing but the general will or the law; his force is only the public force concentrated in his hands, and, as soon as he tries to base any absolute and independent act on his own authority, the tie that binds the whole together begins to be loosened. If finally the prince should come to have a particular will more active than the will of the Sovereign, and should employ the public force in his hands in obedience to this particular will, there would be, so to speak, two

Sovereigns, one rightful and the other actual, the social union would evaporate instantly, and the body politic would be dissolved.

However, in order that the government may have a true existence and a real life distinguishing it from the body of the State, and in order that all its members may be able to act in concert and fulfil the end for which it was set up, it must have a particular personality, a sensibility common to its members, and a force and will of its own making for its preservation. This particular existence implies assemblies, councils, power of deliberation and decision, rights, titles, and privileges belonging exclusively to the prince and making the office of magistrate more honourable in proportion as it is more troublesome. The difficulties lie in the manner of so ordering this subordinate whole within the whole, that it in no way alters the general constitution by affirmation of its own, and always distinguishes the particular force it possesses, which is destined to aid in its preservation, from the public force, which is destined to the preservation of the State; and, in a word, is always ready to sacrifice the government to the people, and never to sacrifice the people to the government.

Furthermore, although the artificial body of the government is the work of another artificial body, and has, we may say, only a borrowed and subordinate life, this does not prevent it from being able to act with more or less vigour or promptitude, or from being, so to speak, in more or less robust health. Finally, without departing directly from the end for which it was instituted, it may deviate more or less from it, according to the manner of its constitution.

From all these differences arise the various relations which the government ought to bear to the body of the State, according to the accidental and particular relations by which the State itself is modified, for often the government that is best in itself will become the most pernicious, if the relations in which it stands have altered according to the defects of the body politic to which it belongs.

---

[1] Thus at Venice the College, even in the absence of the Doge, is called "Most Serene Prince."

---

## CHAPTER II

### THE CONSTITUENT PRINCIPLE IN THE VARIOUS FORMS OF GOVERNMENT

To set forth the general cause of the above differences, we must here distinguish between government and its principle, as we did before between the State and the Sovereign.

The body of the magistrate may be composed of a greater or a less number of members. We said that the relation of the Sovereign to the subjects was greater in proportion as the people was more numerous, and, by a clear analogy, we may say the same of the relation of the government to the magistrates.

But the total force of the government, being always that of the State, is invariable; so that, the more of this force it expends on its own members, the less it has left to employ on the whole people.

The more numerous the magistrates, therefore, the weaker the government. This principle being fundamental, we must do our best to make it clear.

In the person of the magistrate we can distinguish three essentially different wills: first, the private will of the individual, tending only to his personal advantage; secondly, the common will of the magistrates, which is relative solely to the advantage of the prince, and may be called corporate will, being general in relation to the government, and particular in relation to the State, of which the government forms part; and, in the third place, the will of the people or the sovereign will, which is general both in relation to the State regarded as the whole, and to the government regarded as a part of the whole.

In a perfect act of legislation, the individual or particular will should be at zero; the corporate will belonging to the government should occupy a very subordinate position; and, consequently, the general or sovereign will should always predominate and should be the sole guide of all the rest.

According to the natural order, on the other hand, these different wills become more active in proportion as they are concentrated. Thus, the general will is always the weakest, the corporate will second, and the

individual will strongest of all: so that, in the government, each member is first of all himself, then a magistrate, and then a citizen—in an order exactly the reverse of what the social system requires.

This granted, if the whole government is in the hands of one man, the particular and the corporate will are wholly united, and consequently the latter is at its highest possible degree of intensity. But, as the use to which the force is put depends on the degree reached by the will, and as the absolute force of the government is invariable, it follows that the most active government is that of one man.

Suppose, on the other hand, we unite the government with the legislative authority, and make the Sovereign prince also, and all the citizens so many magistrates: then the corporate will, being confounded with the general will, can possess no greater activity than that will, and must leave the particular will as strong as it can possibly be. Thus, the government, having always the same absolute force, will be at the lowest point of its relative force or activity.

These relations are incontestable, and there are other considerations which still further confirm them. We can see, for instance, that each magistrate is more active in the body to which he belongs than each citizen in that to which he belongs, and that consequently the particular will has much more influence on the acts of the government than on those of the Sovereign; for each magistrate is almost always charged with some governmental function, while each citizen, taken singly, exercises no function of Sovereignty. Furthermore, the bigger the State grows, the more its real force increases, though not in direct proportion to its growth; but, the State remaining the same, the number of magistrates may increase to any extent, without the government gaining any greater real force; for its force is that of the State, the dimension of which remains equal. Thus the relative force or activity of the government decreases, while its absolute or real force cannot increase.

Moreover, it is a certainty that promptitude in execution diminishes as more people are put in charge of it: where prudence is made too much of, not enough is made of fortune; opportunity is let slip, and deliberation results in the loss of its object.

I have just proved that the government grows remiss in proportion as the number of the magistrates increases; and I previously proved that, the more

numerous the people, the greater should be the repressive force. From this it follows that the relation of the magistrates to the government should vary inversely to the relation of the subjects to the Sovereign; that is to say, the larger the State, the more should the government be tightened, so that the number of the rulers diminish in proportion to the increase of that of the people.

It should be added that I am here speaking of the relative strength of the government, and not of its rectitude: for, on the other hand, the more numerous the magistracy, the nearer the corporate will comes to the general will; while, under a single magistrate, the corporate will is, as I said, merely a particular will. Thus, what may be gained on one side is lost on the other, and the art of the legislator is to know how to fix the point at which the force and the will of the government, which are always in inverse proportion, meet in the relation that is most to the advantage of the State.

---

### CHAPTER III

## THE DIVISION OF GOVERNMENTS

We saw in the last chapter what causes the various kinds or forms of government to be distinguished according to the number of the members composing them: it remains in this to discover how the division is made.

In the first place, the Sovereign may commit the charge of the government to the whole people or to the majority of the people, so that more citizens are magistrates than are mere private individuals. This form of government is called *democracy*.

Or it may restrict the government to a small number; so that there are more private citizens than magistrates; and this is named *aristocracy*.

Lastly, it may concentrate the whole government in the hands of a single magistrate from whom all others hold their power. This third form is the most usual, and is called *monarchy*, or royal government.

It should be remarked that all these forms, or at least the first two, admit of degree, and even of very wide differences; for democracy may include the whole people, or may be restricted to half. Aristocracy, in its turn, may be restricted indefinitely from half the people down to the smallest possible number. Even royalty is susceptible of a measure of distribution. Sparta always had two kings, as its constitution provided; and the Roman Empire saw as many as eight emperors at once, without it being possible to say that the Empire was split up. Thus there is a point at which each form of government passes into the next, and it becomes clear that, under three comprehensive denominations, government is really susceptible of as many diverse forms as the State has citizens.

There are even more: for, as the government may also, in certain aspects, be subdivided into other parts, one administered in one fashion and one in another, the combination of the three forms may result in a multitude of mixed forms, each of which admits of multiplication by all the simple forms.

There has been at all times much dispute concerning the best form of government, without consideration of the fact that each is in some cases the best, and in others the worst.

If, in the different States, the number of supreme magistrates should be in inverse ratio to the number of citizens, it follows that, generally, democratic government suits small States, aristocratic government those of middle size, and monarchy great ones. This rule is immediately deducible from the principle laid down. But it is impossible to count the innumerable circumstances which may furnish exceptions.

---

#### CHAPTER IV

### DEMOCRACY

He who makes the law knows better than any one else how it should be executed and interpreted. It seems then impossible to have a better constitution than that in which the executive and legislative powers are

united; but this very fact renders the government in certain respects inadequate, because things which should be distinguished are confounded, and the prince and the Sovereign, being the same person, form, so to speak, no more than a government without government.

It is not good for him who makes the laws to execute them, or for the body of the people to turn its attention away from a general standpoint and devote it to particular objects. Nothing is more dangerous than the influence of private interests in public affairs, and the abuse of the laws by the government is a less evil than the corruption of the legislator, which is the inevitable sequel to a particular standpoint. In such a case, the State being altered in substance, all reformation becomes impossible. A people that would never misuse governmental powers would never misuse independence; a people that would always govern well would not need to be governed.

If we take the term in the strict sense, there never has been a real democracy, and there never will be. It is against the natural order for the many to govern and the few to be governed. It is unimaginable that the people should remain continually assembled to devote their time to public affairs, and it is clear that they cannot set up commissions for that purpose without the form of administration being changed.

In fact, I can confidently lay down as a principle that, when the functions of government are shared by several tribunals, the less numerous sooner or later acquire the greatest authority, if only because they are in a position to expedite affairs, and power thus naturally comes into their hands.

Besides, how many conditions that are difficult to unite does such a government presuppose! First, a very small State, where the people can readily be got together and where each citizen can with ease know all the rest; secondly, great simplicity of manners, to prevent business from multiplying and raising thorny problems; next, a large measure of equality in rank and fortune, without which equality of rights and authority cannot long subsist; lastly, little or no luxury—for luxury either comes of riches or makes them necessary; it corrupts at once rich and poor, the rich by possession and the poor by covetousness; it sells the country to softness and vanity, and takes away from the State all its citizens, to make them slaves one to another, and one and all to public opinion.

This is why a famous writer has made virtue the fundamental principle of Republics; for all these conditions could not exist without virtue. But, for want of the necessary distinctions, that great thinker was often inexact, and sometimes obscure, and did not see that, the sovereign authority being everywhere the same, the same principle should be found in every well-constituted State, in a greater or less degree, it is true, according to the form of the government.

It may be added that there is no government so subject to civil wars and intestine agitations as democratic or popular government, because there is none which has so strong and continual a tendency to change to another form, or which demands more vigilance and courage for its maintenance as it is. Under such a constitution above all, the citizen should arm himself with strength and constancy, and say, every day of his life, what a virtuous Count Palatine<sup>[1]</sup> said in the Diet of Poland: *Malo periculosam libertatem quam quietum servitium.*

Were there a people of gods, their government would be democratic. So perfect a government is not for men.

---

[1] The Palatine of Posen, father of the King of Poland, Duke of Lorraine. I prefer liberty with danger to peace with slavery.

---

## CHAPTER V

### ARISTOCRACY

We have here two quite distinct moral persons, the government and the Sovereign, and in consequence two general wills, one general in relation to all the citizens, the other only for the members of the administration. Thus, although the government may regulate its internal policy as it pleases, it can never speak to the people save in the name of the Sovereign, that is, of the people itself, a fact which must not be forgotten.

The first societies governed themselves aristocratically. The heads of families took counsel together on public affairs. The young bowed without question to the authority of experience. Hence such names as *priests*, *elders*, *senate*, and *gerontes*. The savages of North America govern themselves in this way even now, and their government is admirable.

But, in proportion as artificial inequality produced by institutions became predominant over natural inequality, riches or power<sup>[1]</sup> were put before age, and aristocracy became elective. Finally, the transmission of the father's power along with his goods to his children, by creating patrician families, made government hereditary, and there came to be senators of twenty.

There are then three sorts of aristocracy—natural, elective and hereditary. The first is only for simple peoples; the third is the worst of all governments; the second is the best, and is aristocracy properly so called.

Besides the advantage that lies in the distinction between the two powers, it presents that of its members being chosen; for, in popular government, all the citizens are born magistrates; but here magistracy is confined to a few, who become such only by election.<sup>[2]</sup> By this means uprightness, understanding, experience and all other claims to pre-eminence and public esteem become so many further guarantees of wise government.

Moreover, assemblies are more easily held, affairs better discussed and carried out with more order and diligence, and the credit of the State is better sustained abroad by venerable senators than by a multitude that is unknown or despised.

In a word, it is the best and most natural arrangement that the wisest should govern the many, when it is assured that they will govern for its profit, and not for their own. There is no need to multiply instruments, or get twenty thousand men to do what a hundred picked men can do even better, but it must not be forgotten that corporate interest here begins to direct the public power less under the regulation of the general will, and that a further inevitable propensity takes away from the laws part of the executive power.

If we are to speak of what is individually desirable, neither should the State be so small, nor a people so simple and upright, that the execution of the laws follows immediately from the public will, as it does in a good democracy. Nor should the nation be so great that the rulers have to scatter in order to govern it and are able to play the Sovereign each in his own department, and, beginning by making themselves independent, end by becoming masters.

But if aristocracy does not demand all the virtues needed by popular government, it demands others which are peculiar to itself; for instance, moderation on the side of the rich and contentment on that of the poor; for it seems that thorough-going equality would be out of place, as it was not found even at Sparta.

Furthermore, if this form of government carries with it a certain inequality of fortune, this is justifiable in order that as a rule the administration of public affairs may be entrusted to those who are most able to give them their whole time, but not, as Aristotle maintains, in order that the rich may always be put first. On the contrary, it is of importance that an opposite choice should occasionally teach the people that the deserts of men offer claims to pre-eminence more important than those of riches.

---

[1] It is clear that the word *optimates* meant, among the ancients, not the best, but the most powerful.

[2] It is of great importance that the form of the election of magistrates should be regulated by law; for if it is left at the discretion of the prince, it is impossible to avoid falling into hereditary aristocracy, as the Republics of Venice and Berne actually did. The first of these has therefore long

been a State dissolved; the second, however, is maintained by the extreme wisdom of the senate, and forms an honourable and highly dangerous exception.

---

## CHAPTER VI

### MONARCHY

So far, we have considered the prince as a moral and collective person, unified by the force of the laws, and the depositary in the State of the executive power. We have now to consider this power when it is gathered together into the hands of a natural person, a real man, who alone has the right to dispose of it in accordance with the laws. Such a person is called a monarch or king.

In contrast with other forms of administration, in which a collective being stands for an individual, in this form an individual stands for a collective being; so that the moral unity that constituted the prince is at the same time a physical unity, and all the qualities, which in the other case are only with difficulty brought together by the law, are found naturally united.

Thus the will of the people, the will of the prince, the public force of the State, and the particular force of the government, all answer to a single motive power; all the springs of the machine are in the same hands, the whole moves towards the same end; there are no conflicting movements to cancel one another, and no kind of constitution can be imagined in which a less amount of effort produces a more considerable amount of action. Archimedes, seated quietly on the bank and easily drawing a great vessel afloat, stands to my mind for a skilful monarch, governing vast states from his study, and moving everything while he seems himself unmoved.

But if no government is more vigorous than this, there is also none in which the particular will holds more sway and rules the rest more easily. Everything moves towards the same end indeed, but this end is by no means that of the public happiness, and even the force of the administration constantly shows itself prejudicial to the State.

Kings desire to be absolute, and men are always crying out to them from afar that the best means of being so is to get themselves loved by their people. This precept is all very well, and even in some respects very true. Unfortunately, it will always be derided at court. The power which comes of a people's love is no doubt the greatest; but it is precarious and conditional, and princes will never rest content with it. The best kings desire to be in a position to be wicked, if they please, without forfeiting their mastery: political sermonisers may tell them to their hearts' content that, the people's strength being their own, their first interest is that the people should be prosperous, numerous and formidable; they are well aware that this is Untrue. Their first personal interest is that the people should be weak, wretched, and unable to resist them. I admit that, provided the subjects remained always in submission, the prince's interest would indeed be that it should be powerful, in order that its power, being his own, might make him formidable to his neighbours; but, this interest being merely secondary and subordinate, and strength being incompatible with submission, princes naturally give the preference always to the principle that is more to their immediate advantage. This is what Samuel put strongly before the Hebrews, and what Macchiavelli has clearly shown. He professed to teach kings; but it was the people he really taught. His *Prince* is the book of Republicans.<sup>[1]</sup>

We found, on general grounds, that monarchy is suitable only for great States, and this is confirmed when we examine it in itself. The more numerous the public administration, the smaller becomes the relation between the prince and the subjects, and the nearer it comes to equality, so that in democracy the ratio is unity, or absolute equality. Again, as the government is restricted in numbers the ratio increases and reaches its *maximum* when the government is in the hands of a single person. There is then too great a distance between prince and people and the State lacks a bond of union. To form such a bond, there must be intermediate orders, and princes, personages and nobility to compose them. But no such things suit a small State, to which all class differences mean ruin.

If, however, it is hard for a great State to be well governed, it is much harder for it to be so by a single man; and every one knows what happens when kings substitute others for themselves.

An essential and inevitable defect, which will always rank monarchical below republican government, is that in a republic the public voice hardly ever raises to the highest positions men who are not enlightened and capable, and such as to fill them with honour; while in monarchies these who rise to the top are most often merely petty blunderers petty swindlers, and petty intriguers, whose petty talents cause them to get into the highest positions at Court, but, as soon as they have got there, serve only to make their ineptitude clear to the public. The people is far less often mistaken in its choice than the prince; and a man of real worth among the king's ministers is almost as rare as a fool at the head of a republican government. Thus, when, by some fortunate chance, one of these born governors takes the helm of State in some monarchy that has been nearly overwhelmed by swarms of 'gentlemanly' administrators, there is nothing but amazement at the resources he discovers, and his coming marks an era in his country's history.

For a monarchical State to have a chance of being well governed, its population and extent must be proportionate to the abilities of its governor. It is easier to conquer than to rule. With a long enough lever, the world could be moved with a single finger; to sustain it needs the shoulders of Hercules. However small a State may be, the prince is hardly ever big enough for it. When, on the other hand, it happens that the State is too small for its ruler, in these rare cases too it is ill governed, because the ruler, constantly pursuing his great designs, forgets the interests of the people, and makes it no less wretched by misusing the talents he has, than a ruler of less capacity would make it for want of those he had not. A kingdom should, so to speak, expand or contract with each reign, according to the prince's capabilities; but, the abilities of a senate being more constant in quantity, the State can then have permanent frontiers without the administration suffering.

The disadvantage that is most felt in monarchical government is the want of the continuous succession which, in both the other forms, provides an unbroken bond of union. When one king dies, another is needed; elections leave dangerous intervals and are full of storms; and unless the citizens are disinterested and upright to a degree which very seldom goes with this kind of government, intrigue and corruption abound. He to whom the State has sold itself can hardly help selling it in his turn and repaying himself, at the

expense of the weak, the money the powerful have wrung from him. Under such an administration, venality sooner or later spreads through every part, and peace so enjoyed under a king is worse than the disorders of an interregnum.

What has been done to prevent these evils? Crowns have been made hereditary in certain families, and an order of succession has been set up, to prevent disputes from arising on the death of kings. That is to say, the disadvantages of regency have been put in place of those of election, apparent tranquillity has been preferred to wise administration, and men have chosen rather to risk having children, monstrosities, or imbeciles as rulers to having disputes over the choice of good kings. It has not been taken into account that, in so exposing ourselves to the risks this possibility entails, we are setting almost all the chances against us. There was sound sense in what the younger Dionysius said to his father, who reproached him for doing some shameful deed by asking, "Did I set you the example?" "No," answered his son, "but your father was not king."

Everything conspires to take away from a man who is set in authority over others the sense of justice and reason. Much trouble, we are told, is taken to teach young princes the art of reigning; but their education seems to do them no good. It would be better to begin by teaching them the art of obeying. The greatest kings whose praises history tells were not brought up to reign: reigning is a science we are never so far from possessing as when we have learnt too much of it, and one we acquire better by obeying than by commanding. "Nam utilissimus idem ac brevissimus bonarum malarumque rerum delectus cogitare quid aut nolueris sub alio principe, aut volueris."<sup>[2]</sup>

One result of this lack of coherence is the inconstancy of royal government, which, regulated now on one scheme and now on another, according to the character of the reigning prince or those who reign for him, cannot for long have a fixed object or a consistent policy—and this variability, not found in the other forms of government, where the prince is always the same, causes the State to be always shifting from principle to principle and from project to project. Thus we may say that generally, if a court is more subtle in intrigue, there is more wisdom in a senate, and Republics advance towards their ends by more consistent and better considered policies; while every revolution in a royal ministry creates a revolution in the State; for the

principle common to all ministers and nearly all kings is to do in every respect the reverse of what was done by their predecessors.

This incoherence further clears up a sophism that is very familiar to royalist political writers; not only is civil government likened to domestic government, and the prince to the father of a family—this error has already been refuted—but the prince is also freely credited with all the virtues he ought to possess, and is supposed to be always what he should be. This supposition once made, royal government is clearly preferable to all others, because it is incontestably the strongest, and, to be the best also, wants only a corporate will more in conformity with the general will.

But if, according to Plato,<sup>[3]</sup> the "king by nature" is such a rarity, how often will nature and fortune conspire to give him a crown? And, if royal education necessarily corrupts those who receive it, what is to be hoped from a series of men brought up to reign? It is, then, wanton self-deception to confuse royal government with government by a good king. To see such government as it is in itself, we must consider it as it is under princes who are incompetent or wicked: for either they will come to the throne wicked or incompetent, or the throne will make them so.

These difficulties have not escaped our writers, who, all the same, are not troubled by them. The remedy, they say, is to obey without a murmur: God sends bad kings in His wrath, and they must be borne as the scourges of Heaven. Such talk is doubtless edifying; but it would be more in place in a pulpit than in a political book. What are we to think of a doctor who promises miracles, and whose whole art is to exhort the sufferer to patience? We know for ourselves that we must put up with a bad government when it is there; the question is how to find a good one.

---

[1] Macchiavelli was a proper man and a good citizen; but, being attached to the court of the Medici, he could not help veiling his love of liberty in the midst of his country's oppression. The choice of his detestable hero, Cæsar Borgia, clearly enough shows his hidden aim; and the contradiction between the teaching of the *Prince* and that of the *Discourses on Livy* and the *History of Florence* shows that this profound political thinker has so far been studied only by superficial or corrupt readers. The Court of Rome sternly prohibited his book. I can well believe it; for it is that Court it most clearly portrays.

[2] Tacitus, *Histories*, i. 16. "For the best, and also the shortest way of finding out what is good and what is bad is to consider what you would have wished to happen or not to happen, had another than you been Emperor."

[3] In the *Politicus*.

---

## CHAPTER VII

### MIXED GOVERNMENTS

Strictly speaking, there is no such thing as a simple government. An isolated ruler must have subordinate magistrates; a popular government must have a head. There is therefore, in the distribution of the executive power, always a gradation from the greater to the lesser number, with the difference that sometimes the greater number is dependent on the smaller, and sometimes the smaller on the greater.

Sometimes the distribution is equal, when either the constituent parts are in mutual dependence, as in the government of England, or the authority of each section is independent, but imperfect, as in Poland. This last form is bad; for it secures no unity in the government, and the State is left without a bond of union.

Is a simple or a mixed government the better? Political writers are always debating the question, which must be answered as we have already answered a question about all forms of government.

Simple government is better in itself, just because it is simple. But when the executive power is not sufficiently dependent upon the legislative power, *i.e.* when the prince is more closely related to the Sovereign than the people to the prince, this lack of proportion must be cured by the division of the government; for all the parts have then no less authority over the subjects, while their division makes them all together less strong against the Sovereign.

The same disadvantage is also prevented by the appointment of intermediate magistrates, who leave the government entire, and have the effect only of balancing the two powers and maintaining their respective rights. Government is then not mixed, but moderated.

The opposite disadvantages may be similarly cured, and, when the government is too lax, tribunals may be set up to concentrate it. This is done in all democracies. In the first case, the government is divided to make it weak; in the second, to make it strong: for the *maxima* of both strength and weakness are found in simple governments, while the mixed forms result in a mean strength.

---

## CHAPTER VIII

### THAT ALL FORMS OF GOVERNMENT DO NOT SUIT ALL COUNTRIES

Liberty not being a fruit of all climates, is not within the reach of all peoples. The more this principle, laid down by Montesquieu, is considered, the more its truth is felt; the more it is combated, the more chance is given to confirm it by new proofs.

In all the governments that there are, the public person consumes without producing. Whence then does it get what it consumes? From the labour of its members. The necessities of the public are supplied out of the superfluities of individuals. It follows that the civil State can subsist only so long as men's labour brings them a return greater than their needs.

The amount of this excess is not the same in all countries. In some it is considerable, in others middling, in yet others nil, in some even negative. The relation of product to subsistence depends on the fertility of the climate, on the sort of labour the land demands, on the nature of its products, on the strength of its inhabitants, on the greater or less consumption they find necessary, and on several further considerations of which the whole relation is made up.

On the other side, all governments are not of the same nature: some are less voracious than others, and the differences between them are based on this second principle, that the further from their source the public contributions are removed, the more burdensome they become.

The charge should be measured not by the amount of the impositions, but by the path they have to travel in order to get back to those from whom they came. When the circulation is prompt and well-established, it does not matter whether much or little is paid; the people is always rich and, financially speaking, all is well. On the contrary, however little the people gives, if that little does not return to it, it is soon exhausted by giving continually: the State is then never rich, and the people is always a people of beggars.

It follows that, the more the distance between people and government increases, the more burdensome tribute becomes: thus, in a democracy, the people bears the least charge; in an aristocracy, a greater charge; and, in monarchy, the weight becomes heaviest. Monarchy therefore suits only wealthy nations; aristocracy, States of middling size and wealth; and democracy, States that are small and poor.

In fact, the more we reflect, the more we find the difference between free and monarchical States to be this: in the former, everything is used for the public advantage; in the latter, the public forces and those of individuals are affected by each other, and either increases as the other grows weak; finally, instead of governing subjects to make them happy, despotism makes them wretched in order to govern them.

We find then, in every climate, natural causes according to which the form of government which it requires can be assigned, and we can even say what sort of inhabitants it should have.

Unfriendly and barren lands, where the product does not repay the labour, should remain desert and uncultivated, or peopled only by savages; lands where men's labour brings in no more than the exact *minimum* necessary to subsistence should be inhabited by barbarous peoples: in such places all polity is impossible. Lands where the surplus of product over labour is only middling are suitable for free peoples; those in which the soil is abundant and fertile and gives a great product for a little labour call for monarchical government, in order that the surplus of superfluities among the subjects may be consumed by the luxury of the prince: for it is better for this excess to be absorbed by the government than dissipated among the individuals. I am aware that there are exceptions; but these exceptions themselves

confirm the rule, in that sooner or later they produce revolutions which restore things to the natural order.

General laws should always be distinguished from individual causes that may modify their effects. If all the South were covered with Republics and all the North with despotic States, it would be none the less true that, in point of climate, despotism is suitable to hot countries, barbarism to cold countries, and good polity to temperate regions. I see also that, the principle being granted, there may be disputes on its application; it may be said that there are cold countries that are very fertile, and tropical countries that are very unproductive. But this difficulty exists only for those who do not consider the question in all its aspects. We must, as I have already said, take labour, strength, consumption, etc., into account.

Take two tracts of equal extent, one of which brings in five and the other ten. If the inhabitants of the first consume four and those of the second nine, the surplus of the first product will be a fifth and that of the second a tenth. The ratio of these two surpluses will then be inverse to that of the products, and the tract which produces only five will give a surplus double that of the tract which produces ten.

But there is no question of a double product, and I think no one would put the fertility of cold countries, as a general rule, on an equality with that of hot ones. Let us, however, suppose this equality to exist: let us, if you will, regard England as on the same level as Sicily, and Poland as Egypt—further south, we shall have Africa and the Indies; further north, nothing at all. To get this equality of product, what a difference there must be in tillage: in Sicily, there is only need to scratch the ground; in England, how men must toil! But, where more hands are needed to get the same product, the superfluity must necessarily be less.

Consider, besides, that the same number of men consume much less in hot countries. The climate requires sobriety for the sake of health; and Europeans who try to live there as they would at home all perish of dysentery and indigestion. "We are," says Chardin, "carnivorous animals, wolves, in comparison with the Asiatics. Some attribute the sobriety of the Persians to the fact that their country is less cultivated; but it is my belief that their country abounds less in commodities because the inhabitants need less. If their frugality," he goes on, "were the effect of the nakedness of the

land, only the poor would eat little; but everybody does so. Again, less or more would be eaten in various provinces, according to the land's fertility; but the same sobriety is found throughout the kingdom. They are very proud of their manner of life, saying that you have only to look at their hue to recognise how far it excels that of the Christians. In fact, the Persians are of an even hue; their skins are fair, fine and smooth; while the hue of their subjects, the Armenians, who live after the European fashion, is rough and blotchy, and their bodies are gross and unwieldy."

The nearer you get to the equator, the less people live on. Meat they hardly touch; rice, maize, curcur, millet and cassava are their ordinary food. There are in the Indies millions of men whose subsistence does not cost a halfpenny a day. Even in Europe we find considerable differences of appetite between Northern and Southern peoples. A Spaniard will live for a week on a German's dinner. In the countries in which men are more voracious, luxury therefore turns in the direction of consumption. In England, luxury appears in a well-filled table; in Italy, you feast on sugar and flowers.

Luxury in clothes shows similar differences. In climates in which the changes of season are prompt and violent, men have better and simpler clothes; where they clothe themselves only for adornment, what is striking is more thought of than what is useful; clothes themselves are then a luxury. At Naples, you may see daily walking in the Pausilippeum men in gold-embroidered upper garments and nothing else. It is the same with buildings; magnificence is the sole consideration where there is nothing to fear from the air. In Paris and London, you desire to be lodged warmly and comfortably; in Madrid, you have superb salons, but not a window that closes, and you go to bed in a mere hole.

In hot countries foods are much more substantial and succulent; and the third difference cannot but have an influence on the second. Why are so many vegetables eaten in Italy? Because there they are good, nutritious and excellent in taste. In France, where they are nourished only on water, they are far from nutritious and are thought nothing of at table. They take up all the same no less ground, and cost at least as much pains to cultivate. It is a proved fact that the wheat of Barbary, in other respects inferior to that of France, yields much more flour, and that the wheat of France in turn yields more than that of northern countries; from which it may be inferred that a

like gradation in the same direction, from equator to pole, is found generally. But is it not an obvious disadvantage for an equal product to contain less nourishment?

To all these points may be added another, which at once depends on and strengthens them. Hot countries need inhabitants less than cold countries, and can support more of them. There is thus a double surplus, which is all to the advantage of despotism. The greater the territory occupied by a fixed number of inhabitants, the more difficult revolt becomes, because rapid or secret concerted action is impossible, and the government can easily unmask projects and cut communications; but the more a numerous people is gathered together, the less can the government usurp the Sovereign's place: the people's leaders can deliberate as safely in their houses as the prince in council, and the crowd gathers as rapidly in the squares as the prince's troops in their quarters. The advantage of tyrannical government therefore lies in acting at great distances. With the help of the rallying-points it establishes, its strength, like that of the lever,<sup>[1]</sup> grows with distance. The strength of the people, on the other hand, acts only when concentrated: when spread abroad, it evaporates and is lost, like powder scattered on the ground, which catches fire only grain by grain. The least populous countries are thus the fittest for tyranny: fierce animals reign only in deserts.

---

[1] This does not contradict what I said before (Book ii, ch. ix) about the disadvantages of great States; for we were then dealing with the authority of the government over the members, while here we are dealing with its force against the subjects. Its scattered members serve it as rallying-points for action against the people at a distance, but it has no rallying-point for direct action on its members themselves. Thus the length of the lever is its weakness in the one case, and its strength in the other.

---

## CHAPTER IX

### THE MARKS OF A GOOD GOVERNMENT

The question "What absolutely is the best government?" is unanswerable as well as indeterminate; or rather, there are as many good answers as there are

possible combinations in the absolute and relative situations of all nations.

But if it is asked by what sign we may know that a given people is well or ill governed, that is another matter, and the question, being one of fact, admits of an answer.

It is not, however, answered, because every-one wants to answer it in his own way. Subjects extol public tranquillity, citizens individual liberty; the one class prefers security of possessions, the other that of person; the one regards as the best government that which is most severe, the other maintains that the mildest is the best; the one wants crimes punished, the other wants them prevented; the one wants the State to be feared by its neighbours, the other prefers that it should be ignored; the one is content if money circulates, the other demands that the people shall have bread. Even if an agreement were come to on these and similar points, should we have got any further? As moral qualities do not admit of exact measurement, agreement about the mark does not mean agreement about the valuation.

For my part, I am continually astonished that a mark so simple is not recognised, or that men are of so bad faith as not to admit it. What is the end of political association? The preservation and prosperity of its members. And what is the surest mark of their preservation and prosperity? Their numbers and population. Seek then nowhere else this mark that is in dispute. The rest being equal, the government under which, without external aids, without naturalisation or colonies, the citizens increase and multiply most, is beyond question the best. The government under which a people wanes and diminishes is worst. Calculators, it is left for you to count, to measure, to compare.<sup>[1]</sup>

---

[1] On the same principle it should be judged what centuries deserve the preference for human prosperity. Those in which letters and arts have flourished have been too much admired, because the hidden object of their culture has not been fathomed, and their fatal effects not taken into account. "Idque apud imperitos humanitas vocabatur, cum pars servitutis esset." ["Fools called 'humanity' what was a part of slavery," Tacitus, *Agricola*, 31.] Shall we never see in the maxims books lay down the vulgar interest that makes their writers speak? No, whatever they may say, when, despite its renown, a country is depopulated, it is not true that all is well, and it is not enough that a poet should have an income of 100,000 francs to make his age the best of all. Less attention should be paid to the apparent repose and tranquillity of the rulers than to the well-being of their nations as wholes, and above all of the most numerous States. A hail-storm lays several cantons waste, but it rarely makes a famine. Outbreaks and civil wars give rulers rude shocks, but they are not the real ills of peoples, who may even get a respite, while there is a dispute as to who shall tyrannise over them. Their true

prosperity and calamities come from their permanent condition: it is when the whole remains crushed beneath the yoke, that decay sets in, and that the rulers destroy them at will, and "ubi solitudinem faciunt, pacem appellant" ["Where they create solitude, they call it peace," Tacitus, *Agricola*, 31.] When the bickerings of the great disturbed the kingdom of France, and the Coadjutor of Paris took a dagger in his pocket to the Parliament, these things did not prevent the people of France from prospering and multiplying in dignity, ease and freedom. Long ago Greece flourished in the midst of the most savage wars; blood ran in torrents, and yet the whole country was covered with inhabitants. It appeared, says Macchiavelli, that in the midst of murder, proscription and civil war, our republic only thrived: the virtue, morality and independence of the citizens did more to strengthen it than all their dissensions had done to enfeeble it. A little disturbance gives the soul elasticity; what makes the race truly prosperous is not so much peace as liberty.

---

## CHAPTER X

### THE ABUSE OF GOVERNMENT AND ITS TENDENCY TO DEGENERATE

As the particular will acts constantly in opposition to the general will, the government continually exerts itself against the Sovereignty. The greater this exertion becomes, the more the constitution changes; and, as there is in this case no other corporate will to create an equilibrium by resisting the will of the prince, sooner or later the prince must inevitably suppress the Sovereign and break the social treaty. This is the unavoidable and inherent defect which, from the very birth of the body politic, tends ceaselessly to destroy it, as age and death end by destroying the human body.

There are two general courses by which government degenerates: *i.e.* when it undergoes contraction, or when the State is dissolved.

Government undergoes contraction when it passes from the many to the few, that is, from democracy to aristocracy, and from aristocracy to royalty. To do so is its natural propensity.<sup>[1]</sup> If it took the backward course from the few to the many, it could be said that it was relaxed; by this inverse sequence is impossible.

Indeed, governments never change their form except when their energy is exhausted and leaves them too weak to keep what they have. If a government at once extended its sphere and relaxed its stringency, its force would become absolutely nil, and it would persist still less. It is therefore

necessary to wind up the spring and tighten the hold as it gives way: or else the State it sustains will come to grief.

The dissolution of the State may come about in either of two ways.

First, when the prince ceases to administer the State in accordance with the laws, and usurps the Sovereign power. A remarkable change then occurs: not the government, but the State, undergoes contraction; I mean that the great State is dissolved, and another is formed within it, composed solely of the members of the government, which becomes for the rest of the people merely master and tyrant. So that the moment the government usurps the Sovereignty, the social compact is broken and all private citizens recover by right their natural liberty, and are forced, but not bound, to obey.

The same thing happens when the members of the government severally usurp the power they should exercise only as a body; this is as great an infraction of the laws, and results in even greater disorders. There are then, so to speak, as many princes as there are magistrates, and the State, no less divided than the government, either perishes or changes its form.

When the State is dissolved, the abuse of government, whatever it is, bears the common name of *anarchy*. To distinguish, democracy degenerates into *ochlocracy* and aristocracy into *oligarchy* and I would add that royalty degenerates into *tyranny*; but this last word is ambiguous and needs explanation.

In vulgar usage, a tyrant is a king who governs violently and without regard for justice and law. In the exact sense, a tyrant is an individual who arrogates to himself the royal authority without having a right to it. This is how the Greeks understood the word "tyrant": they applied it indifferently to good and bad princes whose authority was not legitimate.<sup>[2]</sup> *Tyrant* and *usurper* are thus perfectly synonymous terms.

In order that I may give different things different names, I call him who usurps the royal authority *tyrant*, and him who usurps the sovereign power a *despot*. The tyrant is he who thrusts himself in contrary to the laws to govern in accordance with the laws; the despot is he who sets himself above the laws themselves. Thus the tyrant cannot be a despot, but the despot is always a tyrant.

[1] The slow formation and the progress of the Republic of Venice in its lagoons are a notable instance of this sequence; and it is most astonishing that, after more than twelve hundred years' existence, the Venetians seem to be still at the second stage, which they reached with the *Serrar di Consiglio* in 1198. As for the ancient Dukes who are brought up against them, it is proved, whatever the *Squittinio della libertà veneta* may say of them, that they were in no sense Sovereigns.

A case certain to be cited against my view is that of the Roman Republic, which, it will be said, followed exactly the opposite course, and passed from monarchy to aristocracy and from aristocracy to democracy. I by no means take this view of it.

What Romulus first set up was a mixed government, which soon deteriorated into despotism. From special causes, the State died an untimely death, as new-born children sometimes perish without reaching manhood. The expulsion of the Tarquins was the real period of the birth of the Republic. But at first it took on no constant form, because, by not abolishing the patriciate, it left half its work undone. For, by this means, hereditary aristocracy, the worst of all legitimate forms of administration, remained in conflict with democracy, and the form of the government, as Macchiavelli has proved, was only fixed on the establishment of the tribunate: only then was there a true government and a veritable democracy. In fact, the people was then not only Sovereign, but also magistrate and judge; the senate was only a subordinate tribunal, to temper and concentrate the government, and the consuls themselves, though they were patricians, first magistrates, and absolute generals in war, were in Rome itself no more than presidents of the people.

From that point, the government followed its natural tendency, and inclined strongly to aristocracy. The patriciate, we may say, abolished itself, and the aristocracy was found no longer in the body of patricians as at Venice and Genoa, but in the body of the senate, which was composed of patricians and plebeians, and even in the body of tribunes when they began to usurp an active function: for names do not affect facts, and, when the people has rulers who govern for it, whatever name they bear, the government is an aristocracy.

The abuse of aristocracy led to the civil wars and the triumvirate. Sulla, Julius Cæsar and Augustus became in fact real monarchs; and finally, under the despotism of Tiberius, the State was dissolved. Roman history then confirms, instead of invalidating, the principle I have laid down.

[2] Omnes enim et habentur et dicuntur tyranni, qui potestate utuntur perpetua in ea civitate quæ libertate usa est (Cornelius Nepos, *Life of Miltiades*). [For all those are called and considered tyrants, who hold perpetual power in a State that has known liberty.] It is true that Aristotle (*Nicomachean Ethics*, Book viii, chapter x) distinguishes the tyrant from the king by the fact that the former governs in his own interest, and the latter only for the good of his subjects; but not only did all Greek authors in general use the word *tyrant* in a different sense, as appears most clearly in Xenophon's *Hiero*, but also it would follow from Aristotle's distinction that, from the very beginning of the world, there has not yet been a single king.

---

## CHAPTER XI

### THE DEATH OF THE BODY POLITIC

Such is the natural and inevitable tendency of the best constituted governments. If Sparta and Rome perished, what State can hope to endure for ever? If we would set up a long-lived form of government, let us not even dream of making it eternal. If we are to succeed, we must not attempt the impossible, or flatter ourselves that we are endowing the work of man with a stability of which human conditions do not permit.

The body politic, as well as the human body, begins to die as soon as it is born, and carries in itself the causes of its destruction. But both may have a constitution that is more or less robust and suited to preserve them a longer or a shorter time. The constitution of man is the work of nature; that of the State the work of art. It is not in men's power to prolong their own lives; but it is for them to prolong as much as possible the life of the State, by giving it the best possible constitution. The best constituted State will have an end; but it will end later than any other, unless some unforeseen accident brings about its untimely destruction.

The life-principle of the body politic lies in the sovereign authority. The legislative power is the heart of the State; the executive power is its brain, which causes the movement of all the parts. The brain may become paralysed and the individual still live. A man may remain an imbecile and live; but as soon as the heart ceases to perform its functions, the animal is dead.

The State subsists by means not of the laws, but of the legislative power. Yesterday's law is not binding to-day; but silence is taken for tacit consent, and the Sovereign is held to confirm incessantly the laws it does not abrogate as it might. All that it has once declared itself to will it wills always, unless it revokes its declaration.

Why then is so much respect paid to old laws? For this very reason. We must believe that nothing but the excellence of old acts of will can have preserved them so long: if the Sovereign had not recognised them as throughout salutary, it would have revoked them a thousand times. This is why, so far from growing weak, the laws continually gain new strength in any well constituted State; the precedent of antiquity makes them daily more venerable: while wherever the laws grow weak as they become old, this proves that there is no longer a legislative power, and that the State is dead.

---

## CHAPTER XII

### HOW THE SOVEREIGN AUTHORITY MAINTAINS ITSELF

The Sovereign, having no force other than the legislative power, acts only by means of the laws; and the laws being solely the authentic acts of the general will, the Sovereign cannot act save when the people is assembled. The people in assembly, I shall be told, is a mere chimera. It is so to-day, but two thousand years ago it was not so. Has man's nature changed?

The bounds of possibility, in moral matters, are less narrow than we imagine: it is our weaknesses, our vices and our prejudices that confine them. Base souls have no belief in great men; vile slaves smile in mockery at the name of liberty.

Let us judge of what can be done by what has been done. I shall say nothing of the Republics of ancient Greece; but the Roman Republic was, to my mind, a great State, and the town of Rome a great town. The last census showed that there were in Rome four hundred thousand citizens capable of bearing arms, and the last computation of the population of the Empire showed over four million citizens, excluding subjects, foreigners, women, children and slaves.

What difficulties might not be supposed to stand in the way of the frequent assemblage of the vast population of this capital and its neighbourhood. Yet few weeks passed without the Roman people being in assembly, and even being so several times. It exercised not only the rights of Sovereignty, but also a part of those of government. It dealt with certain matters, and judged certain cases, and this whole people was found in the public meeting-place hardly less often as magistrates than as citizens.

If we went back to the earliest history of nations, we should find that most ancient governments, even those of monarchical form, such as the Macedonian and the Frankish, had similar councils. In any case, the one incontestable fact I have given is an answer to all difficulties; it is good logic to reason from the actual to the possible.

---

---

## CHAPTER XIII

### THE SAME (*continued*)

It is not enough for the assembled people to have once fixed the constitution of the State by giving its sanction to a body of law; it is not enough for it to have set up a perpetual government, or provided once for all for the election of magistrates. Besides the extraordinary assemblies unforeseen circumstances may demand, there must be fixed periodical assemblies which cannot be abrogated or prorogued, so that on the proper day the people is legitimately called together by law, without need of any formal summoning.

But, apart from these assemblies authorised by their date alone, every assembly of the people not summoned by the magistrates appointed for that purpose, and in accordance with the prescribed forms, should be regarded as unlawful, and all its acts as null and void, because the command to assemble should itself proceed from the law.

The greater or less frequency with which lawful assemblies should occur depends on so many considerations that no exact rules about them can be given. It can only be said generally that the stronger the government the more often should the Sovereign show itself.

This, I shall be told, may do for a single town; but what is to be done when the State includes several? Is the sovereign authority to be divided? Or is it to be concentrated in a single town to which all the rest are made subject?

Neither the one nor the other, I reply. First, the sovereign authority is one and simple, and cannot be divided without being destroyed. In the second place, one town cannot, any more than one nation, legitimately be made subject to another, because the essence of the body politic lies in the reconciliation of obedience and liberty, and the words subject and Sovereign are identical correlatives the idea of which meets in the single word "citizen."

I answer further that the union of several towns in a single city is always bad, and that, if we wish to make such a union, we should not expect to

avoid its natural disadvantages. It is useless to bring up abuses that belong to great States against one who desires to see only small ones; but how can small States be given the strength to resist great ones, as formerly the Greek towns resisted the Great King, and more recently Holland and Switzerland have resisted the House of Austria?

Nevertheless, if the State cannot be reduced to the right limits, there remains still one resource; this is, to allow no capital, to make the seat of government move from town to town, and to assemble by turn in each the Provincial Estates of the country.

People the territory evenly, extend everywhere the same rights, bear to every place in it abundance and life: by these means will the State become at once as strong and as well governed as possible. Remember that the walls of towns are built of the ruins of the houses of the countryside. For every palace I see raised in the capital, my mind's eye sees a whole country made desolate.

---

#### CHAPTER XIV

#### **THE SAME (continued)**

The moment the people is legitimately assembled as a sovereign body, the jurisdiction of the government wholly lapses, the executive power is suspended, and the person of the meanest citizen is as sacred and inviolable as that of the first magistrate; for in the presence of the person represented, representatives no longer exist. Most of the tumults that arose in the comitia at Rome were due to ignorance or neglect of this rule. The consuls were in them merely the presidents of the people; the tribunes were mere speakers; <sup>[1]</sup> the senate was nothing at all.

These intervals of suspension, during which the prince recognises or ought to recognise an actual superior, have always been viewed by him with alarm; and these assemblies of the people, which are the aegis of the body politic and the curb on the government, have at all times been the horror of rulers: who therefore never spare pains, objections, difficulties, and

promises, to stop the citizens from having them. When the citizens are greedy, cowardly, and pusillanimous, and love ease more than liberty, they do not long hold out against the redoubled efforts of the government; and thus, as the resisting force incessantly grows, the sovereign authority ends by disappearing, and most cities fall and perish before their time.

But between the sovereign authority and arbitrary government there sometimes intervenes a mean power of which something must be said.

[1] In nearly the same sense as this word has in the English Parliament. The similarity of these functions would have brought the consuls and the tribunes into conflict, even had all jurisdiction been suspended.

---

## CHAPTER XV

### DEPUTIES OR REPRESENTATIVES

As soon as public service ceases to be the chief business of the citizens, and they would rather serve with their money than with their persons, the State is not far from its fall. When it is necessary to march out to war, they pay troops and stay at home: when it is necessary to meet in council, they name deputies and stay at home. By reason of idleness and money, they end by having soldiers to enslave their country and representatives to sell it.

It is through the hustle of commerce and the arts, through the greedy self-interest of profit, and through softness and love of amenities that personal services are replaced by money payments. Men surrender a part of their profits in order to have time to increase them at leisure. Make gifts of money, and you will not be long without chains. The word *finance* is a slavish word, unknown in the city-state. In a country that is truly free, the citizens do everything with their own arms and nothing by means of money; so far from paying to be exempted from their duties, they would even pay for the privilege of fulfilling them themselves. I am far from taking the common view: I hold enforced labour to be less opposed to liberty than taxes.

The better the constitution of a State is, the more do public affairs encroach on private in the minds of the citizens. Private affairs are even of much less importance, because the aggregate of the common happiness furnishes a greater proportion of that of each individual, so that there is less for him to seek in particular cares. In a well-ordered city every man flies to the assemblies: under a bad government no one cares to stir a step to get to them, because no one is interested in what happens there, because it is foreseen that the general will will not prevail, and lastly because domestic cares are all-absorbing. Good laws lead to the making of better ones; bad

ones bring about worse. As soon as any man says of the affairs of the State *What does it matter to me?* the State may be given up for lost.

The lukewarmness of patriotism, the activity of private interest, the vastness of States, conquest and the abuse of government suggested the method of having deputies or representatives of the people in the national assemblies. These are what, in some countries, men have presumed to call the Third Estate. Thus the individual interest of two orders is put first and second; the public interest occupies only the third place.

Sovereignty, for the same reason as makes it inalienable, cannot be represented; it lies essentially in the general will, and will does not admit of representation: it is either the same, or other; there is no intermediate possibility. The deputies of the people, therefore, are not and cannot be its representatives: they are merely its stewards, and can carry through no definitive acts. Every law the people has not ratified in person is null and void—is, in fact, not a law. The people of England regards itself as free; but it is grossly mistaken; it is free only during the election of members of parliament. As soon as they are elected, slavery overtakes it, and it is nothing. The use it makes of the short moments of liberty it enjoys shows indeed that it deserves to lose them.

The idea of representation is modern; it comes to us from feudal government, from that iniquitous and absurd system which degrades humanity and dishonours the name of man. In ancient republics and even in monarchies, the people never had representatives; the word itself was unknown. It is very singular that in Rome, where the tribunes were so sacrosanct, it was never even imagined that they could usurp the functions of the people, and that in the midst of so great a multitude they never attempted to pass on their own authority a single plebiscitum. We can, however, form an idea of the difficulties caused sometimes by the people being so numerous, from what happened in the time of the Gracchi, when some of the citizens had to cast their votes from the roofs of buildings.

Where right and liberty are everything, disadvantages count for nothing. Among this wise people everything was given its just value, its lictors were allowed to do what its tribunes would never have dared to attempt; for it had no fear that its lictors would try to represent it.

To explain, however, in what way the tribunes did sometimes represent it, it is enough to conceive how the government represents the Sovereign. Law being purely the declaration of the general will, it is clear that, in the exercise of the legislative power, the people cannot be represented; but in that of the executive power, which is only the force that is applied to give the law effect, it both can and should be represented. We thus see that if we looked closely into the matter we should find that very few nations have any laws. However that may be, it is certain that the tribunes, possessing no executive power, could never represent the Roman people by right of the powers entrusted to them, but only by usurping those of the senate.

In Greece, all that the people had to do, it did for itself; it was constantly assembled in the public square. The Greeks lived in a mild climate; they had no natural greed; slaves did their work for them; their great concern was with liberty. Lacking the same advantages, how can you preserve the same rights? Your severer climates add to your needs;<sup>[1]</sup> for half the year your public squares are uninhabitable; the flatness of your languages unfits them for being heard in the open air; you sacrifice more for profit than for liberty, and fear slavery less than poverty.

What then? Is liberty maintained only by the help of slavery? It may be so. Extremes meet. Everything that is not in the course of nature has its disadvantages, civil society most of all. There are some unhappy circumstances in which we can only keep our liberty at others' expense, and where the citizen can be perfectly free only when the slave is most a slave. Such was the case with Sparta. As for you, modern peoples, you have no slaves, but you are slaves yourselves; you pay for their liberty with your own. It is in vain that you boast of this preference; I find in it more cowardice than humanity.

I do not mean by all this that it is necessary to have slaves, or that the right of slavery is legitimate: I am merely giving the reasons why modern peoples, believing themselves to be free, have representatives, while ancient peoples had none. In any case, the moment a people allows itself to be represented, it is no longer free: it no longer exists.

All things considered, I do not see that it is possible henceforth for the Sovereign to preserve among us the exercise of its rights, unless the city is very small. But if it is very small, it will be conquered? No. I will show

later on how the external strength of a great people<sup>[2]</sup> may be combined with the convenient polity and good order of a small State.

---

[1] To adopt in cold countries the luxury and effeminacy of the East is to desire to submit to its chains; it is indeed to bow to them far more inevitably in our case than in theirs.

[2] I had intended to do this in the sequel to this work, when in dealing with external relations I came to the subject of confederations. The subject is quite new, and its principles have still to be laid down.

---

## CHAPTER XVI

### THAT THE INSTITUTION OF GOVERNMENT IS NOT A CONTRACT

The legislative power once well established, the next thing is to establish similarly the executive power; for this latter, which operates only by particular acts, not being of the essence of the former, is naturally separate from it. Were it possible for the Sovereign, as such, to possess the executive power, right and fact would be so confounded that no one could tell what was law and what was not; and the body politic, thus disfigured, would soon fall a prey to the violence it was instituted to prevent.

As the citizens, by the social contract, are all equal, all can prescribe what all should do, but no one has a right to demand that another shall do what he does not do himself. It is strictly this right, which is indispensable for giving the body politic life and movement, that the Sovereign, in instituting the government, confers upon the prince.

It has been held that this act of establishment was a contract between the people and the rulers it sets over itself.—a contract in which conditions were laid down between the two parties binding the one to command and the other to obey. It will be admitted, I am sure, that this is an odd kind of contract to enter into. But let us see if this view can be upheld.

First, the supreme authority can no more be modified than it can be alienated; to limit it is to destroy it. It is absurd and contradictory for the

Sovereign to set a superior over itself; to bind itself to obey a master would be to return to absolute liberty.

Moreover, it is clear that this contract between the people and such and such persons would be a particular act; and from this it follows that it can be neither a law nor an act of Sovereignty, and that consequently it would be illegitimate.

It is plain too that the contracting parties in relation to each other would be under the law of nature alone and wholly without guarantees of their mutual undertakings, a position wholly at variance with the civil state. He who has force at his command being always in a position to control execution, it would come to the same thing if the name "contract" were given to the act of one man who said to another; "I give you all my goods, on condition that you give me back as much of them as you please."

There is only one contract in the State, and that is the act of association, which in itself excludes the existence of a second. It is impossible to conceive of any public contract that would not be a violation of the first.

---

## CHAPTER XVII

### THE INSTITUTION OF GOVERNMENT

Under what general idea then should the act by which government is instituted be conceived as falling? I will begin by stating that the act is complex, as being composed of two others—the establishment' of the law and its execution.

By the former, the Sovereign decrees that there shall be a governing body established in this or that form; this act is clearly a law.

By the latter, the people nominates the rulers who are to be entrusted with the government that has been established. This nomination, being a particular act, is clearly not a second law, but merely a consequence of the first and a function of government.

The difficulty is to understand how there can be a governmental act before government exists, and how the people, which is only Sovereign or subject, can, under certain circumstances, become a prince or magistrate.

It is at this point that there is revealed one of the astonishing properties of the body politic, by means of which it reconciles apparently contradictory operations; for this is accomplished by a sudden conversion of Sovereignty into democracy, so that, without sensible change, and merely by virtue of a new relation of all to all, the citizens become magistrates and pass from general to particular acts, from legislation to the execution of the law.

This changed relation is no speculative subtlety without instances in practice: it happens every day in the English Parliament, where, on certain occasions, the Lower House resolves itself into Grand Committee, for the better discussion of affairs, and thus, from being at one moment a sovereign court, becomes at the next a mere commission; so that subsequently it reports to itself, as House of Commons, the result of its proceedings in Grand Committee, and debates over again under one name what it has already settled under another.

It is, indeed, the peculiar advantage of democratic government that it can be established in actuality by a simple act of the general will. Subsequently, this provisional government remains in power, if this form is adopted, or else establishes in the name of the Sovereign the government that is prescribed by law; and thus the whole proceeding is regular. It is impossible to set up government in any other manner legitimately and in accordance with the principles so far laid down.

---

## CHAPTER XVIII

### HOW TO CHECK THE USURPATIONS OF GOVERNMENT

What we have just said confirms Chapter XVI, and makes it clear that the institution of government is not a contract, but a law; that the depositaries of the executive power are not the people's masters, but its officers; that it can set them up and pull them down when it likes; that for them there is no

question of contract, but of obedience; and that in taking charge of the functions the State imposes on them they are doing no more than fulfilling their duty as citizens, without having the remotest right to argue about the conditions.

When therefore the people sets up an hereditary government, whether it be monarchical and confined to one family, or aristocratic and confined to a class, what it enters into is not an undertaking; the administration is given a provisional form, until the people chooses to order it otherwise.

It is true that such changes are always dangerous, and that the established government should never be touched except when it comes to be incompatible with the public good; but the circumspection this involves is a maxim of policy and not a rule of right, and the State is no more bound to leave civil authority in the hands of its rulers than military authority in the hands of its generals.

It is also true that it is impossible to be too careful to observe, in such cases, all the formalities necessary to distinguish a regular and legitimate act from a seditious tumult, and the will of a whole people from the clamour of a faction. Here above all no further concession should be made to the untoward possibility than cannot, in the strictest logic, be refused it. From this obligation the prince derives a great advantage in preserving his power despite the people, without it being possible to say he has usurped it; for, seeming to avail himself only of his rights, he finds it very easy to extend them, and to prevent, under the pretext of keeping the peace, assemblies that are destined to the re-establishment of order; with the result that he takes advantage of a silence he does not allow to be broken, or of irregularities he causes to be committed, to assume that he has the support of those whom fear prevents from speaking, and to punish those who dare to speak. Thus it was that the decemvirs, first elected for one year and then kept on in office for a second, tried to perpetuate their power by forbidding the comitia to assemble; and by this easy method every government in the world, once clothed with the public power, sooner or later usurps the sovereign authority.

The periodical assemblies of which I have already spoken are designed to prevent or postpone this calamity, above all when they need no formal

summoning; for in that case, the prince cannot stop them without openly declaring himself a law-breaker and an enemy of the State.

The opening of these assemblies, whose sole object is the maintenance of the social treaty, should always take the form of putting two propositions that may not be suppressed, which should be voted on separately.

The first is: "Does it please the Sovereign to preserve the present form of government?"

The second is: "Does it please the people to leave its administration in the hands of those who are actually in charge of it?"

I am here assuming what I think I have shown; that there is in the State no fundamental law that cannot be revoked, not excluding the social compact itself; for if all the citizens assembled of one accord to break the compact, it is impossible to doubt that it would be very legitimately broken. Grotius even thinks that each man can renounce his membership of his own State, and recover his natural liberty and his goods on leaving the country.<sup>[1]</sup> It would be indeed absurd if all the citizens in assembly could not do what each can do by himself.

---

[1] Provided, of course, he does not leave to escape his obligations and avoid having to serve his country in the hour of need. Flight in such a case would be criminal and punishable, and would be, not withdrawal, but desertion.

---

## **BOOK IV**

---

### **CHAPTER I**

#### **THAT THE GENERAL WILL IS INDESTRUCTIBLE**

As long as several men in assembly regard themselves as a single body, they have only a single will which is concerned with their common preservation and general well-being. In this case, all the springs of the State

are vigorous and simple and its rules clear and luminous; there are no embroilments or conflicts of interests; the common good is everywhere clearly apparent, and only good sense is needed to perceive it. Peace, unity and equality are the enemies of political subtleties. Men who are upright and simple are difficult to deceive because of their simplicity; lures and ingenious pretexts fail to impose upon them, and they are not even subtle enough to be dupes. When, among the happiest people in the world, bands of peasants are seen regulating affairs of State under an oak, and always acting wisely, can we help scorning the ingenious methods of other nations, which make themselves illustrious and wretched with so much art and mystery?

A State so governed needs very few laws; and, as it becomes necessary to issue new ones, the necessity is universally seen. The first man to propose them merely says what all have already felt, and there is no question of factions or intrigues or eloquence in order to secure the passage into law of what every one has already decided to do, as soon as he is sure that the rest will act with him.

Theorists are led into error because, seeing only States that have been from the beginning wrongly constituted, they are struck by the impossibility of applying such a policy to them. They make great game of all the absurdities a clever rascal or an insinuating speaker might get the people of Paris or London to believe. They do not know that Cromwell would have been put to "the bells" by the people of Berne, and the Due de Beaufort on the treadmill by the Genevese.

But when the social bond begins to be relaxed and the State to grow weak, when particular interests begin to make themselves felt and the smaller societies to exercise an influence over the larger, the common interest changes and finds opponents: opinion is no longer unanimous; the general will ceases to be the will of all; contradictory views and debates arise; and the best advice is not taken without question.

Finally, when the State, on the eve of ruin, maintains only a vain, illusory and formal existence, when in every heart the social bond is broken, and the meanest interest brazenly lays hold of the sacred name of "public good," the general will becomes mute: all men, guided by secret motives, no more give their views as citizens than if the State had never been; and iniquitous

decrees directed solely to private interest get passed under the name of laws.

Does it follow from this that the general will is exterminated or corrupted? Not at all: it is always constant, unalterable and pure; but it is subordinated to other wills which encroach upon its sphere. Each man, in detaching, his interest from the common interest, sees clearly that he cannot entirely separate them; but his share in the public mishaps seems to him negligible beside the exclusive good he aims at making his own. Apart from this particular good, he wills the general good in his own interest, as strongly as any one else. Even in selling his vote for money, he does not extinguish in himself the general will, but only eludes it. The fault he commits is that of changing the state of the question, and answering something different from what he is asked. Instead of saying, by his vote, "It is to the advantage of the State," he says, "It is of advantage to this or that man or party that this or that view should prevail." Thus the law of public order in assemblies is not so much to maintain in them the general will as to secure that the question be always put to it, and the answer always given by it.

I could here set down many reflections on the simple right of voting in every act of Sovereignty—a right which no-one can take from the citizens—and also on the right of stating views, making proposals, dividing and discussing, which the government is always most careful to leave solely to its members; but this important subject would need a treatise to itself, and it is impossible to say everything in a single work.

---

## CHAPTER II

### VOTING

It may be seen, from the last chapter, that the way in which general business is managed may give a clear enough indication of the actual state of morals and the health of the body politic. The more concert reigns in the assemblies, that is, the nearer opinion approaches unanimity, the greater is the dominance of the general will. On the other hand, long debates,

dissensions and tumult proclaim the ascendancy of particular interests and the decline of the State.

This seems less clear when two or more orders enter into the constitution, as patricians and plebeians did at Rome; for quarrels between these two orders often disturbed the comitia, even in the best days of the Republic. But the exception is rather apparent than real; for then, through the defect that is inherent in the body politic, there were, so to speak, two States in one, and what is not true of the two together is true of either separately. Indeed, even in the most stormy times, the plebiscita of the people, when the Senate did not interfere with them, always went through quietly and by large majorities. The citizens having but one interest, the people had but a single will.

At the other extremity of the circle, unanimity recurs; this is the case when the citizens, having fallen into servitude, have lost both liberty and will. Fear and flattery then change votes into acclamation; deliberation ceases, and only worship or malediction is left. Such was the vile manner in which the senate expressed its views under the Emperors. It did so sometimes with absurd precautions. Tacitus observes that, under Otho, the senators, while they heaped curses on Vitellius, contrived at the same time to make a deafening noise, in order that, should he ever become their master, he might not know what each of them had said.

On these various considerations depend the rules by which the methods of counting votes and comparing opinions should be regulated, according as the general will is more or less easy to discover, and the State more or less in its decline.

There is but one law which, from its nature, needs unanimous consent. This is the social compact; for civil association is the most voluntary of all acts. Every man being born free and his own master, no-one, under any pretext whatsoever, can make any man subject without his consent. To decide that the son of a slave is born a slave is to decide that he is not born a man.

If then there are opponents when the social compact is made, their opposition does not invalidate the contract, but merely prevents them from being included in it. They are foreigners among citizens. When the State is instituted, residence constitutes consent; to dwell within its territory is to submit to the Sovereign.<sup>[1]</sup>

Apart from this primitive contract, the vote of the majority always binds all the rest. This follows from the contract itself. But it is asked how a man can be both free and forced to conform to wills that are not his own. How are the opponents at once free and subject to laws they have not agreed to?

I retort that the question is wrongly put. The citizen gives his consent to all the laws, including those which are passed in spite of his opposition, and even those which punish him when he dares to break any of them. The constant will of all the members of the State is the general will; by virtue of it they are citizens and free.<sup>[2]</sup> When in the popular assembly a law is proposed, what the people is asked is not exactly whether it approves or rejects the proposal, but whether it is in conformity with the general will, which is their will. Each man, in giving his vote, states his opinion on that point; and the general will is found by counting votes. When therefore the opinion that is contrary to my own prevails, this proves neither more nor less than that I was mistaken, and that what I thought to be the general will was not so. If my particular opinion had carried the day I should have achieved the opposite of what was my will and it is in that case that I should not have been free.

This presupposes, indeed, that all the qualities of the general will still reside in the majority: when they cease to do so, whatever side a man may take, liberty is no longer possible.

In my earlier demonstration of how particular wills are substituted for the general will in public deliberation, I have adequately pointed out the practicable methods of avoiding this abuse; and I shall have more to say of them later on. I have also given the principles for determining the proportional number of votes for declaring that will. A difference of one vote destroys equality; a single opponent destroys unanimity; but between equality and unanimity, there are several grades of unequal division, at each of which this proportion may be fixed in accordance with the condition and the needs of the body politic.

There are two general rules that may serve to regulate this relation. First, the more grave and important the questions discussed, the nearer should the opinion that is to prevail approach unanimity. Secondly, the more the matter in hand calls for speed, the smaller the prescribed difference in the numbers of votes may be allowed to become: where an instant decision has to be

reached, a majority of one vote should be enough. The first of these two rules seems more in harmony with the laws, and the second with practical affairs. In any case, it is the combination of them that gives the best proportions for determining the majority necessary.

---

[1] This should of course be understood as applying to a free State; for elsewhere family, goods, lack of a refuge, necessity, or violence may detain a man in a country against his will; and then his dwelling there no longer by itself implies his consent to the contract or to its violation.

[2] At Genoa, the word *Liberty* may be read over the front of the prisons and on the chains of the galley-slaves. This application of the device is good and just. It is indeed only malefactors of all estates who prevent the citizen from being free. In the country in which all such men were in the galleys, the most perfect liberty would be enjoyed.

---

### CHAPTER III

## ELECTIONS

In the elections of the prince and the magistrates, which are, as I have said, complex acts, there are two possible methods of procedure, choice and lot. Both have been employed in various republics, and a highly complicated mixture of the two still survives in the election of the Doge at Venice.

"Election by lot," says Montesquieu, "is democratic in nature." I agree that it is so; but in what sense? "The lot," he goes on, "is a way of making choice that is unfair to nobody; it leaves each citizen a reasonable hope of serving his country." These are not reasons.

If we bear in mind that the election of rulers is a function of government, and not of Sovereignty, we shall see why the lot is the method more natural to democracy, in which the administration is better in proportion as the number of its acts is small.

In every real democracy, magistracy is not an advantage, but a burdensome charge which cannot justly be imposed on one individual rather than another. The law alone can lay the charge on him on whom the lot falls. For, the conditions being then the same for all, and the choice not depending on

any human will, there is no particular application to alter the universality of the law.

In an aristocracy, the prince chooses the prince, the government is preserved by itself, and voting is rightly ordered.

The instance of the election of the Doge of Venice confirms, instead of destroying, this distinction; the mixed form suits a mixed government. For it is an error to take the government of Venice for a real aristocracy. If the people has no share in the government, the nobility is itself the people. A host of poor Barnabotes never gets near any magistracy, and its nobility consists merely in the empty title of Excellency, and in the right to sit in the Great Council. As this Great Council is as numerous as our General Council at Geneva, its illustrious members have no more privileges than our plain citizens. It is indisputable that, apart from the extreme disparity between the two republics, the *bourgeoisie* of Geneva is exactly equivalent to the *patriciate* of Venice; our *natives* and *inhabitants* correspond to the *townsmen* and the *people* of Venice; our *peasants* correspond to the *subjects* on the mainland; and, however that republic be regarded, if its size be left out of account, its government is no more aristocratic than our own. The whole difference is that, having no life-ruler, we do not, like Venice, need to use the lot.

Election by lot would have few disadvantages in a real democracy, in which, as equality would everywhere exist in morals and talents as well as in principles and fortunes, it would become almost a matter of indifference who was chosen. But I have already said that a real democracy is only an ideal.

When choice and lot are combined, positions that require special talents, such as military posts, should be filled by the former; the latter does for cases, such as judicial offices, in which good sense, justice, and integrity are enough, because in a State that is well constituted, these qualities are common to all the citizens.

Neither lot nor vote has any place in monarchical government. The monarch being by right sole prince and only magistrate, the choice of his lieutenants belongs to none but him. When the Abbé de Saint-Pierre proposed that the Councils of the King of France should be multiplied, and

their members elected by ballot, he did not see that he was proposing to change the form of government.

I should now speak of the methods of giving and counting opinions in the assembly of the people; but perhaps an account of this aspect of the Roman constitution will more forcibly illustrate all the rules I could lay down. It is worth the while of a judicious reader to follow in some detail the working of public and private affairs in a Council consisting of two hundred thousand men.

---

#### CHAPTER IV

### THE ROMAN COMITIA

We are without well-certified records of the first period of Rome's existence; it even appears very probable that most of the stories told about it are fables; indeed, generally speaking, the most instructive part of the history of peoples, that which deals with their foundation, is what we have least of. Experience teaches us every day what causes lead to the revolutions of empires; but, as no new peoples are now formed, we have almost nothing beyond conjecture to go upon in explaining how they were created.

The customs we find established show at least that these customs had an origin. The traditions that go back to those origins, that have the greatest authorities behind them, and that are confirmed by the strongest proofs, should pass for the most certain. These are the rules I have tried to follow in inquiring how the freest and most powerful people on earth exercised its supreme power.

After the foundation of Rome, the new-born republic, that is, the army of its founder, composed of Albans, Sabines and foreigners, was divided into three classes, which, from this division, took the name of *tribes*. Each of these tribes was subdivided into ten *curiæ*, and each *curia* into *decuriæ*, headed by leaders called *curiones* and *decuriones*.

Besides this, out of each tribe was taken a body of one hundred *Equites* or Knights, called a *century*, which shows that these divisions, being unnecessary in a town, were at first merely military. But an instinct for greatness seems to have led the little township of Rome to provide itself in advance with a political system suitable for the capital of the world.

Out of this original division an awkward situation soon arose. The tribes of the Albans (Ramnenses) and the Sabines (Tatienses) remained always in the same condition, while that of the foreigners (Luceres) continually grew as more and more foreigners came to live at Rome, so that it soon surpassed the others in strength. Servius remedied this dangerous fault by changing the principle of cleavage, and substituting for the racial division, which he abolished, a new one based on the quarter of the town inhabited by each tribe. Instead of three tribes he created four, each occupying and named after one of the hills of Rome. Thus, while redressing the inequality of the moment, he also provided for the future; and in order that the division might be one of persons as well as localities, he forbade the inhabitants of one quarter to migrate to another, and so prevented the mingling of the races.

He also doubled the three old centuries of Knights and added twelve more, still keeping the old names, and by this simple and prudent method, succeeded in making a distinction between the body of Knights and the people, without a murmur from the latter.

To the four urban tribes Servius added fifteen others called rural tribes, because they consisted of those who lived in the country, divided into fifteen cantons. Subsequently, fifteen more were created, and the Roman people finally found itself divided into thirty-five tribes, as it remained down to the end of the Republic.

The distinction between urban and rural tribes had one effect which is worth mention, both because it is without parallel elsewhere, and because to it Rome owed the preservation of her morality and the enlargement of her empire. We should have expected that the urban tribes would soon monopolise power and honours, and lose no time in bringing the rural tribes into disrepute; but what happened was exactly the reverse. The taste of the early Romans for country life is well known. This taste they owed to their wise founder, who made rural and military labours go along with liberty,

and, so to speak, relegated to the town arts, crafts, intrigue, fortune and slavery.

Since therefore all Rome's most illustrious citizens lived in the fields and tilled the earth, men grew used to seeking there alone the mainstays of the republic. This condition, being that of the best patricians, was honoured by all men; the simple and laborious life of the villager was preferred to the slothful and idle life of the *bourgeoisie* of Rome; and he who, in the town, would have been but a wretched proletarian, became, as a labourer in the fields, a respected citizen. Not without reason, says Varro, did our great-souled ancestors establish in the village the nursery of the sturdy and valiant men who defended them in time of war and provided for their Sustenance in time of peace. Pliny states positively that the country tribes were honoured because of the men of whom they were composed; while cowards men wished to dishonour were transferred, as a public disgrace, to the town tribes. The Sabine Appius Claudius, when he had come to settle in Rome, was loaded with honours and enrolled in a rural tribe, which subsequently took his family name. Lastly, freedmen always entered the urban, and never the rural, tribes: nor is there a single example, throughout the Republic, of a freedman, though he had become a citizen, reaching any magistracy.

This was an excellent rule; but it was carried so far that in the end it led to a change and certainly to an abuse in the political system.

First the censors, after having for a long time claimed the right of transferring citizens arbitrarily from one tribe to another, allowed most persons to enrol themselves in whatever tribe they pleased. This permission certainly did no good, and further robbed the censorship of one of its greatest resources. Moreover, as the great and powerful all got themselves enrolled in the country tribes, while the freedmen who had become citizens remained with the populace in the town tribes, both soon ceased to have any local or territorial meaning, and all were so confused that the members of one could not be told from those of another except by the registers; so that the idea of the word *tribe* became personal instead of real, or rather came to be little more than a chimera.

It happened in addition that the town tribes, being more on the spot, were often the stronger in the comitia and sold the State to those who stooped to buy the votes of the rabble composing them.

As the founder had set up ten *curiæ* in each tribe, the whole Roman people, which was then contained within the walls, consisted of thirty *curia*, each with its temples, its gods, its officers, its priests and its festivals, which were called *compitalia* and corresponded to the *paganalia*, held in later times by the rural tribes.

When Servius made his new division, as the thirty *curiæ* could not be shared equally between his four tribes, and as he was unwilling to interfere with them, they became a further division of the inhabitants of Rome, quite independent of the tribes: but in the case of the rural tribes and their members there was no question of *curiæ* as the tribes had then become a purely civil institution, and, a new system of levying troops having been introduced, the military divisions of Romulus were superfluous. Thus, although every citizen was enrolled in a tribe, there were very many who were not members of a *curia*.

Servius made yet a third division, quite distinct from the two we have mentioned, which became, in its effects, the most important of all. He distributed the whole Roman people into six classes, distinguished neither by place nor by person, but by wealth; the first classes included the rich, the last the poor, and those between persons of moderate means. These six classes were subdivided into one hundred and ninety-three other bodies, called centuries, which were so divided that the first class alone comprised more than half of them, while the last comprised only one. Thus the class that had the smallest number of members had the largest number of centuries, and the whole of the last class only counted as a single subdivision, although it alone included more than half the inhabitants of Rome.

In order that the people might have the less insight into the results of this arrangement, Servius tried to give it a military tone: in the second class he inserted two centuries of armourers, and in the fourth two of makers of instruments of war: in each class, except the last, he distinguished young and old, that is, those who were under an obligation to bear arms and those whose age gave them legal exemption. It was this distinction, rather than that of wealth, which required frequent repetition of the census or counting. Lastly, he ordered that the assembly should be held in the Campus Martius, and that all who were of age to serve should come there armed.

The reason for his not making in the last class also the division of young and old was that the populace, of whom it was composed, was not given the right to bear arms for its country: a man had to possess a hearth to acquire the right to defend it, and of all the troops of beggars who to-day lend lustre to the armies of kings, there is perhaps not one who would not have been driven with scorn out of a Roman cohort, at a time when soldiers were the defenders of liberty.

In this last class, however, *proletarians* were distinguished from *capite censi*. The former, not quite reduced to nothing, at least gave the State citizens, and sometimes, when the need was pressing, even soldiers. Those who had nothing at all, and could be numbered only by counting heads, were regarded as of absolutely no account, and Marius was the first who stooped to enrol them.

Without deciding now whether this third arrangement was good or bad in itself, I think I may assert that it could have been made practicable only by the simple morals, the disinterestedness, the liking for agriculture and the scorn for commerce and for love of gain which characterised the early Romans. Where is the modern people among whom consuming greed, unrest, intrigue, continual removals, and perpetual changes of fortune, could let such a system last for twenty years without turning the State upside down? We must indeed observe that morality and the censorship, being stronger than this institution, corrected its defects at Rome, and that the rich man found himself degraded to the class of the poor for making too much display of his riches.

From all this it is easy to understand why only five classes are almost always mentioned, though there were really six. The sixth, as it furnished neither soldiers to the army nor votes in the Campus Martius,<sup>[1]</sup> and was almost without function in the State, was seldom regarded as of any account.

These were the various ways in which the Roman people was divided. Let us now see the effect on the assemblies. When lawfully summoned, these were called *comitia*: they were usually held in the public square at Rome or in the Campus Martius, and were distinguished as *Comitia Curiata*, *Comitia Centuriata*, and *Comitia Tributa*, according to the form under which they were convoked. The *Comitia Curiata* were founded by Romulus; the

*Centuriata* by Servius; and the *Tributa* by the tribunes of the people. No law received its sanction and no magistrate was elected, save in the comitia; and as every citizen was enrolled in a *curia*, a century, or a tribe, it follows that no citizen was excluded from the right of voting, and that the Roman people was truly sovereign both *de jure* and *de facto*.

For the comitia to be lawfully assembled, and for their acts to have the force of law, three conditions were necessary. First, the body or magistrate convoking them had to possess the necessary authority; secondly, the assembly had to be held on a day allowed by law; and thirdly, the auguries had to be favourable.

The reason for the first regulation needs no explanation; the second is a matter of policy. Thus, the comitia might not be held on festivals or market-days, when the country-folk, coming to Rome on business, had not time to spend the day in the public square. By means of the third, the senate held in check the proud and restive people, and meetly restrained the ardour of seditious tribunes, who, however, found more than one way of escaping this hindrance.

Laws and the election of rulers were not the only questions submitted to the judgment of the comitia: as the Roman people had taken on itself the most important functions of government, it may be said that the lot of Europe was regulated in its assemblies. The variety of their objects gave rise to the various forms these took, according to the matters on which they had to pronounce.

In order to judge of these various forms, it is enough to compare them. Romulus, when he set up *curiæ*, had in view the checking of the senate by the people, and of the people by the senate, while maintaining his ascendancy over both alike. He therefore gave the people, by means of this assembly, all the authority of numbers to balance that of power and riches, which he left to the patricians. But, after the spirit of monarchy, he left all the same a greater advantage to the patricians in the influence of their clients on the majority of votes. This excellent institution of patron and client was a masterpiece of statesmanship and humanity without which the patriciate, being flagrantly in contradiction to the republican spirit, could not have survived. Rome alone has the honour of having given to the world

this great example, which never led to any abuse, and yet has never been followed.

As the assemblies by *curiæ* persisted under the kings till the time of Servius, and the reign of the later Tarquin was not regarded as legitimate, royal laws were called generally *leges curiatæ*.

Under the Republic, the *curiæ* still confined to the four urban tribes, and including only the populace of Rome, suited neither the senate, which led the patricians, nor the tribunes, who, though plebeians, were at the head of the well-to-do citizens. They therefore fell into disrepute, and their degradation was such, that thirty lictors used to assemble and do what the *Comitia Curiata* should have done.

The division by centuries was so favourable to the aristocracy that it is hard to see at first how the senate ever failed to carry the day in the comitia bearing their name, by which the consuls, the censors and the other curule magistrates were elected. Indeed, of the hundred and ninety-three centuries into which the six classes of the whole Roman people were divided, the first class contained ninety-eight; and, as voting went solely by centuries, this class alone had a majority over all the rest. When all these centuries were in agreement, the rest of the votes were not even taken; the decision of the smallest number passed for that of the multitude, and it may be said that, in the *Comitia Centuriata*, decisions were regulated far more by depth of purses than by the number of votes.

But this extreme authority was modified in two ways. First, the tribunes as a rule, and always a great number of plebeians, belonged to the class of the rich, and so counterbalanced the influence of the patricians in the first class.

The second way was this. Instead of causing the centuries to vote throughout in order, which would have meant beginning always with the first, the Romans always chose one by lot which proceeded alone to the election; after this all the centuries were summoned another day according to their rank, and the same election was repeated, and as a rule confirmed. Thus the authority of example was taken away from rank, and given to the lot on a democratic principle.

From this custom resulted a further advantage. The citizens from the country had time, between the two elections, to inform themselves of the

merits of the candidate who had been provisionally nominated, and did not have to vote without knowledge of the case. But, under the pretext of hastening matters, the abolition of this custom was achieved, and both elections were held on the same day.

The *Comitia Tributa* were properly the council of the Roman people. They were convoked by the tribunes alone; at them the tribunes were elected and passed their plebiscita. The senate not only had no standing in them, but even no right to be present; and the senators, being forced to obey laws on which they could not vote, were in this respect less free than the meanest citizens. This injustice was altogether ill-conceived, and was alone enough to invalidate the decrees of a body to which all its members were not admitted. Had all the patricians attended the comitia by virtue of the right they had as citizens, they would not, as mere private individuals, have had any considerable influence on a vote reckoned by counting heads, where the meanest proletarian was as good as the *princeps senatus*.

It may be seen, therefore, that besides the order which was achieved by these various ways of distributing so great a people and taking its votes, the various methods were not reducible to forms indifferent in themselves, but the results of each were relative to the objects which caused it to be preferred.

Without going here into further details, we may gather from what has been said above that the *Comitia Tributa* were the most favourable to popular government, and the *Comitia Centuriata* to aristocracy. The *Comitia Curiata*, in which the populace of Rome formed the majority, being fitted only to further tyranny and evil designs, naturally fell into disrepute, and even seditious persons abstained from using a method which too clearly revealed their projects. It is indisputable that the whole majesty of the Roman people lay solely in the *Comitia Centuriata*, which alone included all; for the *Comitia Curiata* excluded the rural tribes, and the *Comitia Tributa* the senate and the patricians.

As for the method of taking the vote, it was among the ancient Romans as simple as their morals, although not so simple as at Sparta. Each man declared his vote aloud, and a clerk duly wrote it down; the majority in each tribe determined the vote of the tribe, the majority of the tribes that of the people, and so with *curiæ* and centuries. This custom was good as long as

honesty was triumphant among the citizens, and each man was ashamed to vote publicly in favour of an unjust proposal or an unworthy subject; but, when the people grew corrupt and votes were bought, it was fitting that voting should be secret in order that purchasers might be restrained by mistrust, and rogues be given the means of not being traitors.

I know that Cicero attacks this change, and attributes partly to it the ruin of the Republic. But though I feel the weight Cicero's authority must carry on such a point, I cannot agree with him; I hold, on the contrary, that, for want of enough such changes, the destruction of the State must be hastened. Just as the regimen of health does riot suit the sick, we should not wish to govern a people that has been corrupted by the laws that a good people requires. There is no better proof of this rule than the long life of the Republic of Venice, of which the shadow still exists, solely because its laws are suitable only for men who are wicked.

The citizens were provided, therefore, with tablets by means of which each man could vote without any one knowing how he voted: new methods were also introduced for collecting the tablets, for counting voices, for comparing numbers, etc.; but all these precautions did not prevent the good faith of the officers charged with these functions<sup>[2]</sup> from being often suspect. Finally, to prevent intrigues and trafficking in votes, edicts were issued; but their very number proves how useless they were.

Towards the close of the Republic, it was often necessary to have recourse to extraordinary expedients in order to supplement the inadequacy of the laws. Sometimes miracles were supposed; but this method, while it might impose on the people, could not impose on those who governed. Sometimes an assembly was hastily called together, before the candidates had time to form their factions: sometimes a whole sitting was occupied with talk, when it was seen that the people had been won over and was on the point of taking up a wrong position. But in the end ambition eluded all attempts to check it; and the most incredible fact of all is that, in the midst of all these abuses, the vast people, thanks to its ancient regulations, never ceased to elect magistrates, to pass laws, to judge cases, and to carry through business both public and private, almost as easily as the senate itself could have done.

[1] I say "in the Campus Martius" because it was there that the comitia assembled by centuries; in its two other forms the people assembled in the *forum* or elsewhere; and then the *capite censi* had as much influence and authority as the foremost citizens.

[2] Custodes, diribitores, rogatores suffragiorum.

## CHAPTER V

### THE TRIBUNATE

When an exact proportion cannot be established between the constituent parts of the State, or when causes that cannot be removed continually alter the relation of one part to another, recourse is had to the institution of a peculiar magistracy that enters into no corporate unity with the rest. This restores to each term its right relation to the others, and provides a link or middle term between either prince and people, or prince and Sovereign, or, if necessary, both at once.

This body, which I shall call the *tribunate*, is the preserver of the laws and of the legislative power. It serves sometimes to protect the Sovereign against the government, as the tribunes of the people did at Rome; sometimes to uphold the government against the people, as the Council of Ten now does at Venice; and sometimes to maintain the balance between the two, as the Ephors did at Sparta.

The tribunate is not a constituent part of the city, and should have no share in either legislative or executive power; but this very fact makes its own power the greater: for, while it can do nothing, it can prevent anything from being done. It is more sacred and more revered, as the defender of the laws, than the prince who executes them, or than the Sovereign which ordains them. This was seen very clearly at Rome, when the proud patricians, for all their scorn of the people, were forced to bow before one of its officers, who had neither auspices nor jurisdiction.

The tribunate, wisely tempered, is the strongest support a good constitution can have; but if its strength is ever so little excessive, it upsets the whole

State. Weakness, on the other hand, is not natural to it: provided it is something, it is never less than it should be.

It degenerates into tyranny when it usurps the executive power, which it should confine itself to restraining, and when it tries to dispense with the laws, which it should confine itself to protecting. The immense power of the Ephors, harmless as long as Sparta preserved its morality, hastened corruption when once it had begun. The blood of Agis, slaughtered by these tyrants, was avenged by his successor; the crime and the punishment of the Ephors alike hastened the destruction of the republic, and after Cleomenes Sparta ceased to be of any account. Rome perished in the same way: the excessive power of the tribunes, which they had usurped by degrees, finally served, with the help of laws made to secure liberty, as a safeguard for the emperors who destroyed it. As for the Venetian Council of Ten, it is a tribunal of blood, an object of horror to patricians and people alike; and, so far from giving a lofty protection to the laws, it does nothing, now they have become degraded, but strike in the darkness blows of which no one dare take note.

The tribunate, like the government, grows weak as the number of its members increases. When the tribunes of the Roman people, who first numbered only two, and then five, wished to double that number, the senate let them do so, in the confidence that it could use one to check another, as indeed it afterwards freely did.

The best method of preventing usurpations by so formidable a body, though no government has yet made use of it, would be not to make it permanent, but to regulate the periods during which it should remain in abeyance. These intervals, which should not be long enough to give abuses time to grow strong, may be so fixed by law that they can easily be shortened at need by extraordinary commissions.

This method seems to me to have no disadvantages, because, as I have said, the tribunate, which forms no part of the constitution, can be removed without the constitution being affected. It seems to be also efficacious, because a newly restored magistrate starts not with the power his predecessor exercised, but with that which the law allows him.

---

## CHAPTER VI

### THE DICTATORSHIP

The inflexibility of the laws, which prevents them from adapting themselves to circumstances, may, in certain cases, render them disastrous, and make them bring about, at a time of crisis, the ruin of the State. The order and slowness of the forms they enjoin require a space of time which circumstances sometimes withhold. A thousand cases against which the legislator has made no provision may present themselves, and it is a highly necessary part of foresight to be conscious that everything cannot be foreseen.

It is wrong therefore to wish to make political institutions so strong as to render it impossible to suspend their operation. Even Sparta allowed its laws to lapse.

However, none but the greatest dangers can counter-balance that of changing the public order, and the sacred power of the laws should never be arrested save when the existence of the country is at stake. In these rare and obvious cases, provision is made for the public security by a particular act entrusting it to him who is most worthy. This commitment may be carried out in either of two ways, according to the nature of the danger.

If increasing the activity of the government is a sufficient remedy, power is concentrated in the hands of one or two of its members: in this case the change is not in the authority of the laws, but only in the form of administering them. If, on the other hand, the peril is of such a kind that the paraphernalia of the laws are an obstacle to their preservation, the method is to nominate a supreme ruler, who shall silence all the laws and suspend for a moment the sovereign authority. In such a case, there is no doubt about the general will, and it is clear that the people's first intention is that the State shall not perish. Thus the suspension of the legislative authority is in no sense its abolition; the magistrate who silences it cannot make it speak; he dominates it, but cannot represent it. He can do anything, except make laws.

The first method was used by the Roman senate when, in a consecrated formula, it charged the consuls to provide for the safety of the Republic.

The second was employed when one of the two consuls nominated a dictator:<sup>[1]</sup> a custom Rome borrowed from Alba.

During the first period of the Republic, recourse was very often had to the dictatorship, because the State had not yet a firm enough basis to be able to maintain itself by the strength of its constitution alone. As the state of morality then made superfluous many of the precautions which would have been necessary at other times, there was no fear that a dictator would abuse his authority, or try to keep it beyond his term of office. On the contrary, so much power appeared to be burdensome to him who was clothed with it, and he made all speed to lay it down, as if taking the place of the laws had been too troublesome and too perilous a position to retain.

It is therefore the danger not of its abuse, but of its cheapening, that makes me attack the indiscreet use of this supreme magistracy in the earliest times. For as long as it was freely employed at elections, dedications and purely formal functions, there was danger of its becoming less formidable in time of need, and of men growing accustomed to regarding as empty a title that was used only on occasions of empty ceremonial.

Towards the end of the Republic, the Romans, having grown more circumspect, were as unreasonably sparing in the use of the dictatorship as they had formerly been lavish. It is easy to see that their fears were without foundation, that the weakness of the capital secured it against the magistrates who were in its midst; that a dictator might, in certain cases, defend the public liberty, but could never endanger it; and that the chains of Rome would be forged, not in Rome itself, but in her armies. The weak resistance offered by Marius to Sulla, and by Pompey to Cæsar, clearly showed what was to be expected from authority at home against force from abroad.

This misconception led the Romans to make great mistakes; such, for example, as the failure to nominate a dictator in the Catilinarian conspiracy. For, as only the city itself, with at most some province in Italy, was concerned, the unlimited authority the laws gave to the dictator would have enabled him to make short work of the conspiracy, which was, in fact, stifled only by a combination of lucky chances human prudence had no right to expect.

Instead, the senate contented itself with entrusting its whole power to the consuls, so that Cicero, in order to take effective action, was compelled on a capital point to exceed his powers; and if, in the first transports of joy, his conduct was approved, he was justly called, later on, to account for the blood of citizens spilt in violation of the laws. Such a reproach could never have been levelled at a dictator. But the consul's eloquence carried the day; and he himself, Roman though he was, loved his own glory better than his country, and sought, not so much the most lawful and secure means of saving the State, as to get for himself the whole honour of having done so. [2] He was therefore justly honoured as the liberator of Rome, and also justly punished as a law-breaker. However brilliant his recall may have been, it was undoubtedly an act of pardon.

However this important trust be conferred, it is important that its duration should be fixed at a very brief period, incapable of being ever prolonged. In the crises which lead to its adoption, the State is either soon lost, or soon saved; and, the present need passed, the dictatorship becomes either tyrannical or idle. At Rome, where dictators held office for six months only, most of them abdicated before their time was up. If their term had been longer, they might well have tried to prolong it still further, as the decemvirs did when chosen for a year. The dictator had only time to provide against the need that had caused him to be chosen; he had none to think of further projects.

---

[1] The nomination was made secretly by night, as if there were something shameful in setting a man above the laws.

[2] That is what he could not be sure of, if he proposed a dictator; for he dared not nominate himself, and could not be certain that his colleague would nominate him.

---

## CHAPTER VII

### THE CENSORSHIP

As the law is the declaration of the general will, the censorship is the declaration of the public judgment: public opinion is the form of law which

the censor administers, and, like the prince, only applies to particular cases.

The censorial tribunal, so far from being the arbiter of the people's opinion, only declares it, and, as soon as the two part company, its decisions are null and void.

It is useless to distinguish the morality of a nation from the objects of its esteem; both depend on the same principle and are necessarily indistinguishable. There is no people on earth the choice of whose pleasures is not decided by opinion rather than nature. Right men's opinions, and their morality will purge itself. Men always love what is good or what they find good; it is in judging what is good that they go wrong. This judgment, therefore, is what must be regulated. He who judges of morality judges of honour; and he who judges of honour finds his law in opinion.

The opinions of a people are derived from its constitution; although the law does not regulate morality, it is legislation that gives it birth. When legislation grows weak, morality degenerates; but in such cases the judgment of the censors will not do what the force of the laws has failed to effect.

From this it follows that the censorship may be useful for the preservation of morality, but can never be so for its restoration. Set up censors while the laws are vigorous; as soon as they have lost their vigour, all hope is gone; no legitimate power can retain force when the laws have lost it.

The censorship upholds morality by preventing opinion from growing corrupt, by preserving its rectitude by means of wise applications, and sometimes even by fixing it when it is still uncertain. The employment of seconds in duels, which had been carried to wild extremes in the kingdom of France, was done away with merely by these words in a royal edict: "As for those who are cowards enough to call upon seconds." This judgment, in anticipating that of the public, suddenly decided it. But when edicts from the same source tried to pronounce duelling itself an act of cowardice, as indeed it is, then, since common opinion does not regard it as such, the public took no notice of a decision on a point on which its mind was already made up.

I have stated elsewhere<sup>[1]</sup> that as public opinion is not subject to any constraint, there need be no trace of it in the tribunal set up to represent it. It

is impossible to admire too much the art with which this resource, which we moderns have wholly lost, was employed by the Romans, and still more by the Lacedæmonians.

A man of bad morals having made a good proposal in the Spartan Council, the Ephors neglected it, and caused the same proposal to be made by a virtuous citizen. What an honour for the one, and what a disgrace for the other, without praise or blame of either! Certain drunkards from Samos<sup>[2]</sup> polluted the tribunal of the Ephors: the next day, a public edict gave Samians permission to be filthy. An actual punishment would not have been so severe as such an impunity. When Sparta has pronounced on what is or is not right, Greece makes no appeal from her judgments.

---

[1] I merely call attention in this chapter to a subject with which I have dealt at greater length in my *Letter to M. d'Alembert*.

[2] They were from another island, which the delicacy of our language forbids me to name on this occasion.

---

## CHAPTER VIII

### CIVIL RELIGION

At first men had no kings save the gods, and no government save theocracy. They reasoned like Caligula, and, at that period, reasoned aright. It takes a long time for feeling so to change that men can make up their minds to take their equals as masters, in the hope that they will profit by doing so.

From the mere fact that God was set over every political society, it followed that there were as many gods as peoples. Two peoples that were strangers the one to the other, and almost always enemies, could not long recognise the same master: two armies giving battle could not obey the same leader. National divisions thus led to polytheism, and this in turn gave rise to theological and civil intolerance, which, as we shall see hereafter, are by nature the same.

The fancy the Greeks had for rediscovering their gods among the barbarians arose from the way they had of regarding themselves as the natural Sovereigns of such peoples. But there is nothing so absurd as the erudition which in our days identifies and confuses gods of different nations. As if Moloch, Saturn and Chronos could be the same god! As if the Phœnician Baal, the Greek Zeus, and the Latin Jupiter could be the same! As if there could still be anything common to imaginary beings with different names!

If it is asked how in pagan times, where each State had its cult and its gods, there were no wars of religion, I answer that it was precisely because each State, having its own cult as well as its own government, made no distinction between its gods and its laws. Political war was also theological; the provinces of the gods were, so to speak, fixed by the boundaries of nations. The god of one people had no right over another. The gods of the pagans were not jealous gods; they shared among themselves the empire of the world: even Moses and the Hebrews sometimes lent themselves to this view by speaking of the God of Israel. It is true, they regarded as powerless the gods of the Canaanites, a proscribed people condemned to destruction, whose place they were to take; but remember how they spoke of the divisions of the neighbouring peoples they were forbidden to attack! "Is not the possession of what belongs to your god Chamos lawfully your due?" said Jephthah to the Ammonites. "We have the same title to the lands our conquering God has made his own."<sup>[1]</sup> Here, I think, there is a recognition that the rights of Chamos and those of the God of Israel are of the same nature.

But when the Jews, being subject to the kings of Babylon, and, subsequently, to those of Syria, still obstinately refused to recognise any god save their own, their refusal was regarded as rebellion against their conqueror, and drew down on them the persecutions we read of in their history, which are without parallel till the coming of Christianity.<sup>[2]</sup>

Every religion, therefore, being attached solely to the laws of the State which prescribed it, there was no way of converting a people except by enslaving it, and there could be no missionaries save conquerors. The obligation to change cults being the law to which the vanquished yielded, it was necessary to be victorious before suggesting such a change. So far from men fighting for the gods, the gods, as in Homer, fought for men; each asked his god for victory, and repayed him with new altars. The Romans,

before taking a city, summoned its gods to quit it; and, in leaving the Tarentines their outraged gods, they regarded them as subject to their own and compelled to do them homage. They left the vanquished their gods as they left them their laws. A wreath to the Jupiter of the Capitol was often the only tribute they imposed.

Finally, when, along with their empire, the Romans had spread their cult and their gods, and had themselves often adopted those of the vanquished, by granting to both alike the rights of the city, the peoples of that vast empire insensibly found themselves with multitudes of gods and cults, everywhere almost the same; and thus paganism throughout the known world finally came to be one and the same religion.

It was in these circumstances that Jesus came to set up on earth a spiritual kingdom, which, by separating the theological from the political system, made the State no longer one, and brought about the internal divisions which have never ceased to trouble Christian peoples. As the new idea of a kingdom of the other world could never have occurred to pagans, they always looked on the Christians as really rebels, who, while feigning to submit, were only waiting for the chance to make themselves independent and their masters, and to usurp by guile the authority they pretended in their weakness to respect. This was the cause of the persecutions.

What the pagans had feared took place. Then everything changed its aspect: the humble Christians changed their language, and soon this so-called kingdom of the other world turned, under a visible leader, into the most violent of earthly despotisms.

However, as there have always been a prince and civil laws, this double power and conflict of jurisdiction have made all good polity impossible in Christian States; and men have never succeeded in finding out whether they were bound to obey the master or the priest.

Several peoples, however, even in Europe and its neighbourhood, have desired without success to preserve or restore the old system: but the spirit of Christianity has everywhere prevailed. The sacred cult has always remained or again become independent of the Sovereign, and there has been no necessary link between it and the body of the State. Mahomet held very sane views, and linked his political system well together; and, as long as the form of his government continued under the caliphs who succeeded him,

that government was indeed one, and so far good. But the Arabs, having grown prosperous, lettered, civilised, slack and cowardly, were conquered by barbarians: the division between the two powers began again; and, although it is less apparent among the Mahometans than among the Christians, it none the less exists, especially in the sect of Ali, and there are States, such as Persia, where it is continually making itself felt.

Among us, the Kings of England have made themselves heads of the Church, and the Czars have done the same: but this title has made them less its masters than its ministers; they have gained not so much the right to change it, as the power to maintain it: they are not its legislators, but only its princes. Wherever the clergy is a corporate body,<sup>[3]</sup> it is master and legislator in its own country. There are thus two powers, two Sovereigns, in England and in Russia, as well as elsewhere.

Of all Christian writers, the philosopher Hobbes alone has seen the evil and how to remedy it, and has dared to propose the reunion of the two heads of the eagle, and the restoration throughout of political unity, without which no State or government will ever be rightly constituted. But he should have seen that the masterful spirit of Christianity is incompatible with his system, and that the priestly interest would always be stronger than that of the State. It is not so much what is false and terrible in his political theory, as what is just and true, that has drawn down hatred on it.<sup>[4]</sup>

I believe that if the study of history were developed from this point of view, it would be easy to refute the contrary opinions of Bayle and Warburton, one of whom holds that religion can be of no use to the body politic, while the other, on the contrary, maintains that Christianity is its strongest support. We should demonstrate to the former that no State has ever been founded without a religious basis, and to the latter, that the law of Christianity at bottom does more harm by weakening than good by strengthening the constitution of the State. To make myself understood, I have only to make a little more exact the too vague ideas of religion as relating to this subject.

Religion, considered in relation to society, which is either general or particular, may also be divided into two kinds: the religion of man, and that of the citizen. The first, which has neither temples, nor altars, nor rites, and is confined to the purely internal cult of the supreme God and the eternal

obligations of morality, is the religion of the Gospel pure and simple, the true theism, what may be called natural divine right or law. The other, which is codified in a single country, gives it its gods, its own tutelary patrons; it has its dogmas, its rites, and its external cult prescribed by law; outside the single nation that follows it, all the world is in its sight infidel, foreign and barbarous; the duties and rights of man extend for it only as far as its own altars. Of this kind were all the religions of early peoples, which we may define as civil or positive divine right or law.

There is a third sort of religion of a more singular kind, which gives men two codes of legislation, two rulers, and two countries, renders them subject to contradictory duties, and makes it impossible for them to be faithful both to religion and to citizenship. Such are the religions of the Lamas and of the Japanese, and such is Roman Christianity, which may be called the religion of the priest. It leads to a sort of mixed and anti-social code which has no name.

In their political aspect, all these three kinds of religion have their defects. The third is so clearly bad, that it is waste of time to stop to prove it such. All that destroys social unity is worthless; all institutions that set man in contradiction to himself are worthless.

The second is good in that it unites the divine cult with love of the laws, and, making country the object of the citizens' adoration, teaches them that service done to the State is service done to its tutelary god. It is a form of theocracy, in which there can be no pontiff save the prince, and no priests save the magistrates. To die for one's country then becomes martyrdom; violation of its laws, impiety; and to subject one who is guilty to public execration is to condemn him to the anger of the gods: *Sacer est od.*

On the other hand, it is bad in that, being founded on lies and error, it deceives men, makes them credulous and superstitious, and drowns the true cult of the Divinity in empty ceremonial. It is bad, again, when it becomes tyrannous and exclusive, and makes a people bloodthirsty and intolerant, so that it breathes fire and slaughter, and regards as a sacred act the killing of every one who does not believe in its gods. The result is to place such a people in a natural state of war with all others, so that its security is deeply endangered.

There remains therefore the religion of man or Christianity—not the Christianity of to-day, but that of the Gospel, which is entirely different. By means of this holy, sublime, and real religion all men, being children of one God, recognise one another as brothers, and the society that unites them is not dissolved even at death.

But this religion, having no particular relation to the body politic, leaves the laws in possession of the force they have in themselves without making any addition to it; and thus one of the great bonds that unite society considered in severalty fails to operate. Nay, more, so far from binding the hearts of the citizens to the State, it has the effect of taking them away from all earthly things. I know of nothing more contrary to the social spirit.

We are told that a people of true Christians would form the most perfect society imaginable. I see in this supposition only one great difficulty: that a society of true Christians would not be a society of men.

I say further that such a society, with all its perfection, would be neither the strongest nor the most lasting: the very fact that it was perfect would rob it of its bond of union; the flaw that would destroy it would lie in its very perfection.

Every one would do his duty; the people would be law-abiding, the rulers just and temperate; the magistrates upright and incorruptible; the soldiers would scorn death; there would be neither vanity nor luxury. So far, so good; but let us hear more.

Christianity as a religion is entirely spiritual, occupied solely with heavenly things; the country of the Christian is not of this world. He does his duty, indeed, but does it with profound indifference to the good or ill success of his cares. Provided he has nothing to reproach himself with, it matters little to him whether things go well or ill here on earth. If the State is prosperous, he hardly dares to share in the public happiness, for fear he may grow proud of his country's glory; if the State is languishing, he blesses the hand of God that is hard upon His people.

For the State to be peaceable and for harmony to be maintained, all the citizens without exception would have to be good Christians; if by ill hap there should be a single self-seeker or hypocrite, a Catiline or a Cromwell, for instance, he would certainly get the better of his pious compatriots.

Christian charity does not readily allow a man to think hardly of his neighbours. As soon as, by some trick, he has discovered the art of imposing on them and getting hold of a share in the public authority, you have a man established in dignity; it is the will of God that he be respected: very soon you have a power; it is God's will that it be obeyed: and if the power is abused by him who wields it, it is the scourge wherewith God punishes His children. There would be scruples about driving out the usurper: public tranquillity would have to be disturbed, violence would have to be employed, and blood spilt; all this accords ill with Christian meekness; and after all, in this vale of sorrows, what does it matter whether we are free men or serfs? The essential thing is to get to heaven, and resignation is only an additional means of doing so.

If war breaks out with another State, the citizens march readily out to battle; not one of them thinks of flight; they do their duty, but they have no passion for victory; they know better how to die than how to conquer. What does it matter whether they win or lose? Does not Providence know better than they what is meet for them? Only think to what account a proud, impetuous and passionate enemy could turn their stoicism! Set over against them those generous peoples who were devoured by ardent love of glory and of their country, imagine your Christian republic face to face with Sparta or Rome: the pious Christians will be beaten, crushed and destroyed, before they know where they are, or will owe their safety only to the contempt their enemy will conceive for them. It was to my mind a fine oath that was taken by the soldiers of Fabius, who swore, not to conquer or die, but to come back victorious—and kept their oath. Christians, would never have taken such an oath; they would have looked on it as tempting God.

But I am mistaken in speaking of a Christian republic; the terms are mutually exclusive. Christianity preaches only servitude and dependence. Its spirit is so favourable to tyranny that it always profits by such a *régime*. True Christians are made to be slaves, and they know it and do not much mind: this short life counts for too little in their eyes.

I shall be told that Christian troops are excellent. I deny it. Show me an instance. For my part, I know of no Christian troops. I shall be told of the Crusades. Without disputing the valour of the Crusaders, I answer that, so far from being Christians, they were the priests' soldiery, citizens of the Church. They fought for their spiritual country, which the Church had,

somehow or other, made temporal. Well understood, this goes back to paganism: as the Gospel sets up no national religion, a holy war is impossible among Christians.

Under the pagan emperors, the Christian soldiers were brave; every Christian writer affirms it, and I believe it: it was a case of honourable emulation of the pagan troops. As soon as the emperors were Christian, this emulation no longer existed, and, when the Cross had driven out the eagle, Roman valour wholly disappeared.

But, setting aside political considerations, let us come back to what is right, and settle our principles on this important point. The right which the social compact gives the Sovereign over the subjects does not, we have seen, exceed the limits of public expediency.<sup>[5]</sup> The subjects then owe the Sovereign an account of their opinions only to such an extent as they matter to the community. Now, it matters very much to the community that each citizen should have a religion. That will make him love his duty; but the dogmas of that religion concern the State and its members only so far as they have reference to morality and to the duties which he who professes them is bound to do to others. Each man may have, over and above, what opinions he pleases, without it being the Sovereign's business to take cognisance of them; for, as the Sovereign has no authority in the other world, whatever the lot of its subjects may be in the life to come, that is not its business, provided they are good citizens in this life.

There is therefore a purely civil profession of faith of which the Sovereign should fix the articles, not exactly as religious dogmas, but as social sentiments without which a man cannot be a good citizen or a faithful subject.<sup>[6]</sup> While it can compel no one to believe them, it can banish from the State whoever does not believe them—it can banish him, not for impiety, but as an anti-social being, incapable of truly loving the laws and justice, and of sacrificing, at need, his life to his duty. If any one, after publicly recognising these dogmas, behaves as if he does not believe them, let him be punished by death: he has committed the worst of all crimes, that of lying before the law.

The dogmas of civil religion ought to be few, simple, and exactly worded, without explanation or commentary. The existence of a mighty, intelligent and beneficent Divinity, possessed of foresight and providence, the life to

come, the happiness of the just, the punishment of the wicked, the sanctity of the social contract and the laws: these are its positive dogmas. Its negative dogmas I confine to one, intolerance, which is a part of the cults we have rejected.

Those who distinguish civil from theological intolerance are, to my mind, mistaken. The two forms are inseparable. It is impossible to live at peace with those we regard as damned; to love them would be to hate God who punishes them: we positively must either reclaim or torment them. Wherever theological intolerance is admitted, it must inevitably have some civil effect,<sup>[7]</sup> and as soon as it has such an effect, the Sovereign is no longer Sovereign even in the temporal sphere: thenceforth priests are the real masters, and kings only their ministers.

Now that there is and can be no longer an exclusive national religion, tolerance should be given to all religions that tolerate others, so long as their dogmas contain nothing contrary to the duties of citizenship. But whoever dares to say: *Outside the Church is no salvation*, ought to be driven from the State, unless the State is the Church, and the prince the pontiff. Such a dogma is good only in a theocratic government; in any other, it is fatal. The reason for which Henry IV is said to have embraced the Roman religion ought to make every honest man leave it, and still more any prince who knows how to reason.

---

[1] Nonne ea quæ possidet Chamos deus tuus, tibi jure debentur? (Judges xi. 24). Such is the text in the Vulgate. Father de Carrières translates: "Do you not regard yourselves as having a right to what your god possesses?" I do not know the force of the Hebrew text: but I perceive that, in the Vulgate, Jephthah positively recognises the right of the god Chamos, and that the French translator weakened this admission by inserting an "according to you," which is not in the Latin.

[2] It is quite clear that the Phocian war, which was called "the Sacred War," was not a war of religion. Its object was the punishment of acts of sacrilege, and not the conquest of unbelievers.

[3] It should be noted that the clergy find their bond of union not so much in formal assemblies, as in the communion of Churches. Communion and ex-communication are the social compact of the clergy, a compact which will always make them masters of peoples and kings. All priests who communicate together are fellow-citizens, even if they come from opposite ends of the earth. This invention is a masterpiece of statesmanship: there is nothing like it among pagan priests; who have therefore never formed a clerical corporate body.

[4] See, for instance, in a letter from Grotius to his brother (April 11, 1643), what that learned man found to praise and to blame in the *De Cive*. It is true that, with a bent for indulgence, he seems to pardon the writer the good for the sake of the bad; but all men are not so forgiving.

[5] "In the republic," says the Marquis d'Argenson, "each man is perfectly free in what does not harm others." This is the invariable limitation, which it is impossible to define more exactly. I have not been able to deny myself the pleasure of occasionally quoting from this manuscript, though it is unknown to the public, in order to do honour to the memory of a good and illustrious man, who had kept even in the Ministry the heart of a good citizen, and views on the government of his country that were sane and right.

[6] Cæsar, pleading for Catiline, tried to establish the dogma that the soul is mortal: Cato and Cicero, in refutation, did not waste time in philosophising. They were content to show that Cæsar spoke like a bad citizen, and brought forward a doctrine that would have a bad effect on the State. This, in fact, and not a problem of theology, was what the Roman senate had to judge.

[7] Marriage, for instance, being a civil contract, has civil effects without which society cannot even subsist. Suppose a body of clergy should claim the sole right of permitting this act, a right which every intolerant religion must of necessity claim, is it not clear that in establishing the authority of the Church in this respect, it will be destroying that of the prince, who will have thenceforth only as many subjects as the clergy choose to allow him? Being in a position to marry or not to marry people, according to their acceptance of such and such a doctrine, their admission or rejection of such and such a formula, their greater or less piety, the Church alone, by the exercise of prudence and firmness, will dispose of all inheritances, offices and citizens, and even of the State itself, which could not subsist if it were composed entirely of bastards? But, I shall be told, there will be appeals on the ground of abuse, summonses and decrees; the temporalities will be seized. How sad! The clergy, however little, I will not say courage, but sense it has, will take no notice and go its way: it will quietly allow appeals, summonses, decrees and seizures, and, in the end, will remain the master. It is not, I think, a great sacrifice to give up a part, when one is sure of securing all.

---

## CHAPTER IX

## CONCLUSION

Now that I have laid down the true principles of political right, and tried to give the State a basis of its own to rest on, I ought next to strengthen it by its external relations, which would include the law of nations, commerce, the right of war and conquest, public right, leagues, negotiations, treaties, etc. But all this forms a new subject that is far too vast for my narrow scope. I ought throughout to have kept to a more limited sphere.

## A DISCOURSE

WHICH WON THE PRIZE AT THE ACADEMY OF DIJON IN 1750,  
ON THIS QUESTION PROPOSED BY THE ACADEMY:

### HAS THE RESTORATION OF THE ARTS AND SCIENCES HAD A PURIFYING EFFECT UPON MORALS?

Barbaras his ego sum, qui non intelligor illis.—OVID.<sup>[1]</sup>

---

#### PREFACE

The following pages contain a discussion of one of the most sublime and interesting of all moral questions. It is not concerned, however, with those metaphysical subtleties, which of late have found their way into every department of literature, and from which even our academic curricula are not always free. We have now to do with one of those truths on which the happiness of mankind depends.

I foresee that I shall not readily be forgiven for having taken up the position I have adopted. Setting myself up against all that is nowadays most admired, I can expect no less than a universal outcry against me: nor is the approbation of a few sensible men enough to make me count on that of the public. But I have taken my stand, and I shall be at no pains to please either intellectuals or men of the world. There are in all ages men born to be in bondage to the opinions of the society in which they live. There are not a few, who to-day play the free-thinker and the philosopher, who would, if they had lived in the time of the League, have been no more than fanatics. No author, who has a mind to outlive his own age, should write for such readers.

A word more and I have done. As I did not expect the honour conferred on me, I had, since sending in my Discourse, so altered and enlarged it as almost to make it a new work; but in the circumstances I have felt bound to publish it just as it was when it received the prize. I have only added a few notes, and left two alterations which are easily recognisable, of which the

Academy possibly might not have approved. The respect, gratitude and even justice I owe to that body seemed to me to demand this acknowledgment.

---

[1] Here I am, a barbarian, because men understand me not.

---

## MORAL EFFECTS OF THE ARTS AND SCIENCES

*Decipimur specie recti.*—HORACE.

---

The question before me is, "Whether the Restoration of the arts and sciences has had the effect of purifying or corrupting morals." Which side am I to take? That, gentlemen, which becomes an honest man, who is sensible of his own ignorance, and thinks himself none the worse for it.

I feel the difficulty of treating this subject fittingly, before the tribunal which is to judge of what I advance. How can I presume to belittle the sciences before one of the most learned assemblies in Europe, to commend ignorance in a famous Academy, and reconcile my contempt for study with the respect due to the truly learned?

I was aware of these inconsistencies, but not discouraged by them. It is not science, I said to myself, that I am attacking; it is virtue that I am defending, and that before virtuous men—and goodness is even dearer to the good than learning to the learned.

What then have I to fear? The sagacity of the assembly before which I am pleading? That, I acknowledge, is to be feared; but rather on account of faults of construction than of the views I hold. Just sovereigns have never hesitated to decide against themselves in doubtful cases; and indeed the most advantageous situation in which a just claim can be, is that of being laid before a just and enlightened arbitrator, who is judge in his own case.

To this motive, which encouraged me, I may add another which finally decided me. And this is, that as I have upheld the cause of truth to the best of my natural abilities, whatever my apparent success, there is one reward which cannot fail me. That reward I shall find in the bottom of my heart.

---

## THE FIRST PART

It is a noble and beautiful spectacle to see man raising himself, so to speak, from nothing by his own exertions; dissipating, by the light of reason, all the thick clouds in which he was by nature enveloped; mounting above himself; soaring in thought even to the celestial regions; like the sun, encompassing with giant strides the vast extent of the universe; and, what is still grander and more wonderful, going back into himself, there to study man and get to know his own nature, his duties and his end. All these miracles we have seen renewed within the last few generations.

Europe had relapsed into the barbarism of the earliest ages; the inhabitants of this part of the world, which is at present so highly enlightened, were plunged, some centuries ago, in a state still-worse than ignorance. A scientific jargon, more despicable than mere ignorance, had usurped the name of knowledge, and opposed an almost invincible obstacle to its restoration.

Things had come to such a pass, that it required a complete revolution to bring men back to common sense. This came at last from the quarter from which it was least to be expected. It was the stupid Mussulman, the eternal scourge of letters, who was the immediate cause of their revival among us. The fall of the throne of Constantine brought to Italy the relics of ancient Greece; and with these precious spoils France in turn was enriched. The sciences soon followed literature, and the art of thinking joined that of writing: an order which may seem strange, but is perhaps only too natural. The world now began to perceive the principal advantage of an intercourse with the Muses, that of rendering mankind more sociable by inspiring them with the desire to please one another with performances worthy of their mutual approbation.

The mind, as well as the body, has its needs: those of the body are the basis of society, those of the mind its ornaments.

So long as government and law provide for the security and well-being of men in their common life, the arts, literature and the sciences, less despotic though perhaps more powerful, fling garlands of flowers over the chains which weigh them down. They stifle in men's breasts that sense of original liberty, for which they seem to have been born; cause them to love their own slavery, and so make of them what is called a civilised people.

Necessity raised up thrones; the arts and sciences have made them strong. Powers of the earth, cherish all talents and protect those who cultivate them.

[1] Civilised peoples, cultivate such pursuits: to them, happy slaves, you owe that delicacy and exquisiteness of taste, which is so much your boast, that sweetness of disposition and urbanity of manners which make intercourse so easy and agreeable among you—in a word, the appearance of all the virtues, without being in possession of one of them.

It was for this sort of accomplishment, which is by so much the more captivating as it seems less affected, that Athens and Rome were so much distinguished in the boasted times of their splendour and magnificence: and it is doubtless in the same respect that our own age and nation will excel all periods and peoples. An air of philosophy without pedantry; an address at once natural and engaging, distant equally from Teutonic clumsiness and Italian pantomime; these are the effects of a taste acquired by liberal studies and improved by conversation with the world. What happiness would it be for those who live among us, if our external appearance were always a true mirror of our hearts; if decorum were but virtue; if the maxims we professed were the rules of our conduct; and if real philosophy were inseparable from the title of a philosopher! But so many good qualities too seldom go together; virtue rarely appears in so much pomp and state.

Richness of apparel may proclaim the man of fortune, and elegance the man of taste; but true health and manliness are known by different signs. It is under the home-spun of the labourer, and not beneath the gilt and tinsel of the courtier, that we should look for strength and vigour of body.

External ornaments are no less foreign to virtue, which is the strength and activity of the mind. The honest man is an athlete, who loves to wrestle stark naked; he scorns all those vile trappings, which prevent the exertion of

his strength, and were, for the most part, invented only to conceal some deformity.

Before art had moulded our behaviour, and taught our passions to speak an artificial language, our morals were rude but natural; and the different ways in which we behaved proclaimed at the first glance the difference of our dispositions. Human nature was not at bottom better then than now; but men found their security in the ease with which they could see through one another, and this advantage, of which we no longer feel the value, prevented their having many vices.

In our day, now that more subtle study and a more refined taste have reduced the art of pleasing to a system, there prevails in modern manners a servile and deceptive conformity; so that one would think every mind had been cast in the same mould. Politeness requires this thing; decorum that; ceremony has its forms, and fashion its laws, and these we must always follow, never the promptings of our own nature.

We no longer dare seem what we really are, but lie under a perpetual restraint; in the meantime the herd of men, which we call society, all act under the same circumstances exactly alike, unless very particular and powerful motives prevent them. Thus we never know with whom we have to deal; and even to know our friends we must wait for some critical and pressing occasion; that is, till it is too late; for it is on those very occasions that such knowledge is of use to us.

What a train of vices must attend this uncertainty! Sincere friendship, real esteem, and perfect confidence are banished from among men. Jealousy, suspicion, fear, coldness, reserve, hate and fraud lie constantly concealed under that uniform and deceitful veil of politeness; that boasted candour and urbanity, for which we are indebted to the light and leading of this age. We shall no longer take in vain by our oaths the name of our Creator; but we shall insult Him with our blasphemies, and our scrupulous ears will take no offence. We have grown too modest to brag of our own deserts; but we do not scruple to decry those of others. We do not grossly outrage even our enemies, but artfully calumniate them. Our hatred of other nations diminishes, but patriotism dies with it. Ignorance is held in contempt; but a dangerous scepticism has succeeded it. Some vices indeed are condemned and others grown dishonourable; but we have still many that are honoured

with the names of virtues, and it is become necessary that we should either have, or at least pretend to have them. Let who will extol the moderation of our modern sages, I see nothing in it but a refinement of intemperance as unworthy of my commendation as their artificial simplicity.<sup>[2]</sup>

Such is the purity to which our morals have attained; this is the virtue we have made our own. Let the arts and sciences claim the share they have had in this salutary work. I shall add but one reflection more; suppose an inhabitant of some distant country should endeavour to form an idea of European morals from the state of the sciences, the perfection of the arts, the propriety of our public entertainments, the politeness of our behaviour, the affability of our conversation, our constant professions of benevolence, and from those tumultuous assemblies of people of all ranks, who seem, from morning till night, to have no other care than to oblige one another. Such a stranger, I maintain, would arrive at a totally false view of our morality.

Where there is no effect, it is idle to look for a cause: but here the effect is certain and the depravity actual; our minds have been corrupted in proportion as the arts and sciences have improved. Will it be said, that this is a misfortune peculiar to the present age? No, gentlemen, the evils resulting from our vain curiosity are as old as the world. The daily ebb and flow of the tides are not more regularly influenced by the moon, than the morals of a people by the progress of the arts and sciences. As their light has risen above our horizon, virtue has taken flight, and the same phenomenon has been constantly observed in all times and places.

Take Egypt, the first school of mankind, that ancient country, famous for its fertility under a brazen sky; the spot from which Sesostris once set out to conquer the world. Egypt became the mother of philosophy and the fine arts; soon she was conquered by Cambyses, and then successively by the Greeks, the Romans, the Arabs, and finally the Turks.

Take Greece, once peopled by heroes, who twice vanquished Asia. Letters, as yet in their infancy, had not corrupted the disposition of its inhabitants; but the progress of the sciences soon produced a dissoluteness of manners, and the imposition of the Macedonian yoke: from which time Greece, always learned, always voluptuous and always a slave, has experienced amid all its revolutions no more than a change of masters. Not all the

eloquence of Demosthenes could breathe life into a body which luxury and the arts had once enervated.

It was not till the days of Ennius and Terence that Rome, founded by a shepherd, and made illustrious by I peasants, began to degenerate. But after the appearance of an Ovid, a Catullus, a Martial, and the rest of those numerous obscene authors, whose very names are enough to put modesty to the blush, Rome, once the shrine of virtue, became the theatre of vice, a scorn among the nations, and an object of derision even to barbarians. Thus the capital of the world at length submitted to the yoke of slavery it had imposed on others, and the very day of its fall was the eve of that on which it conferred on one of its citizens the title of Arbiter of Good Taste.

What shall I say of that metropolis of the Eastern Empire, which, by its situation, seemed destined to be the capital of the world; that refuge of the arts and sciences, when they were banished from the rest of Europe, more perhaps by wisdom than barbarism? The most profligate debaucheries, the most abandoned villainies, the most atrocious crimes, plots, murders and assassinations form the warp and woof of the history of Constantinople. Such is the pure source from which have flowed to us the floods of knowledge on which the present age so prides itself.

But wherefore should we seek, in past ages, for proofs of a truth, of which the present affords us ample evidence? There is in Asia a vast empire, where learning is held in honour, and leads to the highest dignities in the state. If the sciences improved our morals, if they inspired us with courage and taught us to lay down our lives for the good of our country, the Chinese should be wise, free and invincible. But, if there be no vice they do not practise, no crime with which they are not familiar; if the sagacity of their ministers, the supposed wisdom of their laws, and the multitude of inhabitants who people that vast empire, have alike failed to preserve them from the yoke of the rude and ignorant Tartars, of what use were their men of science and literature? What advantage has that country reaped from the honours bestowed on its learned men? Can it be that of being peopled by a race of scoundrels and slaves?

Contrast with these instances the morals of those few nations which, being preserved from the contagion of useless knowledge, have by their virtues become happy in themselves and afforded an example to the rest of the

world. Such were the first inhabitants of Persia, a nation so singular that virtue was taught among them in the same manner as the sciences are with us. They very easily subdued Asia, and possess the exclusive glory of having had the history of their political institutions regarded as a philosophical romance. Such were the Scythians, of whom such wonderful eulogies have come down to us. Such were the Germans, whose simplicity, innocence and virtue, afforded a most delightful contrast to the pen of an historian, weary of describing the baseness and villainies of an enlightened, opulent and voluptuous nation. Such had been even Rome in the days of its poverty and ignorance. And such has shown itself to be, even in our own times, that rustic nation, whose justly renowned courage not even adversity could conquer, and whose fidelity no example could corrupt.<sup>[3]</sup>

It is not through stupidity that the people have preferred other activities to those of the mind. They were not ignorant that in other countries there were men who spent their time in disputing idly about the sovereign good, and about vice and virtue. They knew that these useless thinkers were lavish in their own praises, and stigmatised other nations contemptuously as barbarians. But they noted the morals of these people, and so learnt what to think of their learning.<sup>[4]</sup>

Can it be forgotten that, in the very heart of Greece, there arose a city as famous for the happy ignorance of its inhabitants, as for the wisdom of its laws; a republic of demi-gods rather than of men, so greatly superior their virtues seemed to those of mere humanity? Sparta, eternal proof of the vanity of science, while the vices, under the conduct of the fine arts, were being introduced into Athens, even while its tyrant was carefully collecting together the works of the prince of poets, was driving from her walls artists and the arts, the learned and their learning!

The difference was seen in the outcome. Athens became the seat of politeness and taste, the country of orators and philosophers. The elegance of its buildings equalled that of its language; on every side might be seen marble and canvas, animated by the hands of the most skilful artists. From Athens we derive those astonishing performances, which will serve as models to every corrupt age. The picture of Lacedæmon is not so highly coloured. There, the neighbouring nations used to say, "men were born virtuous, their native air seeming to inspire them with virtue." But its inhabitants have left us nothing but the memory of their heroic actions:

monuments that should not count for less in our eyes than the most curious relics of Athenian marble.

It is true that, among the Athenians, there were some few wise men who withstood the general torrent, and preserved their integrity even in the company of the muses. But hear the judgment which the principal, and most unhappy of them, passed on the artists and learned men of his day.

"I have considered the poets," says he, "and I look upon them as people whose talents impose both on themselves and on others; they give themselves out for wise men, and are taken for such; but in reality they are anything sooner than that."

"From the poets," continues Socrates, "I turned to the artists. Nobody was more ignorant of the arts than myself; nobody was more fully persuaded that the artists were possessed of amazing knowledge. I soon discovered, however, that they were in as bad a way as the poets, and that both had fallen into the same misconception. Because the most skilful of them excel others in their particular jobs, they think themselves wiser than all the rest of mankind. This arrogance spoilt all their skill in my eyes, so that, putting myself in the place of the oracle, and asking myself whether I would rather be what I am or what they are, know what they know, or know that I know nothing, I very readily answered, for myself and the god, that I had rather remain as I am.

"None of us, neither the sophists, nor the poets, nor the orators, nor the artists, nor I, know what is the nature of the *true*, the *good*, or the *beautiful*. But there is this difference between us; that, though none of these people know anything, they all think they know something; whereas for my part, if I know nothing, I am at least in no doubt of my ignorance. So the superiority of wisdom, imputed to me by the oracle, is reduced merely to my being fully convinced that I am ignorant of what I do not know."

Thus we find Socrates, the wisest of men in the judgment of the god, and the most learned of all the Athenians in the opinion of all Greece, speaking in praise of ignorance. Were he alive now, there is little reason to think that our modern scholars and artists would induce him to change his mind. No, gentlemen, that honest man would still persist in despising our vain sciences. He would lend no aid to swell the flood of books that flows from every quarter: he would leave to us, as he did to his disciples, only the

example and memory of his virtues; that is the noblest method of instructing mankind.

Socrates had begun at Athens, and the elder Cato proceeded at Rome, to inveigh against those seductive and subtle Greeks, who corrupted the virtue and destroyed the courage of their fellow-citizens: culture, however, prevailed. Rome was filled with philosophers and orators, military discipline was neglected, agriculture was held in contempt, men formed sects, and forgot their country. To the sacred names of liberty, disinterestedness and obedience to law, succeeded those of Epicurus, Zeno and Arcesilaus. It was even a saying among their own philosophers that since learned men appeared among them, honest men had been in eclipse. Before that time the Romans were satisfied with the practice of virtue; they were undone when they began to study it.

What would the great soul of Fabricius have felt, if it had been his misfortune to be called back to life, when he saw the pomp and magnificence of that Rome, which his arm had saved from ruin, and his honourable name made more illustrious than all its conquests. "Ye gods!" he would have said, "what has become of those thatched roofs and rustic hearths, which were formerly the habitations of temperance and virtue? What fatal splendour has succeeded the ancient Roman simplicity? What is this foreign language, this effeminacy of manners? What is the meaning of these statues, paintings and buildings? Fools, what have you done? You, the lords of the earth, have made yourselves the slaves of the frivolous nations you have subdued. You are governed by rhetoricians, and it has been only to enrich architects, painters, sculptors and stage-players that you have watered Greece and Asia with your blood. Even the spoils of Carthage are the prize of a flute-player. Romans! Romans! make haste to demolish those amphitheatres, break to pieces those statues, burn those paintings; drive from among you those slaves who keep you in subjection, and whose fatal arts are corrupting your morals. Let other hands make themselves illustrious by such vain talents; the only talent worthy of Rome is that of conquering the world and making virtue its ruler. When Cyneas took the Roman senate for an assembly of kings, he was not struck by either useless pomp or studied elegance. He heard there none of that futile eloquence, which is now the study and the charm of frivolous orators. What then was the majesty that Cyneas beheld? Fellow citizens, he saw the noblest sight that

ever existed under heaven, a sight which not all your riches or your arts can show; an assembly of two hundred virtuous men, worthy to command in Rome, and to govern the world."

But let pass the distance of time and place, and let us see what has happened in our own time and country; or rather let us banish odious descriptions that might offend our delicacy, and spare ourselves the pains of repeating the same tilings under different names. It was not for nothing that I invoked the Manes of Fabricius; for what have I put into his mouth, that might not have come with as much propriety from Louis the Twelfth or Henry the Fourth? It is true that in France Socrates would not have drunk the hemlock, but he would have drunk of a potion infinitely more bitter, of insult, mockery and contempt a hundred times worse than death.

Thus it is that luxury, profligacy and slavery, have been, in all ages, the scourge of the efforts of our pride to emerge from that happy state of ignorance, in which the wisdom of providence had placed us. That thick veil with which it has covered all its operations seems to be a sufficient proof that it never designed us for such fruitless researches. But is there, indeed, one lesson it has taught us, by which we have rightly profited, or which we have neglected with impunity? Let men learn for once that nature would have preserved them from science, as a mother snatches a dangerous weapon from the hands of her child. Let them know that all the secrets she hides are so many evils from which she protects them, and that the very difficulty they find in acquiring knowledge is not the least of her bounty towards them. Men are perverse; but they would have been far worse, if they had had the misfortune to be born learned.

How humiliating are these reflections to humanity, and how mortified by them our pride should be! What! it will be asked, is uprightness the child of ignorance? Is virtue inconsistent with learning? What consequences might not be drawn from such suppositions? But to reconcile these apparent contradictions, we need only examine closely the emptiness and vanity of those pompous titles, which are so liberally bestowed on human knowledge, and which so blind our judgment. Let us consider, therefore, the arts and sciences in themselves. Let us see what must result from their advancement, and let us not hesitate to admit the truth of all those points on which our arguments coincide with the inductions we can make from history.

---

[1] Sovereigns always see with pleasure a taste for the arts of amusement and superfluity, which do not result in the exportation of bullion, increase among their subjects. They very well know that, besides nourishing that littleness of mind which is proper to slavery, the increase of artificial wants only binds so many more chains upon the people. Alexander, wishing to keep the Ichthyophages in a state of dependence, compelled them to give up fishing, and subsist on the customary food of civilised nations. The American savages, who go naked, and live entirely on the products of the chase, have been always impossible to subdue. What yoke, indeed, can be imposed on men who stand in need of nothing?

[2] "I love," said Montaigne, "to converse and hold an argument; but only with very few people, and that for my own gratification. For to do so, by way of affording amusement for the great, or of making a parade of one's talents, is, in my opinion, a trade very ill-becoming a man of honour." It is the trade of all our intellectuals, save one.

[3] I dare not speak of those happy nations, who did not even know the name of many vices, which we find it difficult to suppress; the savages of America, whose simple and natural mode of government Montaigne preferred, without hesitation, not only to the laws of Plato, but to the most perfect visions of government philosophy can ever suggest. He cites many examples, striking for those who are capable of appreciating them. But, what of all that, says he, they can't run to a pair of breeches!

[4] What are we to think was the real opinion of the Athenians themselves about eloquence, when they were so very careful to banish declamation from that upright tribunal, against whose decision even their gods made no appeal? What did the Romans think of physicians, when they expelled medicine from the republic? And when the relics of humanity left among the Spaniards induced them to forbid their lawyers to set foot in America, what must they have thought of jurisprudence? May it not be said that they thought, by this single expedient, to make reparation for all the outrages they had committed against the unhappy Indians?

---

## THE SECOND PART

An ancient tradition passed out of Egypt into Greece, that some god, who was an enemy to the repose of mankind, was the inventor of the sciences.<sup>[1]</sup> What must the Egyptians, among whom the sciences first arose, have thought of them? And they beheld, near at hand, the sources from which they sprang. In fact, whether we turn to the annals of the world, or eke out with philosophical investigations the uncertain chronicles of history, we shall not find for human knowledge an origin answering to the idea we are pleased to entertain of it at present. Astronomy was born of superstition, eloquence of ambition, hatred, falsehood and flattery; geometry of avarice; physics of an idle curiosity; and even moral philosophy of human pride.

Thus the arts and sciences owe their birth to our vices; we should be less doubtful of their advantages, if they had sprung from our virtues.

Their evil origin is, indeed, but too plainly reproduced in their objects. What would become of the arts, were they not cherished by luxury? If men were not unjust, of what use were jurisprudence? What would become of history, if there were no tyrants, wars, or conspiracies? In a word, who would pass his life in barren speculations, if everybody, attentive only to the obligations of humanity and the necessities of nature, spent his whole life in serving his country, obliging his friends, and relieving the unhappy? Are we then made to live and die on the brink of that well at the bottom of which Truth lies hid? This reflection alone is, in my opinion, enough to discourage at first setting out every man who seriously endeavours to instruct himself by the study of philosophy.

What a variety of dangers surrounds us! What a number of wrong paths present themselves in the investigation of the sciences! Through how many errors, more perilous than truth itself is useful, must we not pass to arrive at it? The disadvantages we lie under are evident; for falsehood is capable of an infinite variety of combinations; but the truth has only one manner of being. Besides, where is the man who sincerely desires to find it? Or even admitting his good will, by what characteristic marks is he sure of knowing it? Amid the infinite diversity of opinions where is the criterion<sup>[2]</sup> by which we may certainly judge of it? Again, what is still more difficult, should we even be fortunate enough to discover it, who among us will know how to make right use of it?

If our sciences are futile in the objects they propose, they are no less dangerous in the effects they produce. Being the effect of idleness, they generate idleness in their turn; and an irreparable loss of time is the first prejudice which they must necessarily cause to society. To live without doing some good is a great evil as well in the political as in the moral world; and hence every useless citizen should be regarded as a pernicious person. Tell me then, illustrious philosophers, of whom we learn the ratios in which attraction acts in vacuo; and in the revolution of the planets, the relations of spaces traversed in equal times; by whom we are taught what curves have conjugate points, points of inflexion, and cusps; how the soul and body correspond, like two clocks, without actual communication; what planets may be inhabited; and what insects reproduce in an extraordinary

manner. Answer me, I say, you from whom we receive all this sublime information, whether we should have been less numerous, worse governed, less formidable, less flourishing, or more perverse, supposing you had taught us none of all these fine things.

Reconsider therefore the importance of your productions; and, since the labours of the most enlightened of our learned men and the best of our citizens are of so little utility, tell us what we ought to think of that numerous herd of obscure writers and useless litterateurs, who devour without any return the substance of the State.

Useless, do I say? Would God they were! Society would be more peaceful, and morals less corrupt. But these vain and futile declaimers go forth on all sides, armed with their fatal paradoxes, to sap the foundations of our faith, and nullify virtue. They smile contemptuously at such old names as patriotism and religion, and consecrate their talents and philosophy to the destruction; and defamation of all that men hold sacred. Not that they bear any real hatred to virtue or dogma; they are the enemies of public opinion alone; to bring them to the foot of the altar, it would be enough to banish them to a land of atheists. What extravagancies will not the rage of singularity induce men to commit!

The waste of time is certainly a great evil; but still greater evils attend upon literature and the arts. One is luxury, produced like them by indolence and vanity. Luxury is seldom unattended by the arts and sciences; and they are always attended by luxury. I know that our philosophy, fertile in paradoxes, pretends, in contradiction to the experience of all ages, that luxury contributes to the splendour of States. But, without insisting on the necessity of sumptuary laws, can it be denied that rectitude of morals is essential to the duration of empires, and that luxury is diametrically opposed to such rectitude? Let it be admitted that luxury is a certain indication of wealth; that it even serves, if you will, to increase such wealth: what conclusion is to be drawn from this paradox, so worthy of the times? And what will become of virtue if riches are to be acquired at any cost? The politicians of the ancient world were always talking of morals and virtue; ours speak of nothing but commerce and money. One of them will tell you that in such a country a man is worth just as much as he will sell for at Algiers: another, pursuing the same mode of calculation, finds that in some countries a man is worth nothing, and in others still less than nothing; they

value men as they do droves of oxen. According to them, a man is worth no more to the State, than the amount he consumes; and thus a Sybarite would be worth at least thirty Lacedæmonians. Let these writers tell me, however, which of the two republics, Sybaris or Sparta, was subdued by a handful of peasants, and which became the terror of Asia.

The monarchy of Cyrus was conquered by thirty thousand men, led by a prince poorer than the meanest of Persian Satraps: in like manner the Scythians, the poorest of all nations, were able to resist the most powerful monarchs of the universe. When two famous republics contended for the empire of the world, the one rich and the other poor, the former was subdued by the latter. The Roman empire in its turn, after having engulfed all the riches of the universe, fell a prey to peoples who knew not even what riches were. The Franks conquered the Gauls, and the Saxons England, without any other treasures than their bravery and their poverty. A band of poor mountaineers, whose whole cupidity was confined to the possession of a few sheep-skins, having first given a check to the arrogance of Austria, went on to crush the opulent and formidable house of Burgundy, which at that time made the potentates of Europe tremble. In short, all the power and wisdom of the heir of Charles the Fifth, backed by all the treasures of the Indies, broke before a few herring-fishers. Let our politicians condescend to lay aside their calculations for a moment, to reflect on these examples; let them learn for once that money, though it buys everything else, cannot buy morals and citizens. What then is the precise point in dispute about luxury? It is to know which is most advantageous to empires, that their existence should be brilliant and momentary, or virtuous and lasting? I say brilliant, but with what lustre! A taste for ostentation never prevails in the same minds as a taste for honesty. No, it is impossible that understandings, degraded by a multitude of futile cares, should ever rise to what is truly great and noble; even if they had the strength, they would want the courage.

Every artist loves applause. The praise of his contemporaries is the most valuable part of his recompense. What then will he do to obtain it, if he have the misfortune to be born among a people, and at a time, when learning is in vogue, and the superficiality of youth is in a position to lead the fashion; when men have sacrificed their taste to those who tyrannise over their liberty, and one sex dare not approve anything but what is proportionate to the pusillanimity of the other,<sup>[3]</sup> when the greatest

masterpieces of dramatic poetry are condemned, and the noblest of musical productions neglected? This is what he will do. He will lower his genius to the level of the age, and will rather submit to compose mediocre works, that will be admired during his life-time, than labour at sublime achievements which will not be admired till long after he is dead. Let the famous Voltaire tell us how many nervous and masculine beauties he has sacrificed to our false delicacy, and how much that is great and noble, that spirit of gallantry, which delights in what is frivolous and petty, has cost him.

It is thus that the dissolution of morals, the necessary consequence of luxury, brings with it in its turn the corruption of taste. Further, if by chance there be found among men of average ability, an individual with enough strength of mind to refuse to comply with the spirit of the age, and to debase himself by puerile productions, his lot will be hard. He will die in indigence and oblivion. This is not so much a prediction, as a fact already confirmed by experience! Yes, Carle and Pierre Vanloo, the time is already come when your pencils, destined to increase the majesty of our temples by sublime and holy images, must fall from your hands, or else be prostituted to adorn the panels of a coach with lascivious paintings. And you, inimitable Pigal, rival of Phidias and Praxiteles, whose chisel the ancients would have employed to carve them gods, whose images almost excuse their idolatry in our eyes; even your hand must condescend to fashion the belly of an ape, or else remain idle.

We cannot reflect on the morality of mankind without contemplating with pleasure the picture of the simplicity which prevailed in the earliest times. This image may be justly compared to a beautiful coast, adorned only by the hands of nature; towards which our eyes are constantly turned, and which we see receding with regret. While men were innocent and virtuous and loved to have the gods for witnesses of their actions, they dwelt together in the same huts; but when they became vicious, they grew tired of such inconvenient onlookers, and banished them to magnificent temples. Finally, they expelled their deities even from these, in order to dwell there themselves; or at least the temples of the gods were no longer more magnificent than the palaces of the citizens. This was the height of degeneracy; nor could vice ever be carried to greater lengths than when it was seen, supported, as it were, at the doors of the great, on columns of marble, and graven on Corinthian capitals.

As the conveniences of life increase, as the arts are brought to perfection, and luxury spreads, true courage flags, the virtues disappear; and all this is the effect of the sciences and of those arts which are exercised in the privacy of men's dwellings. When the Goths ravaged Greece, the libraries only escaped the flames owing to an opinion that was set on foot among them, that it was best to leave the enemy with a possession so calculated to divert their attention from military exercises, and keep them engaged in indolent and sedentary occupations.

Charles the Eighth found himself master of Tuscany and the kingdom of Naples, almost without drawing sword; and all his court attributed this unexpected success to the fact that the princes and nobles of Italy applied themselves with greater earnestness to the cultivation of their understandings than to active and martial pursuits. In fact, says the sensible person who records these characteristics, experience plainly tells us, that in military matters and all that resemble them application to the sciences tends rather to make men effeminate and cowardly than resolute and vigorous.

The Romans confessed that military virtue was extinguished among them, in proportion as they became connoisseurs in the arts of the painter, the engraver and the goldsmith, and began to cultivate the fine arts. Indeed, as if this famous country was to be for ever an example to other nations, the rise of the Medici and the revival of letters has once more destroyed, this time perhaps for ever, the martial reputation which Italy seemed a few centuries ago to have recovered.

The ancient republics of Greece, with that wisdom which was so conspicuous in most of their institutions, forbade their citizens to pursue all those inactive and sedentary occupations, which by enervating and corrupting the body diminish also the vigour of the mind. With what courage, in fact, can it be thought that hunger and thirst, fatigues, dangers and death, can be faced by men whom the smallest want overwhelms and the slightest difficulty repels? With what resolution can soldiers support the excessive toils of war, when they are entirely unaccustomed to them? With what spirits can they make forced marches under officers who have not even the strength to travel on horseback? It is no answer to cite the reputed valour of all the modern warriors who are so scientifically trained. I hear much of their bravery in a day's battle; but I am told nothing of how they support excessive fatigue, how they stand the severity of the seasons and

the inclemency of the weather. A little sunshine or snow, or the want of a few superfluities, is enough to cripple and destroy one of our finest armies in a few days. Intrepid warriors I permit me for once to tell you the truth, which you seldom hear. Of your bravery I am fully satisfied. I have no doubt that you would have triumphed with Hannibal at Cannæ, and at Trasimene: that you would have passed the Rubicon with Cæsar, and enabled him to enslave his country; but you never would have been able to cross the Alps with the former, or with the latter to subdue your own ancestors, the Gauls.

A war does not always depend on the events of battle: there is in generalship an art superior to that of gaining victories. A man may behave with great intrepidity under fire, and yet be a very bad officer. Even in the common soldier, a little more Strength and vigour would perhaps be more useful than so much courage, which after all is no protection from death. And what does it matter to the State whether its troops perish by cold and fever, or by the sword of the enemy?

If the cultivation of the sciences is prejudicial to military qualities, it is still more so to moral qualities. Even from our infancy an absurd system of education serves to adorn our wit and corrupt our judgment. We see, on every side, huge institutions, where our youth are educated at great expense, and instructed in everything but their duty. Your children will be ignorant of their own language, when they can talk others which are not spoken anywhere. They will be able to compose verses which they can hardly understand; and, without being capable of distinguishing truth from error, they will possess the art of making them unrecognisable by specious arguments. But magnanimity, equity, temperance, humanity and courage will be words of which they know not the meaning. The dear name of country will never strike on their ears; and if they ever hear speak of God,<sup>[4]</sup> it will be less to fear, than to be frightened of Him. I would as soon, said a wise man, that my pupil had spent his time in the tennis court as in this manner; for there his body at least would have got exercise.

I well know that children ought to be kept employed, and that idleness is for them the danger most to be feared. But what should they be taught? This is undoubtedly an important question. Let them be taught what they are to practise when they come to be men;<sup>[5]</sup> not what they ought to forget.

Our gardens are adorned with statues and our galleries with pictures. What would you imagine these masterpieces of art, thus exhibited to public admiration, represent? The great men, who have defended their country, or the still greater men who have enriched it by their virtues? Far from it. They are the images of every perversion of heart and mind, carefully selected from ancient mythology, and presented to the early curiosity of our children, doubtless that they may have before their eyes the representations of vicious actions, even before they are able to read.

Whence arise all those abuses, unless it be from that fatal inequality introduced among men by the difference of talents and the cheapening of virtue? This is the most evident effect of all our studies, and the most dangerous of all their consequences. The question is no longer whether a man is honest, but whether he is clever. We do not ask whether a book is useful, but whether it is well-written. Rewards are lavished on wit and ingenuity, while virtue is left unhonoured. There are a thousand prizes for fine discourses, and none for good actions. I should be glad, however, to know whether the honour attaching to the best discourse that ever wins the prize in this Academy is comparable with the merit of having founded the prize.

A wise man does not go in chase of fortune; but he is by no means insensible to glory, and when he sees it so ill distributed, his virtue, which might have been animated by a little emulation, and turned to the advantage of society, droops and dies away in obscurity and indigence. It is for this reason that the agreeable arts must in time everywhere be preferred to the useful; and this truth has been but too much confirmed since the revival of the arts and sciences. We have physicists, geometers, chemists, astronomers, poets, musicians, and painters in plenty; but we have no longer a citizen among us; or if there be found a few scattered over our abandoned countryside, they are left to perish there unnoticed and neglected. Such is the condition to which we are reduced, and such are our feelings towards those who give us our daily bread, and our children milk.

I confess, however, that the evil is not so great as it might have become. The eternal providence, in placing salutary simples beside noxious plants, and making poisonous animals contain their own antidote, has taught the sovereigns of the earth, who are its ministers, to imitate its wisdom. It is by following this example that the truly great monarch, to whose glory every

age will add new lustre, drew from the very bosom of the arts and sciences, the very fountains of a thousand lapses from rectitude, those famous societies, which, while they are depositaries of the dangerous trust of human knowledge, are yet the sacred guardians of morals, by the attention they pay to their maintenance among themselves in all their purity, and by the demands which they make on every member whom they admit.

These wise institutions, confirmed by his august successor and imitated by all the kings of Europe, will serve at least to restrain men of letters, who, all aspiring to the honour of being admitted into these Academies, will keep watch over themselves, and endeavour to make themselves worthy of such honour by useful performances and irreproachable morals. Those Academies also, which, in proposing prizes for literary merit, make choice of such subjects as are calculated to arouse the love of virtue in the hearts of citizens, prove that it prevails in themselves, and must give men the rare and real pleasure of finding learned societies devoting themselves to the enlightenment of mankind, not only by agreeable exercises of the intellect, but also by useful instructions.

An objection which may be made is, in fact, only an additional proof of my argument. So much precaution proves but too evidently the need for it. We never seek remedies for evils that do not exist. Why, indeed, must these bear all the marks of ordinary remedies, on account of their inefficacy? The numerous establishments in favour of the learned are only adapted to make men mistake the objects of the sciences, and turn men's attention to the cultivation of them. One would be inclined to think, from the precautions everywhere taken, that we are overstocked with husbandmen, and are afraid of a shortage of philosophers. I will not venture here to enter into a comparison between agriculture and philosophy, as they would not bear it. I shall only ask What is philosophy? What is contained in the writings of the most celebrated philosophers? What are the lessons of these friends of wisdom. To hear them, should we not take them for so many mountebanks, exhibiting themselves in public, and crying out, *Here, Here, come to me, I am the only true doctor?* One of them teaches that there is no such thing as matter, but that everything exists only in representation. Another declares that there is no other substance than matter, and no other God than the world itself. A third tells you that there are no such things as virtue and vice, and that moral good and evil are chimeras; while a fourth informs you

that men are only beasts of prey, and may conscientiously devour one another. Why, my great philosophers, do you not reserve these wise and profitable lessons for your friends and children? You would soon reap the benefit of them, nor should we be under any apprehension of our own becoming your disciples.

Such are the wonderful men, whom their contemporaries held in the highest esteem during their lives, and to whom immortality has been attributed since their decease. Such are the wise maxims we have received from them, and which are transmitted, from age to age, to our descendants. Paganism, though given over to all the extravagances of human reason, has left nothing to compare with the shameful monuments which have been prepared by the art of printing, during the reign of the gospel. The impious writings of Leucippus and Diagoras perished with their authors. The world, in their days, was ignorant of the art of immortalising the errors and extravagancies of the human mind. But thanks to the art of printing<sup>[6]</sup> and the use we make of it, the pernicious reflections of Hobbes and Spinoza will last for ever. Go, famous writings, of which the ignorance and rusticity of our forefathers would have been incapable. Go to our descendants, along with those still more pernicious works which reek of the corrupted manners of the present age! Let them together convey to posterity a faithful history of the progress and advantages of our arts and sciences. If they are read, they will leave not a doubt about the question we are now discussing, and unless mankind should then be still more foolish than we, they will lift up their hands to Heaven and exclaim in bitterness of heart: "Almighty God! thou who holdest in Thy hand the minds of men, deliver us from the fatal arts and sciences of our forefathers; give us back ignorance, innocence and poverty, which alone can make us happy and are precious in Thy sight."

But if the progress of the arts and sciences has added nothing to our real happiness; if it has corrupted our morals, and if that corruption has vitiated our taste, what are we to think of the herd of text-book authors, who have removed those impediments which nature purposely laid in the way to the Temple of the Muses, in order to guard its approach and try the powers of those who might be tempted to seek knowledge? What are we to think of those compilers who have indiscreetly broken open the door of the sciences, and introduced into their sanctuary a populace unworthy to approach it, when it was greatly to be wished that all who should be found incapable of

making a considerable progress in the career of learning should have been repulsed at the entrance, and thereby cast upon those arts which are useful to society. A man who will be all his life a bad versifier, or a third-rate geometrician, might have made nevertheless an excellent clothier. Those whom nature intended for her disciples have not needed masters. Bacon, Descartes and Newton, those teachers of mankind, had themselves no teachers. What guide indeed could have taken them so far as their sublime genius directed them? Ordinary masters would only have cramped their intelligence, by confining it within the narrow limits of their own capacity. It was from the obstacles they met with at first, that they learned to exert themselves, and bestirred themselves to traverse the vast field which they covered. If it be proper to allow some men to apply themselves to the study of the arts and sciences, it is only those who feel themselves able to walk alone in their footsteps and to outstrip them. It belongs only to these few to raise monuments to the glory of the human understanding. But if we are desirous that nothing should be above their genius, nothing should be beyond their hopes. This is the only encouragement they require. The soul insensibly adapts itself to the objects on which it is employed, and thus it is that great occasions produce great men. The greatest orator in the world was Consul of Rome, and perhaps the greatest of philosophers Lord Chancellor of England. Can it be conceived that, if the former had only been a professor at some University, and the latter a pensioner of some Academy, their works would not have suffered from their situation. Let not princes disdain to admit into their councils those who are most capable of giving them good advice. Let them renounce the old prejudice, which was invented by the pride of the great, that the art of governing mankind is more difficult than that of instructing them; as if it was easier to induce men to do good voluntarily, than to compel them to it by force. Let the learned of the first rank find an honourable refuge in their courts; let them there enjoy the only recompense worthy of them, that of promoting by their influence the happiness of the peoples they have enlightened by their wisdom. It is by this means only that we are likely to see what virtue, science and authority can do, when animated by the noblest emulation, and working unanimously for the happiness of mankind.

But so long as power alone is on one side, and knowledge and Understanding alone on the other, the learned will seldom make great

objects their study, princes will still more rarely do great actions, and the peoples will continue to be, as they are, mean, corrupt and miserable.

As for us, ordinary men, on whom Heaven has not been pleased to bestow such great talents; as we are not destined to reap such glory, let us remain in our obscurity. Let us not covet a reputation we should never attain, and which, in the present state of things, would never make up to us for the trouble it would have cost us, even if we were fully qualified to obtain it. Why should we build our happiness on the opinions of others, when we can find it in our own hearts? Let us leave to others the task of instructing mankind in their duty, and confine ourselves to the discharge of our own. We have no occasion for greater knowledge than this.

Virtue! sublime science of simple minds, are such industry and preparation needed if we are to know you? Are not your principles graven on every heart? Need we do more, to learn your laws, than examine ourselves, and listen to the voice of conscience, when the passions are silent?

This is the true philosophy, with which we must learn to be content, without envying the fame of those celebrated men, whose names are immortal in the republic of letters. Let us, instead of envying them, endeavour to make, between them and us, that honourable distinction which was formerly seen to exist between two great peoples, that the one knew how to speak, and the other how to act, aright.

---

[1] It is easy to see the allegory in the fable of Prometheus: and it does not appear that the Greeks, who chained him to the Caucasus, had a better opinion of him than the Egyptians had of their god Theutus. The Satyr, says an ancient fable, the first time he saw a fire, was going to kiss and embrace it; but Prometheus cried out to him to forbear, or his beard would rue it. It burns, says he, everything that touches it.

[2] The less we know, the more we think we know. The peripatetics doubted of nothing. Did not Descartes construct the universe with cubes and vortices? And is there in all Europe one single physicist who does not boldly explain the inexplicable mysteries of electricity, which will, perhaps, be for ever the despair of real philosophers?

[3] I am far from thinking that the ascendancy which women have obtained over men is an evil in itself. It is a present which nature has made them for the good of mankind. If better directed, it might be productive of as much good, as it is now of evil. We are not sufficiently sensible of what advantage it would be to society to give a better education to that half of our species which governs the other. Men will always be what women choose to make them. If you wish then that they should be noble and virtuous, let women be taught what greatness of soul and virtue are. The reflections which this subject arouses, and which Plato formerly made, deserve to be more fully developed by a pen worthy of following so great a master, and defending so great a cause.

[4] Pensées philosophiques (Diderot).

[5] Such was the education of the Spartans with regard to one of the greatest of their-kings. It is well worthy of notice, says Montaigne, that the excellent institutions of Lycurgus, which were in truth miraculously perfect, paid as much attention to the bringing up of youth as if this were their principal object, and yet, at the very seat of the Muses, they make so little mention of learning that it seems as if their generous-spirited youth disdained every other restraint, and required, instead of masters of the sciences, instructors in valour, prudence and justice alone.

Let us hear next what the same writer says of the ancient Persians. Plato, says he, relates that the heir to the throne was thus brought up. At his birth he was committed, not to the care of women, but to eunuchs in the highest authority and near the person of the king, on account of their virtue. These undertook to render his body beautiful and healthy. At seven years of age they taught him to ride and go hunting. At fourteen he was placed in the hands of four, the wisest, the most just, the most temperate and the bravest persons in the kingdom. The first instructed him in religion, the second taught him to adhere inviolably to truth, the third to conquer his passions, and the fourth to be afraid of nothing. All, I may add, taught him to be a good man; but not one taught him to be learned.

Astyages, in Xenophon, desires Cyrus to give him an account of his last lesson. It was this, answered Cyrus, one of the big boys, of the school having a small coat, gave it to a little boy and took away from him his coat, which was larger. Our master having appointed me arbiter in the dispute, I ordered that matters should stand as they were, as each boy seemed to be better suited than before. The master, however, remonstrated with me, saying that I considered only convenience, whereas justice ought to have been the first concern, and justice teaches that no one should suffer forcible interference with what belongs to him. He added that he was punished for his wrong decision, just as boys are punished in our country schools when they forget the first aorist of *τύπτω*. My tutor must make me a fine harangue, *in genere demonstrative*, before he will persuade me that his school is as good as this.

[6] If we consider the frightful disorders which printing has already caused in Europe, and judge of the future by the progress of its evils from day to day, it is easy to foresee that sovereigns will hereafter take as much pains to banish this dreadful art from their dominions, as they ever took to encourage it. The Sultan Achmet, yielding to the importunities of certain pretenders to taste, consented to have a press erected at Constantinople; but it was hardly set to work before they were obliged to destroy it, and throw the plant into a well.

It is related that the Caliph Omar, being asked what should be done with the library at Alexandria, answered in these words. "If the books in the library contain anything contrary to the Alcoran, they are evil and ought to be burnt; if they contain only what the Alcoran teaches, they are superfluous." This reasoning has been cited by our men of letters as the height of absurdity; but if Gregory the Great had been in the place of Omar, and the Gospel in the place of the Alcoran, the library would still have been burnt, and it would have been perhaps the finest action of his life.

## A DISCOURSE

ON A SUBJECT PROPOSED BY THE ACADEMY OF DIJON:

# WHAT IS THE ORIGIN OF INEQUALITY AMONG MEN, AND IS IT AUTHORISED BY NATURAL LAW?

---

*Non in depravatis, sed in his qua bene secundum naturam  
se habent, considerandum est quid sit naturale.*

Aristotle, Politics, Bk. i, ch. 2.

[We should consider what is natural not in things which are depraved  
but in those which are rightly ordered according to nature.]

---

DEDICATION

TO THE

REPUBLIC OF GENEVA

MOST HONOURABLE, MAGNIFICENT AND SOVEREIGN LORDS, convinced that only a virtuous citizen can confer on his country honours which it can accept, I have been for thirty years past working to make myself worthy to offer you some public homage; and, this fortunate opportunity supplementing in some degree the insufficiency of my efforts, I have thought myself entitled to follow in embracing it the dictates of the zeal which inspires me, rather than the right which should have been my authorisation. Having had the happiness to be born among you, how could I reflect on the equality which nature has ordained between men, and the inequality which they have introduced, without reflecting on the profound wisdom by which both are in this State happily combined and made to coincide, in the manner that is most in conformity with natural law, and most favourable to society, to the maintenance of public order and to the happiness of individuals? In my researches after the best rules common sense can lay down for the constitution of a government, I have been so struck at finding them all in actuality in your own, that even had I not been born within your walls I should have thought it indispensable for me to offer this picture of human society to that people, which of all others seems to be possessed of its greatest advantages, and to have best guarded against its abuses.

If I had had to make choice of the place of my birth, I should have preferred a society which had an extent proportionate to the limits of the human faculties; that is, to the possibility of being well governed: in which every person being equal to his occupation, no one should be obliged to commit to others the functions with which he was entrusted: a State, in which all the individuals being well known to one another, neither the secret machinations of vice, nor the modesty of virtue should be able to escape the notice and judgment of the public; and in which the pleasant custom of seeing and knowing one another should make the love of country rather a love of the citizens than of its soil.

I should have wished to be born in a country in which the interest of the Sovereign and that of the people must be single and identical; to the end that all the movements of the machine might tend always to the general happiness. And as this could not be the case, unless the Sovereign and the people were one and the same person, it follows that I should have wished to be born under a democratic government, wisely tempered.

I should have wished to live and die free: that is, so far subject to the laws that neither I, nor anybody else, should be able to cast off their honourable yoke: the easy and salutary yoke which the haughtiest necks bear with the greater docility, as they are made to bear no other.

I should have wished then that no one within the State should be able to say he was above the law; and that no one without should be able to dictate so that the State should be obliged to recognise his authority. For, be the constitution of a government what it may, if there be within its jurisdiction a single man who is not subject to the law, all the rest are necessarily at his discretion. And if there be a national ruler within, and a foreign ruler without, however they may divide their authority, it is impossible that both should be duly obeyed, or that the State should be well governed.

I should not have chosen to live in a republic of recent institution, however excellent its laws; for fear the government, being perhaps otherwise framed than the circumstances of the moment might require, might disagree with the new citizens, or they with it, and the State run the risk of overthrow and destruction almost as soon as it came into being. For it is with liberty as it is with those solid and succulent foods, or with those generous wines which are well adapted to nourish and fortify robust constitutions that are used to

them, but ruin and intoxicate weak and delicate constitutions to which they are not suited. Peoples once accustomed to masters are not in a condition to do without them. If they attempt to shake off the yoke, they still more estrange themselves from freedom, as, by mistaking for it an unbridled license to which it is diametrically opposed, they nearly always manage, by their revolutions, to hand themselves over to seducers, who only make their chains heavier than before. The Roman people itself, a model for all free peoples, was wholly incapable of governing itself when it escaped from the oppression of the Tarquins. Debased by slavery, and the ignominious tasks which had been imposed upon it, it was at first no better than a stupid mob, which it was necessary to control and govern with the greatest wisdom; in order that, being accustomed by degrees to breathe the health-giving air of liberty, minds which had been enervated or rather brutalised under tyranny, might gradually acquire that severity of morals and spirit of fortitude which made it at length the people of all most worthy of respect. I should, then, have sought out for my country some peaceful and happy Republic, of an antiquity that lost itself, as it were, in the night of time: which had experienced only such shocks as served to manifest and strengthen the courage and patriotism of its subjects; and whose citizens, long accustomed to a wise independence, were not only free, but worthy to be so.

I should have wished to choose myself a country, diverted, by a fortunate impotence, from the brutal love of conquest, and secured, by a still more fortunate situation, from the fear of becoming itself the conquest of other States: a free city situated between several nations, none of which should have any interest in attacking it, while each had an interest in preventing it from being attacked by the others; in short, a Republic which should have nothing to tempt the ambition of its neighbours, but might reasonably depend on their assistance in case of need. It follows that a republican State so happily situated could have nothing to fear but from itself; and that, if its members trained themselves to the use of arms, it would be rather to keep alive that military ardour and courageous spirit which are so proper among free-men, and tend to keep up their taste for liberty, than from the necessity of providing for their defence.

I should have sought a country, in which the right of legislation was vested in all the citizens; for who can judge better than they of the conditions under which they had best dwell together in the same society? Not that I

should have approved of Plebiscita, like those among the Romans; in which the rulers in the State, and those most interested in its preservation, were excluded from the deliberations on which in many cases its security depended; and in which, by the most absurd inconsistency, the magistrates were deprived of rights which the meanest citizens enjoyed.

On the contrary, I should have desired that, in order to prevent self-interested and ill-conceived projects, and all such dangerous innovations as finally ruined the Athenians, each man should not be at liberty to propose new laws at pleasure; but that this right should belong exclusively to the magistrates; and that even they should use it with so much caution, the people, on its side, be so reserved in giving its consent to such laws, and the promulgation of them be attended with so much solemnity, that before the constitution could be upset by them, there might be time enough for all to be convinced, that it is above all the great antiquity of the laws which makes them sacred and venerable, that men soon learn to despise laws which they see daily altered, and that States, by accustoming themselves to neglect their ancient customs under the pretext of improvement, often introduce greater evils than those they endeavour to remove.

I should have particularly avoided, as necessarily ill-governed, a Republic in which the people, imagining themselves in a position to do without magistrates, or at least to leave them with only a precarious authority, should imprudently have kept for themselves the administration of civil affairs and the execution of their own laws. Such must have been the rude constitution of primitive governments, directly emerging from a state of nature; and this was another of the vices that contributed to the downfall of the Republic of Athens.

But I should have chosen a community in which the individuals, content with sanctioning their laws, and deciding the most important public affairs in general assembly and on the motion of the rulers, had established honoured tribunals, carefully distinguished the several departments, and elected year by year some of the most capable and upright of their fellow-citizens to administer justice and govern the State; a community, in short, in which the virtue of the magistrates thus bearing witness to the wisdom of the people, each class reciprocally did the other honour. If in such a case any fatal misunderstandings arose to disturb the public peace, even these intervals of blindness and error would bear the marks of moderation, mutual

esteem, and a common respect for the laws; which are sure signs and pledges of a reconciliation as lasting as sincere. Such are the advantages, most honourable, magnificent and sovereign lords, which I should have sought in the country in which I should have chosen to be born. And if providence had added to all these a delightful situation, a temperate climate, a fertile soil, and the most beautiful countryside under Heaven, I should have desired only, to complete my felicity, the peaceful enjoyment of all these blessings, in the bosom of this happy country; to live at peace in the sweet society of my fellow-citizens, and practising towards them, from their own example, the duties of friendship, humanity, and every other virtue, to leave behind me the honourable memory of a good man, and an upright and virtuous patriot.

But, if less fortunate or too late grown wise, I had seen myself reduced to end an infirm and languishing life in other climates, vainly regretting that peaceful repose which I had forfeited in the imprudence of youth, I should at least have entertained the same feelings in my heart, though denied the opportunity of making use of them in my native country. Filled with a tender and disinterested love for my distant fellow-citizens, I should have addressed them from my heart, much in the following terms.

"My dear fellow-citizens, or rather my brothers, since the ties of blood, as well as the laws, unite almost all of us, it gives me pleasure that I cannot think of you, without thinking, at the same time, of all the blessings you enjoy, and of which none of you, perhaps, more deeply feels the value than I who have lost them. The more I reflect on your civil and political condition, the less can I conceive that the nature of human affairs could admit of a better. In all other governments, when there is a question of ensuring the greatest good of the State, nothing gets beyond projects and ideas, or at best bare possibilities. But as for you, your happiness is complete, and you have nothing to do but enjoy it; you require nothing more to be made perfectly happy, than to know how to be satisfied with being so. Your sovereignty, acquired or recovered by the sword, and maintained for two centuries past by your valour and wisdom, is at length fully and universally acknowledged. Your boundaries are fixed, your rights confirmed and your repose secured by honourable treaties. Your constitution is excellent, being not only dictated by the profoundest wisdom, but guaranteed by great and friendly powers. Your State enjoys

perfect tranquillity; you have neither wars nor conquerors to fear; you have no other master than the wise laws you have yourselves made; and these are administered by upright magistrates of your own choosing. You are neither so wealthy as to be enervated by effeminacy, and thence to lose, in the pursuit of frivolous pleasures, the taste for real happiness and solid virtue; nor poor enough to require more assistance from abroad than your own industry is sufficient to procure you. In the meantime the precious privilege of liberty, which in great nations is maintained only by submission to the most exorbitant impositions, costs you hardly anything for its preservation.

May a Republic, so wisely and happily constituted, last for ever, for an example to other nations, and for the felicity of its own citizens! This is the only prayer you have left to make, the only precaution that remains to be taken. It depends, for the future, on yourselves alone (not to make you happy, for your ancestors have saved you that trouble), but to render that happiness lasting, by your wisdom in its enjoyment. It is on your constant union, your obedience to the laws, and your respect for their ministers, that your preservation depends. If there remains among you the smallest trace of bitterness or distrust, hasten to destroy it, as an accursed leaven which sooner or later must bring misfortune and ruin on the State. I conjure you all to look into your hearts, and to hearken to the secret voice of conscience. Is there any among you who can find, throughout the universe, a more upright, more enlightened and more honourable body than your magistracy? Do not all its members set you an example of moderation, of simplicity of manners, of respect for the laws, and of the most sincere harmony? Place, therefore, without reserve, in such wise superiors, that salutary confidence which reason ever owes to virtue. Consider that they are your own choice, that they justify that choice, and that the honours due to those whom you have dignified are necessarily yours by reflexion. Not one of you is so ignorant as not to know that, when the laws lose their force and those who defend them their authority, security and liberty are universally impossible. Why, therefore, should you hesitate to do that cheerfully and with just confidence which you would all along have been bound to do by your true interest, your duty and reason itself?

Let not a culpable and pernicious indifference to the maintenance of the constitution ever induce you to neglect, in case of need, the prudent advice of the most enlightened and zealous of your fellow-citizens; but let equity,

moderation and firmness of resolution continue to regulate all your proceedings, and to exhibit you to the whole universe as the example of a valiant and modest people, jealous equally of their honour and of their liberty. Beware particularly, as the last piece of advice I shall give you, of sinister constructions and venomous rumours, the secret motives of which are often more dangerous than the actions at which they are levelled. A whole house will be awake and take the first alarm given by a good and trusty watch-dog, who barks only at the approach of thieves; but we hate the importunity of those noisy curs, which are perpetually disturbing the public repose, and whose continual ill-timed warnings prevent our attending to them, when they may perhaps be necessary."

And you, most honourable and magnificent lords, the worthy and revered magistrates of a free people, permit me to offer you in particular my duty and homage. If there is in the world a station capable of conferring honour on those who fill it, it is undoubtedly that which virtue and talents combine to bestow, that of which you have made yourselves worthy, and to which you have been promoted by your fellow-citizens. Their worth adds a new lustre to your own; while, as you have been chosen, by men capable of governing others, to govern themselves, I cannot but hold you as much superior to all other magistrates, as a free people, and particularly that over which you have the honour to preside, is by its wisdom and its reason superior to the populace of other States.

Be it permitted me to cite an example of which there ought to have existed better records, and one which will be ever near to my heart. I cannot recall to mind, without the sweetest emotions, the memory of that virtuous citizen, to whom I owe my being, and by whom I was often instructed, in my infancy, in the respect which is due to you. I see him still, living by the work of his hands, and feeding his soul on the sublimest truths. I see the works of Tacitus, Plutarch and Grotius, lying before him in the midst of the tools of his trade. At his side stands his dear son, receiving, alas with too little profit, the tender instructions of the best of fathers. But, if the follies of youth made me for a while forget his wise lessons, I have at length the happiness to be conscious that, whatever propensity one may have to vice, it is not easy for an education, with which love has mingled, to be entirely thrown away.

Such, my most honourable and magnificent lords, are the citizens, and even the common inhabitants of the State which you govern; such are those intelligent and sensible men, of whom, under the name of workmen and the people, it is usual, in other nations, to have a low and false opinion. My father, I own with pleasure, was in no way distinguished among his fellow-citizens. He was only such as they all are; and yet, such as he was, there is no country, in which his acquaintance would not have been coveted, and cultivated even with advantage by men of the highest character. It would not become me, nor is it, thank Heaven, at all necessary for me to remind you of the regard which such men have a right to expect of their magistrates, to whom they are equal both by education and by the rights of nature and birth, and inferior only, by their own will, by that preference which they owe to your merit, and, for giving you, can claim some sort of acknowledgment on your side. It is with a lively satisfaction I understand that the greatest candour and condescension attend, in all your behaviour towards them, on that gravity which becomes the ministers of the law; and that you so well repay them, by your esteem and attention, the respect and obedience which they owe to you. This conduct is not only just but prudent; as it happily tends to obliterate the memory of many unhappy events, which ought to be buried in eternal oblivion. It is also so much the more judicious, as it tends to make this generous and equitable people find a pleasure in their duty; to make them naturally love to do you honour, and to cause those who are the most zealous in the maintenance of their own rights to be at the same time the most disposed to respect yours.

It ought not to be thought surprising that the rulers of a civil society should have the welfare and glory of their communities at heart: but it is uncommonly fortunate for the peace of men, when those persons who look upon themselves as the magistrates, or rather the masters of a more holy and sublime country, show some love for the earthly country which maintains them. I am happy in having it in my power to make so singular an exception in our favour, and to be able to rank, among its best citizens, those zealous depositaries of the sacred articles of faith established by the laws, those venerable shepherds of souls whose powerful and captivating eloquence are so much the better calculated to bear to men's hearts the maxims of the gospel, as they are themselves the first to put them into practice. All the world knows of the great success with which the art of the pulpit is cultivated at Geneva; but men are so used to hearing divines preach

one thing and practise another, that few have a chance of knowing how far the spirit of Christianity, holiness of manners, severity towards themselves and indulgence towards their neighbours, prevail throughout the whole body of our ministers. It is, perhaps, given to the city of Geneva alone, to produce the edifying example of so perfect a union between its clergy and men of letters. It is in great measure on their wisdom, their known moderation, and their zeal for the prosperity of the State that I build my hopes of its perpetual tranquillity. At the same time, I notice, with a pleasure mingled with surprise and veneration, how much they detest the frightful maxims of those accursed and barbarous men, of whom history furnishes us with more than one example; who, in order to support the pretended rights of God, that is to say their own interests, have been so much the less greedy of human blood, as they were more hopeful their own in particular would be always respected.

I must not forget that precious half of the Republic, which makes the happiness of the other; and whose sweetness and prudence preserve its tranquillity and virtue. Amiable and virtuous daughters of Geneva, it will be always the lot of your sex to govern ours. Happy are we, so long as your chaste influence, solely exercised within the limits of conjugal union, is exerted only for the glory of the State and the happiness of the public. It was thus the female sex commanded at Sparta; and thus you deserve to command at Geneva. What man can be such a barbarian as to resist the voice of honour and reason, coming from the lips of an affectionate wife? Who would not despise; the vanities of luxury, on beholding the simple and modest attire which, from the lustre it derives from you, seems the most favourable to beauty? It is your task to perpetuate, by your insinuating influence and your innocent and amiable rule, a respect for the laws of the State, and harmony among the citizens. It is yours to reunite divided families by happy marriages; and, above all things, to correct, by the persuasive sweetness of your lessons and the modest graces of your conversation, those extravagancies which our young people pick up in other countries, whence, instead of many useful things by which they might profit, they bring home hardly anything, besides a puerile air and a ridiculous manner, acquired among loose women, but an admiration for I know not what so-called grandeur, and paltry recompenses for being slaves, which can never come near the real greatness of liberty. Continue, therefore, always to be what you are, the chaste guardians of our morals, and the

sweet security for our peace, exerting on every occasion the privileges of the heart and of nature, in the interests of duty and virtue.

I flatter myself that I shall never be proved to have been mistaken, in building on such a foundation my hopes of the general happiness of the citizens and the glory of the Republic. It must be confessed, however, that with all these advantages, it will not shine with that lustre, by which the eyes of most men are dazzled; a puerile and fatal taste for which is the most mortal enemy of happiness and liberty.

Let our dissolute youth seek elsewhere light pleasures and long repentances. Let our pretenders to taste admire elsewhere the grandeur of palaces, the beauty of equipages, sumptuous furniture, the pomp of public entertainments, and all the refinements of luxury and effeminacy. Geneva boasts nothing but men; such a sight has nevertheless a value of its own, and those who have a taste for it are well worth the admirers of all the rest.

Deign, most honourable, magnificent and sovereign lords, to receive, and with equal goodness, this respectful testimony of the interest I take in your common prosperity. And, if I have been so unhappy as to be guilty of any indiscreet transport in this glowing effusion of my heart, I beseech you to pardon me, and to attribute it to the tender affection of a true patriot, and to the ardent and legitimate zeal of a man, who can imagine for himself no greater felicity than to see you happy.

Most honourable, magnificent and sovereign lords, I am, with the most profound respect,

Your most humble and obedient servant and fellow-citizen.

J. J. ROUSSEAU.

## PREFACE

Of all human sciences the most useful and most imperfect appears to me to be that of mankind: and I will venture to say, the single inscription on the

Temple of Delphi contained a precept more difficult and more important than is to be found in all the huge volumes that moralists have ever written. I consider the subject of the following discourse as one of the most interesting questions philosophy can propose, and unhappily for us, one of the most thorny that philosophers can have to solve. For how shall we know the source of inequality between men, if we do not begin by knowing mankind? And how shall man hope to see himself as nature made him, across all the changes which the succession of place and time must have produced in his original constitution? How can he distinguish what is fundamental in his nature from the changes and additions which his circumstances and the advances he has made have introduced to modify his primitive condition? Like the statue of Glaucus, which was so disfigured by time, seas and tempests, that it looked more like a wild beast than a god, the human soul, altered in society by a thousand causes perpetually recurring, by the acquisition of a multitude of truths and errors, by the changes happening to the constitution of the body, and by the continual jarring of the passions, has, so to speak, changed in appearance, so as to be hardly recognisable. Instead of a being, acting constantly from fixed and invariable principles, instead of that celestial and majestic simplicity, impressed on it by its divine Author, we find in it only the frightful contrast of passion mistaking itself for reason, and of understanding grown delirious.

It is still more cruel that, as every advance made by the human species removes it still farther from its primitive state, the more discoveries we make, the more we deprive ourselves of the means of making the most important of all. Thus it is, in one sense, by our very study of man, that the knowledge of him is put out of our power.

It is easy to perceive that it is in these successive changes in the constitution of man that we must look for the origin of those differences which now distinguish men, who, it is allowed, are as equal among themselves as were the animals of every kind, before physical causes had introduced those varieties which are now observable among some of them.

It is, in fact, not to be conceived that these primary changes, however they may have arisen, could have altered, all at once and in the same manner, every individual of the species. It is natural to think that, while the condition of some of them grew better or worse, and they were acquiring various good or bad qualities not inherent in their nature, there were others

who continued a longer time in their original condition. Such was doubtless the first source of the inequality of mankind, which it is much easier to point out thus in general terms, than to assign with precision to its actual causes.

Let not my readers therefore imagine that I flatter myself with having seen what it appears to me so difficult to discover. I have here entered upon certain arguments, and risked some conjectures, less in the hope of solving the difficulty, than with a view to throwing some light upon it, and reducing the question to its proper form. Others may easily proceed farther on the same road, and yet no one find it very easy to get to the end. For it is by no means a light undertaking to distinguish properly between what is original and what is artificial in the actual nature of man, or to form a true idea of a state which no longer exists, perhaps never did exist, and probably never will exist; and of which, it is, nevertheless, necessary to have true ideas, in order to form a proper judgment of our present state. It requires, indeed, more philosophy than can be imagined to enable any one to determine exactly what precautions he ought to take, in order to make solid observations on this subject; and it appears to me that a good solution of the following problem would be not unworthy of the Aristotles and Plinys of the present age. *What experiments would have to be made, to discover the natural man? And how are those experiments to be made in a state of society?*

So far am I from undertaking to solve this problem, that I think I have sufficiently, considered the subject, to venture to declare beforehand that our greatest philosophers would not be too good to direct such experiments, and our most powerful sovereigns to make them. Such a combination we have very little reason to expect, especially attended with the perseverance, or rather succession of intelligence and good-will necessary on both sides to success.

These investigations, which are so difficult to make, and have been hitherto so little thought of, are, nevertheless, the only means that remain of obviating a multitude of difficulties which deprive us of the knowledge of the real foundations of human society. It is this ignorance of the nature of man, which casts so much uncertainty and obscurity on the true definition of natural right: for, the idea of right, says Burlamaqui, and more particularly that of natural right, are ideas manifestly relative to the nature

of man. It is then from this very nature itself, he goes on, from the constitution and state of man, that we must deduce the first principles of this science.

We cannot see without surprise and disgust how little agreement there is between the different authors who have treated this great subject. Among the more important writers there are scarcely two of the same mind about it. Not to speak of the ancient philosophers, who seem to have done their best purposely to contradict one another on the most fundamental principles, the Roman jurists subjected man and the other animals indiscriminately to the same natural law, because they considered, under that name, rather the law which nature imposes on herself than that which she prescribes to others; or rather because of the particular acceptation of the term law among those jurists; who seem on this occasion to have understood nothing more by it than the general relations established by nature between all animated beings, for their common preservation. The moderns, understanding, by the term law, merely a rule prescribed to a moral being, that is to say intelligent, free and considered in his relations to other beings, consequently confine the jurisdiction of natural law to man, an the only animal endowed with reason. But, defining this law, each after his own fashion, they have established it on such metaphysical principles, that there are very few persons among us capable of comprehending them, much less of discovering them for themselves. So that the definitions of these learned men, all differing in everything else, agree only in this, that it is impossible to comprehend the law of nature, and consequently to obey it, without being a very subtle casuist and a profound metaphysician. All which is as much as to say that mankind must have employed, in the establishment of society, a capacity which is acquired only with great difficulty, and by very few persons, even in a state of society.

Knowing so little of nature, and agreeing so ill about the meaning of the word *law*, it would be difficult for us to fix on a good definition of natural law. Thus all the definitions we meet with in books, setting aside their defect in point of uniformity, have yet another fault, in that they are derived from many kinds of knowledge, which men do not possess naturally, and from advantages of which they can have no idea until they have already departed from that state. Modern writers begin by inquiring what rules it would be expedient for men to agree on for their common interest, and then

give the name of natural law to a collection of these rules, without any other proof than the good that would result from their being universally practised. This is undoubtedly a simple way of making definitions, and of explaining the nature of things by almost arbitrary conveniences.

But as long as we are ignorant of the natural man, it is in vain for us to attempt to determine either the law originally prescribed to him, or that which is best adapted to his constitution. All we can know with any certainty respecting this law is that, if it is to be a law, not only the wills of those it obliges must be sensible of their submission to it; but also, to be natural, it must come directly from the voice of nature.

Throwing aside, therefore, all those scientific books, which teach us only to see men such as they have made themselves, and contemplating the first and most simple operations of the human soul, I think I can perceive in it two principles prior to reason, one of them deeply interesting us in our own welfare and preservation, and the other exciting a natural repugnance at seeing any other sensible being, and particularly any of our own species, suffer pain or death. It is from the agreement and combination which the understanding is in a position to establish between these two principles, without its being necessary to introduce that of sociability, that all the rules of natural right appear to me to be derived—rules which our reason is afterwards obliged to establish on other foundations, when by its successive developments it has been led to suppress nature itself.

In proceeding thus, we shall not be obliged to make man a philosopher before he is a man. His duties toward others are not dictated to him only by the later lessons of wisdom and, so long as he does not resist the internal impulse of compassion, he will never hurt any other man, nor even any sentient being; except on those lawful occasions on which his own preservation is concerned and he is obliged to give himself the preference. By this method also we put an end to the time-honoured disputes concerning the participation of animals in natural law: for it is clear that, being destitute of intelligence and liberty, they cannot recognise that law; as they partake, however, in some measure of our nature, in consequence of the sensibility with which they are endowed, they ought to partake of natural rights so that mankind is subjected to a kind of obligation even toward the brutes. It appears, in fact, that if I am bound to do no injury to my fellow-creatures, this is less because they are rational than because they

are sentient beings: and this quality, being common both to men and beasts, ought to entitle the latter at least to the privilege of not being wantonly ill-treated by the former.

The very study of the original man, of his real wants, and the fundamental principles of his duty, is besides the only proper method we can adopt to obviate all the difficulties which the origin of moral inequality presents, on the true foundations of the body politic, on the reciprocal rights of its members, and on many other similar topics equally important and obscure.

If we look at human society with a calm and disinterested eye, it seems, at first, to show us only the violence of the powerful and the oppression of the weak. The mind is shocked at the cruelty of the one, or is induced to lament the blindness of the other; and as nothing is less permanent in life than those external relations, which are more frequently produced by accident than wisdom, and which are called weakness or power, riches or poverty, all human institutions seem at first glance to be founded merely on banks of shifting sand. It is only by taking a closer look, and removing the dust and sand that surround the edifice, that we perceive the immovable basis on which it is raised, and learn to respect its foundations. Now, without a serious study of man, his natural faculties and their successive development, we shall never be able to make these necessary distinctions, or to separate, in the actual constitution of things, that which is the effect of the divine will, from the innovations attempted by human art. The political and moral investigations, therefore, to which the important question before us leads, are in every respect useful; while the hypothetical history of governments affords a lesson equally instructive to mankind.

In considering what we should have become, had we been left to ourselves, we should learn to bless Him, whose gracious hand, correcting our institutions, and giving them an immovable basis, has prevented those disorders which would otherwise have arisen from them, and caused our happiness to come from those very sources which seemed likely to involve us in misery.

*Quem te deus esse  
Jussit, et humanâ quâ parte locatus es in re,  
Disce.*

Persius, Satire iii, 71.

## **A DISSERTATION**

# **ON THE ORIGIN AND FOUNDATION OF THE INEQUALITY OF MANKIND**

It is of man that I have to speak; and the question I am investigating shows me that it is to men that I must address myself: for questions of this sort are not asked by those who are afraid to honour truth. I shall then confidently uphold the cause of humanity before the wise men who invite me to do so, and shall not be dissatisfied if I acquit myself in a manner worthy of my subject and of my judges.

I conceive that there are two kinds of inequality among the human species; one, which I call natural or physical, because it is established by nature, and consists in a difference of age, health, bodily strength, and the qualities of the mind or of the soul: and another, which may be called moral or political inequality, because it depends on a kind of convention, and is established, or at least authorised by the consent of men. This latter consists of the different privileges, which some men enjoy to the prejudice of others; such as that of being more rich, more honoured, more powerful or even in a position to exact obedience.

It is useless to ask what is the source of natural inequality, because that question is answered by the simple definition of the word. Again, it is still more useless to inquire whether there is any essential connection between the two inequalities; for this would be only asking, in other words, whether those who command are necessarily better than those who obey, and if strength of body or of mind, wisdom or virtue are always found in particular individuals, in proportion to their power or wealth: a question fit perhaps to be discussed by slaves in the hearing of their masters, but highly unbecoming to reasonable and free men in search of the truth.

The subject of the present discourse, therefore, is more precisely this. To mark, in the progress of things, the moment at which right took the place of violence and nature became subject to law, and to explain by what sequence of miracles the strong came to submit to serve the weak, and the people to purchase imaginary repose at the expense of real felicity.

The philosophers, who have inquired into the foundations of society, have all felt the necessity of going back to a state of nature; but not one of them has got there. Some of them have not hesitated to ascribe to man, in such a state, the idea of just and unjust, without troubling themselves to show that he must be possessed of such an idea, or that it could be of any use to him. Others have spoken of the natural right of every man to keep what belongs to him, without explaining what they meant by *belongs*. Others again, beginning by giving the strong authority over the weak, proceeded directly to the birth of government, without regard to the time that must have elapsed before the meaning of the words authority and government could have existed among men. Every one of them, in short, constantly dwelling on wants, avidity, oppression, desires and pride, has transferred to the state of nature ideas which were acquired in society; so that, in speaking of the savage, they described the social man. It has not even entered into the heads of most of our writers to doubt whether the state of nature ever existed; but it is clear from the Holy Scriptures that the first man, having received his understanding and commandments immediately from God, was not himself in such a state; and that, if we give such credit to the writings of Moses as every Christian philosopher ought to give, we must deny that, even before the deluge, men were ever in the pure state of nature; unless, indeed, they fell back into it from some very extraordinary circumstance; a paradox

which it would be very embarrassing to defend, and quite impossible to prove.

Let us begin then by laying facts aside, as they do not affect the question. The investigations we may enter into, in treating this subject, must not be considered as historical truths, but only as mere conditional and hypothetical reasonings, rather calculated to explain the nature of things, than to ascertain their actual origin; just like the hypotheses which our physicists daily form respecting the formation of the world. Religion commands us to believe that, God Himself having taken men out of a state of nature immediately after the creation, they are unequal only because it is His will they should be so: but it does not forbid us to form conjectures based solely on the nature of man, and the beings around him, concerning what might have become of the human race, if it had been left to itself. This then is the question asked me, and that which I propose to discuss in the following discourse. As my subject interests mankind in general, I shall endeavour to make use of a style adapted to all nations, or rather, forgetting time and place, to attend only to men to whom I am speaking. I shall suppose myself in the Lyceum of Athens, repeating the lessons of my masters, with Plato and Xenocrates for judges, and the whole human race for audience.

O man, of whatever country you are, and whatever your opinions may be, behold your history, such as I have thought to read it, not in books written by your fellow-creatures, who are liars, but in nature, which never lies. All that comes from her will be true; nor will you meet with anything false, unless I have involuntarily put in something of my own. The times of which I am going to speak are very remote: how much are you changed from what you once were! It is so to speak, the life of your species which I am going to write, after the qualities which you have received, which your education and habits may have depraved, but cannot have entirely destroyed. There is, I feel, an age at which the individual man would wish to stop; you are about to inquire about the age at which you would have liked your whole species to stand still. Discontented with your present state, for reasons which threaten your unfortunate descendants with still greater discontent, you will perhaps wish it were in your power to go back; and this feeling should be a panegyric on your first ancestors, a criticism of your contemporaries, and a terror to the unfortunates who will come after you.

---

## THE FIRST PART

Important as it may be, in order to judge rightly of the natural state of man, to consider him from his origin, and to examine him, as it were, in the embryo of his species; I shall not follow his organisation through its successive developments, nor shall I stay to inquire what his animal system must have been at the beginning, in order to become at length what it actually is. I shall not ask whether his long nails were at first, as Aristotle supposes, only crooked talons; whether his whole body, like that of a bear, was not covered with hair; or whether the fact that he walked upon all fours, with his looks directed toward the earth, confined to a horizon of a few paces, did not at once point out the nature and limits of his ideas. On this subject I could form none but vague and almost imaginary conjectures. Comparative anatomy has as yet made too little progress, and the observations of naturalists are too uncertain, to afford an adequate basis for any solid reasoning. So that, without having recourse to the supernatural information given us on this head, or paying any regard to the changes which must have taken place in the internal, as well as the external, conformation of man, as he applied his limbs to new uses, and fed himself on new kinds of food, I shall suppose his conformation to have been at all times what it appears to us at this day; that he always walked on two legs, made use of his hands as we do, directed his looks over all nature, and measured with his eyes the vast expanse of Heaven.

If we strip this being, thus constituted, of all the supernatural gifts he may have received, and all the artificial faculties he can have acquired only by a long process; if we consider him, in a word, just as he must have come from the hands of nature, we behold in him an animal weaker than some, and less agile than others; but, taking him all round, the most advantageously organised of any. I see him satisfying his hunger at the first oak, and slaking his thirst at the first brook; finding his bed at the foot of the tree which afforded him a repast; and, with that, all his wants supplied.

While the earth was left to its natural fertility and covered with immense forests, whose trees were never mutilated by the axe, it would present on every side both sustenance and shelter for every species of animal. Men

dispersed up and down among the rest, would observe and imitate their industry, and thus attain even to the instinct of the beasts, with the advantage that, whereas every species of brutes was confined to one particular instinct, man, who perhaps has not any one peculiar to himself, would appropriate them all, and live upon most of those different foods, which other animals shared among themselves; and thus would find his subsistence much more easily than any of the rest.

Accustomed from their infancy to the inclemencies of the weather and the rigour of the seasons, inured to fatigue, and forced, naked and unarmed, to defend themselves and their prey from other ferocious animals, or to escape them by flight, men would acquire a robust and almost unalterable constitution. The children, bringing with them into the world the excellent constitution of their parents, and fortifying it by the very exercises which first produced it, would thus acquire all the vigour of which the human frame is capable. Nature in this case treats them exactly as Sparta treated the children of her citizens: those who come well formed into the world she renders strong and robust, and all the rest she destroys; differing in this respect from our modern communities, in which the State, by making children a burden to their parents, kills them indiscriminately before they are born.

The body of a savage man being the only instrument he understands, he uses it for various purposes, of which ours, for want of practice, are incapable: for our industry deprives us of that force and agility, which necessity obliges him to acquire. If he had had an axe, would he have been able with his naked arm to break so large a branch from a tree? If he had had a sling, would he have been able to throw a stone with so great velocity? If he had had a ladder, would he have been so nimble in climbing a tree? If he had had a horse, would he have been himself so swift of foot? Give civilised man time to gather all his machines about him, and he will no doubt easily beat the savage; but if you would see a still more unequal contest, set them together naked and unarmed, and you will soon see the advantage of having all our forces constantly at our disposal, of being always prepared for every event, and of carrying one's self, as it were, perpetually whole and entire about one.

Hobbes contends that man is naturally intrepid, and is intent only upon attacking and fighting. Another illustrious philosopher holds the opposite,

and Cumberland and Puffendorf also affirm that nothing is more timid and fearful than man in the state of nature; that he is always in a tremble, and ready to fly at the least noise or the slightest movement. This may be true of things he does not know; and I do not doubt his being terrified by every novelty that presents itself, when he neither knows the physical good or evil he may expect from it, nor can make a comparison between his own strength and the dangers he is about to encounter. Such circumstances, however, rarely occur in a state of nature, in which all things proceed in a uniform manner, and the face of the earth is not subject to those sudden and continual changes which arise from the passions and caprices of bodies of men living together. But savage man, living dispersed among other animals and finding himself betimes in a situation to measure his strength with theirs, soon comes to compare himself with them; and, perceiving that he surpasses them more in adroitness than they surpass him in strength, learns to be no longer afraid of them. Set a bear, or a wolf, against a robust, agile, and resolute savage, as they all are, armed with stones and a good cudgel, and you will see that the danger will be at least on both sides, and that, after a few trials of this kind, wild beasts, which are not fond of attacking each other, will not be at all ready to attack man, whom they will have found to be as wild and ferocious as themselves. With regard to such animals as have really more strength than man has adroitness, he is in the same situation as all weaker animals, which notwithstanding are still able to subsist; except indeed that he has the advantage that, being equally swift of foot, and finding an almost certain place of refuge in every tree, he is at liberty to take or leave it at every encounter, and thus to fight or fly, as he chooses. Add to this that it does not appear that any animal naturally makes war on man, except in case of self-defence or excessive hunger, or betrays any of those violent antipathies, which seem to indicate that one species is intended by nature for the food of another.

This is doubtless why negroes and savages are so little afraid of the wild beasts they may meet in the woods. The Caraihs of Venezuela among others live in this respect in absolute security and without the smallest inconvenience. Though they are almost naked, Francis Correal tells us, they expose themselves freely in the woods, armed only with bows and arrows; but no one has ever heard of one of them being devoured by wild beasts.

But man has other enemies more formidable, against which he is not provided with such means of defence: these are the natural infirmities of infancy, old age, and illness of every kind, melancholy proofs of our weakness, of which the two first are common to all animals, and the last belongs chiefly to man in a state of society. With regard to infancy, it is observable that the mother, carrying her child always with her, can nurse it with much greater ease than the females of many other animals, which are forced to be perpetually going and coming, with great fatigue, one way to find subsistence, and another to suckle or feed their young. It is true that if the woman happens to perish, the infant is in great danger of perishing with her; but this risk is common to many other species of animals, whose young take a long time before they are able to provide for themselves. And if our infancy is longer than theirs, our lives are longer in proportion; so that all things are in this respect fairly equal; though there are other rules to be considered regarding the duration of the first period of life, and the number of young, which do not affect the present subject. In old age, when men are less active and perspire little, the need for food diminishes with the ability to provide it. As the savage state also protects them from gout and rheumatism, and old age is, of all ills, that which human aid can least alleviate, they cease to be, without others perceiving that they are no more, and almost without perceiving it themselves.

With respect to sickness, I shall not repeat the vain and false declamations which most healthy people pronounce against medicine; but I shall ask if any solid observations have been made from which it may be justly concluded that, in the countries where the art of medicine is most neglected, the mean duration of man's life is less than in those where it is most cultivated. How indeed can this be the case, if we bring on ourselves more diseases than medicine can furnish remedies? The great inequality in manner of living, the extreme idleness of some, and the excessive labour of others, the easiness of exciting and gratifying our sensual appetites, the too exquisite foods of the wealthy which overheat and fill them with indigestion, and, on the other hand, the unwholesome food of the poor, often, bad as it is, insufficient for their needs, which induces them, when opportunity offers, to eat voraciously and overcharge their stomachs; all these, together with sitting up late, and excesses of every kind, immoderate transports of every passion, fatigue, mental exhaustion, the innumerable pains and anxieties inseparable from every condition of life, by which the

mind of man is incessantly tormented; these are too fatal proofs that the greater part of our ills are of our own making, and that we might have avoided them nearly all by adhering to that simple, uniform and solitary manner of life which nature prescribed. If she destined man to be healthy, I venture to declare that a state of reflection is a state contrary to, nature, and that a thinking man is a depraved animal. When we think of the good constitution of the savages, at least of those whom we have not ruined with our spirituous liquors, and reflect that they are troubled with hardly any disorders, save wounds and old age, we are tempted to believe that, in following the history of civil society, we shall be telling also that of human sickness. Such, at least, was the opinion of Plato, who inferred from certain remedies prescribed, or approved, by Podalirius and Machaon at the siege of Troy, that several sicknesses which these remedies gave rise to in his time, were not then known to mankind: and Celsus tells us that diet, which is now so necessary, was first invented by Hippocrates.

Being subject therefore to so few causes of sickness, man, in the state of nature, can have no need of remedies, and still less of physicians: nor is the human race in this respect worse off than other animals, and it is easy to learn from hunters whether they meet with many infirm animals in the course of the chase. It is certain they frequently meet with such as carry the marks of having been considerably wounded, with many that have had bones or even limbs broken, yet have been healed without any Other surgical assistance than that of time, or any other regimen than that of their ordinary life. At the same time their cures seem not to have been less perfect, for their not having been tortured by incisions, poisoned with drugs, or wasted by fasting. In short, however useful medicine, properly administered, may be among us, it is certain that, if the savage, when he is sick and left to himself, has nothing to hope but from nature, he has, on the other hand, nothing to fear but from his disease; which renders his situation often preferable to our own.

We should beware, therefore, of confounding the savage man with the men we have daily before our eyes. Nature treats all the animals left to her care with a predilection that seems to show how jealous she is of that right. The horse, the cat, the bull, and even the ass are generally of greater stature, and always more robust, and have more vigour, strength and courage, when they run wild in the forests than when bred in the stall. By becoming

domesticated, they lose half these advantages; and it seems as if all our care to feed and treat them well serves only to deprave them. It is thus with man also: as he becomes sociable and a slave, he grows weak, timid and servile; his effeminate way of life totally enervates his strength and courage. To this it may be added that there is still a greater difference between savage and civilised man, than between wild and tame beasts: for men and brutes having been treated alike by nature, the several conveniences in which men indulge themselves still more than they do their beasts, are so many additional causes of their deeper degeneracy.

It is not therefore so great a misfortune to these primitive men, nor so great an obstacle to their preservation, that they go naked, have no dwellings and lack all the superfluities which we think so necessary. If their skins are not covered with hair, they have no need of such covering in warm climates; and, in cold countries, they soon learn to appropriate the skins of the beasts they have overcome. If they have but two legs to run with, they have two arms to defend themselves with, and provide for their wants. Their children are slowly and with difficulty taught to walk; but their mothers are able to carry them with ease; advantage which other animals lack, as the mother, if pursued, is forced either to abandon her young, or to regulate her pace by theirs. Unless, in short, we suppose a singular and fortuitous concurrence of circumstances of which I shall speak later, and which would be unlikely to exist, it is plain in every state of the case, that the man who first made himself clothes or a dwelling was furnishing himself with things not at all necessary; for he had till then done without them, and there is no reason why he should not have been able to put up in manhood with the same kind of life as had been his in infancy.

Solitary, indolent, and perpetually accompanied by danger, the savage cannot but be fond of sleep; his sleep too must be light, like that of the animals, which think but little and may be said to slumber all the time they do not think. Self-preservation being his chief and almost sole concern, he must exercise most those faculties which are most concerned with attack or defence, either for overcoming his prey, or for preventing him from becoming the prey of other animals. On the other hand, those organs which are perfected only by softness and sensuality will remain in a gross and imperfect state, incompatible with any sort of delicacy; so that, his senses being divided on this head, his touch and taste will be extremely coarse, his

sight, hearing and smell exceedingly fine and subtle. Such in general is the animal condition, and such, according to the narratives of travellers, is that of most savage nations. It is therefore no matter for surprise that the Hottentots of the Cape of Good Hope distinguish ships at sea, with the naked eye, at as great a distance as the Dutch can do with their telescopes; or that the savages of America should trace the Spaniards, by their smell, as well as the best dogs could have done; or that these barbarous peoples feel no pain in going naked, or that they use large quantities of piemento with their food, and drink the strongest European liquors like water.

Hitherto I have considered merely the physical man; let us now take a view of him on his metaphysical and moral side.

I see nothing in any animal but an ingenious machine, to which nature hath given senses to wind itself up, and to guard itself, to a certain degree, against anything that might tend to disorder or destroy it. I perceive exactly the same things in the human machine, with this difference, that in the operations of the brute, nature is the sole agent, whereas man has some share in his own operations, in his character as a free agent. The one chooses and refuses by instinct, the other from an act of free-will: hence the brute cannot deviate from the rule prescribed to it, even when it would be advantageous for it to do so; and, on the contrary, man frequently deviates from such rules to his own prejudice. Thus a pigeon would be starved to death by the side of a dish of the choicest meats, and a cat on a heap of fruit or grain; though it is certain that either might find nourishment in the foods which it thus rejects with disdain, did it think of trying them. Hence it is that dissolute men run into excesses which bring on fevers and death; because the mind depraves the senses, and the will continues to speak when nature is silent.

Every animal has ideas, since it has senses; it even combines those ideas in a certain degree; and it is only in degree that man differs, in this respect, from the brute. Some philosophers have even maintained that there is a greater difference between one man and another than between some men and some beasts. It is not, therefore, so much the understanding that constitutes the specific difference between the man and the brute, as the human quality of free-agency. Nature lays her commands on every animal, and the brute obeys her voice. Man receives the same impulsion, but at the same time knows himself at liberty to acquiesce or resist: and it is

particularly in his consciousness of this liberty that the spirituality of his soul is displayed. For physics may explain, in some measure, the mechanism of the senses and the formation of ideas; but in the power of willing or rather of choosing, and in the feeling of this power, nothing is to be found but acts which are purely spiritual and wholly inexplicable by the laws of mechanism.

However, even if the difficulties attending all these questions should still leave room for difference in this respect between men and brutes, there is another very specific quality which distinguishes them, and which will admit of no dispute. This is the faculty of self-improvement, which, by the help of circumstances, gradually develops all the rest of our faculties, and is inherent in the species as in the individual: whereas a brute is, at the end of a few months, all he will ever be during his whole life, and his species, at the end of a thousand years, exactly what it was the first year of that thousand. Why is man alone liable to grow into a dotard? Is it not because he returns, in this, to his primitive state; and that, while the brute, which has acquired nothing and has therefore nothing to lose, still retains the force of instinct, man, who loses, by age or accident, all that his *perfectibility* had enabled him to gain, falls by this means lower than the brutes themselves? It would be melancholy, were we forced to admit that this distinctive and almost unlimited faculty is the source of all human misfortunes; that it is this which, in time, draws man out of his original state, in which he would have spent his days insensibly in peace and innocence; that it is this faculty, which, successively producing in different ages his discoveries and his errors, his vices and his virtues, makes him at length a tyrant both over himself and over nature.<sup>[1]</sup> It would be shocking to be obliged to regard as a benefactor the man who first suggested to the Oroonoko Indians the use of the boards they apply to the temples of their children, which secure to them some part at least of their imbecility and original happiness.

Savage man, left by nature solely to the direction of instinct, or rather indemnified for what he may lack by faculties capable at first of supplying its place, and afterwards of raising him much above it, must accordingly begin with purely animal functions: thus seeing and feeling must be his first condition, which would be common to him and all other animals. To will, and not to will, to desire and to fear, must be the first, and almost the only

operations of his soul, till new circumstances occasion new developments of his faculties.

Whatever moralists may hold, the human understanding is greatly indebted to the passions, which, it is universally allowed, are also much indebted to the understanding. It is by the activity of the passions that pure reason is improved; for we desire knowledge only because we wish to enjoy; and it is impossible to conceive any reason why a person who has neither fears nor desires should give himself the trouble of reasoning. The passions, again, originate in our wants, and their progress depends on that of our knowledge; for we cannot desire or fear anything, except from the idea we have of it, or from the simple impulse of nature. Now savage man, being destitute of every species of intelligence, can have no passions save those of the latter kind: his desires never go beyond his physical wants. The only goods he recognises in the universe are food, a female, and sleep: the only evils he fears are pain and hunger. I say pain, and not death: for no animal can know what it is to die; the knowledge of death and its terrors being one of the first acquisitions made by man in departing from an animal state.

It would be easy, were it necessary, to support this opinion by facts, and to show that, in all the nations of the world, the progress of the understanding has been exactly proportionate to the wants which the peoples had received from nature, or been subjected to by circumstances, and in consequence to the passions that induced them to provide for those necessities. I might instance the arts, rising up in Egypt and expanding with the inundation of the Nile. I might follow their progress into Greece, where they took root afresh, grew up and towered to the skies, among the rocks and sands of Attica, without being able to germinate on the fertile banks of the Eurotas: I might observe that in general, the people of the North are more industrious than those of the South, because they cannot get on so well without being so: as if nature wanted to equalise matters by giving their understandings the fertility she had refused to their soil.

But who does not see, without recurring to the uncertain testimony of history, that everything seems to remove from savage man both the temptation and the means of changing his condition? His imagination paints no pictures; his heart makes no demands on him. His few wants are so readily supplied, and he is so far from having the knowledge which is needful to make him want more, that he can have neither foresight nor

curiosity. The face of nature becomes indifferent to him as it grows familiar. He sees in it always the same order, the same successions: he has not understanding enough to wonder at the greatest miracles; nor is it in his mind that we can expect to find that philosophy man needs, if he is to know how to notice for once what he sees every day. His soul, which nothing disturbs, is wholly wrapped up in the feeling of its present existence, without any idea of the future, however near at hand; while his projects, as limited as his views, hardly extend to the close of day. Such, even at present, is the extent of the native Caribbean's foresight: he will improvidently sell you his cotton-bed in the morning, and come crying in the evening to buy it again, not having foreseen he would want it again the next night.

The more we reflect on this subject, the greater appears the distance between pure sensation and the most simple knowledge: it is impossible indeed to conceive how a man, by his own powers alone, without the aid of communication and the spur of necessity, could have bridged so great a gap. How many ages may have elapsed before mankind were in a position to behold any other Arc than that of the heavens. What a multiplicity of chances must have happened to teach them the commonest uses of that element! How often must they have let it out before they acquired the art of reproducing it? and how often may not such a secret have died with him who had discovered it? What shall we say of agriculture, an art which requires so much labour and foresight, which is so dependent on others that it is plain it could only be practised in a society which had at least begun, and which does not serve so much to draw the means of subsistence from the earth—for these it would produce of itself—but to compel it to produce what is most to our taste? But let us suppose that men had so multiplied that the natural produce of the earth was no longer sufficient for their support; a supposition, by the way, which would prove such a life to be very advantageous for the human race; let us suppose that, without forges or workshops, the instruments of husbandry had dropped from the sky into the hands of savages; that they had overcome their natural aversion to continual labour; that they had learnt so much foresight for their needs; that they had divined how to cultivate the earth, to sow grain and plant trees; that they had discovered the arts of grinding corn, and of setting the grape to ferment—all being things that must have been taught them by the gods, since it is not to be conceived how they could discover them for themselves—yet after

all this, what man among them would be so absurd as to take the trouble of cultivating a field, which might be stripped of its crop by the first comer, man or beast, that might take a liking to it; and how should each of them resolve to pass his life in wearisome labour, when, the more necessary to him the reward of his labour might be, the surer he would be of not getting it? In a word, how could such a situation induce men to cultivate the earth, till it was regularly parcelled out among them; that is to say, till the state of nature had been abolished?

Were we to suppose savage man as trained in the art of thinking as philosophers make him; were we, like them, to suppose him a very philosopher capable of investigating the sublimest truths, and of forming, by highly abstract chains of reasoning, maxims of reason and justice, deduced from the love of order in general, or the known will of his Creator; in a word, were we to suppose him as intelligent and enlightened, as he must have been, and is in fact found to have been, dull and stupid, what advantage would accrue to the species, from all such metaphysics, which could not be communicated by one to another, but must end with him who made them? What progress could be made by mankind, while dispersed in the woods among other animals? and how far could men improve or mutually enlighten one another, when, having no fixed habitation, and no need of one another's assistance, the same persons hardly met twice in their lives, and perhaps then, without knowing one another or speaking together?

Let it be considered how many ideas we owe to the use of speech; how far grammar exercises the understanding and facilitates its operations. Let us reflect on the inconceivable pains and the infinite space of time that the first invention of languages must have cost. To these reflections add what preceded, and then judge how many thousand ages must have elapsed in the successive development in the human mind of those operations of which it is capable.

I shall here take the liberty for a moment, of considering the difficulties of the origin of languages, on which subject I might content myself with a simple repetition of the Abbé Condillac's investigations, as they fully confirm my system, and perhaps even first suggested it. But it is plain, from the manner in which this philosopher solves the difficulties he himself raises, concerning the origin of arbitrary signs, that he assumes what I question, viz. that a kind of society, must already have existed among the

first inventors of language. While I refer, therefore, to his observations on this head, I think it right to give my own, in order to exhibit the same difficulties in a light adapted to my subject. The first which presents itself is to conceive how language can have become necessary; for as there was no communication among men and no need for any, we can neither conceive the necessity of this invention, nor the possibility of it, if it was not somehow indispensable. I might affirm, with many others, that languages arose in the domestic intercourse between parents and their children. But this expedient would not obviate the difficulty, and would besides involve the blunder made by those who, in reasoning on the state of nature, always import into it ideas gathered in a state of society. Thus they constantly consider families as living together under one roof, and the individuals of each as observing among themselves a union as intimate and permanent as that which exists among us, where so many common interests unite them: whereas, in this primitive state, men had neither houses, nor huts, nor any kind of property whatever; every one lived where he could, seldom for more than a single night; the sexes united without design, as accident, opportunity or inclination brought them together, nor had they any great need of words to communicate their designs to each other; and they parted with the same indifference. The mother gave suck to her children at first for her own sake; and afterwards, when habit had made them dear, for theirs: but as soon as they were strong enough to go in search of their own food, they forsook her of their own accord; and, as they had hardly any other method of not losing one another than that of remaining continually within sight, they soon became quite incapable of recognising one another when they happened to meet again. It is farther to be observed that the child, having all his wants to explain, and of course more to say to his mother than the mother could have to say to him, must have borne the brunt of the task of invention, and the language he used would be of his own device, so that the number of languages would be equal to that of the individuals speaking them, and the variety would be increased by the vagabond and roving life they led, which would not give time for any idiom to become constant. For to say that the mother dictated to her child the words he was to use in asking her for one thing or another, is an explanation of how languages already formed are taught, but by no means explains how languages were originally formed.

We will suppose, however, that this first difficulty is obviated. Let us for a moment then take ourselves as being on this side of the vast space which must lie between a pure state of nature and that in which languages had become necessary, and, admitting their necessity, let us inquire how they could first be established. Here we have a new and worse difficulty to grapple with; for if men need speech to learn to think, they must have stood in much greater need of the art of thinking, to be able to invent that of speaking. And though we might conceive how the articulate sounds of the voice came to be taken as the conventional interpreters of our ideas, it would still remain for us to inquire what could have been the interpreters of this convention for those ideas, which, answering to no sensible objects, could not be indicated either by gesture or voice; so that we can hardly form any tolerable conjectures about the origin of this art of communicating our thoughts and establishing a correspondence between minds: an art so sublime, that far distant as it is from its origin, philosophers still behold it at such an immeasurable distance from perfection, that there is none rash enough to affirm it will ever reach it, even though the revolutions time necessarily produces were suspended in its favour, though prejudice should be banished from our academies or condemned to silence, and those learned societies should devote themselves uninterruptedly for whole ages to this thorny question.

The first language of mankind, the most universal and vivid, in a word the only language man needed, before he had occasion to exert his eloquence to persuade assembled multitudes, was the simple cry of nature. But as this was excited only by a sort of instinct on urgent occasions, to implore assistance in case of danger, or relief in case of suffering, it could be of little use in the ordinary course of life, in which more moderate feelings prevail. When the ideas of men began to expand and multiply, and closer communication took place among them, they strove to invent more numerous signs and a more copious language. They multiplied the inflections of the voice, and added gestures, which are in their own nature more expressive, and depend less for their meaning on a prior determination. Visible and movable objects were therefore expressed by gestures, and audible ones by imitative sounds: but, as hardly anything can be indicated by gestures, except objects actually present or easily described, and visible actions; as they are not universally useful—for darkness or the interposition of a material object destroys their efficacy—and as besides

they rather request than secure our attention; men at length bethought themselves of substituting for them the articulate sounds of the voice, which, without bearing the same relation to any particular ideas, are better calculated to express them all, as conventional signs. Such an institution could only be made by common consent, and must have been effected in a manner not very easy for men whose gross organs had not been accustomed to any such exercise. It is also in itself still more difficult to conceive, since such a common agreement must have had motives, and speech seems to have been highly necessary to establish the use of it.

It is reasonable to suppose that the words first made use of by mankind had a much more extensive signification than those used in languages already formed, and that ignorant as they were of the division of discourse into its constituent parts, they at first gave every single word the sense of a whole proposition. When they began to distinguish subject and attribute, and noun and verb, which was itself no common effort of genius, substantives were at first only so many proper names; the present infinitive was the only tense of verbs; and the very idea of adjectives must have been developed with great difficulty; for every adjective is an abstract idea, and abstractions are painful and unnatural operations.

Every object at first received a particular name without regard to genus or species, which these primitive originators were not in a position to distinguish; every individual presented itself to their minds in isolation, as they are in the picture of nature. If one oak was called A, another was called B; for the primitive idea of two things is that they are not the same, and it often takes a long time for what they have in common to be seen: so that, the narrower the limits of their knowledge of things, the more copious their dictionary must have been. The difficulty of using such a vocabulary could not be easily removed; for, to arrange beings under common and generic denominations, it became necessary to know their distinguishing properties: the need arose for observation and definition, that is to say, for natural history and metaphysics of a far more developed kind than men can at that time have possessed.

Add to this, that general ideas cannot be introduced into the mind without the assistance of words, nor can the understanding seize them except by means of propositions. This is one of the reasons why animals cannot form such ideas, or ever acquire that capacity for self-improvement which

depends on them. When a monkey goes from one nut to another, are we to conceive that he entertains any general idea of that kind of fruit, and compares its archetype with the two individual nuts? Assuredly he does not; but the sight of one of these nuts recalls to his memory the sensations which he received from the other, and his eyes, being modified after a certain manner, give information to the palate of the modification it is about to receive. Every general idea is purely intellectual; if the imagination meddles with it ever so little, the idea immediately becomes particular. If you endeavour to trace in your mind the image of a tree in general, you never attain to your end. In spite of all you can do, you will have to see it as great or little, bare or leafy, light or dark, and were you capable of seeing nothing in it but what is common to all trees, it would no longer be like a tree at all. Purely abstract beings are perceivable in the same manner, or are only conceivable by the help of language. The definition of a triangle alone gives you a true idea of it: the moment you imagine a triangle in your mind, it is some particular triangle and not another, and you cannot avoid giving it sensible lines and a coloured area. We must then make use of propositions and of language in order to form general ideas. For no sooner does the imagination cease to operate than the understanding proceeds only by the help of words. If then the first inventors of speech could give names only to ideas they already had, it follows that the first substantives could be nothing more than proper names.

But when our new grammarians, by means of which I have no conception, began to extend their ideas and generalise their terms, the ignorance of the inventors must have confined this method within very narrow limits; and, as they had at first gone too far in multiplying the names of individuals, from ignorance of their genus and species, they made afterwards too few of these, from not having considered beings in all their specific differences. It would indeed have needed more knowledge and experience than they could have, and more pains and inquiry than they would have bestowed, to carry these distinctions to their proper length. If, even to-day, we are continually discovering new species, which have hitherto escaped observation, let us reflect how many of them must have escaped men who judged things merely from their first appearance! It is superfluous to add that the primitive classes and the most general notions must necessarily have escaped their notice also. How, for instance, could they have understood or thought of the words matter, spirit, substance, mode, figure, motion, when

even our philosophers, who have so long been making use of them, have themselves the greatest difficulty in understanding them; and when, the ideas attached to them being purely metaphysical, there are no models of them to be found in nature?

But I stop at this point, and ask my judges to suspend their reading a while, to consider, after the invention of physical substantives, which is the easiest part of language to invent, that there is still a great way to go, before the thoughts of men will have found perfect expression and constant form, such as would answer the purposes of public speaking, and produce their effect on society. I beg of them to consider how much time must have been spent, and how much knowledge needed, to find out numbers, abstract terms, aorists and all the tenses of verbs, particles, syntax, the method of connecting propositions, the forms of reasoning, and all the logic of speech. For myself, I am so aghast at the increasing difficulties which present themselves, and so well convinced of the almost demonstrable impossibility that languages should owe their original institution to merely human means, that I leave, to any one who will undertake it, the discussion of the difficult problem, which was most necessary, the existence of society to the invention of language, or the invention of language to the establishment of society. But be the origin of language and society what they may, it may be at least inferred, from the little care which nature has taken to unite mankind by mutual wants, and to facilitate the use of speech, that she has contributed little to make them sociable, and has put little of her own into all they have done to create such bonds of union. It is in fact impossible to conceive why, in a state of nature, one man should stand more in need of the assistance of another, than a monkey or a wolf of the assistance of another of its kind: or, granting that he did, what motives could induce that other to assist him; or, even then, by what means they could agree about the conditions. I know it is incessantly repeated that man would in such a state have been the most miserable of creatures; and indeed, if it be true, as I think I have proved, that he must have lived many ages, before he could have either desire or an opportunity of emerging from it, this would only be an accusation against nature, and not against the being which she had thus unhappily constituted. But as I understand the word *miserable*, it either has no meaning at all, or else signifies only a painful privation of something, or a state of suffering either in body or soul. I should be glad to have explained to me, what kind of misery a free being, whose heart is at ease and whose

body is in health, can possibly suffer. I would ask also, whether a social or a natural life is most likely to become insupportable to those who enjoy it. We see around us hardly a creature in civil society, who does not lament his existence: we even see many deprive themselves of as much of it as they can, and laws human and divine together can hardly put a stop to the disorder. I ask, if it was ever known that a savage took it into his head, when at liberty, to complain of life or to make away with himself. Let us therefore judge, with less vanity, on which side the real misery is found. On the other hand, nothing could be more unhappy than savage man, dazzled by science, tormented by his passions, and reasoning about a state different from his own. It appears that Providence most wisely determined that the faculties, which he potentially possessed, should develop themselves only as occasion offered to exercise them, in order that they might not be superfluous or perplexing to him, by appearing before their time, nor slow and useless when the need for them arose. In instinct alone, he had all he required for living in the state of nature; and with a developed understanding he has only just enough to support life in society.

It appears, at first view, that men in a state of nature, having no moral relations or determinate obligations one with another, could not be either good nor bad, virtuous or vicious; unless we take these terms in a physical sense, and call, in an individual, those qualities vices which may be injurious to his preservation, and those virtues which contribute to it; in which case, he would have to be accounted most virtuous, who put least check on the pure impulses of nature. But without deviating from the ordinary sense of the words, it will be proper to suspend the judgment we might be led to form on such a state, and be on our guard against our prejudices, till we have weighed the matter in the scales of impartiality, and seen whether virtues or vices preponderate among civilised men; and whether their virtues do them more good than their vices do harm; till we have discovered, whether the progress of the sciences sufficiently indemnifies them for the mischiefs they do one another, in proportion as they are better informed of the good they ought to do; or whether they would not be, on the whole, in a much happier condition if they had nothing to fear or to hope from any one, than as they are, subjected to universal dependence, and obliged to take everything from those who engage to give them nothing in return.

Above all, let us not conclude, with Hobbes, that because man has no idea of goodness, he must be naturally wicked; that he is vicious because he does not know virtue; that he always refuses to do his fellow-creatures services which he does not think they have a right to demand; or that by virtue of the right he truly claims to everything he needs, he foolishly imagines himself the sole proprietor of the whole universe. Hobbes had seen clearly the defects of all the modern definitions of natural right: but the consequences which he deduces from his own show that he understands it in an equally false sense. In reasoning on the principles he lays down, he ought to have said that the state of nature, being that in which the care for our own preservation is the least prejudicial to that of others, was consequently the best calculated to promote peace, and the most suitable for mankind. He does say the exact opposite, in consequence of having improperly admitted, as a part of savage man's care for self-preservation, the gratification of a multitude of passions which are the work of society, and have made laws necessary. A bad man, he says, is a robust child. But it remains to be proved whether man in a state of nature is this robust child: and, should we grant that he is, what would he infer? Why truly, that if this man, when robust and strong, were dependent on others as he is when feeble, there is no extravagance he would not be guilty of; that he would beat his mother when she was too slow in giving him her breast; that he would strangle one of his younger brothers, if he should be troublesome to him, or bite the arm of another, if he put him to any inconvenience. But that man in the state of nature is both strong and dependent involves two contrary suppositions. Man is weak when he is dependent, and is his own master before he comes to be strong. Hobbes did not reflect that the same cause, which prevents a savage from making use of his reason, as our jurists hold, prevents him also from abusing his faculties, as Hobbes himself allows: so that it may be justly said that savages are not bad merely because they do not know what it is to be good: for it is neither the development of the understanding nor the restraint of law that hinders them from doing ill; but the peacefulness of their passions, and their ignorance of vice: *tanto plus in illis proficit vitiorum ignoratio, quam in his cognitio virtutis.*<sup>[2]</sup> There is another principle which has escaped Hobbes; which, having been bestowed on mankind, to moderate, on certain occasions, the impetuosity of egoism, or, before its birth, the desire of self-preservation, tempers the ardour with which he pursues his own welfare, by an innate repugnance at

seeing a fellow-creature suffer.<sup>[3]</sup> I think I need not fear contradiction in holding man to be possessed of the only natural virtue, which could not be denied him by the most violent detractor of human virtue. I am speaking of compassion which is a disposition suitable to creatures so weak and subject to so many evils as we certainly are: by so much the more universal and useful to mankind, as it comes before any kind of reflection; and at the same time so natural, that the very brutes themselves sometimes give evident proofs of it. Not to mention the tenderness of mothers for their offspring and the perils they encounter to save them from danger, it is well known that horses show a reluctance to trample on living bodies. One animal never passes by the dead body of another of its species: there are even some which give their fellows a sort of burial; while the mournful lowings of the cattle when they enter the slaughter-house show the impressions made on them by the horrible spectacle which meets them. We find, with pleasure, the author of the Fable of the Bees obliged to own that man is a compassionate and sensible being, and laying aside his cold subtlety of style, in the example he gives, to present us with the pathetic description of a man who, from a place of confinement, is compelled to behold a wild beast tear a child from the arms of its mother, grinding its tender limbs with its murderous teeth, and tearing its palpitating entrails with its claws. What horrid agitation must not the eye-witness of such a scene experience, although he would not be personally concerned! What anxiety would he not suffer at not being able to give any assistance to the fainting mother and the dying infant!

Such is the pure emotion of nature, prior to all kinds of reflection! Such is the force of natural compassion, which the greatest depravity of morals has as yet hardly been able to destroy! for we daily find at our theatres men affected, nay shedding tears at the sufferings of a wretch who, were he in the tyrant's place, would probably even add to the torments of his enemies; like the bloodthirsty Sulla, who was so sensitive to ills he had not caused, or that Alexander of Pheros who did not dare to go and see any tragedy acted, for fear of being seen weeping with Andromache and Priam, though he could listen without emotion to the cries of all the citizens who were daily strangled at his command.

*Mollissima corda  
Humano generi dare se natura fatetur,*

*Qua lacrimas dedit.*

Juvenal, Satire xv, 151.<sup>[4]</sup>

Mandeville well knew that, in spite of all their morality, men would have never been better than monsters, had not nature bestowed on them a sense of compassion, to aid their reason: but he did not see that from this quality alone flow all those social virtues, of which he denied man the possession. But what is generosity, clemency or humanity but compassion applied to the weak, to the guilty, or to mankind in general? Even benevolence and friendship are, if we judge rightly, only the effects of compassion, constantly set upon a particular object: for how is it different to wish that another person may not suffer pain and uneasiness and to wish him happy? Were it even true that pity is no more than a feeling, which puts us in the place of the sufferer, a feeling, obscure yet lively in a savage, developed yet feeble in civilised man; this truth would have no other consequence than to confirm my argument. Compassion must, in fact, be the stronger, the more the animal beholding any kind of distress identifies himself with the animal that suffers. Now, it is plain that such identification must have been much more perfect in a state of nature than it is in a state of reason. It is reason that engenders self-respect, and reflection that confirms it: it is reason which turns man's mind back upon itself, and divides him from everything that could disturb or afflict him. It is philosophy that isolates him, and bids him say, at sight of the misfortunes of others: "Perish if you will, I am secure." Nothing but such general evils as threaten the whole community can disturb the tranquil sleep of the philosopher, or tear him from his bed. A murder may with impunity be committed under his window; he has only to put his hands to his ears and argue a little with himself, to prevent nature, which is shocked within him, from identifying itself with the unfortunate sufferer. Uncivilised man has not this admirable talent; and for want of reason and wisdom, is always foolishly ready to obey the first promptings of humanity. It is the populace that flocks together at riots and street-brawls, while the wise man prudently makes off. It is the mob and the market-women, who part the combatants, and hinder gentle-folks from cutting one another's throats.

It is then certain that compassion is a natural feeling which, by moderating the violence of love of self in each individual, contributes to the preservation of the whole species. It is this compassion that hurries us

without reflection to the relief of those who are in distress: it is this which in a state of nature supplies the place of laws, morals and virtues, with the advantage that none are tempted to disobey its gentle voice: it is this which will always prevent a sturdy savage from robbing a weak child or a feeble old man of the sustenance they may have with pain and difficulty acquired, if he sees a possibility of providing for himself by other means: it is this which, instead of inculcating that sublime maxim of rational justice, *Do to others as you would have them do unto you*, inspires all men with that other maxim of natural goodness, much less perfect indeed, but perhaps more useful; *Do good to yourself with as little evil as possible to others*. In a word, it is rather in this natural feeling than in any subtle arguments that we must look for the cause of that repugnance, which every man would experience in doing evil, even independently of the maxims of education. Although it might belong to Socrates and other minds of the like craft to acquire virtue by reason, the human race would long since have ceased to be, had its preservation depended only on the reasonings of the individuals composing it.

With passions so little active, and so good a curb, men, being rather wild than wicked, and more intent to guard themselves against the mischief that might be done them, than to do mischief to others, were by no means subject to very perilous dissensions. They maintained no kind of intercourse with one another, and were consequently strangers to vanity, deference, esteem and contempt; they had not the least idea of *meum* and *tuum*, and no true conception of justice; they looked upon every violence to which they were subjected, rather as an injury that might easily be repaired than as a crime that ought to be punished; and they never thought of taking revenge, unless perhaps mechanically and on the spot, as a dog will sometimes bite the stone which is thrown at him. Their quarrels therefore would seldom have very bloody consequences; for the subject of them would be merely the question of subsistence. But I am aware of one greater danger, which remains to be noticed.

Of the passions that stir the heart of man, there is one which makes the sexes necessary to each other, and is extremely ardent and impetuous; a terrible passion that braves danger, surmounts all obstacles, and in its transports seems calculated to bring destruction on the human race which it is really destined to preserve. What must become of men who are left to this

brutal and boundless rage, without modesty, without shame, and daily upholding their amours at the price of their blood?

It must, in the first place, be allowed that, the more violent the passions are, the more are laws necessary to keep them under restraint. But, setting aside the inadequacy of laws to effect this purpose, which is evident from the crimes and disorders to which these passions daily give rise among us, we should do well to inquire if these evils did not spring up with the laws themselves; for in this case, even if the laws were capable of repressing such evils, it is the least that could be expected from them, that they should check a mischief which would not have arisen without them.

Let us begin by distinguishing between the physical and moral ingredients in the feeling of love. The physical part of love is that general desire which urges the sexes to union with each other. The moral part is that which determines and fixes this desire exclusively upon one particular object; or at least gives it a greater degree of energy toward the object thus preferred. It is easy to see that the moral part of love is a factitious feeling, born of social usage, and enhanced by the women with much care and cleverness, to establish their empire, and put in power the sex which ought to obey. This feeling, being founded on certain ideas of beauty and merit which a savage is not in a position to acquire, and on comparisons which he is incapable of making, must be for him almost non-existent; for, as his mind cannot form abstract ideas of proportion and regularity, so his heart is not susceptible of the feelings of love and admiration, which are even insensibly produced by the application of these ideas. He follows solely the character nature has implanted in him, and not tastes which he could never have acquired; so that every woman equally answers his purpose.

Men in a state of nature being confined merely to what is physical in love, and fortunate enough to be ignorant of those excellences, which whet the appetite while they increase the difficulty of gratifying it, must be subject to fewer and less violent fits of passion, and consequently fall into fewer and less violent disputes. The imagination, which causes such ravages among us, never speaks to the heart of savages, who quietly await the impulses of nature, yield to them involuntarily, with more pleasure than ardour, and, their wants once satisfied, lose the desire. It is therefore incontestable that love, as well as all other passions, must have acquired in society that glowing impetuosity, which makes it so often fatal to mankind. And it is the

more absurd to represent savages as continually cutting one another's throats to indulge their brutality, because this opinion is directly contrary to experience; the Caribbeans, who have as yet least of all deviated from the state of nature, being in fact the most peaceable of people in their amours, and the least subject to jealousy, though they live in a hot climate which seems always to inflame the passions.

With regard to the inferences that might be drawn, in the case of several species of animals, the males of which fill our poultry-yards with blood and slaughter, or in spring make the forests resound with their quarrels over their females; we must begin by excluding all those species, in which nature has plainly established, in the comparative power of the sexes, relations different from those which exist among us: thus we can base no conclusion about men on the habits of fighting cocks. In those species where the proportion is better observed, these battles must be entirely due to the scarcity of females in comparison with males; or, what amounts to the same thing, to the intervals during which the female constantly refuses the advances of the male: for if each female admits the male but during two months in the year, it is the same as if the number of females were five-sixths less. Now, neither of these two cases is applicable to the human species, in which the number of females usually exceeds that of males, and among whom it has never been observed, even among savages, that the females have, like those of other animals, their stated times of passion and indifference. Moreover, in several of these species, the individuals all take fire at once, and there comes a fearful moment of universal passion, tumult and disorder among them; a scene which is never beheld in the human species, whose love is not thus seasonal. We must not then conclude from the combats of such animals for the enjoyment of the females, that the case would be the same with mankind in a state of nature: and, even if we drew such a conclusion, we see that such contests do not exterminate other kinds of animals, and we have no reason to think they would be more fatal to ours. It is indeed clear that they would do still less mischief than is the case in a state of society; especially in those countries in which, morals being still held in some repute, the jealousy of lovers and the vengeance of husbands are the daily cause of duels, murders, and even worse crimes; where the obligation of eternal fidelity only occasions adultery, and the very laws of honour and continence necessarily increase debauchery and lead to the multiplication of abortions.

Let us conclude then that man in a state of nature, wandering up and down the forests, without industry, without speech, and without home, an equal stranger to war and to all ties, neither standing in need of his fellow-creatures nor having any desire to hurt them, and perhaps even not distinguishing them one from another; let us conclude that, being self-sufficient and subject to so few passions, he could have no feelings or knowledge but such as befitted his situation; that he felt only his actual necessities, and disregarded everything he did not think himself immediately concerned to notice, and that his understanding made no greater progress than his vanity. If by accident he made any discovery, he was the less able to communicate it to others, as he did not know even his own children. Every art would necessarily perish with its inventor, where there was no kind of education among men, and generations succeeded generations without the least advance; when, all setting out from the same point, centuries must have elapsed in the barbarism of the first ages; when the race was already old, and man remained a child.

If I have expatiated at such length on this supposed primitive state, it is because I had so many ancient errors and inveterate prejudices to eradicate, and therefore thought it incumbent on me to dig down to their very root, and show, by means of a true picture of the state of nature, how far even the natural inequalities of mankind are from having that reality and influence which modern writers suppose.

It is in fact easy to see that many of the differences which distinguish men are merely the effect of habit and the different methods of life men adopt in society. Thus a robust or delicate constitution, and the strength or weakness attaching to it, are more frequently the effects of a hardy or effeminate method of education than of the original endowment of the body. It is the same with the powers of the mind; for education not only makes a difference between such as are cultured and such as are not, but even increases the differences which exist among the former, in proportion to their respective degrees of culture: as the distance between a giant and a dwarf on the same road increases with every step they take. If we compare the prodigious diversity, which obtains in the education and manner of life of the various orders of men in the state of society, with the uniformity and simplicity of animal and savage life, in which every one lives on the same kind of food and in exactly the same manner, and does exactly the same

things, it is easy to conceive how much less the difference between man and man must be in a state of nature than in a state of society, and how greatly the natural inequality of mankind must be increased by the inequalities of social institutions.

But even if nature really affected, in the distribution of her gifts, that partiality which is imputed to her, what advantage would the greatest of her favourites derive from it, to the detriment of others, in a state that admits of hardly any kind of relation between them? Where there is no love, of what advantage is beauty? Of what use is wit to those who do not converse, or cunning to those who have no business with others? I hear it constantly repeated that, in such a state, the strong would oppress the weak; but what is here meant by oppression? Some, it is said, would violently domineer over others, who would groan under a servile submission to their caprices. This indeed is exactly what I observe to be the case among us; but I do not see how it can be inferred of men in a state of nature, who could not easily be brought to conceive what we mean by dominion and servitude. One man, it is true, might seize the fruits which another had gathered, the game he had killed, or the cave he had chosen for shelter; but how would he ever be able to exact obedience, and what ties of dependence could there be among men without possessions? If, for instance, I am driven from one tree, I can go to the next; if I am disturbed in one place, what hinders me from going to another? Again, should I happen to meet with a man so much stronger than myself, and at the same time so depraved, so indolent, and so barbarous, as to compel me to provide for his sustenance while he himself remains idle; he must take care not to have his eyes off me for a single moment; he must bind me fast before he goes to sleep, or I shall certainly either knock him on the head or make my escape. That is to say, he must in such a case voluntarily expose himself to much greater trouble than he seeks to avoid, or can give me. After all this, let him be off his guard ever so little; let him but turn his head aside at any sudden noise, and I shall be instantly twenty paces off, lost in the forest, and, my fetters burst asunder, he would never see me again.

Without my expatiating thus uselessly on these details, every one must see that as the bonds of servitude are formed merely by the mutual dependence of men on one another and the reciprocal needs that unite them, it is impossible to make any man a slave, unless he be first reduced to a situation

in which he cannot do without the help of others: and, since such a situation does not exist in a state of nature, every one is there his own master, and the law of the strongest is of no effect.

Having proved that the inequality of mankind is hardly felt, and that its influence is next to nothing in a state of nature, I must next show its origin and trace its progress in the successive developments of the human mind. Having shown that human *perfectibility*, the social virtues, and the other faculties which natural man potentially possessed, could never develop of themselves, but must require the fortuitous concurrence of many foreign causes that might never arise, and without which he would have remained for ever in his primitive condition, I must now collect and consider the different accidents which may have improved the human understanding while depraving the species, and made man wicked while making him sociable; so as to bring him and the world from that distant period to the point at which we now behold them.

I confess that, as the events I am going to describe might have happened in various ways, I have nothing to determine my choice but conjectures: but such conjectures become reasons, when they are the most probable that can be drawn from the nature of things, and the only means of discovering the truth. The consequences, however, which I mean to deduce will not be barely conjectural; as, on the principles just laid down, it would be impossible to form any other theory that would not furnish the same results, and from which I could not draw the same conclusions.

This will be a sufficient apology for my not dwelling on the manner in which the lapse of time compensates for the little probability in the events; on the surprising power of trivial causes, when their action is constant; on the impossibility, on the one hand, of destroying certain hypotheses, though on the other we cannot give them the certainty of known matters of fact; on its being within the province of history, when two facts are given as real, and have to be connected by a series of intermediate facts, which are unknown or supposed to be so, to supply such facts as may connect them; and on its being in the province of philosophy when history is silent, to determine similar facts to serve the same end; and lastly, on the influence of similarity, which, in the case of events, reduces the facts to a much smaller number of different classes than is commonly imagined. It is enough for me

to offer these hints to the consideration of my judges, and to have so arranged that the general reader has no need to consider them at all.

---

[1] See Appendix.

[2] Justin. Hist, ii, 2. So much more does the ignorance of vice profit the one sort than the knowledge of virtue the other.

[3] Egoism must not be confused with self-respect: for they differ both in themselves and in their effects. Self-respect is a natural feeling which leads every animal to look to its own preservation, and which, guided in man by reason and modified by compassion, creates humanity and virtue. Egoism is a purely relative and factitious feeling, which arises in the state of society, leads each individual to make more of himself than of any other, causes all the mutual damage men inflict one on another, and is the real source of the "sense of honour." This being understood, I maintain that, in our primitive condition, in the true state of nature, egoism did not exist; for as each man regarded himself as the only observer of his actions, the only being in the universe who took any interest in him, and the sole judge of his deserts, no feeling arising from comparisons he could not be led to make could take root in his soul; and for the same reason, he could know neither hatred nor the desire for revenge, since these passions can spring only from a sense of injury: and as it is the contempt or the intention to hurt, and not the harm done, which constitutes the injury, men who neither valued nor compared themselves could do one another much violence, when it suited them, without feeling any sense of injury. In a word, each man, regarding his fellows almost as he regarded animals of different species, might seize the prey of a weaker or yield up his own to a stronger, and yet consider these acts of violence as mere natural occurrences, without the slightest emotion of insolence or despite, or any other feeling than the joy or grief of success or failure.

[4] Nature avows she gave the human race the softest hearts, who gave < them tears.

---

## THE SECOND PART

The first man who, having enclosed a piece of ground, bethought himself of saying *This is mine*, and found people simple enough to believe him, was the real founder of civil society. From how many crimes, wars and murders, from how many horrors and misfortunes might not any one have saved mankind, by pulling up the stakes, or filling up the ditch, and crying to his fellows, "Beware of listening to this impostor; you are undone if you once forget that the fruits of the earth, belong to us all, and the earth itself to nobody." But there is great probability that things had then already come to such a pitch, that they could no longer continue as they were; for the idea of property depends on many prior ideas, which could only be acquired successively, and cannot have been formed all at once in the human mind.

Mankind must have made very considerable progress, and acquired considerable knowledge and industry which they must also have transmitted and increased from age to age, before they arrived at this last point of the

state of nature. Let us then go farther back and endeavour to unify under a single point of view that slow succession of events and discoveries in the most natural order.

Man's first feeling was that of his own existence, and his first care that of self-preservation. The produce of the earth furnished him with all he needed, and instinct told him how to use it. Hunger and other appetites made him at various times experience various modes of existence; and among these was one which urged him to propagate his species—a blind propensity that, having nothing to do with the heart, produced a merely animal act. The want once gratified, the two sexes knew each other no more; and even the offspring was nothing to its mother, as soon as it could do without her.

Such was the condition of infant man; the life of an animal limited at first to mere sensations, and hardly profiting by the gifts nature bestowed on him, much less capable of entertaining a thought of forcing anything from her. But difficulties soon presented themselves, and it became necessary to learn how to surmount them: the height of the trees, which prevented him from gathering their fruits, the competition of other animals desirous of the same fruits, and the ferocity of those who needed them for their own preservation, all obliged him to apply himself to bodily exercises. He had to be active, swift of foot, and vigorous in light. Natural weapons, stones and sticks, were easily found: he learnt to surmount the obstacles of nature, to contend in case of necessity with other animals, and to dispute for the means of subsistence even with other men, or to indemnify himself for what he was forced to give up to a stronger.

In proportion as the human race grew more numerous, men's cares increased. The difference of soils, climates and seasons, must have introduced some differences into their manner of living. Barren years, long and sharp winters, scorching summers which parched the fruits of the earth, must have demanded a new industry. On the sea-shore and the banks of rivers, they invented the hook and line, and became fishermen and eaters of fish. In the forests they made bows and arrows, and became huntsmen and warriors. In cold countries they clothed themselves with the skins of the beasts they had slain. The lightning, a volcano, or some lucky chance acquainted them with fire, a new resource against the rigours of winter: they next learned how to preserve this element, then how to reproduce it, and

finally how to prepare with it the flesh of animals which before they had eaten raw.

This repeated relevance of various beings to himself, and one to another, would naturally give rise in the human mind to the perceptions of certain relations between them. Thus the relations which we denote by the terms, great, small, strong, weak, swift, slow, fearful, bold, and the like, almost insensibly compared at need, must have at length produced in him a kind of reflection, or rather a mechanical prudence, which would indicate to him the precautions most necessary to his security.

The new intelligence which resulted from this development increased his superiority over other animals, by making him sensible of it. He would now endeavour, therefore, to ensnare them, would play them a thousand tricks, and though many of them might surpass him in swiftness or in strength, would in time become the master of some and the scourge of others. Thus, the first time he looked into himself, he felt the first emotion of pride; and, at a time when he scarce knew how to distinguish the different orders of beings, by looking upon his species as of the highest order, he prepared the way for assuming pre-eminence as an individual.

Other men, it is true, were not then to him what they now are to us, and he had no greater intercourse with them than with other animals; yet they were not neglected in his observations. The conformities, which he would in time discover between them, and between himself and his female, led him to judge of others which were not then perceptible; and finding that they all behaved as he himself would have done in like circumstances, he naturally inferred that their manner of thinking and acting was altogether in conformity with his own. This important truth, once deeply impressed on his mind, must have induced him, from an intuitive feeling more certain and much more rapid than any kind of reasoning, to pursue the rules of conduct, which he had best observe towards them, for his own security and advantage.

Taught by experience that the love of well-being is the sole motive of human actions, he found himself in a position to distinguish the few cases, in which mutual interest might justify him in relying upon the assistance of his fellows; and also the still fewer cases in which a conflict of interests might give cause to suspect them. In the former case, he joined in the same

herd with them, or at most in some kind of loose association, that laid no restraint on its members, and lasted no longer than the transitory occasion that formed it. In the latter case, every one sought his own private advantage, either by open force, if he thought himself strong enough, or by address and cunning, if he felt himself the weaker.

In this manner, men may have insensibly acquired some gross ideas of mutual undertakings, and of the advantages of fulfilling them: that is, just so far as their present and apparent interest was concerned: for they were perfect strangers to foresight, and were so far from troubling themselves about the distant future, that they hardly thought of the morrow. If a deer was to be taken, every one saw that, in order to succeed, he must abide faithfully by his post: but if a hare happened to come within the reach of any one of them, it is not to be doubted that he pursued it without scruple, and, having seized his prey, cared very little, if by so doing he caused his companions to miss theirs.

It is easy to understand that such intercourse would not require a language much more refined than that of rooks or monkeys, who associate together for much the same purpose. Inarticulate cries, plenty of gestures and some imitative sounds, must have been for a long time the universal language; and by the addition, in every country, of some conventional articulate sounds (of which, as I have already intimated, the first institution is not too easy to explain) particular languages were produced; but these were rude and imperfect, and nearly such as now to be found among some savage nations.

Hurried on by the rapidity of time, by the abundance of things I have to say, and by the almost insensible progress of things in their beginnings, I pass over in an instant a multitude of ages; for the slower the events were in their succession, the more rapidly may they be described.

These first advances enabled men to make others with greater rapidity. In proportion as they grew enlightened, they grew industrious. They ceased to fall asleep under the first tree, or in the first cave that afforded them shelter; they invented several kinds of implements of hard and sharp stones, which they used to dig up the earth, and to cut wood; they then made huts out of branches, and afterwards learnt to plaster them over with mud and clay. This was the epoch of a first revolution, which established and

distinguished families, and introduced a kind of property, in itself the source of a thousand quarrels and conflicts. As, however, the strongest were probably the first to build themselves huts which they felt themselves able to defend, it may be concluded that the weak found it much easier and safer to imitate, than to attempt to dislodge them: and of those who were once provided with huts, none could have any inducement to appropriate that of his neighbour; not indeed so much because it did not belong to him, as because it could be of no use, and he could not make himself master of it without exposing himself to a desperate battle with the family which occupied it.

The first expansions of the human heart were the effects of a novel situation, which united husbands and wives, fathers and children, under one roof. The habit of living together soon gave rise to the finest feelings known to humanity, conjugal love and paternal affection. Every family became a little society, the more united because liberty—and reciprocal attachment were the only bonds of its union. The sexes, whose manner of life had been hitherto the same, began now to adopt different ways of living. The women became more sedentary, and accustomed themselves to mind the hut and their children, while the men went abroad in search of their common subsistence. From living a softer life, both sexes also began to lose something of their strength and ferocity: but, if individuals became to some extent less able to encounter wild beasts separately, they found it, on the other hand, easier to assemble and resist in common.

The simplicity and solitude of man's life in this new condition, the paucity of his wants, and the implements he had invented to satisfy them, left him a great deal of leisure, which he employed to furnish himself with many conveniences unknown to his fathers: and this was the first yoke he inadvertently imposed on himself, and the first source of the evils he prepared for his descendants. For, besides continuing thus to enervate both body and mind, these conveniences lost with use almost all their power to please, and even degenerated into real needs, till the want of them became far more disagreeable than the possession of them had been pleasant. Men would have been unhappy at the loss of them, though the possession did not make them happy.

We can here see a little better how the use of speech became established, and insensibly improved in each family, and we may form a conjecture also

concerning the manner in which various causes may have extended and accelerated the progress of language, by making it more and more necessary. Floods or earthquakes surrounded inhabited districts with precipices or waters: revolutions of the globe tore off portions from the continent, and made them islands. It is readily seen that among men thus collected and compelled to live together, a common idiom must have arisen much more easily than among those who still wandered through the forests of the continent. Thus it is very possible that after their first essays in navigation the islanders brought over the use of speech to the continent: and it is at least very probable that communities and languages were first established in islands, and even came to perfection there before they were known on the mainland.

Everything now begins to change its aspect. Men, who have up to now been roving in the woods, by taking to a more settled manner of life, come gradually together, form separate bodies, and at length in every country arises a distinct nation, united in character and manners, not by regulations or laws, but by uniformity of life and food, and the common influence of climate. Permanent neighbourhood could not fail to produce, in time, some connection between different families. Among young people of opposite sexes, living in neighbouring huts, the transient commerce required by nature soon led, through mutual intercourse, to another kind not less agreeable, and more permanent. Men began now to take the difference between objects into account, and to make comparisons; they acquired imperceptibly the ideas of beauty and merit, which soon gave rise to feelings of preference. In consequence of seeing each other often, they could not do without seeing each other constantly. A tender and pleasant feeling insinuated itself into their souls, and the least opposition turned it into an impetuous fury: with love arose jealousy; discord triumphed, and human blood was sacrificed to the gentlest of all passions.

As ideas and feelings succeeded one another, and heart and head were brought into play, men continued to lay aside their original wildness; their private connections became every day more intimate as their limits extended. They accustomed themselves to assemble before their huts round a large tree; singing and dancing, the true offspring of love and leisure, became the amusement, or rather the occupation, of men and women thus assembled together with nothing else to do. Each one began to consider the

rest, and to wish to be considered in turn; and thus a—value came to be attached to public esteem. Whoever sang or danced best, whoever was the handsomest, the strongest, the most dexterous, or the most eloquent, came to be of most consideration; and this was the first step towards inequality, and at the same time towards vice. From these first distinctions arose on the one side vanity and contempt and on the other shame and envy: and the fermentation caused by these new leavens ended by producing combinations fatal to innocence and happiness.

As soon as men began to value one another, and the idea of consideration had got a footing in the mind, every one put in his claim to it, and it became impossible to refuse it to any with impunity. Hence arose the first obligations of civility even among savages; and every intended injury became an affront; because, besides the hurt which might result from it, the party injured was certain to find in it a contempt for his person, which was often more insupportable than the hurt itself.

Thus, as every man punished the contempt shown him by others, in proportion to his opinion of himself, revenge became terrible, and men bloody and cruel. This is precisely the state reached by most of the savage nations known to us: and it is for want of having made a proper distinction in our ideas, and seen how very far they already are from the state of nature, that so many writers have hastily concluded that man is naturally cruel, and requires civil institutions to make him more mild; whereas nothing is more gentle than man in his primitive state, as he is placed by nature at an equal distance from the stupidity of brutes, and the fatal ingenuity of civilised man. Equally confined by instinct and reason to the sole care of guarding himself against the mischiefs which threaten him, he is restrained by natural compassion from doing any injury to others, and is not led to do such a thing even in return for injuries received. For, according to the axiom of the wise Locke, *There can be no injury, where there is no property.*

But it must be remarked that the society thus formed, and the relations thus established among men, required of them qualities different from those which they possessed from their primitive constitution. Morality began to appear in human actions, and every one, before the institution of law, was the only judge and avenger of the injuries done him, so that the goodness which was suitable in the pure state of nature was no longer proper in the new-born state of society. Punishments had to be made more severe, as

opportunities of offending became more frequent, and the dread of vengeance had to take the place of the rigour of the law. Thus, though men had become less patient, and their natural compassion had already suffered some diminution, this period of expansion of the human faculties, keeping a just mean between the indolence of the primitive state and the petulant activity of our egoism, must have been the happiest and most stable of epochs. The more we reflect on it, the more we shall find that this state was the least subject to revolutions, and altogether the very best man could experience; so that he can have departed from it only through some fatal accident, which, for the public good, should never have happened. The example of savages, most of whom have been found in this state, seems to prove that men were meant to remain in it, that it is the real youth of the world, and that all subsequent advances have been apparently so many steps towards the perfection of the individual, but in reality towards the decrepitude of the species.

So long as men remained content with their rustic huts, so long as they were satisfied with clothes made of the skins of animals and sewn together with thorns and fish-bones, adorned themselves only with feathers and shells, and continued to paint their bodies different colours, to improve and beautify their bows and arrows and to make with sharp-edged stones fishing boats or clumsy musical instruments; in a word, so long as they undertook only what a single person could accomplish, and confined themselves to such arts as did not require the joint labour of several hands, they lived free, healthy, honest and happy lives, so long as their nature allowed, and as they continued to enjoy the pleasures of mutual and independent intercourse. But from the moment one man began to stand in need of the help of another; from the moment it appeared advantageous to any one man to have enough provisions for two, equality disappeared, property was introduced, work became indispensable, and vast forests became smiling fields, which man had to water with the sweat of his brow, and where slavery and misery were soon seen to germinate and grow up with the crops.

Metallurgy and agriculture were the two arts which produced this great revolution. The poets tell us it was gold and silver, but, for the philosophers, it was iron and corn, which first civilised men, and ruined humanity. Thus both were unknown to the savages of America, who for that reason are still savage; the other nations also seem to have continued in a state of

barbarism while they practised only one of these arts. One of the best reasons, perhaps, why Europe has been, if not longer, at least more constantly and highly civilised than the rest of the world, is that it is at once the most abundant in iron and the most fertile in corn.

It is difficult to conjecture how men first came to know and use iron; for it is impossible to suppose they would of themselves think of digging the ore out of the mine, and preparing it for smelting, before they knew what would be the result. On the other hand, we have the less reason to suppose this discovery the effect of any accidental fire, as mines are only formed in barren places, bare of trees and plants; so that it looks as if nature had taken pains to keep the fatal secret from us. There remains, therefore, only the extraordinary accident of some volcano which, by ejecting metallic substances already in fusion, suggested to the spectators the idea of imitating the natural operation. And we must further conceive them as possessed of uncommon courage and foresight, to undertake so laborious a work, with so distant a prospect of drawing advantage from it; yet these qualities are united only in minds more advanced than we can suppose those of these first discoverers to have been.

With regard to agriculture, the principles of it were known long before they were put in practice; and it is indeed hardly possible that men, constantly employed in drawing their subsistence from plants and trees, should not readily acquire a knowledge of the means made use of by nature for the propagation of vegetables. It was in all probability very long, however, before their industry took that turn, either because trees, which together with hunting and fishing afforded them food, did not require their attention; or because they were ignorant of the use of corn, or without instruments to cultivate it; or because they lacked foresight to future needs; or lastly, because they were without means of preventing others from robbing them of the fruit of their labour.

When they grew more industrious, it is natural to believe that they began, with the help of sharp stones and pointed sticks, to cultivate a few vegetables or roots around their huts; though it was long before they knew how to prepare corn, or were provided with the implements necessary for raising it in any large quantity; not to mention how essential it is, for husbandry, to consent to immediate loss, in order to reap a future gain—a

precaution very foreign to the turn of a savage's mind; for, as I have said, he hardly foresees in the morning what he will need at night.

The invention of the other arts must therefore have been necessary to compel mankind to apply themselves to agriculture. No sooner were artificers wanted to smelt and forge iron, than others were required to maintain them; the more hands that were employed in manufactures, the fewer were left to provide for the common subsistence, though the number of mouths to be furnished with food remained the same: and as some required commodities in exchange for their iron, the rest at length discovered the method of making iron serve for the multiplication of commodities. By this means the arts of husbandry and agriculture were established on the one hand, and the art of working metals and multiplying their uses on the other.

The cultivation of the earth necessarily brought about its distribution; and property, once recognised, gave rise to the first rules of justice; for, to secure each man his own, it had to be possible for each to have something. Besides, as men began to look forward to the future, and all had something to lose, every one had reason to apprehend that reprisals would follow any injury he might do to another. This origin is so much the more natural, as it is impossible to conceive how property can come from anything but manual labour: for what else can a man add to things which he does not originally create, so as to make them his own property? It is the husbandman's labour alone that, giving him a title to the produce of the ground he has tilled, gives him a claim also to the land itself, at least till harvest; and so, from year to year, a constant possession which is easily transformed into property. When the ancients, says Grotius, gave to Ceres the title of *Legislatrix*, and to a festival celebrated in her honour the name of *Thesmophoria*, they meant by that that the distribution of lands had produced a new kind of right: that is to say, the right of property, which is different from the right deducible from the law of nature.

In this state of affairs, equality might have been sustained, had the talents of individuals been equal, and had, for example, the use of iron and the consumption of commodities always exactly balanced each other; but, as there was nothing to preserve this balance, it was soon disturbed; the strongest did most work; the most skilful turned his labour to best account; the most ingenious devised methods of diminishing his labour: the

husbandman wanted more iron, or the smith more corn, and, while both laboured equally, the one gained a great deal by his work, while the other could hardly support himself. Thus natural inequality unfolds itself insensibly with that of combination, and the difference between men, developed by their different circumstances, becomes more sensible and permanent in its effects, and begins to have an influence, in the same proportion, over the lot of individuals.

Matters once at this pitch, it is easy to imagine the rest. I shall not detain the reader with a description of the successive invention of other arts, the development of language, the trial and utilisation of talents, the inequality of fortunes, the use and abuse of riches, and all the details connected with them which the reader can easily supply for himself. I shall confine myself to a glance at mankind in this new situation.

Behold then all human faculties developed, memory and imagination in full play, egoism interested, reason active, and the mind almost at the highest point of its perfection. Behold all the natural qualities in action, the rank and condition of every man assigned him; not merely his share of property and his power to serve or injure others, but also his wit, beauty, strength or skill, merit or talents: and these being the only qualities capable of commanding respect, it soon became necessary to possess or to affect them.

It now became the interest of men to appear what they really were not. To be and to seem became two totally different things; and from this distinction sprang insolent pomp and cheating trickery, with all the numerous vices that go in their train. On the other hand, free and independent as men were before, they were now, in consequence of a multiplicity of new wants, brought into subjection, as it were, to all nature, and particularly to one another; and each became in some degree a slave even in becoming the master of other men: if rich, they stood in need of the services of others; if poor, of their assistance; and even a middle condition did not enable them to do without one another. Man must now, therefore, have been perpetually employed in getting others to interest themselves in his lot, and in making them, apparently at least, if not really, find their advantage in promoting his own. Thus he must have been sly and artful in his behaviour to some, and imperious and cruel to others; being under a kind of necessity to ill-use all the persons of whom he stood in need, when he could not frighten them into compliance, and did not judge it his interest to be useful to them. Insatiable

ambition, the thirst of raising their respective fortunes, not so much from real want as from the desire to surpass others, inspired all men with a vile propensity to injure one another, and with a secret jealousy, which is the more dangerous, as it puts on the mask of benevolence, to carry its point with greater security. In a word, there arose rivalry and competition on the one hand, and conflicting interests on the other, together with a secret desire on both of profiting at the expense of others. All these evils were the first effects of property, and the inseparable attendants of growing inequality.

Before the invention of signs to represent riches, wealth could hardly consist in anything but lands and cattle, the only real possessions men can have. But, when inheritances so increased in number and extent as to occupy the whole of the land, and to border on one another, one man could aggrandise himself only at the expense of another; at the same time the supernumeraries, who had been too weak or too indolent to make such acquisitions, and had grown poor without sustaining any loss, because, while they saw everything change around them, they remained still the same, were obliged to receive their subsistence, or steal it, from the rich; and this soon bred, according to their different characters, dominion and slavery, or violence and rapine. The wealthy, on their part, had no sooner begun to taste the pleasure of command, than they disdained all others, and, using their old slaves to acquire new, thought of nothing but subduing and enslaving their neighbours; like ravenous wolves, which, having once tasted human flesh, despise every other food and thenceforth seek only men to devour.

Thus, as the most powerful or the most miserable considered their might or misery as a kind of right to the possessions of others, equivalent, in their opinion, to that of property, the destruction of equality was attended by the most terrible disorders. Usurpations by the rich, robbery by the poor, and the unbridled passions of both, suppressed the cries of natural compassion and the still feeble voice of justice, and filled men with avarice, ambition and vice. Between the title of the strongest and that of the first occupier, there arose perpetual conflicts, which never ended but in battles and bloodshed. The new-born state of society thus gave rise to a horrible state of war; men thus harassed and depraved were no longer capable of retracing their steps or renouncing the fatal acquisitions they had made, but,

labouring by the abuse of the faculties which do them honour, merely to their own confusion, brought themselves to the brink of ruin.

*Attonitus novitate mali, divesque miserque,  
Effugere optat opes; et quæ modô voverat odit.*<sup>[5]</sup>

It is impossible that men should not at length have reflected on so wretched a situation, and on the calamities that overwhelmed them. The rich, in particular, must have felt how much they suffered by a constant state of war, of which they bore all the expense; and in which, though all risked their lives, they alone risked their property. Besides, however speciously they might disguise their usurpations, they knew that they were founded on precarious and false titles; so that, if others took from them by force what they themselves had gained by force, they would have no reason to complain. Even those who had been enriched by their own industry, could hardly base their proprietorship on better claims. It was in vain to repeat, "I built this well; I gained this spot by my industry." Who gave you your standing, it might be answered, and what right have you to demand payment of us for doing what we never asked you to do? Do you not know that numbers of your fellow-creatures are starving, for want of what you have too much of? You ought to have had the express and universal consent of mankind, before appropriating more of the common subsistence than you needed for your own maintenance. Destitute of valid reasons to justify and sufficient strength to defend himself, able to crush individuals with ease, but easily crushed himself by a troop of bandits, one against all, and incapable, on account of mutual jealousy, of joining with his equals against numerous enemies united by the common hope of plunder, the rich man, thus urged by necessity, conceived at length the profoundest plan that ever entered the mind of man: this was to employ in his favour the forces of those who attacked him, to make allies of his adversaries, to inspire them with different maxims, and to give them other institutions as favourable to himself as the law of nature was unfavourable.

With this view, after having represented to his neighbours the horror of a situation which armed every man against the rest, and made their possessions as burdensome to them as their wants, and in which no safety could be expected either in riches or in poverty, he readily devised plausible arguments to make them close with his design. "Let us join," said he, "to guard the weak from oppression, to restrain the ambitious, and secure to

every man the possession of what belongs to him: let us institute rules of justice and peace, to which all without exception may be obliged to conform; rules that may in some measure make amends for the caprices of fortune, by subjecting equally the powerful and the weak to the observance of reciprocal obligations. Let us, in a word, instead of turning our forces against ourselves, collect them in a supreme power which may govern us by wise laws, protect and defend all the members of the association, repulse their common enemies, and maintain eternal harmony among us."

Far fewer words to this purpose would have been enough to impose on men so barbarous and easily seduced; especially as they had too many disputes among themselves to do without arbitrators, and too much ambition and avarice to go long without masters. All ran headlong to their chains, in hopes of securing their liberty; for they had just wit enough to perceive the advantages of political institutions, without experience enough to enable them to foresee the dangers. The most capable of fore-seeing the dangers were the very persons who expected to benefit by them; and even the most prudent judged it not inexpedient to sacrifice one part of their freedom to ensure the rest; as a wounded man has his arm cut off to save the rest of his body.

Such was, or may well have been, the origin of society and law, which bound new fetters on the poor, and gave new powers to the rich; which irretrievably destroyed natural liberty, eternally fixed the law of property and inequality, converted clever usurpation into unalterable right, and, for the advantage of a few ambitious individuals, subjected all mankind to perpetual labour, slavery and wretchedness. It is easy to see how the establishment of one community made that of all the rest necessary, and how, in order to make head against united forces, the rest of mankind had to unite in turn. Societies soon multiplied and spread over the face of the earth, till hardly a corner of the world was left in which a man could escape the yoke, and withdraw his head from beneath the sword which he saw perpetually hanging over him by a thread. Civil right having thus become the common rule among the members of each community, the law of nature maintained its place only between different communities, where, under the name of the right of nations, it was qualified by certain tacit conventions, in order to make commerce practicable, and serve as a substitute for natural compassion, which lost, when applied to societies, almost all the influence

it had over individuals, and survived no longer except in some great cosmopolitan spirits, who, breaking down the imaginary barriers that separate different peoples, follow the example of our Sovereign Creator, and include the whole human race in their benevolence.

But bodies politic, remaining thus in a state of nature among themselves, presently experienced the inconveniences which had obliged individuals to forsake it; for this state became still more fatal to these great bodies than it had been to the individuals of whom they were composed. Hence arose national wars, battles, murders, and reprisals, which shock nature and outrage reason; together with all those horrible prejudices which class among the virtues the honour of shedding human blood. The most distinguished men hence learned to consider cutting each other's throats a duty; at length men massacred their fellow-creatures by thousands without so much as knowing why, and committed more murders in a single day's fighting, and more violent outrages in the sack of a single town, than were committed in the state of nature during whole ages over the whole earth. Such were the first effects which we can see to have followed the division of mankind into different communities. But let us return to their institutions.

I know that some writers have given other explanations of the origin of political societies, such as the conquest of the powerful, or the association of the weak. It is, indeed, indifferent to my argument which of these causes we choose. That which I have just laid down, however, appears to me the most natural for the following reasons. First: because, in the first case, the right of conquest, being no right, in itself, could not serve as a foundation on which to build any other; the victor and the vanquished people still remained with respect to each other in the state of war, unless the vanquished, restored to the full possession of their liberty, voluntarily made choice of the victor for their chief. For till then, whatever capitulation may have been made being founded on violence, and therefore *ipso facto* void, there could not have been on this hypothesis either a real society or body politic, or any law other than that of the strongest. Secondly: because the words *strong* and *weak* are, in the second case, ambiguous; for during the interval between the establishment of a right of property, or prior occupancy, and that of political government, the meaning of these words is better expressed by the terms *rich* and *poor*: because, in fact, before the institution of laws, men had no other way of reducing their equals to

submission, than by attacking their goods, or making some of their own over to them. Thirdly: because, as the poor had nothing but their freedom to lose, it would have been in the highest degree absurd for them to resign voluntarily the only good they still enjoyed, without getting anything in exchange: whereas the rich having feelings, if I may so express myself, in every part of their possessions, it was much easier to harm them, and therefore more necessary for them to take precautions against it; and, in short, because it is more reasonable to suppose a thing to have been invented by those to whom it would be of service, than by those whom it must have harmed.

Government had, in its infancy, no regular and constant form. The want of experience and philosophy prevented men from seeing any but present inconveniences, and they thought of providing against others only as they presented themselves. In spite of the endeavours of the wisest legislators, the political state remained imperfect, because it was little more than the work of chance; and, as it had begun ill, though time revealed its defects and suggested remedies, the original faults were never repaired. It was continually being patched up, when the first task should have been to get the site cleared and all the old materials removed, as was done by Lycurgus at Sparta, if a stable and lasting edifice was to be erected. Society consisted at first merely of a few general conventions, which every member bound himself to observe; and for the performance of covenants the whole body went security to each individual. Experience only could show the weakness of such a constitution, and how easily it might be infringed with impunity, from the difficulty of convicting men of faults, where the public alone was to be witness and judge: the laws could not but be eluded in many ways; disorders and inconveniences could not but multiply continually, till it became necessary to commit the dangerous trust of public authority to private persons, and the care of enforcing obedience to the deliberations of the people to the magistrate. For to say that chiefs were chosen before the confederacy was formed, and that the administrators of the laws were there before the laws themselves, is too absurd a supposition to consider seriously.

It would be as unreasonable to suppose that men at first threw themselves irretrievably and unconditionally into the arms of an absolute master, and that the first expedient which proud and unsubdued men hit upon for their

common security was to run headlong into slavery. For what reason, in fact, did they take to themselves superiors, if it was not in order that they might be defended from oppression, and have protection for their lives, liberties and properties, which are, so to speak, the constituent elements of their being? Now, in the relations between man and man, the worst that can happen is for one to find himself at the mercy of another, and it would have been inconsistent with common-sense to begin by bestowing on a chief the only things they wanted his help to preserve. What equivalent could he offer them for so great a right? And if he had presumed to exact it under pretext of defending them, would he not have received the answer recorded in the fable: "What more can the enemy do to us?" It is therefore beyond dispute, and indeed the fundamental maxim of all political right, that people have set up chiefs to protect their liberty, and not to enslave them. *If we have a prince*, said Pliny to Trajan, *it is to save ourselves from having a master.*

Politicians indulge in the same sophistry about the love of liberty as philosophers about the state of nature. They judge, by what they see, of very different things, which they have not seen; and attribute to man a natural propensity to servitude, because the slaves within their observation are seen to bear the yoke with patience; they fail to reflect that it is with liberty as with innocence and virtue; the value is known only to those who possess them, and the taste for them is forfeited when they are forfeited themselves. "I know the charms of your country," said Brasidas to a Satrap, who was comparing the life at Sparta with that at Persepolis, "but you cannot know the pleasures of mine."

An unbroken horse erects his mane, paws the ground and starts back impetuously at the sight of the bridle; while one which is properly trained suffers patiently even whip and spur: so savage man will not bend his neck to the yoke to which civilised man submits without a murmur, but prefers the most turbulent state of liberty to the most peaceful slavery. We cannot therefore, from the servility of nations already enslaved, judge of the natural disposition of mankind for or against slavery; we should go by the prodigious efforts of every free people to save itself from oppression. I know that the former are for ever holding forth in praise of the tranquillity they enjoy in their chains, and that they call a state of wretched servitude a state of peace: *miserrimam servitutem pacem appellant*.<sup>[6]</sup> But when I

observe the latter sacrificing pleasure, peace, wealth, power and life itself to the preservation of that one treasure, which is so disdained by those who have lost it; when I see free-born animals dash their brains out against the bars of their cage, from an innate impatience of captivity; when I behold numbers of naked savages, that despise European pleasures, braving hunger, fire, the sword and death, to preserve nothing but their independence, I feel that it is not for slaves to argue about liberty.

With regard to paternal authority, from which some writers have derived absolute government and all society, it is enough, without going back to the contrary arguments of Locke and Sidney, to remark that nothing on earth can be further from the ferocious spirit of despotism than the mildness of that authority which looks more to the advantage of him who obeys than to that of him who commands; that, by the law of nature, the father is the child's master no longer than his help is necessary; that from that time they are both equal, the son being perfectly independent of the father, and owing him only respect and not obedience. For gratitude is a duty which ought to be paid, but not a right to be exacted: instead of saying that civil society is derived from paternal authority, we ought to say rather that the latter derives its principal force from the former. No individual was ever acknowledged as the father of many, till his sons and daughters remained settled around him. The goods of the father, of which he is really the master, are the ties which keep his children in dependence, and he may bestow on them, if he pleases, no share of his property, unless they merit it by constant deference to his will. But the subjects of an arbitrary despot are so far from having the like favour to expect from their chief, that they themselves and everything they possess are his property, or at least are considered by him as such; so that they are forced to receive, as a favour, the little of their own he is pleased to leave them. When he despoils them, he does but justice, and mercy in that he permits them to live.

By proceeding thus to test fact by right, we should discover as little reason as truth in the voluntary establishment of tyranny. It would also be no easy matter to prove the validity of a contract binding on only one of the parties, where all the risk is on one side, and none on the other; so that no one could suffer but he who bound himself. This hateful system is indeed, even in modern times, very far from being that of wise and good monarchs, and especially of the kings of France; as may be seen from several passages in

their edicts; particularly from the following passage in a celebrated edict published in 1667 in the name and by order of Louis XIV.

"Let it not, therefore, be said that the Sovereign is not subject to the laws of his State; since the contrary is a true proposition of the right of nations, which flattery has sometimes attacked but good princes have always defended as the tutelary divinity of their dominions. How much more legitimate is it to say with the wise Plato, that the perfect felicity of a kingdom consists in the obedience of subjects to their prince, and of the prince to the laws, and in the laws being just and constantly directed to the public good!"<sup>[7]</sup>

I shall not stay here to inquire whether, as liberty is the noblest faculty of man, it is not degrading our very nature, reducing ourselves to the level of the brutes, which are mere slaves of instinct, and even an affront to the Author of our being, to renounce without reserve the most precious of all His gifts, and to bow to the necessity of committing all the crimes He has forbidden, merely to gratify a mad or a cruel master; or if this sublime craftsman ought not to be less angered at seeing His workmanship entirely destroyed than thus dishonoured. I will waive (if my opponents please) the authority of Barbeyrac, who, following Locke, roundly declares that no man can so far sell his liberty as to submit to an arbitrary power which may use him as it likes. *For, he adds, this would be to sell his own life, of which he is not master.* I shall ask only what right those who were not afraid thus to debase themselves could have to subject their posterity to the same ignominy, and to renounce for them those blessings which they do not owe to the liberality of their progenitors, and without which life itself must be a burden to all who are worthy of it.

Puffendorf says that we may divest ourselves of our liberty in favour of other men, just as we transfer our property from one to another by contracts and agreements. But this seems a very weak argument. For in the first place, the property I alienate becomes quite foreign to me, nor can I suffer from the abuse of it; but it very nearly concerns me that my liberty should not be abused, and I cannot without incurring the guilt of the crimes I may be compelled to commit, expose myself to become an instrument of crime. Besides, the right of property being only a convention of human institution, men may dispose of what they possess as they please: but this is not the case with the essential gifts of nature, such as life and liberty, which every

man is permitted to enjoy, and of which it is at least doubtful whether any have a right to divest themselves. By giving up the one, we degrade our being; by giving up the other, we do our best to annul it; and, as no temporal good can indemnify us for the loss of either, it would be an offence against both reason and nature to renounce them at any price whatsoever. But, even if we could transfer our liberty, as we do our property, there would be a great difference with regard to the children, who enjoy the father's substance only by the transmission of his right; whereas, liberty being a gift which they hold from nature as being men, their parents have no right whatever to deprive them of it. As then, to establish slavery, it was necessary to do violence to nature, so, in order to perpetuate such a right, nature would have to be changed. Jurists, who have gravely determined that the child of a slave comes into the world a slave, have decided, in other words, that a man shall come into the world not a man.

I regard it then as certain, that government did not begin with arbitrary power, but that this is the depravation, the extreme term, of government, and brings it back, finally, to just the law of the strongest, which it was originally designed to remedy. Supposing, however, it had begun in this manner, such power, being in itself illegitimate, could not have served as a basis for the laws of society, nor, consequently, for the inequality they instituted.

Without entering at present upon the investigations which still remain to be made into the nature of the fundamental compact underlying all government, I content myself with adopting the common opinion concerning it, and regard the establishment of the political body as a real contract between the people and the chiefs chosen by them: a contract by which both parties bind themselves to observe the laws therein expressed, which form the ties of their union. The people having in respect of their social relations concentrated all their wills in one, the several articles, concerning which this will is explained, become so many fundamental laws, obligatory on all the members of the State without exception, and one of these articles regulates the choice and power of the magistrates appointed to watch over the execution of the rest. This power extends to everything which may maintain the constitution, without going so far as to alter it. It is accompanied by honours, in order to bring the laws and their administrators into respect. The ministers are also distinguished by personal prerogatives,

in order to recompense them for the cares and labour which good administration involves. The magistrate, on his side, binds himself to use the power he is entrusted with only in conformity with the intention of his constituents, to maintain them all in the peaceable possession of what belongs to them, and to prefer on every occasion the public interest to his own.

Before experience had shown, or knowledge of the human heart enabled men to foresee, the unavoidable abuses of such a constitution, it must have appeared so much the more excellent, as those who were charged with the care of its preservation had themselves most interest in it; for magistracy and the rights attaching to it being based solely on the fundamental laws, the magistrates would cease to be legitimate as soon as these ceased to exist; the people would no longer owe them obedience; and as not the magistrates, but the laws, are essential to the being of a State, the members of it would regain the right to their natural liberty.

If we reflect with ever so little attention on this subject, we shall find new arguments to confirm this truth, and be convinced from the very nature of the contract that it cannot be irrevocable: for, if there were no superior power capable of ensuring the fidelity of the contracting parties, or compelling them to perform their reciprocal engagements, the parties would be sole judges in their own cause, and each would always have a right to renounce the contract, as soon as he found that the other had violated its terms, or that they no longer suited his convenience. It is upon this principle that the right of abdication may possibly be founded. Now, if, as here, we consider only what is human in this institution, it is certain that, if the magistrate, who has all the power in his own hands, and appropriates to himself all the advantages of the contract, has none the less a right to renounce his authority, the people, who suffer for all the faults of their chief, must have a much better right to renounce their dependence. But the terrible and innumerable quarrels and disorders that would necessarily arise from so dangerous a privilege, show, more than anything else, how much human governments stood in need of a more solid basis than mere reason, and how expedient it was for the public tranquillity that the divine will should interpose to invest the sovereign authority with a sacred and inviolable character, which might deprive subjects of the fatal right of disposing of it. If the world had received no other advantages from religion,

this would be enough to impose on men the duty of adopting and cultivating it, abuses and all, since it has been the means of saving more blood than fanaticism has ever spilt. But let us follow the thread of our hypothesis.

The different forms of government owe their origin to the differing degrees of inequality which existed between individuals at the time of their institution. If there happened to be any one man among them pre-eminent in power, virtue, riches or personal influence, he became sole magistrate, and the State assumed the form of monarchy. If several, nearly equal in point of eminence, stood above the rest, they were elected jointly, and formed an aristocracy. Again, among a people who had deviated less from a state of nature, and between whose fortune or talents there was less disproportion, the supreme administration was retained in common, and a democracy was formed. It was discovered in process of time which of these forms suited men the best. Some peoples remained altogether subject to the laws; others soon came to obey their magistrates. The citizens laboured to preserve their liberty; the subjects, irritated at seeing others enjoying a blessing they had lost, thought only of making slaves of their neighbours. In a word, on the one side arose riches and conquests, and on the other happiness and I virtue.

In these different governments, all the offices were at first elective; and when the influence of wealth was out of the question, the preference was given to merit, which gives a natural ascendancy, and to age, which is experienced in business and deliberate in council. The Elders of the Hebrews, the Gerontes at Sparta, the Senate at Rome, and the very etymology of our word Seigneur, show how old age was once held in veneration. But the more often the choice fell upon old men, the more often elections had to be repeated, and the more they became a nuisance; intrigues set in, factions were formed, party feeling grew—bitter, civil wars broke out; the lives of individuals were sacrificed to the pretended happiness of the State; and at length men were on the point of relapsing into their primitive anarchy. Ambitious chiefs profited by these circumstances to perpetuate their offices in their own families: at the same time the people, already used to dependence, ease, and the conveniences of life, and already incapable of breaking its fetters, agreed to an increase of its slavery, in order to secure its tranquillity. Thus magistrates, having become hereditary, contracted the habit of considering their offices as a family estate, and themselves as proprietors of the communities of which they were at first

only the officers, of regarding their fellow-citizens as their slaves, and numbering them, like cattle, among their belongings, and of calling themselves the equals of the gods and longs of kings.

If we follow the progress of inequality in these various revolutions, we shall find that the establishment of laws and of the right of property was its first term, the institution of magistracy the second, and the conversion of legitimate into arbitrary power the third and last; so that the condition of rich and poor was authorised by the first period; that of powerful and weak by the second; and only by the third that of master and slave, which is the last degree of inequality, and the term at which all the rest remain, when they have got so far, till the government is either entirely dissolved by new revolutions, or brought back again to legitimacy.

To understand this progress as necessary we must consider not so much the motives for the establishment of the body politic, as the forms it assumes in actuality, and the faults that necessarily attend it: for the flaws which make social institutions necessary are the same as make the abuse of them unavoidable. If we except Sparta, where the laws were mainly concerned with the education of children, and where Lycurgus established such morality as practically made laws needless—for laws as a rule, being weaker than the passions, restrain men without altering them—it would not be difficult to prove that every government, which scrupulously complied with the ends for which it was instituted, and guarded carefully against change and corruption, was set up unnecessarily. For a country, in which no one either evaded the laws or made a bad use of magisterial power, could require neither laws nor magistrates.

Political distinctions necessarily produce civil distinctions. The growing equality between the chiefs and the people is soon felt by individuals, and modified in a thousand ways according to passions, talents and circumstances. The magistrate could not usurp any illegitimate power, without giving distinction to the creatures with whom he must share it. Besides, individuals only allow themselves to be oppressed so far as they are hurried on by blind ambition, and, looking rather below than above them, come to love authority more than independence, and submit to slavery, that they may in turn enslave others. It is no easy matter to reduce to obedience a man who has no ambition to command; nor would the most adroit politician find it possible to enslave a people whose only desire was

to be independent. But inequality easily makes its way among cowardly and ambitious minds, which are ever ready to run the risks of fortune, and almost indifferent whether they command or obey, as it is favourable or adverse. Thus, there must have been; a time, when the eyes of the people were so fascinated, that their rulers had only to say to the least of men, "Be great, you and all your posterity," to make him immediately appear great in the eyes of every one as well as in his own. His descendants took still more upon them, in proportion to their distance from him; the more obscure; and uncertain the cause, the greater the effect: the greater—the number of idlers one could count in a family, the more illustrious it was held to be.

If this were the place to go into details, I could readily explain how, even without the intervention of government, inequality of credit and authority became unavoidable among private persons, as soon as their union in a single society made them compare themselves one with another, and take into account the differences which they found out from the continual intercourse every man had to have with his neighbours.<sup>[8]</sup> These differences are of several kinds; but riches, nobility or rank, power and personal merit being the principal distinctions by which men form an estimate "of each other in society, I could prove that the harmony or conflict of these different forces is the surest indication of the good or bad constitution of a State. I could show that among these four kinds of inequality, personal qualities being the origin of all the others, wealth is the one to which they are all reduced in the end; for, as riches tend most immediately to the prosperity of individuals, and are easiest to communicate, they are used to purchase every other distinction. By this observation we are enabled to judge pretty exactly how far a people has departed from its primitive constitution, and of its progress towards the extreme term of corruption. I could explain how much this universal desire for reputation, honours and advancement, which inflames us all, exercises and holds up to comparison our faculties and powers; how it excites and multiplies our passions, and, by creating universal competition and rivalry, or rather enmity, among men, occasions numberless failures, successes and disturbances of all kinds by making so many aspirants run the same course. I could show that it is to this desire of being talked about, and this unremitting rage of distinguishing ourselves, that we owe the best and the worst things we possess, both our virtues and our vices, our science and our errors, our conquerors and our philosophers; that is to say, a great many bad things, and a very few good ones. In a word,

I could prove that, if we have a few rich and powerful men on the pinnacle of fortune and grandeur, while the crowd grovels in want and obscurity, it is because the former prize what they enjoy only in so far as others are destitute of it; and because, without changing their condition, they would cease to be happy the moment the people ceased to be wretched.

These details alone, however, would furnish matter for a considerable work, in which the advantages and disadvantages of every kind of government might be weighed, as they are related to man in the state of nature, and at the same time all the different aspects, under which inequality has up to the present appeared, or may appear in ages yet to come, according to the nature of the several governments, and the alterations which time must unavoidably occasion in them, might be demonstrated. We should then see the multitude oppressed from within, in consequence of the very precautions it had taken to guard against foreign tyranny. We should see oppression continually gain ground without it being possible for the oppressed to know where it would stop, or what legitimate means was left them of checking its progress. We should see the rights of citizens, and the freedom of nations slowly extinguished, and the complaints, protests and appeals of the weak treated as seditious murmurings. We should see the honour of defending the common cause confined by statecraft to a mercenary part of the people. We should see taxes made necessary by such means, and the disheartened husbandman deserting his fields even in the midst of peace, and leaving the plough to gird on the sword. We should see fatal and capricious codes of honour established; and the champions of their country sooner or later becoming its enemies, and for ever holding their daggers to the breasts of their fellow-citizens. The time would come when they would be heard saying to the oppressor of their country—

*Pectore si fratris gladium juguloque parentis  
Condere me jubeas, gravidæque in viscera partu  
Conjugis, invitâ peragam tamen omnia dextrâ.*

Lucan. i, 376.

From great inequality of fortunes and conditions, from the vast variety of passions and of talents, of useless and pernicious arts, of vain sciences, would arise a multitude of prejudices equally contrary to reason, happiness and virtue. We should see the magistrates fomenting everything that might weaken men united in society, by promoting dissension among them;

everything that might sow in it the seeds of actual division, while it gave society the air of harmony; everything that might inspire the different ranks of people with mutual hatred and distrust, by setting the rights and interests of one against those of another, and so strengthen the power which comprehended them all.

It is from the midst of this disorder and these revolutions, that despotism, gradually raising up its hideous head and devouring everything that remained sound and untainted in any part of the State, would at length trample on both the laws and the people, and establish itself on the ruins of the republic. The times which immediately preceded this last change would be times of trouble and calamity; but at length the monster would swallow up everything, and the people would no longer have either chiefs or laws, but only tyrants. From this moment there would be no question of virtue or morality; for despotism *cui ex honesto nulla est spes*, wherever it prevails, admits no other master; it no sooner speaks than probity and duty lose their weight and blind obedience is the only virtue which slaves can still practise.

This is the last term of inequality, the extreme points that closes the circle, and meets that from which we set out. Here all private persons return to their first equality, because they are nothing; and, subjects having no law but the will of their master, and their master no restraint but his passions, all notions of good and all principles of equity again vanish. There is here a complete return to the law of the strongest, and so to a new state of nature, differing from that we set out from; for the one was a state of nature in its first purity, while this is the consequence of excessive corruption. There is so little difference between the two states in other respects, and the contract of government is so completely dissolved by despotism, that the despot is master only so long as he remains the strongest; as soon as he can be expelled, he has no right to complain of violence. The popular insurrection that ends in the death or deposition of a Sultan is as lawful an act as those by which he disposed, the day before, of the lives and fortunes of his subjects. As he was maintained by force alone, it is force alone that overthrows him. Thus everything takes place according to the natural order; and, whatever may be the result of such frequent and precipitate revolutions, no one man has reason to complain of the injustice of another, but only of his own ill-fortune or indiscretion.

If the reader thus discovers and retraces the lost and forgotten road, by which man must have passed from the state of nature to the state of society; if he carefully restores, along with the intermediate situations which I have just described, those which want of time has compelled me to suppress, or my imagination has failed to suggest, he cannot fail to be struck by the vast distance which separates the two states. It is in tracing this slow succession that he will find the solution of a number of problems of politics and morals, which philosophers cannot settle. He will feel that, men being different in different ages, the reason why Diogenes could not find a man was that he sought among his contemporaries a man of an earlier period. He will see that Cato died with Rome and liberty, because he did not fit the age in which he lived; the greatest of men served only to astonish a world which he would certainly have ruled, had he lived five hundred years sooner. In a word, he will explain how the soul and the passions of men insensibly change their very nature; why our wants and pleasures in the end seek new objects; and why, the original man having vanished by degrees, society offers to us only an assembly of artificial men and factitious passions, which are the work of all these new relations, and without any real foundation in nature. We are taught nothing on this subject, by reflection, that is not entirely confirmed by observation. The savage and the civilised man differ so much in the bottom of their hearts and in their inclinations, that what constitutes the supreme happiness of one would reduce the other to despair. The former breathes only peace and liberty; he desires only to live and be free from labour; even the *ataraxia* of the Stoic falls far short of his profound indifference to every other object. Civilised man, on the other hand, is always moving, sweating, toiling and racking his brains to find still more laborious occupations: he goes on in drudgery to his last moment, and even seeks death to put himself in a position to live, or renounces life to acquire immortality. He pays his court to men in power, whom he hates, and to the wealthy, whom he despises; he stops at nothing to have the honour of serving them; he is not ashamed to value himself on his own meanness and their protection; and, proud of his slavery, he speaks with disdain of those, who have not the honour of sharing it. What a sight would the perplexing and envied labours of a European minister of State present to the eyes of a Caribbean! How many cruel deaths would not this indolent savage prefer to the horrors of such a life, which is seldom even sweetened by the pleasure of doing good! But, for him to see into the motives of all this solicitude, the

words *power* and *reputation*, would have to bear some meaning in his mind; he would have to know that there are men who set a value on the opinion of the rest of the world; who can be made happy and satisfied with themselves rather on the testimony of other people than on their own. In reality, the source, of all these differences is, that the savage lives within himself, while social man lives constantly outside himself, and only knows how to live in the opinion of others, so that he seems to receive the consciousness of his own existence merely from the judgment of others concerning him. It is not to my present purpose to insist on the indifference to good and evil which arises from this disposition, in spite of our many fine works on morality, or to show how, everything being reduced to appearances, there is but art and mummery in even honour, friendship, virtue, and often vice itself, of which we at length learn the secret of boasting; to show, in short, how, always asking others what, we are, and never daring to ask ourselves, in the midst of so much philosophy, humanity and civilisation, and of such sublime codes of morality, we have nothing to show for ourselves but a frivolous and deceitful appearance, honour without virtue, reason without wisdom, and pleasure without happiness. It is sufficient that I have proved that this is not by any means the original state of man, but that it is merely the spirit of society, and the inequality which society produces, that thus transform and alter all our natural inclinations.

I have endeavoured to trace the origin and progress of inequality, and the institution and abuse of political societies, as far as these are capable of being deduced from the nature of man merely by the light of reason, and independently of those sacred dogmas which give the sanction of divine right to sovereign authority. It follows from this survey that, as there is hardly any inequality in the state of nature, all the inequality which now prevails owes its strength and growth to the development of our faculties and the advance of the human mind, and becomes at last permanent and legitimate by the establishment of property and laws. Secondly, it follows that moral inequality authorised by positive right alone, clashes with natural right, whenever it is not proportionate to physical inequality; a distinction which sufficiently determines what we ought to think of that species of inequality which prevails in all civilised countries; since it is plainly contrary to the law of nature, however defined, that children should command old men, fools wise men, and that the privileged few should

gorge themselves with superfluities, while the starving multitude are in want of the bare necessities of life.

---

[5] Ovid, *Metamorphoses* xi, 127.

Both rich and poor, shocked at their new-found ills,  
Would fly from wealth, and lose what they had sought.

[6] Tacitus, *Hist.* iv, 17. The most wretched slavery they call peace.

[7] *Of the Rights of the Most Christian Queen over various States of the Monarchy of Spain*, 1667.

[8] Distributive justice would oppose this rigorous equality of the state of nature, even were it practicable in civil society; as all the members of the State owe it their services in proportion to their talents and abilities, they ought, on their side, to be distinguished and favoured in proportion to the services they have actually rendered. It is in this sense we must understand that passage of Isocrates, in which he extols the primitive Athenians, for having determined which of the two kinds of equality was the most useful, viz. that which consists in dividing the same advantages indiscriminately among all the citizens, or that which consists in distributing them to each according to his deserts. These able politicians, adds the orator, banishing that unjust inequality which makes no distinction between good and bad men, adhered inviolably to that which rewards and punishes every man according to his deserts.

But in the first place, there never existed a society, however corrupt some may have become, where no difference was made between the good and the bad; and with regard to morality, where no measures can be prescribed by law exact enough to serve as a practical rule for a magistrate, it is with great prudence that, in order not to leave the fortune or quality of the citizens to his discretion, it prohibits him from passing judgment on persons and confines his judgment to actions. Only morals such as those of the ancient Romans can bear censors, and such a tribunal among us would throw everything into confusion. The difference between good and bad men is determined by public esteem; the magistrate being strictly a judge of right alone; whereas the public is the truest judge of morals, and is of such integrity and penetration on this head, that although it may be sometimes deceived, it can never be corrupted. The rank of citizens ought, therefore, to be regulated, not according to their personal merit—for this would put it in the power of the magistrate to apply the law almost arbitrarily—but according to the actual services done to the State, which are capable of being more exactly estimated.

---

## APPENDIX<sup>[1]</sup>

A famous author, reckoning up the good and evil of human life, and comparing the aggregates, finds that our pains greatly exceed our pleasures: so that, all things considered, human life is not at all a valuable gift. This conclusion does not surprise me; for the writer drew all his arguments from man in civilisation. Had he gone back to the state of nature, his inquiries would clearly have had a different result, and man would have been seen to be subject to very few evils not of his own creation. It has indeed cost us not a little trouble to make ourselves as wretched as we are. When we consider, on the one hand, the immense labours of mankind, the many

sciences brought to perfection, the arts invented, the powers employed, the deeps filled up, the mountains levelled, the rocks shattered, the rivers made navigable, the tracts of land cleared, the lakes emptied, the marshes drained, the enormous structures erected on land, and the teeming vessels that cover the sea; and, on the other hand, estimate with ever so little thought, the real advantages that have accrued from all these works to mankind, we cannot help being amazed at the vast disproportion there is between these things, and deploring the infatuation of man, which, to gratify his silly pride and vain self-admiration, induces him eagerly to pursue all the miseries he is capable of feeling, though beneficent nature had kindly placed them out of his way.

[1] See the "[faculty of self-improvement](#)".

That men are actually wicked, a sad and continual experience of them proves beyond doubt: but all the same, I think I've shown that man is naturally good. What then can have depraved him to such an extent, except the changes that have happened in his constitution, the advances he has made, and the knowledge he has acquired? We may admire human society as much as we please; it will be none the less true that it necessarily leads men to hate each other in proportion as their interests clash, and to do one another apparent services, while they are really doing every imaginable mischief. What can be thought of a relation, in which the interest of every individual dictates rules directly opposite to those the public reason dictates to the community in general—in which every man finds his profit in the misfortunes of his neighbour? There is not perhaps any man in a comfortable position who has not greedy heirs, and perhaps even children, secretly wishing for his death; not a ship at sea, of which the loss would not be good news to some merchant or other; not a house, which some debtor of bad faith would not be glad to see reduced to ashes with all the papers it contains; not a nation which does not rejoice at the disasters that befall its neighbours. Thus it is that we find our advantage in the misfortunes of our fellow-creatures, and that the loss of one man almost always constitutes the prosperity of another. But it is still more pernicious that public calamities are the objects of the hopes and expectations of innumerable individuals. Some desire sickness, some mortality, some war, and some famine. I have seen men wicked enough to weep for sorrow at the prospect of a plentiful season; and the great and fatal fire of London, which cost so many unhappy

persons their lives or their fortunes, made the fortunes of perhaps ten thousand others. I know that Montaigne; censures Demades the Athenian for having caused to be I punished a workman who, by selling his coffins very dear, was a great gainer by the deaths of his fellow-citizens; but, the reason alleged by Montaigne being that everybody ought to be punished, my point is clearly confirmed by it. Let us penetrate, therefore, the superficial appearances of benevolence, and survey what passes in the inmost recesses of the heart. Let us reflect what must be the state of things, when men are forced to caress and destroy one another at the same time; when they are born enemies by duty, and knaves by interest. It will perhaps be said that society is so formed that every man gains by serving the rest. That would be all very well, if he did not gain still more by injuring them. There is no legitimate profit so great, that it cannot be greatly exceeded by what may be made illegitimately; we always gain more by hurting our neighbours than by doing them good. Nothing is required but to know how to act with impunity; and to this end the powerful employ all their strength, and the weak all their cunning.

Savage man, when he has dined, is at peace with all nature, and the friend of all his fellow-creatures. If a dispute arises about a meal, he rarely comes to blows, without having first compared the difficulty of conquering his antagonist with the trouble of finding subsistence elsewhere: and, as pride does not come in, it all ends in a few blows; the victor eats, and the vanquished seeks provision somewhere else, and all is at peace. The case is quite different with man in the state of society, for whom first necessities have to be provided, and then superfluities; delicacies follow next, then immense wealth, then subjects, and then slaves. He enjoys not a moments relaxation; and what is yet stranger, the less natural and pressing his wants, the more headstrong are his passions, and, still worse, the more he has it in his power to gratify them; so that after a long course of prosperity, after having swallowed up treasures and ruined multitudes, the hero ends up by cutting every throat till he finds himself, at last, sole master of the world. Such is in miniature the moral picture, if not of human life, at least of the secret pretensions of the heart of civilised man.

Compare without partiality the state of the citizen with that of the savage, and trace out, if you can, how many inlets the former has opened to pain and death, besides those of his vices, his wants and his misfortunes. If you

reflect on the mental afflictions that prey on us, the violent passions that waste and exhaust us, the excessive labour with which the poor are burdened, the still more dangerous indolence to which the wealthy give themselves up, so that the poor perish of want, and the rich of surfeit; if you reflect but a moment on the heterogeneous mixtures and pernicious seasonings of foods; the corrupt state in which they are frequently eaten; on the adulteration of medicines, the wiles of those who sell them, the mistakes of those who administer them, and the poisonous vessels in which they are prepared; on the epidemics bred by foul air in consequence of great numbers of men being crowded together, or those which are caused by our delicate way of living, by our passing from our houses into the open air and back again, by the putting on or throwing off our clothes with too little care, and by all the precautions which sensuality has converted into necessary habits, and the neglect of which sometimes costs us our life or health; if you take into account the conflagrations and earthquakes, which, devouring or overwhelming whole cities, destroy the inhabitants by thousands; in a word, if you add together all the dangers with which these causes are always threatening us, you will see how dearly nature makes us pay for the contempt with which we have treated her lessons.

I shall not here repeat, what I have elsewhere said of the calamities of war; but wish that those, who have sufficient knowledge, were willing or bold enough to make public the details of the villainies committed in armies by the contractors for commissariat, and hospitals: we should see plainly that their monstrous frauds, already none too well concealed, which cripple the finest armies in less than no time, occasion greater destruction among the soldiers than the swords of the enemy.

The number of people who perish annually at sea, by famine, the scurvy, pirates, fire and shipwrecks, affords matter for another shocking calculation. We must also place to the credit of the establishment of property, and consequently to the institution of society, assassinations, poisonings, highway robberies, and even the punishments inflicted on the wretches guilty of these crimes; which, though expedient to prevent greater evils, yet by making the murder of one man cost the lives of two or more, double the loss to the human race.

What shameful methods are sometimes practised to prevent the birth of men, and cheat nature; either by brutal and depraved appetites which insult

her most beautiful work—appetites unknown to savages or mere animals, which can spring only from the corrupt imagination of mankind in civilised countries; or by secret abortions, the fitting effects of debauchery and vitiated notions of honour; or by the exposure or murder of multitudes of infants, who fall victims to the poverty of their parents, or the cruel shame of their mothers; or, finally, by the mutilation of unhappy wretches, part of whose life, with their hope of posterity, is given up to vain singing, or, still worse, the brutal jealousy of other men: a mutilation which, in the last case, becomes a double outrage against nature from the treatment of those who suffer it, and from the use to which they are destined. But is it not a thousand times more common and more dangerous for paternal rights openly to offend against humanity? How many talents have not been thrown away, and inclinations forced, by the unwise constraint of fathers? How many men, who would have distinguished themselves in a fitting estate, have died dishonoured and wretched in another for which they had no taste! How many happy, but unequal, marriages have been broken or disturbed, and how many chaste wives have been dishonoured, by an order of things continually in contradiction with that of nature! How many good and virtuous husbands and wives are reciprocally punished for having been ill-assorted! How many young and unhappy victims of their parents' avarice plunge into vice, or pass their melancholy days in tears, groaning in the indissoluble bonds which their hearts repudiate and gold alone has formed! Fortunate sometimes are those whose courage and virtue remove them from life before inhuman violence makes them spend it in crime or in despair. Forgive me, father and mother, whom I shall ever regret: my complaint embitters your griefs; but would they might be an eternal and terrible example to every one who dares, in the name of nature, to violate her most sacred right.

If I have spoken only of those ill-starred unions which are the result of our system, is it to be thought that those over which love and sympathy preside are free from disadvantages? What if I should undertake to show humanity attacked in its very source, and even in the most sacred of all ties, in which fortune is consulted before nature, and, the disorders of society confounding all virtue and vice, continence becomes a criminal precaution, and a refusal to give life to a fellow-creature, an act of humanity? But, without drawing aside the veil which hides all these horrors, let us content ourselves with pointing out the evil which others will have to remedy.

To all this add the multiplicity of unhealthy trades, which shorten men's lives or destroy their bodies, such as working in the mines, and the preparing of metals and minerals, particularly lead, copper, mercury, cobalt, and arsenic: add those other dangerous trades which are daily fatal to many tilers, carpenters, masons and miners: put all these together and we can see, in the establishment and perfection of societies, the reasons for that diminution of our species, which has been noticed by many philosophers.

Luxury, which cannot be prevented among men who are tenacious of their own convenience and of the respect paid them by others, soon completes the evil society had begun, and, under the pretence of giving bread to the poor, whom it should never have made such, impoverishes all the rest, and sooner or later depopulates the State. Luxury is a remedy much worse than the disease it sets up to cure; or rather it is in itself the greatest of all evils, for every State, great or small: for, in order to maintain all the servants and vagabonds it creates, it brings oppression and ruin on the citizen and the labourer; it is like those scorching winds, which, covering the trees and plants with devouring insects, deprive useful animals of their subsistence and spread famine and death wherever they blow.

From society and the luxury to which it gives birth arise the liberal and mechanical arts, commerce, letters, and all those superfluities which make industry flourish, and enrich and ruin nations. The reason for such destruction is plain. It is easy to see, from the very nature of agriculture, that it must be the least lucrative of all the arts; for, its produce being the most universally necessary, the price must be proportionate to the abilities of the very poorest of mankind.

From the same principle may be deduced this rule, that the arts in general are more lucrative in proportion as they are less useful; and that, in the end, the most useful becomes the most neglected. From this we may learn what to think of the real advantages of industry and the actual effects of its progress.

Such are the sensible causes of all the miseries, into which opulence at length plunges the most celebrated nations. In proportion as arts and industry flourish, the despised husbandman, burdened with the taxes necessary for the support of luxury, and condemned to pass his days between labour and hunger, forsakes his native field, to seek in towns the

bread he ought to carry thither. The more our capital cities strike the vulgar eye with admiration, the greater reason is there to lament the sight of the abandoned countryside, the large tracts of land that lie uncultivated, the roads crowded with unfortunate citizens turned beggars or highwaymen, and doomed to end their wretched lives either on a dunghill or on the gallows. Thus the State grows rich on the one hand, and feeble and depopulated on the other; the mightiest monarchies, after having taken immense pains to enrich and depopulate themselves, fall at last a prey to some poor nation, which has yielded to the fatal temptation of invading them, and then, growing opulent and weak in its turn, is itself invaded and ruined by some other.

Let any one inform us what produced the swarms of barbarians, who overran Europe, Asia and Africa for so many ages. Was their prodigious increase due to their industry and arts, to the wisdom of their laws, or to the excellence of their political system? Let the learned tell us why, instead of multiplying to such a degree, these fierce and brutal men, without sense or science, without education, without restraint, did not destroy each other hourly in quarrelling over the productions of their fields and woods. Let them tell us how these wretches could have the presumption to oppose such clever people as we were, so well trained in military discipline, and possessed of such excellent laws and institutions: and why, since society has been brought to perfection in northern countries, and so much pains taken to instruct their inhabitants in their social duties and in the art of living happily and peaceably together, we see them no longer produce such numberless hosts as they used once to send forth to be the plague and terror of other nations. I fear some one may at last answer me by saying, that all these fine things, arts, sciences and laws, were wisely invented by men, as a salutary plague, to prevent the too great multiplication of mankind, lest the world, which was given us for a habitation, should in time be too small for its inhabitants.

What, then, is to be done? Must societies be totally abolished? Must *meum* and *tuum* be annihilated, and must we return again to the forests to live among beasts? This is a deduction in the manner of my adversaries, which I would as soon anticipate as let them have the shame of drawing. O you, who have never heard the voice of heaven, who think man destined only to live this little life and die in peace; you, who can resign in the midst of

populous cities your fatal acquisitions, your restless spirits, your corrupt hearts and endless desires; resume, since it depends entirely on yourselves, your ancient and primitive innocence: retire to the woods, there to lose the sight and remembrance of the crimes of your contemporaries; and be not apprehensive of degrading your species, by renouncing its advances in order to renounce its vices. As for men like me whose passions have destroyed their original simplicity, who can no longer subsist on plants or acorns, or live without laws and magistrates those who were honoured in their first father with supernatural instructions; those who discover, in the design of giving human actions at the start a morality which they must otherwise have been so long in acquiring, the reason for a precept in itself indifferent and inexplicable on every other system; those, in short, who are persuaded that the Divine Being has called all mankind to be partakers in the happiness and perfection of celestial intelligences, all these will endeavour to merit the eternal prize they are to expect from the practice of those virtues, which they make themselves follow in learning to know them. They will respect the sacred bonds of their respective communities; they will love their fellow-citizens, and serve them with all their might: they will scrupulously obey the laws, and all those who make or administer them; they will particularly honour those wise and good princes, who find means of preventing, curing or even palliating all these evils and abuses, by which we are constantly threatened; they will animate the zeal of their deserving rulers, by showing them, without flattery or fear, the importance of their office and the severity of their duty. But they will not therefore have less contempt for a constitution that cannot support itself without the aid of so many splendid characters, much oftener wished for than found; and from which, notwithstanding all their pains and solicitude, there always arise more real calamities than even apparent advantages.

---

## A DISCOURSE ON POLITICAL ECONOMY

The word Economy, or Œconomy, is derived from *οἶκος*, a house, and *νόμος*, law, and meant originally only the wise and legitimate government of the house for the common good of the whole family. The meaning of the

term was then extended to the government of that great family, the State. To distinguish these two senses of the word, the latter is called *general* or *political* economy, and the former domestic or particular economy. The first only is discussed in the present discourse.

Even if there were as close an analogy as many authors maintain between the State and the family, it would not follow that the rules of conduct proper for one of these societies would be also proper for the other. They differ too much in extent to be regulated in the same manner; and there will always be a great difference between domestic government, in which a father can see everything for himself, and civil government, where the chief sees hardly anything save through the eyes of others. To put both on an equality in this respect, the talents, strength, and all the faculties of the father would have to increase in proportion to the size of his family, and the soul of a powerful monarch would have to be, to that of an ordinary man, as the extent of his empire is to that of a private person's estate.

But how could the government of the State be like that of the family, when the basis on which they rest is so different? The father being physically stronger than his children, his paternal authority, as long as they need his protection, may be reasonably said to be established by nature. But in the great family, all the members of which are naturally equal, the political authority, being purely arbitrary as far as its institution is concerned, can be founded only on conventions, and the Magistrate can have no authority over the rest, except by virtue of the laws. The duties of a father are dictated to him by natural feelings, and in a manner that seldom allows him to neglect them. For rulers there is no such principle, and they are really obliged to the people only by what they themselves have promised to do, and the people have therefore a right to require of them. Another more important difference is that since the children have nothing but what they receive from their father, it is plain that all the rights of property belong to him, or emanate from him; but quite the opposite is the case in the great family, where the general administration is established only to secure individual property, which is antecedent to it. The principal object of the work of the whole house is to preserve and increase the patrimony of the father, in order that he may be able some day to distribute it among his children without impoverishing them; whereas the wealth of the exchequer is only a means, often ill understood, of keeping the individuals in peace and plenty. In a

word, the little family is destined to be extinguished, and to resolve itself some day into several families of a similar nature; but the great family, being constituted to endure for ever in the same condition, need not, like the small one, increase for the purpose of multiplying, but need only maintain itself; and it can easily be proved that any increase does it more harm than good.

In the family, it is clear, for several reasons which lie in its very nature, that the father ought to command. In the first place, the authority ought not to be equally divided between father and mother; the government must be single, and in every division of opinion there must be one preponderant voice to decide. Secondly, however lightly we may regard the disadvantages peculiar to women, yet, as they necessarily occasion intervals of inaction, this is a sufficient reason for excluding them from this supreme authority: for when the balance is perfectly even, a straw is enough to turn the scale. Besides, the husband ought to be able to superintend his wife's conduct, because it is of importance for him to be assured that the children, whom he is obliged to acknowledge and maintain, belong to no-one but himself. Thirdly, children should be obedient to their father, at first of necessity, and afterwards from gratitude: after having had their wants satisfied by him during one half of their lives, they ought to consecrate the other half to providing for his. Fourthly, servants owe him their services in exchange for the provision he makes for them, though they may break off the bargain as soon as it ceases to suit them. I say nothing here of slavery, because it is contrary to nature, and cannot be authorised by any right or law.

There is nothing of all this in political society, in which the chief is so far from having any natural interest in the happiness of the individuals, that it is not uncommon for him to seek his own in their misery. If the magistracy is hereditary, a community of men is often governed by a child. If it be elective, innumerable inconveniences arise from such election; while in both cases all the advantages of paternity are lost. If you have but a single ruler, you lie at the discretion of a master who has no reason to love you: and if you have several, you must bear at once their tyranny and their divisions. In a word, abuses are inevitable and their consequences fatal in every society where the public interest and the laws have no natural force, and are perpetually attacked by personal interest and the passions of the ruler and the members.

Although the functions of the father of a family and those of the chief magistrate ought to make for the same object, they must do so in such different ways, and their duty and rights are so essentially distinct, that we cannot confound them without forming very false ideas about the fundamental laws of society, and falling into errors which are fatal to mankind. In fact, if the voice of nature is the best counsellor to which a father can listen in the discharge of his duty, for the Magistrate it is a false guide, which continually prevents him from performing his, and leads him on sooner or later to the ruin of himself and of the State, if he is not restrained by the most sublime virtue. The only precaution necessary for the father of a family is to guard himself against depravity, and prevent his natural inclinations from being corrupted; whereas it is these themselves which corrupt the Magistrate. In order to act aright, the first has only to consult his heart; the other becomes a traitor the moment he listens to his. Even his own reason should be suspect to him, nor should he follow any rule other than the public reason, which is the law. Thus nature has made a multitude of good fathers of families; but it is doubtful whether, from the very beginning of the world, human wisdom has made ten men capable of governing their peers.

From all that has just been said, it follows that *public* economy, which is my subject, has been rightly distinguished from *private* economy, and that, the State having nothing in common with the family except the obligations which their heads lie under of making both of them happy, the same rules of conduct cannot apply to both. I have considered these few lines enough to overthrow the detestable system which Sir Robert Filmer has endeavoured to establish in his *Patriarcha*; a work to which two celebrated writers have done too much honour in writing books to refute it. Moreover, this error is of very long standing; for Aristotle himself thought proper to combat it with arguments which may be found in the first book of his *Politics*.

I must here ask my readers to distinguish also between *public economy*, which is my subject and which I call *government*, and the supreme authority, which I call *Sovereignty*; a distinction which consists in the fact that the latter has the right of legislation, and in certain cases binds the body of the nation itself, while the former has only the right of execution, and is binding only on individuals.

I shall take the liberty of making use of a very common, and in some respects inaccurate, comparison, which will serve to illustrate my meaning.

The body politic, taken individually, may be considered as an organised, living body, resembling that of man. The sovereign power represents the head; the laws and customs are the brain, the source of the nerves and seat of the understanding, will and senses, of which the Judges and Magistrates are the organs: commerce, industry, and agriculture are the mouth and stomach which prepare the common subsistence; the public income is the blood, which a prudent *economy*, in performing the functions of the heart, causes to distribute through the whole body nutriment and life: the citizens are the body and the members, which make the machine live, move and work; and no part of this machine can be damaged without the painful impression being at once conveyed to the brain, if the animal is in a state of health.

The life of both bodies is the self common to the whole, the reciprocal sensibility and internal correspondence of all the parts. Where this communication ceases, where the formal unity disappears, and the contiguous parts belong to one another only by juxtaposition, the man is dead, or the State is dissolved.

The body politic, therefore, is also a moral being possessed of a will; and this general will, which tends always to the preservation and welfare of the whole and of every part, and is the source of the laws, constitutes for all the members of the State, in their relations to one another and to it, the rule of what is just or unjust: a truth which shows, by the way, how idly some writers have treated as theft the subtlety prescribed to children at Sparta for obtaining their frugal repasts, as if everything ordained by the law were not lawful.

It is important to observe that this rule of justice, though certain with regard to all citizens, may be defective with regard to foreigners. The reason is clear. The will of the State, though general in relation to its own members, is no longer so in relation to other States and their members, but becomes, for them, a particular and individual will, which has its rule of justice in the law of nature. This, however, enters equally into the principle here laid down; for in such a case, the great city of the world becomes the body politic, whose general will is always the law of nature, and of which the

different States and peoples are individual members. From these distinctions, applied to each political society and its members, are derived the most certain and universal rules, by which we can judge whether a government is good or bad, and in general of the morality of all human actions.

Every political society is composed of other smaller societies of different kinds, each of which has its interests and its rules of conduct: but those societies which everybody perceives, because they have an external and authorised form, are not the only ones that actually exist in the State: all individuals who are united by a common interest compose as many others, either transitory or permanent, whose influence is none the less real because it is less apparent, and the proper observation of whose various relations is the true knowledge of public morals and manners. The influence of all these tacit or formal associations causes, by the influence of their will, as many different modifications of the public will. The will of these particular societies has always two relations; for the members of the association, it is a general will; for the great society, it is a particular will; and it is often right with regard to the first object, and wrong as to the second. An individual may be a devout priest, a brave soldier, or a zealous senator, and yet a bad citizen. A particular resolution may be advantageous to the smaller community, but pernicious to the greater. It is true that particular societies being always subordinate to the general society in preference to others, the duty of a citizen takes precedence of that of a senator, and a man's duty of that of a citizen: but unhappily personal interest is always found in inverse ratio to duty, and increases in proportion as the association grows narrower, and the engagement less sacred; which irrefragably proves that the most general will is always the most just also, and that the voice of the people is in fact the voice of God.

It does not follow that the public decisions are always equitable; they may possibly, for reasons which I have given, not be so when they have to do with foreigners. Thus it is not impossible that a Republic, though in itself well governed, should enter upon an unjust war. Nor is it less possible for the Council of a Democracy to pass unjust decrees, and condemn the innocent; but this never happens unless the people is seduced by private interests, which the credit or eloquence of some clever persons substitutes for those of the State; in which case the general will will be one thing, and

the result of the public deliberation another. This is not contradicted by the case of the Athenian Democracy; for Athens was in fact not a Democracy, but a very tyrannical Aristocracy, governed by philosophers and orators. Carefully determine what happens in every public deliberation, and it will be seen that the general will is always for the common good; but very often there is a secret division, a tacit confederacy, which, for particular ends, causes the natural disposition of the assembly to be set at nought. In such a case the body of society is really divided into other bodies, the members of which acquire a general will, which is good and just with respect to these new bodies, but unjust and bad with regard to the whole, from which each is thus dismembered.

We see then how easy it is, by the help of these principles, to explain those apparent contradictions, which are noticed in the conduct of many persons who are scrupulously honest in some respects, and cheats and scoundrels in others, who trample under foot the most sacred duties, and yet are faithful to the death to engagements that are often illegitimate. Thus the most depraved of men always pay some sort of homage to public faith; and even robbers, who are the enemies of virtue in the great society, pay some respect to the shadow of it in their secret caves.

In establishing the general will as the first principle of public *economy*, and the fundamental rule of government, I have not thought it necessary to inquire seriously whether the Magistrates belong to the people, or the people to the Magistrates; or whether in public affairs the good of the State should be taken into account, or only that of its rulers. That question indeed has long been decided one way in theory, and another in practice; and in general it would be ridiculous to expect that those who are in fact masters will prefer any other interest to their own. It would not be improper, therefore, further to distinguish public *economy* as popular or tyrannical. The former is that of every State, in which there reigns between the people and the rulers unity of interest and will: the latter will necessarily exist wherever the government and the people have different interests, and, consequently, opposing wills. The rules of the latter are written at length in the archives of history, and in the satires of Macchiavelli. The rules of the former are found only in the writings of those philosophers who venture to proclaim the rights of humanity.

I. The first and most important rule of legitimate or popular government, that is to say, of government whose object is the good of the people, is therefore, as I have observed, to follow in everything the general will. But to follow this will it is necessary to know it, and above all to distinguish it from the particular will, beginning with one's self: this distinction is always very difficult to make, and only the most sublime virtue can afford sufficient illumination for it. As, in order to will, it is necessary to be free, a difficulty no less great than the former arises—that of preserving at once the public liberty and the authority of government. Look into the motives which have induced men, once united by their common needs in a general society, to unite themselves still more intimately by means of civil societies: you will find no other motive than that of assuring the property, life and liberty of each member by the protection of all. But can men be forced to defend the liberty of any one among them, without trespassing on that of others? And how can they provide for the public needs, without alienating the individual property of those who are forced to contribute to them? With whatever sophistry all this may be covered over, it is certain that if any constraint can be laid on my will, I am no longer free, and that I am no longer master of my own property, if any one else can lay a hand on it. This difficulty, which would have seemed insurmountable, has been removed, like the first, by the most sublime of all human institutions, or rather by a divine inspiration, which teaches mankind to imitate here below the unchangeable decrees of the Deity. By what inconceivable art has a means been found of making men free by making them subject; of using in the service of the State the properties, the persons and even the lives of all its members, without constraining and without consulting them; of confining their will by their own admission; of overcoming their refusal by that consent, and forcing them to punish themselves, when they act against their own will? How can it be that all should obey, yet nobody take upon him to command, and that all should serve, and yet have no masters, but be the more free, as, in apparent subjection, each loses no part of his liberty but what might be hurtful; to that of another? These wonders are the work of law. It is to law alone that men owe justice and liberty. It is this salutary organ of the will of all which establishes, in civil right, the natural equality between men. It is this celestial voice which dictates to each citizen the precepts of public reason, and teaches him to act according to the rules of his own judgment, and not to behave inconsistently with himself. It is with

this voice alone that political rulers should speak when they command; for no sooner does one man, setting aside the law, claim to subject another to his private will, than he departs from the state of civil society, and confronts him face to face in the pure state of nature, in which obedience is prescribed solely by necessity.

The most pressing interest of the ruler, and even his most indispensable duty, therefore, is to watch over the observance of the laws of which he is the minister, and on which his whole authority is founded. At the same time, if he exacts the observance of them from others, he is the more strongly bound to observe them himself, since he enjoys all their favour. For his example is of such force, that even if the people were willing to permit him to release himself from the yoke of the law, he ought to be cautious in availing himself of so dangerous a prerogative, which others might soon claim to usurp in their turn, and often use to his prejudice. At bottom, as all social engagements are mutual in nature, it is impossible for any one to set himself above the law, without renouncing its advantages; for nobody is bound by any obligation to one who claims that he is under no obligations to others. For this reason no exemption from the law will ever be granted, on any ground whatsoever, in a well-regulated government. Those citizens who have deserved well of their country ought to be rewarded with honours, but never with privileges: for the Republic is at the eve of its fall, when any one can think it fine not to obey the laws. If the nobility or the soldiery should ever adopt such a maxim, all would be lost beyond redemption.

The power of the laws depends still more on their own wisdom than on the severity of their administrators, and the public will derives its greatest weight from the reason which has dictated it. Hence Plato looked upon it as a very necessary precaution to place at the head of all edicts a preamble, setting forth their justice and utility. In fact, the first of all laws is to respect the laws: the severity of penalties is only a vain resource, invented by little minds in order to substitute terror for that respect which they have no means of obtaining. It has constantly been observed that in those countries where legal punishments are most severe, they are also most frequent; so that the cruelty of such punishments is a proof only of the multitude of criminals, and, punishing everything with equal severity, induces those who are guilty to commit crimes, in order to escape being punished for their faults.

But though the government be not master of the law, it is much to be its guarantor, and to possess a thousand means of inspiring the love of it. In this alone the talent of reigning consists. With force in one's hands, there is no art required to make the whole world tremble, nor indeed much to gain men's hearts; for experience has long since taught the people to give its rulers great credit for all the evil they abstain from doing it, and to adore them if they do not absolutely hate it. A fool, if he be obeyed, may punish crimes as well as another: but the true statesman is he who knows how to prevent them: it is over the wills, even more than the actions, of his subjects that his honourable rule is extended. If he could secure that every one should act aright, he would no longer have anything to do; and the masterpiece of his labours would be to be able to remain unemployed. It is certain, at least, that the greatest talent a ruler can possess is to disguise his power, in order to render it less odious, and to conduct the State so peaceably as to make it seem to have no need of conductors.

I conclude, therefore, that, as the first duty of the legislator is to make the laws conformable to the general will, the first rule of public *economy* is that the administration of justice should be conformable to the laws. It will even be enough to prevent the State from being ill governed, that the Legislator shall have provided, as he should, for every need of place, climate, soil, custom, neighbourhood, and all the rest of the relations peculiar to the people he had to institute. Not but what there still remains an infinity of details of administration and economy, which are left to the wisdom of the government: but there are two infallible rules for its good conduct on these occasions; one is, that the spirit of the law ought to decide in every particular case that could not be foreseen; the other is that the general will, the source and supplement of all laws, should be consulted wherever they fail. But how, I shall be asked, can the general will be known in cases in which it has not expressed itself? Must the whole nation be assembled together at every unforeseen event? Certainly not. It ought the less to be assembled, because it is by no means certain that its decision would be the expression of the general will; besides, the method would be impracticable in a great people, and is hardly ever necessary where the government is well-intentioned: for the rulers well know that the general will is always on the side which is most favourable to the public interest, that is to say, most equitable; so that it is needful only to act justly, to be certain of following the general will. When this is flouted too openly, it makes itself felt, in spite

of the formidable restraint of the public authority. I shall cite the nearest possible examples that may be followed in such cases.

In China, it is the constant maxim of the Prince to decide against his officers, in every dispute that arises between them and the people. If bread be too dear in any province, the Intendant of that province is thrown into prison. If there be an insurrection in another, the Governor is dismissed, and every Mandarin answers with his head for all the mischief that happens in his department. Not that these affairs do not subsequently undergo a regular examination; but long experience has caused the judgment to be thus anticipated. There is seldom any injustice to be repaired; in the meantime, the Emperor, being satisfied that public outcry does not arise without cause, always discovers, through the seditious clamours which he punishes, just grievances to redress.

It is a great thing to preserve the rule of peace and order through all the parts of the Republic; it is a great thing that the State should be tranquil, and the law respected: but if nothing more is done, there will be in all this more appearance than reality; for that government which confines itself to mere obedience will find difficulty in getting itself obeyed. If it is good to know how to deal with men as they are, it is much better to make them what there is need that they should be. The most absolute authority is that which penetrates into a man's inmost being, and concerns itself no less with his will than with his actions. It is certain that all peoples become in the long run what the government makes them; warriors, citizens, men, when it so pleases; or merely populace and rabble, when it chooses to make them so. Hence every prince who despises his subjects, dishonours himself, in confessing that he does not know how to make them worthy of respect. Make men, therefore, if you would command men: if you would have them obedient to the laws, make them love the laws, and then they will need only to know what is their duty to do it. This was the great art of ancient governments, in those distant times when philosophers gave laws to men, and made use of their authority only to render them wise and happy. Thence arose the numerous sumptuary laws, the many regulations of morals, and all the public rules of conduct which were admitted or rejected with the greatest care. Even tyrants did not forget this important part of administration, but took as great pains to corrupt the morals of their slaves, as Magistrates took to correct those of their fellow-citizens. But our modern

governments, which imagine they have done everything when they have raised money, conceive that it is unnecessary and even impossible to go a step further.

II. The second essential rule of public economy is no less important than the first. If you would have the general will accomplished, bring all the particular wills into conformity with it; in other words, as virtue is nothing more than this conformity of the particular wills with the general will, establish the reign of virtue.

If our politicians were less blinded by their ambition, they would see how impossible it is for any establishment whatever to act in the spirit of its institution, unless it is guided in accordance with the law of duty; they would feel that the greatest support of public authority lies in the hearts of the citizens, and that nothing can take the place of morality in the maintenance of government. It is not only upright men who know how to administer the laws; but at bottom only good men know how to obey them. The man who once gets the better of remorse, will not shrink before punishments which are less severe, and less lasting, and from which there is at least the hope of escaping: whatever precautions are taken, those who only require impunity in order to do wrong will not fail to find means of eluding the law, and avoiding its penalties. In this case, as all particular interests unite against the general interest, which is no longer that of any individual, public vices have a greater effect in enervating the laws than the laws in the repression of such vices: so that the corruption of the people and of their rulers will at length extend to the government, however wise it may be. The worst of all abuses is to pay an apparent obedience to the laws, only in order actually to break them with security. For in this case the best laws soon become the most pernicious; and it would be a hundred times better that they should not exist. In such a situation, it is vain to add edicts to edicts and regulations to regulations. Everything serves only to introduce new abuses, without correcting the old. The more laws are multiplied, the more they are despised, and all the new officials appointed to supervise them are only so many more people to break them, and either to share the plunder with their predecessors, or to plunder apart on their own. The reward of virtue soon becomes that of robbery; the vilest of men rise to the greatest credit; the greater they are the more despicable they become; their infamy appears even in their dignities, and their very honours dishonour

them. If they buy the influence of the leaders or the protection of women, it is only that they may sell justice, duty, and the State in their turn: in the meantime, the people, feeling that its vices are not the first cause of its misfortunes, murmurs and complains that all its misfortunes come solely from those whom it pays to protect it from such things.

It is under these circumstances that the voice of duty no longer speaks in men's hearts, and their rulers are obliged to substitute the cry of terror, or the lure of an apparent interest, of which they subsequently trick their creatures. In this situation they are compelled to have recourse to all the petty and despicable shifts which they call *rules of State* and *mysteries of the cabinet*. All the vigour that is left in the government is used by its members in ruining and supplanting one another, while the public business is neglected, or is transacted only as personal interest requires and directs. In short, the whole art of those great politicians lies in so mesmerising those they stand in need of, that each may think he is labouring for his own interest in working for theirs: I say *theirs* on the false supposition that it is the real interest of rulers to annihilate a people in order to make it subject, and to; ruin their own property in order to secure their possession of it.

But when the citizens love their duty, and the guardians of the public authority sincerely apply themselves to the fostering of that love by their own example and assiduity, every difficulty vanishes; and government becomes so easy that it needs none of that art of darkness, whose blackness is its only mystery. Those enterprising spirits, so dangerous and so much admired, all those great ministers, whose glory is inseparable from the miseries of the people, are no longer regretted: public morality supplies what is wanting in the genius of the rulers; and the more virtue reigns, the less need there is for talent. Even ambition is better served by duty than by usurpation: when the people is convinced that its rulers are labouring only for its happiness, its deference saves them the trouble of labouring to strengthen their power: and history shows us, in a thousand cases, that the authority of one who is beloved over those whom he loves is a hundred times more absolute than all the tyranny of usurpers. This does not mean that the government ought to be afraid to make use of its power, but that it ought to make use of it only in a lawful manner. We find in history a thousand examples of pusillanimous or ambitious rulers, who were ruined by their slackness or their pride; not one who suffered for having been

strictly just. But we ought not to confound negligence with moderation, or clemency with weakness. To be just, it is necessary to be severe; to permit vice, when one has the right and the power to suppress it, is to be oneself vicious.

It is not enough to say to the citizens, *be good*; they must be taught to be so; and even example, which is in this respect the first lesson, is not the sole means to be employed; patriotism is the most efficacious: for, as I have said already, every man is virtuous when his particular will is in all things conformable to the general will, and we voluntarily will what is willed by those whom we love. It appears that the feeling of humanity evaporates and grows feeble in embracing all mankind, and that we cannot be affected by the calamities of Tartary or Japan, in the same manner as we are by those of European nations. It is necessary in some degree to confine and limit our interest and compassion in order to make it active. Now, as this sentiment can be useful only to those with whom we have to live, it is proper that our humanity should confine itself to our fellow-citizens, and should receive a new force because we are in the habit of seeing them, and by reason of the common interest which unites them. It is certain that the greatest miracles of virtue have been produced by patriotism: this fine and lively feeling, which gives to the force of self-love all the beauty of virtue, lends it an energy which, without disfiguring it, makes it the most heroic of all passions. This it is that produces so many immortal actions, the glory of which dazzles our feeble eyes; and so many great men, whose old-world virtues pass for fables now that patriotism is made mock of. This is not surprising; the transports of susceptible hearts appear altogether fanciful to any one who has never felt them; and the love of one's country, which is a hundred times more lively and delightful than the love of a mistress, cannot be conceived except by experiencing it. But it is easy to perceive in every heart that is warmed by it, in all the actions it inspires, a glowing and sublime ardour which does not attend the purest virtue, when separated from it. Contrast Socrates even with Cato; the one was the greater philosopher, the other more of the citizen. Athens was already ruined in the time of Socrates, and he had no other country than the world at large. Cato had the cause of his country always at heart; he lived for it alone, and could not bear to outlive it. The virtue of Socrates was that of the wisest of men; but, compared with Cæsar and Pompey, Cato seems a God among mortals. Socrates instructed a few individuals, opposed the Sophists, and died for

truth: but Cato defended his country, its liberty and its laws, against the conquerors of the world, and at length departed from the earth, when he had no longer a country to serve. A worthy pupil of Socrates would be the most virtuous of his contemporaries; but a worthy follower of Cato would be one of the greatest. The virtue of the former would be his happiness; the latter would seek his happiness in that of all. We should be taught by the one, and led by the other; and this alone is enough to determine which to prefer: for no people has ever been made into a nation of philosophers, but it is not impossible to make a people happy.

Do we wish men to be virtuous? Then let us begin by making them love their country: but how can they love it, if their country be nothing more to them than to strangers, and afford them nothing but what it can refuse nobody? It would be still worse, if they did not enjoy even the privilege of social security, and if their lives, liberties and property lay at the mercy of persons in power, without their being permitted, or it being possible for them, to get relief from the laws. For in that case, being subjected to the duties of the state of civil society, without enjoying even the common privileges of the state of nature, and without being able to use their strength in their own defence, they would be in the worst, condition in which freemen could possibly find themselves, and the word *country* would mean for them something merely odious and ridiculous. It must not be imagined that a man can break or lose an arm, without the pain being conveyed to his head: nor is it any more credible that the general will should consent that any one member of the State, whoever he might be, should wound or destroy another, than it is that the fingers of a man in his senses should wilfully scratch his eyes out. The security of individuals is so intimately connected with the public confederation that, apart from the regard that must be paid to human weakness, that convention would in point of right be dissolved, if in the State a single citizen who might have been relieved were allowed to perish, or if one were wrongfully confined in prison, or if in one case an obviously unjust sentence were given. For the fundamental conventions being broken, it is impossible to conceive of any right or interest that could retain the people in the social union; unless they were restrained by force, which alone causes the dissolution of the state of civil society.

In fact, does not the undertaking entered into by the whole body of the nation bind it to provide for the security of the least of its members with as much care as for that of all the rest? Is the welfare of a single citizen any less the common cause than that of the whole State? It may be said that it is good that one should perish for all. I am ready to admire such a saying when it comes from the lips of a virtuous and worthy patriot, voluntarily and dutifully sacrificing himself for the good of his country: but if we are to understand by it, that it is lawful for the government to sacrifice an innocent man for the good of the multitude, I look upon it as one of the most execrable rules tyranny ever invented, the greatest falsehood that can be advanced, the most dangerous admission that can be made, and a direct contradiction of the fundamental laws of society. So little is it the case that any one person ought to perish for all, that all have pledged their lives and properties for the defence of each, in order that the weakness of individuals may always be protected by the strength of the public, and each member by the whole State. Suppose we take from the whole people one individual after another, and then press the advocates of this rule to explain more exactly what they mean by the *body of the State*, and we shall see that it will at length be reduced to a small number of persons, who are not the people, but the officers of the people, and who, having bound themselves by personal oath to perish for the welfare of the people, would thence infer that the people is to perish for their own.

Need we look for examples of the protection which the State owes to its members, and the respect it owes to their persons? It is only among the most illustrious and courageous nations that they are to be found; it is only among free peoples that the dignity of man is realised. It is well known into what perplexity the whole republic of Sparta was thrown, when the question of punishing a guilty citizen arose.

In Macedon, the life of a man was a matter of such importance, that Alexander the Great, at the height of his glory, would not have dared to put a Macedonian criminal to death in cold blood, till the accused had appeared to make his defence before his fellow-citizens, and had been condemned by them. But the Romans distinguished themselves above all other peoples by the regard which their government paid to the individual, and by its scrupulous attention to the preservation of the inviolable rights of all the members of the State. Nothing was so sacred among them as the life of a

citizen; and no less than an assembly of the whole people was needed to condemn one. Not even the Senate, nor the Consuls, in all their majesty, possessed the right; but the crime and punishment of a citizen were regarded as a public calamity among the most powerful people in the world. So hard indeed did it seem to shed blood for any crime whatsoever, that by the Lex Porcia, the penalty of death was commuted into that of banishment for all those who were willing to survive the loss of so great a country. Everything both at Rome, and in the Roman armies, breathed that love of fellow-citizens one for another, and that respect for the Roman name, which raised the courage and inspired the virtue of every one who had the honour to bear it. The cap of a citizen delivered from slavery, the civic crown of him who had saved the life of another, were looked upon with the greatest pleasure amid the pomp of their triumphs; and it is remarkable that among the crowns which were bestowed in honour of splendid actions in war, the civic crown and that of the triumphant general alone were of laurel, all the others being merely of gold. It was thus that Rome was virtuous and became the mistress of the world. Ambitious rulers! A herdsman governs his dogs and cattle, and yet is only the meanest of mankind. If it be a fine thing to command, it is when those who obey us are capable of doing us honour. Show respect, therefore, to your fellow-citizens, and you will render yourselves worthy of respect; show respect to liberty, and your power will increase daily. Never exceed your rights, and they will soon become unlimited.

Let our country then show itself the common mother of her citizens; let the advantages they enjoy in their country endear it to them; let the government leave them enough share in the public administration to make them feel that they are at home; and let the laws be in their eyes only the guarantees of the common liberty. These rights, great as they are, belong to all men: but without seeming to attack them directly, the ill-will of rulers may in fact easily reduce their effect to nothing. The law, which they thus abuse, serves the powerful at once as a weapon of offence, and as a shield against the weak; and the pretext of the public good is always the most dangerous scourge of the people. What is most necessary, and perhaps most difficult, in government, is rigid integrity in doing strict justice to all, and above all in protecting the poor against the tyranny of the rich. The greatest evil has already come about, when there are poor men to be defended, and rich men to be restrained. It is on the middle classes alone that the whole force of the

law is exerted; they are equally powerless against the treasures of the rich and the penury of the poor. The first mocks them, the second escapes them. The one breaks the meshes, the other passes through them.

It is therefore one of the most important functions of government to prevent extreme inequality of fortunes; not by taking away wealth from its possessors, but by depriving all men of means to accumulate it; not by building hospitals for the poor, but by securing the citizens from becoming poor. The unequal distribution of inhabitants over the territory, when men are crowded together in one place, while other places are depopulated; the encouragement of the arts that minister to luxury and of purely industrial arts at the expense of useful and laborious crafts; the sacrifice of agriculture to commerce; the necessitation of the tax-farmer by the mal-administration of the funds of the State; and in short, venality pushed to such an extreme that even public esteem is reckoned at a cash value, and virtue rated at a market price: these are the most obvious causes of opulence and of poverty, of public interest, of mutual hatred among citizens, of indifference to the common cause, of the corruption of the people, and of the weakening of all the springs of government. Such are the evils, which are with difficulty cured when they make themselves felt, but which a wise administration ought to prevent, if it is to maintain, along with good morals, respect for the laws, patriotism, and the influence of the general will.

But all these precautions will be inadequate, unless rulers go still more to the root of the matter. I conclude this part of public economy where I ought to have begun it. There can be no patriotism without liberty, no liberty without virtue, no virtue without citizens; create citizens, and you have everything you need; without them, you will have nothing but debased slaves, from the rulers of the State downwards. To form citizens is not the work of a day; and in order to have men it is necessary to educate them when they are children. It will be said, perhaps, that whoever has men to govern, ought not to seek, beyond their nature, a perfection of which they are incapable; that he ought not to desire to destroy their passions; and that the execution of such an attempt is no more desirable than it is possible. I will agree, further, that a man without passions would certainly be a bad citizen; but it must be agreed also that, if men are not taught not to love some things, it is impossible to teach them to love one object more than another—to prefer that which is truly beautiful to that which is deformed.

If, for example, they were early accustomed to regard their individuality only in its relation to the body of the State, and to be aware, so to speak, of their own existence merely as a part of that of the State, they might at length come to identify themselves in some degree with this greater whole, to feel themselves members of their country, and to love it with that exquisite feeling which no isolated person has save for himself; to lift up their spirits perpetually to this great object, and thus to transform into a sublime virtue that dangerous disposition which gives rise to all our vices. Not only does philosophy demonstrate the possibility of giving feeling these new directions; history furnishes us with a thousand striking examples. If they are so rare among us moderns, it is because nobody troubles himself whether citizens exist or not, and still less does anybody think of attending to the matter soon enough to make them. It is too late to change our natural inclinations, when they have taken their course, and egoism is confirmed by habit: it is too late to lead us out of ourselves when once the human Ego, concentrated in our hearts, has acquired that contemptible activity which absorbs all virtue and constitutes the life and being of little minds. How can, patriotism germinate in the midst of so many other passions which smother it? And what can remain, for fellow-citizens, of a heart already divided between avarice, a mistress, and vanity?

From the first moment of life, men ought to begin learning to deserve to live; and, as at the instant of birth we partake of the rights of citizenship, that instant ought to be the beginning of the exercise of our duty. If there are laws for the age of maturity, there ought to be laws for infancy, teaching obedience to others: and as the reason of each man is not left to be the sole arbiter of his duties, government ought the less indiscriminately to abandon to the intelligence and prejudices of fathers the education of their children, as that education is of still greater importance to the State than to the fathers: for, according to the course of nature, the death of the father often deprives him of the final fruits of education; but his country sooner or later perceives its effects. Families dissolve, but the State remains.

Should the public authority, by taking the place of the father, and charging itself with that important function, acquire his rights by discharging his duties, he would have the less cause to complain, as he would only be changing his title, and would have in common, under the name of *citizen*, the same authority over his children, as he was exercising separately under

the name of *father*, and would not be less obeyed when speaking in the name of the law, than when he spoke in that of nature. Public education, therefore, under regulations prescribed by the government, and under magistrates established by the Sovereign, is one of the fundamental rules of popular or legitimate government. If children are brought up in common in the bosom of equality; if they are imbued with the laws of the State and the precepts of the general will; if they are taught to respect these above all things; if they are surrounded by examples and objects which constantly remind them of the tender mother who nourishes them, of the love she bears them, of the inestimable benefits they receive from her, and of the return they owe her, we cannot doubt that they will learn to cherish one another mutually as brothers, to will nothing contrary to the will of society, to substitute the actions of men and citizens for the futile and vain babbling of sophists, and to become in time defenders and fathers of the country of which they will have been so long the children.

I shall say nothing of the Magistrates destined to preside over such an education, which is certainly the most important business of the State. It is easy to see that if such marks of public confidence were conferred on slight grounds, if this sublime function were not, for those who have worthily discharged all other offices, the reward of labour, the pleasant and honourable repose of old age, and the crown of all honours, the whole enterprise would be useless and the education void of success. For wherever the lesson is not supported by authority, and the precept by example, all instruction is fruitless; and virtue itself loses its credit in the mouth of one who does not practise it. But let illustrious warriors, bent under the weight of their laurels, preach courage: let upright Magistrates, grown white in the purple and on the bench teach justice. Such teachers as these would thus get themselves virtuous successors, and transmit from age to age, to generations to come, the experience and talents of rulers, the courage and virtue of citizens, and common emulation in all to live and die for their country.

I know of but three peoples which once practised public education, the Cretans, the Lacedæmonians, and the ancient Persians: among all these it was attended with the greatest success, and indeed it did wonders among the two last. Since the world has been divided into nations too great to admit of being well governed, this method has been no longer practicable,

and the reader will readily perceive other reasons why such a thing has never been attempted by any modern people. It is very remarkable that the Romans were able to dispense with it; but Rome was for five hundred years one continued miracle which the world cannot hope to see again. The virtue of the Romans, engendered by their horror of tyranny and the crimes of tyrants, and by an innate patriotism, made all their houses so many schools of citizenship; while the unlimited power of fathers over their children made the individual authority so rigid that the father was more feared than the Magistrate, and was in his family tribunal both censor of morals and avenger of the laws.

Thus a careful and well-intentioned government, vigilant incessantly to maintain or restore patriotism and morality among the people, provides beforehand against the evils which sooner or later result from the indifference of the citizens to the fate of the Republic, keeping within narrow bounds that personal interest which so isolates the individual that the State is enfeebled by his power, and has nothing to hope from his goodwill. Wherever men love their country, respect the laws, and live simply, little remains to be done in order to make them happy; and in public administration, where chance has less influence than in the lot of individuals, wisdom is so nearly allied to happiness, that the two objects are confounded.

III. It is not enough to have citizens and to protect them, it is also necessary to consider their subsistence. Provision for the public wants is an obvious inference from the general will, and the third essential duty of government. This duty is not, we should feel, to fill the granaries of individuals and thereby to grant them a dispensation from labour, but to keep plenty so within their reach that labour is always necessary and never useless for its acquisition. It extends also to everything regarding the management of the exchequer, and the expenses of public administration. Having thus treated of general economy with reference to the government of persons, we must now consider it with reference to the administration of property.

This part presents no fewer difficulties to solve, and contradictions to remove, than the preceding. It is certain that the right of property is the most sacred of all the rights of citizenship, and even more important in some respects than liberty itself; either because it more nearly affects the preservation of life, or because, property being more easily usurped and

more difficult to defend than life, the law ought to pay a greater attention to what is most easily taken away; or finally, because property is the true foundation of civil society, and the real guarantee of the undertakings of citizens: for if property were not answerable for personal actions, nothing would be easier than to evade duties and laugh at the laws. On the other hand, it is no less certain that the maintenance of the State and the government involves costs and out-goings; and as every one who agrees to the end must acquiesce in the means, it follows that the members of a society ought to contribute from their property to its support. Besides, it is difficult to secure the property of individuals on one side, without attacking it on another; and it is impossible that all the regulations which govern the order of succession, will, contracts, &c. should not lay individuals under some constraint as to the disposition of their goods, and should not consequently restrict the right of property.

But besides what I have said above of the agreement between the authority of law and the liberty of the citizen, there remains to be made, with respect to the disposition of goods, an important observation which removes many difficulties. As Puffendorf has shown, the right of property, by its very nature, does not extend beyond the life of the proprietor, and the moment a man is dead his goods cease to belong to him. Thus, to prescribe the conditions according to which he can dispose of them, is in reality less to alter his right as it appears, than to extend it in fact.

In general, although the institution of the laws which regulate the power of individuals in the disposition of their own goods belongs only to the Sovereign, the spirit of these laws, which the government ought to follow in their application, is that, from father to son, and from relation to relation, the goods of a family should go as little out of it and be as little alienated as possible. There is a sensible reason for this in favour of children, to whom the right of property would be quite useless, if the father left them nothing, and who besides, having often contributed by their labour to the acquisition of their father's wealth, are in their own right associates with him in his right of property. But another reason, more distant, though not less important, is that nothing is more fatal to morality and to the Republic than the continual shifting of rank and fortune among the citizens: such changes are both the proof and the source of a thousand disorders, and overturn and confound everything; for those who were brought up to one thing find

themselves destined for another; and neither those who rise nor those who fall are able to assume the rules of conduct, or to possess themselves of the qualifications requisite for their new condition, still less to discharge the duties it entails. I proceed to the object of public finance.

If the people governed itself and there were no intermediary between the administration of the State and the citizens, they would have no more to do than to assess themselves occasionally, in proportion to the public needs and the abilities of individuals: and as they would all keep in sight the recovery and employment of such assessments, no fraud or abuse could slip into the management of them; the State would never be involved in debt, or the people over-burdened with taxes; or at least the knowledge of how the money would be used would be a consolation For the severity of the tax. But things cannot be carried on in this manner: on the contrary, however small any State may be, civil societies are always too populous to be under the immediate government of all their members. It is necessary that the public money should go through the hands of the rulers, all of whom have, besides the interests of the State, their own individual interests, which are not the last to be listened to. The people, on its side, perceiving rather the cupidity and ridiculous expenditure of its rulers than the public needs, murmurs at seeing itself stripped of necessaries to furnish others with superfluities; and when once these complaints have reached a certain degree of bitterness, the most upright administration will find it impossible to restore confidence. In such a case, voluntary contributions bring in nothing, and forced contributions are illegitimate. This cruel alternative of letting the State perish, or of violating the sacred right of property, which is its support, constitutes the great difficulty of just and prudent economy.

The first step which the founder of a republic ought to take after the establishment of laws, is to settle a sufficient fund for the maintenance of the Magistrates and other Officials, and for other public expenses. This fund, if it consist of money, is called *ærarium* or *fisc*, and *public demesne* if it consist of lands. This, for obvious reasons, is much to be preferred. Whoever has reflected on this matter must be of the opinion of Bodin, who looks upon the public demesne as the most reputable and certain means of providing for the needs of the State. It is remarkable also that Romulus, in his division of lands, made it his first care to set apart a third for the use of the State. I confess it is not impossible for the produce of the demesne, if it be badly managed, to be reduced to nothing; but it is not of the essence of public demesnes to be badly administered.

Before any use is made of this fund, it should be assigned or accepted by an assembly of the people, or of the estates of the country, which should determine its future use. After this solemnity, which makes such funds inalienable, their very nature is, in a manner, changed, and the revenues become so sacred, that it is not only the most infamous theft, but actual treason, to misapply them or pervert them from the purpose for which they were destined. It reflects great dishonour on Rome that the integrity of Cato the censor was something so very remarkable, and that an Emperor, on rewarding the talents of a singer with a few crowns, thought it necessary to observe that the money came from his own private purse, and not from that of the State. But if we find few Galbas, where are we to look for a Cato? For when vice is no longer dishonourable, what chiefs will be so scrupulous as to abstain from touching the public revenues that are left to their discretion, and even not in time to impose on themselves, by pretending to confound their own expensive and scandalous dissipations with the glory of the State, and the means of extending their own authority with the means of augmenting its power? It is particularly in this delicate part of the administration that virtue is the only effective instrument, and that the integrity of the Magistrate is the only real check upon his avarice. Books and auditing of accounts, instead of exposing frauds, only conceal them; for prudence is never so ready to conceive new precautions as knavery is to elude them. Never mind, then, about account books and papers; place the management of finance in honest hands: that is the only way to get it faithfully conducted.

When public funds are once established, the rulers of the State become of right the administrators of them: for this administration constitutes a part of government which is always essential, though not always equally so. Its influence increases in proportion as that of other resources is diminished; and it may justly be said that a government has reached the last stage of corruption, when it has ceased to have sinews other than money. Now as every government constantly tends to become lax, this is enough to show why no State can subsist unless its revenues constantly increase.

The first sense of the necessity of this increase is also the first sign of the internal disorder of the State; and the prudent administrator, in his endeavours to find means to provide for the present necessity, will neglect nothing to find out the distant cause of the new need; just as a mariner when he finds the water gaining on his vessel, does not neglect, while he is working the pumps, to discover and stop the leak.

From this rule is deduced the most important rule in the administration of finance, which is, to take more pains to guard against needs than to increase revenues. For, whatever diligence be employed, the relief which only comes after, and more slowly than, the evil, always leaves some injury behind. While a remedy is being found for one evil, another is beginning to make itself felt, and even the remedies themselves produce new difficulties: so that at length the nation is involved in debt and the people oppressed, while the government loses its influence and can do very little with a great deal of money. I imagine it was owing to the recognition of this rule that such wonders were done by ancient governments, which did more with their parsimony than ours do with all their treasures; and perhaps from this comes the common use of the word *economy*, which means rather the prudent management of what one has than ways of getting what one has not.

But apart from the public demesne, which is of service to the State in proportion to the uprightness of those who govern, any one sufficiently acquainted with the whole force of the general administration, especially when it confines itself to legitimate methods, would be astonished at the resources the rulers can make use of for guarding against public needs, without trespassing on the goods of individuals. As they are masters of the whole commerce of the State, nothing is easier for them than to direct it into such channels as to provide for every need, without appearing to interfere.

The distribution of provisions, money, and merchandise in just proportions, according to times and places, is the true secret of finance and the source of wealth, provided those who administer it have foresight enough to suffer a present apparent loss, in order really to obtain immense profits in the future. When we see a government paying bounties, instead of receiving duties, on the exportation of corn in time of plenty, and on its importation in time of scarcity, we must have such facts before our eyes if we are to be persuaded of their reality. We should hold such facts to be idle tales, if they had happened in ancient times. Let us suppose that, in order to prevent a scarcity in bad years, a proposal were made to establish public granaries; would not the maintenance of so useful an institution serve in most countries as an excuse for new taxes? At Geneva, such granaries, established and kept up by a prudent administration, are a public resource in bad years, and the principal revenue of the State at all times. *Alit et ditat* is the inscription which stands, rightly and properly, on the front of the building. To set forth in this place the economic system of a good government, I have often turned my eyes to that of this Republic, rejoicing to find in my own country an example of that wisdom and happiness which I should be glad to see prevail in every other.

If we ask how the needs of a State grow, we shall find they generally arise, like the wants of individuals, less from any real necessity than from the increase of useless desires, and that expenses are often augmented only to give a pretext for raising receipts: so that the State would sometimes gain by not being rich, and apparent wealth is in reality more burdensome than poverty itself would be. Rulers may indeed hope to keep the peoples in stricter dependence, by thus giving them with one hand what they take from them with the other; and this was in fact the policy of Joseph towards the Egyptians: but this political sophistry is the more fatal to the State, as the money never returns into the hands it went out of. Such principles only enrich the idle at the expense of the industrious.

A desire for conquest is one of the most evident and dangerous causes of this increase. This desire, occasioned often by a different species of ambition from that which, it seems to proclaim, is not always what it appears to be, and has not so much, for its real motive, the apparent desire to aggrandise the Nation as a secret desire to increase the authority of the

rulers at home, by increasing the number of troops, and by the diversion which the objects of war occasion in the minds of the citizens.

It is at least certain, that no peoples are so oppressed and wretched as conquering nations, and that their successes only increase their misery. Did not history inform us of the fact, reason would suffice to tell us that, the greater a State grows, the heavier and more burdensome in proportion its expenses become: for every province has to furnish its share to the general expense of government, and besides has to be at the expense of its own administration, which is as great as if it were really independent. Add to this that great fortunes are always acquired in one place and spent in another. Production therefore soon ceases to balance consumption, and a whole country is impoverished merely to enrich a single town.

Another source of the increase of public wants, which depends on the foregoing, is this. There may come a time when the citizens, no longer looking upon themselves as interested in the common cause, will cease to be the defenders of their country, and the Magistrates will prefer the command of mercenaries to that of free-men; if for no other reason than that, when the time comes, they may use them to reduce free-men to submission. Such was the state of Rome towards the end of the Republic and under the Emperors: for all the victories of the early Romans, like those of Alexander, had been won by brave citizens, who were ready, at need, to give their blood in the service of their country, but would never sell it. Only at the siege of Veii did the practice of paying the Roman infantry begin. Marius, in the Jugurthine war, dishonoured the legions by introducing freedmen, vagabonds and other mercenaries. Tyrants, the enemies of the very people it was their duty to make happy, maintained regular troops, apparently to withstand the foreigner, but really to enslave their countrymen. To form such troops, it was necessary to take men from the land; the lack of their labour then diminished the amount of provisions, and their maintenance introduced those taxes which increased prices. This first disorder gave rise to murmurs among the people; in order to suppress them, the number of troops had to be increased, and consequently the misery of the people also got worse; and the growing despair led to still further increases in the cause in order to guard against its effects. On the other hand, the mercenaries, whose merit we may judge of by the price at which they sold themselves, proud of their own meanness, and despising the laws

that protected them, as well as their fellows whose bread they ate, imagined themselves more honoured in being Cæsar's satellites than in being defenders of Rome. As they were given over to blind obedience, their swords were always at the throats of their fellow-citizens, and they were prepared for general butchery at the first sign. It would not be difficult to show that this was one of the principal causes of the ruin of the Roman Empire.

The invention of artillery and fortifications has forced the princes of Europe, in modern times, to return to the use of regular troops, in order to garrison their towns; but> however lawful their motives, it is to be feared the effect may be no less fatal. There is no better reason now than formerly for depopulating the country to form armies and garrisons, nor should the people be oppressed to support, them; in a word, these dangerous establishments have increased of late years with such rapidity in this part of the world, that they evidently threaten to depopulate Europe, and sooner or later to ruin its inhabitants.

Be this as it may, it ought to be seen that such institutions necessarily subvert the true economic system, which draws the principal revenue of the State from the public demesne, and leave only the troublesome resource of subsidies and imposts; with which it remains to deal.

It should be remembered that the foundation of the social compact is property; and its first condition, that every one should be maintained in the peaceful possession of what belongs to him. It is true that, by the same treaty, every one binds himself, at least tacitly, to be assessed toward the public wants: but as this undertaking cannot prejudice the fundamental law, and presupposes that the need is clearly recognised by all who contribute to it, it is plain that such assessment, in order to be lawful, must be voluntary; it must depend, not indeed on a particular will, as if it were necessary to have the consent of each individual, and that he should give no more than just what he pleased, but on a general will, decided by vote of a majority, and on the basis of a proportional rating which leaves nothing arbitrary in the imposition of the tax.

That taxes cannot be legitimately established except by the consent of the people or its representatives, is a truth generally admitted by all philosophers and jurists of any repute on questions of public right, not even

excepting Bodin. If any of them have laid down rules which seem to contradict this, their particular motives for doing so may easily be seen; and they introduce so many conditions and restrictions that the argument comes at bottom to the same thing: for whether the people has it in its power to refuse, or the Sovereign ought not to exact, is a matter of indifference with regard to right; and if the point in question concerns only power, it is useless to inquire whether it is legitimate or not. Contributions levied on the people are two kinds; real, levied on commodities, and personal, paid by the head. Both are called taxes or subsidies: when the people fixes the sum to be paid, it is called subsidy; but when it grants the product of an imposition, it is called a tax. We are told in the Spirit of the Laws that a capitation tax is most suited to slavery, and a real tax most in accordance with liberty. This would be incontestable, if the circumstances of every person were equal; for otherwise nothing can be more disproportionate than such a tax; and it is in the observations of exact proportions that the spirit of liberty consists. But if a tax by heads were exactly proportioned to the circumstances of individuals, as what is called the capitation tax in France might be, it would be the most equitable and consequently the most proper for free-men.

These proportions appear at first very easy to note, because, being relative to each man's position in the world, their incidence is always public: but proper regard is seldom paid to all the elements that should enter into such a calculation, even apart from deception arising from avarice, fraud and self-interest. In the first place, we have to consider the relation of quantities, according to which, *ceteris paribus*, the person who has ten times the property of another man ought to pay ten times as much to the State. Secondly, the relation of the use made, that is to say, the distinction between necessaries and superfluities. He who possesses only the common necessaries of life should pay nothing at all, while the tax on him who is in possession of superfluities may justly be extended to everything he has over and above mere necessaries. To this he will possibly object that, when his rank is taken into account, what may be superfluous to a man of inferior station is necessary for him. But this is false: for a grandee has two legs just like a cow-herd, and, like him again, but one belly. Besides, these pretended necessaries are really so little necessary to his rank, that if he should renounce them on any worthy occasion, he would only be the more honoured. The populace would be ready to adore a Minister who went to Council on foot, because he had sold off his carriages to supply a pressing

need of the State. Lastly, to no man does the law prescribe magnificence; and propriety is no argument against right.

A third relation, which is never taken into account, though it ought to be the chief consideration, is the advantage that every person derives from the social confederacy; for this provides a powerful protection for the immense possessions of the rich, and hardly leaves the poor man in quiet possession of the cottage he builds with his own hands. Are not all the advantages of society for the rich and powerful? Are not all lucrative posts in their hands? Are not all privileges and exemptions reserved for them alone? Is not the public authority always on their side? If a man of eminence robs his creditors, or is guilty of other knaveries, is he not always assured of impunity? Are not the assaults, acts of violence, assassinations, and even murders committed by the great, matters that are hushed up in a few months, and of which nothing more is thought? But if a great man himself is robbed or insulted, the whole police force is immediately in motion, and woe even to innocent persons who chance to be suspected. If he has to pass through any dangerous road, the country is up in arms to escort him. If the axle-tree of his chaise breaks, everybody flies to his assistance. If there is a noise at his door, he speaks but a word, and all is silent. If he is incommoded by the crowd, he waves his hand and every one makes way. If his coach is met on the road by a wagon, his servants are ready to beat the driver's brains out, and fifty honest pedestrians going quietly about their business had better be knocked on the head than an idle jackanapes be delayed in his coach. Yet all this respect costs him not a farthing: it is the rich man's right, and not what he buys with his wealth. How different the case of the poor man! the more humanity owes him, the more society denies him. Every door is shut against him, even when he has a right to its being opened: and if ever he obtains justice, it is with much greater difficulty than others obtain favours. If the militia is to be raised or the highway to be mended, he is always given the preference; he always bears the burden which his richer neighbour has influence enough to get exempted from. On the least accident that happens to him, everybody avoids him: if his cart be overturned in the road, so far is he from receiving any assistance, that he is lucky if he does not get horse-whipped by the impudent lackeys of some young Duke; in a word, all gratuitous assistance is denied to the poor when they need it, just because they cannot pay for it. I look upon any poor man

as totally undone, if he has the misfortune to have an honest heart, a fine daughter, and a powerful neighbour.

Another no less important fact is that the losses of the poor are much harder to repair than those of the rich, and that the difficulty of acquisition is always greater in proportion as there is more need for it. "Nothing comes out of nothing," is as true of life as in physics: money is the seed of money, and the first guinea is sometimes more difficult to acquire than the second million. Add to this that what the poor pay is lost to them for ever, and remains in, or returns to, the hands of the rich: and as, to those who share in the government or to their dependents, the whole produce of the taxes must sooner or later pass, although they pay their share, these persons have always a sensible interest in increasing them.

The terms of the social compact between these two estates of men may be summed up in a few words. "You have need of me, because I am rich and you are poor. We will therefore come to an agreement. I will permit you to have the honour of serving me, on condition that you bestow on me the little you have left, in return for the pains I shall take to command you."

Putting all these considerations carefully together, we shall find that, in order to levy taxes in a truly equitable and proportionate manner, the imposition ought not to be in simple ratio to the property of the contributors, but in compound ratio to the difference of their conditions and the superfluity of their possessions. This very important and difficult operation is daily made by numbers of honest clerks, who know their arithmetic; but a Plato or a Montesquieu would not venture to undertake it without the greatest diffidence, or without praying to Heaven for understanding and integrity.

Another disadvantage of personal taxes is that they may be too much felt or raised with too great severity. This, however, does not prevent them from being frequently evaded; for it is much easier for persons to escape a tax than for their possessions.

Of all impositions, that on land, or real taxation, has always been regarded as most advantageous in countries where more attention is paid to what the tax will produce, and to the certainty of recovering the product, than to securing the least discomfort for the people. It has been even maintained that it is necessary to burden the peasant in order to rouse him from

indolence, and that he would never work if he had no taxes to pay. But in all countries experience confutes this ridiculous notion. In England and Holland the farmer pays very little, and in China nothing: yet these are the countries in which the land is best cultivated. On the other hand, in those countries where the husbandman is taxed in proportion to the produce of his lands, he leaves them uncultivated, or reaps just as much from them as suffices for bare subsistence. For to him who loses the fruit of his labour, it is some gain to do nothing. To lay a tax on industry is a very singular expedient for banishing idleness.

Taxes on land or corn, especially when they are excessive, lead to two results so fatal in their effect that they cannot but depopulate and ruin, in the long run, all countries in which they are established.

The first of these arises from the defective circulation of specie; for industry and commerce draw all the money from the country into the capitals: and as the tax destroys the proportion there might otherwise be between the needs of the husbandman and the price of his corn, money is always leaving and never returning. Thus the richer the city the poorer the country. The product of the taxes passes from the hands of the Prince or his financial officers into those of artists and traders; and the husbandman, who receives, only the smallest part of it, is at length exhausted by paying always the same, and receiving constantly less. How could a human body subsist if it had veins and no arteries, or if its arteries conveyed the blood only within four inches of the heart? Chardin tells us that in Persia the royal dues on commodities are paid in kind: this custom, which, Herodotus informs us, prevailed long ago in the same country down to the time of Darius, might prevent the evil of which I have been speaking. But unless Intendants, Directors, Commissioners and Warehousemen in Persia are a different kind of people from what they are elsewhere, I can hardly believe that the smallest part of this produce ever reaches the king, or that the corn is not spoilt in every granary, and the greater part of the warehouses not consumed by fire.

The second evil effect arises from an apparent advantage, which aggravates the evil before it can be perceived. That is that corn is a commodity whose price is not enhanced by taxes in the country producing it, and which, in spite of its absolute necessity, may be diminished in quantity without the price being increased. Hence, many people die of hunger, although corn remains cheap, and the husbandman bears the whole charge of a tax, for

which he cannot indemnify himself by the price of his corn. It must be observed that we ought not to reason about a land-tax in the same manner as about duties laid on various kinds of merchandise; for the effect of such duties is to raise the price, and they are paid by the buyers rather than the sellers. For these duties, however heavy, are still voluntary, and are paid by the merchant only in proportion to the quantity he buys; and as he buys only in proportion to his sale, he himself gives the law its particular application; but the farmer who is obliged to pay his rent at stated times, whether he sells or not, cannot wait till he can get his own price for his commodity: even if he is not forced to sell for mere subsistence, he must sell to pay the taxes; so that it is frequently the heaviness of the tax that keeps the price of corn low.

It is further to be noticed that the resources of commerce and industry are so far from rendering the tax more supportable through abundance of money, that they only render it more burdensome. I shall not insist on what is very evident; *i.e.* that, although a greater or less quantity of money in a State may give it the greater or less credit in the eye of the foreigner, it makes not the least difference to the real fortune of the citizens, and does not make their condition any more or less comfortable. But I must make these two important remarks: first, unless a State possesses superfluous commodities, and abundance of money results from foreign trade, only trading cities are sensible of the abundance; while the peasant only becomes relatively poorer. Secondly, as the price of everything is enhanced by the increase of money, taxes also must be proportionately increased; so that the farmer will find himself still more burdened without having more resources.

It ought to be observed that the tax on land is a real duty on the produce. It is universally agreed, however, that nothing is so dangerous as a tax on corn paid by the purchaser: but how comes it we do not see that it is a hundred times worse when the duty is paid by the cultivator himself? Is not this an attack on the substance of the State at its very source? Is it not the directest possible method of depopulating a country, and therefore in the end ruining it? For the worst kind of scarcity a nation can suffer from is lack of inhabitants.

Only the real statesman can rise, in imposing taxes, above the mere financial object: he alone can transform heavy burdens into useful regulations, and make the people even doubtful whether such

establishments were not calculated rather for the good of the nation in general, than merely for the raising of money.

Duties on the importation of foreign commodities, of which the natives are fond, without the country standing in need of them; on the exportation of those of the growth of the country which are not too plentiful, and which foreigners cannot do without; on the productions of frivolous and all too lucrative arts; on the importation of all pure luxuries; and in general on all objects of luxury; will answer the two-fold end in view. It is by such taxes, indeed, by which the poor are eased, and the burdens thrown on the rich, that it is possible to prevent the continual increase of inequality of fortune; the subjection of such a multitude of artisans and useless servants to the rich, the multiplication of idle persons in our cities, and the depopulation of the country-side.

It is important that the value of any commodity and the duties laid on it should be so proportioned that the avarice of individuals may not be too strongly tempted to fraud by the greatness of the possible profit. To make smuggling difficult, those commodities should be singled out which are hardest to conceal. All duties should be rather paid by the consumer of the commodity taxed than by him who sells it: as the quantity of duty he would be obliged to pay would lay him open to greater temptations, and afford him more opportunities for fraud.

This is the constant custom in China, a country where the taxes are greater and yet better paid than in any other part of the world. The merchant himself there pays no duty; the buyer alone, without murmuring or sedition, meets the whole charge; for as the necessaries of life, such as rice and corn, are absolutely exempt from taxation, the common people is not oppressed, and the duty falls only on those who are well-to-do. Precautions against smuggling ought not to be dictated so much by the fear of it occurring, as by the attention which the government should pay to securing individuals from being seduced by illegitimate profits, which first make them bad citizens, and afterwards soon turn them into dishonest men.

Heavy taxes should be laid on servants in livery, on equipages, rich furniture, fine clothes, on spacious courts and gardens, on public entertainments of all kinds, on useless professions, such as dancers, singers, players, and in a word, on all that multiplicity of objects of luxury,

amusement and idleness, which strike the eyes of all, and can the less be hidden, as their whole purpose is to be seen, without which they would be useless. We need be under no apprehension of the produce of these taxes being arbitrary, because they are laid on things not absolutely necessary. They must know but little of mankind who imagine that, after they have been once seduced by luxury, they can ever renounce it: they would a hundred times sooner renounce common necessaries, and had much rather die of hunger than of shame. The increase in their expense is only an additional reason for supporting them, when the vanity of appearing wealthy reaps its profit from the price of the thing and the charge of the tax. As long as there are rich people in the world, they will be desirous of distinguishing themselves from the poor, nor can the State devise a revenue less burdensome or more certain than what arises from this distinction.

For the same reason, industry would have nothing to suffer from an economic system which increased the revenue, encouraged agriculture by relieving the husbandman, and insensibly tended to bring all fortunes nearer to that middle condition which constitutes the genuine strength of the State. These taxes might, I admit, bring certain fashionable articles of dress and amusement to an untimely end; but it would be only to substitute others, by which the artificer would gain, and the exchequer suffer no loss. In a word, suppose the spirit of government was constantly to tax only the superfluities of the rich, one of two things must happen: either the rich would convert their superfluous expenses into useful ones, which would redound to the profit of the State, and thus the imposition of taxes would have the effect of the best sumptuary laws, the expenses of the State would necessarily diminish with those of individuals, and the treasury would not receive so much less as it would gain by having less to pay; or, if the rich did not become less extravagant, the exchequer would have such resources in the product of taxes on their expenditure as would provide for the needs of the State. In the first case the treasury would be the richer by what it would save, from having the less to do with its money; and in the second, it would be enriched by the useless expenses of individuals.

We may add to all this a very important distinction in matters of political right, to which governments, constantly tenacious of doing everything for themselves, ought to pay great attention. It has been observed that personal taxes and duties on the necessaries of life, as they directly trespass on the

right of property, and consequently on the true foundation of political society, are always liable to have dangerous results, if they are not established with the express consent of the people or its representatives. It is not the same with articles the use of which we can deny ourselves; for as the individual is under no absolute necessity to pay, his contribution may count as voluntary. The particular consent of each contributor then takes the place of the general consent of the whole people: for why should a people oppose the imposition of a tax which falls only on those who desire to pay it? It appears to me certain that everything, which is not proscribed by law, or contrary to morality, and yet may be prohibited by the government, may also be permitted on payment of a certain duty. Thus, for example, if the government may prohibit the use of coaches, it may certainly impose a tax on them; and this is a prudent and useful method of censuring their use without absolutely forbidding it. In this case, the tax may be regarded as a sort of fine, the product of which compensates for the abuse it punishes.

It may perhaps be objected that those, whom Bodin calls *impostors*, *i.e.* those who impose or contrive the taxes, being in the class of the rich, will be far from sparing themselves to relieve the poor. But this is quite beside the point. If, in every nation, those to whom the Sovereign commits the government of the people, were, from their position, its enemies, it would not be worth while to inquire what they ought to do to make the people happy.

---

\*\*\*END OF THE PROJECT GUTENBERG EBOOK THE SOCIAL CONTRACT & DISCOURSES\*\*\*

\*\*\*\*\* This file should be named 46333-h.txt or 46333-h.zip \*\*\*\*\*

This and all associated files of various formats will be found in:

<http://www.gutenberg.org/4/6/3/3/46333>

Updated editions will replace the previous one--the old editions will be renamed.

Creating the works from public domain print editions means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg-tm electronic works to protect the PROJECT GUTENBERG-tm concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for the eBooks, unless you receive specific permission. If you do not charge anything for copies of this eBook, complying with the rules is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. They may be modified and printed and given away--you may do practically ANYTHING with public domain eBooks. Redistribution is subject to the trademark license, especially commercial redistribution.

**\*\*\* START: FULL LICENSE \*\*\***  
**THE FULL PROJECT GUTENBERG LICENSE**  
**PLEASE READ THIS BEFORE YOU**  
**DISTRIBUTE OR USE THIS WORK**

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License available with this file or online at [www.gutenberg.org/license](http://www.gutenberg.org/license).

**Section 1. General Terms of Use and Redistributing Project  
Gutenberg-tm electronic works**

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free

future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the

terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.org](http://www.gutenberg.org)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

## 1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH 1.F.3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

## **Section 2. Information about the Mission of Project Gutenberg-tm**

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive

Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation information page at [www.gutenberg.org](http://www.gutenberg.org)

### **Section 3. Information about the Project Gutenberg Literary Archive Foundation**

The Project Gutenberg Literary Archive Foundation is a non profit 501(c) (3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887. Email contact links and up to date contact information can be found at the Foundation's web site and official page at [www.gutenberg.org/contact](http://www.gutenberg.org/contact)

For additional contact information:

Dr. Gregory B. Newby  
Chief Executive and Director  
[gnewby@pglaf.org](mailto:gnewby@pglaf.org)

### **Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation**

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to

\$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit [www.gutenberg.org/donate](http://www.gutenberg.org/donate)

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: [www.gutenberg.org/donate](http://www.gutenberg.org/donate)

## **Section 5. General Information About Project Gutenberg-tm electronic works.**

Professor Michael S. Hart was the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For forty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

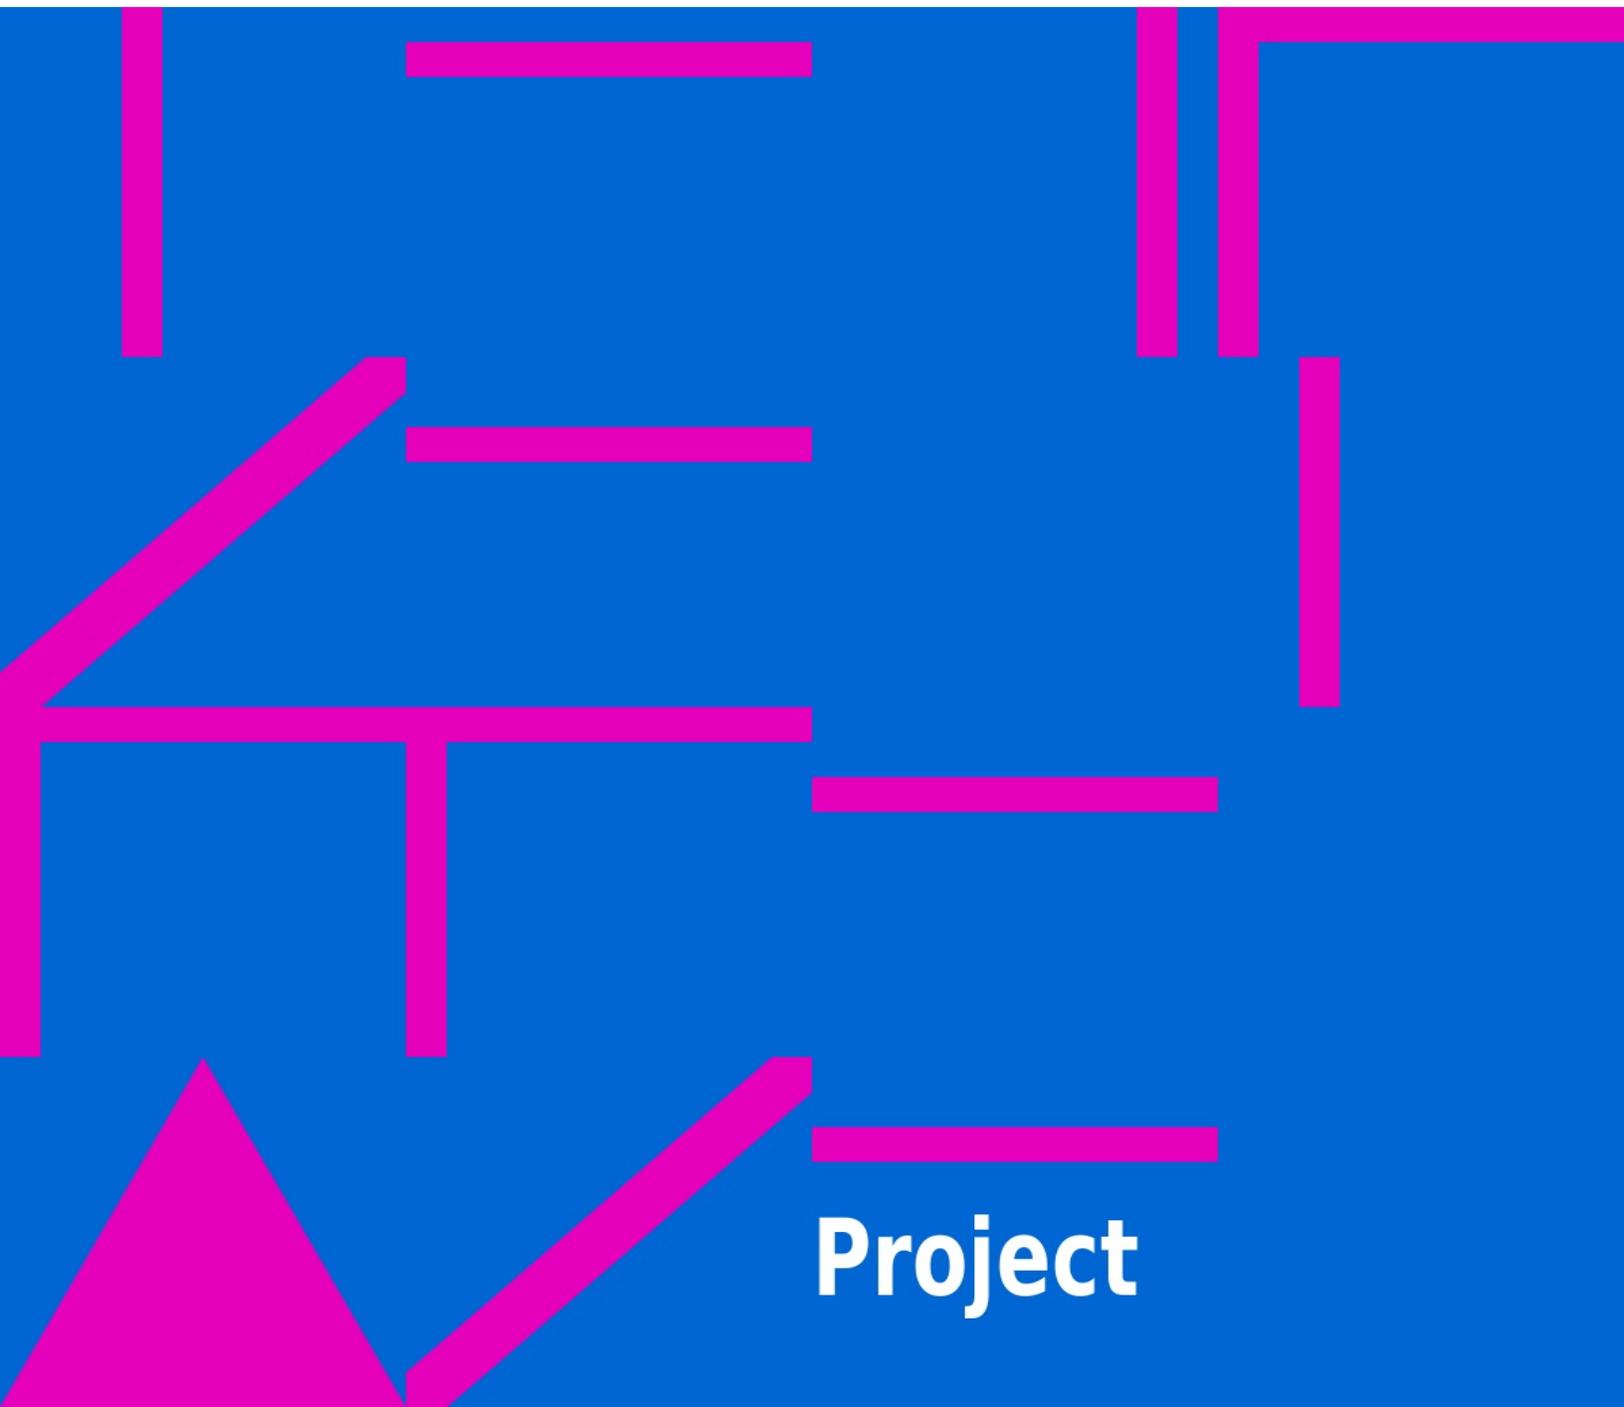

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:  
[www.gutenberg.org](http://www.gutenberg.org)

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

# Beyond Good and Evil

Friedrich Wilhelm Nietzsche

Project

The Project Gutenberg eBook of Beyond Good and Evil, by Friedrich Nietzsche

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

Title: Beyond Good and Evil

Author: Friedrich Nietzsche

Translator: Helen Zimmern

Release Date: December 7, 2009 [EBook #4363]

Last Updated: February 4, 2013

Language: English

\*\*\* START OF THIS PROJECT GUTENBERG EBOOK BEYOND GOOD AND EVIL \*\*\*

# BEYOND GOOD AND EVIL

**By Friedrich Nietzsche**

**Translated by Helen Zimmern**

TRANSCRIBER'S NOTE ABOUT THIS E-TEXT EDITION:

The following is a reprint of the Helen Zimmern translation from German into English of "Beyond Good and Evil," as published in The Complete Works of Friedrich Nietzsche (1909-1913). Some adaptations from the original text were made to format it into an e-text. Italics in the original book are capitalized in this e-text, except for most foreign language phrases that were italicized. Original footnotes are put in brackets [ ] at the points where they are cited in the text. Some spellings were altered. "To-day" and "To-morrow" are spelled "today" and "tomorrow." Some words containing the letters "ise" in the original text, such as "idealise," had these letters changed to "ize," such as "idealize." "Sceptic" was changed to "skeptical."

## PREFACE

SUPPOSING that Truth is a woman—what then? Is there not ground for suspecting that all philosophers, in so far as they have been dogmatists, have failed to understand women—that the terrible seriousness and clumsy importunity with which they have usually paid their addresses to Truth, have been unskilled and unseemly methods for winning a woman? Certainly she has never allowed herself to be won; and at present every kind of dogma stands with sad and discouraged mien—IF, indeed, it stands at all! For there are scoffers who maintain that it has fallen, that all dogma lies on the ground—nay more, that it is at its last gasp. But to speak seriously, there are good grounds for hoping that all dogmatizing in philosophy, whatever solemn, whatever conclusive and decided airs it has assumed, may have been only a noble puerilism and tyronism; and probably the time is at hand when it will be once and again understood WHAT has actually sufficed for the basis of such imposing and absolute philosophical edifices as the dogmatists have hitherto reared: perhaps some popular superstition of immemorial time (such as the soul-superstition, which, in the form of subject- and ego-superstition, has not yet ceased doing mischief): perhaps some play upon words, a deception on the part of grammar, or an audacious generalization of very restricted, very personal, very human—all-too-human facts. The philosophy of the dogmatists, it is to be hoped, was only a promise for thousands of years afterwards, as was astrology in still earlier times, in the service of which probably more labour, gold, acuteness, and patience have been spent than on any actual science hitherto: we owe to it, and to its "super-terrestrial" pretensions in Asia and Egypt, the grand style of architecture. It seems that in order to inscribe themselves upon the heart of humanity with everlasting claims, all great things have first to wander about the earth as enormous and awe-inspiring caricatures: dogmatic philosophy has been a caricature of this kind—for instance, the Vedanta doctrine in Asia, and Platonism in Europe. Let us not be ungrateful to it, although it must certainly be confessed that the worst, the most tiresome, and the most dangerous of errors hitherto has been a dogmatist error—namely, Plato's invention of Pure Spirit and the Good in Itself. But now

when it has been surmounted, when Europe, rid of this nightmare, can again draw breath freely and at least enjoy a healthier—sleep, we, WHOSE DUTY IS WAKEFULNESS ITSELF, are the heirs of all the strength which the struggle against this error has fostered. It amounted to the very inversion of truth, and the denial of the PERSPECTIVE—the fundamental condition—of life, to speak of Spirit and the Good as Plato spoke of them; indeed one might ask, as a physician: "How did such a malady attack that finest product of antiquity, Plato? Had the wicked Socrates really corrupted him? Was Socrates after all a corrupter of youths, and deserved his hemlock?" But the struggle against Plato, or—to speak plainer, and for the "people"—the struggle against the ecclesiastical oppression of millenniums of Christianity (FOR CHRISTIANITY IS PLATONISM FOR THE "PEOPLE"), produced in Europe a magnificent tension of soul, such as had not existed anywhere previously; with such a tensely strained bow one can now aim at the furthest goals. As a matter of fact, the European feels this tension as a state of distress, and twice attempts have been made in grand style to unbend the bow: once by means of Jesuitism, and the second time by means of democratic enlightenment—which, with the aid of liberty of the press and newspaper-reading, might, in fact, bring it about that the spirit would not so easily find itself in "distress"! (The Germans invented gunpowder—all credit to them! but they again made things square—they invented printing.) But we, who are neither Jesuits, nor democrats, nor even sufficiently Germans, we GOOD EUROPEANS, and free, VERY free spirits—we have it still, all the distress of spirit and all the tension of its bow! And perhaps also the arrow, the duty, and, who knows? THE GOAL TO AIM AT....

Sils Maria Upper Engadine, JUNE, 1885.

## CHAPTER I. PREJUDICES OF PHILOSOPHERS

1. The Will to Truth, which is to tempt us to many a hazardous enterprise, the famous Truthfulness of which all philosophers have hitherto spoken with respect, what questions has this Will to Truth not laid before us! What strange, perplexing, questionable questions! It is already a long story; yet it seems as if it were hardly commenced. Is it any wonder if we at last grow distrustful, lose patience, and turn impatiently away? That this Sphinx teaches us at last to ask questions ourselves? WHO is it really that puts questions to us here? WHAT really is this "Will to Truth" in us? In fact we made a long halt at the question as to the origin of this Will—until at last we came to an absolute standstill before a yet more fundamental question. We inquired about the VALUE of this Will. Granted that we want the truth: WHY NOT RATHER untruth? And uncertainty? Even ignorance? The problem of the value of truth presented itself before us—or was it we who presented ourselves before the problem? Which of us is the Oedipus here? Which the Sphinx? It would seem to be a rendezvous of questions and notes of interrogation. And could it be believed that it at last seems to us as if the problem had never been propounded before, as if we were the first to discern it, get a sight of it, and RISK RAISING it? For there is risk in raising it, perhaps there is no greater risk.

2. "HOW COULD anything originate out of its opposite? For example, truth out of error? or the Will to Truth out of the will to deception? or the generous deed out of selfishness? or the pure sun-bright vision of the wise man out of covetousness? Such genesis is impossible; whoever dreams of it is a fool, nay, worse than a fool; things of the highest value must have a different origin, an origin of THEIR own—in this transitory, seductive, illusory, paltry world, in this turmoil of delusion and cupidity, they cannot have their source. But rather in the lap of Being, in the intransitory, in the concealed God, in the 'Thing-in-itself—THERE must be their source, and nowhere else!"—This mode of reasoning discloses the typical prejudice by which metaphysicians of all times can be recognized, this mode of valuation is at the back of all their logical procedure; through this "belief"

of theirs, they exert themselves for their "knowledge," for something that is in the end solemnly christened "the Truth." The fundamental belief of metaphysicians is THE BELIEF IN ANTITHESES OF VALUES. It never occurred even to the wariest of them to doubt here on the very threshold (where doubt, however, was most necessary); though they had made a solemn vow, "DE OMNIBUS DUBITANDUM." For it may be doubted, firstly, whether antitheses exist at all; and secondly, whether the popular valuations and antitheses of value upon which metaphysicians have set their seal, are not perhaps merely superficial estimates, merely provisional perspectives, besides being probably made from some corner, perhaps from below—"frog perspectives," as it were, to borrow an expression current among painters. In spite of all the value which may belong to the true, the positive, and the unselfish, it might be possible that a higher and more fundamental value for life generally should be assigned to pretence, to the will to delusion, to selfishness, and cupidity. It might even be possible that WHAT constitutes the value of those good and respected things, consists precisely in their being insidiously related, knotted, and crocheted to these evil and apparently opposed things—perhaps even in being essentially identical with them. Perhaps! But who wishes to concern himself with such dangerous "Perhapses"! For that investigation one must await the advent of a new order of philosophers, such as will have other tastes and inclinations, the reverse of those hitherto prevalent—philosophers of the dangerous "Perhaps" in every sense of the term. And to speak in all seriousness, I see such new philosophers beginning to appear.

3. Having kept a sharp eye on philosophers, and having read between their lines long enough, I now say to myself that the greater part of conscious thinking must be counted among the instinctive functions, and it is so even in the case of philosophical thinking; one has here to learn anew, as one learned anew about heredity and "innateness." As little as the act of birth comes into consideration in the whole process and procedure of heredity, just as little is "being-conscious" OPPOSED to the instinctive in any decisive sense; the greater part of the conscious thinking of a philosopher is secretly influenced by his instincts, and forced into definite channels. And behind all logic and its seeming sovereignty of movement, there are valuations, or to speak more plainly, physiological demands, for the maintenance of a definite mode of life. For example, that the certain is worth more than the uncertain, that illusion is less valuable than "truth"

such valuations, in spite of their regulative importance for US, might notwithstanding be only superficial valuations, special kinds of *niaiserie*, such as may be necessary for the maintenance of beings such as ourselves. Supposing, in effect, that man is not just the "measure of things."

4. The falseness of an opinion is not for us any objection to it: it is here, perhaps, that our new language sounds most strangely. The question is, how far an opinion is life-furthering, life-preserving, species-preserving, perhaps species-rearing, and we are fundamentally inclined to maintain that the falsest opinions (to which the synthetic judgments a priori belong), are the most indispensable to us, that without a recognition of logical fictions, without a comparison of reality with the purely IMAGINED world of the absolute and immutable, without a constant counterfeiting of the world by means of numbers, man could not live—that the renunciation of false opinions would be a renunciation of life, a negation of life. TO RECOGNISE UNTRUTH AS A CONDITION OF LIFE; that is certainly to impugn the traditional ideas of value in a dangerous manner, and a philosophy which ventures to do so, has thereby alone placed itself beyond good and evil.

5. That which causes philosophers to be regarded half-distrustfully and half-mockingly, is not the oft-repeated discovery how innocent they are—how often and easily they make mistakes and lose their way, in short, how childish and childlike they are,—but that there is not enough honest dealing with them, whereas they all raise a loud and virtuous outcry when the problem of truthfulness is even hinted at in the remotest manner. They all pose as though their real opinions had been discovered and attained through the self-evolving of a cold, pure, divinely indifferent dialectic (in contrast to all sorts of mystics, who, fairer and foolisher, talk of "inspiration"), whereas, in fact, a prejudiced proposition, idea, or "suggestion," which is generally their heart's desire abstracted and refined, is defended by them with arguments sought out after the event. They are all advocates who do not wish to be regarded as such, generally astute defenders, also, of their prejudices, which they dub "truths,"—and VERY far from having the conscience which bravely admits this to itself, very far from having the good taste of the courage which goes so far as to let this be understood, perhaps to warn friend or foe, or in cheerful confidence and self-ridicule. The spectacle of the Tartuffery of old Kant, equally stiff and decent, with which he entices us into the dialectic by-ways that lead (more correctly

mislead) to his "categorical imperative"—makes us fastidious ones smile, we who find no small amusement in spying out the subtle tricks of old moralists and ethical preachers. Or, still more so, the hocus-pocus in mathematical form, by means of which Spinoza has, as it were, clad his philosophy in mail and mask—in fact, the "love of HIS wisdom," to translate the term fairly and squarely—in order thereby to strike terror at once into the heart of the assailant who should dare to cast a glance on that invincible maiden, that Pallas Athene:—how much of personal timidity and vulnerability does this masquerade of a sickly recluse betray!

6. It has gradually become clear to me what every great philosophy up till now has consisted of—namely, the confession of its originator, and a species of involuntary and unconscious auto-biography; and moreover that the moral (or immoral) purpose in every philosophy has constituted the true vital germ out of which the entire plant has always grown. Indeed, to understand how the abstrusest metaphysical assertions of a philosopher have been arrived at, it is always well (and wise) to first ask oneself: "What morality do they (or does he) aim at?" Accordingly, I do not believe that an "impulse to knowledge" is the father of philosophy; but that another impulse, here as elsewhere, has only made use of knowledge (and mistaken knowledge!) as an instrument. But whoever considers the fundamental impulses of man with a view to determining how far they may have here acted as INSPIRING GENII (or as demons and cobolds), will find that they have all practiced philosophy at one time or another, and that each one of them would have been only too glad to look upon itself as the ultimate end of existence and the legitimate LORD over all the other impulses. For every impulse is imperious, and as SUCH, attempts to philosophize. To be sure, in the case of scholars, in the case of really scientific men, it may be otherwise—"better," if you will; there there may really be such a thing as an "impulse to knowledge," some kind of small, independent clock-work, which, when well wound up, works away industriously to that end, WITHOUT the rest of the scholarly impulses taking any material part therein. The actual "interests" of the scholar, therefore, are generally in quite another direction—in the family, perhaps, or in money-making, or in politics; it is, in fact, almost indifferent at what point of research his little machine is placed, and whether the hopeful young worker becomes a good philologist, a mushroom specialist, or a chemist; he is not CHARACTERISED by becoming this or that. In the philosopher, on the contrary, there is absolutely nothing

impersonal; and above all, his morality furnishes a decided and decisive testimony as to WHO HE IS,—that is to say, in what order the deepest impulses of his nature stand to each other.

7. How malicious philosophers can be! I know of nothing more stinging than the joke Epicurus took the liberty of making on Plato and the Platonists; he called them Dionysiokolakes. In its original sense, and on the face of it, the word signifies "Flatterers of Dionysius"—consequently, tyrants' accessories and lick-spittles; besides this, however, it is as much as to say, "They are all ACTORS, there is nothing genuine about them" (for Dionysiokolax was a popular name for an actor). And the latter is really the malignant reproach that Epicurus cast upon Plato: he was annoyed by the grandiose manner, the *mise en scene* style of which Plato and his scholars were masters—of which Epicurus was not a master! He, the old school-teacher of Samos, who sat concealed in his little garden at Athens, and wrote three hundred books, perhaps out of rage and ambitious envy of Plato, who knows! Greece took a hundred years to find out who the garden-god Epicurus really was. Did she ever find out?

8. There is a point in every philosophy at which the "conviction" of the philosopher appears on the scene; or, to put it in the words of an ancient mystery:

*Adventavit asinus, Pulcher et fortissimus.*

9. You desire to LIVE "according to Nature"? Oh, you noble Stoics, what fraud of words! Imagine to yourselves a being like Nature, boundlessly extravagant, boundlessly indifferent, without purpose or consideration, without pity or justice, at once fruitful and barren and uncertain: imagine to yourselves INDIFFERENCE as a power—how COULD you live in accordance with such indifference? To live—is not that just endeavouring to be otherwise than this Nature? Is not living valuing, preferring, being unjust, being limited, endeavouring to be different? And granted that your imperative, "living according to Nature," means actually the same as "living according to life"—how could you do DIFFERENTLY? Why should you make a principle out of what you yourselves are, and must be? In reality, however, it is quite otherwise with you: while you pretend to read with rapture the canon of your law in Nature, you want something quite the contrary, you extraordinary stage-players and self-deluders! In your pride you wish to dictate your morals and ideals to Nature, to Nature herself, and

to incorporate them therein; you insist that it shall be Nature "according to the Stoa," and would like everything to be made after your own image, as a vast, eternal glorification and generalism of Stoicism! With all your love for truth, you have forced yourselves so long, so persistently, and with such hypnotic rigidity to see Nature FALSELY, that is to say, Stoically, that you are no longer able to see it otherwise—and to crown all, some unfathomable superciliousness gives you the Bedlamite hope that BECAUSE you are able to tyrannize over yourselves—Stoicism is self-tyranny—Nature will also allow herself to be tyrannized over: is not the Stoic a PART of Nature?... But this is an old and everlasting story: what happened in old times with the Stoics still happens today, as soon as ever a philosophy begins to believe in itself. It always creates the world in its own image; it cannot do otherwise; philosophy is this tyrannical impulse itself, the most spiritual Will to Power, the will to "creation of the world," the will to the causa prima.

10. The eagerness and subtlety, I should even say craftiness, with which the problem of "the real and the apparent world" is dealt with at present throughout Europe, furnishes food for thought and attention; and he who hears only a "Will to Truth" in the background, and nothing else, cannot certainly boast of the sharpest ears. In rare and isolated cases, it may really have happened that such a Will to Truth—a certain extravagant and adventurous pluck, a metaphysician's ambition of the forlorn hope—has participated therein: that which in the end always prefers a handful of "certainty" to a whole cartload of beautiful possibilities; there may even be puritanical fanatics of conscience, who prefer to put their last trust in a sure nothing, rather than in an uncertain something. But that is Nihilism, and the sign of a despairing, mortally wearied soul, notwithstanding the courageous bearing such a virtue may display. It seems, however, to be otherwise with stronger and livelier thinkers who are still eager for life. In that they side AGAINST appearance, and speak superciliously of "perspective," in that they rank the credibility of their own bodies about as low as the credibility of the ocular evidence that "the earth stands still," and thus, apparently, allowing with complacency their securest possession to escape (for what does one at present believe in more firmly than in one's body?),—who knows if they are not really trying to win back something which was formerly an even securer possession, something of the old domain of the faith of former times, perhaps the "immortal soul," perhaps "the old God," in short, ideas by which they could live better, that is to say, more

vigorously and more joyously, than by "modern ideas"? There is DISTRUST of these modern ideas in this mode of looking at things, a disbelief in all that has been constructed yesterday and today; there is perhaps some slight admixture of satiety and scorn, which can no longer endure the BRIC-A-BRAC of ideas of the most varied origin, such as so-called Positivism at present throws on the market; a disgust of the more refined taste at the village-fair motley and patchiness of all these reality-philosophasters, in whom there is nothing either new or true, except this motley. Therein it seems to me that we should agree with those skeptical anti-realists and knowledge-microscopists of the present day; their instinct, which repels them from MODERN reality, is unrefuted... what do their retrograde by-paths concern us! The main thing about them is NOT that they wish to go "back," but that they wish to get AWAY therefrom. A little MORE strength, swing, courage, and artistic power, and they would be OFF—and not back!

11. It seems to me that there is everywhere an attempt at present to divert attention from the actual influence which Kant exercised on German philosophy, and especially to ignore prudently the value which he set upon himself. Kant was first and foremost proud of his Table of Categories; with it in his hand he said: "This is the most difficult thing that could ever be undertaken on behalf of metaphysics." Let us only understand this "could be"! He was proud of having DISCOVERED a new faculty in man, the faculty of synthetic judgment a priori. Granting that he deceived himself in this matter; the development and rapid flourishing of German philosophy depended nevertheless on his pride, and on the eager rivalry of the younger generation to discover if possible something—at all events "new faculties"—of which to be still prouder!—But let us reflect for a moment—it is high time to do so. "How are synthetic judgments a priori POSSIBLE?" Kant asks himself—and what is really his answer? "BY MEANS OF A MEANS (faculty)"—but unfortunately not in five words, but so circumstantially, imposingly, and with such display of German profundity and verbal flourishes, that one altogether loses sight of the comical niaiserie allemande involved in such an answer. People were beside themselves with delight over this new faculty, and the jubilation reached its climax when Kant further discovered a moral faculty in man—for at that time Germans were still moral, not yet dabbling in the "Politics of hard fact." Then came the honeymoon of German philosophy. All the young theologians of the

Tubingen institution went immediately into the groves—all seeking for "faculties." And what did they not find—in that innocent, rich, and still youthful period of the German spirit, to which Romanticism, the malicious fairy, piped and sang, when one could not yet distinguish between "finding" and "inventing"! Above all a faculty for the "transcendental"; Schelling christened it, intellectual intuition, and thereby gratified the most earnest longings of the naturally pious-inclined Germans. One can do no greater wrong to the whole of this exuberant and eccentric movement (which was really youthfulness, notwithstanding that it disguised itself so boldly, in hoary and senile conceptions), than to take it seriously, or even treat it with moral indignation. Enough, however—the world grew older, and the dream vanished. A time came when people rubbed their foreheads, and they still rub them today. People had been dreaming, and first and foremost—old Kant. "By means of a means (faculty)"—he had said, or at least meant to say. But, is that—an answer? An explanation? Or is it not rather merely a repetition of the question? How does opium induce sleep? "By means of a means (faculty)," namely the *virtus dormitiva*, replies the doctor in Moliere,

*Quia est in eo virtus dormitiva,  
Cujus est natura sensus assoupire.*

But such replies belong to the realm of comedy, and it is high time to replace the Kantian question, "How are synthetic judgments a *PRIORI* possible?" by another question, "Why is belief in such judgments necessary?"—in effect, it is high time that we should understand that such judgments must be believed to be true, for the sake of the preservation of creatures like ourselves; though they still might naturally be false judgments! Or, more plainly spoken, and roughly and readily—synthetic judgments a priori should not "be possible" at all; we have no right to them; in our mouths they are nothing but false judgments. Only, of course, the belief in their truth is necessary, as plausible belief and ocular evidence belonging to the perspective view of life. And finally, to call to mind the enormous influence which "German philosophy"—I hope you understand its right to inverted commas (goosefeet)?—has exercised throughout the whole of Europe, there is no doubt that a certain *VIRTUS DORMITIVA* had a share in it; thanks to German philosophy, it was a delight to the noble idlers, the virtuous, the mystics, the artiste, the three-fourths Christians, and the political obscurantists of all nations, to find an antidote to the still

overwhelming sensualism which overflowed from the last century into this, in short—"sensus assoupire."...

12. As regards materialistic atomism, it is one of the best-refuted theories that have been advanced, and in Europe there is now perhaps no one in the learned world so unscholarly as to attach serious signification to it, except for convenient everyday use (as an abbreviation of the means of expression)—thanks chiefly to the Pole Boscovich: he and the Pole Copernicus have hitherto been the greatest and most successful opponents of ocular evidence. For while Copernicus has persuaded us to believe, contrary to all the senses, that the earth does NOT stand fast, Boscovich has taught us to abjure the belief in the last thing that "stood fast" of the earth—the belief in "substance," in "matter," in the earth-residuum, and particle-atom: it is the greatest triumph over the senses that has hitherto been gained on earth. One must, however, go still further, and also declare war, relentless war to the knife, against the "atomistic requirements" which still lead a dangerous after-life in places where no one suspects them, like the more celebrated "metaphysical requirements": one must also above all give the finishing stroke to that other and more portentous atomism which Christianity has taught best and longest, the SOUL-ATOMISM. Let it be permitted to designate by this expression the belief which regards the soul as something indestructible, eternal, indivisible, as a monad, as an atomon: this belief ought to be expelled from science! Between ourselves, it is not at all necessary to get rid of "the soul" thereby, and thus renounce one of the oldest and most venerated hypotheses—as happens frequently to the clumsiness of naturalists, who can hardly touch on the soul without immediately losing it. But the way is open for new acceptations and refinements of the soul-hypothesis; and such conceptions as "mortal soul," and "soul of subjective multiplicity," and "soul as social structure of the instincts and passions," want henceforth to have legitimate rights in science. In that the NEW psychologist is about to put an end to the superstitions which have hitherto flourished with almost tropical luxuriance around the idea of the soul, he is really, as it were, thrusting himself into a new desert and a new distrust—it is possible that the older psychologists had a merrier and more comfortable time of it; eventually, however, he finds that precisely thereby he is also condemned to INVENT—and, who knows? perhaps to DISCOVER the new.

13. Psychologists should bethink themselves before putting down the instinct of self-preservation as the cardinal instinct of an organic being. A living thing seeks above all to DISCHARGE its strength—life itself is WILL TO POWER; self-preservation is only one of the indirect and most frequent RESULTS thereof. In short, here, as everywhere else, let us beware of SUPERFLUOUS teleological principles!—one of which is the instinct of self-preservation (we owe it to Spinoza's inconsistency). It is thus, in effect, that method ordains, which must be essentially economy of principles.

14. It is perhaps just dawning on five or six minds that natural philosophy is only a world-exposition and world-arrangement (according to us, if I may say so!) and NOT a world-explanation; but in so far as it is based on belief in the senses, it is regarded as more, and for a long time to come must be regarded as more—namely, as an explanation. It has eyes and fingers of its own, it has ocular evidence and palpableness of its own: this operates fascinatingly, persuasively, and CONVINCINGLY upon an age with fundamentally plebeian tastes—in fact, it follows instinctively the canon of truth of eternal popular sensualism. What is clear, what is "explained"? Only that which can be seen and felt—one must pursue every problem thus far. Obversely, however, the charm of the Platonic mode of thought, which was an ARISTOCRATIC mode, consisted precisely in RESISTANCE to obvious sense-evidence—perhaps among men who enjoyed even stronger and more fastidious senses than our contemporaries, but who knew how to find a higher triumph in remaining masters of them: and this by means of pale, cold, grey conceptional networks which they threw over the motley whirl of the senses—the mob of the senses, as Plato said. In this overcoming of the world, and interpreting of the world in the manner of Plato, there was an ENJOYMENT different from that which the physicists of today offer us—and likewise the Darwinists and anti-teleologists among the physiological workers, with their principle of the "smallest possible effort," and the greatest possible blunder. "Where there is nothing more to see or to grasp, there is also nothing more for men to do"—that is certainly an imperative different from the Platonic one, but it may notwithstanding be the right imperative for a hardy, laborious race of machinists and bridge-builders of the future, who have nothing but ROUGH work to perform.

15. To study physiology with a clear conscience, one must insist on the fact that the sense-organs are not phenomena in the sense of the idealistic philosophy; as such they certainly could not be causes! Sensualism,

therefore, at least as regulative hypothesis, if not as heuristic principle. What? And others say even that the external world is the work of our organs? But then our body, as a part of this external world, would be the work of our organs! But then our organs themselves would be the work of our organs! It seems to me that this is a complete REDUCTIO AD ABSURDUM, if the conception CAUSA SUI is something fundamentally absurd. Consequently, the external world is NOT the work of our organs—?

16. There are still harmless self-observers who believe that there are "immediate certainties"; for instance, "I think," or as the superstition of Schopenhauer puts it, "I will"; as though cognition here got hold of its object purely and simply as "the thing in itself," without any falsification taking place either on the part of the subject or the object. I would repeat it, however, a hundred times, that "immediate certainty," as well as "absolute knowledge" and the "thing in itself," involve a CONTRADICTION IN ADJECTO; we really ought to free ourselves from the misleading significance of words! The people on their part may think that cognition is knowing all about things, but the philosopher must say to himself: "When I analyze the process that is expressed in the sentence, 'I think,' I find a whole series of daring assertions, the argumentative proof of which would be difficult, perhaps impossible: for instance, that it is *I* who think, that there must necessarily be something that thinks, that thinking is an activity and operation on the part of a being who is thought of as a cause, that there is an 'ego,' and finally, that it is already determined what is to be designated by thinking—that I KNOW what thinking is. For if I had not already decided within myself what it is, by what standard could I determine whether that which is just happening is not perhaps 'willing' or 'feeling'? In short, the assertion 'I think,' assumes that I COMPARE my state at the present moment with other states of myself which I know, in order to determine what it is; on account of this retrospective connection with further 'knowledge,' it has, at any rate, no immediate certainty for me."—In place of the "immediate certainty" in which the people may believe in the special case, the philosopher thus finds a series of metaphysical questions presented to him, veritable conscience questions of the intellect, to wit: "Whence did I get the notion of 'thinking'? Why do I believe in cause and effect? What gives me the right to speak of an 'ego,' and even of an 'ego' as cause, and finally of an 'ego' as cause of thought?" He who ventures to answer these metaphysical questions at once by an appeal to a sort of INTUITIVE

perception, like the person who says, "I think, and know that this, at least, is true, actual, and certain"—will encounter a smile and two notes of interrogation in a philosopher nowadays. "Sir," the philosopher will perhaps give him to understand, "it is improbable that you are not mistaken, but why should it be the truth?"

17. With regard to the superstitions of logicians, I shall never tire of emphasizing a small, terse fact, which is unwillingly recognized by these credulous minds—namely, that a thought comes when "it" wishes, and not when "I" wish; so that it is a PERVERSION of the facts of the case to say that the subject "I" is the condition of the predicate "think." ONE thinks; but that this "one" is precisely the famous old "ego," is, to put it mildly, only a supposition, an assertion, and assuredly not an "immediate certainty." After all, one has even gone too far with this "one thinks"—even the "one" contains an INTERPRETATION of the process, and does not belong to the process itself. One infers here according to the usual grammatical formula—"To think is an activity; every activity requires an agency that is active; consequently"... It was pretty much on the same lines that the older atomism sought, besides the operating "power," the material particle wherein it resides and out of which it operates—the atom. More rigorous minds, however, learnt at last to get along without this "earth-residuum," and perhaps some day we shall accustom ourselves, even from the logician's point of view, to get along without the little "one" (to which the worthy old "ego" has refined itself).

18. It is certainly not the least charm of a theory that it is refutable; it is precisely thereby that it attracts the more subtle minds. It seems that the hundred-times-refuted theory of the "free will" owes its persistence to this charm alone; some one is always appearing who feels himself strong enough to refute it.

19. Philosophers are accustomed to speak of the will as though it were the best-known thing in the world; indeed, Schopenhauer has given us to understand that the will alone is really known to us, absolutely and completely known, without deduction or addition. But it again and again seems to me that in this case Schopenhauer also only did what philosophers are in the habit of doing—he seems to have adopted a POPULAR PREJUDICE and exaggerated it. Willing seems to me to be above all something COMPLICATED, something that is a unity only in name—and it

is precisely in a name that popular prejudice lurks, which has got the mastery over the inadequate precautions of philosophers in all ages. So let us for once be more cautious, let us be "unphilosophical": let us say that in all willing there is firstly a plurality of sensations, namely, the sensation of the condition "AWAY FROM WHICH we go," the sensation of the condition "TOWARDS WHICH we go," the sensation of this "FROM" and "TOWARDS" itself, and then besides, an accompanying muscular sensation, which, even without our putting in motion "arms and legs," commences its action by force of habit, directly we "will" anything. Therefore, just as sensations (and indeed many kinds of sensations) are to be recognized as ingredients of the will, so, in the second place, thinking is also to be recognized; in every act of the will there is a ruling thought;—and let us not imagine it possible to sever this thought from the "willing," as if the will would then remain over! In the third place, the will is not only a complex of sensation and thinking, but it is above all an EMOTION, and in fact the emotion of the command. That which is termed "freedom of the will" is essentially the emotion of supremacy in respect to him who must obey: "I am free, 'he' must obey"—this consciousness is inherent in every will; and equally so the straining of the attention, the straight look which fixes itself exclusively on one thing, the unconditional judgment that "this and nothing else is necessary now," the inward certainty that obedience will be rendered—and whatever else pertains to the position of the commander. A man who WILLS commands something within himself which renders obedience, or which he believes renders obedience. But now let us notice what is the strangest thing about the will,—this affair so extremely complex, for which the people have only one name. Inasmuch as in the given circumstances we are at the same time the commanding AND the obeying parties, and as the obeying party we know the sensations of constraint, impulsion, pressure, resistance, and motion, which usually commence immediately after the act of will; inasmuch as, on the other hand, we are accustomed to disregard this duality, and to deceive ourselves about it by means of the synthetic term "I": a whole series of erroneous conclusions, and consequently of false judgments about the will itself, has become attached to the act of willing—to such a degree that he who wills believes firmly that willing SUFFICES for action. Since in the majority of cases there has only been exercise of will when the effect of the command—consequently obedience, and therefore action—was to be EXPECTED,

the APPEARANCE has translated itself into the sentiment, as if there were a NECESSITY OF EFFECT; in a word, he who wills believes with a fair amount of certainty that will and action are somehow one; he ascribes the success, the carrying out of the willing, to the will itself, and thereby enjoys an increase of the sensation of power which accompanies all success. "Freedom of Will"—that is the expression for the complex state of delight of the person exercising volition, who commands and at the same time identifies himself with the executor of the order—who, as such, enjoys also the triumph over obstacles, but thinks within himself that it was really his own will that overcame them. In this way the person exercising volition adds the feelings of delight of his successful executive instruments, the useful "underwills" or under-souls—indeed, our body is but a social structure composed of many souls—to his feelings of delight as commander. L'EFFET C'EST MOI. what happens here is what happens in every well-constructed and happy commonwealth, namely, that the governing class identifies itself with the successes of the commonwealth. In all willing it is absolutely a question of commanding and obeying, on the basis, as already said, of a social structure composed of many "souls", on which account a philosopher should claim the right to include willing-as-such within the sphere of morals—regarded as the doctrine of the relations of supremacy under which the phenomenon of "life" manifests itself.

20. That the separate philosophical ideas are not anything optional or autonomously evolving, but grow up in connection and relationship with each other, that, however suddenly and arbitrarily they seem to appear in the history of thought, they nevertheless belong just as much to a system as the collective members of the fauna of a Continent—is betrayed in the end by the circumstance: how unfailingly the most diverse philosophers always fill in again a definite fundamental scheme of POSSIBLE philosophies. Under an invisible spell, they always revolve once more in the same orbit, however independent of each other they may feel themselves with their critical or systematic wills, something within them leads them, something impels them in definite order the one after the other—to wit, the innate methodology and relationship of their ideas. Their thinking is, in fact, far less a discovery than a re-recognizing, a remembering, a return and a home-coming to a far-off, ancient common-household of the soul, out of which those ideas formerly grew: philosophizing is so far a kind of atavism of the highest order. The wonderful family resemblance of all Indian, Greek, and

German philosophizing is easily enough explained. In fact, where there is affinity of language, owing to the common philosophy of grammar—I mean owing to the unconscious domination and guidance of similar grammatical functions—it cannot but be that everything is prepared at the outset for a similar development and succession of philosophical systems, just as the way seems barred against certain other possibilities of world-interpretation. It is highly probable that philosophers within the domain of the Ural-Altaic languages (where the conception of the subject is least developed) look otherwise "into the world," and will be found on paths of thought different from those of the Indo-Germans and Mussulmans, the spell of certain grammatical functions is ultimately also the spell of PHYSIOLOGICAL valuations and racial conditions.—So much by way of rejecting Locke's superficiality with regard to the origin of ideas.

21. The CAUSA SUI is the best self-contradiction that has yet been conceived, it is a sort of logical violation and unnaturalness; but the extravagant pride of man has managed to entangle itself profoundly and frightfully with this very folly. The desire for "freedom of will" in the superlative, metaphysical sense, such as still holds sway, unfortunately, in the minds of the half-educated, the desire to bear the entire and ultimate responsibility for one's actions oneself, and to absolve God, the world, ancestors, chance, and society therefrom, involves nothing less than to be precisely this CAUSA SUI, and, with more than Munchausen daring, to pull oneself up into existence by the hair, out of the slough of nothingness. If any one should find out in this manner the crass stupidity of the celebrated conception of "free will" and put it out of his head altogether, I beg of him to carry his "enlightenment" a step further, and also put out of his head the contrary of this monstrous conception of "free will": I mean "non-free will," which is tantamount to a misuse of cause and effect. One should not wrongly MATERIALISE "cause" and "effect," as the natural philosophers do (and whoever like them naturalize in thinking at present), according to the prevailing mechanical doltishness which makes the cause press and push until it "effects" its end; one should use "cause" and "effect" only as pure CONCEPTIONS, that is to say, as conventional fictions for the purpose of designation and mutual understanding,—NOT for explanation. In "being-in-itself" there is nothing of "casual-connection," of "necessity," or of "psychological non-freedom"; there the effect does NOT follow the cause, there "law" does not obtain. It is WE alone who have devised cause,

sequence, reciprocity, relativity, constraint, number, law, freedom, motive, and purpose; and when we interpret and intermix this symbol-world, as "being-in-itself," with things, we act once more as we have always acted—MYTHOLOGICALLY. The "non-free will" is mythology; in real life it is only a question of STRONG and WEAK wills.—It is almost always a symptom of what is lacking in himself, when a thinker, in every "causal-connection" and "psychological necessity," manifests something of compulsion, indigence, obsequiousness, oppression, and non-freedom; it is suspicious to have such feelings—the person betrays himself. And in general, if I have observed correctly, the "non-freedom of the will" is regarded as a problem from two entirely opposite standpoints, but always in a profoundly PERSONAL manner: some will not give up their "responsibility," their belief in THEMSELVES, the personal right to THEIR merits, at any price (the vain races belong to this class); others on the contrary, do not wish to be answerable for anything, or blamed for anything, and owing to an inward self-contempt, seek to GET OUT OF THE BUSINESS, no matter how. The latter, when they write books, are in the habit at present of taking the side of criminals; a sort of socialistic sympathy is their favourite disguise. And as a matter of fact, the fatalism of the weak-willed embellishes itself surprisingly when it can pose as "la religion de la souffrance humaine"; that is ITS "good taste."

22. Let me be pardoned, as an old philologist who cannot desist from the mischief of putting his finger on bad modes of interpretation, but "Nature's conformity to law," of which you physicists talk so proudly, as though—why, it exists only owing to your interpretation and bad "philology." It is no matter of fact, no "text," but rather just a naively humanitarian adjustment and perversion of meaning, with which you make abundant concessions to the democratic instincts of the modern soul! "Everywhere equality before the law—Nature is not different in that respect, nor better than we": a fine instance of secret motive, in which the vulgar antagonism to everything privileged and autocratic—likewise a second and more refined atheism—is once more disguised. "Ni dieu, ni maitre"—that, also, is what you want; and therefore "Cheers for natural law!"—is it not so? But, as has been said, that is interpretation, not text; and somebody might come along, who, with opposite intentions and modes of interpretation, could read out of the same "Nature," and with regard to the same phenomena, just the tyrannically inconsiderate and relentless enforcement of the claims of power—an

interpreter who should so place the unexceptionalness and unconditionalness of all "Will to Power" before your eyes, that almost every word, and the word "tyranny" itself, would eventually seem unsuitable, or like a weakening and softening metaphor—as being too human; and who should, nevertheless, end by asserting the same about this world as you do, namely, that it has a "necessary" and "calculable" course, NOT, however, because laws obtain in it, but because they are absolutely LACKING, and every power effects its ultimate consequences every moment. Granted that this also is only interpretation—and you will be eager enough to make this objection?—well, so much the better.

23. All psychology hitherto has run aground on moral prejudices and timidities, it has not dared to launch out into the depths. In so far as it is allowable to recognize in that which has hitherto been written, evidence of that which has hitherto been kept silent, it seems as if nobody had yet harboured the notion of psychology as the Morphology and DEVELOPMENT-DOCTRINE OF THE WILL TO POWER, as I conceive of it. The power of moral prejudices has penetrated deeply into the most intellectual world, the world apparently most indifferent and unprejudiced, and has obviously operated in an injurious, obstructive, blinding, and distorting manner. A proper physio-psychology has to contend with unconscious antagonism in the heart of the investigator, it has "the heart" against it even a doctrine of the reciprocal conditionality of the "good" and the "bad" impulses, causes (as refined immorality) distress and aversion in a still strong and manly conscience—still more so, a doctrine of the derivation of all good impulses from bad ones. If, however, a person should regard even the emotions of hatred, envy, covetousness, and imperiousness as life-conditioning emotions, as factors which must be present, fundamentally and essentially, in the general economy of life (which must, therefore, be further developed if life is to be further developed), he will suffer from such a view of things as from sea-sickness. And yet this hypothesis is far from being the strangest and most painful in this immense and almost new domain of dangerous knowledge, and there are in fact a hundred good reasons why every one should keep away from it who CAN do so! On the other hand, if one has once drifted hither with one's bark, well! very good! now let us set our teeth firmly! let us open our eyes and keep our hand fast on the helm! We sail away right OVER morality, we crush out, we destroy perhaps the remains of our own morality by daring to

make our voyage thither—but what do WE matter. Never yet did a PROFOUNDER world of insight reveal itself to daring travelers and adventurers, and the psychologist who thus "makes a sacrifice"—it is not the sacrificio dell' intelletto, on the contrary!—will at least be entitled to demand in return that psychology shall once more be recognized as the queen of the sciences, for whose service and equipment the other sciences exist. For psychology is once more the path to the fundamental problems.

## CHAPTER II. THE FREE SPIRIT

24. O sancta simplicitas! In what strange simplification and falsification man lives! One can never cease wondering when once one has got eyes for beholding this marvel! How we have made everything around us clear and free and easy and simple! how we have been able to give our senses a passport to everything superficial, our thoughts a godlike desire for wanton pranks and wrong inferences!—how from the beginning, we have contrived to retain our ignorance in order to enjoy an almost inconceivable freedom, thoughtlessness, imprudence, heartiness, and gaiety—in order to enjoy life! And only on this solidified, granite-like foundation of ignorance could knowledge rear itself hitherto, the will to knowledge on the foundation of a far more powerful will, the will to ignorance, to the uncertain, to the untrue! Not as its opposite, but—as its refinement! It is to be hoped, indeed, that LANGUAGE, here as elsewhere, will not get over its awkwardness, and that it will continue to talk of opposites where there are only degrees and many refinements of gradation; it is equally to be hoped that the incarnated Tartuffery of morals, which now belongs to our unconquerable "flesh and blood," will turn the words round in the mouths of us discerning ones. Here and there we understand it, and laugh at the way in which precisely the best knowledge seeks most to retain us in this SIMPLIFIED, thoroughly artificial, suitably imagined, and suitably falsified world: at the way in which, whether it will or not, it loves error, because, as living itself, it loves life!

25. After such a cheerful commencement, a serious word would fain be heard; it appeals to the most serious minds. Take care, ye philosophers and friends of knowledge, and beware of martyrdom! Of suffering "for the truth's sake"! even in your own defense! It spoils all the innocence and fine neutrality of your conscience; it makes you headstrong against objections and red rags; it stupefies, animalizes, and brutalizes, when in the struggle with danger, slander, suspicion, expulsion, and even worse consequences of enmity, ye have at last to play your last card as protectors of truth upon earth—as though "the Truth" were such an innocent and incompetent creature as to require protectors! and you of all people, ye knights of the

sorrowful countenance, Messrs Loafers and Cobweb-spinners of the spirit! Finally, ye know sufficiently well that it cannot be of any consequence if YE just carry your point; ye know that hitherto no philosopher has carried his point, and that there might be a more laudable truthfulness in every little interrogative mark which you place after your special words and favourite doctrines (and occasionally after yourselves) than in all the solemn pantomime and trumping games before accusers and law-courts! Rather go out of the way! Flee into concealment! And have your masks and your ruses, that ye may be mistaken for what you are, or somewhat feared! And pray, don't forget the garden, the garden with golden trellis-work! And have people around you who are as a garden—or as music on the waters at eventide, when already the day becomes a memory. Choose the GOOD solitude, the free, wanton, lightsome solitude, which also gives you the right still to remain good in any sense whatsoever! How poisonous, how crafty, how bad, does every long war make one, which cannot be waged openly by means of force! How PERSONAL does a long fear make one, a long watching of enemies, of possible enemies! These pariahs of society, these long-pursued, badly-persecuted ones—also the compulsory recluses, the Spinozas or Giordano Brunos—always become in the end, even under the most intellectual masquerade, and perhaps without being themselves aware of it, refined vengeance-seekers and poison-Brewers (just lay bare the foundation of Spinoza's ethics and theology!), not to speak of the stupidity of moral indignation, which is the unfailing sign in a philosopher that the sense of philosophical humour has left him. The martyrdom of the philosopher, his "sacrifice for the sake of truth," forces into the light whatever of the agitator and actor lurks in him; and if one has hitherto contemplated him only with artistic curiosity, with regard to many a philosopher it is easy to understand the dangerous desire to see him also in his deterioration (deteriorated into a "martyr," into a stage-and-tribune-bawler). Only, that it is necessary with such a desire to be clear WHAT spectacle one will see in any case—merely a satyric play, merely an epilogue farce, merely the continued proof that the long, real tragedy IS AT AN END, supposing that every philosophy has been a long tragedy in its origin.

26. Every select man strives instinctively for a citadel and a privacy, where he is FREE from the crowd, the many, the majority—where he may forget "men who are the rule," as their exception;—exclusive only of the

case in which he is pushed straight to such men by a still stronger instinct, as a discerner in the great and exceptional sense. Whoever, in intercourse with men, does not occasionally glisten in all the green and grey colours of distress, owing to disgust, satiety, sympathy, gloominess, and solitariness, is assuredly not a man of elevated tastes; supposing, however, that he does not voluntarily take all this burden and disgust upon himself, that he persistently avoids it, and remains, as I said, quietly and proudly hidden in his citadel, one thing is then certain: he was not made, he was not predestined for knowledge. For as such, he would one day have to say to himself: "The devil take my good taste! but 'the rule' is more interesting than the exception—than myself, the exception!" And he would go DOWN, and above all, he would go "inside." The long and serious study of the AVERAGE man—and consequently much disguise, self-overcoming, familiarity, and bad intercourse (all intercourse is bad intercourse except with one's equals):—that constitutes a necessary part of the life-history of every philosopher; perhaps the most disagreeable, odious, and disappointing part. If he is fortunate, however, as a favourite child of knowledge should be, he will meet with suitable auxiliaries who will shorten and lighten his task; I mean so-called cynics, those who simply recognize the animal, the commonplace and "the rule" in themselves, and at the same time have so much spirituality and ticklishness as to make them talk of themselves and their like BEFORE WITNESSES—sometimes they wallow, even in books, as on their own dung-hill. Cynicism is the only form in which base souls approach what is called honesty; and the higher man must open his ears to all the coarser or finer cynicism, and congratulate himself when the clown becomes shameless right before him, or the scientific satyr speaks out. There are even cases where enchantment mixes with the disgust—namely, where by a freak of nature, genius is bound to some such indiscreet billy-goat and ape, as in the case of the Abbe Galiani, the profoundest, acutest, and perhaps also filthiest man of his century—he was far profounder than Voltaire, and consequently also, a good deal more silent. It happens more frequently, as has been hinted, that a scientific head is placed on an ape's body, a fine exceptional understanding in a base soul, an occurrence by no means rare, especially among doctors and moral physiologists. And whenever anyone speaks without bitterness, or rather quite innocently, of man as a belly with two requirements, and a head with one; whenever any one sees, seeks, and WANTS to see only hunger, sexual

instinct, and vanity as the real and only motives of human actions; in short, when any one speaks "badly"—and not even "ill"—of man, then ought the lover of knowledge to hearken attentively and diligently; he ought, in general, to have an open ear wherever there is talk without indignation. For the indignant man, and he who perpetually tears and lacerates himself with his own teeth (or, in place of himself, the world, God, or society), may indeed, morally speaking, stand higher than the laughing and self-satisfied satyr, but in every other sense he is the more ordinary, more indifferent, and less instructive case. And no one is such a LIAR as the indignant man.

27. It is difficult to be understood, especially when one thinks and lives gangasrotogati [Footnote: Like the river Ganges: presto.] among those only who think and live otherwise—namely, kurmagati [Footnote: Like the tortoise: lento.], or at best "froglike," mandeikagati [Footnote: Like the frog: staccato.] (I do everything to be "difficultly understood" myself!)—and one should be heartily grateful for the good will to some refinement of interpretation. As regards "the good friends," however, who are always too easy-going, and think that as friends they have a right to ease, one does well at the very first to grant them a play-ground and romping-place for misunderstanding—one can thus laugh still; or get rid of them altogether, these good friends—and laugh then also!

28. What is most difficult to render from one language into another is the TEMPO of its style, which has its basis in the character of the race, or to speak more physiologically, in the average TEMPO of the assimilation of its nutriment. There are honestly meant translations, which, as involuntary vulgarizations, are almost falsifications of the original, merely because its lively and merry TEMPO (which overleaps and obviates all dangers in word and expression) could not also be rendered. A German is almost incapacitated for PRESTO in his language; consequently also, as may be reasonably inferred, for many of the most delightful and daring NUANCES of free, free-spirited thought. And just as the buffoon and satyr are foreign to him in body and conscience, so Aristophanes and Petronius are untranslatable for him. Everything ponderous, viscous, and pompously clumsy, all long-winded and wearying species of style, are developed in profuse variety among Germans—pardon me for stating the fact that even Goethe's prose, in its mixture of stiffness and elegance, is no exception, as a reflection of the "good old time" to which it belongs, and as an expression of German taste at a time when there was still a "German taste," which was

a rococo-taste in moribus et artibus. Lessing is an exception, owing to his histrionic nature, which understood much, and was versed in many things; he who was not the translator of Bayle to no purpose, who took refuge willingly in the shadow of Diderot and Voltaire, and still more willingly among the Roman comedy-writers—Lessing loved also free-spiritism in the TEMPO, and flight out of Germany. But how could the German language, even in the prose of Lessing, imitate the TEMPO of Machiavelli, who in his "Principe" makes us breathe the dry, fine air of Florence, and cannot help presenting the most serious events in a boisterous allegrissimo, perhaps not without a malicious artistic sense of the contrast he ventures to present—long, heavy, difficult, dangerous thoughts, and a TEMPO of the gallop, and of the best, wantonest humour? Finally, who would venture on a German translation of Petronius, who, more than any great musician hitherto, was a master of PRESTO in invention, ideas, and words? What matter in the end about the swamps of the sick, evil world, or of the "ancient world," when like him, one has the feet of a wind, the rush, the breath, the emancipating scorn of a wind, which makes everything healthy, by making everything RUN! And with regard to Aristophanes—that transfiguring, complementary genius, for whose sake one PARDONS all Hellenism for having existed, provided one has understood in its full profundity ALL that there requires pardon and transfiguration; there is nothing that has caused me to meditate more on PLATO'S secrecy and sphinx-like nature, than the happily preserved petit fait that under the pillow of his death-bed there was found no "Bible," nor anything Egyptian, Pythagorean, or Platonic—but a book of Aristophanes. How could even Plato have endured life—a Greek life which he repudiated—without an Aristophanes!

29. It is the business of the very few to be independent; it is a privilege of the strong. And whoever attempts it, even with the best right, but without being OBLIGED to do so, proves that he is probably not only strong, but also daring beyond measure. He enters into a labyrinth, he multiplies a thousandfold the dangers which life in itself already brings with it; not the least of which is that no one can see how and where he loses his way, becomes isolated, and is torn piecemeal by some minotaur of conscience. Supposing such a one comes to grief, it is so far from the comprehension of men that they neither feel it, nor sympathize with it. And he cannot any longer go back! He cannot even go back again to the sympathy of men!

30. Our deepest insights must—and should—appear as follies, and under certain circumstances as crimes, when they come unauthorizedly to the ears of those who are not disposed and predestined for them. The exoteric and the esoteric, as they were formerly distinguished by philosophers—among the Indians, as among the Greeks, Persians, and Mussulmans, in short, wherever people believed in gradations of rank and NOT in equality and equal rights—are not so much in contradistinction to one another in respect to the exoteric class, standing without, and viewing, estimating, measuring, and judging from the outside, and not from the inside; the more essential distinction is that the class in question views things from below upwards—while the esoteric class views things FROM ABOVE DOWNWARDS. There are heights of the soul from which tragedy itself no longer appears to operate tragically; and if all the woe in the world were taken together, who would dare to decide whether the sight of it would NECESSARILY seduce and constrain to sympathy, and thus to a doubling of the woe?... That which serves the higher class of men for nourishment or refreshment, must be almost poison to an entirely different and lower order of human beings. The virtues of the common man would perhaps mean vice and weakness in a philosopher; it might be possible for a highly developed man, supposing him to degenerate and go to ruin, to acquire qualities thereby alone, for the sake of which he would have to be honoured as a saint in the lower world into which he had sunk. There are books which have an inverse value for the soul and the health according as the inferior soul and the lower vitality, or the higher and more powerful, make use of them. In the former case they are dangerous, disturbing, unsettling books, in the latter case they are herald-calls which summon the bravest to THEIR bravery. Books for the general reader are always ill-smelling books, the odour of paltry people clings to them. Where the populace eat and drink, and even where they reverence, it is accustomed to stink. One should not go into churches if one wishes to breathe PURE air.

31. In our youthful years we still venerate and despise without the art of NUANCE, which is the best gain of life, and we have rightly to do hard penance for having fallen upon men and things with Yea and Nay. Everything is so arranged that the worst of all tastes, THE TASTE FOR THE UNCONDITIONAL, is cruelly befooled and abused, until a man learns to introduce a little art into his sentiments, and prefers to try conclusions with the artificial, as do the real artists of life. The angry and

reverent spirit peculiar to youth appears to allow itself no peace, until it has suitably falsified men and things, to be able to vent its passion upon them: youth in itself even, is something falsifying and deceptive. Later on, when the young soul, tortured by continual disillusion, finally turns suspiciously against itself—still ardent and savage even in its suspicion and remorse of conscience: how it upbraids itself, how impatiently it tears itself, how it revenges itself for its long self-blinding, as though it had been a voluntary blindness! In this transition one punishes oneself by distrust of one's sentiments; one tortures one's enthusiasm with doubt, one feels even the good conscience to be a danger, as if it were the self-concealment and lassitude of a more refined uprightness; and above all, one espouses upon principle the cause AGAINST "youth."—A decade later, and one comprehends that all this was also still—youth!

32. Throughout the longest period of human history—one calls it the prehistoric period—the value or non-value of an action was inferred from its CONSEQUENCES; the action in itself was not taken into consideration, any more than its origin; but pretty much as in China at present, where the distinction or disgrace of a child redounds to its parents, the retro-operating power of success or failure was what induced men to think well or ill of an action. Let us call this period the PRE-MORAL period of mankind; the imperative, "Know thyself!" was then still unknown.—In the last ten thousand years, on the other hand, on certain large portions of the earth, one has gradually got so far, that one no longer lets the consequences of an action, but its origin, decide with regard to its worth: a great achievement as a whole, an important refinement of vision and of criterion, the unconscious effect of the supremacy of aristocratic values and of the belief in "origin," the mark of a period which may be designated in the narrower sense as the MORAL one: the first attempt at self-knowledge is thereby made. Instead of the consequences, the origin—what an inversion of perspective! And assuredly an inversion effected only after long struggle and wavering! To be sure, an ominous new superstition, a peculiar narrowness of interpretation, attained supremacy precisely thereby: the origin of an action was interpreted in the most definite sense possible, as origin out of an INTENTION; people were agreed in the belief that the value of an action lay in the value of its intention. The intention as the sole origin and antecedent history of an action: under the influence of this prejudice moral praise and blame have been bestowed, and men have judged and even

philosophized almost up to the present day.—Is it not possible, however, that the necessity may now have arisen of again making up our minds with regard to the reversing and fundamental shifting of values, owing to a new self-consciousness and acuteness in man—is it not possible that we may be standing on the threshold of a period which to begin with, would be distinguished negatively as ULTRA-MORAL: nowadays when, at least among us immoralists, the suspicion arises that the decisive value of an action lies precisely in that which is NOT INTENTIONAL, and that all its intentionality, all that is seen, sensible, or "sensed" in it, belongs to its surface or skin—which, like every skin, betrays something, but CONCEALS still more? In short, we believe that the intention is only a sign or symptom, which first requires an explanation—a sign, moreover, which has too many interpretations, and consequently hardly any meaning in itself alone: that morality, in the sense in which it has been understood hitherto, as intention-morality, has been a prejudice, perhaps a prematureness or preliminariness, probably something of the same rank as astrology and alchemy, but in any case something which must be surmounted. The surmounting of morality, in a certain sense even the self-mounting of morality—let that be the name for the long-secret labour which has been reserved for the most refined, the most upright, and also the most wicked consciences of today, as the living touchstones of the soul.

33. It cannot be helped: the sentiment of surrender, of sacrifice for one's neighbour, and all self-renunciation-morality, must be mercilessly called to account, and brought to judgment; just as the aesthetics of "disinterested contemplation," under which the emasculation of art nowadays seeks insidiously enough to create itself a good conscience. There is far too much witchery and sugar in the sentiments "for others" and "NOT for myself," for one not needing to be doubly distrustful here, and for one asking promptly: "Are they not perhaps—DECEPTIONS?"—That they PLEASE—him who has them, and him who enjoys their fruit, and also the mere spectator—that is still no argument in their FAVOUR, but just calls for caution. Let us therefore be cautious!

34. At whatever standpoint of philosophy one may place oneself nowadays, seen from every position, the ERRONEOUSNESS of the world in which we think we live is the surest and most certain thing our eyes can light upon: we find proof after proof thereof, which would fain allure us into surmises concerning a deceptive principle in the "nature of things." He,

however, who makes thinking itself, and consequently "the spirit," responsible for the falseness of the world—an honourable exit, which every conscious or unconscious advocatus dei avails himself of—he who regards this world, including space, time, form, and movement, as falsely DEDUCED, would have at least good reason in the end to become distrustful also of all thinking; has it not hitherto been playing upon us the worst of scurvy tricks? and what guarantee would it give that it would not continue to do what it has always been doing? In all seriousness, the innocence of thinkers has something touching and respect-inspiring in it, which even nowadays permits them to wait upon consciousness with the request that it will give them HONEST answers: for example, whether it be "real" or not, and why it keeps the outer world so resolutely at a distance, and other questions of the same description. The belief in "immediate certainties" is a MORAL NAIVETE which does honour to us philosophers; but—we have now to cease being "MERELY moral" men! Apart from morality, such belief is a folly which does little honour to us! If in middle-class life an ever-ready distrust is regarded as the sign of a "bad character," and consequently as an imprudence, here among us, beyond the middle-class world and its Yeas and Nays, what should prevent our being imprudent and saying: the philosopher has at length a RIGHT to "bad character," as the being who has hitherto been most befooled on earth—he is now under OBLIGATION to distrustfulness, to the wickedest squinting out of every abyss of suspicion.—Forgive me the joke of this gloomy grimace and turn of expression; for I myself have long ago learned to think and estimate differently with regard to deceiving and being deceived, and I keep at least a couple of pokes in the ribs ready for the blind rage with which philosophers struggle against being deceived. Why NOT? It is nothing more than a moral prejudice that truth is worth more than semblance; it is, in fact, the worst proved supposition in the world. So much must be conceded: there could have been no life at all except upon the basis of perspective estimates and semblances; and if, with the virtuous enthusiasm and stupidity of many philosophers, one wished to do away altogether with the "seeming world"—well, granted that YOU could do that,—at least nothing of your "truth" would thereby remain! Indeed, what is it that forces us in general to the supposition that there is an essential opposition of "true" and "false"? Is it not enough to suppose degrees of seemingness, and as it were lighter and darker shades and tones of

semblance—different valeurs, as the painters say? Why might not the world WHICH CONCERNS US—be a fiction? And to any one who suggested: "But to a fiction belongs an originator?"—might it not be bluntly replied: WHY? May not this "belong" also belong to the fiction? Is it not at length permitted to be a little ironical towards the subject, just as towards the predicate and object? Might not the philosopher elevate himself above faith in grammar? All respect to governesses, but is it not time that philosophy should renounce governess-faith?

35. O Voltaire! O humanity! O idiocy! There is something ticklish in "the truth," and in the SEARCH for the truth; and if man goes about it too humanely—"il ne cherche le vrai que pour faire le bien"—I wager he finds nothing!

36. Supposing that nothing else is "given" as real but our world of desires and passions, that we cannot sink or rise to any other "reality" but just that of our impulses—for thinking is only a relation of these impulses to one another:—are we not permitted to make the attempt and to ask the question whether this which is "given" does not SUFFICE, by means of our counterparts, for the understanding even of the so-called mechanical (or "material") world? I do not mean as an illusion, a "semblance," a "representation" (in the Berkeleyan and Schopenhauerian sense), but as possessing the same degree of reality as our emotions themselves—as a more primitive form of the world of emotions, in which everything still lies locked in a mighty unity, which afterwards branches off and develops itself in organic processes (naturally also, refines and debilitates)—as a kind of instinctive life in which all organic functions, including self-regulation, assimilation, nutrition, secretion, and change of matter, are still synthetically united with one another—as a PRIMARY FORM of life?—In the end, it is not only permitted to make this attempt, it is commanded by the conscience of LOGICAL METHOD. Not to assume several kinds of causality, so long as the attempt to get along with a single one has not been pushed to its furthest extent (to absurdity, if I may be allowed to say so): that is a morality of method which one may not repudiate nowadays—it follows "from its definition," as mathematicians say. The question is ultimately whether we really recognize the will as OPERATING, whether we believe in the causality of the will; if we do so—and fundamentally our belief IN THIS is just our belief in causality itself—we MUST make the attempt to posit hypothetically the causality of the will as the only causality.

"Will" can naturally only operate on "will"—and not on "matter" (not on "nerves," for instance): in short, the hypothesis must be hazarded, whether will does not operate on will wherever "effects" are recognized—and whether all mechanical action, inasmuch as a power operates therein, is not just the power of will, the effect of will. Granted, finally, that we succeeded in explaining our entire instinctive life as the development and ramification of one fundamental form of will—namely, the Will to Power, as my thesis puts it; granted that all organic functions could be traced back to this Will to Power, and that the solution of the problem of generation and nutrition—it is one problem—could also be found therein: one would thus have acquired the right to define ALL active force unequivocally as WILL TO POWER. The world seen from within, the world defined and designated according to its "intelligible character"—it would simply be "Will to Power," and nothing else.

37. "What? Does not that mean in popular language: God is disproved, but not the devil?"—On the contrary! On the contrary, my friends! And who the devil also compels you to speak popularly!

38. As happened finally in all the enlightenment of modern times with the French Revolution (that terrible farce, quite superfluous when judged close at hand, into which, however, the noble and visionary spectators of all Europe have interpreted from a distance their own indignation and enthusiasm so long and passionately, UNTIL THE TEXT HAS DISAPPEARED UNDER THE INTERPRETATION), so a noble posterity might once more misunderstand the whole of the past, and perhaps only thereby make ITS aspect enduring.—Or rather, has not this already happened? Have not we ourselves been—that "noble posterity"? And, in so far as we now comprehend this, is it not—thereby already past?

39. Nobody will very readily regard a doctrine as true merely because it makes people happy or virtuous—excepting, perhaps, the amiable "Idealists," who are enthusiastic about the good, true, and beautiful, and let all kinds of motley, coarse, and good-natured desirabilities swim about promiscuously in their pond. Happiness and virtue are no arguments. It is willingly forgotten, however, even on the part of thoughtful minds, that to make unhappy and to make bad are just as little counter-arguments. A thing could be TRUE, although it were in the highest degree injurious and dangerous; indeed, the fundamental constitution of existence might be such

that one succumbed by a full knowledge of it—so that the strength of a mind might be measured by the amount of "truth" it could endure—or to speak more plainly, by the extent to which it REQUIRED truth attenuated, veiled, sweetened, damped, and falsified. But there is no doubt that for the discovery of certain PORTIONS of truth the wicked and unfortunate are more favourably situated and have a greater likelihood of success; not to speak of the wicked who are happy—a species about whom moralists are silent. Perhaps severity and craft are more favourable conditions for the development of strong, independent spirits and philosophers than the gentle, refined, yielding good-nature, and habit of taking things easily, which are prized, and rightly prized in a learned man. Presupposing always, to begin with, that the term "philosopher" be not confined to the philosopher who writes books, or even introduces HIS philosophy into books!—Stendhal furnishes a last feature of the portrait of the free-spirited philosopher, which for the sake of German taste I will not omit to underline—for it is OPPOSED to German taste. "Pour etre bon philosophe," says this last great psychologist, "il faut etre sec, clair, sans illusion. Un banquier, qui a fait fortune, a une partie du caractere requis pour faire des decouvertes en philosophie, c'est-a-dire pour voir clair dans ce qui est."

40. Everything that is profound loves the mask: the profoundest things have a hatred even of figure and likeness. Should not the CONTRARY only be the right disguise for the shame of a God to go about in? A question worth asking!—it would be strange if some mystic has not already ventured on the same kind of thing. There are proceedings of such a delicate nature that it is well to overwhelm them with coarseness and make them unrecognizable; there are actions of love and of an extravagant magnanimity after which nothing can be wiser than to take a stick and thrash the witness soundly: one thereby obscures his recollection. Many a one is able to obscure and abuse his own memory, in order at least to have vengeance on this sole party in the secret: shame is inventive. They are not the worst things of which one is most ashamed: there is not only deceit behind a mask—there is so much goodness in craft. I could imagine that a man with something costly and fragile to conceal, would roll through life clumsily and rotundly like an old, green, heavily-hooped wine-cask: the refinement of his shame requiring it to be so. A man who has depths in his shame meets his destiny and his delicate decisions upon paths which few ever reach, and with regard to the existence of which his nearest and most

intimate friends may be ignorant; his mortal danger conceals itself from their eyes, and equally so his regained security. Such a hidden nature, which instinctively employs speech for silence and concealment, and is inexhaustible in evasion of communication, DESIRES and insists that a mask of himself shall occupy his place in the hearts and heads of his friends; and supposing he does not desire it, his eyes will some day be opened to the fact that there is nevertheless a mask of him there—and that it is well to be so. Every profound spirit needs a mask; nay, more, around every profound spirit there continually grows a mask, owing to the constantly false, that is to say, SUPERFICIAL interpretation of every word he utters, every step he takes, every sign of life he manifests.

41. One must subject oneself to one's own tests that one is destined for independence and command, and do so at the right time. One must not avoid one's tests, although they constitute perhaps the most dangerous game one can play, and are in the end tests made only before ourselves and before no other judge. Not to cleave to any person, be it even the dearest—every person is a prison and also a recess. Not to cleave to a fatherland, be it even the most suffering and necessitous—it is even less difficult to detach one's heart from a victorious fatherland. Not to cleave to a sympathy, be it even for higher men, into whose peculiar torture and helplessness chance has given us an insight. Not to cleave to a science, though it tempt one with the most valuable discoveries, apparently specially reserved for us. Not to cleave to one's own liberation, to the voluptuous distance and remoteness of the bird, which always flies further aloft in order always to see more under it—the danger of the flier. Not to cleave to our own virtues, nor become as a whole a victim to any of our specialties, to our "hospitality" for instance, which is the danger of dangers for highly developed and wealthy souls, who deal prodigally, almost indifferently with themselves, and push the virtue of liberality so far that it becomes a vice. One must know how TO CONSERVE ONESELF—the best test of independence.

42. A new order of philosophers is appearing; I shall venture to baptize them by a name not without danger. As far as I understand them, as far as they allow themselves to be understood—for it is their nature to WISH to remain something of a puzzle—these philosophers of the future might rightly, perhaps also wrongly, claim to be designated as "tempters." This name itself is after all only an attempt, or, if it be preferred, a temptation.

43. Will they be new friends of "truth," these coming philosophers? Very probably, for all philosophers hitherto have loved their truths. But assuredly they will not be dogmatists. It must be contrary to their pride, and also contrary to their taste, that their truth should still be truth for every one—that which has hitherto been the secret wish and ultimate purpose of all dogmatic efforts. "My opinion is MY opinion: another person has not easily a right to it"—such a philosopher of the future will say, perhaps. One must renounce the bad taste of wishing to agree with many people. "Good" is no longer good when one's neighbour takes it into his mouth. And how could there be a "common good"! The expression contradicts itself; that which can be common is always of small value. In the end things must be as they are and have always been—the great things remain for the great, the abysses for the profound, the delicacies and thrills for the refined, and, to sum up shortly, everything rare for the rare.

44. Need I say expressly after all this that they will be free, VERY free spirits, these philosophers of the future—as certainly also they will not be merely free spirits, but something more, higher, greater, and fundamentally different, which does not wish to be misunderstood and mistaken? But while I say this, I feel under OBLIGATION almost as much to them as to ourselves (we free spirits who are their heralds and forerunners), to sweep away from ourselves altogether a stupid old prejudice and misunderstanding, which, like a fog, has too long made the conception of "free spirit" obscure. In every country of Europe, and the same in America, there is at present something which makes an abuse of this name a very narrow, prepossessed, enchained class of spirits, who desire almost the opposite of what our intentions and instincts prompt—not to mention that in respect to the NEW philosophers who are appearing, they must still more be closed windows and bolted doors. Briefly and regrettably, they belong to the LEVELLERS, these wrongly named "free spirits"—as glib-tongued and scribe-fingered slaves of the democratic taste and its "modern ideas" all of them men without solitude, without personal solitude, blunt honest fellows to whom neither courage nor honourable conduct ought to be denied, only, they are not free, and are ludicrously superficial, especially in their innate partiality for seeing the cause of almost ALL human misery and failure in the old forms in which society has hitherto existed—a notion which happily inverts the truth entirely! What they would fain attain with all their strength, is the universal, green-meadow happiness of the herd, together with

security, safety, comfort, and alleviation of life for every one, their two most frequently chanted songs and doctrines are called "Equality of Rights" and "Sympathy with All Sufferers"—and suffering itself is looked upon by them as something which must be DONE AWAY WITH. We opposite ones, however, who have opened our eye and conscience to the question how and where the plant "man" has hitherto grown most vigorously, believe that this has always taken place under the opposite conditions, that for this end the dangerousness of his situation had to be increased enormously, his inventive faculty and dissembling power (his "spirit") had to develop into subtlety and daring under long oppression and compulsion, and his Will to Life had to be increased to the unconditioned Will to Power—we believe that severity, violence, slavery, danger in the street and in the heart, secrecy, stoicism, tempter's art and devilry of every kind,—that everything wicked, terrible, tyrannical, predatory, and serpentine in man, serves as well for the elevation of the human species as its opposite—we do not even say enough when we only say THIS MUCH, and in any case we find ourselves here, both with our speech and our silence, at the OTHER extreme of all modern ideology and gregarious desirability, as their antipodes perhaps? What wonder that we "free spirits" are not exactly the most communicative spirits? that we do not wish to betray in every respect WHAT a spirit can free itself from, and WHERE perhaps it will then be driven? And as to the import of the dangerous formula, "Beyond Good and Evil," with which we at least avoid confusion, we ARE something else than "libres-penseurs," "liben pensatori" "free-thinkers," and whatever these honest advocates of "modern ideas" like to call themselves. Having been at home, or at least guests, in many realms of the spirit, having escaped again and again from the gloomy, agreeable nooks in which preferences and prejudices, youth, origin, the accident of men and books, or even the weariness of travel seemed to confine us, full of malice against the seductions of dependency which he concealed in honours, money, positions, or exaltation of the senses, grateful even for distress and the vicissitudes of illness, because they always free us from some rule, and its "prejudice," grateful to the God, devil, sheep, and worm in us, inquisitive to a fault, investigators to the point of cruelty, with unhesitating fingers for the intangible, with teeth and stomachs for the most indigestible, ready for any business that requires sagacity and acute senses, ready for every adventure, owing to an excess of "free will", with anterior and posterior souls, into the ultimate intentions of

which it is difficult to pry, with foregrounds and backgrounds to the end of which no foot may run, hidden ones under the mantles of light, appropriators, although we resemble heirs and spendthrifts, arrangers and collectors from morning till night, misers of our wealth and our full-crammed drawers, economical in learning and forgetting, inventive in scheming, sometimes proud of tables of categories, sometimes pedants, sometimes night-owls of work even in full day, yea, if necessary, even scarecrows—and it is necessary nowadays, that is to say, inasmuch as we are the born, sworn, jealous friends of SOLITUDE, of our own profoundest midnight and midday solitude—such kind of men are we, we free spirits! And perhaps ye are also something of the same kind, ye coming ones? ye NEW philosophers?

## CHAPTER III. THE RELIGIOUS MOOD

45. The human soul and its limits, the range of man's inner experiences hitherto attained, the heights, depths, and distances of these experiences, the entire history of the soul UP TO THE PRESENT TIME, and its still unexhausted possibilities: this is the preordained hunting-domain for a born psychologist and lover of a "big hunt". But how often must he say despairingly to himself: "A single individual! alas, only a single individual! and this great forest, this virgin forest!" So he would like to have some hundreds of hunting assistants, and fine trained hounds, that he could send into the history of the human soul, to drive HIS game together. In vain: again and again he experiences, profoundly and bitterly, how difficult it is to find assistants and dogs for all the things that directly excite his curiosity. The evil of sending scholars into new and dangerous hunting-domains, where courage, sagacity, and subtlety in every sense are required, is that they are no longer serviceable just when the "BIG hunt," and also the great danger commences,—it is precisely then that they lose their keen eye and nose. In order, for instance, to divine and determine what sort of history the problem of KNOWLEDGE AND CONSCIENCE has hitherto had in the souls of homines religiosi, a person would perhaps himself have to possess as profound, as bruised, as immense an experience as the intellectual conscience of Pascal; and then he would still require that wide-spread heaven of clear, wicked spirituality, which, from above, would be able to oversee, arrange, and effectively formulize this mass of dangerous and painful experiences.—But who could do me this service! And who would have time to wait for such servants!—they evidently appear too rarely, they are so improbable at all times! Eventually one must do everything ONESELF in order to know something; which means that one has MUCH to do!—But a curiosity like mine is once for all the most agreeable of vices—pardon me! I mean to say that the love of truth has its reward in heaven, and already upon earth.

46. Faith, such as early Christianity desired, and not infrequently achieved in the midst of a skeptical and southernly free-spirited world, which had centuries of struggle between philosophical schools behind it and

in it, counting besides the education in tolerance which the Imperium Romanum gave—this faith is NOT that sincere, austere slave-faith by which perhaps a Luther or a Cromwell, or some other northern barbarian of the spirit remained attached to his God and Christianity, it is much rather the faith of Pascal, which resembles in a terrible manner a continuous suicide of reason—a tough, long-lived, worm-like reason, which is not to be slain at once and with a single blow. The Christian faith from the beginning, is sacrifice the sacrifice of all freedom, all pride, all self-confidence of spirit, it is at the same time subjection, self-derision, and self-mutilation. There is cruelty and religious Phoenicianism in this faith, which is adapted to a tender, many-sided, and very fastidious conscience, it takes for granted that the subjection of the spirit is indescribably PAINFUL, that all the past and all the habits of such a spirit resist the absurdissimum, in the form of which "faith" comes to it. Modern men, with their obtuseness as regards all Christian nomenclature, have no longer the sense for the terribly superlative conception which was implied to an antique taste by the paradox of the formula, "God on the Cross". Hitherto there had never and nowhere been such boldness in inversion, nor anything at once so dreadful, questioning, and questionable as this formula: it promised a transvaluation of all ancient values—It was the Orient, the PROFOUND Orient, it was the Oriental slave who thus took revenge on Rome and its noble, light-minded toleration, on the Roman "Catholicism" of non-faith, and it was always not the faith, but the freedom from the faith, the half-stoical and smiling indifference to the seriousness of the faith, which made the slaves indignant at their masters and revolt against them. "Enlightenment" causes revolt, for the slave desires the unconditioned, he understands nothing but the tyrannous, even in morals, he loves as he hates, without NUANCE, to the very depths, to the point of pain, to the point of sickness—his many HIDDEN sufferings make him revolt against the noble taste which seems to DENY suffering. The skepticism with regard to suffering, fundamentally only an attitude of aristocratic morality, was not the least of the causes, also, of the last great slave-insurrection which began with the French Revolution.

47. Wherever the religious neurosis has appeared on the earth so far, we find it connected with three dangerous prescriptions as to regimen: solitude, fasting, and sexual abstinence—but without its being possible to determine with certainty which is cause and which is effect, or IF any relation at all of cause and effect exists there. This latter doubt is justified by the fact that

one of the most regular symptoms among savage as well as among civilized peoples is the most sudden and excessive sensuality, which then with equal suddenness transforms into penitential paroxysms, world-renunciation, and will-renunciation, both symptoms perhaps explainable as disguised epilepsy? But nowhere is it MORE obligatory to put aside explanations around no other type has there grown such a mass of absurdity and superstition, no other type seems to have been more interesting to men and even to philosophers—perhaps it is time to become just a little indifferent here, to learn caution, or, better still, to look AWAY, TO GO AWAY—Yet in the background of the most recent philosophy, that of Schopenhauer, we find almost as the problem in itself, this terrible note of interrogation of the religious crisis and awakening. How is the negation of will POSSIBLE? how is the saint possible?—that seems to have been the very question with which Schopenhauer made a start and became a philosopher. And thus it was a genuine Schopenhauerian consequence, that his most convinced adherent (perhaps also his last, as far as Germany is concerned), namely, Richard Wagner, should bring his own life-work to an end just here, and should finally put that terrible and eternal type upon the stage as Kundry, type vecu, and as it loved and lived, at the very time that the mad-doctors in almost all European countries had an opportunity to study the type close at hand, wherever the religious neurosis—or as I call it, "the religious mood"—made its latest epidemical outbreak and display as the "Salvation Army"—If it be a question, however, as to what has been so extremely interesting to men of all sorts in all ages, and even to philosophers, in the whole phenomenon of the saint, it is undoubtedly the appearance of the miraculous therein—namely, the immediate SUCCESSION OF OPPOSITES, of states of the soul regarded as morally antithetical: it was believed here to be self-evident that a "bad man" was all at once turned into a "saint," a good man. The hitherto existing psychology was wrecked at this point, is it not possible it may have happened principally because psychology had placed itself under the dominion of morals, because it BELIEVED in oppositions of moral values, and saw, read, and INTERPRETED these oppositions into the text and facts of the case? What? "Miracle" only an error of interpretation? A lack of philology?

48. It seems that the Latin races are far more deeply attached to their Catholicism than we Northerners are to Christianity generally, and that consequently unbelief in Catholic countries means something quite different

from what it does among Protestants—namely, a sort of revolt against the spirit of the race, while with us it is rather a return to the spirit (or non-spirit) of the race.

We Northerners undoubtedly derive our origin from barbarous races, even as regards our talents for religion—we have POOR talents for it. One may make an exception in the case of the Celts, who have theretofore furnished also the best soil for Christian infection in the North: the Christian ideal blossomed forth in France as much as ever the pale sun of the north would allow it. How strangely pious for our taste are still these later French skeptics, whenever there is any Celtic blood in their origin! How Catholic, how un-German does Auguste Comte's Sociology seem to us, with the Roman logic of its instincts! How Jesuitical, that amiable and shrewd cicerone of Port Royal, Sainte-Beuve, in spite of all his hostility to Jesuits! And even Ernest Renan: how inaccessible to us Northerners does the language of such a Renan appear, in whom every instant the merest touch of religious thrill throws his refined voluptuous and comfortably couching soul off its balance! Let us repeat after him these fine sentences—and what wickedness and haughtiness is immediately aroused by way of answer in our probably less beautiful but harder souls, that is to say, in our more German souls!—"DISONS DONC HARDIMENT QUE LA RELIGION EST UN PRODUIT DE L'HOMME NORMAL, QUE L'HOMME EST LE PLUS DANS LE VRAI QUANT IL EST LE PLUS RELIGIEUX ET LE PLUS ASSURE D'UNE DESTINEE INFINIE.... C'EST QUAND IL EST BON QU'IL VEUT QUE LA VIRTU CORRESPONDE A UN ORDER ETERNAL, C'EST QUAND IL CONTEMPE LES CHOSES D'UNE MANIERE DESINTERESSEE QU'IL TROUVE LA MORT REVOLTANTE ET ABSURDE. COMMENT NE PAS SUPPOSER QUE C'EST DANS CES MOMENTS-LA, QUE L'HOMME VOIT LE MIEUX?"... These sentences are so extremely ANTIPODAL to my ears and habits of thought, that in my first impulse of rage on finding them, I wrote on the margin, "LA NIAISERIE RELIGIEUSE PAR EXCELLENCE!"—until in my later rage I even took a fancy to them, these sentences with their truth absolutely inverted! It is so nice and such a distinction to have one's own antipodes!

49. That which is so astonishing in the religious life of the ancient Greeks is the irrestrainable stream of GRATITUDE which it pours forth—it is a very superior kind of man who takes SUCH an attitude towards nature and

life.—Later on, when the populace got the upper hand in Greece, FEAR became rampant also in religion; and Christianity was preparing itself.

50. The passion for God: there are churlish, honest-hearted, and importunate kinds of it, like that of Luther—the whole of Protestantism lacks the southern DELICATEZZA. There is an Oriental exaltation of the mind in it, like that of an undeservedly favoured or elevated slave, as in the case of St. Augustine, for instance, who lacks in an offensive manner, all nobility in bearing and desires. There is a feminine tenderness and sensuality in it, which modestly and unconsciously longs for a UNIO MYSTICA ET PHYSICA, as in the case of Madame de Guyon. In many cases it appears, curiously enough, as the disguise of a girl's or youth's puberty; here and there even as the hysteria of an old maid, also as her last ambition. The Church has frequently canonized the woman in such a case.

51. The mightiest men have hitherto always bowed reverently before the saint, as the enigma of self-subjugation and utter voluntary privation—why did they thus bow? They divined in him—and as it were behind the questionableness of his frail and wretched appearance—the superior force which wished to test itself by such a subjugation; the strength of will, in which they recognized their own strength and love of power, and knew how to honour it: they honoured something in themselves when they honoured the saint. In addition to this, the contemplation of the saint suggested to them a suspicion: such an enormity of self-negation and anti-naturalness will not have been coveted for nothing—they have said, inquiringly. There is perhaps a reason for it, some very great danger, about which the ascetic might wish to be more accurately informed through his secret interlocutors and visitors? In a word, the mighty ones of the world learned to have a new fear before him, they divined a new power, a strange, still unconquered enemy:—it was the "Will to Power" which obliged them to halt before the saint. They had to question him.

52. In the Jewish "Old Testament," the book of divine justice, there are men, things, and sayings on such an immense scale, that Greek and Indian literature has nothing to compare with it. One stands with fear and reverence before those stupendous remains of what man was formerly, and one has sad thoughts about old Asia and its little out-pushed peninsula Europe, which would like, by all means, to figure before Asia as the "Progress of Mankind." To be sure, he who is himself only a slender, tame

house-animal, and knows only the wants of a house-animal (like our cultured people of today, including the Christians of "cultured" Christianity), need neither be amazed nor even sad amid those ruins—the taste for the Old Testament is a touchstone with respect to "great" and "small": perhaps he will find that the New Testament, the book of grace, still appeals more to his heart (there is much of the odour of the genuine, tender, stupid beadsman and petty soul in it). To have bound up this New Testament (a kind of ROCOCO of taste in every respect) along with the Old Testament into one book, as the "Bible," as "The Book in Itself," is perhaps the greatest audacity and "sin against the Spirit" which literary Europe has upon its conscience.

53. Why Atheism nowadays? "The father" in God is thoroughly refuted; equally so "the judge," "the rewarder." Also his "free will": he does not hear—and even if he did, he would not know how to help. The worst is that he seems incapable of communicating himself clearly; is he uncertain?—This is what I have made out (by questioning and listening at a variety of conversations) to be the cause of the decline of European theism; it appears to me that though the religious instinct is in vigorous growth,—it rejects the theistic satisfaction with profound distrust.

54. What does all modern philosophy mainly do? Since Descartes—and indeed more in defiance of him than on the basis of his procedure—an ATTENTAT has been made on the part of all philosophers on the old conception of the soul, under the guise of a criticism of the subject and predicate conception—that is to say, an ATTENTAT on the fundamental presupposition of Christian doctrine. Modern philosophy, as epistemological skepticism, is secretly or openly ANTI-CHRISTIAN, although (for keener ears, be it said) by no means anti-religious. Formerly, in effect, one believed in "the soul" as one believed in grammar and the grammatical subject: one said, "I" is the condition, "think" is the predicate and is conditioned—to think is an activity for which one MUST suppose a subject as cause. The attempt was then made, with marvelous tenacity and subtlety, to see if one could not get out of this net,—to see if the opposite was not perhaps true: "think" the condition, and "I" the conditioned; "I," therefore, only a synthesis which has been MADE by thinking itself. KANT really wished to prove that, starting from the subject, the subject could not be proved—nor the object either: the possibility of an APPARENT EXISTENCE of the subject, and therefore of "the soul," may not always

have been strange to him,—the thought which once had an immense power on earth as the Vedanta philosophy.

55. There is a great ladder of religious cruelty, with many rounds; but three of these are the most important. Once on a time men sacrificed human beings to their God, and perhaps just those they loved the best—to this category belong the firstling sacrifices of all primitive religions, and also the sacrifice of the Emperor Tiberius in the Mithra-Grotto on the Island of Capri, that most terrible of all Roman anachronisms. Then, during the moral epoch of mankind, they sacrificed to their God the strongest instincts they possessed, their "nature"; THIS festal joy shines in the cruel glances of ascetics and "anti-natural" fanatics. Finally, what still remained to be sacrificed? Was it not necessary in the end for men to sacrifice everything comforting, holy, healing, all hope, all faith in hidden harmonies, in future blessedness and justice? Was it not necessary to sacrifice God himself, and out of cruelty to themselves to worship stone, stupidity, gravity, fate, nothingness? To sacrifice God for nothingness—this paradoxical mystery of the ultimate cruelty has been reserved for the rising generation; we all know something thereof already.

56. Whoever, like myself, prompted by some enigmatical desire, has long endeavoured to go to the bottom of the question of pessimism and free it from the half-Christian, half-German narrowness and stupidity in which it has finally presented itself to this century, namely, in the form of Schopenhauer's philosophy; whoever, with an Asiatic and super-Asiatic eye, has actually looked inside, and into the most world-renouncing of all possible modes of thought—beyond good and evil, and no longer like Buddha and Schopenhauer, under the dominion and delusion of morality,—whoever has done this, has perhaps just thereby, without really desiring it, opened his eyes to behold the opposite ideal: the ideal of the most world-approving, exuberant, and vivacious man, who has not only learnt to compromise and arrange with that which was and is, but wishes to have it again AS IT WAS AND IS, for all eternity, insatiably calling out *da capo*, not only to himself, but to the whole piece and play; and not only the play, but actually to him who requires the play—and makes it necessary; because he always requires himself anew—and makes himself necessary.—What? And this would not be—*circulus vitiosus deus*?

57. The distance, and as it were the space around man, grows with the strength of his intellectual vision and insight: his world becomes profounder; new stars, new enigmas, and notions are ever coming into view. Perhaps everything on which the intellectual eye has exercised its acuteness and profundity has just been an occasion for its exercise, something of a game, something for children and childish minds. Perhaps the most solemn conceptions that have caused the most fighting and suffering, the conceptions "God" and "sin," will one day seem to us of no more importance than a child's plaything or a child's pain seems to an old man;—and perhaps another plaything and another pain will then be necessary once more for "the old man"—always childish enough, an eternal child!

58. Has it been observed to what extent outward idleness, or semi-idleness, is necessary to a real religious life (alike for its favourite microscopic labour of self-examination, and for its soft placidity called "prayer," the state of perpetual readiness for the "coming of God"), I mean the idleness with a good conscience, the idleness of olden times and of blood, to which the aristocratic sentiment that work is DISHONOURING—that it vulgarizes body and soul—is not quite unfamiliar? And that consequently the modern, noisy, time-engrossing, conceited, foolishly proud laboriousness educates and prepares for "unbelief" more than anything else? Among these, for instance, who are at present living apart from religion in Germany, I find "free-thinkers" of diversified species and origin, but above all a majority of those in whom laboriousness from generation to generation has dissolved the religious instincts; so that they no longer know what purpose religions serve, and only note their existence in the world with a kind of dull astonishment. They feel themselves already fully occupied, these good people, be it by their business or by their pleasures, not to mention the "Fatherland," and the newspapers, and their "family duties"; it seems that they have no time whatever left for religion; and above all, it is not obvious to them whether it is a question of a new business or a new pleasure—for it is impossible, they say to themselves, that people should go to church merely to spoil their tempers. They are by no means enemies of religious customs; should certain circumstances, State affairs perhaps, require their participation in such customs, they do what is required, as so many things are done—with a patient and unassuming seriousness, and without much curiosity or discomfort;—they live too much apart and outside to feel even the necessity for a FOR or AGAINST in such

matters. Among those indifferent persons may be reckoned nowadays the majority of German Protestants of the middle classes, especially in the great laborious centres of trade and commerce; also the majority of laborious scholars, and the entire University personnel (with the exception of the theologians, whose existence and possibility there always gives psychologists new and more subtle puzzles to solve). On the part of pious, or merely church-going people, there is seldom any idea of HOW MUCH good-will, one might say arbitrary will, is now necessary for a German scholar to take the problem of religion seriously; his whole profession (and as I have said, his whole workmanlike laboriousness, to which he is compelled by his modern conscience) inclines him to a lofty and almost charitable serenity as regards religion, with which is occasionally mingled a slight disdain for the "uncleanliness" of spirit which he takes for granted wherever any one still professes to belong to the Church. It is only with the help of history (NOT through his own personal experience, therefore) that the scholar succeeds in bringing himself to a respectful seriousness, and to a certain timid deference in presence of religions; but even when his sentiments have reached the stage of gratitude towards them, he has not personally advanced one step nearer to that which still maintains itself as Church or as piety; perhaps even the contrary. The practical indifference to religious matters in the midst of which he has been born and brought up, usually sublimates itself in his case into circumspection and cleanliness, which shuns contact with religious men and things; and it may be just the depth of his tolerance and humanity which prompts him to avoid the delicate trouble which tolerance itself brings with it.—Every age has its own divine type of naivete, for the discovery of which other ages may envy it: and how much naivete—adorable, childlike, and boundlessly foolish naivete is involved in this belief of the scholar in his superiority, in the good conscience of his tolerance, in the unsuspecting, simple certainty with which his instinct treats the religious man as a lower and less valuable type, beyond, before, and ABOVE which he himself has developed—he, the little arrogant dwarf and mob-man, the sedulously alert, head-and-hand drudge of "ideas," of "modern ideas"!

59. Whoever has seen deeply into the world has doubtless divined what wisdom there is in the fact that men are superficial. It is their preservative instinct which teaches them to be flighty, lightsome, and false. Here and there one finds a passionate and exaggerated adoration of "pure forms" in

philosophers as well as in artists: it is not to be doubted that whoever has NEED of the cult of the superficial to that extent, has at one time or another made an unlucky dive BENEATH it. Perhaps there is even an order of rank with respect to those burnt children, the born artists who find the enjoyment of life only in trying to FALSIFY its image (as if taking wearisome revenge on it), one might guess to what degree life has disgusted them, by the extent to which they wish to see its image falsified, attenuated, ultrified, and deified,—one might reckon the *homines religiosi* among the artists, as their HIGHEST rank. It is the profound, suspicious fear of an incurable pessimism which compels whole centuries to fasten their teeth into a religious interpretation of existence: the fear of the instinct which divines that truth might be attained TOO soon, before man has become strong enough, hard enough, artist enough.... Piety, the "Life in God," regarded in this light, would appear as the most elaborate and ultimate product of the FEAR of truth, as artist-adoration and artist-intoxication in presence of the most logical of all falsifications, as the will to the inversion of truth, to untruth at any price. Perhaps there has hitherto been no more effective means of beautifying man than piety, by means of it man can become so artful, so superficial, so iridescent, and so good, that his appearance no longer offends.

60. To love mankind FOR GOD'S SAKE—this has so far been the noblest and remotest sentiment to which mankind has attained. That love to mankind, without any redeeming intention in the background, is only an ADDITIONAL folly and brutishness, that the inclination to this love has first to get its proportion, its delicacy, its gram of salt and sprinkling of ambergris from a higher inclination—whoever first perceived and "experienced" this, however his tongue may have stammered as it attempted to express such a delicate matter, let him for all time be holy and respected, as the man who has so far flown highest and gone astray in the finest fashion!

61. The philosopher, as WE free spirits understand him—as the man of the greatest responsibility, who has the conscience for the general development of mankind,—will use religion for his disciplining and educating work, just as he will use the contemporary political and economic conditions. The selecting and disciplining influence—destructive, as well as creative and fashioning—which can be exercised by means of religion is manifold and varied, according to the sort of people placed under its spell

and protection. For those who are strong and independent, destined and trained to command, in whom the judgment and skill of a ruling race is incorporated, religion is an additional means for overcoming resistance in the exercise of authority—as a bond which binds rulers and subjects in common, betraying and surrendering to the former the conscience of the latter, their inmost heart, which would fain escape obedience. And in the case of the unique natures of noble origin, if by virtue of superior spirituality they should incline to a more retired and contemplative life, reserving to themselves only the more refined forms of government (over chosen disciples or members of an order), religion itself may be used as a means for obtaining peace from the noise and trouble of managing GROSSER affairs, and for securing immunity from the UNAVOIDABLE filth of all political agitation. The Brahmins, for instance, understood this fact. With the help of a religious organization, they secured to themselves the power of nominating kings for the people, while their sentiments prompted them to keep apart and outside, as men with a higher and super-regal mission. At the same time religion gives inducement and opportunity to some of the subjects to qualify themselves for future ruling and commanding the slowly ascending ranks and classes, in which, through fortunate marriage customs, volitional power and delight in self-control are on the increase. To them religion offers sufficient incentives and temptations to aspire to higher intellectuality, and to experience the sentiments of authoritative self-control, of silence, and of solitude. Asceticism and Puritanism are almost indispensable means of educating and ennobling a race which seeks to rise above its hereditary baseness and work itself upwards to future supremacy. And finally, to ordinary men, to the majority of the people, who exist for service and general utility, and are only so far entitled to exist, religion gives invaluable contentedness with their lot and condition, peace of heart, ennoblement of obedience, additional social happiness and sympathy, with something of transfiguration and embellishment, something of justification of all the commonplaceness, all the meanness, all the semi-animal poverty of their souls. Religion, together with the religious significance of life, sheds sunshine over such perpetually harassed men, and makes even their own aspect endurable to them, it operates upon them as the Epicurean philosophy usually operates upon sufferers of a higher order, in a refreshing and refining manner, almost TURNING suffering TO ACCOUNT, and in the end even hallowing and

vindicating it. There is perhaps nothing so admirable in Christianity and Buddhism as their art of teaching even the lowest to elevate themselves by piety to a seemingly higher order of things, and thereby to retain their satisfaction with the actual world in which they find it difficult enough to live—this very difficulty being necessary.

62. To be sure—to make also the bad counter-reckoning against such religions, and to bring to light their secret dangers—the cost is always excessive and terrible when religions do NOT operate as an educational and disciplinary medium in the hands of the philosopher, but rule voluntarily and PARAMOUNTLY, when they wish to be the final end, and not a means along with other means. Among men, as among all other animals, there is a surplus of defective, diseased, degenerating, infirm, and necessarily suffering individuals; the successful cases, among men also, are always the exception; and in view of the fact that man is THE ANIMAL NOT YET PROPERLY ADAPTED TO HIS ENVIRONMENT, the rare exception. But worse still. The higher the type a man represents, the greater is the improbability that he will SUCCEED; the accidental, the law of irrationality in the general constitution of mankind, manifests itself most terribly in its destructive effect on the higher orders of men, the conditions of whose lives are delicate, diverse, and difficult to determine. What, then, is the attitude of the two greatest religions above-mentioned to the SURPLUS of failures in life? They endeavour to preserve and keep alive whatever can be preserved; in fact, as the religions FOR SUFFERERS, they take the part of these upon principle; they are always in favour of those who suffer from life as from a disease, and they would fain treat every other experience of life as false and impossible. However highly we may esteem this indulgent and preservative care (inasmuch as in applying to others, it has applied, and applies also to the highest and usually the most suffering type of man), the hitherto PARAMOUNT religions—to give a general appreciation of them—are among the principal causes which have kept the type of "man" upon a lower level—they have preserved too much THAT WHICH SHOULD HAVE PERISHED. One has to thank them for invaluable services; and who is sufficiently rich in gratitude not to feel poor at the contemplation of all that the "spiritual men" of Christianity have done for Europe hitherto! But when they had given comfort to the sufferers, courage to the oppressed and despairing, a staff and support to the helpless, and when they had allured from society into convents and spiritual penitentiaries the broken-hearted

and distracted: what else had they to do in order to work systematically in that fashion, and with a good conscience, for the preservation of all the sick and suffering, which means, in deed and in truth, to work for the DETERIORATION OF THE EUROPEAN RACE? To REVERSE all estimates of value—THAT is what they had to do! And to shatter the strong, to spoil great hopes, to cast suspicion on the delight in beauty, to break down everything autonomous, manly, conquering, and imperious—all instincts which are natural to the highest and most successful type of "man"—into uncertainty, distress of conscience, and self-destruction; forsooth, to invert all love of the earthly and of supremacy over the earth, into hatred of the earth and earthly things—THAT is the task the Church imposed on itself, and was obliged to impose, until, according to its standard of value, "unworldliness," "unsensuousness," and "higher man" fused into one sentiment. If one could observe the strangely painful, equally coarse and refined comedy of European Christianity with the derisive and impartial eye of an Epicurean god, I should think one would never cease marvelling and laughing; does it not actually seem that some single will has ruled over Europe for eighteen centuries in order to make a SUBLIME ABORTION of man? He, however, who, with opposite requirements (no longer Epicurean) and with some divine hammer in his hand, could approach this almost voluntary degeneration and stunting of mankind, as exemplified in the European Christian (Pascal, for instance), would he not have to cry aloud with rage, pity, and horror: "Oh, you bunglers, presumptuous pitiful bunglers, what have you done! Was that a work for your hands? How you have hacked and botched my finest stone! What have you presumed to do!"—I should say that Christianity has hitherto been the most portentous of presumptions. Men, not great enough, nor hard enough, to be entitled as artists to take part in fashioning MAN; men, not sufficiently strong and far-sighted to ALLOW, with sublime self-constraint, the obvious law of the thousandfold failures and perishings to prevail; men, not sufficiently noble to see the radically different grades of rank and intervals of rank that separate man from man:—SUCH men, with their "equality before God," have hitherto swayed the destiny of Europe; until at last a dwarfed, almost ludicrous species has been produced, a gregarious animal, something obliging, sickly, mediocre, the European of the present day.

## CHAPTER IV. APOPTHEGMS AND INTERLUDES

63. He who is a thorough teacher takes things seriously—and even himself—only in relation to his pupils.

64. "Knowledge for its own sake"—that is the last snare laid by morality: we are thereby completely entangled in morals once more.

65. The charm of knowledge would be small, were it not so much shame has to be overcome on the way to it.

65A. We are most dishonourable towards our God: he is not PERMITTED to sin.

66. The tendency of a person to allow himself to be degraded, robbed, deceived, and exploited might be the diffidence of a God among men.

67. Love to one only is a barbarity, for it is exercised at the expense of all others. Love to God also!

68. "I did that," says my memory. "I could not have done that," says my pride, and remains inexorable. Eventually—the memory yields.

69. One has regarded life carelessly, if one has failed to see the hand that—kills with leniency.

70. If a man has character, he has also his typical experience, which always recurs.

71. THE SAGE AS ASTRONOMER.—So long as thou feelest the stars as an "above thee," thou lackest the eye of the discerning one.

72. It is not the strength, but the duration of great sentiments that makes great men.

73. He who attains his ideal, precisely thereby surpasses it.

73A. Many a peacock hides his tail from every eye—and calls it his pride.

74. A man of genius is unbearable, unless he possess at least two things besides: gratitude and purity.

75. The degree and nature of a man's sensuality extends to the highest altitudes of his spirit.

76. Under peaceful conditions the militant man attacks himself.

77. With his principles a man seeks either to dominate, or justify, or honour, or reproach, or conceal his habits: two men with the same principles probably seek fundamentally different ends therewith.

78. He who despises himself, nevertheless esteems himself thereby, as a despiser.

79. A soul which knows that it is loved, but does not itself love, betrays its sediment: its dregs come up.

80. A thing that is explained ceases to concern us—What did the God mean who gave the advice, "Know thyself!" Did it perhaps imply "Cease to be concerned about thyself! become objective!"—And Socrates?—And the "scientific man"?

81. It is terrible to die of thirst at sea. Is it necessary that you should so salt your truth that it will no longer—quench thirst?

82. "Sympathy for all"—would be harshness and tyranny for THEE, my good neighbour.

83. INSTINCT—When the house is on fire one forgets even the dinner—Yes, but one recovers it from among the ashes.

84. Woman learns how to hate in proportion as she—forgets how to charm.

85. The same emotions are in man and woman, but in different TEMPO, on that account man and woman never cease to misunderstand each other.

86. In the background of all their personal vanity, women themselves have still their impersonal scorn—for "woman".

87. FETTERED HEART, FREE SPIRIT—When one firmly fetters one's heart and keeps it prisoner, one can allow one's spirit many liberties: I said this once before But people do not believe it when I say so, unless they know it already.

88. One begins to distrust very clever persons when they become embarrassed.

89. Dreadful experiences raise the question whether he who experiences them is not something dreadful also.

90. Heavy, melancholy men turn lighter, and come temporarily to their surface, precisely by that which makes others heavy—by hatred and love.

91. So cold, so icy, that one burns one's finger at the touch of him! Every hand that lays hold of him shrinks back!—And for that very reason many think him red-hot.

92. Who has not, at one time or another—sacrificed himself for the sake of his good name?

93. In affability there is no hatred of men, but precisely on that account a great deal too much contempt of men.

94. The maturity of man—that means, to have reacquired the seriousness that one had as a child at play.

95. To be ashamed of one's immorality is a step on the ladder at the end of which one is ashamed also of one's morality.

96. One should part from life as Ulysses parted from Nausicaa—blessing it rather than in love with it.

97. What? A great man? I always see merely the play-actor of his own ideal.

98. When one trains one's conscience, it kisses one while it bites.

99. THE DISAPPOINTED ONE SPEAKS—"I listened for the echo and I heard only praise."

100. We all feign to ourselves that we are simpler than we are, we thus relax ourselves away from our fellows.

101. A discerning one might easily regard himself at present as the animalization of God.

102. Discovering reciprocal love should really disenchant the lover with regard to the beloved. "What! She is modest enough to love even you? Or stupid enough? Or—or—"

103. THE DANGER IN HAPPINESS.—"Everything now turns out best for me, I now love every fate:—who would like to be my fate?"

104. Not their love of humanity, but the impotence of their love, prevents the Christians of today—burning us.

105. The pia fraus is still more repugnant to the taste (the "piety") of the free spirit (the "pious man of knowledge") than the impia fraus. Hence the

profound lack of judgment, in comparison with the Church, characteristic of the type "free spirit"—as ITS non-freedom.

106. By means of music the very passions enjoy themselves.

107. A sign of strong character, when once the resolution has been taken, to shut the ear even to the best counter-arguments. Occasionally, therefore, a will to stupidity.

108. There is no such thing as moral phenomena, but only a moral interpretation of phenomena.

109. The criminal is often enough not equal to his deed: he extenuates and maligns it.

110. The advocates of a criminal are seldom artists enough to turn the beautiful terribleness of the deed to the advantage of the doer.

111. Our vanity is most difficult to wound just when our pride has been wounded.

112. To him who feels himself preordained to contemplation and not to belief, all believers are too noisy and obtrusive; he guards against them.

113. "You want to prepossess him in your favour? Then you must be embarrassed before him."

114. The immense expectation with regard to sexual love, and the coyness in this expectation, spoils all the perspectives of women at the outset.

115. Where there is neither love nor hatred in the game, woman's play is mediocre.

116. The great epochs of our life are at the points when we gain courage to rebaptize our badness as the best in us.

117. The will to overcome an emotion, is ultimately only the will of another, or of several other, emotions.

118. There is an innocence of admiration: it is possessed by him to whom it has not yet occurred that he himself may be admired some day.

119. Our loathing of dirt may be so great as to prevent our cleaning ourselves—"justifying" ourselves.

120. Sensuality often forces the growth of love too much, so that its root remains weak, and is easily torn up.

121. It is a curious thing that God learned Greek when he wished to turn author—and that he did not learn it better.

122. To rejoice on account of praise is in many cases merely politeness of heart—and the very opposite of vanity of spirit.

123. Even concubinage has been corrupted—by marriage.

124. He who exults at the stake, does not triumph over pain, but because of the fact that he does not feel pain where he expected it. A parable.

125. When we have to change an opinion about any one, we charge heavily to his account the inconvenience he thereby causes us.

126. A nation is a detour of nature to arrive at six or seven great men.—Yes, and then to get round them.

127. In the eyes of all true women science is hostile to the sense of shame. They feel as if one wished to peep under their skin with it—or worse still! under their dress and finery.

128. The more abstract the truth you wish to teach, the more must you allure the senses to it.

129. The devil has the most extensive perspectives for God; on that account he keeps so far away from him:—the devil, in effect, as the oldest friend of knowledge.

130. What a person IS begins to betray itself when his talent decreases,—when he ceases to show what he CAN do. Talent is also an adornment; an adornment is also a concealment.

131. The sexes deceive themselves about each other: the reason is that in reality they honour and love only themselves (or their own ideal, to express it more agreeably). Thus man wishes woman to be peaceable: but in fact woman is ESSENTIALLY unpeaceable, like the cat, however well she may have assumed the peaceable demeanour.

132. One is punished best for one's virtues.

133. He who cannot find the way to HIS ideal, lives more frivolously and shamelessly than the man without an ideal.

134. From the senses originate all trustworthiness, all good conscience, all evidence of truth.

135. Pharisaism is not a deterioration of the good man; a considerable part of it is rather an essential condition of being good.

136. The one seeks an accoucheur for his thoughts, the other seeks some one whom he can assist: a good conversation thus originates.

137. In intercourse with scholars and artists one readily makes mistakes of opposite kinds: in a remarkable scholar one not infrequently finds a mediocre man; and often, even in a mediocre artist, one finds a very remarkable man.

138. We do the same when awake as when dreaming: we only invent and imagine him with whom we have intercourse—and forget it immediately.

139. In revenge and in love woman is more barbarous than man.

140. ADVICE AS A RIDDLE.—"If the band is not to break, bite it first—secure to make!"

141. The belly is the reason why man does not so readily take himself for a God.

142. The chastest utterance I ever heard: "Dans le veritable amour c'est l'ame qui enveloppe le corps."

143. Our vanity would like what we do best to pass precisely for what is most difficult to us.—Concerning the origin of many systems of morals.

144. When a woman has scholarly inclinations there is generally something wrong with her sexual nature. Barrenness itself conduces to a certain virility of taste; man, indeed, if I may say so, is "the barren animal."

145. Comparing man and woman generally, one may say that woman would not have the genius for adornment, if she had not the instinct for the SECONDARY role.

146. He who fights with monsters should be careful lest he thereby become a monster. And if thou gaze long into an abyss, the abyss will also gaze into thee.

147. From old Florentine novels—moreover, from life: Buona femmina e mala femmina vuol bastone.—Sacchetti, Nov. 86.

148. To seduce their neighbour to a favourable opinion, and afterwards to believe implicitly in this opinion of their neighbour—who can do this conjuring trick so well as women?

149. That which an age considers evil is usually an unseasonable echo of what was formerly considered good—the atavism of an old ideal.

150. Around the hero everything becomes a tragedy; around the demigod everything becomes a satyr-play; and around God everything becomes—what? perhaps a "world"?

151. It is not enough to possess a talent: one must also have your permission to possess it;—eh, my friends?

152. "Where there is the tree of knowledge, there is always Paradise": so say the most ancient and the most modern serpents.

153. What is done out of love always takes place beyond good and evil.

154. Objection, evasion, joyous distrust, and love of irony are signs of health; everything absolute belongs to pathology.

155. The sense of the tragic increases and declines with sensuousness.

156. Insanity in individuals is something rare—but in groups, parties, nations, and epochs it is the rule.

157. The thought of suicide is a great consolation: by means of it one gets successfully through many a bad night.

158. Not only our reason, but also our conscience, truckles to our strongest impulse—the tyrant in us.

159. One MUST repay good and ill; but why just to the person who did us good or ill?

160. One no longer loves one's knowledge sufficiently after one has communicated it.

161. Poets act shamelessly towards their experiences: they exploit them.

162. "Our fellow-creature is not our neighbour, but our neighbour's neighbour":—so thinks every nation.

163. Love brings to light the noble and hidden qualities of a lover—his rare and exceptional traits: it is thus liable to be deceptive as to his normal character.

164. Jesus said to his Jews: "The law was for servants;—love God as I love him, as his Son! What have we Sons of God to do with morals!"

165. IN SIGHT OF EVERY PARTY.—A shepherd has always need of a bell-wether—or he has himself to be a wether occasionally.

166. One may indeed lie with the mouth; but with the accompanying grimace one nevertheless tells the truth.

167. To vigorous men intimacy is a matter of shame—and something precious.

168. Christianity gave Eros poison to drink; he did not die of it, certainly, but degenerated to Vice.

169. To talk much about oneself may also be a means of concealing oneself.

170. In praise there is more obtrusiveness than in blame.

171. Pity has an almost ludicrous effect on a man of knowledge, like tender hands on a Cyclops.

172. One occasionally embraces some one or other, out of love to mankind (because one cannot embrace all); but this is what one must never confess to the individual.

173. One does not hate as long as one disesteems, but only when one esteems equal or superior.

174. Ye Utilitarians—ye, too, love the UTILE only as a VEHICLE for your inclinations,—ye, too, really find the noise of its wheels insupportable!

175. One loves ultimately one's desires, not the thing desired.

176. The vanity of others is only counter to our taste when it is counter to our vanity.

177. With regard to what "truthfulness" is, perhaps nobody has ever been sufficiently truthful.

178. One does not believe in the follies of clever men: what a forfeiture of the rights of man!

179. The consequences of our actions seize us by the forelock, very indifferent to the fact that we have meanwhile "reformed."

180. There is an innocence in lying which is the sign of good faith in a cause.

181. It is inhuman to bless when one is being cursed.

182. The familiarity of superiors embitters one, because it may not be returned.

183. "I am affected, not because you have deceived me, but because I can no longer believe in you."

184. There is a haughtiness of kindness which has the appearance of wickedness.

185. "I dislike him."—Why?—"I am not a match for him."—Did any one ever answer so?

## CHAPTER V. THE NATURAL HISTORY OF MORALS

186. The moral sentiment in Europe at present is perhaps as subtle, belated, diverse, sensitive, and refined, as the "Science of Morals" belonging thereto is recent, initial, awkward, and coarse-fingered:—an interesting contrast, which sometimes becomes incarnate and obvious in the very person of a moralist. Indeed, the expression, "Science of Morals" is, in respect to what is designated thereby, far too presumptuous and counter to GOOD taste,—which is always a foretaste of more modest expressions. One ought to avow with the utmost fairness WHAT is still necessary here for a long time, WHAT is alone proper for the present: namely, the collection of material, the comprehensive survey and classification of an immense domain of delicate sentiments of worth, and distinctions of worth, which live, grow, propagate, and perish—and perhaps attempts to give a clear idea of the recurring and more common forms of these living crystallizations—as preparation for a THEORY OF TYPES of morality. To be sure, people have not hitherto been so modest. All the philosophers, with a pedantic and ridiculous seriousness, demanded of themselves something very much higher, more pretentious, and ceremonious, when they concerned themselves with morality as a science: they wanted to GIVE A BASIC to morality—and every philosopher hitherto has believed that he has given it a basis; morality itself, however, has been regarded as something "given." How far from their awkward pride was the seemingly insignificant problem—left in dust and decay—of a description of forms of morality, notwithstanding that the finest hands and senses could hardly be fine enough for it! It was precisely owing to moral philosophers' knowing the moral facts imperfectly, in an arbitrary epitome, or an accidental abridgement—perhaps as the morality of their environment, their position, their church, their Zeitgeist, their climate and zone—it was precisely because they were badly instructed with regard to nations, eras, and past ages, and were by no means eager to know about these matters, that they did not even come in sight of the real problems of morals—problems which only disclose themselves by a comparison of MANY kinds of morality. In

every "Science of Morals" hitherto, strange as it may sound, the problem of morality itself has been OMITTED: there has been no suspicion that there was anything problematic there! That which philosophers called "giving a basis to morality," and endeavoured to realize, has, when seen in a right light, proved merely a learned form of good FAITH in prevailing morality, a new means of its EXPRESSION, consequently just a matter-of-fact within the sphere of a definite morality, yea, in its ultimate motive, a sort of denial that it is LAWFUL for this morality to be called in question—and in any case the reverse of the testing, analyzing, doubting, and vivisectioning of this very faith. Hear, for instance, with what innocence—almost worthy of honour—Schopenhauer represents his own task, and draw your conclusions concerning the scientificness of a "Science" whose latest master still talks in the strain of children and old wives: "The principle," he says (page 136 of the *Grundprobleme der Ethik*), [Footnote: Pages 54-55 of Schopenhauer's *Basis of Morality*, translated by Arthur B. Bullock, M.A. (1903).] "the axiom about the purport of which all moralists are PRACTICALLY agreed: *neminem laede, immo omnes quantum potes juva*—is REALLY the proposition which all moral teachers strive to establish, ... the REAL basis of ethics which has been sought, like the philosopher's stone, for centuries."—The difficulty of establishing the proposition referred to may indeed be great—it is well known that Schopenhauer also was unsuccessful in his efforts; and whoever has thoroughly realized how absurdly false and sentimental this proposition is, in a world whose essence is Will to Power, may be reminded that Schopenhauer, although a pessimist, ACTUALLY—played the flute... daily after dinner: one may read about the matter in his biography. A question by the way: a pessimist, a repudiator of God and of the world, who MAKES A HALT at morality—who assents to morality, and plays the flute to *laede-neminem* morals, what? Is that really—a pessimist?

187. Apart from the value of such assertions as "there is a categorical imperative in us," one can always ask: What does such an assertion indicate about him who makes it? There are systems of morals which are meant to justify their author in the eyes of other people; other systems of morals are meant to tranquilize him, and make him self-satisfied; with other systems he wants to crucify and humble himself, with others he wishes to take revenge, with others to conceal himself, with others to glorify himself and gave superiority and distinction,—this system of morals helps its author to forget, that system makes him, or something of him, forgotten, many a

moralist would like to exercise power and creative arbitrariness over mankind, many another, perhaps, Kant especially, gives us to understand by his morals that "what is estimable in me, is that I know how to obey—and with you it SHALL not be otherwise than with me!" In short, systems of morals are only a SIGN-LANGUAGE OF THE EMOTIONS.

188. In contrast to *laissez-aller*, every system of morals is a sort of tyranny against "nature" and also against "reason", that is, however, no objection, unless one should again decree by some system of morals, that all kinds of tyranny and unreasonableness are unlawful. What is essential and invaluable in every system of morals, is that it is a long constraint. In order to understand Stoicism, or Port Royal, or Puritanism, one should remember the constraint under which every language has attained to strength and freedom—the metrical constraint, the tyranny of rhyme and rhythm. How much trouble have the poets and orators of every nation given themselves!—not excepting some of the prose writers of today, in whose ear dwells an inexorable conscientiousness—"for the sake of a folly," as utilitarian bunglers say, and thereby deem themselves wise—"from submission to arbitrary laws," as the anarchists say, and thereby fancy themselves "free," even free-spirited. The singular fact remains, however, that everything of the nature of freedom, elegance, boldness, dance, and masterly certainty, which exists or has existed, whether it be in thought itself, or in administration, or in speaking and persuading, in art just as in conduct, has only developed by means of the tyranny of such arbitrary law, and in all seriousness, it is not at all improbable that precisely this is "nature" and "natural"—and not *laissez-aller*! Every artist knows how different from the state of letting himself go, is his "most natural" condition, the free arranging, locating, disposing, and constructing in the moments of "inspiration"—and how strictly and delicately he then obeys a thousand laws, which, by their very rigidity and precision, defy all formulation by means of ideas (even the most stable idea has, in comparison therewith, something floating, manifold, and ambiguous in it). The essential thing "in heaven and in earth" is, apparently (to repeat it once more), that there should be long OBEDIENCE in the same direction, there thereby results, and has always resulted in the long run, something which has made life worth living; for instance, virtue, art, music, dancing, reason, spirituality—anything whatever that is transfiguring, refined, foolish, or divine. The long bondage of the spirit, the distrustful constraint in the communicability of

ideas, the discipline which the thinker imposed on himself to think in accordance with the rules of a church or a court, or conformable to Aristotelian premises, the persistent spiritual will to interpret everything that happened according to a Christian scheme, and in every occurrence to rediscover and justify the Christian God:—all this violence, arbitrariness, severity, dreadfulness, and unreasonableness, has proved itself the disciplinary means whereby the European spirit has attained its strength, its remorseless curiosity and subtle mobility; granted also that much irrecoverable strength and spirit had to be stifled, suffocated, and spoilt in the process (for here, as everywhere, "nature" shows herself as she is, in all her extravagant and INDIFFERENT magnificence, which is shocking, but nevertheless noble). That for centuries European thinkers only thought in order to prove something—nowadays, on the contrary, we are suspicious of every thinker who "wishes to prove something"—that it was always settled beforehand what WAS TO BE the result of their strictest thinking, as it was perhaps in the Asiatic astrology of former times, or as it is still at the present day in the innocent, Christian-moral explanation of immediate personal events "for the glory of God," or "for the good of the soul":—this tyranny, this arbitrariness, this severe and magnificent stupidity, has EDUCATED the spirit; slavery, both in the coarser and the finer sense, is apparently an indispensable means even of spiritual education and discipline. One may look at every system of morals in this light: it is "nature" therein which teaches to hate the *laissez-aller*, the too great freedom, and implants the need for limited horizons, for immediate duties—it teaches the NARROWING OF PERSPECTIVES, and thus, in a certain sense, that stupidity is a condition of life and development. "Thou must obey some one, and for a long time; OTHERWISE thou wilt come to grief, and lose all respect for thyself"—this seems to me to be the moral imperative of nature, which is certainly neither "categorical," as old Kant wished (consequently the "otherwise"), nor does it address itself to the individual (what does nature care for the individual!), but to nations, races, ages, and ranks; above all, however, to the animal "man" generally, to MANKIND.

189. Industrious races find it a great hardship to be idle: it was a master stroke of ENGLISH instinct to hallow and begloom Sunday to such an extent that the Englishman unconsciously hankers for his week—and work-day again:—as a kind of cleverly devised, cleverly intercalated FAST, such

as is also frequently found in the ancient world (although, as is appropriate in southern nations, not precisely with respect to work). Many kinds of fasts are necessary; and wherever powerful influences and habits prevail, legislators have to see that intercalary days are appointed, on which such impulses are fettered, and learn to hunger anew. Viewed from a higher standpoint, whole generations and epochs, when they show themselves infected with any moral fanaticism, seem like those intercalated periods of restraint and fasting, during which an impulse learns to humble and submit itself—at the same time also to PURIFY and SHARPEN itself; certain philosophical sects likewise admit of a similar interpretation (for instance, the Stoa, in the midst of Hellenic culture, with the atmosphere rank and overcharged with Aphrodisiacal odours).—Here also is a hint for the explanation of the paradox, why it was precisely in the most Christian period of European history, and in general only under the pressure of Christian sentiments, that the sexual impulse sublimated into love (amour-passion).

190. There is something in the morality of Plato which does not really belong to Plato, but which only appears in his philosophy, one might say, in spite of him: namely, Socratism, for which he himself was too noble. "No one desires to injure himself, hence all evil is done unwittingly. The evil man inflicts injury on himself; he would not do so, however, if he knew that evil is evil. The evil man, therefore, is only evil through error; if one free him from error one will necessarily make him—good."—This mode of reasoning savours of the POPULACE, who perceive only the unpleasant consequences of evil-doing, and practically judge that "it is STUPID to do wrong"; while they accept "good" as identical with "useful and pleasant," without further thought. As regards every system of utilitarianism, one may at once assume that it has the same origin, and follow the scent: one will seldom err.—Plato did all he could to interpret something refined and noble into the tenets of his teacher, and above all to interpret himself into them—he, the most daring of all interpreters, who lifted the entire Socrates out of the street, as a popular theme and song, to exhibit him in endless and impossible modifications—namely, in all his own disguises and multiplicities. In jest, and in Homeric language as well, what is the Platonic Socrates, if not—[Greek words inserted here.]

191. The old theological problem of "Faith" and "Knowledge," or more plainly, of instinct and reason—the question whether, in respect to the

valuation of things, instinct deserves more authority than rationality, which wants to appreciate and act according to motives, according to a "Why," that is to say, in conformity to purpose and utility—it is always the old moral problem that first appeared in the person of Socrates, and had divided men's minds long before Christianity. Socrates himself, following, of course, the taste of his talent—that of a surpassing dialectician—took first the side of reason; and, in fact, what did he do all his life but laugh at the awkward incapacity of the noble Athenians, who were men of instinct, like all noble men, and could never give satisfactory answers concerning the motives of their actions? In the end, however, though silently and secretly, he laughed also at himself: with his finer conscience and introspection, he found in himself the same difficulty and incapacity. "But why"—he said to himself—"should one on that account separate oneself from the instincts! One must set them right, and the reason ALSO—one must follow the instincts, but at the same time persuade the reason to support them with good arguments." This was the real FALSENESS of that great and mysterious ironist; he brought his conscience up to the point that he was satisfied with a kind of self-outwitting: in fact, he perceived the irrationality in the moral judgment.—Plato, more innocent in such matters, and without the craftiness of the plebeian, wished to prove to himself, at the expenditure of all his strength—the greatest strength a philosopher had ever expended—that reason and instinct lead spontaneously to one goal, to the good, to "God"; and since Plato, all theologians and philosophers have followed the same path—which means that in matters of morality, instinct (or as Christians call it, "Faith," or as I call it, "the herd") has hitherto triumphed. Unless one should make an exception in the case of Descartes, the father of rationalism (and consequently the grandfather of the Revolution), who recognized only the authority of reason: but reason is only a tool, and Descartes was superficial.

192. Whoever has followed the history of a single science, finds in its development a clue to the understanding of the oldest and commonest processes of all "knowledge and cognizance": there, as here, the premature hypotheses, the fictions, the good stupid will to "belief," and the lack of distrust and patience are first developed—our senses learn late, and never learn completely, to be subtle, reliable, and cautious organs of knowledge. Our eyes find it easier on a given occasion to produce a picture already often produced, than to seize upon the divergence and novelty of an

impression: the latter requires more force, more "morality." It is difficult and painful for the ear to listen to anything new; we hear strange music badly. When we hear another language spoken, we involuntarily attempt to form the sounds into words with which we are more familiar and conversant—it was thus, for example, that the Germans modified the spoken word ARCUBALISTA into ARMBRUST (cross-bow). Our senses are also hostile and averse to the new; and generally, even in the "simplest" processes of sensation, the emotions DOMINATE—such as fear, love, hatred, and the passive emotion of indolence.—As little as a reader nowadays reads all the single words (not to speak of syllables) of a page—he rather takes about five out of every twenty words at random, and "guesses" the probably appropriate sense to them—just as little do we see a tree correctly and completely in respect to its leaves, branches, colour, and shape; we find it so much easier to fancy the chance of a tree. Even in the midst of the most remarkable experiences, we still do just the same; we fabricate the greater part of the experience, and can hardly be made to contemplate any event, EXCEPT as "inventors" thereof. All this goes to prove that from our fundamental nature and from remote ages we have been—ACCUSTOMED TO LYING. Or, to express it more politely and hypocritically, in short, more pleasantly—one is much more of an artist than one is aware of.—In an animated conversation, I often see the face of the person with whom I am speaking so clearly and sharply defined before me, according to the thought he expresses, or which I believe to be evoked in his mind, that the degree of distinctness far exceeds the STRENGTH of my visual faculty—the delicacy of the play of the muscles and of the expression of the eyes MUST therefore be imagined by me. Probably the person put on quite a different expression, or none at all.

193. Quidquid luce fuit, tenebris agit: but also contrariwise. What we experience in dreams, provided we experience it often, pertains at last just as much to the general belongings of our soul as anything "actually" experienced; by virtue thereof we are richer or poorer, we have a requirement more or less, and finally, in broad daylight, and even in the brightest moments of our waking life, we are ruled to some extent by the nature of our dreams. Supposing that someone has often flown in his dreams, and that at last, as soon as he dreams, he is conscious of the power and art of flying as his privilege and his peculiarly enviable happiness; such a person, who believes that on the slightest impulse, he can actualize all

sorts of curves and angles, who knows the sensation of a certain divine levity, an "upwards" without effort or constraint, a "downwards" without descending or lowering—without TROUBLE!—how could the man with such dream-experiences and dream-habits fail to find "happiness" differently coloured and defined, even in his waking hours! How could he fail—to long DIFFERENTLY for happiness? "Flight," such as is described by poets, must, when compared with his own "flying," be far too earthly, muscular, violent, far too "troublesome" for him.

194. The difference among men does not manifest itself only in the difference of their lists of desirable things—in their regarding different good things as worth striving for, and being disagreed as to the greater or less value, the order of rank, of the commonly recognized desirable things:—it manifests itself much more in what they regard as actually HAVING and POSSESSING a desirable thing. As regards a woman, for instance, the control over her body and her sexual gratification serves as an amply sufficient sign of ownership and possession to the more modest man; another with a more suspicious and ambitious thirst for possession, sees the "questionableness," the mere apparentness of such ownership, and wishes to have finer tests in order to know especially whether the woman not only gives herself to him, but also gives up for his sake what she has or would like to have—only THEN does he look upon her as "possessed." A third, however, has not even here got to the limit of his distrust and his desire for possession: he asks himself whether the woman, when she gives up everything for him, does not perhaps do so for a phantom of him; he wishes first to be thoroughly, indeed, profoundly well known; in order to be loved at all he ventures to let himself be found out. Only then does he feel the beloved one fully in his possession, when she no longer deceives herself about him, when she loves him just as much for the sake of his devilry and concealed insatiability, as for his goodness, patience, and spirituality. One man would like to possess a nation, and he finds all the higher arts of Cagliostro and Catalina suitable for his purpose. Another, with a more refined thirst for possession, says to himself: "One may not deceive where one desires to possess"—he is irritated and impatient at the idea that a mask of him should rule in the hearts of the people: "I must, therefore, MAKE myself known, and first of all learn to know myself!" Among helpful and charitable people, one almost always finds the awkward craftiness which first gets up suitably him who has to be helped, as though, for instance, he

should "merit" help, seek just THEIR help, and would show himself deeply grateful, attached, and subservient to them for all help. With these conceits, they take control of the needy as a property, just as in general they are charitable and helpful out of a desire for property. One finds them jealous when they are crossed or forestalled in their charity. Parents involuntarily make something like themselves out of their children—they call that "education"; no mother doubts at the bottom of her heart that the child she has borne is thereby her property, no father hesitates about his right to HIS OWN ideas and notions of worth. Indeed, in former times fathers deemed it right to use their discretion concerning the life or death of the newly born (as among the ancient Germans). And like the father, so also do the teacher, the class, the priest, and the prince still see in every new individual an unobjectionable opportunity for a new possession. The consequence is...

195. The Jews—a people "born for slavery," as Tacitus and the whole ancient world say of them; "the chosen people among the nations," as they themselves say and believe—the Jews performed the miracle of the inversion of valuations, by means of which life on earth obtained a new and dangerous charm for a couple of millenniums. Their prophets fused into one the expressions "rich," "godless," "wicked," "violent," "sensual," and for the first time coined the word "world" as a term of reproach. In this inversion of valuations (in which is also included the use of the word "poor" as synonymous with "saint" and "friend") the significance of the Jewish people is to be found; it is with THEM that the SLAVE-INSURRECTION IN MORALS commences.

196. It is to be INFERRED that there are countless dark bodies near the sun—such as we shall never see. Among ourselves, this is an allegory; and the psychologist of morals reads the whole star-writing merely as an allegorical and symbolic language in which much may be unexpressed.

197. The beast of prey and the man of prey (for instance, Caesar Borgia) are fundamentally misunderstood, "nature" is misunderstood, so long as one seeks a "morbidness" in the constitution of these healthiest of all tropical monsters and growths, or even an innate "hell" in them—as almost all moralists have done hitherto. Does it not seem that there is a hatred of the virgin forest and of the tropics among moralists? And that the "tropical man" must be discredited at all costs, whether as disease and deterioration of mankind, or as his own hell and self-torture? And why? In favour of the

"temperate zones"? In favour of the temperate men? The "moral"? The mediocre?—This for the chapter: "Morals as Timidity."

198. All the systems of morals which address themselves with a view to their "happiness," as it is called—what else are they but suggestions for behaviour adapted to the degree of DANGER from themselves in which the individuals live; recipes for their passions, their good and bad propensities, insofar as such have the Will to Power and would like to play the master; small and great expediencies and elaborations, permeated with the musty odour of old family medicines and old-wife wisdom; all of them grotesque and absurd in their form—because they address themselves to "all," because they generalize where generalization is not authorized; all of them speaking unconditionally, and taking themselves unconditionally; all of them flavoured not merely with one grain of salt, but rather endurable only, and sometimes even seductive, when they are over-spiced and begin to smell dangerously, especially of "the other world." That is all of little value when estimated intellectually, and is far from being "science," much less "wisdom"; but, repeated once more, and three times repeated, it is expediency, expediency, expediency, mixed with stupidity, stupidity, stupidity—whether it be the indifference and statuesque coldness towards the heated folly of the emotions, which the Stoics advised and fostered; or the no-more-laughing and no-more-weeping of Spinoza, the destruction of the emotions by their analysis and vivisection, which he recommended so naively; or the lowering of the emotions to an innocent mean at which they may be satisfied, the Aristotelianism of morals; or even morality as the enjoyment of the emotions in a voluntary attenuation and spiritualization by the symbolism of art, perhaps as music, or as love of God, and of mankind for God's sake—for in religion the passions are once more enfranchised, provided that...; or, finally, even the complaisant and wanton surrender to the emotions, as has been taught by Hafis and Goethe, the bold letting-go of the reins, the spiritual and corporeal licentia morum in the exceptional cases of wise old codgers and drunkards, with whom it "no longer has much danger."—This also for the chapter: "Morals as Timidity."

199. Inasmuch as in all ages, as long as mankind has existed, there have also been human herds (family alliances, communities, tribes, peoples, states, churches), and always a great number who obey in proportion to the small number who command—in view, therefore, of the fact that obedience has been most practiced and fostered among mankind hitherto, one may

reasonably suppose that, generally speaking, the need thereof is now innate in every one, as a kind of FORMAL CONSCIENCE which gives the command "Thou shalt unconditionally do something, unconditionally refrain from something", in short, "Thou shalt". This need tries to satisfy itself and to fill its form with a content, according to its strength, impatience, and eagerness, it at once seizes as an omnivorous appetite with little selection, and accepts whatever is shouted into its ear by all sorts of commanders—parents, teachers, laws, class prejudices, or public opinion. The extraordinary limitation of human development, the hesitation, protractedness, frequent retrogression, and turning thereof, is attributable to the fact that the herd-instinct of obedience is transmitted best, and at the cost of the art of command. If one imagine this instinct increasing to its greatest extent, commanders and independent individuals will finally be lacking altogether, or they will suffer inwardly from a bad conscience, and will have to impose a deception on themselves in the first place in order to be able to command just as if they also were only obeying. This condition of things actually exists in Europe at present—I call it the moral hypocrisy of the commanding class. They know no other way of protecting themselves from their bad conscience than by playing the role of executors of older and higher orders (of predecessors, of the constitution, of justice, of the law, or of God himself), or they even justify themselves by maxims from the current opinions of the herd, as "first servants of their people," or "instruments of the public weal". On the other hand, the gregarious European man nowadays assumes an air as if he were the only kind of man that is allowable, he glorifies his qualities, such as public spirit, kindness, deference, industry, temperance, modesty, indulgence, sympathy, by virtue of which he is gentle, endurable, and useful to the herd, as the peculiarly human virtues. In cases, however, where it is believed that the leader and bell-wether cannot be dispensed with, attempt after attempt is made nowadays to replace commanders by the summing together of clever gregarious men all representative constitutions, for example, are of this origin. In spite of all, what a blessing, what a deliverance from a weight becoming unendurable, is the appearance of an absolute ruler for these gregarious Europeans—of this fact the effect of the appearance of Napoleon was the last great proof the history of the influence of Napoleon is almost the history of the higher happiness to which the entire century has attained in its worthiest individuals and periods.

200. The man of an age of dissolution which mixes the races with one another, who has the inheritance of a diversified descent in his body—that is to say, contrary, and often not only contrary, instincts and standards of value, which struggle with one another and are seldom at peace—such a man of late culture and broken lights, will, on an average, be a weak man. His fundamental desire is that the war which is IN HIM should come to an end; happiness appears to him in the character of a soothing medicine and mode of thought (for instance, Epicurean or Christian); it is above all things the happiness of repose, of undisturbedness, of repletion, of final unity—it is the "Sabbath of Sabbaths," to use the expression of the holy rhetorician, St. Augustine, who was himself such a man.—Should, however, the contrariety and conflict in such natures operate as an ADDITIONAL incentive and stimulus to life—and if, on the other hand, in addition to their powerful and irreconcilable instincts, they have also inherited and indoctrinated into them a proper mastery and subtlety for carrying on the conflict with themselves (that is to say, the faculty of self-control and self-deception), there then arise those marvelously incomprehensible and inexplicable beings, those enigmatical men, predestined for conquering and circumventing others, the finest examples of which are Alcibiades and Caesar (with whom I should like to associate the FIRST of Europeans according to my taste, the Hohenstaufen, Frederick the Second), and among artists, perhaps Leonardo da Vinci. They appear precisely in the same periods when that weaker type, with its longing for repose, comes to the front; the two types are complementary to each other, and spring from the same causes.

201. As long as the utility which determines moral estimates is only gregarious utility, as long as the preservation of the community is only kept in view, and the immoral is sought precisely and exclusively in what seems dangerous to the maintenance of the community, there can be no "morality of love to one's neighbour." Granted even that there is already a little constant exercise of consideration, sympathy, fairness, gentleness, and mutual assistance, granted that even in this condition of society all those instincts are already active which are latterly distinguished by honourable names as "virtues," and eventually almost coincide with the conception "morality": in that period they do not as yet belong to the domain of moral valuations—they are still ULTRA-MORAL. A sympathetic action, for instance, is neither called good nor bad, moral nor immoral, in the best

period of the Romans; and should it be praised, a sort of resentful disdain is compatible with this praise, even at the best, directly the sympathetic action is compared with one which contributes to the welfare of the whole, to the RES PUBLICA. After all, "love to our neighbour" is always a secondary matter, partly conventional and arbitrarily manifested in relation to our FEAR OF OUR NEIGHBOUR. After the fabric of society seems on the whole established and secured against external dangers, it is this fear of our neighbour which again creates new perspectives of moral valuation. Certain strong and dangerous instincts, such as the love of enterprise, foolhardiness, revengefulness, astuteness, rapacity, and love of power, which up till then had not only to be honoured from the point of view of general utility—under other names, of course, than those here given—but had to be fostered and cultivated (because they were perpetually required in the common danger against the common enemies), are now felt in their dangerousness to be doubly strong—when the outlets for them are lacking—and are gradually branded as immoral and given over to calumny. The contrary instincts and inclinations now attain to moral honour, the gregarious instinct gradually draws its conclusions. How much or how little dangerousness to the community or to equality is contained in an opinion, a condition, an emotion, a disposition, or an endowment—that is now the moral perspective, here again fear is the mother of morals. It is by the loftiest and strongest instincts, when they break out passionately and carry the individual far above and beyond the average, and the low level of the gregarious conscience, that the self-reliance of the community is destroyed, its belief in itself, its backbone, as it were, breaks, consequently these very instincts will be most branded and defamed. The lofty independent spirituality, the will to stand alone, and even the cogent reason, are felt to be dangers, everything that elevates the individual above the herd, and is a source of fear to the neighbour, is henceforth called EVIL, the tolerant, unassuming, self-adapting, self-equalizing disposition, the MEDIOCRITY of desires, attains to moral distinction and honour. Finally, under very peaceful circumstances, there is always less opportunity and necessity for training the feelings to severity and rigour, and now every form of severity, even in justice, begins to disturb the conscience, a lofty and rigorous nobleness and self-responsibility almost offends, and awakens distrust, "the lamb," and still more "the sheep," wins respect. There is a point of diseased mellowness and effeminacy in the history of society, at which society itself

takes the part of him who injures it, the part of the CRIMINAL, and does so, in fact, seriously and honestly. To punish, appears to it to be somehow unfair—it is certain that the idea of "punishment" and "the obligation to punish" are then painful and alarming to people. "Is it not sufficient if the criminal be rendered HARMLESS? Why should we still punish? Punishment itself is terrible!"—with these questions gregarious morality, the morality of fear, draws its ultimate conclusion. If one could at all do away with danger, the cause of fear, one would have done away with this morality at the same time, it would no longer be necessary, it WOULD NOT CONSIDER ITSELF any longer necessary!—Whoever examines the conscience of the present-day European, will always elicit the same imperative from its thousand moral folds and hidden recesses, the imperative of the timidity of the herd "we wish that some time or other there may be NOTHING MORE TO FEAR!" Some time or other—the will and the way THERETO is nowadays called "progress" all over Europe.

202. Let us at once say again what we have already said a hundred times, for people's ears nowadays are unwilling to hear such truths—OUR truths. We know well enough how offensive it sounds when any one plainly, and without metaphor, counts man among the animals, but it will be accounted to us almost a CRIME, that it is precisely in respect to men of "modern ideas" that we have constantly applied the terms "herd," "herd-instincts," and such like expressions. What avail is it? We cannot do otherwise, for it is precisely here that our new insight is. We have found that in all the principal moral judgments, Europe has become unanimous, including likewise the countries where European influence prevails in Europe people evidently KNOW what Socrates thought he did not know, and what the famous serpent of old once promised to teach—they "know" today what is good and evil. It must then sound hard and be distasteful to the ear, when we always insist that that which here thinks it knows, that which here glorifies itself with praise and blame, and calls itself good, is the instinct of the herding human animal, the instinct which has come and is ever coming more and more to the front, to preponderance and supremacy over other instincts, according to the increasing physiological approximation and resemblance of which it is the symptom. MORALITY IN EUROPE AT PRESENT IS HERDING-ANIMAL MORALITY, and therefore, as we understand the matter, only one kind of human morality, beside which, before which, and after which many other moralities, and above all

HIGHER moralities, are or should be possible. Against such a "possibility," against such a "should be," however, this morality defends itself with all its strength, it says obstinately and inexorably "I am morality itself and nothing else is morality!" Indeed, with the help of a religion which has humoured and flattered the sublimest desires of the herding-animal, things have reached such a point that we always find a more visible expression of this morality even in political and social arrangements: the DEMOCRATIC movement is the inheritance of the Christian movement. That its TEMPO, however, is much too slow and sleepy for the more impatient ones, for those who are sick and distracted by the herding-instinct, is indicated by the increasingly furious howling, and always less disguised teeth-gnashing of the anarchist dogs, who are now roving through the highways of European culture. Apparently in opposition to the peacefully industrious democrats and Revolution-ideologues, and still more so to the awkward philosophasters and fraternity-visionaries who call themselves Socialists and want a "free society," those are really at one with them all in their thorough and instinctive hostility to every form of society other than that of the AUTONOMOUS herd (to the extent even of repudiating the notions "master" and "servant"—ni dieu ni maitre, says a socialist formula); at one in their tenacious opposition to every special claim, every special right and privilege (this means ultimately opposition to EVERY right, for when all are equal, no one needs "rights" any longer); at one in their distrust of punitive justice (as though it were a violation of the weak, unfair to the NECESSARY consequences of all former society); but equally at one in their religion of sympathy, in their compassion for all that feels, lives, and suffers (down to the very animals, up even to "God"—the extravagance of "sympathy for God" belongs to a democratic age); altogether at one in the cry and impatience of their sympathy, in their deadly hatred of suffering generally, in their almost feminine incapacity for witnessing it or ALLOWING it; at one in their involuntary begloom and heart-softening, under the spell of which Europe seems to be threatened with a new Buddhism; at one in their belief in the morality of MUTUAL sympathy, as though it were morality in itself, the climax, the ATTAINED climax of mankind, the sole hope of the future, the consolation of the present, the great discharge from all the obligations of the past; altogether at one in their belief in the community as the DELIVERER, in the herd, and therefore in "themselves."

203. We, who hold a different belief—we, who regard the democratic movement, not only as a degenerating form of political organization, but as equivalent to a degenerating, a waning type of man, as involving his mediocrising and depreciation: where have WE to fix our hopes? In NEW PHILOSOPHERS—there is no other alternative: in minds strong and original enough to initiate opposite estimates of value, to transvalue and invert "eternal valuations"; in forerunners, in men of the future, who in the present shall fix the constraints and fasten the knots which will compel millenniums to take NEW paths. To teach man the future of humanity as his WILL, as depending on human will, and to make preparation for vast hazardous enterprises and collective attempts in rearing and educating, in order thereby to put an end to the frightful rule of folly and chance which has hitherto gone by the name of "history" (the folly of the "greatest number" is only its last form)—for that purpose a new type of philosopher and commander will some time or other be needed, at the very idea of which everything that has existed in the way of occult, terrible, and benevolent beings might look pale and dwarfed. The image of such leaders hovers before OUR eyes:—is it lawful for me to say it aloud, ye free spirits? The conditions which one would partly have to create and partly utilize for their genesis; the presumptive methods and tests by virtue of which a soul should grow up to such an elevation and power as to feel a CONSTRAINT to these tasks; a transvaluation of values, under the new pressure and hammer of which a conscience should be steeled and a heart transformed into brass, so as to bear the weight of such responsibility; and on the other hand the necessity for such leaders, the dreadful danger that they might be lacking, or miscarry and degenerate:—these are OUR real anxieties and glooms, ye know it well, ye free spirits! these are the heavy distant thoughts and storms which sweep across the heaven of OUR life. There are few pains so grievous as to have seen, divined, or experienced how an exceptional man has missed his way and deteriorated; but he who has the rare eye for the universal danger of "man" himself DETERIORATING, he who like us has recognized the extraordinary fortuitousness which has hitherto played its game in respect to the future of mankind—a game in which neither the hand, nor even a "finger of God" has participated!—he who divines the fate that is hidden under the idiotic unwariness and blind confidence of "modern ideas," and still more under the whole of Christo-European morality—suffers from an anguish with

which no other is to be compared. He sees at a glance all that could still BE MADE OUT OF MAN through a favourable accumulation and augmentation of human powers and arrangements; he knows with all the knowledge of his conviction how unexhausted man still is for the greatest possibilities, and how often in the past the type man has stood in presence of mysterious decisions and new paths:—he knows still better from his painfulest recollections on what wretched obstacles promising developments of the highest rank have hitherto usually gone to pieces, broken down, sunk, and become contemptible. The UNIVERSAL DEGENERACY OF MANKIND to the level of the "man of the future"—as idealized by the socialistic fools and shallow-pates—this degeneracy and dwarfing of man to an absolutely gregarious animal (or as they call it, to a man of "free society"), this brutalizing of man into a pigmy with equal rights and claims, is undoubtedly POSSIBLE! He who has thought out this possibility to its ultimate conclusion knows ANOTHER loathing unknown to the rest of mankind—and perhaps also a new MISSION!

## CHAPTER VI. WE SCHOLARS

204. At the risk that moralizing may also reveal itself here as that which it has always been—namely, resolutely MONTRER SES PLAIES, according to Balzac—I would venture to protest against an improper and injurious alteration of rank, which quite unnoticed, and as if with the best conscience, threatens nowadays to establish itself in the relations of science and philosophy. I mean to say that one must have the right out of one's own EXPERIENCE—experience, as it seems to me, always implies unfortunate experience?—to treat of such an important question of rank, so as not to speak of colour like the blind, or AGAINST science like women and artists ("Ah! this dreadful science!" sigh their instinct and their shame, "it always FINDS THINGS OUT!"). The declaration of independence of the scientific man, his emancipation from philosophy, is one of the subtler after-effects of democratic organization and disorganization: the self-glorification and self-conceitedness of the learned man is now everywhere in full bloom, and in its best springtime—which does not mean to imply that in this case self-praise smells sweet. Here also the instinct of the populace cries, "Freedom from all masters!" and after science has, with the happiest results, resisted theology, whose "hand-maid" it had been too long, it now proposes in its wantonness and indiscretion to lay down laws for philosophy, and in its turn to play the "master"—what am I saying! to play the PHILOSOPHER on its own account. My memory—the memory of a scientific man, if you please!—teems with the naivetes of insolence which I have heard about philosophy and philosophers from young naturalists and old physicians (not to mention the most cultured and most conceited of all learned men, the philologists and schoolmasters, who are both the one and the other by profession). On one occasion it was the specialist and the Jack Horner who instinctively stood on the defensive against all synthetic tasks and capabilities; at another time it was the industrious worker who had got a scent of OTIUM and refined luxuriousness in the internal economy of the philosopher, and felt himself aggrieved and belittled thereby. On another occasion it was the colour-blindness of the utilitarian, who sees nothing in philosophy but a series of REFUTED systems, and an extravagant expenditure which "does

nobody any good". At another time the fear of disguised mysticism and of the boundary-adjustment of knowledge became conspicuous, at another time the disregard of individual philosophers, which had involuntarily extended to disregard of philosophy generally. In fine, I found most frequently, behind the proud disdain of philosophy in young scholars, the evil after-effect of some particular philosopher, to whom on the whole obedience had been foresworn, without, however, the spell of his scornful estimates of other philosophers having been got rid of—the result being a general ill-will to all philosophy. (Such seems to me, for instance, the after-effect of Schopenhauer on the most modern Germany: by his unintelligent rage against Hegel, he has succeeded in severing the whole of the last generation of Germans from its connection with German culture, which culture, all things considered, has been an elevation and a divining refinement of the HISTORICAL SENSE, but precisely at this point Schopenhauer himself was poor, irreceptive, and un-German to the extent of ingeniousness.) On the whole, speaking generally, it may just have been the humanness, all-too-humanness of the modern philosophers themselves, in short, their contemptibleness, which has injured most radically the reverence for philosophy and opened the doors to the instinct of the populace. Let it but be acknowledged to what an extent our modern world diverges from the whole style of the world of Heraclitus, Plato, Empedocles, and whatever else all the royal and magnificent anchorites of the spirit were called, and with what justice an honest man of science MAY feel himself of a better family and origin, in view of such representatives of philosophy, who, owing to the fashion of the present day, are just as much aloft as they are down below—in Germany, for instance, the two lions of Berlin, the anarchist Eugen Duhring and the amalgamist Eduard von Hartmann. It is especially the sight of those hotch-potch philosophers, who call themselves "realists," or "positivists," which is calculated to implant a dangerous distrust in the soul of a young and ambitious scholar those philosophers, at the best, are themselves but scholars and specialists, that is very evident! All of them are persons who have been vanquished and BROUGHT BACK AGAIN under the dominion of science, who at one time or another claimed more from themselves, without having a right to the "more" and its responsibility—and who now, creditably, rancorously, and vindictively, represent in word and deed, DISBELIEF in the master-task and supremacy of philosophy After all, how could it be otherwise?

Science flourishes nowadays and has the good conscience clearly visible on its countenance, while that to which the entire modern philosophy has gradually sunk, the remnant of philosophy of the present day, excites distrust and displeasure, if not scorn and pity. Philosophy reduced to a "theory of knowledge," no more in fact than a diffident science of epochs and doctrine of forbearance a philosophy that never even gets beyond the threshold, and rigorously DENIES itself the right to enter—that is philosophy in its last throes, an end, an agony, something that awakens pity. How could such a philosophy—RULE!

205. The dangers that beset the evolution of the philosopher are, in fact, so manifold nowadays, that one might doubt whether this fruit could still come to maturity. The extent and towering structure of the sciences have increased enormously, and therewith also the probability that the philosopher will grow tired even as a learner, or will attach himself somewhere and "specialize" so that he will no longer attain to his elevation, that is to say, to his superspection, his circumspection, and his DESPECTION. Or he gets aloft too late, when the best of his maturity and strength is past, or when he is impaired, coarsened, and deteriorated, so that his view, his general estimate of things, is no longer of much importance. It is perhaps just the refinement of his intellectual conscience that makes him hesitate and linger on the way, he dreads the temptation to become a dilettante, a millepede, a milleantenna, he knows too well that as a discerner, one who has lost his self-respect no longer commands, no longer LEADS, unless he should aspire to become a great play-actor, a philosophical Cagliostro and spiritual rat-catcher—in short, a misleader. This is in the last instance a question of taste, if it has not really been a question of conscience. To double once more the philosopher's difficulties, there is also the fact that he demands from himself a verdict, a Yea or Nay, not concerning science, but concerning life and the worth of life—he learns unwillingly to believe that it is his right and even his duty to obtain this verdict, and he has to seek his way to the right and the belief only through the most extensive (perhaps disturbing and destroying) experiences, often hesitating, doubting, and dumbfounded. In fact, the philosopher has long been mistaken and confused by the multitude, either with the scientific man and ideal scholar, or with the religiously elevated, desensualized, desecularized visionary and God-intoxicated man; and even yet when one hears anybody praised, because he lives "wisely," or "as a philosopher," it

hardly means anything more than "prudently and apart." Wisdom: that seems to the populace to be a kind of flight, a means and artifice for withdrawing successfully from a bad game; but the GENUINE philosopher—does it not seem so to US, my friends?—lives "unphilosophically" and "unwisely," above all, IMPRUDENTLY, and feels the obligation and burden of a hundred attempts and temptations of life—he risks HIMSELF constantly, he plays THIS bad game.

206. In relation to the genius, that is to say, a being who either ENGENDERS or PRODUCES—both words understood in their fullest sense—the man of learning, the scientific average man, has always something of the old maid about him; for, like her, he is not conversant with the two principal functions of man. To both, of course, to the scholar and to the old maid, one concedes respectability, as if by way of indemnification—in these cases one emphasizes the respectability—and yet, in the compulsion of this concession, one has the same admixture of vexation. Let us examine more closely: what is the scientific man? Firstly, a commonplace type of man, with commonplace virtues: that is to say, a non-ruling, non-authoritative, and non-self-sufficient type of man; he possesses industry, patient adaptableness to rank and file, equability and moderation in capacity and requirement; he has the instinct for people like himself, and for that which they require—for instance: the portion of independence and green meadow without which there is no rest from labour, the claim to honour and consideration (which first and foremost presupposes recognition and recognisability), the sunshine of a good name, the perpetual ratification of his value and usefulness, with which the inward DISTRUST which lies at the bottom of the heart of all dependent men and gregarious animals, has again and again to be overcome. The learned man, as is appropriate, has also maladies and faults of an ignoble kind: he is full of petty envy, and has a lynx-eye for the weak points in those natures to whose elevations he cannot attain. He is confiding, yet only as one who lets himself go, but does not FLOW; and precisely before the man of the great current he stands all the colder and more reserved—his eye is then like a smooth and irresponsive lake, which is no longer moved by rapture or sympathy. The worst and most dangerous thing of which a scholar is capable results from the instinct of mediocrity of his type, from the Jesuitism of mediocrity, which labours instinctively for the destruction of the exceptional man, and endeavours to break—or still better, to relax—every bent bow To relax, of

course, with consideration, and naturally with an indulgent hand—to RELAX with confiding sympathy that is the real art of Jesuitism, which has always understood how to introduce itself as the religion of sympathy.

207. However gratefully one may welcome the OBJECTIVE spirit—and who has not been sick to death of all subjectivity and its confounded IPSISIMOSITY!—in the end, however, one must learn caution even with regard to one's gratitude, and put a stop to the exaggeration with which the unselfing and depersonalizing of the spirit has recently been celebrated, as if it were the goal in itself, as if it were salvation and glorification—as is especially accustomed to happen in the pessimist school, which has also in its turn good reasons for paying the highest honours to "disinterested knowledge" The objective man, who no longer curses and scolds like the pessimist, the IDEAL man of learning in whom the scientific instinct blossoms forth fully after a thousand complete and partial failures, is assuredly one of the most costly instruments that exist, but his place is in the hand of one who is more powerful He is only an instrument, we may say, he is a MIRROR—he is no "purpose in himself" The objective man is in truth a mirror accustomed to prostration before everything that wants to be known, with such desires only as knowing or "reflecting" implies—he waits until something comes, and then expands himself sensitively, so that even the light footsteps and gliding-past of spiritual beings may not be lost on his surface and film Whatever "personality" he still possesses seems to him accidental, arbitrary, or still oftener, disturbing, so much has he come to regard himself as the passage and reflection of outside forms and events He calls up the recollection of "himself" with an effort, and not infrequently wrongly, he readily confounds himself with other persons, he makes mistakes with regard to his own needs, and here only is he unrefined and negligent Perhaps he is troubled about the health, or the pettiness and confined atmosphere of wife and friend, or the lack of companions and society—indeed, he sets himself to reflect on his suffering, but in vain! His thoughts already rove away to the MORE GENERAL case, and tomorrow he knows as little as he knew yesterday how to help himself He does not now take himself seriously and devote time to himself he is serene, NOT from lack of trouble, but from lack of capacity for grasping and dealing with HIS trouble The habitual complaisance with respect to all objects and experiences, the radiant and impartial hospitality with which he receives everything that comes his way, his habit of inconsiderate good-nature, of

dangerous indifference as to Yea and Nay: alas! there are enough of cases in which he has to atone for these virtues of his!—and as man generally, he becomes far too easily the CAPUT MORTUUM of such virtues. Should one wish love or hatred from him—I mean love and hatred as God, woman, and animal understand them—he will do what he can, and furnish what he can. But one must not be surprised if it should not be much—if he should show himself just at this point to be false, fragile, questionable, and deteriorated. His love is constrained, his hatred is artificial, and rather UN TOUR DE FORCE, a slight ostentation and exaggeration. He is only genuine so far as he can be objective; only in his serene totality is he still "nature" and "natural." His mirroring and eternally self-polishing soul no longer knows how to affirm, no longer how to deny; he does not command; neither does he destroy. "JE NE MEPRISE PRESQUE RIEN"—he says, with Leibniz: let us not overlook nor undervalue the PRESQUE! Neither is he a model man; he does not go in advance of any one, nor after, either; he places himself generally too far off to have any reason for espousing the cause of either good or evil. If he has been so long confounded with the PHILOSOPHER, with the Caesarian trainer and dictator of civilization, he has had far too much honour, and what is more essential in him has been overlooked—he is an instrument, something of a slave, though certainly the sublimest sort of slave, but nothing in himself—PRESQUE RIEN! The objective man is an instrument, a costly, easily injured, easily tarnished measuring instrument and mirroring apparatus, which is to be taken care of and respected; but he is no goal, not outgoing nor upgoing, no complementary man in whom the REST of existence justifies itself, no termination—and still less a commencement, an engendering, or primary cause, nothing hardy, powerful, self-centred, that wants to be master; but rather only a soft, inflated, delicate, movable potter's-form, that must wait for some kind of content and frame to "shape" itself thereto—for the most part a man without frame and content, a "selfless" man. Consequently, also, nothing for women, IN PARENTHESI.

208. When a philosopher nowadays makes known that he is not a skeptic—I hope that has been gathered from the foregoing description of the objective spirit?—people all hear it impatiently; they regard him on that account with some apprehension, they would like to ask so many, many questions... indeed among timid hearers, of whom there are now so many, he is henceforth said to be dangerous. With his repudiation of skepticism, it

seems to them as if they heard some evil-threatening sound in the distance, as if a new kind of explosive were being tried somewhere, a dynamite of the spirit, perhaps a newly discovered Russian NIHILINE, a pessimism BONAE VOLUNTATIS, that not only denies, means denial, but—dreadful thought! PRACTISES denial. Against this kind of "good-will"—a will to the veritable, actual negation of life—there is, as is generally acknowledged nowadays, no better soporific and sedative than skepticism, the mild, pleasing, lulling poppy of skepticism; and Hamlet himself is now prescribed by the doctors of the day as an antidote to the "spirit," and its underground noises. "Are not our ears already full of bad sounds?" say the skeptics, as lovers of repose, and almost as a kind of safety police; "this subterranean Nay is terrible! Be still, ye pessimistic moles!" The skeptic, in effect, that delicate creature, is far too easily frightened; his conscience is schooled so as to start at every Nay, and even at that sharp, decided Yea, and feels something like a bite thereby. Yea! and Nay!—they seem to him opposed to morality; he loves, on the contrary, to make a festival to his virtue by a noble aloofness, while perhaps he says with Montaigne: "What do I know?" Or with Socrates: "I know that I know nothing." Or: "Here I do not trust myself, no door is open to me." Or: "Even if the door were open, why should I enter immediately?" Or: "What is the use of any hasty hypotheses? It might quite well be in good taste to make no hypotheses at all. Are you absolutely obliged to straighten at once what is crooked? to stuff every hole with some kind of oakum? Is there not time enough for that? Has not the time leisure? Oh, ye demons, can ye not at all WAIT? The uncertain also has its charms, the Sphinx, too, is a Circe, and Circe, too, was a philosopher."—Thus does a skeptic console himself; and in truth he needs some consolation. For skepticism is the most spiritual expression of a certain many-sided physiological temperament, which in ordinary language is called nervous debility and sickliness; it arises whenever races or classes which have been long separated, decisively and suddenly blend with one another. In the new generation, which has inherited as it were different standards and valuations in its blood, everything is disquiet, derangement, doubt, and tentativeness; the best powers operate restrictively, the very virtues prevent each other growing and becoming strong, equilibrium, ballast, and perpendicular stability are lacking in body and soul. That, however, which is most diseased and degenerated in such nondescripts is the WILL; they are no longer familiar with independence of decision, or the

courageous feeling of pleasure in willing—they are doubtful of the "freedom of the will" even in their dreams Our present-day Europe, the scene of a senseless, precipitate attempt at a radical blending of classes, and CONSEQUENTLY of races, is therefore skeptical in all its heights and depths, sometimes exhibiting the mobile skepticism which springs impatiently and wantonly from branch to branch, sometimes with gloomy aspect, like a cloud over-charged with interrogative signs—and often sick unto death of its will! Paralysis of will, where do we not find this cripple sitting nowadays! And yet how bedecked oftentimes! How seductively ornamented! There are the finest gala dresses and disguises for this disease, and that, for instance, most of what places itself nowadays in the show-cases as "objectiveness," "the scientific spirit," "L'ART POUR L'ART," and "pure voluntary knowledge," is only decked-out skepticism and paralysis of will—I am ready to answer for this diagnosis of the European disease—The disease of the will is diffused unequally over Europe, it is worst and most varied where civilization has longest prevailed, it decreases according as "the barbarian" still—or again—asserts his claims under the loose drapery of Western culture It is therefore in the France of today, as can be readily disclosed and comprehended, that the will is most infirm, and France, which has always had a masterly aptitude for converting even the portentous crises of its spirit into something charming and seductive, now manifests emphatically its intellectual ascendancy over Europe, by being the school and exhibition of all the charms of skepticism The power to will and to persist, moreover, in a resolution, is already somewhat stronger in Germany, and again in the North of Germany it is stronger than in Central Germany, it is considerably stronger in England, Spain, and Corsica, associated with phlegm in the former and with hard skulls in the latter—not to mention Italy, which is too young yet to know what it wants, and must first show whether it can exercise will, but it is strongest and most surprising of all in that immense middle empire where Europe as it were flows back to Asia—namely, in Russia There the power to will has been long stored up and accumulated, there the will—uncertain whether to be negative or affirmative—waits threateningly to be discharged (to borrow their pet phrase from our physicists) Perhaps not only Indian wars and complications in Asia would be necessary to free Europe from its greatest danger, but also internal subversion, the shattering of the empire into small states, and above all the introduction of parliamentary imbecility, together

with the obligation of every one to read his newspaper at breakfast I do not say this as one who desires it, in my heart I should rather prefer the contrary—I mean such an increase in the threatening attitude of Russia, that Europe would have to make up its mind to become equally threatening—namely, TO ACQUIRE ONE WILL, by means of a new caste to rule over the Continent, a persistent, dreadful will of its own, that can set its aims thousands of years ahead; so that the long spun-out comedy of its petty-statism, and its dynastic as well as its democratic many-willed-ness, might finally be brought to a close. The time for petty politics is past; the next century will bring the struggle for the dominion of the world—the COMPULSION to great politics.

209. As to how far the new warlike age on which we Europeans have evidently entered may perhaps favour the growth of another and stronger kind of skepticism, I should like to express myself preliminarily merely by a parable, which the lovers of German history will already understand. That unscrupulous enthusiast for big, handsome grenadiers (who, as King of Prussia, brought into being a military and skeptical genius—and therewith, in reality, the new and now triumphantly emerged type of German), the problematic, crazy father of Frederick the Great, had on one point the very knack and lucky grasp of the genius: he knew what was then lacking in Germany, the want of which was a hundred times more alarming and serious than any lack of culture and social form—his ill-will to the young Frederick resulted from the anxiety of a profound instinct. MEN WERE LACKING; and he suspected, to his bitterest regret, that his own son was not man enough. There, however, he deceived himself; but who would not have deceived himself in his place? He saw his son lapsed to atheism, to the ESPRIT, to the pleasant frivolity of clever Frenchmen—he saw in the background the great bloodsucker, the spider skepticism; he suspected the incurable wretchedness of a heart no longer hard enough either for evil or good, and of a broken will that no longer commands, is no longer ABLE to command. Meanwhile, however, there grew up in his son that new kind of harder and more dangerous skepticism—who knows TO WHAT EXTENT it was encouraged just by his father's hatred and the icy melancholy of a will condemned to solitude?—the skepticism of daring manliness, which is closely related to the genius for war and conquest, and made its first entrance into Germany in the person of the great Frederick. This skepticism despises and nevertheless grasps; it undermines and takes possession; it

does not believe, but it does not thereby lose itself; it gives the spirit a dangerous liberty, but it keeps strict guard over the heart. It is the GERMAN form of skepticism, which, as a continued Fredericianism, risen to the highest spirituality, has kept Europe for a considerable time under the dominion of the German spirit and its critical and historical distrust Owing to the insuperably strong and tough masculine character of the great German philologists and historical critics (who, rightly estimated, were also all of them artists of destruction and dissolution), a NEW conception of the German spirit gradually established itself—in spite of all Romanticism in music and philosophy—in which the leaning towards masculine skepticism was decidedly prominent whether, for instance, as fearlessness of gaze, as courage and sternness of the dissecting hand, or as resolute will to dangerous voyages of discovery, to spiritualized North Pole expeditions under barren and dangerous skies. There may be good grounds for it when warm-blooded and superficial humanitarians cross themselves before this spirit, CET ESPRIT FATALISTE, IRONIQUE, MEPHISTOPHELIQUE, as Michelet calls it, not without a shudder. But if one would realize how characteristic is this fear of the "man" in the German spirit which awakened Europe out of its "dogmatic slumber," let us call to mind the former conception which had to be overcome by this new one—and that it is not so very long ago that a masculinized woman could dare, with unbridled presumption, to recommend the Germans to the interest of Europe as gentle, good-hearted, weak-willed, and poetical fools. Finally, let us only understand profoundly enough Napoleon's astonishment when he saw Goethe it reveals what had been regarded for centuries as the "German spirit" "VOILA UN HOMME!"—that was as much as to say "But this is a MAN! And I only expected to see a German!"

210. Supposing, then, that in the picture of the philosophers of the future, some trait suggests the question whether they must not perhaps be skeptics in the last-mentioned sense, something in them would only be designated thereby—and not they themselves. With equal right they might call themselves critics, and assuredly they will be men of experiments. By the name with which I ventured to baptize them, I have already expressly emphasized their attempting and their love of attempting is this because, as critics in body and soul, they will love to make use of experiments in a new, and perhaps wider and more dangerous sense? In their passion for knowledge, will they have to go further in daring and painful attempts than

the sensitive and pampered taste of a democratic century can approve of?— There is no doubt these coming ones will be least able to dispense with the serious and not unscrupulous qualities which distinguish the critic from the skeptic I mean the certainty as to standards of worth, the conscious employment of a unity of method, the wary courage, the standing-alone, and the capacity for self-responsibility, indeed, they will avow among themselves a DELIGHT in denial and dissection, and a certain considerate cruelty, which knows how to handle the knife surely and deftly, even when the heart bleeds They will be STERNER (and perhaps not always towards themselves only) than humane people may desire, they will not deal with the "truth" in order that it may "please" them, or "elevate" and "inspire" them—they will rather have little faith in "TRUTH" bringing with it such revels for the feelings. They will smile, those rigorous spirits, when any one says in their presence "That thought elevates me, why should it not be true?" or "That work enchants me, why should it not be beautiful?" or "That artist enlarges me, why should he not be great?" Perhaps they will not only have a smile, but a genuine disgust for all that is thus rapturous, idealistic, feminine, and hermaphroditic, and if any one could look into their inmost hearts, he would not easily find therein the intention to reconcile "Christian sentiments" with "antique taste," or even with "modern parliamentarism" (the kind of reconciliation necessarily found even among philosophers in our very uncertain and consequently very conciliatory century). Critical discipline, and every habit that conduces to purity and rigour in intellectual matters, will not only be demanded from themselves by these philosophers of the future, they may even make a display thereof as their special adornment—nevertheless they will not want to be called critics on that account. It will seem to them no small indignity to philosophy to have it decreed, as is so welcome nowadays, that "philosophy itself is criticism and critical science—and nothing else whatever!" Though this estimate of philosophy may enjoy the approval of all the Positivists of France and Germany (and possibly it even flattered the heart and taste of KANT: let us call to mind the titles of his principal works), our new philosophers will say, notwithstanding, that critics are instruments of the philosopher, and just on that account, as instruments, they are far from being philosophers themselves! Even the great Chinaman of Konigsberg was only a great critic.

211. I insist upon it that people finally cease confounding philosophical workers, and in general scientific men, with philosophers—that precisely

here one should strictly give "each his own," and not give those far too much, these far too little. It may be necessary for the education of the real philosopher that he himself should have once stood upon all those steps upon which his servants, the scientific workers of philosophy, remain standing, and **MUST** remain standing he himself must perhaps have been critic, and dogmatist, and historian, and besides, poet, and collector, and traveler, and riddle-reader, and moralist, and seer, and "free spirit," and almost everything, in order to traverse the whole range of human values and estimations, and that he may **BE ABLE** with a variety of eyes and consciences to look from a height to any distance, from a depth up to any height, from a nook into any expanse. But all these are only preliminary conditions for his task; this task itself demands something else—it requires him **TO CREATE VALUES**. The philosophical workers, after the excellent pattern of Kant and Hegel, have to fix and formalize some great existing body of valuations—that is to say, former **DETERMINATIONS OF VALUE**, creations of value, which have become prevalent, and are for a time called "truths"—whether in the domain of the **LOGICAL**, the **POLITICAL** (moral), or the **ARTISTIC**. It is for these investigators to make whatever has happened and been esteemed hitherto, conspicuous, conceivable, intelligible, and manageable, to shorten everything long, even "time" itself, and to **SUBJUGATE** the entire past: an immense and wonderful task, in the carrying out of which all refined pride, all tenacious will, can surely find satisfaction. **THE REAL PHILOSOPHERS, HOWEVER, ARE COMMANDERS AND LAW-GIVERS**; they say: "Thus **SHALL** it be!" They determine first the Whither and the Why of mankind, and thereby set aside the previous labour of all philosophical workers, and all subjugators of the past—they grasp at the future with a creative hand, and whatever is and was, becomes for them thereby a means, an instrument, and a hammer. Their "knowing" is **CREATING**, their creating is a law-giving, their will to truth is—**WILL TO POWER**.—Are there at present such philosophers? Have there ever been such philosophers? **MUST** there not be such philosophers some day? ...

212. It is always more obvious to me that the philosopher, as a man **INDISPENSABLE** for the morrow and the day after the morrow, has ever found himself, and **HAS BEEN OBLIGED** to find himself, in contradiction to the day in which he lives; his enemy has always been the ideal of his day. Hitherto all those extraordinary furtherers of humanity whom one calls

philosophers—who rarely regarded themselves as lovers of wisdom, but rather as disagreeable fools and dangerous interrogators—have found their mission, their hard, involuntary, imperative mission (in the end, however, the greatness of their mission), in being the bad conscience of their age. In putting the vivisector's knife to the breast of the very VIRTUES OF THEIR AGE, they have betrayed their own secret; it has been for the sake of a NEW greatness of man, a new untrodden path to his aggrandizement. They have always disclosed how much hypocrisy, indolence, self-indulgence, and self-neglect, how much falsehood was concealed under the most venerated types of contemporary morality, how much virtue was OUTLIVED, they have always said "We must remove hence to where YOU are least at home" In the face of a world of "modern ideas," which would like to confine every one in a corner, in a "specialty," a philosopher, if there could be philosophers nowadays, would be compelled to place the greatness of man, the conception of "greatness," precisely in his comprehensiveness and multifariousness, in his all-roundness, he would even determine worth and rank according to the amount and variety of that which a man could bear and take upon himself, according to the EXTENT to which a man could stretch his responsibility Nowadays the taste and virtue of the age weaken and attenuate the will, nothing is so adapted to the spirit of the age as weakness of will consequently, in the ideal of the philosopher, strength of will, sternness, and capacity for prolonged resolution, must specially be included in the conception of "greatness", with as good a right as the opposite doctrine, with its ideal of a silly, renouncing, humble, selfless humanity, was suited to an opposite age—such as the sixteenth century, which suffered from its accumulated energy of will, and from the wildest torrents and floods of selfishness In the time of Socrates, among men only of worn-out instincts, old conservative Athenians who let themselves go—"for the sake of happiness," as they said, for the sake of pleasure, as their conduct indicated—and who had continually on their lips the old pompous words to which they had long forfeited the right by the life they led, IRONY was perhaps necessary for greatness of soul, the wicked Socratic assurance of the old physician and plebeian, who cut ruthlessly into his own flesh, as into the flesh and heart of the "noble," with a look that said plainly enough "Do not dissemble before me! here—we are equal!" At present, on the contrary, when throughout Europe the herding-animal alone attains to honours, and dispenses honours, when "equality of right" can too readily be

transformed into equality in wrong—I mean to say into general war against everything rare, strange, and privileged, against the higher man, the higher soul, the higher duty, the higher responsibility, the creative plenipotence and lordliness—at present it belongs to the conception of "greatness" to be noble, to wish to be apart, to be capable of being different, to stand alone, to have to live by personal initiative, and the philosopher will betray something of his own ideal when he asserts "He shall be the greatest who can be the most solitary, the most concealed, the most divergent, the man beyond good and evil, the master of his virtues, and of super-abundance of will; precisely this shall be called GREATNESS: as diversified as can be entire, as ample as can be full." And to ask once more the question: Is greatness POSSIBLE—nowadays?

213. It is difficult to learn what a philosopher is, because it cannot be taught: one must "know" it by experience—or one should have the pride NOT to know it. The fact that at present people all talk of things of which they CANNOT have any experience, is true more especially and unfortunately as concerns the philosopher and philosophical matters:—the very few know them, are permitted to know them, and all popular ideas about them are false. Thus, for instance, the truly philosophical combination of a bold, exuberant spirituality which runs at presto pace, and a dialectic rigour and necessity which makes no false step, is unknown to most thinkers and scholars from their own experience, and therefore, should any one speak of it in their presence, it is incredible to them. They conceive of every necessity as troublesome, as a painful compulsory obedience and state of constraint; thinking itself is regarded by them as something slow and hesitating, almost as a trouble, and often enough as "worthy of the SWEAT of the noble"—but not at all as something easy and divine, closely related to dancing and exuberance! "To think" and to take a matter "seriously," "arduously"—that is one and the same thing to them; such only has been their "experience."—Artists have here perhaps a finer intuition; they who know only too well that precisely when they no longer do anything "arbitrarily," and everything of necessity, their feeling of freedom, of subtlety, of power, of creatively fixing, disposing, and shaping, reaches its climax—in short, that necessity and "freedom of will" are then the same thing with them. There is, in fine, a gradation of rank in psychical states, to which the gradation of rank in the problems corresponds; and the highest problems repel ruthlessly every one who ventures too near them, without

being predestined for their solution by the loftiness and power of his spirituality. Of what use is it for nimble, everyday intellects, or clumsy, honest mechanics and empiricists to press, in their plebeian ambition, close to such problems, and as it were into this "holy of holies"—as so often happens nowadays! But coarse feet must never tread upon such carpets: this is provided for in the primary law of things; the doors remain closed to those intruders, though they may dash and break their heads thereon. People have always to be born to a high station, or, more definitely, they have to be BRED for it: a person has only a right to philosophy—taking the word in its higher significance—in virtue of his descent; the ancestors, the "blood," decide here also. Many generations must have prepared the way for the coming of the philosopher; each of his virtues must have been separately acquired, nurtured, transmitted, and embodied; not only the bold, easy, delicate course and current of his thoughts, but above all the readiness for great responsibilities, the majesty of ruling glance and contemning look, the feeling of separation from the multitude with their duties and virtues, the kindly patronage and defense of whatever is misunderstood and calumniated, be it God or devil, the delight and practice of supreme justice, the art of commanding, the amplitude of will, the lingering eye which rarely admires, rarely looks up, rarely loves....

## CHAPTER VII. OUR VIRTUES

214. OUR Virtues?—It is probable that we, too, have still our virtues, although naturally they are not those sincere and massive virtues on account of which we hold our grandfathers in esteem and also at a little distance from us. We Europeans of the day after tomorrow, we firstlings of the twentieth century—with all our dangerous curiosity, our multifariousness and art of disguising, our mellow and seemingly sweetened cruelty in sense and spirit—we shall presumably, IF we must have virtues, have those only which have come to agreement with our most secret and heartfelt inclinations, with our most ardent requirements: well, then, let us look for them in our labyrinths!—where, as we know, so many things lose themselves, so many things get quite lost! And is there anything finer than to SEARCH for one's own virtues? Is it not almost to BELIEVE in one's own virtues? But this "believing in one's own virtues"—is it not practically the same as what was formerly called one's "good conscience," that long, respectable pigtail of an idea, which our grandfathers used to hang behind their heads, and often enough also behind their understandings? It seems, therefore, that however little we may imagine ourselves to be old-fashioned and grandfatherly respectable in other respects, in one thing we are nevertheless the worthy grandchildren of our grandfathers, we last Europeans with good consciences: we also still wear their pigtail.—Ah! if you only knew how soon, so very soon—it will be different!

215. As in the stellar firmament there are sometimes two suns which determine the path of one planet, and in certain cases suns of different colours shine around a single planet, now with red light, now with green, and then simultaneously illumine and flood it with motley colours: so we modern men, owing to the complicated mechanism of our "firmament," are determined by DIFFERENT moralities; our actions shine alternately in different colours, and are seldom unequivocal—and there are often cases, also, in which our actions are MOTLEY-COLOURED.

216. To love one's enemies? I think that has been well learnt: it takes place thousands of times at present on a large and small scale; indeed, at times the higher and sublimer thing takes place:—we learn to DESPISE

when we love, and precisely when we love best; all of it, however, unconsciously, without noise, without ostentation, with the shame and secrecy of goodness, which forbids the utterance of the pompous word and the formula of virtue. Morality as attitude—is opposed to our taste nowadays. This is ALSO an advance, as it was an advance in our fathers that religion as an attitude finally became opposed to their taste, including the enmity and Voltairean bitterness against religion (and all that formerly belonged to freethinker-pantomime). It is the music in our conscience, the dance in our spirit, to which Puritan litanies, moral sermons, and goody-goodness won't chime.

217. Let us be careful in dealing with those who attach great importance to being credited with moral tact and subtlety in moral discernment! They never forgive us if they have once made a mistake BEFORE us (or even with REGARD to us)—they inevitably become our instinctive calumniators and detractors, even when they still remain our "friends."—Blessed are the forgetful: for they "get the better" even of their blunders.

218. The psychologists of France—and where else are there still psychologists nowadays?—have never yet exhausted their bitter and manifold enjoyment of the betise bourgeoise, just as though... in short, they betray something thereby. Flaubert, for instance, the honest citizen of Rouen, neither saw, heard, nor tasted anything else in the end; it was his mode of self-torment and refined cruelty. As this is growing wearisome, I would now recommend for a change something else for a pleasure—namely, the unconscious astuteness with which good, fat, honest mediocrity always behaves towards loftier spirits and the tasks they have to perform, the subtle, barbed, Jesuitical astuteness, which is a thousand times subtler than the taste and understanding of the middle-class in its best moments—subtler even than the understanding of its victims:—a repeated proof that "instinct" is the most intelligent of all kinds of intelligence which have hitherto been discovered. In short, you psychologists, study the philosophy of the "rule" in its struggle with the "exception": there you have a spectacle fit for Gods and godlike malignity! Or, in plainer words, practise vivisection on "good people," on the "homo bonae voluntatis," ON YOURSELVES!

219. The practice of judging and condemning morally, is the favourite revenge of the intellectually shallow on those who are less so, it is also a

kind of indemnity for their being badly endowed by nature, and finally, it is an opportunity for acquiring spirit and BECOMING subtle—malice spiritualises. They are glad in their inmost heart that there is a standard according to which those who are over-endowed with intellectual goods and privileges, are equal to them, they contend for the "equality of all before God," and almost NEED the belief in God for this purpose. It is among them that the most powerful antagonists of atheism are found. If any one were to say to them "A lofty spirituality is beyond all comparison with the honesty and respectability of a merely moral man"—it would make them furious, I shall take care not to say so. I would rather flatter them with my theory that lofty spirituality itself exists only as the ultimate product of moral qualities, that it is a synthesis of all qualities attributed to the "merely moral" man, after they have been acquired singly through long training and practice, perhaps during a whole series of generations, that lofty spirituality is precisely the spiritualising of justice, and the beneficent severity which knows that it is authorized to maintain GRADATIONS OF RANK in the world, even among things—and not only among men.

220. Now that the praise of the "disinterested person" is so popular one must—probably not without some danger—get an idea of WHAT people actually take an interest in, and what are the things generally which fundamentally and profoundly concern ordinary men—including the cultured, even the learned, and perhaps philosophers also, if appearances do not deceive. The fact thereby becomes obvious that the greater part of what interests and charms higher natures, and more refined and fastidious tastes, seems absolutely "uninteresting" to the average man—if, notwithstanding, he perceives devotion to these interests, he calls it *desinteresse*, and wonders how it is possible to act "disinterestedly." There have been philosophers who could give this popular astonishment a seductive and mystical, other-worldly expression (perhaps because they did not know the higher nature by experience?), instead of stating the naked and candidly reasonable truth that "disinterested" action is very interesting and "interested" action, provided that... "And love?"—What! Even an action for love's sake shall be "unegoistic"? But you fools—! "And the praise of the self-sacrificer?"—But whoever has really offered sacrifice knows that he wanted and obtained something for it—perhaps something from himself for something from himself; that he relinquished here in order to have more there, perhaps in general to be more, or even feel himself "more." But this is a realm of

questions and answers in which a more fastidious spirit does not like to stay: for here truth has to stifle her yawns so much when she is obliged to answer. And after all, truth is a woman; one must not use force with her.

221. "It sometimes happens," said a moralistic pedant and trifle-retailer, "that I honour and respect an unselfish man: not, however, because he is unselfish, but because I think he has a right to be useful to another man at his own expense. In short, the question is always who HE is, and who THE OTHER is. For instance, in a person created and destined for command, self-denial and modest retirement, instead of being virtues, would be the waste of virtues: so it seems to me. Every system of unegoistic morality which takes itself unconditionally and appeals to every one, not only sins against good taste, but is also an incentive to sins of omission, an ADDITIONAL seduction under the mask of philanthropy—and precisely a seduction and injury to the higher, rarer, and more privileged types of men. Moral systems must be compelled first of all to bow before the GRADATIONS OF RANK; their presumption must be driven home to their conscience—until they thoroughly understand at last that it is IMMORAL to say that 'what is right for one is proper for another.'"—So said my moralistic pedant and bonhomme. Did he perhaps deserve to be laughed at when he thus exhorted systems of morals to practise morality? But one should not be too much in the right if one wishes to have the laughers on ONE'S OWN side; a grain of wrong pertains even to good taste.

222. Wherever sympathy (fellow-suffering) is preached nowadays—and, if I gather rightly, no other religion is any longer preached—let the psychologist have his ears open through all the vanity, through all the noise which is natural to these preachers (as to all preachers), he will hear a hoarse, groaning, genuine note of SELF-CONTEMPT. It belongs to the overshadowing and uglifying of Europe, which has been on the increase for a century (the first symptoms of which are already specified documentarily in a thoughtful letter of Galiani to Madame d'Epinau)—IF IT IS NOT REALLY THE CAUSE THEREOF! The man of "modern ideas," the conceited ape, is excessively dissatisfied with himself—this is perfectly certain. He suffers, and his vanity wants him only "to suffer with his fellows."

223. The hybrid European—a tolerably ugly plebeian, taken all in all—absolutely requires a costume: he needs history as a storeroom of costumes.

To be sure, he notices that none of the costumes fit him properly—he changes and changes. Let us look at the nineteenth century with respect to these hasty preferences and changes in its masquerades of style, and also with respect to its moments of desperation on account of "nothing suiting" us. It is in vain to get ourselves up as romantic, or classical, or Christian, or Florentine, or barocco, or "national," in moribus et artibus: it does not "clothe us"! But the "spirit," especially the "historical spirit," profits even by this desperation: once and again a new sample of the past or of the foreign is tested, put on, taken off, packed up, and above all studied—we are the first studious age in puncto of "costumes," I mean as concerns morals, articles of belief, artistic tastes, and religions; we are prepared as no other age has ever been for a carnival in the grand style, for the most spiritual festival—laughter and arrogance, for the transcendental height of supreme folly and Aristophanic ridicule of the world. Perhaps we are still discovering the domain of our invention just here, the domain where even we can still be original, probably as parodists of the world's history and as God's Merry-Andrews,—perhaps, though nothing else of the present have a future, our laughter itself may have a future!

224. The historical sense (or the capacity for divining quickly the order of rank of the valuations according to which a people, a community, or an individual has lived, the "divining instinct" for the relationships of these valuations, for the relation of the authority of the valuations to the authority of the operating forces),—this historical sense, which we Europeans claim as our specialty, has come to us in the train of the enchanting and mad semi-barbarity into which Europe has been plunged by the democratic mingling of classes and races—it is only the nineteenth century that has recognized this faculty as its sixth sense. Owing to this mingling, the past of every form and mode of life, and of cultures which were formerly closely contiguous and superimposed on one another, flows forth into us "modern souls"; our instincts now run back in all directions, we ourselves are a kind of chaos: in the end, as we have said, the spirit perceives its advantage therein. By means of our semi-barbarity in body and in desire, we have secret access everywhere, such as a noble age never had; we have access above all to the labyrinth of imperfect civilizations, and to every form of semi-barbarity that has at any time existed on earth; and in so far as the most considerable part of human civilization hitherto has just been semi-barbarity, the "historical sense" implies almost the sense and instinct for everything, the taste and

tongue for everything: whereby it immediately proves itself to be an IGNOBLE sense. For instance, we enjoy Homer once more: it is perhaps our happiest acquisition that we know how to appreciate Homer, whom men of distinguished culture (as the French of the seventeenth century, like Saint-Evremond, who reproached him for his ESPRIT VASTE, and even Voltaire, the last echo of the century) cannot and could not so easily appropriate—whom they scarcely permitted themselves to enjoy. The very decided Yea and Nay of their palate, their promptly ready disgust, their hesitating reluctance with regard to everything strange, their horror of the bad taste even of lively curiosity, and in general the averseness of every distinguished and self-sufficing culture to avow a new desire, a dissatisfaction with its own condition, or an admiration of what is strange: all this determines and disposes them unfavourably even towards the best things of the world which are not their property or could not become their prey—and no faculty is more unintelligible to such men than just this historical sense, with its truckling, plebeian curiosity. The case is not different with Shakespeare, that marvelous Spanish-Moorish-Saxon synthesis of taste, over whom an ancient Athenian of the circle of AEschylus would have half-killed himself with laughter or irritation: but we—accept precisely this wild motley, this medley of the most delicate, the most coarse, and the most artificial, with a secret confidence and cordiality; we enjoy it as a refinement of art reserved expressly for us, and allow ourselves to be as little disturbed by the repulsive fumes and the proximity of the English populace in which Shakespeare's art and taste lives, as perhaps on the Chiaja of Naples, where, with all our senses awake, we go our way, enchanted and voluntarily, in spite of the drain-odour of the lower quarters of the town. That as men of the "historical sense" we have our virtues, is not to be disputed:—we are unpretentious, unselfish, modest, brave, habituated to self-control and self-renunciation, very grateful, very patient, very complaisant—but with all this we are perhaps not very "tasteful." Let us finally confess it, that what is most difficult for us men of the "historical sense" to grasp, feel, taste, and love, what finds us fundamentally prejudiced and almost hostile, is precisely the perfection and ultimate maturity in every culture and art, the essentially noble in works and men, their moment of smooth sea and halcyon self-sufficiency, the goldenness and coldness which all things show that have perfected themselves. Perhaps our great virtue of the historical sense is in necessary

contrast to GOOD taste, at least to the very bad taste; and we can only evoke in ourselves imperfectly, hesitatingly, and with compulsion the small, short, and happy godsend and glorifications of human life as they shine here and there: those moments and marvelous experiences when a great power has voluntarily come to a halt before the boundless and infinite,—when a super-abundance of refined delight has been enjoyed by a sudden checking and petrifying, by standing firmly and planting oneself fixedly on still trembling ground. PROPORTIONATENESS is strange to us, let us confess it to ourselves; our itching is really the itching for the infinite, the immeasurable. Like the rider on his forward panting horse, we let the reins fall before the infinite, we modern men, we semi-barbarians—and are only in OUR highest bliss when we—ARE IN MOST DANGER.

225. Whether it be hedonism, pessimism, utilitarianism, or eudaemonism, all those modes of thinking which measure the worth of things according to PLEASURE and PAIN, that is, according to accompanying circumstances and secondary considerations, are plausible modes of thought and naivetes, which every one conscious of CREATIVE powers and an artist's conscience will look down upon with scorn, though not without sympathy. Sympathy for you!—to be sure, that is not sympathy as you understand it: it is not sympathy for social "distress," for "society" with its sick and misfortunate, for the hereditarily vicious and defective who lie on the ground around us; still less is it sympathy for the grumbling, vexed, revolutionary slave-classes who strive after power—they call it "freedom." OUR sympathy is a loftier and further-sighted sympathy:—we see how MAN dwarfs himself, how YOU dwarf him! and there are moments when we view YOUR sympathy with an indescribable anguish, when we resist it,—when we regard your seriousness as more dangerous than any kind of levity. You want, if possible—and there is not a more foolish "if possible"—TO DO AWAY WITH SUFFERING; and we?—it really seems that WE would rather have it increased and made worse than it has ever been! Well-being, as you understand it—is certainly not a goal; it seems to us an END; a condition which at once renders man ludicrous and contemptible—and makes his destruction DESIRABLE! The discipline of suffering, of GREAT suffering—know ye not that it is only THIS discipline that has produced all the elevations of humanity hitherto? The tension of soul in misfortune which communicates to it its energy, its shuddering in view of rack and ruin, its inventiveness and bravery in undergoing, enduring, interpreting,

and exploiting misfortune, and whatever depth, mystery, disguise, spirit, artifice, or greatness has been bestowed upon the soul—has it not been bestowed through suffering, through the discipline of great suffering? In man CREATURE and CREATOR are united: in man there is not only matter, shred, excess, clay, mire, folly, chaos; but there is also the creator, the sculptor, the hardness of the hammer, the divinity of the spectator, and the seventh day—do ye understand this contrast? And that YOUR sympathy for the "creature in man" applies to that which has to be fashioned, bruised, forged, stretched, roasted, annealed, refined—to that which must necessarily SUFFER, and IS MEANT to suffer? And our sympathy—do ye not understand what our REVERSE sympathy applies to, when it resists your sympathy as the worst of all pampering and enervation?—So it is sympathy AGAINST sympathy!—But to repeat it once more, there are higher problems than the problems of pleasure and pain and sympathy; and all systems of philosophy which deal only with these are naivetes.

226. WE IMMORALISTS.—This world with which WE are concerned, in which we have to fear and love, this almost invisible, inaudible world of delicate command and delicate obedience, a world of "almost" in every respect, captious, insidious, sharp, and tender—yes, it is well protected from clumsy spectators and familiar curiosity! We are woven into a strong net and garment of duties, and CANNOT disengage ourselves—precisely here, we are "men of duty," even we! Occasionally, it is true, we dance in our "chains" and betwixt our "swords"; it is none the less true that more often we gnash our teeth under the circumstances, and are impatient at the secret hardship of our lot. But do what we will, fools and appearances say of us: "These are men WITHOUT duty,"—we have always fools and appearances against us!

227. Honesty, granting that it is the virtue of which we cannot rid ourselves, we free spirits—well, we will labour at it with all our perversity and love, and not tire of "perfecting" ourselves in OUR virtue, which alone remains: may its glance some day overspread like a gilded, blue, mocking twilight this aging civilization with its dull gloomy seriousness! And if, nevertheless, our honesty should one day grow weary, and sigh, and stretch its limbs, and find us too hard, and would fain have it pleasanter, easier, and gentler, like an agreeable vice, let us remain HARD, we latest Stoics, and let us send to its help whatever devilry we have in us:—our disgust at the

clumsy and undefined, our "NITIMUR IN VETITUM," our love of adventure, our sharpened and fastidious curiosity, our most subtle, disguised, intellectual Will to Power and universal conquest, which rambles and roves avidiously around all the realms of the future—let us go with all our "devils" to the help of our "God"! It is probable that people will misunderstand and mistake us on that account: what does it matter! They will say: "Their 'honesty'—that is their devilry, and nothing else!" What does it matter! And even if they were right—have not all Gods hitherto been such sanctified, re-baptized devils? And after all, what do we know of ourselves? And what the spirit that leads us wants TO BE CALLED? (It is a question of names.) And how many spirits we harbour? Our honesty, we free spirits—let us be careful lest it become our vanity, our ornament and ostentation, our limitation, our stupidity! Every virtue inclines to stupidity, every stupidity to virtue; "stupid to the point of sanctity," they say in Russia,—let us be careful lest out of pure honesty we eventually become saints and bores! Is not life a hundred times too short for us—to bore ourselves? One would have to believe in eternal life in order to...

228. I hope to be forgiven for discovering that all moral philosophy hitherto has been tedious and has belonged to the soporific appliances—and that "virtue," in my opinion, has been MORE injured by the TEDIOUSNESS of its advocates than by anything else; at the same time, however, I would not wish to overlook their general usefulness. It is desirable that as few people as possible should reflect upon morals, and consequently it is very desirable that morals should not some day become interesting! But let us not be afraid! Things still remain today as they have always been: I see no one in Europe who has (or DISCLOSES) an idea of the fact that philosophizing concerning morals might be conducted in a dangerous, captious, and ensnaring manner—that CALAMITY might be involved therein. Observe, for example, the indefatigable, inevitable English utilitarians: how ponderously and respectably they stalk on, stalk along (a Homeric metaphor expresses it better) in the footsteps of Bentham, just as he had already stalked in the footsteps of the respectable Helvetius! (no, he was not a dangerous man, Helvetius, CE SENATEUR POCOCURANTE, to use an expression of Galiani). No new thought, nothing of the nature of a finer turning or better expression of an old thought, not even a proper history of what has been previously thought on the subject: an IMPOSSIBLE literature, taking it all in all, unless one

knows how to leaven it with some mischief. In effect, the old English vice called CANT, which is MORAL TARTUFFISM, has insinuated itself also into these moralists (whom one must certainly read with an eye to their motives if one MUST read them), concealed this time under the new form of the scientific spirit; moreover, there is not absent from them a secret struggle with the pangs of conscience, from which a race of former Puritans must naturally suffer, in all their scientific tinkering with morals. (Is not a moralist the opposite of a Puritan? That is to say, as a thinker who regards morality as questionable, as worthy of interrogation, in short, as a problem? Is moralizing not-immoral?) In the end, they all want English morality to be recognized as authoritative, inasmuch as mankind, or the "general utility," or "the happiness of the greatest number,"—no! the happiness of ENGLAND, will be best served thereby. They would like, by all means, to convince themselves that the striving after English happiness, I mean after COMFORT and FASHION (and in the highest instance, a seat in Parliament), is at the same time the true path of virtue; in fact, that in so far as there has been virtue in the world hitherto, it has just consisted in such striving. Not one of those ponderous, conscience-stricken herding-animals (who undertake to advocate the cause of egoism as conducive to the general welfare) wants to have any knowledge or inkling of the facts that the "general welfare" is no ideal, no goal, no notion that can be at all grasped, but is only a nostrum,—that what is fair to one MAY NOT at all be fair to another, that the requirement of one morality for all is really a detriment to higher men, in short, that there is a DISTINCTION OF RANK between man and man, and consequently between morality and morality. They are an unassuming and fundamentally mediocre species of men, these utilitarian Englishmen, and, as already remarked, in so far as they are tedious, one cannot think highly enough of their utility. One ought even to ENCOURAGE them, as has been partially attempted in the following rhymes:—

Hail, ye worthies, barrow-wheeling,  
"Longer-better," aye revealing,

Stiffer aye in head and knee;  
Unenraptured, never jesting,  
Mediocre everlasting,

SANS GENIE ET SANS ESPRIT!

229. In these later ages, which may be proud of their humanity, there still remains so much fear, so much SUPERSTITION of the fear, of the "cruel wild beast," the mastering of which constitutes the very pride of these humaner ages—that even obvious truths, as if by the agreement of centuries, have long remained unuttered, because they have the appearance of helping the finally slain wild beast back to life again. I perhaps risk something when I allow such a truth to escape; let others capture it again and give it so much "milk of pious sentiment" [FOOTNOTE: An expression from Schiller's *William Tell*, Act IV, Scene 3.] to drink, that it will lie down quiet and forgotten, in its old corner.—One ought to learn anew about cruelty, and open one's eyes; one ought at last to learn impatience, in order that such immodest gross errors—as, for instance, have been fostered by ancient and modern philosophers with regard to tragedy—may no longer wander about virtuously and boldly. Almost everything that we call "higher culture" is based upon the spiritualising and intensifying of CRUELTY—this is my thesis; the "wild beast" has not been slain at all, it lives, it flourishes, it has only been—transfigured. That which constitutes the painful delight of tragedy is cruelty; that which operates agreeably in so-called tragic sympathy, and at the basis even of everything sublime, up to the highest and most delicate thrills of metaphysics, obtains its sweetness solely from the intermingled ingredient of cruelty. What the Roman enjoys in the arena, the Christian in the ecstasies of the cross, the Spaniard at the sight of the faggot and stake, or of the bull-fight, the present-day Japanese who presses his way to the tragedy, the workman of the Parisian suburbs who has a homesickness for bloody revolutions, the Wagnerienne who, with unhinged will, "undergoes" the performance of "Tristan and Isolde"—what all these enjoy, and strive with mysterious ardour to drink in, is the philtre of the great Circe "cruelty." Here, to be sure, we must put aside entirely the blundering psychology of former times, which could only teach with regard to cruelty that it originated at the sight of the suffering of OTHERS: there is an abundant, super-abundant enjoyment even in one's own suffering, in causing one's own suffering—and wherever man has allowed himself to be

persuaded to self-denial in the RELIGIOUS sense, or to self-mutilation, as among the Phoenicians and ascetics, or in general, to desensualisation, decarnalisation, and contrition, to Puritanical repentance-spasms, to vivisection of conscience and to Pascal-like SACRIFIZIA DELL'INTELLETO, he is secretly allured and impelled forwards by his cruelty, by the dangerous thrill of cruelty TOWARDS HIMSELF.—Finally, let us consider that even the seeker of knowledge operates as an artist and glorifier of cruelty, in that he compels his spirit to perceive AGAINST its own inclination, and often enough against the wishes of his heart:—he forces it to say Nay, where he would like to affirm, love, and adore; indeed, every instance of taking a thing profoundly and fundamentally, is a violation, an intentional injuring of the fundamental will of the spirit, which instinctively aims at appearance and superficiality,—even in every desire for knowledge there is a drop of cruelty.

230. Perhaps what I have said here about a "fundamental will of the spirit" may not be understood without further details; I may be allowed a word of explanation.—That imperious something which is popularly called "the spirit," wishes to be master internally and externally, and to feel itself master; it has the will of a multiplicity for a simplicity, a binding, taming, imperious, and essentially ruling will. Its requirements and capacities here, are the same as those assigned by physiologists to everything that lives, grows, and multiplies. The power of the spirit to appropriate foreign elements reveals itself in a strong tendency to assimilate the new to the old, to simplify the manifold, to overlook or repudiate the absolutely contradictory; just as it arbitrarily re-underlines, makes prominent, and falsifies for itself certain traits and lines in the foreign elements, in every portion of the "outside world." Its object thereby is the incorporation of new "experiences," the assortment of new things in the old arrangements—in short, growth; or more properly, the FEELING of growth, the feeling of increased power—is its object. This same will has at its service an apparently opposed impulse of the spirit, a suddenly adopted preference of ignorance, of arbitrary shutting out, a closing of windows, an inner denial of this or that, a prohibition to approach, a sort of defensive attitude against much that is knowable, a contentment with obscurity, with the shutting-in horizon, an acceptance and approval of ignorance: as that which is all necessary according to the degree of its appropriating power, its "digestive power," to speak figuratively (and in fact "the spirit" resembles a stomach

more than anything else). Here also belong an occasional propensity of the spirit to let itself be deceived (perhaps with a waggish suspicion that it is NOT so and so, but is only allowed to pass as such), a delight in uncertainty and ambiguity, an exulting enjoyment of arbitrary, out-of-the-way narrowness and mystery, of the too-near, of the foreground, of the magnified, the diminished, the misshapen, the beautified—an enjoyment of the arbitrariness of all these manifestations of power. Finally, in this connection, there is the not unscrupulous readiness of the spirit to deceive other spirits and dissemble before them—the constant pressing and straining of a creating, shaping, changeable power: the spirit enjoys therein its craftiness and its variety of disguises, it enjoys also its feeling of security therein—it is precisely by its Protean arts that it is best protected and concealed!—COUNTER TO this propensity for appearance, for simplification, for a disguise, for a cloak, in short, for an outside—for every outside is a cloak—there operates the sublime tendency of the man of knowledge, which takes, and INSISTS on taking things profoundly, variously, and thoroughly; as a kind of cruelty of the intellectual conscience and taste, which every courageous thinker will acknowledge in himself, provided, as it ought to be, that he has sharpened and hardened his eye sufficiently long for introspection, and is accustomed to severe discipline and even severe words. He will say: "There is something cruel in the tendency of my spirit": let the virtuous and amiable try to convince him that it is not so! In fact, it would sound nicer, if, instead of our cruelty, perhaps our "extravagant honesty" were talked about, whispered about, and glorified—we free, VERY free spirits—and some day perhaps SUCH will actually be our—posthumous glory! Meanwhile—for there is plenty of time until then—we should be least inclined to deck ourselves out in such florid and fringed moral verbiage; our whole former work has just made us sick of this taste and its sprightly exuberance. They are beautiful, glistening, jingling, festive words: honesty, love of truth, love of wisdom, sacrifice for knowledge, heroism of the truthful—there is something in them that makes one's heart swell with pride. But we anchorites and marmots have long ago persuaded ourselves in all the secrecy of an anchorite's conscience, that this worthy parade of verbiage also belongs to the old false adornment, frippery, and gold-dust of unconscious human vanity, and that even under such flattering colour and repainting, the terrible original text HOMO NATURA must again be recognized. In effect, to translate man back again into nature;

to master the many vain and visionary interpretations and subordinate meanings which have hitherto been scratched and daubed over the eternal original text, HOMO NATURA; to bring it about that man shall henceforth stand before man as he now, hardened by the discipline of science, stands before the OTHER forms of nature, with fearless Oedipus-eyes, and stopped Ulysses-ears, deaf to the enticements of old metaphysical bird-catchers, who have piped to him far too long: "Thou art more! thou art higher! thou hast a different origin!"—this may be a strange and foolish task, but that it is a TASK, who can deny! Why did we choose it, this foolish task? Or, to put the question differently: "Why knowledge at all?" Every one will ask us about this. And thus pressed, we, who have asked ourselves the question a hundred times, have not found and cannot find any better answer....

231. Learning alters us, it does what all nourishment does that does not merely "conserve"—as the physiologist knows. But at the bottom of our souls, quite "down below," there is certainly something unteachable, a granite of spiritual fate, of predetermined decision and answer to predetermined, chosen questions. In each cardinal problem there speaks an unchangeable "I am this"; a thinker cannot learn anew about man and woman, for instance, but can only learn fully—he can only follow to the end what is "fixed" about them in himself. Occasionally we find certain solutions of problems which make strong beliefs for us; perhaps they are henceforth called "convictions." Later on—one sees in them only footsteps to self-knowledge, guide-posts to the problem which we ourselves ARE—or more correctly to the great stupidity which we embody, our spiritual fate, the UNTEACHABLE in us, quite "down below."—In view of this liberal compliment which I have just paid myself, permission will perhaps be more readily allowed me to utter some truths about "woman as she is," provided that it is known at the outset how literally they are merely—MY truths.

232. Woman wishes to be independent, and therefore she begins to enlighten men about "woman as she is"—THIS is one of the worst developments of the general UGLIFYING of Europe. For what must these clumsy attempts of feminine scientificity and self-exposure bring to light! Woman has so much cause for shame; in woman there is so much pedantry, superficiality, schoolmasterliness, petty presumption, unbridledness, and indiscretion concealed—study only woman's behaviour towards children!—which has really been best restrained and dominated hitherto by the FEAR

of man. Alas, if ever the "eternally tedious in woman"—she has plenty of it!—is allowed to venture forth! if she begins radically and on principle to unlearn her wisdom and art-of charming, of playing, of frightening away sorrow, of alleviating and taking easily; if she forgets her delicate aptitude for agreeable desires! Female voices are already raised, which, by Saint Aristophanes! make one afraid:—with medical explicitness it is stated in a threatening manner what woman first and last **REQUIRES** from man. Is it not in the very worst taste that woman thus sets herself up to be scientific? Enlightenment hitherto has fortunately been men's affair, men's gift—we remained therewith "among ourselves"; and in the end, in view of all that women write about "woman," we may well have considerable doubt as to whether woman really **DESIRES** enlightenment about herself—and **CAN** desire it. If woman does not thereby seek a new **ORNAMENT** for herself—I believe ornamentation belongs to the eternally feminine?—why, then, she wishes to make herself feared: perhaps she thereby wishes to get the mastery. But she does not want truth—what does woman care for truth? From the very first, nothing is more foreign, more repugnant, or more hostile to woman than truth—her great art is falsehood, her chief concern is appearance and beauty. Let us confess it, we men: we honour and love this very art and this very instinct in woman: we who have the hard task, and for our recreation gladly seek the company of beings under whose hands, glances, and delicate follies, our seriousness, our gravity, and profundity appear almost like follies to us. Finally, I ask the question: Did a woman herself ever acknowledge profundity in a woman's mind, or justice in a woman's heart? And is it not true that on the whole "woman" has hitherto been most despised by woman herself, and not at all by us?—We men desire that woman should not continue to compromise herself by enlightening us; just as it was man's care and the consideration for woman, when the church decreed: *mulier taceat in ecclesia*. It was to the benefit of woman when Napoleon gave the too eloquent Madame de Stael to understand: *mulier taceat in politicis!*—and in my opinion, he is a true friend of woman who calls out to women today: *mulier taceat de mulierel*.

233. It betrays corruption of the instincts—apart from the fact that it betrays bad taste—when a woman refers to Madame Roland, or Madame de Stael, or Monsieur George Sand, as though something were proved thereby in favour of "woman as she is." Among men, these are the three comical

women as they are—nothing more!—and just the best involuntary counter-arguments against feminine emancipation and autonomy.

234. Stupidity in the kitchen; woman as cook; the terrible thoughtlessness with which the feeding of the family and the master of the house is managed! Woman does not understand what food means, and she insists on being cook! If woman had been a thinking creature, she should certainly, as cook for thousands of years, have discovered the most important physiological facts, and should likewise have got possession of the healing art! Through bad female cooks—through the entire lack of reason in the kitchen—the development of mankind has been longest retarded and most interfered with: even today matters are very little better. A word to High School girls.

235. There are turns and casts of fancy, there are sentences, little handfuls of words, in which a whole culture, a whole society suddenly crystallises itself. Among these is the incidental remark of Madame de Lambert to her son: "MON AMI, NE VOUS PERMETTEZ JAMAIS QUE DES FOLIES, QUI VOUS FERONT GRAND PLAISIR"—the motherliest and wisest remark, by the way, that was ever addressed to a son.

236. I have no doubt that every noble woman will oppose what Dante and Goethe believed about woman—the former when he sang, "ELLA GUARDAVA SUSO, ED IO IN LEI," and the latter when he interpreted it, "the eternally feminine draws us ALOFT"; for THIS is just what she believes of the eternally masculine.

#### 237. SEVEN APOPTHEGMS FOR WOMEN

How the longest ennui flees, When a man comes to our knees!

Age, alas! and science staid, Furnish even weak virtue aid.

Sombre garb and silence meet: Dress for every dame—discreet.

Whom I thank when in my bliss? God!—and my good tailoress!

Young, a flower-decked cavern home; Old, a dragon thence doth roam.

Noble title, leg that's fine, Man as well: Oh, were HE mine!

Speech in brief and sense in mass—Slippery for the jenny-ass!

237A. Woman has hitherto been treated by men like birds, which, losing their way, have come down among them from an elevation: as something

delicate, fragile, wild, strange, sweet, and animating—but as something also which must be cooped up to prevent it flying away.

238. To be mistaken in the fundamental problem of "man and woman," to deny here the profoundest antagonism and the necessity for an eternally hostile tension, to dream here perhaps of equal rights, equal training, equal claims and obligations: that is a TYPICAL sign of shallow-mindedness; and a thinker who has proved himself shallow at this dangerous spot—shallow in instinct!—may generally be regarded as suspicious, nay more, as betrayed, as discovered; he will probably prove too "short" for all fundamental questions of life, future as well as present, and will be unable to descend into ANY of the depths. On the other hand, a man who has depth of spirit as well as of desires, and has also the depth of benevolence which is capable of severity and harshness, and easily confounded with them, can only think of woman as ORIENTALS do: he must conceive of her as a possession, as confinable property, as a being predestined for service and accomplishing her mission therein—he must take his stand in this matter upon the immense rationality of Asia, upon the superiority of the instinct of Asia, as the Greeks did formerly; those best heirs and scholars of Asia—who, as is well known, with their INCREASING culture and amplitude of power, from Homer to the time of Pericles, became gradually STRICTER towards woman, in short, more Oriental. HOW necessary, HOW logical, even HOW humanely desirable this was, let us consider for ourselves!

239. The weaker sex has in no previous age been treated with so much respect by men as at present—this belongs to the tendency and fundamental taste of democracy, in the same way as disrespectfulness to old age—what wonder is it that abuse should be immediately made of this respect? They want more, they learn to make claims, the tribute of respect is at last felt to be well-nigh galling; rivalry for rights, indeed actual strife itself, would be preferred: in a word, woman is losing modesty. And let us immediately add that she is also losing taste. She is unlearning to FEAR man: but the woman who "unlearns to fear" sacrifices her most womanly instincts. That woman should venture forward when the fear-inspiring quality in man—or more definitely, the MAN in man—is no longer either desired or fully developed, is reasonable enough and also intelligible enough; what is more difficult to understand is that precisely thereby—woman deteriorates. This is what is happening nowadays: let us not deceive ourselves about it! Wherever the industrial spirit has triumphed over the military and aristocratic spirit,

woman strives for the economic and legal independence of a clerk: "woman as clerkess" is inscribed on the portal of the modern society which is in course of formation. While she thus appropriates new rights, aspires to be "master," and inscribes "progress" of woman on her flags and banners, the very opposite realises itself with terrible obviousness: WOMAN RETROGRADES. Since the French Revolution the influence of woman in Europe has DECLINED in proportion as she has increased her rights and claims; and the "emancipation of woman," insofar as it is desired and demanded by women themselves (and not only by masculine shallow-pates), thus proves to be a remarkable symptom of the increased weakening and deadening of the most womanly instincts. There is STUPIDITY in this movement, an almost masculine stupidity, of which a well-reared woman—who is always a sensible woman—might be heartily ashamed. To lose the intuition as to the ground upon which she can most surely achieve victory; to neglect exercise in the use of her proper weapons; to let-herself-go before man, perhaps even "to the book," where formerly she kept herself in control and in refined, artful humility; to neutralize with her virtuous audacity man's faith in a VEILED, fundamentally different ideal in woman, something eternally, necessarily feminine; to emphatically and loquaciously dissuade man from the idea that woman must be preserved, cared for, protected, and indulged, like some delicate, strangely wild, and often pleasant domestic animal; the clumsy and indignant collection of everything of the nature of servitude and bondage which the position of woman in the hitherto existing order of society has entailed and still entails (as though slavery were a counter-argument, and not rather a condition of every higher culture, of every elevation of culture):—what does all this betoken, if not a disintegration of womanly instincts, a defeminising? Certainly, there are enough of idiotic friends and corrupters of woman among the learned asses of the masculine sex, who advise woman to defeminize herself in this manner, and to imitate all the stupidities from which "man" in Europe, European "manliness," suffers,—who would like to lower woman to "general culture," indeed even to newspaper reading and meddling with politics. Here and there they wish even to make women into free spirits and literary workers: as though a woman without piety would not be something perfectly obnoxious or ludicrous to a profound and godless man;—almost everywhere her nerves are being ruined by the most morbid and dangerous kind of music (our latest German music), and she is daily being made more

hysterical and more incapable of fulfilling her first and last function, that of bearing robust children. They wish to "cultivate" her in general still more, and intend, as they say, to make the "weaker sex" STRONG by culture: as if history did not teach in the most emphatic manner that the "cultivating" of mankind and his weakening—that is to say, the weakening, dissipating, and languishing of his FORCE OF WILL—have always kept pace with one another, and that the most powerful and influential women in the world (and lastly, the mother of Napoleon) had just to thank their force of will—and not their schoolmasters—for their power and ascendancy over men. That which inspires respect in woman, and often enough fear also, is her NATURE, which is more "natural" than that of man, her genuine, carnivora-like, cunning flexibility, her tiger-claws beneath the glove, her NAIVETE in egoism, her untrainableness and innate wildness, the incomprehensibleness, extent, and deviation of her desires and virtues. That which, in spite of fear, excites one's sympathy for the dangerous and beautiful cat, "woman," is that she seems more afflicted, more vulnerable, more necessitous of love, and more condemned to disillusionment than any other creature. Fear and sympathy it is with these feelings that man has hitherto stood in the presence of woman, always with one foot already in tragedy, which rends while it delights—What? And all that is now to be at an end? And the DISENCHANTMENT of woman is in progress? The tediousness of woman is slowly evolving? Oh Europe! Europe! We know the horned animal which was always most attractive to thee, from which danger is ever again threatening thee! Thy old fable might once more become "history"—an immense stupidity might once again overmaster thee and carry thee away! And no God concealed beneath it—no! only an "idea," a "modern idea"!

## CHAPTER VIII. PEOPLES AND COUNTRIES

240. I HEARD, once again for the first time, Richard Wagner's overture to the Mastersinger: it is a piece of magnificent, gorgeous, heavy, latter-day art, which has the pride to presuppose two centuries of music as still living, in order that it may be understood:—it is an honour to Germans that such a pride did not miscalculate! What flavours and forces, what seasons and climes do we not find mingled in it! It impresses us at one time as ancient, at another time as foreign, bitter, and too modern, it is as arbitrary as it is pompously traditional, it is not infrequently roguish, still oftener rough and coarse—it has fire and courage, and at the same time the loose, dun-coloured skin of fruits which ripen too late. It flows broad and full: and suddenly there is a moment of inexplicable hesitation, like a gap that opens between cause and effect, an oppression that makes us dream, almost a nightmare; but already it broadens and widens anew, the old stream of delight—the most manifold delight,—of old and new happiness; including ESPECIALLY the joy of the artist in himself, which he refuses to conceal, his astonished, happy cognizance of his mastery of the expedients here employed, the new, newly acquired, imperfectly tested expedients of art which he apparently betrays to us. All in all, however, no beauty, no South, nothing of the delicate southern clearness of the sky, nothing of grace, no dance, hardly a will to logic; a certain clumsiness even, which is also emphasized, as though the artist wished to say to us: "It is part of my intention"; a cumbersome drapery, something arbitrarily barbaric and ceremonious, a flirring of learned and venerable conceits and witticisms; something German in the best and worst sense of the word, something in the German style, manifold, formless, and inexhaustible; a certain German potency and super-plenitude of soul, which is not afraid to hide itself under the RAFFINEMENTS of decadence—which, perhaps, feels itself most at ease there; a real, genuine token of the German soul, which is at the same time young and aged, too ripe and yet still too rich in futurity. This kind of music expresses best what I think of the Germans: they belong to the day before yesterday and the day after tomorrow—THEY HAVE AS YET NO TODAY.

241. We "good Europeans," we also have hours when we allow ourselves a warm-hearted patriotism, a plunge and relapse into old loves and narrow views—I have just given an example of it—hours of national excitement, of patriotic anguish, and all other sorts of old-fashioned floods of sentiment. Duller spirits may perhaps only get done with what confines its operations in us to hours and plays itself out in hours—in a considerable time: some in half a year, others in half a lifetime, according to the speed and strength with which they digest and "change their material." Indeed, I could think of sluggish, hesitating races, which even in our rapidly moving Europe, would require half a century ere they could surmount such atavistic attacks of patriotism and soil-attachment, and return once more to reason, that is to say, to "good Europeanism." And while digressing on this possibility, I happen to become an ear-witness of a conversation between two old patriots—they were evidently both hard of hearing and consequently spoke all the louder. "HE has as much, and knows as much, philosophy as a peasant or a corps-student," said the one—"he is still innocent. But what does that matter nowadays! It is the age of the masses: they lie on their belly before everything that is massive. And so also in politicis. A statesman who rears up for them a new Tower of Babel, some monstrosity of empire and power, they call 'great'—what does it matter that we more prudent and conservative ones do not meanwhile give up the old belief that it is only the great thought that gives greatness to an action or affair. Supposing a statesman were to bring his people into the position of being obliged henceforth to practise 'high politics,' for which they were by nature badly endowed and prepared, so that they would have to sacrifice their old and reliable virtues, out of love to a new and doubtful mediocrity;—supposing a statesman were to condemn his people generally to 'practise politics,' when they have hitherto had something better to do and think about, and when in the depths of their souls they have been unable to free themselves from a prudent loathing of the restlessness, emptiness, and noisy wranglings of the essentially politics-practising nations;—supposing such a statesman were to stimulate the slumbering passions and avidities of his people, were to make a stigma out of their former diffidence and delight in aloofness, an offence out of their exoticism and hidden permanency, were to depreciate their most radical proclivities, subvert their consciences, make their minds narrow, and their tastes 'national'—what! a statesman who should do all this, which his people would have to do penance for throughout their whole future, if they

had a future, such a statesman would be GREAT, would he?"—"Undoubtedly!" replied the other old patriot vehemently, "otherwise he COULD NOT have done it! It was mad perhaps to wish such a thing! But perhaps everything great has been just as mad at its commencement!"—"Misuse of words!" cried his interlocutor, contradictorily—"strong! strong! Strong and mad! NOT great!"—The old men had obviously become heated as they thus shouted their "truths" in each other's faces, but I, in my happiness and apartness, considered how soon a stronger one may become master of the strong, and also that there is a compensation for the intellectual superficialising of a nation—namely, in the deepening of another.

242. Whether we call it "civilization," or "humanising," or "progress," which now distinguishes the European, whether we call it simply, without praise or blame, by the political formula the DEMOCRATIC movement in Europe—behind all the moral and political foregrounds pointed to by such formulas, an immense PHYSIOLOGICAL PROCESS goes on, which is ever extending the process of the assimilation of Europeans, their increasing detachment from the conditions under which, climatically and hereditarily, united races originate, their increasing independence of every definite milieu, that for centuries would fain inscribe itself with equal demands on soul and body,—that is to say, the slow emergence of an essentially SUPER-NATIONAL and nomadic species of man, who possesses, physiologically speaking, a maximum of the art and power of adaptation as his typical distinction. This process of the EVOLVING EUROPEAN, which can be retarded in its TEMPO by great relapses, but will perhaps just gain and grow thereby in vehemence and depth—the still-raging storm and stress of "national sentiment" pertains to it, and also the anarchism which is appearing at present—this process will probably arrive at results on which its naive propagators and panegyrists, the apostles of "modern ideas," would least care to reckon. The same new conditions under which on an average a levelling and mediocrising of man will take place—a useful, industrious, variously serviceable, and clever gregarious man—are in the highest degree suitable to give rise to exceptional men of the most dangerous and attractive qualities. For, while the capacity for adaptation, which is every day trying changing conditions, and begins a new work with every generation, almost with every decade, makes the POWERFULNESS of the type impossible; while the collective impression of such future Europeans will probably be

that of numerous, talkative, weak-willed, and very handy workmen who REQUIRE a master, a commander, as they require their daily bread; while, therefore, the democratising of Europe will tend to the production of a type prepared for SLAVERY in the most subtle sense of the term: the STRONG man will necessarily in individual and exceptional cases, become stronger and richer than he has perhaps ever been before—owing to the unprejudicedness of his schooling, owing to the immense variety of practice, art, and disguise. I meant to say that the democratising of Europe is at the same time an involuntary arrangement for the rearing of TYRANTS—taking the word in all its meanings, even in its most spiritual sense.

243. I hear with pleasure that our sun is moving rapidly towards the constellation Hercules: and I hope that the men on this earth will do like the sun. And we foremost, we good Europeans!

244. There was a time when it was customary to call Germans "deep" by way of distinction; but now that the most successful type of new Germanism is covetous of quite other honours, and perhaps misses "smartness" in all that has depth, it is almost opportune and patriotic to doubt whether we did not formerly deceive ourselves with that commendation: in short, whether German depth is not at bottom something different and worse—and something from which, thank God, we are on the point of successfully ridding ourselves. Let us try, then, to relearn with regard to German depth; the only thing necessary for the purpose is a little vivisection of the German soul.—The German soul is above all manifold, varied in its source, aggregated and super-imposed, rather than actually built: this is owing to its origin. A German who would embolden himself to assert: "Two souls, alas, dwell in my breast," would make a bad guess at the truth, or, more correctly, he would come far short of the truth about the number of souls. As a people made up of the most extraordinary mixing and mingling of races, perhaps even with a preponderance of the pre-Aryan element as the "people of the centre" in every sense of the term, the Germans are more intangible, more ample, more contradictory, more unknown, more incalculable, more surprising, and even more terrifying than other peoples are to themselves:—they escape DEFINITION, and are thereby alone the despair of the French. It IS characteristic of the Germans that the question: "What is German?" never dies out among them. Kotzebue certainly knew his Germans well enough: "We are known," they cried

jubilantly to him—but Sand also thought he knew them. Jean Paul knew what he was doing when he declared himself incensed at Fichte's lying but patriotic flatteries and exaggerations,—but it is probable that Goethe thought differently about Germans from Jean Paul, even though he acknowledged him to be right with regard to Fichte. It is a question what Goethe really thought about the Germans?—But about many things around him he never spoke explicitly, and all his life he knew how to keep an astute silence—probably he had good reason for it. It is certain that it was not the "Wars of Independence" that made him look up more joyfully, any more than it was the French Revolution,—the event on account of which he RECONSTRUCTED his "Faust," and indeed the whole problem of "man," was the appearance of Napoleon. There are words of Goethe in which he condemns with impatient severity, as from a foreign land, that which Germans take a pride in, he once defined the famous German turn of mind as "Indulgence towards its own and others' weaknesses." Was he wrong? it is characteristic of Germans that one is seldom entirely wrong about them. The German soul has passages and galleries in it, there are caves, hiding-places, and dungeons therein, its disorder has much of the charm of the mysterious, the German is well acquainted with the bypaths to chaos. And as everything loves its symbol, so the German loves the clouds and all that is obscure, evolving, crepuscular, damp, and shrouded, it seems to him that everything uncertain, undeveloped, self-displacing, and growing is "deep". The German himself does not EXIST, he is BECOMING, he is "developing himself". "Development" is therefore the essentially German discovery and hit in the great domain of philosophical formulas,—a ruling idea, which, together with German beer and German music, is labouring to Germanise all Europe. Foreigners are astonished and attracted by the riddles which the conflicting nature at the basis of the German soul propounds to them (riddles which Hegel systematised and Richard Wagner has in the end set to music). "Good-natured and spiteful"—such a juxtaposition, preposterous in the case of every other people, is unfortunately only too often justified in Germany one has only to live for a while among Swabians to know this! The clumsiness of the German scholar and his social distastefulness agree alarmingly well with his physical rope-dancing and nimble boldness, of which all the Gods have learnt to be afraid. If any one wishes to see the "German soul" demonstrated ad oculos, let him only look at German taste, at German arts and manners what boorish indifference to "taste"! How the

noblest and the commonest stand there in juxtaposition! How disorderly and how rich is the whole constitution of this soul! The German DRAGS at his soul, he drags at everything he experiences. He digests his events badly; he never gets "done" with them; and German depth is often only a difficult, hesitating "digestion." And just as all chronic invalids, all dyspeptics like what is convenient, so the German loves "frankness" and "honesty"; it is so CONVENIENT to be frank and honest!—This confidingness, this complaisance, this showing-the-cards of German HONESTY, is probably the most dangerous and most successful disguise which the German is up to nowadays: it is his proper Mephistophelean art; with this he can "still achieve much"! The German lets himself go, and thereby gazes with faithful, blue, empty German eyes—and other countries immediately confound him with his dressing-gown!—I meant to say that, let "German depth" be what it will—among ourselves alone we perhaps take the liberty to laugh at it—we shall do well to continue henceforth to honour its appearance and good name, and not barter away too cheaply our old reputation as a people of depth for Prussian "smartness," and Berlin wit and sand. It is wise for a people to pose, and LET itself be regarded, as profound, clumsy, good-natured, honest, and foolish: it might even be—profound to do so! Finally, we should do honour to our name—we are not called the "TIUSCHE VOLK" (deceptive people) for nothing....

245. The "good old" time is past, it sang itself out in Mozart—how happy are WE that his ROCOCO still speaks to us, that his "good company," his tender enthusiasm, his childish delight in the Chinese and its flourishes, his courtesy of heart, his longing for the elegant, the amorous, the tripping, the tearful, and his belief in the South, can still appeal to SOMETHING LEFT in us! Ah, some time or other it will be over with it!—but who can doubt that it will be over still sooner with the intelligence and taste for Beethoven! For he was only the last echo of a break and transition in style, and NOT, like Mozart, the last echo of a great European taste which had existed for centuries. Beethoven is the intermediate event between an old mellow soul that is constantly breaking down, and a future over-young soul that is always COMING; there is spread over his music the twilight of eternal loss and eternal extravagant hope,—the same light in which Europe was bathed when it dreamed with Rousseau, when it danced round the Tree of Liberty of the Revolution, and finally almost fell down in adoration before Napoleon. But how rapidly does THIS very sentiment now pale, how

difficult nowadays is even the APPREHENSION of this sentiment, how strangely does the language of Rousseau, Schiller, Shelley, and Byron sound to our ear, in whom COLLECTIVELY the same fate of Europe was able to SPEAK, which knew how to SING in Beethoven!—Whatever German music came afterwards, belongs to Romanticism, that is to say, to a movement which, historically considered, was still shorter, more fleeting, and more superficial than that great interlude, the transition of Europe from Rousseau to Napoleon, and to the rise of democracy. Weber—but what do WE care nowadays for "Freischütz" and "Oberon"! Or Marschner's "Hans Heiling" and "Vampyre"! Or even Wagner's "Tannhäuser"! That is extinct, although not yet forgotten music. This whole music of Romanticism, besides, was not noble enough, was not musical enough, to maintain its position anywhere but in the theatre and before the masses; from the beginning it was second-rate music, which was little thought of by genuine musicians. It was different with Felix Mendelssohn, that halcyon master, who, on account of his lighter, purer, happier soul, quickly acquired admiration, and was equally quickly forgotten: as the beautiful EPISODE of German music. But with regard to Robert Schumann, who took things seriously, and has been taken seriously from the first—he was the last that founded a school,—do we not now regard it as a satisfaction, a relief, a deliverance, that this very Romanticism of Schumann's has been surmounted? Schumann, fleeing into the "Saxon Switzerland" of his soul, with a half Werther-like, half Jean-Paul-like nature (assuredly not like Beethoven! assuredly not like Byron!)—his MANFRED music is a mistake and a misunderstanding to the extent of injustice; Schumann, with his taste, which was fundamentally a PETTY taste (that is to say, a dangerous propensity—doubly dangerous among Germans—for quiet lyricism and intoxication of the feelings), going constantly apart, timidly withdrawing and retiring, a noble weakling who revelled in nothing but anonymous joy and sorrow, from the beginning a sort of girl and NOLI ME TANGERE—this Schumann was already merely a GERMAN event in music, and no longer a European event, as Beethoven had been, as in a still greater degree Mozart had been; with Schumann German music was threatened with its greatest danger, that of LOSING THE VOICE FOR THE SOUL OF EUROPE and sinking into a merely national affair.

246. What a torture are books written in German to a reader who has a THIRD ear! How indignantly he stands beside the slowly turning swamp of

sounds without tune and rhythms without dance, which Germans call a "book"! And even the German who READS books! How lazily, how reluctantly, how badly he reads! How many Germans know, and consider it obligatory to know, that there is ART in every good sentence—art which must be divined, if the sentence is to be understood! If there is a misunderstanding about its TEMPO, for instance, the sentence itself is misunderstood! That one must not be doubtful about the rhythm-determining syllables, that one should feel the breaking of the too-rigid symmetry as intentional and as a charm, that one should lend a fine and patient ear to every STACCATO and every RUBATO, that one should divine the sense in the sequence of the vowels and diphthongs, and how delicately and richly they can be tinted and retinted in the order of their arrangement—who among book-reading Germans is complaisant enough to recognize such duties and requirements, and to listen to so much art and intention in language? After all, one just "has no ear for it"; and so the most marked contrasts of style are not heard, and the most delicate artistry is as it were SQUANDERED on the deaf.—These were my thoughts when I noticed how clumsily and unintuitively two masters in the art of prose-writing have been confounded: one, whose words drop down hesitatingly and coldly, as from the roof of a damp cave—he counts on their dull sound and echo; and another who manipulates his language like a flexible sword, and from his arm down into his toes feels the dangerous bliss of the quivering, over-sharp blade, which wishes to bite, hiss, and cut.

247. How little the German style has to do with harmony and with the ear, is shown by the fact that precisely our good musicians themselves write badly. The German does not read aloud, he does not read for the ear, but only with his eyes; he has put his ears away in the drawer for the time. In antiquity when a man read—which was seldom enough—he read something to himself, and in a loud voice; they were surprised when any one read silently, and sought secretly the reason of it. In a loud voice: that is to say, with all the swellings, inflections, and variations of key and changes of TEMPO, in which the ancient PUBLIC world took delight. The laws of the written style were then the same as those of the spoken style; and these laws depended partly on the surprising development and refined requirements of the ear and larynx; partly on the strength, endurance, and power of the ancient lungs. In the ancient sense, a period is above all a physiological whole, inasmuch as it is comprised in one breath. Such periods as occur in

Demosthenes and Cicero, swelling twice and sinking twice, and all in one breath, were pleasures to the men of ANTIQUITY, who knew by their own schooling how to appreciate the virtue therein, the rareness and the difficulty in the deliverance of such a period;—WE have really no right to the BIG period, we modern men, who are short of breath in every sense! Those ancients, indeed, were all of them dilettanti in speaking, consequently connoisseurs, consequently critics—they thus brought their orators to the highest pitch; in the same manner as in the last century, when all Italian ladies and gentlemen knew how to sing, the virtuosship of song (and with it also the art of melody) reached its elevation. In Germany, however (until quite recently when a kind of platform eloquence began shyly and awkwardly enough to flutter its young wings), there was properly speaking only one kind of public and APPROXIMATELY artistical discourse—that delivered from the pulpit. The preacher was the only one in Germany who knew the weight of a syllable or a word, in what manner a sentence strikes, springs, rushes, flows, and comes to a close; he alone had a conscience in his ears, often enough a bad conscience: for reasons are not lacking why proficiency in oratory should be especially seldom attained by a German, or almost always too late. The masterpiece of German prose is therefore with good reason the masterpiece of its greatest preacher: the BIBLE has hitherto been the best German book. Compared with Luther's Bible, almost everything else is merely "literature"—something which has not grown in Germany, and therefore has not taken and does not take root in German hearts, as the Bible has done.

248. There are two kinds of geniuses: one which above all engenders and seeks to engender, and another which willingly lets itself be fructified and brings forth. And similarly, among the gifted nations, there are those on whom the woman's problem of pregnancy has devolved, and the secret task of forming, maturing, and perfecting—the Greeks, for instance, were a nation of this kind, and so are the French; and others which have to fructify and become the cause of new modes of life—like the Jews, the Romans, and, in all modesty be it asked: like the Germans?—nations tortured and enraptured by unknown fevers and irresistibly forced out of themselves, amorous and longing for foreign races (for such as "let themselves be fructified"), and withal imperious, like everything conscious of being full of generative force, and consequently empowered "by the grace of God."

These two kinds of geniuses seek each other like man and woman; but they also misunderstand each other—like man and woman.

249. Every nation has its own "Tartuffery," and calls that its virtue.—One does not know—cannot know, the best that is in one.

250. What Europe owes to the Jews?—Many things, good and bad, and above all one thing of the nature both of the best and the worst: the grand style in morality, the fearfulness and majesty of infinite demands, of infinite significations, the whole Romanticism and sublimity of moral questionableness—and consequently just the most attractive, ensnaring, and exquisite element in those iridescences and allurements to life, in the aftersheen of which the sky of our European culture, its evening sky, now glows—perhaps glows out. For this, we artists among the spectators and philosophers, are—grateful to the Jews.

251. It must be taken into the bargain, if various clouds and disturbances—in short, slight attacks of stupidity—pass over the spirit of a people that suffers and WANTS to suffer from national nervous fever and political ambition: for instance, among present-day Germans there is alternately the anti-French folly, the anti-Semitic folly, the anti-Polish folly, the Christian-romantic folly, the Wagnerian folly, the Teutonic folly, the Prussian folly (just look at those poor historians, the Sybels and Treitschkes, and their closely bandaged heads), and whatever else these little obscurations of the German spirit and conscience may be called. May it be forgiven me that I, too, when on a short daring sojourn on very infected ground, did not remain wholly exempt from the disease, but like every one else, began to entertain thoughts about matters which did not concern me—the first symptom of political infection. About the Jews, for instance, listen to the following:—I have never yet met a German who was favourably inclined to the Jews; and however decided the repudiation of actual anti-Semitism may be on the part of all prudent and political men, this prudence and policy is not perhaps directed against the nature of the sentiment itself, but only against its dangerous excess, and especially against the distasteful and infamous expression of this excess of sentiment;—on this point we must not deceive ourselves. That Germany has amply SUFFICIENT Jews, that the German stomach, the German blood, has difficulty (and will long have difficulty) in disposing only of this quantity of "Jew"—as the Italian, the Frenchman, and the Englishman have done by means of a stronger digestion:—that is the

unmistakable declaration and language of a general instinct, to which one must listen and according to which one must act. "Let no more Jews come in! And shut the doors, especially towards the East (also towards Austria)!"—thus commands the instinct of a people whose nature is still feeble and uncertain, so that it could be easily wiped out, easily extinguished, by a stronger race. The Jews, however, are beyond all doubt the strongest, toughest, and purest race at present living in Europe, they know how to succeed even under the worst conditions (in fact better than under favourable ones), by means of virtues of some sort, which one would like nowadays to label as vices—owing above all to a resolute faith which does not need to be ashamed before "modern ideas", they alter only, WHEN they do alter, in the same way that the Russian Empire makes its conquest—as an empire that has plenty of time and is not of yesterday—namely, according to the principle, "as slowly as possible"! A thinker who has the future of Europe at heart, will, in all his perspectives concerning the future, calculate upon the Jews, as he will calculate upon the Russians, as above all the surest and likeliest factors in the great play and battle of forces. That which is at present called a "nation" in Europe, and is really rather a RES FACTA than NATA (indeed, sometimes confusingly similar to a RES FICTA ET PICTA), is in every case something evolving, young, easily displaced, and not yet a race, much less such a race AERE PERENNUS, as the Jews are such "nations" should most carefully avoid all hot-headed rivalry and hostility! It is certain that the Jews, if they desired—or if they were driven to it, as the anti-Semites seem to wish—COULD now have the ascendancy, nay, literally the supremacy, over Europe, that they are NOT working and planning for that end is equally certain. Meanwhile, they rather wish and desire, even somewhat importunately, to be insorbed and absorbed by Europe, they long to be finally settled, authorized, and respected somewhere, and wish to put an end to the nomadic life, to the "wandering Jew",—and one should certainly take account of this impulse and tendency, and MAKE ADVANCES to it (it possibly betokens a mitigation of the Jewish instincts) for which purpose it would perhaps be useful and fair to banish the anti-Semitic bawlers out of the country. One should make advances with all prudence, and with selection, pretty much as the English nobility do. It stands to reason that the more powerful and strongly marked types of new Germanism could enter into relation with the Jews with the least hesitation, for instance, the nobleman officer from the Prussian border

it would be interesting in many ways to see whether the genius for money and patience (and especially some intellect and intellectuality—sadly lacking in the place referred to) could not in addition be annexed and trained to the hereditary art of commanding and obeying—for both of which the country in question has now a classic reputation. But here it is expedient to break off my festal discourse and my sprightly Teutomania for I have already reached my SERIOUS TOPIC, the "European problem," as I understand it, the rearing of a new ruling caste for Europe.

252. They are not a philosophical race—the English: Bacon represents an ATTACK on the philosophical spirit generally, Hobbes, Hume, and Locke, an abasement, and a depreciation of the idea of a "philosopher" for more than a century. It was AGAINST Hume that Kant arose and raised himself; it was Locke of whom Schelling RIGHTLY said, "JE MEPRISE LOCKE"; in the struggle against the English mechanical stultification of the world, Hegel and Schopenhauer (along with Goethe) were of one accord; the two hostile brother-geniuses in philosophy, who pushed in different directions towards the opposite poles of German thought, and thereby wronged each other as only brothers will do.—What is lacking in England, and has always been lacking, that half-actor and rhetorician knew well enough, the absurd muddle-head, Carlyle, who sought to conceal under passionate grimaces what he knew about himself: namely, what was LACKING in Carlyle—real POWER of intellect, real DEPTH of intellectual perception, in short, philosophy. It is characteristic of such an unphilosophical race to hold on firmly to Christianity—they NEED its discipline for "moralizing" and humanizing. The Englishman, more gloomy, sensual, headstrong, and brutal than the German—is for that very reason, as the baser of the two, also the most pious: he has all the MORE NEED of Christianity. To finer nostrils, this English Christianity itself has still a characteristic English taint of spleen and alcoholic excess, for which, owing to good reasons, it is used as an antidote—the finer poison to neutralize the coarser: a finer form of poisoning is in fact a step in advance with coarse-mannered people, a step towards spiritualization. The English coarseness and rustic demureness is still most satisfactorily disguised by Christian pantomime, and by praying and psalm-singing (or, more correctly, it is thereby explained and differently expressed); and for the herd of drunkards and rakes who formerly learned moral grunting under the influence of Methodism (and more recently as the "Salvation Army"), a penitential fit

may really be the relatively highest manifestation of "humanity" to which they can be elevated: so much may reasonably be admitted. That, however, which offends even in the humanest Englishman is his lack of music, to speak figuratively (and also literally): he has neither rhythm nor dance in the movements of his soul and body; indeed, not even the desire for rhythm and dance, for "music." Listen to him speaking; look at the most beautiful Englishwoman WALKING—in no country on earth are there more beautiful doves and swans; finally, listen to them singing! But I ask too much...

253. There are truths which are best recognized by mediocre minds, because they are best adapted for them, there are truths which only possess charms and seductive power for mediocre spirits:—one is pushed to this probably unpleasant conclusion, now that the influence of respectable but mediocre Englishmen—I may mention Darwin, John Stuart Mill, and Herbert Spencer—begins to gain the ascendancy in the middle-class region of European taste. Indeed, who could doubt that it is a useful thing for SUCH minds to have the ascendancy for a time? It would be an error to consider the highly developed and independently soaring minds as specially qualified for determining and collecting many little common facts, and deducing conclusions from them; as exceptions, they are rather from the first in no very favourable position towards those who are "the rules." After all, they have more to do than merely to perceive:—in effect, they have to BE something new, they have to SIGNIFY something new, they have to REPRESENT new values! The gulf between knowledge and capacity is perhaps greater, and also more mysterious, than one thinks: the capable man in the grand style, the creator, will possibly have to be an ignorant person;—while on the other hand, for scientific discoveries like those of Darwin, a certain narrowness, aridity, and industrious carefulness (in short, something English) may not be unfavourable for arriving at them.—Finally, let it not be forgotten that the English, with their profound mediocrity, brought about once before a general depression of European intelligence.

What is called "modern ideas," or "the ideas of the eighteenth century," or "French ideas"—that, consequently, against which the GERMAN mind rose up with profound disgust—is of English origin, there is no doubt about it. The French were only the apes and actors of these ideas, their best soldiers, and likewise, alas! their first and profoundest VICTIMS; for owing to the diabolical Anglomania of "modern ideas," the AME FRANCAIS has

in the end become so thin and emaciated, that at present one recalls its sixteenth and seventeenth centuries, its profound, passionate strength, its inventive excellency, almost with disbelief. One must, however, maintain this verdict of historical justice in a determined manner, and defend it against present prejudices and appearances: the European NOBLESSE—of sentiment, taste, and manners, taking the word in every high sense—is the work and invention of FRANCE; the European ignobleness, the plebeianism of modern ideas—is ENGLAND'S work and invention.

254. Even at present France is still the seat of the most intellectual and refined culture of Europe, it is still the high school of taste; but one must know how to find this "France of taste." He who belongs to it keeps himself well concealed:—they may be a small number in whom it lives and is embodied, besides perhaps being men who do not stand upon the strongest legs, in part fatalists, hypochondriacs, invalids, in part persons over-indulged, over-refined, such as have the AMBITION to conceal themselves.

They have all something in common: they keep their ears closed in presence of the delirious folly and noisy spouting of the democratic BOURGEOIS. In fact, a besotted and brutalized France at present sprawls in the foreground—it recently celebrated a veritable orgy of bad taste, and at the same time of self-admiration, at the funeral of Victor Hugo. There is also something else common to them: a predilection to resist intellectual Germanizing—and a still greater inability to do so! In this France of intellect, which is also a France of pessimism, Schopenhauer has perhaps become more at home, and more indigenious than he has ever been in Germany; not to speak of Heinrich Heine, who has long ago been re-incarnated in the more refined and fastidious lyrists of Paris; or of Hegel, who at present, in the form of Taine—the FIRST of living historians—exercises an almost tyrannical influence. As regards Richard Wagner, however, the more French music learns to adapt itself to the actual needs of the AME MODERNE, the more will it "Wagnerite"; one can safely predict that beforehand,—it is already taking place sufficiently! There are, however, three things which the French can still boast of with pride as their heritage and possession, and as indelible tokens of their ancient intellectual superiority in Europe, in spite of all voluntary or involuntary Germanizing and vulgarizing of taste. FIRSTLY, the capacity for artistic emotion, for devotion to "form," for which the expression, L'ART POUR L'ART, along with numerous others, has been invented:—such capacity has not been

lacking in France for three centuries; and owing to its reverence for the "small number," it has again and again made a sort of chamber music of literature possible, which is sought for in vain elsewhere in Europe.—The SECOND thing whereby the French can lay claim to a superiority over Europe is their ancient, many-sided, MORALISTIC culture, owing to which one finds on an average, even in the petty ROMANCIERS of the newspapers and chance BOULEVARDIERS DE PARIS, a psychological sensitiveness and curiosity, of which, for example, one has no conception (to say nothing of the thing itself!) in Germany. The Germans lack a couple of centuries of the moralistic work requisite thereto, which, as we have said, France has not grudged: those who call the Germans "naive" on that account give them commendation for a defect. (As the opposite of the German inexperience and innocence IN VOLUPTATE PSYCHOLOGICA, which is not too remotely associated with the tediousness of German intercourse,—and as the most successful expression of genuine French curiosity and inventive talent in this domain of delicate thrills, Henri Beyle may be noted; that remarkable anticipatory and forerunning man, who, with a Napoleonic TEMPO, traversed HIS Europe, in fact, several centuries of the European soul, as a surveyor and discoverer thereof:—it has required two generations to OVERTAKE him one way or other, to divine long afterwards some of the riddles that perplexed and enraptured him—this strange Epicurean and man of interrogation, the last great psychologist of France).—There is yet a THIRD claim to superiority: in the French character there is a successful half-way synthesis of the North and South, which makes them comprehend many things, and enjoins upon them other things, which an Englishman can never comprehend. Their temperament, turned alternately to and from the South, in which from time to time the Provençal and Ligurian blood froths over, preserves them from the dreadful, northern grey-in-grey, from sunless conceptual-spectrism and from poverty of blood—our GERMAN infirmity of taste, for the excessive prevalence of which at the present moment, blood and iron, that is to say "high politics," has with great resolution been prescribed (according to a dangerous healing art, which bids me wait and wait, but not yet hope).—There is also still in France a pre-understanding and ready welcome for those rarer and rarely gratified men, who are too comprehensive to find satisfaction in any kind of fatherlandism, and know how to love the South when in the North and the North when in the South—the born Midlanders, the "good Europeans." For

them BIZET has made music, this latest genius, who has seen a new beauty and seduction,—who has discovered a piece of the SOUTH IN MUSIC.

255. I hold that many precautions should be taken against German music. Suppose a person loves the South as I love it—as a great school of recovery for the most spiritual and the most sensuous ills, as a boundless solar profusion and effulgence which o'erspreads a sovereign existence believing in itself—well, such a person will learn to be somewhat on his guard against German music, because, in injuring his taste anew, it will also injure his health anew. Such a Southerner, a Southerner not by origin but by BELIEF, if he should dream of the future of music, must also dream of it being freed from the influence of the North; and must have in his ears the prelude to a deeper, mightier, and perhaps more perverse and mysterious music, a super-German music, which does not fade, pale, and die away, as all German music does, at the sight of the blue, wanton sea and the Mediterranean clearness of sky—a super-European music, which holds its own even in presence of the brown sunsets of the desert, whose soul is akin to the palm-tree, and can be at home and can roam with big, beautiful, lonely beasts of prey... I could imagine a music of which the rarest charm would be that it knew nothing more of good and evil; only that here and there perhaps some sailor's home-sickness, some golden shadows and tender weaknesses might sweep lightly over it; an art which, from the far distance, would see the colours of a sinking and almost incomprehensible MORAL world fleeing towards it, and would be hospitable enough and profound enough to receive such belated fugitives.

256. Owing to the morbid estrangement which the nationality-craze has induced and still induces among the nations of Europe, owing also to the short-sighted and hasty-handed politicians, who with the help of this craze, are at present in power, and do not suspect to what extent the disintegrating policy they pursue must necessarily be only an interlude policy—owing to all this and much else that is altogether unmentionable at present, the most unmistakable signs that EUROPE WISHES TO BE ONE, are now overlooked, or arbitrarily and falsely misinterpreted. With all the more profound and large-minded men of this century, the real general tendency of the mysterious labour of their souls was to prepare the way for that new SYNTHESIS, and tentatively to anticipate the European of the future; only in their simulations, or in their weaker moments, in old age perhaps, did they belong to the "fatherlands"—they only rested from themselves when

they became "patriots." I think of such men as Napoleon, Goethe, Beethoven, Stendhal, Heinrich Heine, Schopenhauer: it must not be taken amiss if I also count Richard Wagner among them, about whom one must not let oneself be deceived by his own misunderstandings (geniuses like him have seldom the right to understand themselves), still less, of course, by the unseemly noise with which he is now resisted and opposed in France: the fact remains, nevertheless, that Richard Wagner and the LATER FRENCH ROMANTICISM of the forties, are most closely and intimately related to one another. They are akin, fundamentally akin, in all the heights and depths of their requirements; it is Europe, the ONE Europe, whose soul presses urgently and longingly, outwards and upwards, in their multifarious and boisterous art—whither? into a new light? towards a new sun? But who would attempt to express accurately what all these masters of new modes of speech could not express distinctly? It is certain that the same storm and stress tormented them, that they SOUGHT in the same manner, these last great seekers! All of them steeped in literature to their eyes and ears—the first artists of universal literary culture—for the most part even themselves writers, poets, intermediaries and blenders of the arts and the senses (Wagner, as musician is reckoned among painters, as poet among musicians, as artist generally among actors); all of them fanatics for EXPRESSION "at any cost"—I specially mention Delacroix, the nearest related to Wagner; all of them great discoverers in the realm of the sublime, also of the loathsome and dreadful, still greater discoverers in effect, in display, in the art of the show-shop; all of them talented far beyond their genius, out and out VIRTUOSI, with mysterious accesses to all that seduces, allures, constrains, and upsets; born enemies of logic and of the straight line, hankering after the strange, the exotic, the monstrous, the crooked, and the self-contradictory; as men, Tantaluses of the will, plebeian parvenus, who knew themselves to be incapable of a noble TEMPO or of a LENTO in life and action—think of Balzac, for instance,—unrestrained workers, almost destroying themselves by work; antinomians and rebels in manners, ambitious and insatiable, without equilibrium and enjoyment; all of them finally shattering and sinking down at the Christian cross (and with right and reason, for who of them would have been sufficiently profound and sufficiently original for an ANTI-CHRISTIAN philosophy?);—on the whole, a boldly daring, splendidly overbearing, high-flying, and aloft-up-dragging class of higher men, who had first to teach their century—and it is

the century of the MASSES—the conception "higher man."... Let the German friends of Richard Wagner advise together as to whether there is anything purely German in the Wagnerian art, or whether its distinction does not consist precisely in coming from SUPER-GERMAN sources and impulses: in which connection it may not be underrated how indispensable Paris was to the development of his type, which the strength of his instincts made him long to visit at the most decisive time—and how the whole style of his proceedings, of his self-apostolate, could only perfect itself in sight of the French socialistic original. On a more subtle comparison it will perhaps be found, to the honour of Richard Wagner's German nature, that he has acted in everything with more strength, daring, severity, and elevation than a nineteenth-century Frenchman could have done—owing to the circumstance that we Germans are as yet nearer to barbarism than the French;—perhaps even the most remarkable creation of Richard Wagner is not only at present, but for ever inaccessible, incomprehensible, and inimitable to the whole latter-day Latin race: the figure of Siegfried, that VERY FREE man, who is probably far too free, too hard, too cheerful, too healthy, too ANTI-CATHOLIC for the taste of old and mellow civilized nations. He may even have been a sin against Romanticism, this anti-Latin Siegfried: well, Wagner atoned amply for this sin in his old sad days, when—anticipating a taste which has meanwhile passed into politics—he began, with the religious vehemence peculiar to him, to preach, at least, THE WAY TO ROME, if not to walk therein.—That these last words may not be misunderstood, I will call to my aid a few powerful rhymes, which will even betray to less delicate ears what I mean—what I mean COUNTER TO the "last Wagner" and his Parsifal music:—

—Is this our mode?—From German heart came this vexed ululating?  
From German body, this self-lacerating? Is ours this priestly hand-dilation,  
This incense-fuming exaltation? Is ours this faltering, falling, shambling,  
This quite uncertain ding-dong-dangling? This sly nun-ogling, Ave-hour-  
bell ringing, This wholly false enraptured heaven-o'erspringing?—Is this  
our mode?—Think well!—ye still wait for admission—For what ye hear is  
ROME—ROME'S FAITH BY INTUITION!

## CHAPTER IX. WHAT IS NOBLE?

257. EVERY elevation of the type "man," has hitherto been the work of an aristocratic society and so it will always be—a society believing in a long scale of gradations of rank and differences of worth among human beings, and requiring slavery in some form or other. Without the PATHOS OF DISTANCE, such as grows out of the incarnated difference of classes, out of the constant out-looking and down-looking of the ruling caste on subordinates and instruments, and out of their equally constant practice of obeying and commanding, of keeping down and keeping at a distance—that other more mysterious pathos could never have arisen, the longing for an ever new widening of distance within the soul itself, the formation of ever higher, rarer, further, more extended, more comprehensive states, in short, just the elevation of the type "man," the continued "self-surmounting of man," to use a moral formula in a supermoral sense. To be sure, one must not resign oneself to any humanitarian illusions about the history of the origin of an aristocratic society (that is to say, of the preliminary condition for the elevation of the type "man"): the truth is hard. Let us acknowledge unprejudicedly how every higher civilization hitherto has ORIGINATED! Men with a still natural nature, barbarians in every terrible sense of the word, men of prey, still in possession of unbroken strength of will and desire for power, threw themselves upon weaker, more moral, more peaceful races (perhaps trading or cattle-rearing communities), or upon old mellow civilizations in which the final vital force was flickering out in brilliant fireworks of wit and depravity. At the commencement, the noble caste was always the barbarian caste: their superiority did not consist first of all in their physical, but in their psychical power—they were more COMPLETE men (which at every point also implies the same as "more complete beasts").

258. Corruption—as the indication that anarchy threatens to break out among the instincts, and that the foundation of the emotions, called "life," is convulsed—is something radically different according to the organization in which it manifests itself. When, for instance, an aristocracy like that of France at the beginning of the Revolution, flung away its privileges with

sublime disgust and sacrificed itself to an excess of its moral sentiments, it was corruption:—it was really only the closing act of the corruption which had existed for centuries, by virtue of which that aristocracy had abdicated step by step its lordly prerogatives and lowered itself to a FUNCTION of royalty (in the end even to its decoration and parade-dress). The essential thing, however, in a good and healthy aristocracy is that it should not regard itself as a function either of the kingship or the commonwealth, but as the SIGNIFICANCE and highest justification thereof—that it should therefore accept with a good conscience the sacrifice of a legion of individuals, who, FOR ITS SAKE, must be suppressed and reduced to imperfect men, to slaves and instruments. Its fundamental belief must be precisely that society is NOT allowed to exist for its own sake, but only as a foundation and scaffolding, by means of which a select class of beings may be able to elevate themselves to their higher duties, and in general to a higher EXISTENCE: like those sun-seeking climbing plants in Java—they are called Sipo Matador,—which encircle an oak so long and so often with their arms, until at last, high above it, but supported by it, they can unfold their tops in the open light, and exhibit their happiness.

259. To refrain mutually from injury, from violence, from exploitation, and put one's will on a par with that of others: this may result in a certain rough sense in good conduct among individuals when the necessary conditions are given (namely, the actual similarity of the individuals in amount of force and degree of worth, and their co-relation within one organization). As soon, however, as one wished to take this principle more generally, and if possible even as the FUNDAMENTAL PRINCIPLE OF SOCIETY, it would immediately disclose what it really is—namely, a Will to the DENIAL of life, a principle of dissolution and decay. Here one must think profoundly to the very basis and resist all sentimental weakness: life itself is ESSENTIALLY appropriation, injury, conquest of the strange and weak, suppression, severity, obtrusion of peculiar forms, incorporation, and at the least, putting it mildest, exploitation;—but why should one for ever use precisely these words on which for ages a disparaging purpose has been stamped? Even the organization within which, as was previously supposed, the individuals treat each other as equal—it takes place in every healthy aristocracy—must itself, if it be a living and not a dying organization, do all that towards other bodies, which the individuals within it refrain from doing to each other it will have to be the incarnated Will to Power, it will

endeavour to grow, to gain ground, attract to itself and acquire ascendancy—not owing to any morality or immorality, but because it LIVES, and because life IS precisely Will to Power. On no point, however, is the ordinary consciousness of Europeans more unwilling to be corrected than on this matter, people now rave everywhere, even under the guise of science, about coming conditions of society in which "the exploiting character" is to be absent—that sounds to my ears as if they promised to invent a mode of life which should refrain from all organic functions. "Exploitation" does not belong to a depraved, or imperfect and primitive society it belongs to the nature of the living being as a primary organic function, it is a consequence of the intrinsic Will to Power, which is precisely the Will to Life—Granting that as a theory this is a novelty—as a reality it is the FUNDAMENTAL FACT of all history let us be so far honest towards ourselves!

260. In a tour through the many finer and coarser moralities which have hitherto prevailed or still prevail on the earth, I found certain traits recurring regularly together, and connected with one another, until finally two primary types revealed themselves to me, and a radical distinction was brought to light. There is MASTER-MORALITY and SLAVE-MORALITY,—I would at once add, however, that in all higher and mixed civilizations, there are also attempts at the reconciliation of the two moralities, but one finds still oftener the confusion and mutual misunderstanding of them, indeed sometimes their close juxtaposition—even in the same man, within one soul. The distinctions of moral values have either originated in a ruling caste, pleasantly conscious of being different from the ruled—or among the ruled class, the slaves and dependents of all sorts. In the first case, when it is the rulers who determine the conception "good," it is the exalted, proud disposition which is regarded as the distinguishing feature, and that which determines the order of rank. The noble type of man separates from himself the beings in whom the opposite of this exalted, proud disposition displays itself he despises them. Let it at once be noted that in this first kind of morality the antithesis "good" and "bad" means practically the same as "noble" and "despicable",—the antithesis "good" and "EVIL" is of a different origin. The cowardly, the timid, the insignificant, and those thinking merely of narrow utility are despised; moreover, also, the distrustful, with their constrained glances, the self-abasing, the dog-like kind of men who let themselves be abused, the

mendicant flatterers, and above all the liars:—it is a fundamental belief of all aristocrats that the common people are untruthful. "We truthful ones"—the nobility in ancient Greece called themselves. It is obvious that everywhere the designations of moral value were at first applied to MEN; and were only derivatively and at a later period applied to ACTIONS; it is a gross mistake, therefore, when historians of morals start with questions like, "Why have sympathetic actions been praised?" The noble type of man regards HIMSELF as a determiner of values; he does not require to be approved of; he passes the judgment: "What is injurious to me is injurious in itself;" he knows that it is he himself only who confers honour on things; he is a CREATOR OF VALUES. He honours whatever he recognizes in himself: such morality equals self-glorification. In the foreground there is the feeling of plenitude, of power, which seeks to overflow, the happiness of high tension, the consciousness of a wealth which would fain give and bestow:—the noble man also helps the unfortunate, but not—or scarcely—out of pity, but rather from an impulse generated by the super-abundance of power. The noble man honours in himself the powerful one, him also who has power over himself, who knows how to speak and how to keep silence, who takes pleasure in subjecting himself to severity and hardness, and has reverence for all that is severe and hard. "Wotan placed a hard heart in my breast," says an old Scandinavian Saga: it is thus rightly expressed from the soul of a proud Viking. Such a type of man is even proud of not being made for sympathy; the hero of the Saga therefore adds warningly: "He who has not a hard heart when young, will never have one." The noble and brave who think thus are the furthest removed from the morality which sees precisely in sympathy, or in acting for the good of others, or in DESINTERESSEMENT, the characteristic of the moral; faith in oneself, pride in oneself, a radical enmity and irony towards "selflessness," belong as definitely to noble morality, as do a careless scorn and precaution in presence of sympathy and the "warm heart."—It is the powerful who KNOW how to honour, it is their art, their domain for invention. The profound reverence for age and for tradition—all law rests on this double reverence,—the belief and prejudice in favour of ancestors and unfavourable to newcomers, is typical in the morality of the powerful; and if, reversely, men of "modern ideas" believe almost instinctively in "progress" and the "future," and are more and more lacking in respect for old age, the ignoble origin of these "ideas" has complacently betrayed itself

thereby. A morality of the ruling class, however, is more especially foreign and irritating to present-day taste in the sternness of its principle that one has duties only to one's equals; that one may act towards beings of a lower rank, towards all that is foreign, just as seems good to one, or "as the heart desires," and in any case "beyond good and evil": it is here that sympathy and similar sentiments can have a place. The ability and obligation to exercise prolonged gratitude and prolonged revenge—both only within the circle of equals,—artfulness in retaliation, RAFFINEMENT of the idea in friendship, a certain necessity to have enemies (as outlets for the emotions of envy, quarrelsomeness, arrogance—in fact, in order to be a good FRIEND): all these are typical characteristics of the noble morality, which, as has been pointed out, is not the morality of "modern ideas," and is therefore at present difficult to realize, and also to unearth and disclose.—It is otherwise with the second type of morality, SLAVE-MORALITY. Supposing that the abused, the oppressed, the suffering, the unemancipated, the weary, and those uncertain of themselves should moralize, what will be the common element in their moral estimates? Probably a pessimistic suspicion with regard to the entire situation of man will find expression, perhaps a condemnation of man, together with his situation. The slave has an unfavourable eye for the virtues of the powerful; he has a skepticism and distrust, a REFINEMENT of distrust of everything "good" that is there honoured—he would fain persuade himself that the very happiness there is not genuine. On the other hand, THOSE qualities which serve to alleviate the existence of sufferers are brought into prominence and flooded with light; it is here that sympathy, the kind, helping hand, the warm heart, patience, diligence, humility, and friendliness attain to honour; for here these are the most useful qualities, and almost the only means of supporting the burden of existence. Slave-morality is essentially the morality of utility. Here is the seat of the origin of the famous antithesis "good" and "evil":—power and dangerousness are assumed to reside in the evil, a certain dreadfulness, subtlety, and strength, which do not admit of being despised. According to slave-morality, therefore, the "evil" man arouses fear; according to master-morality, it is precisely the "good" man who arouses fear and seeks to arouse it, while the bad man is regarded as the despicable being. The contrast attains its maximum when, in accordance with the logical consequences of slave-morality, a shade of depreciation—it may be slight and well-intentioned—at last attaches itself to the "good" man of this

morality; because, according to the servile mode of thought, the good man must in any case be the SAFE man: he is good-natured, easily deceived, perhaps a little stupid, un bonhomme. Everywhere that slave-morality gains the ascendancy, language shows a tendency to approximate the significations of the words "good" and "stupid."—A last fundamental difference: the desire for FREEDOM, the instinct for happiness and the refinements of the feeling of liberty belong as necessarily to slave-morals and morality, as artifice and enthusiasm in reverence and devotion are the regular symptoms of an aristocratic mode of thinking and estimating.—Hence we can understand without further detail why love AS A PASSION—it is our European specialty—must absolutely be of noble origin; as is well known, its invention is due to the Provencal poet-cavaliers, those brilliant, ingenious men of the "gai saber," to whom Europe owes so much, and almost owes itself.

261. Vanity is one of the things which are perhaps most difficult for a noble man to understand: he will be tempted to deny it, where another kind of man thinks he sees it self-evidently. The problem for him is to represent to his mind beings who seek to arouse a good opinion of themselves which they themselves do not possess—and consequently also do not "deserve,"—and who yet BELIEVE in this good opinion afterwards. This seems to him on the one hand such bad taste and so self-disrespectful, and on the other hand so grotesquely unreasonable, that he would like to consider vanity an exception, and is doubtful about it in most cases when it is spoken of. He will say, for instance: "I may be mistaken about my value, and on the other hand may nevertheless demand that my value should be acknowledged by others precisely as I rate it:—that, however, is not vanity (but self-conceit, or, in most cases, that which is called 'humility,' and also 'modesty')." Or he will even say: "For many reasons I can delight in the good opinion of others, perhaps because I love and honour them, and rejoice in all their joys, perhaps also because their good opinion endorses and strengthens my belief in my own good opinion, perhaps because the good opinion of others, even in cases where I do not share it, is useful to me, or gives promise of usefulness:—all this, however, is not vanity." The man of noble character must first bring it home forcibly to his mind, especially with the aid of history, that, from time immemorial, in all social strata in any way dependent, the ordinary man WAS only that which he PASSED FOR:—not being at all accustomed to fix values, he did not assign even to himself any

other value than that which his master assigned to him (it is the peculiar RIGHT OF MASTERS to create values). It may be looked upon as the result of an extraordinary atavism, that the ordinary man, even at present, is still always WAITING for an opinion about himself, and then instinctively submitting himself to it; yet by no means only to a "good" opinion, but also to a bad and unjust one (think, for instance, of the greater part of the self-appreciations and self-depreciations which believing women learn from their confessors, and which in general the believing Christian learns from his Church). In fact, conformably to the slow rise of the democratic social order (and its cause, the blending of the blood of masters and slaves), the originally noble and rare impulse of the masters to assign a value to themselves and to "think well" of themselves, will now be more and more encouraged and extended; but it has at all times an older, ampler, and more radically ingrained propensity opposed to it—and in the phenomenon of "vanity" this older propensity overmasters the younger. The vain person rejoices over EVERY good opinion which he hears about himself (quite apart from the point of view of its usefulness, and equally regardless of its truth or falsehood), just as he suffers from every bad opinion: for he subjects himself to both, he feels himself subjected to both, by that oldest instinct of subjection which breaks forth in him.—It is "the slave" in the vain man's blood, the remains of the slave's craftiness—and how much of the "slave" is still left in woman, for instance!—which seeks to SEDUCE to good opinions of itself; it is the slave, too, who immediately afterwards falls prostrate himself before these opinions, as though he had not called them forth.—And to repeat it again: vanity is an atavism.

262. A SPECIES originates, and a type becomes established and strong in the long struggle with essentially constant UNFAVOURABLE conditions. On the other hand, it is known by the experience of breeders that species which receive super-abundant nourishment, and in general a surplus of protection and care, immediately tend in the most marked way to develop variations, and are fertile in prodigies and monstrosities (also in monstrous vices). Now look at an aristocratic commonwealth, say an ancient Greek polis, or Venice, as a voluntary or involuntary contrivance for the purpose of REARING human beings; there are there men beside one another, thrown upon their own resources, who want to make their species prevail, chiefly because they MUST prevail, or else run the terrible danger of being exterminated. The favour, the super-abundance, the protection are

there lacking under which variations are fostered; the species needs itself as species, as something which, precisely by virtue of its hardness, its uniformity, and simplicity of structure, can in general prevail and make itself permanent in constant struggle with its neighbours, or with rebellious or rebellion-threatening vassals. The most varied experience teaches it what are the qualities to which it principally owes the fact that it still exists, in spite of all Gods and men, and has hitherto been victorious: these qualities it calls virtues, and these virtues alone it develops to maturity. It does so with severity, indeed it desires severity; every aristocratic morality is intolerant in the education of youth, in the control of women, in the marriage customs, in the relations of old and young, in the penal laws (which have an eye only for the degenerating): it counts intolerance itself among the virtues, under the name of "justice." A type with few, but very marked features, a species of severe, warlike, wisely silent, reserved, and reticent men (and as such, with the most delicate sensibility for the charm and nuances of society) is thus established, unaffected by the vicissitudes of generations; the constant struggle with uniform UNFAVOURABLE conditions is, as already remarked, the cause of a type becoming stable and hard. Finally, however, a happy state of things results, the enormous tension is relaxed; there are perhaps no more enemies among the neighbouring peoples, and the means of life, even of the enjoyment of life, are present in superabundance. With one stroke the bond and constraint of the old discipline severs: it is no longer regarded as necessary, as a condition of existence—if it would continue, it can only do so as a form of LUXURY, as an archaizing TASTE. Variations, whether they be deviations (into the higher, finer, and rarer), or deteriorations and monstrosities, appear suddenly on the scene in the greatest exuberance and splendour; the individual dares to be individual and detach himself. At this turning-point of history there manifest themselves, side by side, and often mixed and entangled together, a magnificent, manifold, virgin-forest-like up-growth and up-striving, a kind of TROPICAL TEMPO in the rivalry of growth, and an extraordinary decay and self-destruction, owing to the savagely opposing and seemingly exploding egoisms, which strive with one another "for sun and light," and can no longer assign any limit, restraint, or forbearance for themselves by means of the hitherto existing morality. It was this morality itself which piled up the strength so enormously, which bent the bow in so threatening a manner:—it is now "out of date," it is getting "out of date."

The dangerous and disquieting point has been reached when the greater, more manifold, more comprehensive life IS LIVED BEYOND the old morality; the "individual" stands out, and is obliged to have recourse to his own law-giving, his own arts and artifices for self-preservation, self-elevation, and self-deliverance. Nothing but new "Whys," nothing but new "Hows," no common formulas any longer, misunderstanding and disregard in league with each other, decay, deterioration, and the loftiest desires frightfully entangled, the genius of the race overflowing from all the cornucopias of good and bad, a portentous simultaneousness of Spring and Autumn, full of new charms and mysteries peculiar to the fresh, still inexhausted, still unwearied corruption. Danger is again present, the mother of morality, great danger; this time shifted into the individual, into the neighbour and friend, into the street, into their own child, into their own heart, into all the most personal and secret recesses of their desires and volitions. What will the moral philosophers who appear at this time have to preach? They discover, these sharp onlookers and loafers, that the end is quickly approaching, that everything around them decays and produces decay, that nothing will endure until the day after tomorrow, except one species of man, the incurably MEDIOCRE. The mediocre alone have a prospect of continuing and propagating themselves—they will be the men of the future, the sole survivors; "be like them! become mediocre!" is now the only morality which has still a significance, which still obtains a hearing.—But it is difficult to preach this morality of mediocrity! it can never avow what it is and what it desires! it has to talk of moderation and dignity and duty and brotherly love—it will have difficulty IN CONCEALING ITS IRONY!

263. There is an INSTINCT FOR RANK, which more than anything else is already the sign of a HIGH rank; there is a DELIGHT in the NUANCES of reverence which leads one to infer noble origin and habits. The refinement, goodness, and loftiness of a soul are put to a perilous test when something passes by that is of the highest rank, but is not yet protected by the awe of authority from obtrusive touches and incivilities: something that goes its way like a living touchstone, undistinguished, undiscovered, and tentative, perhaps voluntarily veiled and disguised. He whose task and practice it is to investigate souls, will avail himself of many varieties of this very art to determine the ultimate value of a soul, the unalterable, innate order of rank to which it belongs: he will test it by its INSTINCT FOR

REVERENCE. DIFFERENCE ENGENDRE HAINE: the vulgarity of many a nature spurts up suddenly like dirty water, when any holy vessel, any jewel from closed shrines, any book bearing the marks of great destiny, is brought before it; while on the other hand, there is an involuntary silence, a hesitation of the eye, a cessation of all gestures, by which it is indicated that a soul FEELS the nearness of what is worthiest of respect. The way in which, on the whole, the reverence for the BIBLE has hitherto been maintained in Europe, is perhaps the best example of discipline and refinement of manners which Europe owes to Christianity: books of such profoundness and supreme significance require for their protection an external tyranny of authority, in order to acquire the PERIOD of thousands of years which is necessary to exhaust and unriddle them. Much has been achieved when the sentiment has been at last instilled into the masses (the shallow-pates and the boobies of every kind) that they are not allowed to touch everything, that there are holy experiences before which they must take off their shoes and keep away the unclean hand—it is almost their highest advance towards humanity. On the contrary, in the so-called cultured classes, the believers in "modern ideas," nothing is perhaps so repulsive as their lack of shame, the easy insolence of eye and hand with which they touch, taste, and finger everything; and it is possible that even yet there is more RELATIVE nobility of taste, and more tact for reverence among the people, among the lower classes of the people, especially among peasants, than among the newspaper-reading DEMIMONDE of intellect, the cultured class.

264. It cannot be effaced from a man's soul what his ancestors have preferably and most constantly done: whether they were perhaps diligent economizers attached to a desk and a cash-box, modest and citizen-like in their desires, modest also in their virtues; or whether they were accustomed to commanding from morning till night, fond of rude pleasures and probably of still ruder duties and responsibilities; or whether, finally, at one time or another, they have sacrificed old privileges of birth and possession, in order to live wholly for their faith—for their "God,"—as men of an inexorable and sensitive conscience, which blushes at every compromise. It is quite impossible for a man NOT to have the qualities and predilections of his parents and ancestors in his constitution, whatever appearances may suggest to the contrary. This is the problem of race. Granted that one knows something of the parents, it is admissible to draw a conclusion about the

child: any kind of offensive incontinence, any kind of sordid envy, or of clumsy self-vaunting—the three things which together have constituted the genuine plebeian type in all times—such must pass over to the child, as surely as bad blood; and with the help of the best education and culture one will only succeed in DECEIVING with regard to such heredity.—And what else does education and culture try to do nowadays! In our very democratic, or rather, very plebeian age, "education" and "culture" MUST be essentially the art of deceiving—deceiving with regard to origin, with regard to the inherited plebeianism in body and soul. An educator who nowadays preached truthfulness above everything else, and called out constantly to his pupils: "Be true! Be natural! Show yourselves as you are!"—even such a virtuous and sincere ass would learn in a short time to have recourse to the FURCA of Horace, NATURAM EXPELLERE: with what results? "Plebeianism" USQUE RECURRET. [FOOTNOTE: Horace's "Epistles," I. x. 24.]

265. At the risk of displeasing innocent ears, I submit that egoism belongs to the essence of a noble soul, I mean the unalterable belief that to a being such as "we," other beings must naturally be in subjection, and have to sacrifice themselves. The noble soul accepts the fact of his egoism without question, and also without consciousness of harshness, constraint, or arbitrariness therein, but rather as something that may have its basis in the primary law of things:—if he sought a designation for it he would say: "It is justice itself." He acknowledges under certain circumstances, which made him hesitate at first, that there are other equally privileged ones; as soon as he has settled this question of rank, he moves among those equals and equally privileged ones with the same assurance, as regards modesty and delicate respect, which he enjoys in intercourse with himself—in accordance with an innate heavenly mechanism which all the stars understand. It is an ADDITIONAL instance of his egoism, this artfulness and self-limitation in intercourse with his equals—every star is a similar egoist; he honours HIMSELF in them, and in the rights which he concedes to them, he has no doubt that the exchange of honours and rights, as the ESSENCE of all intercourse, belongs also to the natural condition of things. The noble soul gives as he takes, prompted by the passionate and sensitive instinct of requital, which is at the root of his nature. The notion of "favour" has, INTER PARES, neither significance nor good repute; there may be a sublime way of letting gifts as it were light upon one from above, and of

drinking them thirstily like dew-drops; but for those arts and displays the noble soul has no aptitude. His egoism hinders him here: in general, he looks "aloft" unwillingly—he looks either FORWARD, horizontally and deliberately, or downwards—HE KNOWS THAT HE IS ON A HEIGHT.

266. "One can only truly esteem him who does not LOOK OUT FOR himself."—Goethe to Rath Schlosser.

267. The Chinese have a proverb which mothers even teach their children: "SIAO-SIN" ("MAKE THY HEART SMALL"). This is the essentially fundamental tendency in latter-day civilizations. I have no doubt that an ancient Greek, also, would first of all remark the self-dwarfing in us Europeans of today—in this respect alone we should immediately be "distasteful" to him.

268. What, after all, is ignobleness?—Words are vocal symbols for ideas; ideas, however, are more or less definite mental symbols for frequently returning and concurring sensations, for groups of sensations. It is not sufficient to use the same words in order to understand one another: we must also employ the same words for the same kind of internal experiences, we must in the end have experiences IN COMMON. On this account the people of one nation understand one another better than those belonging to different nations, even when they use the same language; or rather, when people have lived long together under similar conditions (of climate, soil, danger, requirement, toil) there ORIGINATES therefrom an entity that "understands itself"—namely, a nation. In all souls a like number of frequently recurring experiences have gained the upper hand over those occurring more rarely: about these matters people understand one another rapidly and always more rapidly—the history of language is the history of a process of abbreviation; on the basis of this quick comprehension people always unite closer and closer. The greater the danger, the greater is the need of agreeing quickly and readily about what is necessary; not to misunderstand one another in danger—that is what cannot at all be dispensed with in intercourse. Also in all loves and friendships one has the experience that nothing of the kind continues when the discovery has been made that in using the same words, one of the two parties has feelings, thoughts, intuitions, wishes, or fears different from those of the other. (The fear of the "eternal misunderstanding": that is the good genius which so often keeps persons of different sexes from too hasty attachments, to which

sense and heart prompt them—and NOT some Schopenhauerian "genius of the species"!)

Whichever groups of sensations within a soul awaken most readily, begin to speak, and give the word of command—these decide as to the general order of rank of its values, and determine ultimately its list of desirable things. A man's estimates of value betray something of the STRUCTURE of his soul, and wherein it sees its conditions of life, its intrinsic needs. Supposing now that necessity has from all time drawn together only such men as could express similar requirements and similar experiences by similar symbols, it results on the whole that the easy COMMUNICABILITY of need, which implies ultimately the undergoing only of average and COMMON experiences, must have been the most potent of all the forces which have hitherto operated upon mankind. The more similar, the more ordinary people, have always had and are still having the advantage; the more select, more refined, more unique, and difficultly comprehensible, are liable to stand alone; they succumb to accidents in their isolation, and seldom propagate themselves. One must appeal to immense opposing forces, in order to thwart this natural, all-too-natural PROGRESSUS IN SIMILE, the evolution of man to the similar, the ordinary, the average, the gregarious—to the IGNOBLE—!

269. The more a psychologist—a born, an unavoidable psychologist and soul-diviner—turns his attention to the more select cases and individuals, the greater is his danger of being suffocated by sympathy: he NEEDS sternness and cheerfulness more than any other man. For the corruption, the ruination of higher men, of the more unusually constituted souls, is in fact, the rule: it is dreadful to have such a rule always before one's eyes. The manifold torment of the psychologist who has discovered this ruination, who discovers once, and then discovers ALMOST repeatedly throughout all history, this universal inner "desperateness" of higher men, this eternal "too late!" in every sense—may perhaps one day be the cause of his turning with bitterness against his own lot, and of his making an attempt at self-destruction—of his "going to ruin" himself. One may perceive in almost every psychologist a tell-tale inclination for delightful intercourse with commonplace and well-ordered men; the fact is thereby disclosed that he always requires healing, that he needs a sort of flight and forgetfulness, away from what his insight and incisiveness—from what his "business"—has laid upon his conscience. The fear of his memory is peculiar to him. He is easily silenced by the judgment of others; he hears with unmoved

countenance how people honour, admire, love, and glorify, where he has PERCEIVED—or he even conceals his silence by expressly assenting to some plausible opinion. Perhaps the paradox of his situation becomes so dreadful that, precisely where he has learnt GREAT SYMPATHY, together with great CONTEMPT, the multitude, the educated, and the visionaries, have on their part learnt great reverence—reverence for "great men" and marvelous animals, for the sake of whom one blesses and honours the fatherland, the earth, the dignity of mankind, and one's own self, to whom one points the young, and in view of whom one educates them. And who knows but in all great instances hitherto just the same happened: that the multitude worshipped a God, and that the "God" was only a poor sacrificial animal! SUCCESS has always been the greatest liar—and the "work" itself is a success; the great statesman, the conqueror, the discoverer, are disguised in their creations until they are unrecognizable; the "work" of the artist, of the philosopher, only invents him who has created it, is REPUTED to have created it; the "great men," as they are revered, are poor little fictions composed afterwards; in the world of historical values spurious coinage PREVAILS. Those great poets, for example, such as Byron, Musset, Poe, Leopardi, Kleist, Gogol (I do not venture to mention much greater names, but I have them in my mind), as they now appear, and were perhaps obliged to be: men of the moment, enthusiastic, sensuous, and childish, light-minded and impulsive in their trust and distrust; with souls in which usually some flaw has to be concealed; often taking revenge with their works for an internal defilement, often seeking forgetfulness in their soaring from a too true memory, often lost in the mud and almost in love with it, until they become like the Will-o'-the-Wisps around the swamps, and PRETEND TO BE stars—the people then call them idealists,—often struggling with protracted disgust, with an ever-reappearing phantom of disbelief, which makes them cold, and obliges them to languish for GLORIA and devour "faith as it is" out of the hands of intoxicated adulators:—what a TORTURE these great artists are and the so-called higher men in general, to him who has once found them out! It is thus conceivable that it is just from woman—who is clairvoyant in the world of suffering, and also unfortunately eager to help and save to an extent far beyond her powers—that THEY have learnt so readily those outbreaks of boundless devoted SYMPATHY, which the multitude, above all the reverent multitude, do not understand, and overwhelm with prying and self-

gratifying interpretations. This sympathizing invariably deceives itself as to its power; woman would like to believe that love can do EVERYTHING—it is the SUPERSTITION peculiar to her. Alas, he who knows the heart finds out how poor, helpless, pretentious, and blundering even the best and deepest love is—he finds that it rather DESTROYS than saves!—It is possible that under the holy fable and travesty of the life of Jesus there is hidden one of the most painful cases of the martyrdom of KNOWLEDGE ABOUT LOVE: the martyrdom of the most innocent and most craving heart, that never had enough of any human love, that DEMANDED love, that demanded inexorably and frantically to be loved and nothing else, with terrible outbursts against those who refused him their love; the story of a poor soul insatiated and insatiable in love, that had to invent hell to send thither those who WOULD NOT love him—and that at last, enlightened about human love, had to invent a God who is entire love, entire CAPACITY for love—who takes pity on human love, because it is so paltry, so ignorant! He who has such sentiments, he who has such KNOWLEDGE about love—SEEKS for death!—But why should one deal with such painful matters? Provided, of course, that one is not obliged to do so.

270. The intellectual haughtiness and loathing of every man who has suffered deeply—it almost determines the order of rank HOW deeply men can suffer—the chilling certainty, with which he is thoroughly imbued and coloured, that by virtue of his suffering he KNOWS MORE than the shrewdest and wisest can ever know, that he has been familiar with, and "at home" in, many distant, dreadful worlds of which "YOU know nothing"!—this silent intellectual haughtiness of the sufferer, this pride of the elect of knowledge, of the "initiated," of the almost sacrificed, finds all forms of disguise necessary to protect itself from contact with officious and sympathizing hands, and in general from all that is not its equal in suffering. Profound suffering makes noble: it separates.—One of the most refined forms of disguise is Epicurism, along with a certain ostentatious boldness of taste, which takes suffering lightly, and puts itself on the defensive against all that is sorrowful and profound. They are "gay men" who make use of gaiety, because they are misunderstood on account of it—they WISH to be misunderstood. There are "scientific minds" who make use of science, because it gives a gay appearance, and because scientificness leads to the conclusion that a person is superficial—they WISH to mislead to a false

conclusion. There are free insolent minds which would fain conceal and deny that they are broken, proud, incurable hearts (the cynicism of Hamlet—the case of Galiani); and occasionally folly itself is the mask of an unfortunate OVER-ASSURED knowledge.—From which it follows that it is the part of a more refined humanity to have reverence "for the mask," and not to make use of psychology and curiosity in the wrong place.

271. That which separates two men most profoundly is a different sense and grade of purity. What does it matter about all their honesty and reciprocal usefulness, what does it matter about all their mutual good-will: the fact still remains—they "cannot smell each other!" The highest instinct for purity places him who is affected with it in the most extraordinary and dangerous isolation, as a saint: for it is just holiness—the highest spiritualization of the instinct in question. Any kind of cognizance of an indescribable excess in the joy of the bath, any kind of ardour or thirst which perpetually impels the soul out of night into the morning, and out of gloom, out of "affliction" into clearness, brightness, depth, and refinement:—just as much as such a tendency DISTINGUISHES—it is a noble tendency—it also SEPARATES.—The pity of the saint is pity for the FILTH of the human, all-too-human. And there are grades and heights where pity itself is regarded by him as impurity, as filth.

272. Signs of nobility: never to think of lowering our duties to the rank of duties for everybody; to be unwilling to renounce or to share our responsibilities; to count our prerogatives, and the exercise of them, among our DUTIES.

273. A man who strives after great things, looks upon every one whom he encounters on his way either as a means of advance, or a delay and hindrance—or as a temporary resting-place. His peculiar lofty BOUNTY to his fellow-men is only possible when he attains his elevation and dominates. Impatience, and the consciousness of being always condemned to comedy up to that time—for even strife is a comedy, and conceals the end, as every means does—spoil all intercourse for him; this kind of man is acquainted with solitude, and what is most poisonous in it.

274. THE PROBLEM OF THOSE WHO WAIT.—Happy chances are necessary, and many incalculable elements, in order that a higher man in whom the solution of a problem is dormant, may yet take action, or "break forth," as one might say—at the right moment. On an average it DOES

NOT happen; and in all corners of the earth there are waiting ones sitting who hardly know to what extent they are waiting, and still less that they wait in vain. Occasionally, too, the waking call comes too late—the chance which gives "permission" to take action—when their best youth, and strength for action have been used up in sitting still; and how many a one, just as he "sprang up," has found with horror that his limbs are benumbed and his spirits are now too heavy! "It is too late," he has said to himself—and has become self-distrustful and henceforth for ever useless.—In the domain of genius, may not the "Raphael without hands" (taking the expression in its widest sense) perhaps not be the exception, but the rule?—Perhaps genius is by no means so rare: but rather the five hundred HANDS which it requires in order to tyrannize over the [GREEK INSERTED HERE], "the right time"—in order to take chance by the forelock!

275. He who does not WISH to see the height of a man, looks all the more sharply at what is low in him, and in the foreground—and thereby betrays himself.

276. In all kinds of injury and loss the lower and coarser soul is better off than the nobler soul: the dangers of the latter must be greater, the probability that it will come to grief and perish is in fact immense, considering the multiplicity of the conditions of its existence.—In a lizard a finger grows again which has been lost; not so in man.—

277. It is too bad! Always the old story! When a man has finished building his house, he finds that he has learnt unawares something which he OUGHT absolutely to have known before he—began to build. The eternal, fatal "Too late!" The melancholia of everything COMPLETED—!

278.—Wanderer, who art thou? I see thee follow thy path without scorn, without love, with unfathomable eyes, wet and sad as a plummet which has returned to the light insatiated out of every depth—what did it seek down there?—with a bosom that never sighs, with lips that conceal their loathing, with a hand which only slowly grasps: who art thou? what hast thou done? Rest thee here: this place has hospitality for every one—refresh thyself! And whoever thou art, what is it that now pleases thee? What will serve to refresh thee? Only name it, whatever I have I offer thee! "To refresh me? To refresh me? Oh, thou prying one, what sayest thou! But give me, I pray thee —" What? what? Speak out! "Another mask! A second mask!"

279. Men of profound sadness betray themselves when they are happy: they have a mode of seizing upon happiness as though they would choke and strangle it, out of jealousy—ah, they know only too well that it will flee from them!

280. "Bad! Bad! What? Does he not—go back?" Yes! But you misunderstand him when you complain about it. He goes back like every one who is about to make a great spring.

281.—"Will people believe it of me? But I insist that they believe it of me: I have always thought very unsatisfactorily of myself and about myself, only in very rare cases, only compulsorily, always without delight in 'the subject,' ready to digress from 'myself,' and always without faith in the result, owing to an unconquerable distrust of the POSSIBILITY of self-knowledge, which has led me so far as to feel a CONTRADICTION IN ADJECTO even in the idea of 'direct knowledge' which theorists allow themselves:—this matter of fact is almost the most certain thing I know about myself. There must be a sort of repugnance in me to BELIEVE anything definite about myself.—Is there perhaps some enigma therein? Probably; but fortunately nothing for my own teeth.—Perhaps it betrays the species to which I belong?—but not to myself, as is sufficiently agreeable to me."

282.—"But what has happened to you?"—"I do not know," he said, hesitatingly; "perhaps the Harpies have flown over my table."—It sometimes happens nowadays that a gentle, sober, retiring man becomes suddenly mad, breaks the plates, upsets the table, shrieks, raves, and shocks everybody—and finally withdraws, ashamed, and raging at himself—whither? for what purpose? To famish apart? To suffocate with his memories?—To him who has the desires of a lofty and dainty soul, and only seldom finds his table laid and his food prepared, the danger will always be great—nowadays, however, it is extraordinarily so. Thrown into the midst of a noisy and plebeian age, with which he does not like to eat out of the same dish, he may readily perish of hunger and thirst—or, should he nevertheless finally "fall to," of sudden nausea.—We have probably all sat at tables to which we did not belong; and precisely the most spiritual of us, who are most difficult to nourish, know the dangerous DYSPEPSIA which originates from a sudden insight and disillusionment about our food and our messmates—the AFTER-DINNER NAUSEA.

283. If one wishes to praise at all, it is a delicate and at the same time a noble self-control, to praise only where one DOES NOT agree—otherwise in fact one would praise oneself, which is contrary to good taste:—a self-control, to be sure, which offers excellent opportunity and provocation to constant MISUNDERSTANDING. To be able to allow oneself this veritable luxury of taste and morality, one must not live among intellectual imbeciles, but rather among men whose misunderstandings and mistakes amuse by their refinement—or one will have to pay dearly for it!—"He praises me, THEREFORE he acknowledges me to be right"—this asinine method of inference spoils half of the life of us recluses, for it brings the asses into our neighbourhood and friendship.

284. To live in a vast and proud tranquility; always beyond... To have, or not to have, one's emotions, one's For and Against, according to choice; to lower oneself to them for hours; to SEAT oneself on them as upon horses, and often as upon asses:—for one must know how to make use of their stupidity as well as of their fire. To conserve one's three hundred foregrounds; also one's black spectacles: for there are circumstances when nobody must look into our eyes, still less into our "motives." And to choose for company that roguish and cheerful vice, politeness. And to remain master of one's four virtues, courage, insight, sympathy, and solitude. For solitude is a virtue with us, as a sublime bent and bias to purity, which divines that in the contact of man and man—"in society"—it must be unavoidably impure. All society makes one somehow, somewhere, or sometime—"commonplace."

285. The greatest events and thoughts—the greatest thoughts, however, are the greatest events—are longest in being comprehended: the generations which are contemporary with them do not EXPERIENCE such events—they live past them. Something happens there as in the realm of stars. The light of the furthest stars is longest in reaching man; and before it has arrived man DENIES—that there are stars there. "How many centuries does a mind require to be understood?"—that is also a standard, one also makes a gradation of rank and an etiquette therewith, such as is necessary for mind and for star.

286. "Here is the prospect free, the mind exalted." [FOOTNOTE: Goethe's "Faust," Part II, Act V. The words of Dr. Marianus.]—But there is

a reverse kind of man, who is also upon a height, and has also a free prospect—but looks DOWNWARDS.

287. What is noble? What does the word "noble" still mean for us nowadays? How does the noble man betray himself, how is he recognized under this heavy overcast sky of the commencing plebeianism, by which everything is rendered opaque and leaden?—It is not his actions which establish his claim—actions are always ambiguous, always inscrutable; neither is it his "works." One finds nowadays among artists and scholars plenty of those who betray by their works that a profound longing for nobleness impels them; but this very NEED of nobleness is radically different from the needs of the noble soul itself, and is in fact the eloquent and dangerous sign of the lack thereof. It is not the works, but the BELIEF which is here decisive and determines the order of rank—to employ once more an old religious formula with a new and deeper meaning—it is some fundamental certainty which a noble soul has about itself, something which is not to be sought, is not to be found, and perhaps, also, is not to be lost.—  
THE NOBLE SOUL HAS REVERENCE FOR ITSELF.—

288. There are men who are unavoidably intellectual, let them turn and twist themselves as they will, and hold their hands before their treacherous eyes—as though the hand were not a betrayer; it always comes out at last that they have something which they hide—namely, intellect. One of the subtlest means of deceiving, at least as long as possible, and of successfully representing oneself to be stupider than one really is—which in everyday life is often as desirable as an umbrella,—is called ENTHUSIASM, including what belongs to it, for instance, virtue. For as Galiani said, who was obliged to know it: VERTU EST ENTHOUSIASME.

289. In the writings of a recluse one always hears something of the echo of the wilderness, something of the murmuring tones and timid vigilance of solitude; in his strongest words, even in his cry itself, there sounds a new and more dangerous kind of silence, of concealment. He who has sat day and night, from year's end to year's end, alone with his soul in familiar discord and discourse, he who has become a cave-bear, or a treasure-seeker, or a treasure-guardian and dragon in his cave—it may be a labyrinth, but can also be a gold-mine—his ideas themselves eventually acquire a twilight-colour of their own, and an odour, as much of the depth as of the mould, something uncommunicative and repulsive, which blows chilly

upon every passer-by. The recluse does not believe that a philosopher—supposing that a philosopher has always in the first place been a recluse—ever expressed his actual and ultimate opinions in books: are not books written precisely to hide what is in us?—indeed, he will doubt whether a philosopher CAN have "ultimate and actual" opinions at all; whether behind every cave in him there is not, and must necessarily be, a still deeper cave: an ampler, stranger, richer world beyond the surface, an abyss behind every bottom, beneath every "foundation." Every philosophy is a foreground philosophy—this is a recluse's verdict: "There is something arbitrary in the fact that the PHILOSOPHER came to a stand here, took a retrospect, and looked around; that he HERE laid his spade aside and did not dig any deeper—there is also something suspicious in it." Every philosophy also CONCEALS a philosophy; every opinion is also a LURKING-PLACE, every word is also a MASK.

290. Every deep thinker is more afraid of being understood than of being misunderstood. The latter perhaps wounds his vanity; but the former wounds his heart, his sympathy, which always says: "Ah, why would you also have as hard a time of it as I have?"

291. Man, a COMPLEX, mendacious, artful, and inscrutable animal, uncanny to the other animals by his artifice and sagacity, rather than by his strength, has invented the good conscience in order finally to enjoy his soul as something SIMPLE; and the whole of morality is a long, audacious falsification, by virtue of which generally enjoyment at the sight of the soul becomes possible. From this point of view there is perhaps much more in the conception of "art" than is generally believed.

292. A philosopher: that is a man who constantly experiences, sees, hears, suspects, hopes, and dreams extraordinary things; who is struck by his own thoughts as if they came from the outside, from above and below, as a species of events and lightning-flashes PECULIAR TO HIM; who is perhaps himself a storm pregnant with new lightnings; a portentous man, around whom there is always rumbling and mumbling and gaping and something uncanny going on. A philosopher: alas, a being who often runs away from himself, is often afraid of himself—but whose curiosity always makes him "come to himself" again.

293. A man who says: "I like that, I take it for my own, and mean to guard and protect it from every one"; a man who can conduct a case, carry

out a resolution, remain true to an opinion, keep hold of a woman, punish and overthrow insolence; a man who has his indignation and his sword, and to whom the weak, the suffering, the oppressed, and even the animals willingly submit and naturally belong; in short, a man who is a MASTER by nature—when such a man has sympathy, well! THAT sympathy has value! But of what account is the sympathy of those who suffer! Or of those even who preach sympathy! There is nowadays, throughout almost the whole of Europe, a sickly irritability and sensitiveness towards pain, and also a repulsive irrestrainableness in complaining, an effeminizing, which, with the aid of religion and philosophical nonsense, seeks to deck itself out as something superior—there is a regular cult of suffering. The UNMANLINESS of that which is called "sympathy" by such groups of visionaries, is always, I believe, the first thing that strikes the eye.—One must resolutely and radically taboo this latest form of bad taste; and finally I wish people to put the good amulet, "GAI SABER" ("gay science," in ordinary language), on heart and neck, as a protection against it.

294. THE OLYMPIAN VICE.—Despite the philosopher who, as a genuine Englishman, tried to bring laughter into bad repute in all thinking minds—"Laughing is a bad infirmity of human nature, which every thinking mind will strive to overcome" (Hobbes),—I would even allow myself to rank philosophers according to the quality of their laughing—up to those who are capable of GOLDEN laughter. And supposing that Gods also philosophize, which I am strongly inclined to believe, owing to many reasons—I have no doubt that they also know how to laugh thereby in an overman-like and new fashion—and at the expense of all serious things! Gods are fond of ridicule: it seems that they cannot refrain from laughter even in holy matters.

295. The genius of the heart, as that great mysterious one possesses it, the tempter-god and born rat-catcher of consciences, whose voice can descend into the nether-world of every soul, who neither speaks a word nor casts a glance in which there may not be some motive or touch of allurements, to whose perfection it pertains that he knows how to appear,—not as he is, but in a guise which acts as an ADDITIONAL constraint on his followers to press ever closer to him, to follow him more cordially and thoroughly;—the genius of the heart, which imposes silence and attention on everything loud and self-conceited, which smoothes rough souls and makes them taste a new longing—to lie placid as a mirror, that the deep heavens may be

reflected in them;—the genius of the heart, which teaches the clumsy and too hasty hand to hesitate, and to grasp more delicately; which scents the hidden and forgotten treasure, the drop of goodness and sweet spirituality under thick dark ice, and is a divining-rod for every grain of gold, long buried and imprisoned in mud and sand; the genius of the heart, from contact with which every one goes away richer; not favoured or surprised, not as though gratified and oppressed by the good things of others; but richer in himself, newer than before, broken up, blown upon, and sounded by a thawing wind; more uncertain, perhaps, more delicate, more fragile, more bruised, but full of hopes which as yet lack names, full of a new will and current, full of a new ill-will and counter-current... but what am I doing, my friends? Of whom am I talking to you? Have I forgotten myself so far that I have not even told you his name? Unless it be that you have already divined of your own accord who this questionable God and spirit is, that wishes to be PRAISED in such a manner? For, as it happens to every one who from childhood onward has always been on his legs, and in foreign lands, I have also encountered on my path many strange and dangerous spirits; above all, however, and again and again, the one of whom I have just spoken: in fact, no less a personage than the God DIONYSUS, the great equivocator and tempter, to whom, as you know, I once offered in all secrecy and reverence my first-fruits—the last, as it seems to me, who has offered a SACRIFICE to him, for I have found no one who could understand what I was then doing. In the meantime, however, I have learned much, far too much, about the philosophy of this God, and, as I said, from mouth to mouth—I, the last disciple and initiate of the God Dionysus: and perhaps I might at last begin to give you, my friends, as far as I am allowed, a little taste of this philosophy? In a hushed voice, as is but seemly: for it has to do with much that is secret, new, strange, wonderful, and uncanny. The very fact that Dionysus is a philosopher, and that therefore Gods also philosophize, seems to me a novelty which is not unensnaring, and might perhaps arouse suspicion precisely among philosophers;—among you, my friends, there is less to be said against it, except that it comes too late and not at the right time; for, as it has been disclosed to me, you are loth nowadays to believe in God and gods. It may happen, too, that in the frankness of my story I must go further than is agreeable to the strict usages of your ears? Certainly the God in question went further, very much further, in such dialogues, and was always many paces ahead of me... Indeed, if it

were allowed, I should have to give him, according to human usage, fine ceremonious tides of lustre and merit, I should have to extol his courage as investigator and discoverer, his fearless honesty, truthfulness, and love of wisdom. But such a God does not know what to do with all that respectable trumpery and pomp. "Keep that," he would say, "for thyself and those like thee, and whoever else require it! I—have no reason to cover my nakedness!" One suspects that this kind of divinity and philosopher perhaps lacks shame?—He once said: "Under certain circumstances I love mankind"—and referred thereby to Ariadne, who was present; "in my opinion man is an agreeable, brave, inventive animal, that has not his equal upon earth, he makes his way even through all labyrinths. I like man, and often think how I can still further advance him, and make him stronger, more evil, and more profound."—"Stronger, more evil, and more profound?" I asked in horror. "Yes," he said again, "stronger, more evil, and more profound; also more beautiful"—and thereby the tempter-god smiled with his halcyon smile, as though he had just paid some charming compliment. One here sees at once that it is not only shame that this divinity lacks;—and in general there are good grounds for supposing that in some things the Gods could all of them come to us men for instruction. We men are—more human.—

296. Alas! what are you, after all, my written and painted thoughts! Not long ago you were so variegated, young and malicious, so full of thorns and secret spices, that you made me sneeze and laugh—and now? You have already doffed your novelty, and some of you, I fear, are ready to become truths, so immortal do they look, so pathetically honest, so tedious! And was it ever otherwise? What then do we write and paint, we mandarins with Chinese brush, we immortalisers of things which LEND themselves to writing, what are we alone capable of painting? Alas, only that which is just about to fade and begins to lose its odour! Alas, only exhausted and departing storms and belated yellow sentiments! Alas, only birds strayed and fatigued by flight, which now let themselves be captured with the hand—with OUR hand! We immortalize what cannot live and fly much longer, things only which are exhausted and mellow! And it is only for your AFTERNOON, you, my written and painted thoughts, for which alone I have colours, many colours, perhaps, many variegated softenings, and fifty yellows and browns and greens and reds;—but nobody will divine thereby

how ye looked in your morning, you sudden sparks and marvels of my  
solitude, you, my old, beloved—EVIL thoughts!

# FROM THE HEIGHTS

By F W Nietzsche

Translated by L. A. Magnus

1.

MIDDAY of Life! Oh, season of delight!  
My summer's park!  
Uneaseful joy to look, to lurk, to hark—  
I peer for friends, am ready day and night,—  
Where linger ye, my friends? The time is right!

2.

Is not the glacier's grey today for you  
Rose-garlanded?  
The brooklet seeks you, wind, cloud, with longing thread  
And thrust themselves yet higher to the blue,  
To spy for you from farthest eagle's view.

3.

My table was spread out for you on high—  
Who dwelleth so  
Star-near, so near the grisly pit below?—  
My realm—what realm hath wider boundary?  
My honey—who hath sipped its fragrancy?

4.

Friends, ye are there! Woe me,—yet I am not  
He whom ye seek?  
Ye stare and stop—better your wrath could speak!  
I am not I? Hand, gait, face, changed? And what  
I am, to you my friends, now am I not?

5.

Am I an other? Strange am I to Me?  
Yet from Me sprung?  
A wrestler, by himself too oft self-wrung?  
Hindering too oft my own self's potency,  
Wounded and hampered by self-victory?

6.

I sought where-so the wind blows keenest. There  
I learned to dwell  
Where no man dwells, on lonesome ice-lorn fell,  
And unlearned Man and God and curse and prayer?

Became a ghost haunting the glaciers bare?

7.

Ye, my old friends! Look! Ye turn pale, filled o'er  
    With love and fear!  
Go! Yet not in wrath. Ye could ne'er live here.  
Here in the farthest realm of ice and scaur,  
A huntsman must one be, like chamois soar.

8.

An evil huntsman was I? See how taut  
    My bow was bent!  
Strongest was he by whom such bolt were sent—  
Woe now! That arrow is with peril fraught,  
Perilous as none.—Have yon safe home ye sought!

9.

Ye go! Thou didst endure enough, oh, heart;—  
    Strong was thy hope;  
Unto new friends thy portals widely ope,  
Let old ones be. Bid memory depart!  
Wast thou young then, now—better young thou art!

10.

What linked us once together, one hope's tie—  
    (Who now doth con  
Those lines, now fading, Love once wrote thereon?)—  
Is like a parchment, which the hand is shy  
To touch—like crackling leaves, all seared, all dry.

11.

Oh! Friends no more! They are—what name for those?—  
    Friends' phantom-flight  
Knocking at my heart's window-pane at night,  
Gazing on me, that speaks "We were" and goes,—  
Oh, withered words, once fragrant as the rose!

12.

Pinings of youth that might not understand!  
    For which I pined,  
Which I deemed changed with me, kin of my kind:  
But they grew old, and thus were doomed and banned:  
None but new kith are native of my land!

13.

Midday of life! My second youth's delight!  
    My summer's park!  
Unrestful joy to long, to lurk, to hark!  
I peer for friends!—am ready day and night,  
For my new friends. Come! Come! The time is right!

14.

This song is done,—the sweet sad cry of rue

Sang out its end;  
A wizard wrought it, he the timely friend,  
The midday-friend,-no, do not ask me who;  
At midday 'twas, when one became as two.

15.

We keep our Feast of Feasts, sure of our bourne,  
Our aims self-same:  
The Guest of Guests, friend Zarathustra, came!  
The world now laughs, the grisly veil was torn,  
And Light and Dark were one that wedding-morn.

---

End of Project Gutenberg's Beyond Good and Evil, by Friedrich Nietzsche

\*\*\* END OF THIS PROJECT GUTENBERG EBOOK BEYOND GOOD AND EVIL \*\*\*

\*\*\*\*\* This file should be named 4363-h.htm or 4363-h.zip \*\*\*\*\*  
This and all associated files of various formats will be found in:  
<http://www.gutenberg.org/4/3/6/4363/>

Produced by John Mamoun, Charles Franks, David Widger and the Online  
Distributed Proofreading Team

Updated editions will replace the previous one--the old editions  
will be renamed.

Creating the works from public domain print editions means that no  
one owns a United States copyright in these works, so the Foundation  
(and you!) can copy and distribute it in the United States without  
permission and without paying copyright royalties. Special rules,  
set forth in the General Terms of Use part of this license, apply to  
copying and distributing Project Gutenberg-tm electronic works to  
protect the PROJECT GUTENBERG-tm concept and trademark. Project  
Gutenberg is a registered trademark, and may not be used if you  
charge for the eBooks, unless you receive specific permission. If you  
do not charge anything for copies of this eBook, complying with the  
rules is very easy. You may use this eBook for nearly any purpose  
such as creation of derivative works, reports, performances and  
research. They may be modified and printed and given away--you may do  
practically ANYTHING with public domain eBooks. Redistribution is  
subject to the trademark license, especially commercial  
redistribution.

\*\*\* START: FULL LICENSE \*\*\*

THE FULL PROJECT GUTENBERG LICENSE  
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License (available with this file or online at <http://gutenberg.org/license>).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.org](http://www.gutenberg.org)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided

that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE

LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

## Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <http://www.pgla.org>.

### Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <http://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email [business@pglaf.org](mailto:business@pglaf.org). Email contact links and up to date contact information can be found at the Foundation's web site and official page at <http://pglaf.org>

For additional contact information:

Dr. Gregory B. Newby  
Chief Executive and Director  
[gbnewby@pglaf.org](mailto:gbnewby@pglaf.org)

### Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <http://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: <http://pglaf.org/donate>

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

<http://www.gutenberg.org>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.
