# Leviathan

Thomas Hobbes

The background of the lower half of the page is a vibrant green color. Overlaid on this green background are several thick, bright blue geometric shapes. These include a large 'X' shape in the upper right, a large triangle in the center, and various lines and curves that create a complex, abstract pattern. The word 'Project' is written in white, bold, sans-serif font, centered within the bottom-most blue triangle.

**TRANSCRIBER'S NOTES ON THE E-TEXT:**

This E-text was prepared from the Pelican Classics edition of Leviathan, which in turn was prepared from the first edition. I have tried to follow as closely as possible the original, and to give the

flavour of the text that Hobbes himself proof-read, but the following differences were unavoidable.

Hobbes used capitals and italics very extensively, for emphasis, for proper names, for quotations, and sometimes, it seems, just because.

The original has very extensive margin notes, which are used to show where he introduces the definitions of words and concepts, to give in short the subject that a paragraph or section is dealing with, and to give references to his quotations, largely but not exclusively biblical. To some degree, these margin notes seem to have been intended to serve in place of an index, the original having none. They are all in italics.

He also used italics for words in other languages than English, and there are a number of Greek words, in the Greek alphabet, in the text.

To deal with these within the limits of plain vanilla ASCII, I have done the following in this E-text.

I have restricted my use of full capitalization to those places where Hobbes used it, except in the chapter headings, which I have fully capitalized, where Hobbes used a mixture of full capitalization and italics.

Where it is clear that the italics are to indicate the text is quoting, I have introduced quotation marks. Within quotation marks I have retained the capitalization that Hobbes used.

Where italics seem to be used for emphasis, or for proper names, or just because, I have capitalized the initial letter of the words. This has the disadvantage that they are not then distinguished from those that Hobbes capitalized in plain text, but the extent of his italics would make the text very ugly if I was to use an underscore or slash.

Where the margin notes are either to introduce the paragraph subject, or to show where he introduces word definitions, I have included them as headers to the paragraph, again with all words having initial capitals, and on a shortened line.

For margin references to quotes, I have included them in the text, in brackets immediately next to the quotation. Where Hobbes included references in the main text, I have left them as he put them, except to change his square brackets to round.

For the Greek alphabet, I have simply substituted the nearest ordinary letters that I can, and I have used initial capitals for foreign language words.

Neither Thomas Hobbes nor his typesetters seem to have had many inhibitions about spelling and punctuation. I have tried to reproduce both exactly, with the exception of the introduction of quotation marks.

In preparing the text, I have found that it has much more meaning if I read it with sub-vocalization, or aloud, rather than trying to read silently. Hobbes' use of emphasis and his eccentric punctuation and construction seem then to work.

---

TO MY MOST HONOR'D FRIEND Mr. FRANCIS GODOLPHIN of  
GODOLPHIN

HONOR'D SIR.

Your most worthy Brother Mr SIDNEY GODOLPHIN, when he lived, was pleas'd to think my studies something, and otherwise to oblige me, as you know, with reall testimonies of his good opinion, great in themselves, and the greater for the worthinesse of his person. For there is not any vertue that disposeth a man, either to the service of God, or to the service of his Country, to Civill Society, or private Friendship, that did not manifestly appear in his conversation, not as acquired by necessity, or affected upon occasion, but inhaerent, and shining in a generous constitution of his nature. Therefore in honour and gratitude to him, and with devotion to your selfe, I humbly Dedicate unto you this my discourse

of Common-wealth. I know not how the world will receive it, nor how it may reflect on those that shall seem to favour it. For in a way beset with those that contend on one side for too great Liberty, and on the other side for too much Authority, 'tis hard to passe between the points of both unwounded. But yet, me thinks, the endeavour to advance the Civill Power, should not be by the Civill Power condemned; nor private men, by reprehending it, declare they think that Power too great. Besides, I speak not of the men, but (in the Abstract) of the Seat of Power, (like to those simple and unpartiall creatures in the Roman Capitol, that with their noyse defended those within it, not because they were they, but there) offending none, I think, but those without, or such within (if there be any such) as favour them. That which perhaps may most offend, are certain Texts of Holy Scripture, alledged by me to other purpose than ordinarily they use to be by others. But I have done it with due submission, and also (in order to my Subject) necessarily; for they are the Outworks of the Enemy, from whence they impugne the Civill Power. If notwithstanding this, you find my labour generally decryed, you may be pleased to excuse your selfe, and say that I am a man that love my own opinions, and think all true I say, that I honoured your Brother, and honour you, and have presum'd on that, to assume the Title (without your knowledge) of being, as I am,

Sir,

Your most humble, and most obedient servant, Thomas Hobbes.

Paris APRILL 15/25 1651.

## **CONTENTS**

### THE INTRODUCTION

### PART I OF MAN

#### CHAPTER I. OF SENSE

#### CHAPTER II. OF IMAGINATION

Memory

Dreams

Apparitions Or Visions

Understanding

#### CHAPTER III. OF THE CONSEQUENCE OR TRAYNE OF IMAGINATIONS

Trayne Of Thoughts Unguided

Trayne Of Thoughts Regulated

Remembrance

Prudence

Signes

Conjecture Of The Time Past

#### CHAPTER IV. OF SPEECH

Originall Of Speech

*The Use Of Speech*

*Abuses Of Speech*

*Names Proper & Common Universall*

*Subject To Names*

*Use Of Names Positive*

*Negative Names With Their Uses*

*Words Insignificant*

*Understanding*

*Inconstant Names*

*CHAPTER V. OF REASON, AND SCIENCE.*

*Reason What It Is*

*Reason Defined*

*Right Reason Where*

*The Use Of Reason*

*Of Error And Absurdity.*

*Causes Of Absurditie*

*Science*

*Prudence & Sapience, With Their Difference*

*Signes Of Science*

*CHAPTER VI. OF THE INTERIOUR BEGINNINGS  
OF VOLUNTARY MOTIONS*

*Motion Vitall And Animal*

Endeavour; Appetite; Desire; Hunger; Thirst;  
Aversion

Contempt

Good Evill

Pulchrum Turpe; Delightfull Profitable;  
Unpleasant Unprofitable

Delight Displeasure

Pleasure Offence

Pleasures Of Sense; Pleasures Of The Mind; Joy  
Paine Griefe

The Will

Formes Of Speech, In Passion

Good And Evill Apparent

Felicity

Praise Magnification

CHAPTER VII. OF THE ENDS OR RESOLUTIONS  
OF DISCOURSE

Judgement, or Sentence Final; Doubt

Science Opinion Conscience

Beliefe Faith

CHAPTER VIII. OF THE VERTUES COMMONLY  
CALLED INTELLECTUAL;

Intellectuall Vertue Defined

Wit, Naturall, Or Acquired

Good Wit, Or Fancy; Good Judgement; Discretion

Prudence

Craft

Acquired Wit

Giddinesse Madnesse

Rage

Melancholy

Insignificant Speech

CHAPTER IX. OF THE SEVERALL SUBJECTS OF KNOWLEDGE

CHAPTER X. OF POWER, WORTH, DIGNITY, HONOUR AND WORTHINESS

Power

Worth

Dignity

To Honour and Dishonour

Titles of Honour

Worthinesse Fitness

CHAPTER XI. OF THE DIFFERENCE OF MANNERS

What Is Here Meant By Manners

*A Restlesse Desire Of Power, In All Men*  
*Love Of Contention From Competition*  
*Civil Obedience From Love Of Ease*  
*From Feare Of Death Or Wounds*  
*And From Love Of Arts*  
*Love Of Vertue, From Love Of Praise*  
*Hate, From Difficulty Of Requiting Great Benefits*  
*And From Conscience Of Deserving To Be Hated*  
*Promptnesse To Hurt, From Fear*  
*And From Distrust Of Their Own Wit*  
*Vain Undertaking From Vain-glory*  
*Ambition, From Opinion Of Sufficiency*  
*Irresolution, From Too Great Valuing Of Small Matters*  
*And From The Ignorance Of Naturall Causes*  
*And From Want Of Understanding*  
*Credulity From Ignorance Of Nature*  
*Curiosity To Know, From Care Of Future Time*  
*Naturall Religion, From The Same*

## *CHAPTER XII. OF RELIGION*

*Religion, In Man Onely*

*First, From His Desire Of Knowing Causes*

From The Consideration Of The Beginning Of Things

From His Observation Of The Sequell Of Things

Which Makes Them Fear The Power Of Invisible Things

And Suppose Them Incorporeall

But Know Not The Way How They Effect Anything

But Honour Them As They Honour Men

And Attribute To Them All Extraordinary Events

Foure Things, Naturall Seeds Of Religion

Made Different By Culture

The Absurd Opinion Of Gentilisme

The Causes Of Change In Religion

Injoyning Beleeffe Of Impossibilities

Doing Contrary To The Religion They Establish

Want Of The Testimony Of Miracles

CHAPTER XIII. OF THE NATURALL CONDITION OF MANKIND,

From Equality Proceeds Diffidence

From Diffidence Warre

Out Of Civil States,

The Incommodities Of Such A War

In Such A Warre, Nothing Is Unjust

*The Passions That Incline Men To Peace*

*CHAPTER XIV. OF THE FIRST AND SECOND  
NATURALL LAWES, AND OF CONTRACTS*

*Right Of Nature What*

*Liberty What*

*A Law Of Nature What*

*Naturally Every Man Has Right To Everything*

*The Fundamental Law Of Nature*

*The Second Law Of Nature*

*What it is to lay down a Right*

*Renouncing (or) Transferring Right What;  
Obligation Duty Justice*

*Not All Rights Are Alienable*

*Contract What*

*Covenant What*

*Free-gift*

*Signes Of Contract Expresse*

*Signes Of Contract By Inference*

*Free Gift Passeth By Words Of The Present Or  
Past*

*Merit What*

*Covenants Of Mutuall Trust, When Invalid*

*Right To The End, Containeth Right To The Means*

No Covenant With Beasts

Nor With God Without Speciall Revelation

No Covenant, But Of Possible And Future

Covenants How Made Voyd

Covenants Extorted By Feare Are Valide

The Former Covenant To One, Makes Voyd The  
Later To Another

A Mans Covenant Not To Defend Himselfe, Is Voyd

No Man Obliged To Accuse Himselfe

The End Of An Oath; The Forme Of As Oath

No Oath, But By God

An Oath Addes Nothing To The Obligation

## CHAPTER XV. OF OTHER LAWES OF NATURE

The Third Law Of Nature, Justice

Justice And Injustice What

Justice Not Contrary To Reason

Covenants Not Discharged By The Vice Of The  
Person To Whom Made

Justice Of Men, And Justice Of Actions What

Justice Of Manners, And Justice Of Actions

Nothing Done To A Man, By His Own Consent Can  
Be Injury.

Justice Commutative, And Distributive

*The Fourth Law Of Nature, Gratitude*

*The Fifth, Mutuall accommodation, or  
Compleasance*

*The Sixth, Facility To Pardon*

*The Seventh, That In Revenges, Men Respect Onely  
The Future Good*

*The Eighth, Against Contumely*

*The Ninth, Against Pride*

*The Tenth Against Arrogance*

*The Eleventh Equity*

*The Twelfth, Equall Use Of Things Common*

*The Thirteenth, Of Lot*

*The Fourteenth, Of Primogeniture, And First  
Seising*

*The Fifteenth, Of Mediators*

*The Sixteenth, Of Submission To Arbitrement*

*The Seventeenth, No Man Is His Own Judge*

*The Eighteenth, No Man To Be Judge, That Has In  
Him Cause Of Partiality*

*The Nineteenth, Of Witsesse*

*A Rule, By Which The Laws Of Nature May Easily  
Be Examined*

*The Lawes Of Nature Oblige In Conscience  
Always,*

*The Laws Of Nature Are Eternal;*

And Yet Easie

The Science Of These Lawes, Is The True Morall  
Philosophy.

CHAPTER XVI. OF PERSONS, AUTHORS, AND  
THINGS PERSONATED

Person Naturall, And Artificiall

The Word Person, Whence

Actor, Author; Authority.

Covenants By Authority, Bind The Author

But Not The Actor

The Authority Is To Be Shewne

Things Personated, Inanimate

Irrational

False Gods

The True God

A Multitude Of Men, How One Person

Every One Is Author

An Actor May Be Many Men Made One By  
Plurality Of Voyces

Representatives, When The Number Is Even,  
Unprofitable

Negative Voyce

PART II. OF COMMON-WEALTH

CHAPTER XVII. OF THE CAUSES, GENERATION,  
AND DEFINITION OF A

The End Of Common-wealth, Particular Security

Which Is Not To Be Had From The Law Of Nature:

Nor From The Conjunction Of A Few Men Or  
Families

Nor From A Great Multitude, Unlesse Directed By  
One Judgement

And That Continually

Why Certain Creatures Without Reason, Or  
Speech,

Do Neverthelesse Live In Society, Without Any  
Coercive Power

The Generation Of A Common-wealth

The Definition Of A Common-wealth

Sovereigne, And Subject, What

CHAPTER XVIII. OF THE RIGHTS OF  
SOVERAIGNES BY INSTITUTION

The Act Of Instituting A Common-wealth, What

The Consequences To Such Institution, Are

I. The Subjects Cannot Change The Forme Of  
Government

From this Institution of a Common-wealth are  
derived all the Rights, and

2. Sovereigne Power Cannot Be Forfeited

3. No Man Can Without Injustice Protest Against The

4. The Sovereigns Actions Cannot Be Justly Accused By The Subject

5. What Soever The Sovereigne Doth, Is Unpunishable By The Subject

6. The Sovereigne Is Judge Of What Is Necessary For The Peace

And Judge Of What Doctrines Are Fit To Be Taught Them

7. The Right Of Making Rules, Whereby The Subject May

8. To Him Also Belongeth The Right Of All Judicature

9. And Of Making War, And Peace, As He Shall Think Best:

10. And Of Choosing All Counsellours, And Ministers,

11. And Of Rewarding, And Punishing, And That (Where No

12. And Of Honour And Order

These Rights Are Indivisible

And Can By No Grant Passe Away Without Direct

The Power And Honour Of Subjects Vanisheth In The Presence

Sovereigne Power Not Hurtfull As The Want Of It,

CHAPTER XIX. OF THE SEVERALL KINDS OF  
COMMON-WEALTH BY INSTITUTION,

The Different Formes Of Common-wealths But  
Three

Tyranny And Oligarchy, But Different Names Of  
Monarchy, And Aristocracy

Subordinate Representatives Dangerous

Comparison Of Monarchy, With Sovereign  
Assemblies

Of The Right Of Succession

Succession Passeth By Expresse Words;

Or, By Not Controlling A Custome;

Or, By Presumption Of Naturall Affection

To Dispose Of The Succession, Though To A King  
Of Another Nation,

CHAPTER XX. OF DOMINION PATERNALL AND  
DESPOTICALL

Wherein Different From A Common-wealth By  
Institution

The Rights Of Sovereignty The Same In Both

Dominion Paternall How Attained Not By  
Generation, But By Contract

Or Education;

Or Precedent Subjection Of One Of The Parents To  
The Other

*The Right Of Succession Followeth The Rules Of  
The Rights Of Possession*

*Despotically Dominion, How Attained*

*Not By The Victory, But By The Consent Of The  
Vanquished*

*Difference Between A Family And A Kingdom*

*The Right Of Monarchy From Scripture*

*Sovereign Power Ought In All Common-wealths To  
Be Absolute*

## *CHAPTER XXI. OF THE LIBERTY OF SUBJECTS*

*Liberty What*

*What It Is To Be Free*

*Fear And Liberty Consistent*

*Liberty And Necessity Consistent*

*Artificial Bonds, Or Covenants*

*Liberty Of Subjects Consisteth In Liberty From  
Covenants*

*Liberty Of The Subject Consistent With Unlimited  
Power Of The Sovereign*

*The Liberty Which Writers Praise, Is The Liberty  
Of Sovereigns;*

*Liberty Of The Subject How To Be Measured*

*Subjects Have Liberty To Defend Their Own  
Bodies,*

*Are Not Bound To Hurt Themselves;*

Nor To Warfare, Unless They Voluntarily Undertake It

The Greatest Liberty Of Subjects, Dependeth On The Silence Of The Law

In What Cases Subjects Absolved Of Their Obedience To Their Sovereign

In Case Of Captivity

In Case The Sovereign Cast Off The Government From Himself And Heirs

In Case Of Banishment

In Case The Sovereign Render Himself Subject To Another

CHAPTER XXII. OF SYSTEMES SUBJECT, POLITICALL, AND PRIVATE

The Divers Sorts Of Systemes Of People

In All Bodies Politique The Power Of The Representative Is Limited

By Letters Patents

And The Lawes

When The Representative Is One Man, His Unwarranted Acts His Own Onely

When It Is An Assembly, It Is The Act Of Them That Assented Onely

When It Is An Assembly, They Onely Are Liable That Have Assented

*If The Debt Be To One Of The Assembly, The Body  
Onely Is Obliged*

*Protestation Against The Decrees Of Bodies  
Politique*

*Bodies Politique For Government Of A Province,  
Colony, Or Town*

*Bodies Politique For Ordering Of Trade*

*A Bodie Politique For Counsel To Be Give To The  
Soveraign*

*A Regular Private Body, Lawfull, As A Family*

*Private Bodies Regular, But Unlawfull*

*Systemes Irregular, Such As Are Private Leagues*

*Secret Cabals*

*Feuds Of Private Families*

*Factions For Government*

*CHAPTER XXIII. OF THE PUBLIQUE MINISTERS  
OF SOVERAIGN POWER*

*Publique Minister Who*

*Ministers For The Generall Administration*

*For Speciall Administration, As For Oeconomy.*

*For Instruction Of The People*

*For Judicature*

*For Execution*

Counsellors Without Other Employment Then To Advise

CHAPTER XXIV. OF THE NUTRITION, AND PROCREATION OF A COMMON-WEALTH

And The Right Of Distribution Of Them

All Private Estates Of Land Proceed Originally

Propriety Of A Subject Excludes Not The Dominion Of The Sovereign,

The Publique Is Not To Be Dieted

The Places And Matter Of Traffique Depend, As Their Distribution,

The Laws Of Transferring Property Belong Also To The Sovereign

Mony The Bloud Of A Common-wealth

The Conduits And Way Of Mony To The Publique Use

The Children Of A Common-wealth Colonies

CHAPTER XXV. OF COUNSELL

Counsell What

Differences Between Command And Counsell

Exhortation And Dehortation What

Differences Of Fit And Unfit Counsellours

CHAPTER XXVI. OF CIVILL LAWES

Civill Law what

The Sovereign Is Legislator

And Not Subject To Civill Law

Use, A Law Not By Vertue Of Time, But Of The  
Sovereigns Consent

The Law Of Nature, And The Civill Law Contain  
Each Other

Provinciall Lawes Are Not Made By Custome, But  
By The Sovereign Power

Some Foolish Opinions Of Lawyers Concerning  
The Making Of Lawes

Law Made, If Not Also Made Known, Is No Law

Unwritten Lawes Are All Of Them Lawes Of Nature

Nothing Is Law Where The Legislator Cannot Be  
Known

Difference Between Verifying And Authorising

The Law Verified By The Subordinate Judge

By The Publique Registers

By Letters Patent, And Publique Seale

The Interpretation Of The Law Dependeth On The  
Sovereign Power

All Lawes Need Interpretation

The Authentically Interpretation Of Law Is Not That  
Of Writers

The Interpreter Of The Law Is The Judge Giving  
Sentence Viva Voce

*The Sentence Of A Judge, Does Not Bind Him, Or Another Judge*

*The Difference Between The Letter And Sentence Of The Law*

*The Abilities Required In A Judge*

*Divisions Of Law*

*Another Division Of Law*

*Divine Positive Law How Made Known To Be Law*

*Another Division Of Lawes*

*A Fundamentall Law What*

*Difference Between Law And Right*

*And Between A Law And A Charter*

*CHAPTER XXVII. OF CRIMES, EXCUSES, AND EXTENUATIONS*

*A Crime What*

*Where No Civill Law Is, There Is No Crime*

*Ignorance Of The Law Of Nature Excuseth No Man*

*Ignorance Of The Civill Law Excuseth Sometimes*

*Ignorance Of The Soveraign Excuseth Not*

*Ignorance Of The Penalty Excuseth Not*

*Punishments Declared Before The Fact, Excuse From Greater Punishments*

*Nothing Can Be Made A Crime By A Law Made After The Fact*

False Principles Of Right And Wrong Causes Of Crime

False Teachers Mis-interpreting The Law Of Nature Secondly, by false

And False Inferences From True Principles, By Teachers

By Their Passions;

Presumption Of Riches

And Friends

Wisdom

Hatred, Lust, Ambition, Covetousness, Causes Of Crime

Fear Sometimes Cause Of Crime, As When The Danger Is Neither Present,

Crimes Not Equal

Total Excuses

Excuses Against The Author

Presumption Of Power, Aggravates

Evil Teachers, Extenuate

Examples Of Impunity, Extenuate

Praemeditation, Aggravates

Tacite Approbation Of The Sovereign, Extenuates

Comparison Of Crimes From Their Effects

Laesae Majestas

Bribery And False Testimony

Depeculation

Counterfeiting Authority

Crimes Against Private Men Compared

Publique Crimes What

CHAPTER XXVIII. OF PUNISHMENTS, AND  
REWARDS

The Definition Of Punishment

Right To Punish Whence Derived

Private Injuries, And Revenges No Punishments

Nor Denyall Of Preferment

Nor Pain Inflicted Without Publique Hearing

Nor Pain Inflicted By Usurped Power

Nor Pain Inflicted Without Respect To The Future  
Good

Naturall Evill Consequences, No Punishments

Hurt Inflicted, If Lesse Than The Benefit Of  
Transgressing,

Where The Punishment Is Annexed To The Law, A  
Greater Hurt Is Not

Hurt Inflicted For A Fact Done Before The Law, No  
Punishment

The Representative Of The Common-wealth  
Unpunishable

Hurt To Revolted Subjects Is Done By Right Of  
War, Not

*Punishments Corporall*

Capital

Ignominy

Imprisonment

Exile

The Punishment Of Innocent Subjects Is Contrary  
To The Law Of Nature

But The Harme Done To Innocents In War, Not So

Reward, Is Either Salary, Or Grace

Benefits Bestowed For Fear, Are Not Rewards

Salaries Certain And Casuall

CHAPTER XXIX. OF THOSE THINGS THAT  
WEAKEN, OR TEND TO THE DISSOLUTION OF

Want Of Absolute Power

Private Judgement Of Good and Evill

Erroneous Conscience

Pretence Of Inspiration

Subjecting The Sovereign Power To Civill Lawes

Attributing Of Absolute Propriety To The Subjects

Dividing Of The Sovereign Power

Imitation Of Neighbour Nations

Imitation Of The Greeks, And Romans

Mixt Government

Want Of Mony

Monopolies And Abuses Of Publicans

Popular Men

Excessive Greatnesse Of A Town, Multitude Of Corporations

Liberty Of Disputing Against Sovereign Power

Dissolution Of The Common-wealth

CHAPTER XXX. OF THE OFFICE OF THE SOVERAIGN REPRESENTATIVE

The Procuration Of The Good Of The People

By Instruction & Lawes

Against The Duty Of A Sovereign To Relinquish Any Essentiall Right

Objection Of Those That Say There Are No Principles Of Reason For

Objection From The Incapacity Of The Vulgar

Subjects Are To Be Taught, Not To Affect Change Of Government

Nor Adhere (Against The Sovereign) To Popular Men

And To Have Dayes Set Apart To Learn Their Duty

And To Honour Their Parents

And To Avoyd Doing Of Injury:

And To Do All This Sincerely From The Heart

*The Use Of Universities*

*Equall Taxes*

*Publique Charity*

*Good Lawes What*

*Such As Are Necessary*

*Such As Are Perspicuous*

*Punishments*

*Rewards*

*Counsellours*

*Commanders*

*CHAPTER XXXI. OF THE KINGDOME OF GOD  
BY NATURE*

*The Scope Of The Following Chapters*

*Who Are Subjects In The Kingdome Of God*

*A Threefold Word Of God, Reason, Revelation,  
Prophecy*

*Sinne Not The Cause Of All Affliction*

*Divine Lawes*

*Honour And Worship What*

*Severall Signes Of Honour*

*Worship Naturall And Arbitrary*

*Worship Commanded And Free*

Worship Publique And Private

The End Of Worship

Attributes Of Divine Honour

Actions That Are Signes Of Divine Honour

Publique Worship Consisteth In Uniformity

All Attributes Depend On The Lawes Civill

Not All Actions

Naturall Punishments

The Conclusion Of The Second Part

PART III. OF A CHRISTIAN COMMON-WEALTH

CHAPTER XXXII. OF THE PRINCIPLES OF  
CHRISTIAN POLITIQUES

What It Is To Captivate The Understanding

How God Speaketh To Men

By What Marks Prophets Are Known

The Marks Of A Prophet In The Old Law, Miracles,  
And Doctrine

Miracles Ceasing, Prophets Cease, The Scripture  
Supplies Their Place

CHAPTER XXXIII. OF THE NUMBER,  
ANTIQUITY, SCOPE, AUTHORITY,

Of The Books Of Holy Scripture

Their Antiquity

*The Pentateuch Not Written By Moses*

*The Book of Joshua Written After His Time*

*The Booke Of Judges And Ruth Written Long After  
The Captivity*

*The Like Of The Bookes Of Samuel*

*The Books Of The Kings, And The Chronicles*

*Ezra And Nehemiah*

*Esther*

*Job*

*The Psalter*

*The Proverbs*

*Ecclesiastes And The Canticles*

*The Prophets*

*The New Testament*

*Their Scope*

*The Question Of The Authority Of The Scriptures  
Stated.*

*Their Authority And Interpretation*

*CHAPTER XXXIV. OF THE SIGNIFICATION OF  
SPIRIT, ANGEL, AND INSPIRATION IN*

*Body And Spirit How Taken In The Scripture*

*Spirit Of God Taken In The Scripture Sometimes  
For A Wind, Or Breath*

Secondly, For Extraordinary Gifts Of The Understanding

Thirdly, For Extraordinary Affections

Fourthly, For The Gift Of Prediction By Dreams And Visions

Fiftly, For Life

Sixtly, For A Subordination To Authority

Seventhly, For Aeriall Bodies

Angel What

Inspiration What

CHAPTER XXXV. OF THE SIGNIFICATION IN SCRIPTURE OF KINGDOME OF GOD, OF

Kingdom Of God Taken By Divines Metaphorically But In The Scriptures

The Originall Of The Kingdome Of God

That The Kingdome Of God Is Properly His Civill Sovereignty Over

Sacred What

Degrees of Sanctity

Sacrament

CHAPTER XXXVI. OF THE WORD OF GOD, AND OF PROPHETS

Word What

The Words Spoken By God And Concerning God,  
Both Are Called Gods Word

Secondly, For The Effect Of His Word

Thirdly, For The Words Of Reason And Equity

Divers Acceptions Of The Word Prophet

Praediction Of Future Contingents, Not Alwaies  
Prophecy

The Manner How God Hath Spoken To The  
Prophets

To The Extraordinary Prophets Of The Old  
Testament He Spake

God Sometimes Also Spake By Lots

Every Man Ought To Examine The Probability Of A  
Pretended Prophets

All Prophecy But Of The Sovereign Prophet Is To  
Be Examined

CHAPTER XXXVII. OF MIRACLES, AND THEIR  
USE

A Miracle Is A Work That causeth Admiration

And Must Therefore Be Rare, Whereof There Is No  
Naturall Cause Known

That Which Seemeth A Miracle To One Man, May  
Seem Otherwise To Another

The End Of Miracles

The Definition Of A Miracle

*That Men Are Apt To Be Deceived By False Miracles*

*Cautions Against The Imposture Of Miracles*

*CHAPTER XXXVIII. OF THE SIGNIFICATION IN SCRIPTURE OF ETERNALL LIFE,*

*Place Of Adams Eternity If He Had Not Sinned, The Terrestrial Paradise*

*Texts Concerning The Place Of Life Eternall For Beleevers*

*Ascension Into Heaven*

*The Place After Judgment, Of Those Who Were Never In The Kingdome*

*The Congregation Of Giants*

*Lake Of Fire*

A REVIEW, AND CONCLUSION

---

## THE INTRODUCTION

Nature (the art whereby God hath made and governes the world) is by the art of man, as in many other things, so in this also imitated, that it can make an Artificial Animal. For seeing life is but a motion of Limbs, the begining whereof is in some principall part within; why may we not say, that all Automata (Engines that move themselves by springs and wheelles as doth a watch) have an artificiall life? For what is the Heart, but a Spring; and the Nerves, but so many Strings; and the Joynts, but so many Wheelles, giving motion to the whole Body, such as was intended by the Artificer? Art goes yet further, imitating that Rationall and most excellent worke of Nature, Man. For by Art is created that great LEVIATHAN called a COMMON-WEALTH, or STATE, (in latine CIVITAS) which is but an Artificiall Man; though of greater stature and strength than the Naturall, for whose protection and defence it was intended; and in which, the Sovereignty is an Artificiall Soul, as giving life and motion to the whole body; The Magistrates, and other Officers of Judicature and Execution, artificiall Joynts; Reward and Punishment (by which fastned to the seat of the Sovereignty, every joynt and member is moved to performe his duty) are the Nerves, that do the same in the Body Naturall; The Wealth and Riches of all the particular members, are the Strength; Salus Populi (the Peoples Safety) its Businesse; Counsellors, by whom all things needfull for it to know, are suggested unto it, are the Memory; Equity and Lawes, an artificiall Reason and Will; Concord, Health; Sedition, Sicknesse; and Civill War, Death. Lastly, the Pacts and Covenants, by which the parts of this Body Politique were at first made, set together, and united, resemble that Fiat, or the Let Us Make Man, pronounced by God in the Creation.

To describe the Nature of this Artificiall man, I will consider

First the Matter thereof, and the Artificer; both which is Man.

Secondly, How, and by what Covenants it is made; what are the Rights and just Power or Authority of a Sovereigne; and what it is that Preserveth and Dissolveth it.

Thirdly, what is a Christian Common-Wealth.

Lastly, what is the Kingdome of Darkness.

Concerning the first, there is a saying much usurped of late, That Wisedome is acquired, not by reading of Books, but of Men. Consequently whereunto, those persons, that for the most part can give no other proof of being wise, take great delight to shew what they think they have read in men, by uncharitable censures of one another behind their backs. But there is another saying not of late understood, by which they might learn truly to read one another, if they would take the pains; and that is, *Nosce Teipsum*, Read Thy Self: which was not meant, as it is now used, to countenance, either the barbarous state of men in power, towards their inferiors; or to encourage men of low degree, to a sawcie behaviour towards their betters; But to teach us, that for the similitude of the thoughts, and Passions of one man, to the thoughts, and Passions of another, whosoever looketh into himselfe, and considereth what he doth, when he does Think, Opine, Reason, Hope, Feare, &c, and upon what grounds; he shall thereby read and know, what are the thoughts, and Passions of all other men, upon the like occasions. I say the similitude of Passions, which are the same in all men, Desire, Feare, Hope, &c; not the similitude or The Objects of the Passions, which are the things Desired, Feared, Hoped, &c: for these the constitution individuall, and particular education do so vary, and they are so easie to be kept from our knowledge, that the characters of mans heart, blotted and confounded as they are, with dissembling, lying, counterfeiting, and erroneous doctrines, are legible onely to him that searcheth hearts. And though by mens actions wee do discover their designee sometimes; yet to do it without comparing them with our own, and distinguishing all circumstances, by which the case may come to be altered, is to decypher without a key, and be for the most part deceived, by too much trust, or by too much diffidence; as he that reads, is himselfe a good or evill man.

But let one man read another by his actions never so perfectly, it serves him onely with his acquaintance, which are but few. He that is to govern a whole Nation, must read in himselfe, not this, or that particular man; but Man-kind; which though it be hard to do, harder than to learn any Language, or Science; yet, when I shall have set down my own reading orderly, and perspicuously, the pains left another, will be onely to consider, if he also find not the same in himselfe. For this kind of Doctrine, admitteth no other Demonstration.

# **PART 1 OF MAN**

## CHAPTER I. OF SENSE

Concerning the Thoughts of man, I will consider them first Singly, and afterwards in Trayne, or dependance upon one another. Singly, they are every one a Representation or Apparence, of some quality, or other Accident of a body without us; which is commonly called an Object. Which Object worketh on the Eyes, Eares, and other parts of mans body; and by diversity of working, produceth diversity of Apparences.

The Originall of them all, is that which we call Sense; (For there is no conception in a mans mind, which hath not at first, totally, or by parts, been begotten upon the organs of Sense.) The rest are derived from that originall.

To know the naturall cause of Sense, is not very necessary to the business now in hand; and I have els-where written of the same at large. Nevertheless, to fill each part of my present method, I will briefly deliver the same in this place.

The cause of Sense, is the Externall Body, or Object, which presseth the organ proper to each Sense, either immediatly, as in the Tast and Touch; or mediately, as in Seeing, Hearing, and Smelling: which pressure, by the mediation of Nerves, and other strings, and membranes of the body, continued inwards to the Brain, and Heart, causeth there a resistance, or counter-pressure, or endeavour of the heart, to deliver it self: which endeavour because Outward, seemeth to be some matter without. And this Seeming, or Fancy, is that which men call sense; and consisteth, as to the Eye, in a Light, or Colour Figured; To the Eare, in a Sound; To the Nostrill, in an Odour; To the Tongue and Palat, in a Savour; and to the rest of the body, in Heat, Cold, Hardnesse, Softnesse, and such other qualities, as we discern by Feeling. All which qualities called Sensible, are in the object that causeth them, but so many several motions of the matter, by which it presseth our organs diversly. Neither in us that are pressed, are they anything els, but divers motions; (for motion, produceth nothing but motion.) But their apparence to us is Fancy, the same waking, that dreaming. And as pressing, rubbing, or striking the Eye, makes us fancy a light; and pressing the Eare, produceth a dinne; so do the bodies also we

see, or hear, produce the same by their strong, though unobserved action, For if those Colours, and Sounds, were in the Bodies, or Objects that cause them, they could not be severed from them, as by glasses, and in Ecchoes by reflection, we see they are; where we know the thing we see, is in one place; the apparence, in another. And though at some certain distance, the reall, and very object seem invested with the fancy it begets in us; Yet still the object is one thing, the image or fancy is another. So that Sense in all cases, is nothing els but originall fancy, caused (as I have said) by the pressure, that is, by the motion, of externall things upon our Eyes, Eares, and other organs thereunto ordained.

But the Philosophy-schooles, through all the Universities of Christendome, grounded upon certain Texts of Aristotle, teach another doctrine; and say, For the cause of Vision, that the thing seen, sendeth forth on every side a Visible Species(in English) a Visible Shew, Apparition, or Aspect, or a Being Seen; the receiving whereof into the Eye, is Seeing. And for the cause of Hearing, that the thing heard, sendeth forth an Audible Species, that is, an Audible Aspect, or Audible Being Seen; which entring at the Eare, maketh Hearing. Nay for the cause of Understanding also, they say the thing Understood sendeth forth Intelligible Species, that is, an Intelligible Being Seen; which comming into the Understanding, makes us Understand. I say not this, as disapproving the use of Universities: but because I am to speak hereafter of their office in a Common-wealth, I must let you see on all occasions by the way, what things would be amended in them; amongst which the frequency of insignificant Speech is one.

## CHAPTER II. OF IMAGINATION

That when a thing lies still, unlesse somewhat els stirre it, it will lye still for ever, is a truth that no man doubts of. But that when a thing is in motion, it will eternally be in motion, unless somewhat els stay it, though the reason be the same, (namely, that nothing can change it selfe,) is not so easily assented to. For men measure, not onely other men, but all other things, by themselves: and because they find themselves subject after motion to pain, and lassitude, think every thing els growes weary of motion, and seeks repose of its own accord; little considering, whether it be not some other motion, wherein that desire of rest they find in themselves, consisteth. From hence it is, that the Schooles say, Heavy bodies fall downwards, out of an appetite to rest, and to conserve their nature in that place which is most proper for them; ascribing appetite, and Knowledge of what is good for their conservation, (which is more than man has) to things inanimate absurdly.

When a Body is once in motion, it moveth (unless something els hinder it) eternally; and whatsoever hindreth it, cannot in an instant, but in time, and by degrees quite extinguish it: And as wee see in the water, though the wind cease, the waves give not over rowling for a long time after; so also it happeneth in that motion, which is made in the internall parts of a man, then, when he Sees, Dreams, &c. For after the object is removed, or the eye shut, wee still retain an image of the thing seen, though more obscure than when we see it. And this is it, that Latines call Imagination, from the image made in seeing; and apply the same, though improperly, to all the other senses. But the Greeks call it Fancy; which signifies Apparence, and is as proper to one sense, as to another. Imagination therefore is nothing but Decaying Sense; and is found in men, and many other living Creatures, as well sleeping, as waking.

## Memory

The decay of Sense in men waking, is not the decay of the motion made in sense; but an obscuring of it, in such manner, as the light of the Sun obscureth the light of the Starres; which starrs do no less exercise their vertue by which they are visible, in the day, than in the night. But because amongst many stroaks, which our eyes, eares, and other organs receive from externall bodies, the predominant onely is sensible; therefore the light of the Sun being predominant, we are not affected with the action of the starrs. And any object being removed from our eyes, though the impression it made in us remain; yet other objects more present succeeding, and working on us, the Imagination of the past is obscured, and made weak; as the voyce of a man is in the noyse of the day. From whence it followeth, that the longer the time is, after the sight, or Sense of any object, the weaker is the Imagination. For the continuall change of mans body, destroyes in time the parts which in sense were moved: So that the distance of time, and of place, hath one and the same effect in us. For as at a distance of place, that which wee look at, appears dimme, and without distinction of the smaller parts; and as Voyces grow weak, and inarticulate: so also after great distance of time, our imagination of the Past is weak; and wee lose( for example) of Cities wee have seen, many particular Streets; and of Actions, many particular Circumstances. This Decaying Sense, when wee would express the thing it self, (I mean Fancy it selfe,) wee call Imagination, as I said before; But when we would express the Decay, and signifie that the Sense is fading, old, and past, it is called Memory. So that Imagination and Memory, are but one thing, which for divers considerations hath divers names.

Much memory, or memory of many things, is called Experience. Againe, Imagination being only of those things which have been formerly perceived by Sense, either all at once, or by parts at severall times; The former, (which is the imagining the whole object, as it was presented to the sense) is Simple Imagination; as when one imagineth a man, or horse, which he hath seen before. The other is Compounded; as when from the sight of a man at one time, and of a horse at another, we conceive in our

mind a Centaure. So when a man compoundeth the image of his own person, with the image of the actions of an other man; as when a man imagins himselfe a Hercules, or an Alexander, (which happeneth often to them that are much taken with reading of Romants) it is a compound imagination, and properly but a Fiction of the mind. There be also other Imaginations that rise in men, (though waking) from the great impression made in sense; As from gazing upon the Sun, the impression leaves an image of the Sun before our eyes a long time after; and from being long and vehemently attent upon Geometricall Figures, a man shall in the dark, (though awake) have the Images of Lines, and Angles before his eyes: which kind of Fancy hath no particular name; as being a thing that doth not commonly fall into mens discourse.

## Dreams

The imaginations of them that sleep, are those we call Dreams. And these also (as all other Imaginations) have been before, either totally, or by parcells in the Sense. And because in sense, the Brain, and Nerves, which are the necessary Organs of sense, are so benumbed in sleep, as not easily to be moved by the action of Externall Objects, there can happen in sleep, no Imagination; and therefore no Dreame, but what proceeds from the agitation of the inward parts of mans body; which inward parts, for the connexion they have with the Brayn, and other Organs, when they be distempered, do keep the same in motion; whereby the Imaginations there formerly made, appeare as if a man were waking; saving that the Organs of Sense being now benumbed, so as there is no new object, which can master and obscure them with a more vigorous impression, a Dreame must needs be more cleare, in this silence of sense, than are our waking thoughts. And hence it cometh to pass, that it is a hard matter, and by many thought impossible to distinguish exactly between Sense and Dreaming. For my part, when I consider, that in Dreames, I do not often, nor constantly think of the same Persons, Places, Objects, and Actions that I do waking; nor remember so long a trayne of coherent thoughts, Dreaming, as at other times; And because waking I often observe the absurdity of Dreames, but never dream of the absurdities of my waking Thoughts; I am well satisfied, that being awake, I know I dreame not; though when I dreame, I think my selfe awake.

And seeing dreames are caused by the distemper of some of the inward parts of the Body; divers distempers must needs cause different Dreams. And hence it is, that lying cold breedeth Dreams of Feare, and raiseth the thought and Image of some fearfull object (the motion from the brain to the inner parts, and from the inner parts to the Brain being reciprocally:) and that as Anger causeth heat in some parts of the Body, when we are awake; so when we sleep, the over heating of the same parts causeth Anger, and raiseth up in the brain the Imagination of an Enemy. In the same manner; as naturall kindness, when we are awake causeth desire; and desire makes heat in certain other parts of the body; so also, too much heat

in those parts, while wee sleep, raiseth in the brain an imagination of some kindness shewn. In summe, our Dreams are the reverse of our waking Imaginations; The motion when we are awake, beginning at one end; and when we Dream, at another.

## Apparitions Or Visions

The most difficult discerning of a mans Dream, from his waking thoughts, is then, when by some accident we observe not that we have slept: which is easie to happen to a man full of fearfull thoughts; and whose conscience is much troubled; and that sleepeth, without the circumstances, of going to bed, or putting off his clothes, as one that noddeth in a chayre. For he that taketh pains, and industriously layes himselfe to sleep, in case any uncouth and exorbitant fancy come unto him, cannot easily think it other than a Dream. We read of Marcus Brutes, (one that had his life given him by Julius Caesar, and was also his favorite, and notwithstanding murdered him,) how at Phillipi, the night before he gave battell to Augustus Caesar, he saw a fearfull apparition, which is commonly related by Historians as a Vision: but considering the circumstances, one may easily judge to have been but a short Dream. For sitting in his tent, pensive and troubled with the horrour of his rash act, it was not hard for him, slumbering in the cold, to dream of that which most affrighted him; which feare, as by degrees it made him wake; so also it must needs make the Apparition by degrees to vanish: And having no assurance that he slept, he could have no cause to think it a Dream, or any thing but a Vision. And this is no very rare Accident: for even they that be perfectly awake, if they be timorous, and supperstitious, possessed with fearfull tales, and alone in the dark, are subject to the like fancies, and believe they see spirits and dead mens Ghosts walking in Churchyards; whereas it is either their Fancy onely, or els the knavery of such persons, as make use of such superstitious feare, to pass disguised in the night, to places they would not be known to haunt.

From this ignorance of how to distinguish Dreams, and other strong Fancies, from vision and Sense, did arise the greatest part of the Religion of the Gentiles in time past, that worshipped Satyres, Fawnes, nymphs, and the like; and now adayes the opinion than rude people have of Fayries, Ghosts, and Goblins; and of the power of Witches. For as for Witches, I think not that their witch craft is any reall power; but yet that they are justly punished, for the false believe they have, that they can do such

mischiefe, joyned with their purpose to do it if they can; their trade being neerer to a new Religion, than to a Craft or Science. And for Fayries, and walking Ghosts, the opinion of them has I think been on purpose, either taught, or not confuted, to keep in credit the use of Exorcisme, of Crosses, of holy Water, and other such inventions of Ghostly men. Neverthelesse, there is no doubt, but God can make unnaturall Apparitions. But that he does it so often, as men need to feare such things, more than they feare the stay, or change, of the course of Nature, which he also can stay, and change, is no point of Christian faith. But evill men under pretext that God can do any thing, are so bold as to say any thing when it serves their turn, though they think it untrue; It is the part of a wise man, to believe them no further, than right reason makes that which they say, appear credible. If this superstitious fear of Spirits were taken away, and with it, Prognostiques from Dreams, false Prophecies, and many other things depending thereon, by which, crafty ambitious persons abuse the simple people, men would be much more fitted than they are for civill Obedience.

And this ought to be the work of the Schooles; but they rather nourish such doctrine. For (not knowing what Imagination, or the Senses are), what they receive, they teach: some saying, that Imaginations rise of themselves, and have no cause: Others that they rise most commonly from the Will; and that Good thoughts are blown (inspired) into a man, by God; and evill thoughts by the Divell: or that Good thoughts are powred (infused) into a man, by God; and evill ones by the Divell. Some say the Senses receive the Species of things, and deliver them to the Common-sense; and the Common Sense delivers them over to the Fancy, and the Fancy to the Memory, and the Memory to the Judgement, like handing of things from one to another, with many words making nothing understood.

## **Understanding**

The Imagination that is rayed in man (or any other creature indued with the faculty of imagining) by words, or other voluntary signes, is that we generally call Understanding; and is common to Man and Beast. For a dogge by custome will understand the call, or the rating of his Master; and so will many other Beasts. That Understanding which is peculiar to man, is the Understanding not onely his will; but his conceptions and thoughts, by the sequell and contexture of the names of things into Affirmations, Negations, and other formes of Speech: And of this kinde of Understanding I shall speak hereafter.

## CHAPTER III. OF THE CONSEQUENCE OR TRAYNE OF IMAGINATIONS

By Consequence, or Trayne of Thoughts, I understand that succession of one Thought to another, which is called (to distinguish it from Discourse in words) Mentall Discourse.

When a man thinketh on any thing whatsoever, His next Thought after, is not altogether so casuall as it seems to be. Not every Thought to every Thought succeeds indifferently. But as wee have no Imagination, whereof we have not formerly had Sense, in whole, or in parts; so we have no Transition from one Imagination to another, whereof we never had the like before in our Senses. The reason whereof is this. All Fancies are Motions within us, reliques of those made in the Sense: And those motions that immediately succeeded one another in the sense, continue also together after Sense: In so much as the former coming again to take place, and be praedominant, the later followeth, by coherence of the matter moved, in such manner, as water upon a plain Table is drawn which way any one part of it is guided by the finger. But because in sense, to one and the same thing perceived, sometimes one thing, sometimes another succeedeth, it comes to passe in time, that in the Imagining of any thing, there is no certainty what we shall Imagine next; Onely this is certain, it shall be something that succeeded the same before, at one time or another.

## Trayne Of Thoughts Unguided

This Trayne of Thoughts, or Mentall Discourse, is of two sorts. The first is Unguided, Without Designee, and inconstant; Wherein there is no Passionate Thought, to govern and direct those that follow, to it self, as the end and scope of some desire, or other passion: In which case the thoughts are said to wander, and seem impertinent one to another, as in a Dream. Such are Commonly the thoughts of men, that are not onely without company, but also without care of any thing; though even then their Thoughts are as busie as at other times, but without harmony; as the sound which a Lute out of tune would yeeld to any man; or in tune, to one that could not play. And yet in this wild ranging of the mind, a man may oft-times perceive the way of it, and the dependance of one thought upon another. For in a Discourse of our present civill warre, what could seem more impertinent, than to ask (as one did) what was the value of a Roman Penny? Yet the Coherence to me was manifest enough. For the Thought of the warre, introduced the Thought of the delivering up the King to his Enemies; The Thought of that, brought in the Thought of the delivering up of Christ; and that again the Thought of the 30 pence, which was the price of that treason: and thence easily followed that malicious question; and all this in a moment of time; for Thought is quick.

## **Trayne Of Thoughts Regulated**

The second is more constant; as being Regulated by some desire, and designee. For the impression made by such things as wee desire, or feare, is strong, and permanent, or, (if it cease for a time,) of quick return: so strong it is sometimes, as to hinder and break our sleep. From Desire, ariseth the Thought of some means we have seen produce the like of that which we ayme at; and from the thought of that, the thought of means to that mean; and so continually, till we come to some beginning within our own power. And because the End, by the greatnesse of the impression, comes often to mind, in case our thoughts begin to wander, they are quickly again reduced into the way: which observed by one of the seven wise men, made him give men this praecept, which is now worne out, *Respice Finem*; that is to say, in all your actions, look often upon what you would have, as the thing that directs all your thoughts in the way to attain it.

## Remembrance

The Trayn of regulated Thoughts is of two kinds; One, when of an effect imagined, wee seek the causes, or means that produce it: and this is common to Man and Beast. The other is, when imagining any thing whatsoever, wee seek all the possible effects, that can by it be produced; that is to say, we imagine what we can do with it, when wee have it. Of which I have not at any time seen any signe, but in man onely; for this is a curiosity hardly incident to the nature of any living creature that has no other Passion but sensuall, such as are hunger, thirst, lust, and anger. In summe, the Discourse of the Mind, when it is governed by designee, is nothing but Seeking, or the faculty of Invention, which the Latines call Sagacitas, and Solertia; a hunting out of the causes, of some effect, present or past; or of the effects, of some present or past cause, sometimes a man seeks what he hath lost; and from that place, and time, wherein hee misses it, his mind runs back, from place to place, and time to time, to find where, and when he had it; that is to say, to find some certain, and limited time and place, in which to begin a method of seeking. Again, from thence, his thoughts run over the same places and times, to find what action, or other occasion might make him lose it. This we call Remembrance, or Calling to mind: the Latines call it Remiscentia, as it were a Re-Conning of our former actions.

Sometimes a man knows a place determinate, within the compasse whereof his is to seek; and then his thoughts run over all the parts thereof, in the same manner, as one would sweep a room, to find a jewell; or as a Spaniel ranges the field, till he find a sent; or as a man should run over the alphabet, to start a rime.

## Prudence

Sometime a man desires to know the event of an action; and then he thinketh of some like action past, and the events thereof one after another; supposing like events will follow like actions. As he that foresees what will become of a Criminal, re-cons what he has seen follow on the like Crime before; having this order of thoughts, The Crime, the Officer, the Prison, the Judge, and the Gallows. Which kind of thoughts, is called Foresight, and Prudence, or Providence; and sometimes Wisdome; though such conjecture, through the difficulty of observing all circumstances, be very fallacious. But this is certain; by how much one man has more experience of things past, than another; by so much also he is more Prudent, and his expectations the seldomer faile him. The Present onely has a being in Nature; things Past have a being in the Memory onely, but things To Come have no being at all; the Future being but a fiction of the mind, applying the sequels of actions Past, to the actions that are Present; which with most certainty is done by him that has most Experience; but not with certainty enough. And though it be called Prudence, when the Event answereth our Expectation; yet in its own nature, it is but Presumption. For the foresight of things to come, which is Providence, belongs onely to him by whose will they are to come. From him onely, and supernaturally, proceeds Prophecy. The best Prophet naturally is the best gesser; and the best gesser, he that is most versed and studied in the matters he guesses at: for he hath most Signes to gesse by.

## Signes

A Signe, is the Event Antecedent, of the Consequent; and contrarily, the Consequent of the Antecedent, when the like Consequences have been observed, before: And the oftner they have been observed, the lesse uncertain is the Signe. And therefore he that has most experience in any kind of businesse, has most Signes, whereby to guesse at the Future time, and consequently is the most prudent: And so much more prudent than he that is new in that kind of business, as not to be equalled by any advantage of naturall and extemporary wit: though perhaps many young men think the contrary.

Nevertheless it is not Prudence that distinguisheth man from beast. There be beasts, that at a year old observe more, and pursue that which is for their good, more prudently, than a child can do at ten.

## Conjecture Of The Time Past

As Prudence is a Praesumption of the Future, contracted from the Experience of time Past; So there is a Praesumption of things Past taken from other things (not future but) past also. For he that hath seen by what courses and degrees, a flourishing State hath first come into civill warre, and then to ruine; upon the sights of the ruines of any other State, will guesse, the like warre, and the like courses have been there also. But his conjecture, has the same uncertainty almost with the conjecture of the Future; both being grounded onely upon Experience.

There is no other act of mans mind, that I can remember, naturally planted in him, so, as to need no other thing, to the exercise of it, but to be born a man, and live with the use of his five Senses. Those other Faculties, of which I shall speak by and by, and which seem proper to man onely, are acquired, and encreased by study and industry; and of most men learned by instruction, and discipline; and proceed all from the invention of Words, and Speech. For besides Sense, and Thoughts, and the Trayne of thoughts, the mind of man has no other motion; though by the help of Speech, and Method, the same Facultyes may be improved to such a height, as to distinguish men from all other living Creatures.

Whatsoever we imagine, is Finite. Therefore there is no Idea, or conception of anything we call Infinite. No man can have in his mind an Image of infinite magnitude; nor conceive the ends, and bounds of the thing named; having no Conception of the thing, but of our own inability. And therefore the Name of GOD is used, not to make us conceive him; (for he is Incomprehensible; and his greatnesse, and power are unconceivable;) but that we may honour him. Also because whatsoever (as I said before,) we conceive, has been perceived first by sense, either all at once, or by parts; a man can have no thought, representing any thing, not subject to sense. No man therefore can conceive any thing, but he must conceive it in some place; and indued with some determinate magnitude; and which may be divided into parts; nor that any thing is all in this place, and all in another place at the same time; nor that two, or more things can be in one, and the same place at once: for none of these things ever have,

or can be incident to Sense; but are absurd speeches, taken upon credit (without any signification at all,) from deceived Philosophers, and deceived, or deceiving Schoolemen.

## **CHAPTER IV. OF SPEECH**

## Originall Of Speech

The Invention of Printing, though ingenious, compared with the invention of Letters, is no great matter. But who was the first that found the use of Letters, is not known. He that first brought them into Greece, men say was Cadmus, the sonne of Agenor, King of Phaenicia. A profitable Invention for continuing the memory of time past, and the conjunction of mankind, dispersed into so many, and distant regions of the Earth; and with all difficult, as proceeding from a watchfull observation of the divers motions of the Tongue, Palat, Lips, and other organs of Speech; whereby to make as many differences of characters, to remember them. But the most noble and profitable invention of all other, was that of Speech, consisting of Names or Apellations, and their Connexion; whereby men register their Thoughts; recall them when they are past; and also declare them one to another for mutuall utility and conversation; without which, there had been amongst men, neither Common-wealth, nor Society, nor Contract, nor Peace, no more than amongst Lyons, Bears, and Wolves. The first author of Speech was GOD himselfe, that instructed Adam how to name such creatures as he presented to his sight; For the Scripture goeth no further in this matter. But this was sufficient to direct him to adde more names, as the experience and use of the creatures should give him occasion; and to joyn them in such manner by degrees, as to make himselfe understood; and so by succession of time, so much language might be gotten, as he had found use for; though not so copious, as an Orator or Philosopher has need of. For I do not find any thing in the Scripture, out of which, directly or by consequence can be gathered, that Adam was taught the names of all Figures, Numbers, Measures, Colours, Sounds, Fancies, Relations; much less the names of Words and Speech, as Generall, Speciall, Affirmative, Negative, Interrogative, Optative, Infinitive, all which are usefull; and least of all, of Entity, Intentionality, Quiddity, and other significant words of the School.

But all this language gotten, and augmented by Adam and his posterity, was again lost at the tower of Babel, when by the hand of God, every man was stricken for his rebellion, with an oblivion of his former language.

And being hereby forced to disperse themselves into severall parts of the world, it must needs be, that the diversity of Tongues that now is, proceeded by degrees from them, in such manner, as need (the mother of all inventions) taught them; and in tract of time grew every where more copious.

## The Use Of Speech

The generall use of Speech, is to transferre our Mentall Discourse, into Verbal; or the Trayne of our Thoughts, into a Trayne of Words; and that for two commodities; whereof one is, the Registering of the Consequences of our Thoughts; which being apt to slip out of our memory, and put us to a new labour, may again be recalled, by such words as they were marked by. So that the first use of names, is to serve for Markes, or Notes of remembrance. Another is, when many use the same words, to signifie (by their connexion and order,) one to another, what they conceive, or think of each matter; and also what they desire, feare, or have any other passion for, and for this use they are called Signes. Speciall uses of Speech are these; First, to Register, what by cogitation, wee find to be the cause of any thing, present or past; and what we find things present or past may produce, or effect: which in summe, is acquiring of Arts. Secondly, to shew to others that knowledge which we have attained; which is, to Counsell, and Teach one another. Thirdly, to make known to others our wills, and purposes, that we may have the mutuall help of one another. Fourthly, to please and delight our selves, and others, by playing with our words, for pleasure or ornament, innocently.

## Abuses Of Speech

To these Uses, there are also foure correspondent Abuses. First, when men register their thoughts wrong, by the inconstancy of the signification of their words; by which they register for their conceptions, that which they never conceived; and so deceive themselves. Secondly, when they use words metaphorically; that is, in other sense than that they are ordained for; and thereby deceive others. Thirdly, when by words they declare that to be their will, which is not. Fourthly, when they use them to grieve one another: for seeing nature hath armed living creatures, some with teeth, some with horns, and some with hands, to grieve an enemy, it is but an abuse of Speech, to grieve him with the tongue, unlesse it be one whom wee are obliged to govern; and then it is not to grieve, but to correct and amend.

The manner how Speech serveth to the remembrance of the consequence of causes and effects, consisteth in the imposing of Names, and the Connexion of them.

## **Names Proper & Common Universall**

Of Names, some are Proper, and singular to one onely thing; as Peter, John, This Man, This Tree: and some are Common to many things; as Man, Horse, Tree; every of which though but one Name, is nevertheless the name of divers particular things; in respect of all which together, it is called an Universall; there being nothing in the world Universall but Names; for the things named, are every one of them Individual and Singular.

One Universall name is imposed on many things, for their similitude in some quality, or other accident: And whereas a Proper Name bringeth to mind one thing onely; Universals recall any one of those many.

And of Names Universall, some are of more, and some of lesse extent; the larger comprehending the lesse large: and some again of equall extent, comprehending each other reciprocally. As for example, the Name Body is of larger signification than the word Man, and comprehendeth it; and the names Man and Rationall, are of equall extent, comprehending mutually one another. But here wee must take notice, that by a Name is not alwayes understood, as in Grammar, one onely word; but sometimes by circumlocution many words together. For all these words, Hee That In His Actions Observeth The Lawes Of His Country, make but one Name, equivalent to this one word, Just.

By this imposition of Names, some of larger, some of stricter signification, we turn the reckoning of the consequences of things imagined in the mind, into a reckoning of the consequences of Appellations. For example, a man that hath no use of Speech at all, (such as is born and remains perfectly deafe and dumb,) if he set before his eyes a triangle, and by it two right angles, (such as are the corners of a square figure,) he may by meditation compare and find, that the three angles of that triangle, are equall to those two right angles that stand by it. But if another triangle be shewn him different in shape from the former, he cannot know without a new labour, whether the three angles of that also be equall to the same. But he that hath the use of words, when he observes, that such equality was consequent, not to the length of the sides, nor to any

other particular thing in his triangle; but onely to this, that the sides were straight, and the angles three; and that that was all, for which he named it a Triangle; will boldly conclude Universally, that such equality of angles is in all triangles whatsoever; and register his invention in these generall termes, Every Triangle Hath Its Three Angles Equall To Two Right Angles. And thus the consequence found in one particular, comes to be registred and remembred, as a Universall rule; and discharges our mentall reckoning, of time and place; and delivers us from all labour of the mind, saving the first; and makes that which was found true Here, and Now, to be true in All Times and Places.

But the use of words in registring our thoughts, is in nothing so evident as in Numbering. A naturall foole that could never learn by heart the order of numerall words, as One, Two, and Three, may observe every stroak of the Clock, and nod to it, or say one, one, one; but can never know what houre it strikes. And it seems, there was a time when those names of number were not in use; and men were fayn to apply their fingers of one or both hands, to those things they desired to keep account of; and that thence it proceeded, that now our numerall words are but ten, in any Nation, and in some but five, and then they begin again. And he that can tell ten, if he recite them out of order, will lose himselfe, and not know when he has done: Much lesse will he be able to add, and substract, and performe all other operations of Arithmetique. So that without words, there is no possibility of reckoning of Numbers; much lesse of Magnitudes, of Swiftnesse, of Force, and other things, the reckonings whereof are necessary to the being, or well-being of man-kind.

When two Names are joynd together into a Consequence, or Affirmation; as thus, A Man Is A Living Creature; or thus, If He Be A Man, He Is A Living Creature, If the later name Living Creature, signifie all that the former name Man signifieth, then the affirmation, or consequence is True; otherwise False. For True and False are attributes of Speech, not of things. And where Speech is not, there is neither Truth nor Falshood. Errour there may be, as when wee expect that which shall not be; or suspect what has not been: but in neither case can a man be charged with Untruth.

Seeing then that Truth consisteth in the right ordering of names in our affirmations, a man that seeketh precise Truth, had need to remember what

every name he uses stands for; and to place it accordingly; or els he will find himselfe entangled in words, as a bird in lime-twiggs; the more he struggles, the more belimed. And therefore in Geometry, (which is the onely Science that it hath pleased God hitherto to bestow on mankind,) men begin at settling the significations of their words; which settling of significations, they call Definitions; and place them in the beginning of their reckoning.

By this it appears how necessary it is for any man that aspires to true Knowledge, to examine the Definitions of former Authors; and either to correct them, where they are negligently set down; or to make them himselfe. For the errours of Definitions multiply themselves, according as the reckoning proceeds; and lead men into absurdities, which at last they see, but cannot avoyd, without reckoning anew from the beginning; in which lyes the foundation of their errours. From whence it happens, that they which trust to books, do as they that cast up many little summs into a greater, without considering whether those little summes were rightly cast up or not; and at last finding the errour visible, and not mistrusting their first grounds, know not which way to cleere themselves; but spend time in fluttering over their bookes; as birds that entring by the chimney, and finding themselves inclosed in a chamber, flitter at the false light of a glasse window, for want of wit to consider which way they came in. So that in the right Definition of Names, lyes the first use of Speech; which is the Acquisition of Science: And in wrong, or no Definitions' lyes the first abuse; from which proceed all false and senslesse Tenets; which make those men that take their instruction from the authority of books, and not from their own meditation, to be as much below the condition of ignorant men, as men endued with true Science are above it. For between true Science, and erroneous Doctrines, Ignorance is in the middle. Naturall sense and imagination, are not subject to absurdity. Nature it selfe cannot erre: and as men abound in copiousnesse of language; so they become more wise, or more mad than ordinary. Nor is it possible without Letters for any man to become either excellently wise, or (unless his memory be hurt by disease, or ill constitution of organs) excellently foolish. For words are wise mens counters, they do but reckon by them: but they are the mony of fooles, that value them by the authority of an Aristotle, a Cicero, or a Thomas, or any other Doctor whatsoever, if but a man.

## Subject To Names

Subject To Names, is whatsoever can enter into, or be considered in an account; and be added one to another to make a summe; or substracted one from another, and leave a remainder. The Latines called Accounts of many Rationes, and accounting, Ratiocinatio: and that which we in bills or books of account call Items, they called Nomina; that is, Names: and thence it seems to proceed, that they extended the word Ratio, to the faculty of Reckoning in all other things. The Greeks have but one word Logos, for both Speech and Reason; not that they thought there was no Speech without Reason; but no Reasoning without Speech: And the act of reasoning they called syllogisme; which signifieth summing up of the consequences of one saying to another. And because the same things may enter into account for divers accidents; their names are (to shew that diversity) diversly wrested, and diversified. This diversity of names may be reduced to foure generall heads.

First, a thing may enter into account for Matter, or Body; as Living, Sensible, Rationall, Hot, Cold, Moved, Quiet; with all which names the word Matter, or Body is understood; all such, being names of Matter.

Secondly, it may enter into account, or be considered, for some accident or quality, which we conceive to be in it; as for Being Moved, for Being So Long, for Being Hot, &c; and then, of the name of the thing it selfe, by a little change or wresting, wee make a name for that accident, which we consider; and for Living put into account Life; for Moved, Motion; for Hot, Heat; for Long, Length, and the like. And all such Names, are the names of the accidents and properties, by which one Matter, and Body is distinguished from another. These are called Names Abstract; Because Severed (not from Matter, but) from the account of Matter.

Thirdly, we bring into account, the Properties of our own bodies, whereby we make such distinction: as when any thing is Seen by us, we reckon not the thing it selfe; but the Sight, the Colour, the Idea of it in the fancy: and when any thing is Heard, wee reckon it not; but the Hearing, or Sound onely, which is our fancy or conception of it by the Eare: and such are names of fancies.

Fourthly, we bring into account, consider, and give names, to Names themselves, and to Speeches: For, Generall, Universall, Speciall, Oequivocall, are names of Names. And Affirmation, Interrogation, Commandement, Narration, Syllogisme, Sermon, Oration, and many other such, are names of Speeches.

## **Use Of Names Positive**

And this is all the variety of Names Positive; which are put to mark somewhat which is in Nature, or may be feigned by the mind of man, as Bodies that are, or may be conceived to be; or of bodies, the Properties that are, or may be feigned to be; or Words and Speech.

## **Negative Names With Their Uses**

There be also other Names, called Negative; which are notes to signifie that a word is not the name of the thing in question; as these words Nothing, No Man, Infinite, Indocible, Three Want Foure, and the like; which are nevertheless of use in reckoning, or in correcting of reckoning; and call to mind our past cogitations, though they be not names of any thing; because they make us refuse to admit of Names not rightly used.

## Words Insignificant

All other names, are but insignificant sounds; and those of two sorts. One, when they are new, and yet their meaning not explained by Definition; whereof there have been abundance coyned by Schoole-men, and pusled Philosophers.

Another, when men make a name of two Names, whose significations are contradictory and inconsistent; as this name, an Incorporeall Body, or (which is all one) an Incorporeall Substance, and a great number more. For whensoever any affirmation is false, the two names of which it is composed, put together and made one, signifie nothing at all. For example if it be a false affirmation to say A Quadrangle Is Round, the word Round Quadrangle signifies nothing; but is a meere sound. So likewise if it be false, to say that vertue can be powred, or blown up and down; the words In-powred Vertue, In-blown Vertue, are as absurd and insignificant, as a Round Quadrangle. And therefore you shall hardly meet with a senselesse and insignificant word, that is not made up of some Latin or Greek names. A Frenchman seldome hears our Saviour called by the name of Parole, but by the name of Verbe often; yet Verbe and Parole differ no more, but that one is Latin, the other French.

## Understanding

When a man upon the hearing of any Speech, hath those thoughts which the words of that Speech, and their connexion, were ordained and constituted to signifie; Then he is said to understand it; Understanding being nothing els, but conception caused by Speech. And therefore if Speech be peculiar to man (as for ought I know it is,) then is Understanding peculiar to him also. And therefore of absurd and false affirmations, in case they be universall, there can be no Understanding; though many think they understand, then, when they do but repeat the words softly, or con them in their mind.

What kinds of Speeches signifie the Appetites, Aversions, and Passions of mans mind; and of their use and abuse, I shall speak when I have spoken of the Passions.

## **Inconstant Names**

The names of such things as affect us, that is, which please, and displease us, because all men be not alike affected with the same thing, nor the same man at all times, are in the common discourses of men, of Inconstant signification. For seeing all names are imposed to signifie our conceptions; and all our affections are but conceptions; when we conceive the same things differently, we can hardly avoyd different naming of them. For though the nature of that we conceive, be the same; yet the diversity of our reception of it, in respect of different constitutions of body, and prejudices of opinion, gives everything a tincture of our different passions. And therefore in reasoning, a man bust take heed of words; which besides the signification of what we imagine of their nature, disposition, and interest of the speaker; such as are the names of Vertues, and Vices; For one man calleth Wisdome, what another calleth Feare; and one Cruelty, what another Justice; one Prodigality, what another Magnanimity; one Gravity, what another Stupidity, &c. And therefore such names can never be true grounds of any ratiocination. No more can Metaphors, and Tropes of speech: but these are less dangerous, because they profess their inconstancy; which the other do not.

## **CHAPTER V. OF REASON, AND SCIENCE.**

## Reason What It Is

When a man Reasoneth, hee does nothing els but conceive a summe totall, from Addition of parcels; or conceive a Remainder, from Substraction of one summe from another: which (if it be done by Words,) is conceiving of the consequence of the names of all the parts, to the name of the whole; or from the names of the whole and one part, to the name of the other part. And though in some things, (as in numbers,) besides Adding and Subtracting, men name other operations, as Multiplying and Dividing; yet they are the same; for Multiplication, is but Addition together of things equall; and Division, but Subtracting of one thing, as often as we can. These operations are not incident to Numbers onely, but to all manner of things that can be added together, and taken one out of another. For as Arithmeticians teach to adde and subtract in Numbers; so the Geometricians teach the same in Lines, Figures (solid and superficial,) Angles, Proportions, Times, degrees of Swiftnesse, Force, Power, and the like; The Logicians teach the same in Consequences Of Words; adding together Two Names, to make an Affirmation; and Two Affirmations, to make a syllogisme; and Many syllogismes to make a Demonstration; and from the Summe, or Conclusion of a syllogisme, they subtract one Proposition, to finde the other. Writers of Politiques, adde together Pactions, to find mens Duties; and Lawyers, Lawes and Facts, to find what is Right and Wrong in the actions of private men. In summe, in what matter soever there is place for Addition and Substraction, there also is place for Reason; and where these have no place, there Reason has nothing at all to do.

## **Reason Defined**

Out of all which we may define, (that is to say determine,) what that is, which is meant by this word Reason, when we reckon it amongst the Faculties of the mind. For Reason, in this sense, is nothing but Reckoning (that is, Adding and Subtracting) of the Consequences of generall names agreed upon, for the Marking and Signifying of our thoughts; I say Marking them, when we reckon by our selves; and Signifying, when we demonstrate, or approve our reckonings to other men.

## Right Reason Where

And as in Arithmetique, unpractised men must, and Professors themselves may often erre, and cast up false; so also in any other subject of Reasoning, the ablest, most attentive, and most practised men, may deceive themselves, and inferre false Conclusions; Not but that Reason it selfe is always Right Reason, as well as Arithmetique is a certain and infallible art: But no one mans Reason, nor the Reason of any one number of men, makes the certaintie; no more than an account is therefore well cast up, because a great many men have unanimously approved it. And therefore, as when there is a controversy in an account, the parties must by their own accord, set up for right Reason, the Reason of some Arbitrator, or Judge, to whose sentence they will both stand, or their controversie must either come to blowes, or be undecided, for want of a right Reason constituted by Nature; so is it also in all debates of what kind soever: And when men that think themselves wiser than all others, clamor and demand right Reason for judge; yet seek no more, but that things should be determined, by no other mens reason but their own, it is as intolerable in the society of men, as it is in play after trump is turned, to use for trump on every occasion, that suite whereof they have most in their hand. For they do nothing els, that will have every of their passions, as it comes to bear sway in them, to be taken for right Reason, and that in their own controversies: bewraying their want of right Reason, by the claym they lay to it.

## The Use Of Reason

The Use and End of Reason, is not the finding of the summe, and truth of one, or a few consequences, remote from the first definitions, and settled significations of names; but to begin at these; and proceed from one consequence to another. For there can be no certainty of the last Conclusion, without a certainty of all those Affirmations and Negations, on which it was grounded, and inferred. As when a master of a family, in taking an account, casteth up the sums of all the bills of expence, into one sum; and not regarding how each bill is summed up, by those that give them in account; nor what it is he payes for; he advantages himselfe no more, than if he allowed the account in grosse, trusting to every of the accountants skill and honesty; so also in Reasoning of all other things, he that takes up conclusions on the trust of Authors, and doth not fetch them from the first Items in every Reckoning, (which are the significations of names settled by definitions), loses his labour; and does not know any thing; but onely beleeveth.

## Of Error And Absurdity

When a man reckons without the use of words, which may be done in particular things, (as when upon the sight of any one thing, we conjecture what was likely to have preceded, or is likely to follow upon it;) if that which he thought likely to follow, follows not; or that which he thought likely to have preceded it, hath not preceded it, this is called ERROR; to which even the most prudent men are subject. But when we Reason in Words of generall signification, and fall upon a generall inference which is false; though it be commonly called Error, it is indeed an ABSURDITY, or senseless Speech. For Error is but a deception, in presuming that somewhat is past, or to come; of which, though it were not past, or not to come; yet there was no impossibility discoverable. But when we make a generall assertion, unlesse it be a true one, the possibility of it is unconceivable. And words whereby we conceive nothing but the sound, are those we call Absurd, insignificant, and Non-sense. And therefore if a man should talk to me of a Round Quadrangle; or Accidents Of Bread In Cheese; or Immaterial Substances; or of A Free Subject; A Free Will; or any Free, but free from being hindred by opposition, I should not say he were in an Error; but that his words were without meaning; that is to say, Absurd.

I have said before, (in the second chapter,) that a Man did excell all other Animals in this faculty, that when he conceived any thing whatsoever, he was apt to enquire the consequences of it, and what effects he could do with it. And now I adde this other degree of the same excellence, that he can by words reduce the consequences he findes to generall Rules, called Theoremes, or Aphorismes; that is, he can Reason, or reckon, not onely in number; but in all other things, whereof one may be added unto, or substracted from another.

But this priviledge, is allayed by another; and that is, by the priviledge of Absurdity; to which no living creature is subject, but man onely. And of men, those are of all most subject to it, that professe Philosophy. For it is most true that Cicero sayth of them somewhere; that there can be nothing so absurd, but may be found in the books of Philosophers. And the reason

is manifest. For there is not one of them that begins his ratiocination from the Definitions, or Explications of the names they are to use; which is a method that hath been used onely in Geometry; whose Conclusions have thereby been made indisputable.

## Causes Of Absurditie

The first cause of Absurd conclusions I ascribe to the want of Method; in that they begin not their Ratiocination from Definitions; that is, from settled significations of their words: as if they could cast account, without knowing the value of the numerall words, One, Two, and Three.

And whereas all bodies enter into account upon divers considerations, (which I have mentioned in the precedent chapter;) these considerations being diversly named, divers absurdities proceed from the confusion, and unfit connexion of their names into assertions. And therefore

The second cause of Absurd assertions, I ascribe to the giving of names of Bodies, to Accidents; or of Accidents, to Bodies; As they do, that say, Faith Is Infused, or Inspired; when nothing can be Powred, or Breathed into any thing, but body; and that, Extension is Body; that Phantasmes are Spirits, &c.

The third I ascribe to the giving of the names of the Accidents of Bodies Without Us, to the Accidents of our Own Bodies; as they do that say, the Colour Is In The Body; The Sound Is In The Ayre, &c.

The fourth, to the giving of the names of Bodies, to Names, or Speeches; as they do that say, that There Be Things Universall; that A Living Creature Is Genus, or A Generall Thing, &c.

The fifth, to the giving of the names of Accidents, to Names and Speeches; as they do that say, The Nature Of A Thing Is In Its Definition; A Mans Command Is His Will; and the like.

The sixth, to the use of Metaphors, Tropes, and other Rhetoricall figures, in stead of words proper. For though it be lawfull to say, (for example) in common speech, The Way Goeth, Or Leadeth Hither, Or Thither, The Proverb Sayes This Or That (whereas wayes cannot go, nor Proverbs speak;) yet in reckoning, and seeking of truth, such speeches are not to be admitted.

The seventh, to names that signifie nothing; but are taken up, and learned by rote from the Schooles, as Hypostatical, Transubstantiate, Consubstantiate, Eternal-now, and the like canting of Schoole-men.

To him that can avoyd these things, it is not easie to fall into any absurdity, unlesse it be by the length of an account; wherein he may perhaps forget what went before. For all men by nature reason alike, and well, when they have good principles. For who is so stupid, as both to mistake in Geometry, and also to persist in it, when another detects his error to him?

## Science

By this it appears that Reason is not as Sense, and Memory, borne with us; nor gotten by Experience onely; as Prudence is; but attained by Industry; first in apt imposing of Names; and secondly by getting a good and orderly Method in proceeding from the Elements, which are Names, to Assertions made by Connexion of one of them to another; and so to syllogismes, which are the Connexions of one Assertion to another, till we come to a knowledge of all the Consequences of names appertaining to the subject in hand; and that is it, men call SCIENCE. And whereas Sense and Memory are but knowledge of Fact, which is a thing past, and irrevocable; Science is the knowledge of Consequences, and dependance of one fact upon another: by which, out of that we can presently do, we know how to do something els when we will, or the like, another time; Because when we see how any thing comes about, upon what causes, and by what manner; when the like causes come into our power, wee see how to make it produce the like effects.

Children therefore are not endued with Reason at all, till they have attained the use of Speech: but are called Reasonable Creatures, for the possibility apparent of having the use of Reason in time to come. And the most part of men, though they have the use of Reasoning a little way, as in numbring to some degree; yet it serves them to little use in common life; in which they govern themselves, some better, some worse, according to their differences of experience, quicknesse of memory, and inclinations to severall ends; but specially according to good or evill fortune, and the errors of one another. For as for Science, or certain rules of their actions, they are so farre from it, that they know not what it is. Geometry they have thought Conjuring: but for other Sciences, they who have not been taught the beginnings, and some progresse in them, that they may see how they be acquired and generated, are in this point like children, that having no thought of generation, are made believe by the women, that their brothers and sisters are not born, but found in the garden.

But yet they that have no Science, are in better, and nobler condition with their naturall Prudence; than men, that by mis-reasoning, or by

trusting them that reason wrong, fall upon false and absurd generall rules. For ignorance of causes, and of rules, does not set men so farre out of their way, as relying on false rules, and taking for causes of what they aspire to, those that are not so, but rather causes of the contrary.

To conclude, The Light of humane minds is Perspicuous Words, but by exact definitions first snuffed, and purged from ambiguity; Reason is the Pace; Encrease of Science, the Way; and the Benefit of man-kind, the End. And on the contrary, Metaphors, and senslesse and ambiguous words, are like *Ignes Fatui*; and reasoning upon them, is wandering amongst innumerable absurdities; and their end, contention, and sedition, or contempt.

## **Prudence & Sapience, With Their Difference**

As, much Experience, is Prudence; so, is much Science, Sapience. For though wee usually have one name of Wisedome for them both; yet the Latines did always distinguish between Prudentia and Sapientia, ascribing the former to Experience, the later to Science. But to make their difference appeare more cleerly, let us suppose one man endued with an excellent naturall use, and dexterity in handling his armes; and another to have added to that dexterity, an acquired Science, of where he can offend, or be offended by his adversarie, in every possible posture, or guard: The ability of the former, would be to the ability of the later, as Prudence to Sapience; both usefull; but the later infallible. But they that trusting onely to the authority of books, follow the blind blindly, are like him that trusting to the false rules of the master of fence, ventures praesumptuously upon an adversary, that either kills, or disgraces him.

## Signes Of Science

The signes of Science, are some, certain and infallible; some, uncertain. Certain, when he that pretendeth the Science of any thing, can teach the same; that is to say, demonstrate the truth thereof perspicuously to another: Uncertain, when onely some particular events answer to his pretence, and upon many occasions prove so as he sayes they must. Signes of prudence are all uncertain; because to observe by experience, and remember all circumstances that may alter the successe, is impossible. But in any businesse, whereof a man has not infallible Science to proceed by; to forsake his own natural judgement, and be guided by generall sentences read in Authors, and subject to many exceptions, is a signe of folly, and generally scorned by the name of Pedantry. And even of those men themselves, that in Councells of the Common-wealth, love to shew their reading of Politiques and History, very few do it in their domestique affaires, where their particular interest is concerned; having Prudence enough for their private affaires: but in publique they study more the reputation of their owne wit, than the successe of anothers businesse.

# **CHAPTER VI. OF THE INTERIOUR BEGINNINGS OF VOLUNTARY MOTIONS**

COMMONLY CALLED THE PASSIONS. AND THE SPEECHES BY  
WHICH THEY ARE EXPRESSED.

## **Motion Vitall And Animal**

There be in Animals, two sorts of Motions peculiar to them: One called Vitall; begun in generation, and continued without interruption through their whole life; such as are the Course of the Bloud, the Pulse, the Breathing, the Concoctions, Nutrition, Excretion, &c; to which Motions there needs no help of Imagination: The other in Animal Motion, otherwise called Voluntary Motion; as to Go, to Speak, to Move any of our limbes, in such manner as is first fancied in our minds. That Sense, is Motion in the organs and interiour parts of mans body, caused by the action of the things we See, Heare, &c.; And that Fancy is but the Reliques of the same Motion, remaining after Sense, has been already sayd in the first and second Chapters. And because Going, Speaking, and the like Voluntary motions, depend alwayes upon a precedent thought of Whither, Which Way, and What; it is evident, that the Imagination is the first internall beginning of all Voluntary Motion. And although unstudied men, doe not conceive any motion at all to be there, where the thing moved is invisible; or the space it is moved in, is (for the shortnesse of it) insensible; yet that doth not hinder, but that such Motions are. For let a space be never so little, that which is moved over a greater space, whereof that little one is part, must first be moved over that. These small beginnings of Motion, within the body of Man, before they appear in walking, speaking, striking, and other visible actions, are commonly called ENDEAVOUR.

## **Endeavour; Appetite; Desire; Hunger; Thirst; Aversion**

This Endeavour, when it is toward something which causes it, is called APPETITE, or DESIRE; the later, being the generall name; and the other, oftentimes restrayned to signifie the Desire of Food, namely Hunger and Thirst. And when the Endeavour is fromward something, it is generally called AVERSION. These words Appetite, and Aversion we have from the Latines; and they both of them signifie the motions, one of approaching, the other of retiring. So also do the Greek words for the same, which are orme and aphorme. For nature it selfe does often presse upon men those truths, which afterwards, when they look for somewhat beyond Nature, they stumble at. For the Schooles find in meere Appetite to go, or move, no actuall Motion at all: but because some Motion they must acknowledge, they call it Metaphoricall Motion; which is but an absurd speech; for though Words may be called metaphoricall; Bodies, and Motions cannot.

That which men Desire, they are also sayd to LOVE; and to HATE those things, for which they have Aversion. So that Desire, and Love, are the same thing; save that by Desire, we alwayes signifie the Absence of the object; by Love, most commonly the Presence of the same. So also by Aversion, we signifie the Absence; and by Hate, the Presence of the Object.

Of Appetites, and Aversions, some are born with men; as Appetite of food, Appetite of excretion, and exoneration, (which may also and more properly be called Aversions, from somewhat they feele in their Bodies;) and some other Appetites, not many. The rest, which are Appetites of particular things, proceed from Experience, and triall of their effects upon themselves, or other men. For of things wee know not at all, or believe not to be, we can have no further Desire, than to tast and try. But Aversion wee have for things, not onely which we know have hurt us; but also that we do not know whether they will hurt us, or not.

## Contempt

Those things which we neither Desire, nor Hate, we are said to Contemne: CONTEMPT being nothing els but an immobility, or contumacy of the Heart, in resisting the action of certain things; and proceeding from that the Heart is already moved otherwise, by either more potent objects; or from want of experience of them.

And because the constitution of a mans Body, is in continuall mutation; it is impossible that all the same things should alwayes cause in him the same Appetites, and aversions: much lesse can all men consent, in the Desire of almost any one and the same Object.

## **Good Evill**

But whatsoever is the object of any mans Appetite or Desire; that is it, which he for his part calleth Good: And the object of his Hate, and Aversion, evill; And of his contempt, Vile, and Inconsiderable. For these words of Good, evill, and Contemptible, are ever used with relation to the person that useth them: There being nothing simply and absolutely so; nor any common Rule of Good and evill, to be taken from the nature of the objects themselves; but from the Person of the man (where there is no Common-wealth;) or, (in a Common-wealth,) From the Person that representeth it; or from an Arbitrator or Judge, whom men disagreeing shall by consent set up, and make his sentence the Rule thereof.

## **Pulchrum Turpe; Delightfull Profitable; Unpleasant Unprofitable**

The Latine Tongue has two words, whose significations approach to those of Good and Evill; but are not precisely the same; And those are Pulchrum and Turpe. Whereof the former signifies that, which by some apparent signes promiseth Good; and the later, that, which promiseth evill. But in our Tongue we have not so generall names to expresse them by. But for Pulchrum, we say in some things, Fayre; in other Beautifull, or Handsome, or Gallant, or Honourable, or Comely, or Amiable; and for Turpe, Foule, Deformed, Ugly, Base, Nauseous, and the like, as the subject shall require; All which words, in their proper places signifie nothing els, but the Mine, or Countenance, that promiseth Good and evill. So that of Good there be three kinds; Good in the Promise, that is Pulchrum; Good in Effect, as the end desired, which is called Jucundum, Delightfull; and Good as the Means, which is called Utile, Profitable; and as many of evill: For evill, in Promise, is that they call Turpe; evill in Effect, and End, is Molestum, Unpleasant, Troublesome; and evill in the Means, Inutile, Unprofitable, Hurtfull.

## **Delight Displeasure**

As, in Sense, that which is really within us, is (As I have sayd before) onely Motion, caused by the action of externall objects, but in apparence; to the Sight, Light and Colour; to the Eare, Sound; to the Nostrill, Odour, &c: so, when the action of the same object is continued from the Eyes, Eares, and other organs to the Heart; the real effect there is nothing but Motion, or Endeavour; which consisteth in Appetite, or Aversion, to, or from the object moving. But the apparence, or sense of that motion, is that wee either call DELIGHT, or TROUBLE OF MIND.

## **Pleasure Offence**

This Motion, which is called Appetite, and for the apparence of it Delight, and Pleasure, seemeth to be, a corroboration of Vitall motion, and a help thereunto; and therefore such things as caused Delight, were not improperly called Jucunda, (A Juvando,) from helping or fortifying; and the contrary, Molesta, Offensive, from hindering, and troubling the motion vitall.

Pleasure therefore, (or Delight,) is the apparence, or sense of Good; and Molestation or Displeasure, the apparence, or sense of evill. And consequently all Appetite, Desire, and Love, is accompanied with some Delight more or lesse; and all Hatred, and Aversion, with more or lesse Displeasure and Offence.

## **Pleasures Of Sense; Pleasures Of The Mind; Joy Paine Griefe**

Of Pleasures, or Delights, some arise from the sense of an object Present; And those may be called Pleasures Of Sense, (The word Sensuall, as it is used by those onely that condemn them, having no place till there be Lawes.) Of this kind are all Onerations and Exonerations of the body; as also all that is pleasant, in the Sight, Hearing, Smell, Tast, Or Touch; Others arise from the Expectation, that proceeds from foresight of the End, or Consequence of things; whether those things in the Sense Please or Displease: And these are Pleasures Of The Mind of him that draweth those consequences; and are generally called JOY. In the like manner, Displeasures, are some in the Sense, and called PAYNE; others, in the Expectation of consequences, and are called GRIEFE.

These simple Passions called Appetite, Desire, Love, Aversion, Hate, Joy, and griefe, have their names for divers considerations diversified. As first, when they one succeed another, they are diversly called from the opinion men have of the likelihood of attaining what they desire. Secondly, from the object loved or hated. Thirdly, from the consideration of many of them together. Fourthly, from the Alteration or succession it selfe.

Hope— For Appetite with an opinion of attaining, is called HOPE.

Despaire— The same, without such opinion, DESPAIRE.

Feare— Aversion, with opinion of Hurt from the object, FEARE.

Courage— The same, with hope of avoyding that Hurt by resistance, COURAGE.

Anger— Sudden Courage, ANGER.

Confidence— Constant Hope, CONFIDENCE of our selves.

Diffidence— Constant Despayre, DIFFIDENCE of our selves.

Indignation— Anger for great hurt done to another, when we conceive the same to be done by Injury, INDIGNATION.

Benevolence— Desire of good to another, BENEVOLENCE, GOOD WILL, CHARITY. If to man generally, GOOD NATURE.

Covetousnesse— Desire of Riches, COVETOUSNESSE: a name used always in signification of blame; because men contending for them, are displeas'd with one anothers attaining them; though the desire in it selfe, be to be blamed, or allowed, according to the means by which those Riches are sought.

Ambition— Desire of Office, or precedence, AMBITION: a name used also in the worse sense, for the reason before mentioned.

Pusillanimity— Desire of things that conduce but a little to our ends; And fear of things that are but of little hindrance, PUSILLANIMITY.

Magnanimity— Contempt of little helps, and hindrances, MAGNANIMITY.

Valour— Magnanimity, in danger of Death, or Wounds, VALOUR, FORTITUDE.

Liberality— Magnanimity in the use of Riches, LIBERALITY

Miserableness— Pusillanimity, in the same WRETCHEDNESSE, MISERABLENESSE; or PARSIMONY; as it is liked or disliked.

Kindnesse— Love of Persons for society, KINDNESSE.

Naturall Lust— Love of Persons for Pleasing the sense onely, NATURAL LUST.

Luxury— Love of the same, acquired from Ruminacion, that is Imagination of Pleasure past, LUXURY.

The Passion Of Love; Jealousie— Love of one singularly, with desire to be singularly beloved, THE PASSION OF LOVE. The same, with fear that the love is not mutuall, JEALOUSIE.

Revengefulness— Desire, by doing hurt to another, to make him condemn some fact of his own, REVENGEFULNESSE.

Curiosity— Desire, to know why, and how, CURIOSITY; such as is in no living creature but Man; so that Man is distinguished, not onely by his Reason; but also by this singular Passion from other Animals; in whom the appetite of food, and other pleasures of Sense, by praedominance, take away the care of knowing causes; which is a Lust of the mind, that by a perseverance of delight in the continuall and indefatigable generation of Knowledge, exceedeth the short vehemence of any carnall Pleasure.

Religion Superstition; True Religion— Feare of power invisible, feigned by the mind, or imagined from tales publicly allowed, RELIGION; not allowed, superstition. And when the power imagined is truly such as we imagine, TRUE RELIGION.

Panique Terrour— Feare, without the apprehension of why, or what, PANIQUE TERROR; called so from the fables that make Pan the author of them; whereas in truth there is always in him that so feareth, first, some apprehension of the cause, though the rest run away by example; every one supposing his fellow to know why. And therefore this Passion happens to none but in a throng, or multitude of people.

Admiration— Joy, from apprehension of novelty, ADMIRATION; proper to man, because it excites the appetite of knowing the cause.

Glory Vaine-glory— Joy, arising from imagination of a man's own power and ability, is that exultation of the mind which is called GLORYING: which, if grounded upon the experience of his own former actions, is the same with Confidence: but if grounded on the flattery of others, or onely supposed by himselfe, for delight in the consequences of it, is called VAINE-GLORY: which name is properly given; because a well-grounded Confidence begetteth attempt; whereas the supposing of power does not, and is therefore rightly called Vaine.

Dejection— Griefe, from opinion of want of power, is called dejection of mind.

The Vaine-glory which consisteth in the feigning or supposing of abilities in ourselves, which we know are not, is most incident to young men, and nourished by the Histories or Fictions of Gallant Persons; and is corrected often times by Age, and Employment.

Sudden Glory Laughter— Sudden glory, is the passion which maketh those Grimaces called LAUGHTER; and is caused either by some sudden act of their own, that pleaseth them; or by the apprehension of some deformed thing in another, by comparison whereof they suddenly applaud themselves. And it is incident most to them, that are conscious of the fewest abilities in themselves; who are forced to keep themselves in their own favour, by observing the imperfections of other men. And therefore much Laughter at the defects of others is a signe of Pusillanimity. For of great minds, one of the proper workes is, to help and free others from scorn; and compare themselves onely with the most able.

Sudden Dejection Weeping— On the contrary, Sudden Dejection is the passion that causeth WEEPING; and is caused by such accidents, as suddenly take away some vehement hope, or some prop of their power: and they are most subject to it, that rely principally on helps externall, such as are Women, and Children. Therefore, some Weep for the loss of Friends; Others for their unkindnesse; others for the sudden stop made to their thoughts of revenge, by Reconciliation. But in all cases, both Laughter and Weeping, are sudden motions; Custome taking them both away. For no man Laughs at old jests; or Weeps for an old calamity.

Shame Blushing— Griefe, for the discovery of some defect of ability is SHAME, or the passion that discovereth itself in BLUSHING; and consisteth in the apprehension of some thing dishonourable; and in young men, is a signe of the love of good reputation; and commendable: in old men it is a signe of the same; but because it comes too late, not commendable.

Impudence— The Contempt of good reputation is called IMPUDENCE.

Pitty— Griefe, for the calamity of another is PITY; and ariseth from the imagination that the like calamity may befall himselfe; and therefore is called also COMPASSION, and in the phrase of this present time a FELLOW-FEELING: and therefore for Calamity arriving from great wickedness, the best men have the least Pitty; and for the same Calamity, those have least Pitty, that think themselves least obnoxious to the same.

Cruelty— Contempt, or little sense of the calamity of others, is that which men call CRUELTY; proceeding from Security of their own fortune. For, that any man should take pleasure in other mens' great harmes, without other end of his own, I do not conceive it possible.

Emulation Envy— Griefe, for the success of a Competitor in wealth, honour, or other good, if it be joynd with Endeavour to enforce our own abilities to equal or exceed him, is called EMULATION: but joynd with Endeavour to supplant or hinder a Competitor, ENVIE.

Deliberation— When in the mind of man, Appetites and Aversions, Hopes and Feares, concerning one and the same thing, arise alternately; and divers good and evill consequences of the doing, or omitting the thing propounded, come successively into our thoughts; so that sometimes we have an Appetite to it, sometimes an Aversion from it; sometimes Hope to be able to do it; sometimes Despaire, or Feare to attempt it; the whole sum

of Desires, Aversions, Hopes and Feares, continued till the thing be either done, or thought impossible, is that we call DELIBERATION.

Therefore of things past, there is no Deliberation; because manifestly impossible to be changed: nor of things known to be impossible, or thought so; because men know, or think such Deliberation vaine. But of things impossible, which we think possible, we may Deliberate; not knowing it is in vain. And it is called DELIBERATION; because it is a putting an end to the Liberty we had of doing, or omitting, according to our own Appetite, or Aversion.

This alternate succession of Appetites, Aversions, Hopes and Feares is no less in other living Creatures than in Man; and therefore Beasts also Deliberate.

Every Deliberation is then sayd to End when that whereof they Deliberate, is either done, or thought impossible; because till then wee retain the liberty of doing, or omitting, according to our Appetite, or Aversion.

## The Will

In Deliberation, the last Appetite, or Aversion, immediately adhaering to the action, or to the omission thereof, is that wee call the WILL; the Act, (not the faculty,) of Willing. And Beasts that have Deliberation must necessarily also have Will. The Definition of the Will, given commonly by the Schooles, that it is a Rationall Appetite, is not good. For if it were, then could there be no Voluntary Act against Reason. For a Voluntary Act is that, which proceedeth from the Will, and no other. But if in stead of a Rationall Appetite, we shall say an Appetite resulting from a precedent Deliberation, then the Definition is the same that I have given here. Will, therefore, Is The Last Appetite In Deliberating. And though we say in common Discourse, a man had a Will once to do a thing, that neverthelesse he forbore to do; yet that is properly but an Inclination, which makes no Action Voluntary; because the action depends not of it, but of the last Inclination, or Appetite. For if the intervenient Appetites make any action Voluntary, then by the same reason all intervenient Aversions should make the same action Involuntary; and so one and the same action should be both Voluntary & Involuntary.

By this it is manifest, that not onely actions that have their beginning from Covetousness, Ambition, Lust, or other Appetites to the thing propounded; but also those that have their beginning from Aversion, or Feare of those consequences that follow the omission, are Voluntary Actions.

## Formes Of Speech, In Passion

The formes of Speech by which the Passions are expressed, are partly the same, and partly different from those, by which we express our Thoughts. And first generally all Passions may be expressed Indicatively; as, I Love, I Feare, I Joy, I Deliberate, I Will, I Command: but some of them have particular expressions by themselves, which nevertheless are not affirmations, unless it be when they serve to make other inferences, besides that of the Passion they proceed from. Deliberation is expressed Subjunctively; which is a speech proper to signifie suppositions, with their consequences; as, If This Be Done, Then This Will Follow; and differs not from the language of Reasoning, save that Reasoning is in generall words, but Deliberation for the most part is of Particulars. The language of Desire, and Aversion, is Imperative; as, Do This, Forbear That; which when the party is obliged to do, or forbear, is Command; otherwise Prayer; or els Counsell. The language of Vaine-Glory, of Indignation, Pitty and Revengfulness, Optative: but of the Desire to know, there is a peculiar expression called Interrogative; as, What Is It, When Shall It, How Is It Done, and Why So? Other language of the Passions I find none: for Cursing, Swearing, Reviling, and the like, do not signifie as Speech; but as the actions of a tongue accustomed.

These forms of Speech, I say, are expressions, or voluntary significations of our Passions: but certain signes they be not; because they may be used arbitrarily, whether they that use them, have such Passions or not. The best signes of Passions present, are either in the countenance, motions of the body, actions, and ends, or aims, which we otherwise know the man to have.

## **Good And Evill Apparent**

And because in Deliberation the Appetites and Aversions are raised by foresight of the good and evill consequences, and sequels of the action whereof we Deliberate; the good or evill effect thereof dependeth on the foresight of a long chain of consequences, of which very seldome any man is able to see to the end. But for so far as a man seeth, if the Good in those consequences be greater than the evill, the whole chain is that which Writers call Apparent or Seeming Good. And contrarily, when the evill exceedeth the good, the whole is Apparent or Seeming Evill: so that he who hath by Experience, or Reason, the greatest and surest prospect of Consequences, Deliberates best himself; and is able, when he will, to give the best counsel unto others.

## **Felicity**

Continual Successes in obtaining those things which a man from time to time desireth, that is to say, continual prospering, is that men call FELICITY; I mean the Felicity of this life. For there is no such thing as perpetual Tranquillity of mind, while we live here; because Life itself is but Motion, and can never be without Desire, nor without Feare, no more than without Sense. What kind of Felicity God hath ordained to them that devoutly honour him, a man shall no sooner know, than enjoy; being joys, that now are as incomprehensible, as the word of School-men, Beatifical Vision, is unintelligible.

## **Praise Magnification**

The form of speech whereby men signifie their opinion of the Goodnesse of anything is PRAISE. That whereby they signifie the power and greatness of anything is MAGNIFYING. And that whereby they signifie the opinion they have of a man's felicity is by the Greeks called Makarismos, for which we have no name in our tongue. And thus much is sufficient for the present purpose to have been said of the passions.

## **CHAPTER VII. OF THE ENDS OR RESOLUTIONS OF DISCOURSE**

Of all Discourse, governed by desire of Knowledge, there is at last an End, either by attaining, or by giving over. And in the chain of Discourse, wheresoever it be interrupted, there is an End for that time.

## **Judgement, or Sentence Final; Doubt**

If the Discourse be meerly Mentall, it consisteth of thoughts that the thing will be, and will not be; or that it has been, and has not been, alternately. So that wheresoever you break off the chayn of a mans Discourse, you leave him in a Praesumption of It Will Be, or, It Will Not Be; or it Has Been, or, Has Not Been. All which is Opinion. And that which is alternate Appetite, in Deliberating concerning Good and Evil, the same is alternate Opinion in the Enquiry of the truth of Past, and Future. And as the last Appetite in Deliberation is called the Will, so the last Opinion in search of the truth of Past, and Future, is called the JUDGEMENT, or Resolute and Final Sentence of him that Discourseth. And as the whole chain of Appetites alternate, in the question of Good or Bad is called Deliberation; so the whole chain of Opinions alternate, in the question of True, or False is called DOUBT.

No Discourse whatsoever, can End in absolute knowledge of Fact, past, or to come. For, as for the knowledge of Fact, it is originally, Sense; and ever after, Memory. And for the knowledge of consequence, which I have said before is called Science, it is not Absolute, but Conditionall. No man can know by Discourse, that this, or that, is, has been, or will be; which is to know absolutely: but onely, that if This be, That is; if This has been, That has been; if This shall be, That shall be: which is to know conditionally; and that not the consequence of one thing to another; but of one name of a thing, to another name of the same thing.

## Science Opinion Conscience

And therefore, when the Discourse is put into Speech, and begins with the Definitions of Words, and proceeds by Connexion of the same into general Affirmations, and of these again into Syllogismes, the end or last sum is called the Conclusion; and the thought of the mind by it signified is that conditional Knowledge, or Knowledge of the consequence of words, which is commonly called Science. But if the first ground of such Discourse be not Definitions, or if the Definitions be not rightly joyed together into Syllogismes, then the End or Conclusion is again OPINION, namely of the truth of somewhat said, though sometimes in absurd and senseless words, without possibility of being understood. When two, or more men, know of one and the same fact, they are said to be CONSCIOUS of it one to another; which is as much as to know it together. And because such are fittest witnesses of the facts of one another, or of a third, it was, and ever will be reputed a very Evil act, for any man to speak against his Conscience; or to corrupt or force another so to do: Insomuch that the plea of Conscience, has been always hearkened unto very diligently in all times. Afterwards, men made use of the same word metaphorically, for the knowledge of their own secret facts, and secret thoughts; and therefore it is Rhetorically said that the Conscience is a thousand witnesses. And last of all, men, vehemently in love with their own new opinions, (though never so absurd,) and obstinately bent to maintain them, gave those their opinions also that revered name of Conscience, as if they would have it seem unlawful, to change or speak against them; and so pretend to know they are true, when they know at most but that they think so.

## Beliefe Faith

When a mans Discourse beginneth not at Definitions, it beginneth either at some other contemplation of his own, and then it is still called Opinion; Or it beginneth at some saying of another, of whose ability to know the truth, and of whose honesty in not deceiving, he doubteth not; and then the Discourse is not so much concerning the Thing, as the Person; And the Resolution is called BELEEFEE, and FAITH: Faith, In the man; Beleeefe, both Of the man, and Of the truth of what he sayes. So then in Beleeefe are two opinions; one of the saying of the man; the other of his vertue. To Have Faith In, or Trust To, or Beleeve A Man, signifie the same thing; namely, an opinion of the veracity of the man: But to Beleeve What Is Said, signifieth onely an opinion of the truth of the saying. But wee are to observe that this Phrase, I Beleeve In; as also the Latine, Credo In; and the Greek, Pisteno Eis, are never used but in the writings of Divines. In stead of them, in other writings are put, I Beleeve Him; I Have Faith In Him; I Rely On Him: and in Latin, Credo Illi; Fido Illi: and in Greek, Pisteno Anto: and that this singularity of the Ecclesiastical use of the word hath raised many disputes about the right object of the Christian Faith.

But by Beleeving In, as it is in the Creed, is meant, not trust in the Person; but Confession and acknowledgement of the Doctrine. For not onely Christians, but all manner of men do so believe in God, as to hold all for truth they heare him say, whether they understand it, or not; which is all the Faith and trust can possibly be had in any person whatsoever: But they do not all believe the Doctrine of the Creed.

From whence we may inferre, that when wee believe any saying whatsoever it be, to be true, from arguments taken, not from the thing it selfe, or from the principles of naturall Reason, but from the Authority, and good opinion wee have, of him that hath sayd it; then is the speaker, or person we believe in, or trust in, and whose word we take, the object of our Faith; and the Honour done in Believing, is done to him onely. And consequently, when wee Believe that the Scriptures are the word of God, having no immediate revelation from God himselfe, our Beleeefe, Faith, and Trust is in the Church; whose word we take, and acquiesce therein.

And they that believe that which a Prophet relates unto them in the name of God, take the word of the Prophet, do honour to him, and in him trust, and believe, touching the truth of what he relateth, whether he be a true, or a false Prophet. And so it is also with all other History. For if I should not believe all that is written By Historians, of the glorious acts of Alexander, or Caesar; I do not think the Ghost of Alexander, or Caesar, had any just cause to be offended; or any body else, but the Historian. If Livy say the Gods made once a Cow speak, and we believe it not; wee distrust not God therein, but Livy. So that it is evident, that whatsoever we believe, upon no other reason, than what is drawn from authority of men onely, and their writings; whether they be sent from God or not, is Faith in men onely.

**CHAPTER VIII. OF THE VERTUES  
COMMONLY CALLED INTELLECTUAL;**

**AND THEIR CONTRARY DEFECTS**

## **Intellectuall Vertue Defined**

Vertue generally, in all sorts of subjects, is somewhat that is valued for eminence; and consisteth in comparison. For if all things were equally in all men, nothing would be prized. And by Vertues INTELLECTUALL, are always understood such abilityes of the mind, as men praise, value, and desire should be in themselves; and go commonly under the name of a Good Witte; though the same word Witte, be used also, to distinguish one certain ability from the rest.

## **Wit, Naturall, Or Acquired**

These Vertues are of two sorts; Naturall, and Acquired. By Naturall, I mean not, that which a man hath from his Birth: for that is nothing else but Sense; wherein men differ so little one from another, and from brute Beasts, as it is not to be reckoned amongst Vertues. But I mean, that Witte, which is gotten by Use onely, and Experience; without Method, Culture, or Instruction. This NATURALL WITTE, consisteth principally in two things; Celerity Of Imagining, (that is, swift succession of one thought to another;) and Steddy Direction to some approved end. On the Contrary a slow Imagination, maketh that Defect, or fault of the mind, which is commonly called DULNESSE, Stupidity, and sometimes by other names that signifie slownesse of motion, or difficulty to be moved.

## **Good Wit, Or Fancy; Good Judgement; Discretion**

And this difference of quicknesse, is caused by the difference of mens passions; that love and dislike, some one thing, some another: and therefore some mens thoughts run one way, some another: and are held to, and observe differently the things that passe through their imagination. And whereas in his succession of mens thoughts, there is nothing to observe in the things they think on, but either in what they be Like One Another, or in what they be Unlike, or What They Serve For, or How They Serve To Such A Purpose; Those that observe their similitudes, in case they be such as are but rarely observed by others, are sayd to have a Good Wit; by which, in this occasion, is meant a Good Fancy. But they that observe their differences, and dissimilitudes; which is called Distinguishing, and Discerning, and Judging between thing and thing; in case, such discerning be not easie, are said to have a Good Judgement: and particularly in matter of conversation and businesse; wherein, times, places, and persons are to be discerned, this Vertue is called DISCRETION. The former, that is, Fancy, without the help of Judgement, is not commended as a Vertue: but the later which is Judgement, and Discretion, is commended for it selfe, without the help of Fancy. Besides the Discretion of times, places, and persons, necessary to a good Fancy, there is required also an often application of his thoughts to their End; that is to say, to some use to be made of them. This done; he that hath this Vertue, will be easily fitted with similitudes, that will please, not onely by illustration of his discourse, and adorning it with new and apt metaphors; but also, by the rarity or their invention. But without Steddinesse, and Direction to some End, a great Fancy is one kind of Madnesse; such as they have, that entring into any discourse, are snatched from their purpose, by every thing that comes in their thought, into so many, and so long digressions, and parentheses, that they utterly lose themselves: Which kind of folly, I know no particular name for: but the cause of it is, sometimes want of experience; whereby that seemeth to a man new and rare, which doth not so to others: sometimes Pusillanimity; by which that seems great to him, which other men think a trifle: and whatsoever is new,

or great, and therefore thought fit to be told, withdrawes a man by degrees from the intended way of his discourse.

In a good Poem, whether it be Epique, or Dramatique; as also in Sonnets, Epigrams, and other Pieces, both Judgement and Fancy are required: But the Fancy must be more eminent; because they please for the Extravagancy; but ought not to displease by Indiscretion.

In a good History, the Judgement must be eminent; because the goodnesse consisteth, in the Method, in the Truth, and in the Choise of the actions that are most profitable to be known. Fancy has no place, but onely in adorning the stile.

In Orations of Prayse, and in Invectives, the Fancy is praedominant; because the designe is not truth, but to Honour or Dishonour; which is done by noble, or by vile comparisons. The Judgement does but suggest what circumstances make an action laudable, or culpable.

In Hortatives, and Pleadings, as Truth, or Disguise serveth best to the Designe in hand; so is the Judgement, or the Fancy most required.

In Demonstration, in Councell, and all rigourous search of Truth, Judgement does all; except sometimes the understanding have need to be opened by some apt similitude; and then there is so much use of Fancy. But for Metaphors, they are in this case utterly excluded. For seeing they openly professe deceit; to admit them into Councell, or Reasoning, were manifest folly.

And in any Discourse whatsoever, if the defect of Discretion be apparent, how extravagant soever the Fancy be, the whole discourse will be taken for a signe of want of wit; and so will it never when the Discretion is manifest, though the Fancy be never so ordinary.

The secret thoughts of a man run over all things, holy, prophane, clean, obscene, grave, and light, without shame, or blame; which verball discourse cannot do, farther than the Judgement shall approve of the Time, Place, and Persons. An Anatomist, or a Physitian may speak, or write his judgement of unclean things; because it is not to please, but profit: but for another man to write his extravagant, and pleasant fancies of the same, is as if a man, from being tumbled into the dirt, should come and present himselfe before good company. And 'tis the want of Discretion that makes the difference. Again, in profest remissnesse of mind, and familiar company, a man may play with the sounds, and aequivocal significations

of words; and that many times with encounters of extraordinary Fancy: but in a Sermon, or in publique, or before persons unknown, or whom we ought to reverence, there is no Ginglyng of words that will not be accounted folly: and the difference is onely in the want of Discretion. So that where Wit is wanting, it is not Fancy that is wanting, but Discretion. Judgement therefore without Fancy is Wit, but Fancy without Judgement not.

## Prudence

When the thoughts of a man, that has a designe in hand, running over a multitude of things, observes how they conduce to that designe; or what designe they may conduce into; if his observations be such as are not easie, or usuall, This wit of his is called PRUDENCE; and dependeth on much Experience, and Memory of the like things, and their consequences heretofore. In which there is not so much difference of Men, as there is in their Fancies and Judgements; Because the Experience of men equall in age, is not much unequall, as to the quantity; but lyes in different occasions; every one having his private designes. To govern well a family, and a kingdome, are not different degrees of Prudence; but different sorts of businesse; no more then to draw a picture in little, or as great, or greater then the life, are different degrees of Art. A plain husband-man is more Prudent in affaires of his own house, then a Privy Counsellor in the affaires of another man.

## Craft

To Prudence, if you adde the use of unjust, or dishonest means, such as usually are prompted to men by Feare, or Want; you have that Crooked Wisdome, which is called CRAFT; which is a signe of Pusillanimity. For Magnanimity is contempt of unjust, or dishonest helps. And that which the Latines Call Versutia, (translated into English, Shifting,) and is a putting off of a present danger or incommodity, by engaging into a greater, as when a man robs one to pay another, is but a shorter sighted Craft, called Versutia, from Versura, which signifies taking mony at usurie, for the present payment of interest.

## Acquired Wit

As for Acquired Wit, (I mean acquired by method and instruction,) there is none but Reason; which is grounded on the right use of Speech; and produceth the Sciences. But of Reason and Science, I have already spoken in the fifth and sixth Chapters.

The causes of this difference of Witts, are in the Passions: and the difference of Passions, proceedeth partly from the different Constitution of the body, and partly from different Education. For if the difference proceeded from the temper of the brain, and the organs of Sense, either exterior or interior, there would be no lesse difference of men in their Sight, Hearing, or other Senses, than in their Fancies, and Discretions. It proceeds therefore from the Passions; which are different, not onely from the difference of mens complexions; but also from their difference of customes, and education.

The Passions that most of all cause the differences of Wit, are principally, the more or lesse Desire of Power, of Riches, of Knowledge, and of Honour. All which may be reduced to the first, that is Desire of Power. For Riches, Knowledge and Honour are but severall sorts of Power.

## Giddinesse Madnesse

And therefore, a man who has no great Passion for any of these things; but is as men terme it indifferent; though he may be so farre a good man, as to be free from giving offence; yet he cannot possibly have either a great Fancy, or much Judgement. For the Thoughts, are to the Desires, as Scouts, and Spies, to range abroad, and find the way to the things Desired: All Stedinesse of the minds motion, and all quicknesse of the same, proceeding from thence. For as to have no Desire, is to be Dead: so to have weak Passions, is Dulnesse; and to have Passions indifferently for every thing, GIDDINESSE, and Distraction; and to have stronger, and more vehement Passions for any thing, than is ordinarily seen in others, is that which men call MADNESSE.

Whereof there be almost as many kinds, as of the Passions themselves. Sometimes the extraordinary and extravagant Passion, proceedeth from the evill constitution of the organs of the Body, or harme done them; and sometimes the hurt, and indisposition of the Organs, is caused by the vehemence, or long continuance of the Passion. But in both cases the Madnesse is of one and the same nature.

The Passion, whose violence, or continuance maketh Madnesse, is either great Vaine-Glory; which is commonly called Pride, and Selfe-Conceipt; or great Dejection of mind.

## Rage

Pride, subjecteth a man to Anger, the excesse whereof, is the Madnesse called RAGE, and FURY. And thus it comes to passe that excessive desire of Revenge, when it becomes habituall, hurteth the organs, and becomes Rage: That excessive love, with jealousie, becomes also Rage: Excessive opinion of a mans own selfe, for divine inspiration, for wisdom, learning, forme, and the like, becomes Distraction, and Giddinesse: the same, joynd with Envy, Rage: Vehement opinion of the truth of any thing, contradicted by others, Rage.

## Melancholy

Dejection, subjects a man to causelesse fears; which is a Madnesse commonly called MELANCHOLY, apparent also in divers manners; as in haunting of solitudes, and graves; in superstitious behaviour; and in fearing some one, some another particular thing. In summe, all Passions that produce strange and unusuall behaviour, are called by the generall name of Madnesse. But of the severall kinds of Madnesse, he that would take the paines, might enrowle a legion. And if the Excesses be madnesse, there is no doubt but the Passions themselves, when they tend to Evill, are degrees of the same.

(For example,) Though the effect of folly, in them that are possessed of an opinion of being inspired, be not visible alwayes in one man, by any very extravagant action, that proceedeth from such Passion; yet when many of them conspire together, the Rage of the whole multitude is visible enough. For what argument of Madnesse can there be greater, than to clamour, strike, and throw stones at our best friends? Yet this is somewhat lesse than such a multitude will do. For they will clamour, fight against, and destroy those, by whom all their lifetime before, they have been protected, and secured from injury. And if this be Madnesse in the multitude, it is the same in every particular man. For as in the midst of the sea, though a man perceive no sound of that part of the water next him; yet he is well assured, that part contributes as much, to the Roaring of the Sea, as any other part, of the same quantity: so also, though wee perceive no great unquietnesse, in one, or two men; yet we may be well assured, that their singular Passions, are parts of the Seditious roaring of a troubled Nation. And if there were nothing else that bewrayed their madnesse; yet that very arrogating such inspiration to themselves, is argument enough. If some man in Bedlam should entertaine you with sober discourse; and you desire in taking leave, to know what he were, that you might another time requite his civility; and he should tell you, he were God the Father; I think you need expect no extravagant action for argument of his Madnesse.

This opinion of Inspiration, called commonly, Private Spirit, begins very often, from some lucky finding of an Errour generally held by others;

and not knowing, or not remembering, by what conduct of reason, they came to so singular a truth, (as they think it, though it be many times an untruth they light on,) they presently admire themselves; as being in the speciall grace of God Almighty, who hath revealed the same to them supernaturally, by his Spirit.

Again, that Madnesse is nothing else, but too much appearing Passion, may be gathered out of the effects of Wine, which are the same with those of the evill disposition of the organs. For the variety of behaviour in men that have drunk too much, is the same with that of Mad-men: some of them Raging, others Loving, others laughing, all extravagantly, but according to their severall domineering Passions: For the effect of the wine, does but remove Dissimulation; and take from them the sight of the deformity of their Passions. For, (I believe) the most sober men, when they walk alone without care and employment of the mind, would be unwilling the vanity and Extravagance of their thoughts at that time should be publicly seen: which is a confession, that Passions unguided, are for the most part meere Madnesse.

The opinions of the world, both in antient and later ages, concerning the cause of madnesse, have been two. Some, deriving them from the Passions; some, from Daemons, or Spirits, either good, or bad, which they thought might enter into a man, possesse him, and move his organs in such strange, and uncouth manner, as mad-men use to do. The former sort therefore, called such men, Mad-men: but the Later, called them sometimes Daemoniacs, (that is, possessed with spirits;) sometimes Energumeni, (that is agitated, or moved with spirits;) and now in Italy they are called not onely Pazzi, Mad-men; but also Spiritati, men possest.

There was once a great conflux of people in Abdera, a City of the Greeks, at the acting of the Tragedy of Andromeda, upon an extream hot day: whereupon, a great many of the spectators falling into Fevers, had this accident from the heat, and from The Tragedy together, that they did nothing but pronounce Iambiques, with the names of Perseus and Andromeda; which together with the Fever, was cured, by the comming on of Winter: And this madnesse was thought to proceed from the Passion imprinted by the Tragedy. Likewise there raigned a fit of madnesse in another Graecian city, which seized onely the young Maidens; and caused many of them to hang themselves. This was by most then thought an act of

the Divel. But one that suspected, that contempt of life in them, might proceed from some Passion of the mind, and supposing they did not contemne also their honour, gave counsell to the Magistrates, to strip such as so hang'd themselves, and let them hang out naked. This the story sayes cured that madnesse. But on the other side, the same Graecians, did often ascribe madnesse, to the operation of the Eumenides, or Furies; and sometimes of Ceres, Phoebus, and other Gods: so much did men attribute to Phantasmes, as to think them aerial living bodies; and generally to call them Spirits. And as the Romans in this, held the same opinion with the Greeks: so also did the Jewes; For they calle mad-men Prophets, or (according as they thought the spirits good or bad) Daemoniacks; and some of them called both Prophets, and Daemoniacks, mad-men; and some called the same man both Daemoniack, and mad-man. But for the Gentiles, 'tis no wonder; because Diseases, and Health; Vices, and Vertues; and many naturall accidents, were with them termed, and worshipped as Daemons. So that a man was to understand by Daemon, as well (sometimes) an Ague, as a Divell. But for the Jewes to have such opinion, is somewhat strange. For neither Moses, nor Abraham pretended to Prophecy by possession of a Spirit; but from the voyce of God; or by a Vision or Dream: Nor is there any thing in his Law, Morall, or Ceremoniall, by which they were taught, there was any such Enthusiasme; or any Possession. When God is sayd, (Numb. 11. 25.) to take from the Spirit that was in Moses, and give it to the 70. Elders, the Spirit of God (taking it for the substance of God) is not divided. The Scriptures by the Spirit of God in man, mean a mans spirit, enclined to Godlinesse. And where it is said (Exod. 28. 3.) "Whom I have filled with the Spirit of wisdome to make garments for Aaron," is not meant a spirit put into them, that can make garments; but the wisdome of their own spirits in that kind of work. In the like sense, the spirit of man, when it produceth unclean actions, is ordinarily called an unclean spirit; and so other spirits, though not alwayes, yet as often as the vertue or vice so stiled, is extraordinary, and Eminent. Neither did the other Prophets of the old Testament pretend Enthusiasme; or, that God spake in them; but to them by Voyce, Vision, or Dream; and the Burthen Of The Lord was not Possession, but Command. How then could the Jewes fall into this opinion of possession? I can imagine no reason, but that which is common to all men; namely, the want of curiosity to search naturall causes; and their placing Felicity, in the

acquisition of the grosse pleasures of the Senses, and the things that most immediately conduce thereto. For they that see any strange, and unusuall ability, or defect in a mans mind; unlesse they see withall, from what cause it may probably proceed, can hardly think it naturall; and if not naturall, they must needs thinke it supernaturall; and then what can it be, but that either God, or the Divell is in him? And hence it came to passe, when our Saviour (Mark 3.21.) was compassed about with the multitude, those of the house doubted he was mad, and went out to hold him: but the Scribes said he had Belzebub, and that was it, by which he cast out divels; as if the greater mad-man had awed the lesser. And that (John 10. 20.) some said, "He hath a Divell, and is mad;" whereas others holding him for a Prophet, sayd, "These are not the words of one that hath a Divell." So in the old Testament he that came to annoynt Jehu, (2 Kings 9.11.) was a Prophet; but some of the company asked Jehu, "What came that mad-man for?" So that in summe, it is manifest, that whosoever behaved himselfe in extraordinary manner, was thought by the Jewes to be possessed either with a good, or evill spirit; except by the Sadduces, who erred so farre on the other hand, as not to believe there were at all any spirits, (which is very neere to direct Atheisme;) and thereby perhaps the more provoked others, to terme such men Daemoniacks, rather than mad-men.

But why then does our Saviour proceed in the curing of them, as if they were possest; and not as if they were mad. To which I can give no other kind of answer, but that which is given to those that urge the Scripture in like manner against the opinion of the motion of the Earth. The Scripture was written to shew unto men the kingdome of God; and to prepare their mindes to become his obedient subjects; leaving the world, and the Philosophy thereof, to the disputation of men, for the exercising of their naturall Reason. Whether the Earths, or Suns motion make the day, and night; or whether the Exorbitant actions of men, proceed from Passion, or from the Divell, (so we worship him not) it is all one, as to our obedience, and subjection to God Almighty; which is the thing for which the Scripture was written. As for that our Saviour speaketh to the disease, as to a person; it is the usuall phrase of all that cure by words onely, as Christ did, (and Inchanters pretend to do, whether they speak to a Divel or not.) For is not Christ also said (Math. 8.26.) to have rebuked the winds? Is not he said also (Luk. 4. 39.) to rebuke a Fever? Yet this does not argue that a Fever is a Divel. And whereas many of these Divels are said to confesse Christ; it

is not necessary to interpret those places otherwise, than that those mad-men confessed him. And whereas our Saviour (Math. 12. 43.) speaketh of an unclean Spirit, that having gone out of a man, wandreth through dry places, seeking rest, and finding none; and returning into the same man, with seven other spirits worse than himselfe; It is manifestly a Parable, alluding to a man, that after a little endeavour to quit his lusts, is vanquished by the strength of them; and becomes seven times worse than he was. So that I see nothing at all in the Scripture, that requireth a beliefe, that Daemoniacks were any other thing but Mad-men.

## Insignificant Speech

There is yet another fault in the Discourses of some men; which may also be numbred amongst the sorts of Madnesse; namely, that abuse of words, whereof I have spoken before in the fifth chapter, by the Name of Absurdity. And that is, when men speak such words, as put together, have in them no signification at all; but are fallen upon by some, through misunderstanding of the words they have received, and repeat by rote; by others, from intention to deceive by obscurity. And this is incident to none but those, that converse in questions of matters incomprehensible, as the Schoole-men; or in questions of abstruse Philosophy. The common sort of men seldome speak Insignificantly, and are therefore, by those other Egregious persons counted Idiots. But to be assured their words are without any thing correspondent to them in the mind, there would need some Examples; which if any man require, let him take a Schoole-man into his hands, and see if he can translate any one chapter concerning any difficult point; as the Trinity; the Deity; the nature of Christ; Transubstantiation; Free-will. &c. into any of the moderne tongues, so as to make the same intelligible; or into any tolerable Latine, such as they were acquainted withall, that lived when the Latine tongue was Vulgar. What is the meaning of these words. "The first cause does not necessarily inflow any thing into the second, by force of the Essential subordination of the second causes, by which it may help it to worke?" They are the Translation of the Title of the sixth chapter of Suarez first Booke, Of The Concourse, Motion, And Help Of God. When men write whole volumes of such stuffe, are they not Mad, or intend to make others so? And particularly, in the question of Transubstantiation; where after certain words spoken, they that say, the White-nesse, Round-nesse, Magni-tude, Quali-ty, Corruptibili-ty, all which are incorporeall, &c. go out of the Wafer, into the Body of our blessed Saviour, do they not make those Nesses, Tudes and Ties, to be so many spirits possessing his body? For by Spirits, they mean alwayes things, that being incorporeall, are neverthesse moveable from one place to another. So that this kind of Absurdity, may rightly be numbred amongst the many sorts of Madnesse;

and all the time that guided by clear Thoughts of their worldly lust, they forbear disputing, or writing thus, but Lucide Intervals. And thus much of the Vertues and Defects Intellectuall.

# CHAPTER IX. OF THE SEVERALL SUBJECTS OF KNOWLEDGE

There are of KNOWLEDGE two kinds; whereof one is Knowledge Of Fact: the other Knowledge Of The Consequence Of One Affirmation To Another. The former is nothing else, but Sense and Memory, and is Absolute Knowledge; as when we see a Fact doing, or remember it done: And this is the Knowledge required in a Witsnesse. The later is called Science; and is Conditionall; as when we know, that, If The Figure Showne Be A Circle, Then Any Straight Line Through The Centre Shall Divide It Into Two Equall Parts. And this is the Knowledge required in a Philosopher; that is to say, of him that pretends to Reasoning.

The Register of Knowledge Of Fact is called History. Whereof there be two sorts: one called Naturall History; which is the History of such Facts, or Effects of Nature, as have no Dependance on Mans Will; Such as are the Histories of Metals, Plants, Animals, Regions, and the like. The other, is Civill History; which is the History of the Voluntary Actions of men in Common-wealths.

The Registers of Science, are such Books as contain the Demonstrations of Consequences of one Affirmation, to another; and are commonly called Books of Philosophy; whereof the sorts are many, according to the diversity of the Matter; And may be divided in such manner as I have divided them in the following Table.

I. Science, that is, Knowledge of Consequences; which is called also PHILOSOPHY

A. Consequences from Accidents of Bodies Naturall; which is called NATURALL PHILOSOPHY

1. Consequences from the Accidents common to all Bodies Naturall; which are Quantity, and Motion.

a. Consequences from Quantity, and Motion Indeterminate; which, being the Principles or first foundation of Philosophy, is called Philosophia Prima

PHILOSOPHIA PRIMA

b. Consequences from Motion, and Quantity Determined

- 1) Consequences from Quantity, and Motion Determined
  - a) By Figure, By Number
    - 1] Mathematiques,
 

GEOMETRY  
ARITHMETIQUE
  - 2) Consequences from the Motion, and Quantity of Bodies in Speciall
    - a) Consequences from the Motion, and Quantity of the great parts of the World, as the Earth and Stars,
      - 1] Cosmography
 

ASTRONOMY  
GEOGRAPHY
    - b) Consequences from the Motion of Speciall kinds, and Figures of Body,
      - 1] Mechaniques, Doctrine of Weight
 

Science of  
ENGINEERS  
ARCHITECTURE  
NAVIGATION
2. PHYSIQUES, or Consequences from Qualities
  - a. Consequences from the Qualities of Bodies Transient, such as sometimes appear, sometimes vanish
 

METEOROLOGY
  - b. Consequences from the Qualities of Bodies Permanent
    - 1) Consequences from the Qualities of the Starres
      - a) Consequences from the Light of the Starres. Out of this, and the Motion of the Sunne, is made the Science of
 

SCIOGRAPHY
      - b) Consequences from the Influence of the Starres,
 

ASTROLOGY
    - 2) Consequences of the Qualities from Liquid Bodies that fill the space between the Starres; such as are the Ayre, or substance aetherial.
    - 3) Consequences from Qualities of Bodies Terrestrial

- a) Consequences from parts of the Earth that are without Sense,
  - 1] Consequences from Qualities of Minerals, as Stones, Metals, &c
  - 2] Consequences from the Qualities of Vegetables

b) Consequences from Qualities of Animals

- 1] Consequences from Qualities of Animals in Generall
  - a] Consequences from Vision,
    - OPTIQUES
  - b] Consequences from Sounds,
    - MUSIQUE
  - c] Consequences from the rest of the senses
- 2] Consequences from Qualities of Men in Speciall
  - a] Consequences from Passions of Men,
    - ETHIQUES
  - b] Consequences from Speech,
    - i) In Magnifying, Vilifying, etc.
      - POETRY
    - ii) In Persuading,
      - RHETORIQUE
    - iii) In Reasoning,
      - LOGIQUE
    - iv) In Contracting,

The Science of  
JUST and UNJUST

- B. Consequences from the Accidents of Politique Bodies; which is called POLITIQUES, and CIVILL PHILOSOPHY
  - 1. Of Consequences from the Institution of COMMON-WEALTHS, to the Rights, and Duties of the Body Politique, or Soveraign.
  - 2. Of Consequences from the same, to the Duty and Right of the Subjects.

**CHAPTER X. OF POWER, WORTH, DIGNITY,  
HONOUR AND WORTHINESS**

## Power

The POWER of a Man, (to take it Universally,) is his present means, to obtain some future apparent Good. And is either Originall, or Instrumentall.

Naturall Power, is the eminence of the Faculties of Body, or Mind: as extraordinary Strength, Forme, Prudence, Arts, Eloquence, Liberality, Nobility. Instrumentall are those Powers, which acquired by these, or by fortune, are means and Instruments to acquire more: as Riches, Reputation, Friends, and the Secret working of God, which men call Good Luck. For the nature of Power, is in this point, like to Fame, increasing as it proceeds; or like the motion of heavy bodies, which the further they go, make still the more hast.

The Greatest of humane Powers, is that which is compounded of the Powers of most men, united by consent, in one person, Naturall, or civill, that has the use of all their Powers depending on his will; such as is the Power of a Common-wealth: or depending on the wills of each particular; such as is the Power of a Faction, or of divers factions leagued. Therefore to have servants, is Power; To have Friends, is Power: for they are strengths united.

Also Riches joyned with liberality, is Power; because it procureth friends, and servants: Without liberality, not so; because in this case they defend not; but expose men to Envy, as a Prey.

Reputation of power, is Power; because it draweth with it the adhaerance of those that need protection.

So is Reputation of love of a mans Country, (called Popularity,) for the same Reason.

Also, what quality soever maketh a man beloved, or feared of many; or the reputation of such quality, is Power; because it is a means to have the assistance, and service of many.

Good successe is Power; because it maketh reputation of Wisdome, or good fortune; which makes men either feare him, or rely on him.

Affability of men already in power, is encrease of Power; because it gaineth love.

Reputation of Prudence in the conduct of Peace or War, is Power; because to prudent men, we commit the government of our selves, more willingly than to others.

Nobility is Power, not in all places, but onely in those Commonwealths, where it has Priviledges: for in such priviledges consisteth their Power.

Eloquence is Power; because it is seeming Prudence.

Forme is Power; because being a promise of Good, it recommendeth men to the favour of women and strangers.

The Sciences, are small Power; because not eminent; and therefore, not acknowledged in any man; nor are at all, but in a few; and in them, but of a few things. For Science is of that nature, as none can understand it to be, but such as in a good measure have attained it.

Arts of publique use, as Fortification, making of Engines, and other Instruments of War; because they conferre to Defence, and Victory, are Power; And though the true Mother of them, be Science, namely the Mathematicques; yet, because they are brought into the Light, by the hand of the Artificer, they be esteemed (the Midwife passing with the vulgar for the Mother,) as his issue.

## Worth

The Value, or WORTH of a man, is as of all other things, his Price; that is to say, so much as would be given for the use of his Power: and therefore is not absolute; but a thing dependant on the need and judgement of another. An able conductor of Souldiers, is of great Price in time of War present, or imminent; but in Peace not so. A learned and uncorrupt Judge, is much Worth in time of Peace; but not so much in War. And as in other things, so in men, not the seller, but the buyer determines the Price. For let a man (as most men do,) rate themselves as the highest Value they can; yet their true Value is no more than it is esteemed by others.

The manifestation of the Value we set on one another, is that which is commonly called Honouring, and Dishonouring. To Value a man at a high rate, is to Honour him; at a low rate, is to Dishonour him. But high, and low, in this case, is to be understood by comparison to the rate that each man setteth on himselfe.

## **Dignity**

The publique worth of a man, which is the Value set on him by the Common-wealth, is that which men commonly call DIGNITY. And this Value of him by the Common-wealth, is understood, by offices of Command, Judicature, publike Employment; or by Names and Titles, introduced for distinction of such Value.

## To Honour and Dishonour

To pray to another, for ayde of any kind, is to HONOUR; because a signe we have an opinion he has power to help; and the more difficult the ayde is, the more is the Honour.

To obey, is to Honour; because no man obeyes them, whom they think have no power to help, or hurt them. And consequently to disobey, is to Dishonour.

To give great gifts to a man, is to Honour him; because 'tis buying of Protection, and acknowledging of Power. To give little gifts, is to Dishonour; because it is but Almes, and signifies an opinion of the need of small helps. To be sedulous in promoting anothers good; also to flatter, is to Honour; as a signe we seek his protection or ayde. To neglect, is to Dishonour.

To give way, or place to another, in any Commodity, is to Honour; being a confession of greater power. To arrogate, is to Dishonour.

To shew any signe of love, or feare of another, is to Honour; for both to love, and to feare, is to value. To contemne, or lesse to love or feare then he expects, is to Dishonour; for 'tis undervaluing.

To praise, magnifie, or call happy, is to Honour; because nothing but goodnesse, power, and felicity is valued. To revile, mock, or pittie, is to Dishonour.

To speak to another with consideration, to appear before him with decency, and humility, is to Honour him; as signes of feare to offend. To speak to him rashly, to do anything before him obscenely, slovenly, impudently, is to Dishonour.

To believe, to trust, to rely on another, is to Honour him; signe of opinion of his vertue and power. To distrust, or not believe, is to Dishonour.

To hearken to a mans counsell, or discourse of what kind soever, is to Honour; as a signe we think him wise, or eloquent, or witty. To sleep, or go forth, or talk the while, is to Dishonour.

To do those things to another, which he takes for signes of Honour, or which the Law or Custome makes so, is to Honour; because in approving the Honour done by others, he acknowledgeth the power which others acknowledge. To refuse to do them, is to Dishonour.

To agree with in opinion, is to Honour; as being a signe of approving his judgement, and wisdom. To dissent, is Dishonour; and an upbraiding of error; and (if the dissent be in many things) of folly.

To imitate, is to Honour; for it is vehemently to approve. To imitate ones Enemy, is to Dishonour.

To honour those another honours, is to Honour him; as a signe of approbation of his judgement. To honour his Enemies, is to Dishonour him.

To employ in counsell, or in actions of difficulty, is to Honour; as a signe of opinion of his wisdom, or other power. To deny employment in the same cases, to those that seek it, is to Dishonour.

All these wayes of Honouring, are naturall; and as well within, as without Common-wealths. But in Common-wealths, where he, or they that have the supreme Authority, can make whatsoever they please, to stand for signes of Honour, there be other Honours.

A Sovereigne doth Honour a Subject, with whatsoever Title, or Office, or Employment, or Action, that he himselfe will have taken for a signe of his will to Honour him.

The King of Persia, Honoured Mordecay, when he appointed he should be conducted through the streets in the Kings Garment, upon one of the Kings Horses, with a Crown on his head, and a Prince before him, proclayming, "Thus shall it be done to him that the King will honour." And yet another King of Persia, or the same another time, to one that demanded for some great service, to weare one of the Kings robes, gave him leave so to do; but with his addition, that he should weare it as the Kings foole; and then it was Dishonour. So that of Civill Honour; such as are Magistracy, Offices, Titles; and in some places Coats, and Scutchions painted: and men Honour such as have them, as having so many signes of favour in the Common-wealth; which favour is Power.

Honourable is whatsoever possession, action, or quality, is an argument and signe of Power.

And therefore To be Honoured, loved, or feared of many, is Honourable; as arguments of Power. To be Honoured of few or none, Dishonourable.

Good fortune (if lasting,) Honourable; as a signe of the favour of God. Ill fortune, and losses, Dishonourable. Riches, are Honourable; for they are Power. Poverty, Dishonourable. Magnanimity, Liberality, Hope, Courage, Confidence, are Honourable; for they proceed from the conscience of Power. Pusillanimity, Parsimony, Fear, Diffidence, are Dishonourable.

Timely Resolution, or determination of what a man is to do, is Honourable; as being the contempt of small difficulties, and dangers. And Irresolution, Dishonourable; as a signe of too much valuing of little impediments, and little advantages: For when a man has weighed things as long as the time permits, and resolves not, the difference of weight is but little; and therefore if he resolve not, he overvalues little things, which is Pusillanimity.

All Actions, and Speeches, that proceed, or seem to proceed from much Experience, Science, Discretion, or Wit, are Honourable; For all these are Powers. Actions, or Words that proceed from Errour, Ignorance, or Folly, Dishonourable.

Gravity, as farre forth as it seems to proceed from a mind employed on some thing else, is Honourable; because employment is a signe of Power. But if it seem to proceed from a purpose to appear grave, it is Dishonourable. For the gravity of the Former, is like the steddinesse of a Ship laden with Merchandise; but of the later, like the steddinesse of a Ship ballasted with Sand, and other trash.

To be Conspicuous, that is to say, to be known, for Wealth, Office, great Actions, or any eminent Good, is Honourable; as a signe of the power for which he is conspicuous. On the contrary, Obscurity, is Dishonourable.

To be descended from conspicuous Parents, is Honourable; because they the more easily attain the aydes, and friends of their Ancestors. On the contrary, to be descended from obscure Parentage, is Dishonourable.

Actions proceeding from Equity, joyned with losse, are Honourable; as signes of Magnanimity: for Magnanimity is a signe of Power. On the contrary, Craft, Shifting, neglect of Equity, is Dishonourable.

Nor does it alter the case of Honour, whether an action (so it be great and difficult, and consequently a signe of much power,) be just or unjust:

for Honour consisteth onely in the opinion of Power. Therefore the ancient Heathen did not thinke they Dishonoured, but greatly Honoured the Gods, when they introduced them in their Poems, committing Rapes, Thefts, and other great, but unjust, or unclean acts: In so much as nothing is so much celebrated in Jupiter, as his Adulteries; nor in Mercury, as his Frauds, and Thefts: of whose praises, in a hymne of Homer, the greatest is this, that being born in the morning, he had invented Musique at noon, and before night, stolen away the Cattell of Appollo, from his Herdsmen.

Also amongst men, till there were constituted great Common-wealths, it was thought no dishonour to be a Pyrate, or a High-way Theefe; but rather a lawfull Trade, not onely amongst the Greeks, but also amongst all other Nations; as is manifest by the Histories of antient time. And at this day, in this part of the world, private Duels are, and alwayes will be Honourable, though unlawfull, till such time as there shall be Honour ordained for them that refuse, and Ignominy for them that make the Challenge. For Duels also are many times effects of Courage; and the ground of Courage is alwayes Strength or Skill, which are Power; though for the most part they be effects of rash speaking, and of the fear of Dishonour, in one, or both the Combatants; who engaged by rashnesse, are driven into the Lists to avoyd disgrace.

Scutchions, and coats of Armes haereditary, where they have any eminent Priviledges, are Honourable; otherwise not: for their Power consisteth either in such Priviledges, or in Riches, or some such thing as is equally honoured in other men. This kind of Honour, commonly called Gentry, has been derived from the Antient Germans. For there never was any such thing known, where the German Customes were unknown. Nor is it now any where in use, where the Germans have not inhabited. The antient Greek Commanders, when they went to war, had their Shields painted with such Devises as they pleased; insomuch as an unpainted Buckler was a signe of Poverty, and of a common Souldier: but they transmitted not the Inheritance of them. The Romans transmitted the Marks of their Families: but they were the Images, not the Devises of their Ancestors. Amongst the people of Asia, Afrique, and America, there is not, nor was ever, any such thing. The Germans onely had that custome; from whom it has been derived into England, France, Spain, and Italy, when in great numbers they either ayded the Romans, or made their own Conquests in these Westerne parts of the world.

For Germany, being antiently, as all other Countries, in their beginnings, divided amongst an infinite number of little Lords, or Masters of Families, that continually had wars one with another; those Masters, or Lords, principally to the end they might, when they were Covered with Arms, be known by their followers; and partly for ornament, both painted their Armor, or their Scutchion, or Coat, with the picture of some Beast, or other thing; and also put some eminent and visible mark upon the Crest of their Helmets. And his ornament both of the Armes, and Crest, descended by inheritance to their Children; to the eldest pure, and to the rest with some note of diversity, such as the Old master, that is to say in Dutch, the Here-alt thought fit. But when many such Families, joyned together, made a greater Monarchy, this duty of the Herealt, to distinguish Scutchions, was made a private Office a part. And the issue of these Lords, is the great and antient Gentry; which for the most part bear living creatures, noted for courage, and rapine; or Castles, Battlements, Belts, Weapons, Bars, Palisadoes, and other notes of War; nothing being then in honour, but vertue military. Afterwards, not onely Kings, but popular Commonwealths, gave divers manners of Scutchions, to such as went forth to the War, or returned from it, for encouragement, or recompence to their service. All which, by an observing Reader, may be found in such ancient Histories, Greek and Latine, as make mention of the German Nation, and Manners, in their times.

## **Titles of Honour**

Titles of Honour, such as are Duke, Count, Marquis, and Baron, are Honourable; as signifying the value set upon them by the Sovereigne Power of the Common-wealth: Which Titles, were in old time titles of Office, and Command, derived some from the Romans, some from the Germans, and French. Dukes, in Latine Duces, being Generalls in War: Counts, Comites, such as bare the Generall company out of friendship; and were left to govern and defend places conquered, and pacified: Marquises, Marchiones, were Counts that governed the Marches, or bounds of the Empire. Which titles of Duke, Count, and Marquis, came into the Empire, about the time of Constantine the Great, from the customes of the German Militia. But Baron, seems to have been a Title of the Gaules, and signifies a Great man; such as were the Kings, or Princes men, whom they employed in war about their persons; and seems to be derived from Vir, to Ber, and Bar, that signified the same in the Language of the Gaules, that Vir in Latine; and thence to Bero, and Baro: so that such men were called Berones, and after Barones; and (in Spanish) Varones. But he that would know more particularly the originall of Titles of Honour, may find it, as I have done this, in Mr. Seldens most excellent Treatise of that subject. In processe of time these offices of Honour, by occasion of trouble, and for reasons of good and peacable government, were turned into meer Titles; serving for the most part, to distinguish the precedence, place, and order of subjects in the Common-wealth: and men were made Dukes, Counts, Marquises, and Barons of Places, wherein they had neither possession, nor command: and other Titles also, were devised to the same end.

## **Worthinesse Fitnessse**

WORTHINESSE, is a thing different from the worth, or value of a man; and also from his merit, or desert; and consisteth in a particular power, or ability for that, whereof he is said to be worthy: which particular ability, is usually named FITNESSSE, or Aptitude.

For he is Worthiest to be a Commander, to be a Judge, or to have any other charge, that is best fitted, with the qualities required to the well discharging of it; and Worthiest of Riches, that has the qualities most requisite for the well using of them: any of which qualities being absent, one may neverthelesse be a Worthy man, and valuable for some thing else. Again, a man may be Worthy of Riches, Office, and Employment, that neverthelesse, can plead no right to have it before another; and therefore cannot be said to merit or deserve it. For Merit, praesupposeth a right, and that the thing deserved is due by promise: Of which I shall say more hereafter, when I shall speak of Contracts.

**CHAPTER XI. OF THE DIFFERENCE OF  
MANNERS**

## **What Is Here Meant By Manners**

By MANNERS, I mean not here, Decency of behaviour; as how one man should salute another, or how a man should wash his mouth, or pick his teeth before company, and such other points of the Small Morals; But those qualities of man-kind, that concern their living together in Peace, and Unity. To which end we are to consider, that the Felicity of this life, consisteth not in the repose of a mind satisfied. For there is no such Finis Ultimus, (utmost ayme,) nor Summum Bonum, (greatest good,) as is spoken of in the Books of the old Morall Philosophers. Nor can a man any more live, whose Desires are at an end, than he, whose Senses and Imaginations are at a stand. Felicity is a continuall progresse of the desire, from one object to another; the attaining of the former, being still but the way to the later. The cause whereof is, That the object of mans desire, is not to enjoy once onely, and for one instant of time; but to assure for ever, the way of his future desire. And therefore the voluntary actions, and inclinations of all men, tend, not only to the procuring, but also to the assuring of a contented life; and differ onely in the way: which ariseth partly from the diversity of passions, in divers men; and partly from the difference of the knowledge, or opinion each one has of the causes, which produce the effect desired.

## **A Restlesse Desire Of Power, In All Men**

So that in the first place, I put for a generall inclination of all mankind, a perpetuall and restlesse desire of Power after power, that ceaseth onely in Death. And the cause of this, is not alwayes that a man hopes for a more intensive delight, than he has already attained to; or that he cannot be content with a moderate power: but because he cannot assure the power and means to live well, which he hath present, without the acquisition of more. And from hence it is, that Kings, whose power is greatest, turn their endeavours to the assuring it a home by Lawes, or abroad by Wars: and when that is done, there succeedeth a new desire; in some, of Fame from new Conquest; in others, of ease and sensuall pleasure; in others, of admiration, or being flattered for excellence in some art, or other ability of the mind.

## **Love Of Contention From Competition**

Competition of Riches, Honour, command, or other power, enclineth to Contention, Enmity, and War: because the way of one Competitor, to the attaining of his desire, is to kill, subdue, supplant, or repell the other. Particularly, competition of praise, enclineth to a reverence of Antiquity. For men contend with the living, not with the dead; to these ascribing more than due, that they may obscure the glory of the other.

## **Civil Obedience From Love Of Ease**

Desire of Ease, and sensuall Delight, disposeth men to obey a common Power: because by such Desires, a man doth abandon the protection might be hoped for from his own Industry, and labour.

## **From Feare Of Death Or Wounds**

Fear of Death, and Wounds, disposeth to the same; and for the same reason. On the contrary, needy men, and hardy, not contented with their present condition; as also, all men that are ambitious of Military command, are enclined to continue the causes of warre; and to stirre up trouble and sedition: for there is no honour Military but by warre; nor any such hope to mend an ill game, as by causing a new shuffle.

## **And From Love Of Arts**

Desire of Knowledge, and Arts of Peace, enclineth men to obey a common Power: For such Desire, containeth a desire of leasure; and consequently protection from some other Power than their own.

## **Love Of Vertue, From Love Of Praise**

Desire of Praise, disposeth to laudable actions, such as please them whose judgement they value; for of these men whom we contemn, we contemn also the Praises. Desire of Fame after death does the same. And though after death, there be no sense of the praise given us on Earth, as being joyes, that are either swallowed up in the unspeakable joyes of Heaven, or extinguished in the extreme torments of Hell: yet is not such Fame vain; because men have a present delight therein, from the foresight of it, and of the benefit that may rebound thereby to their posterity: which though they now see not, yet they imagine; and any thing that is pleasure in the sense, the same also is pleasure in the imagination.

## **Hate, From Difficulty Of Requiting Great Benefits**

To have received from one, to whom we think our selves equall, greater benefits than there is hope to Requite, disposeth to counterfiet love; but really secret hatred; and puts a man into the estate of a desperate debtor, that in declining the sight of his creditor, tacitely wishes him there, where he might never see him more. For benefits oblige; and obligation is thraldome; which is to ones equall, hateful. But to have received benefits from one, whom we acknowledge our superiour, enclines to love; because the obligation is no new depression: and cheerfull acceptation, (which men call Gratitude,) is such an honour done to the obliger, as is taken generally for retribution. Also to receive benefits, though from an equall, or inferiour, as long as there is hope of requitall, disposeth to love: for in the intention of the receiver, the obligation is of ayd, and service mutuall; from whence proceedeth an Emulation of who shall exceed in benefiting; the most noble and profitable contention possible; wherein the victor is pleased with his victory, and the other revenged by confessing it.

## **And From Conscience Of Deserving To Be Hated**

To have done more hurt to a man, than he can, or is willing to expiate, enclineth the doer to hate the sufferer. For he must expect revenge, or forgiveness; both which are hatefull.

## **Promptnesse To Hurt, From Fear**

Feare of oppression, disposeth a man to anticipate, or to seek ayd by society: for there is no other way by which a man can secure his life and liberty.

## **And From Distrust Of Their Own Wit**

Men that distrust their own subtilty, are in tumult, and sedition, better disposed for victory, than they that suppose themselves wise, or crafty. For these love to consult, the other (fearing to be circumvented,) to strike first. And in sedition, men being alwayes in the procincts of Battell, to hold together, and use all advantages of force, is a better stratagem, than any that can proceed from subtilty of Wit.

## **Vain Undertaking From Vain-glory**

Vain-glorious men, such as without being conscious to themselves of great sufficiency, delight in supposing themselves gallant men, are enclined onely to ostentation; but not to attempt: Because when danger or difficulty appears, they look for nothing but to have their insufficiency discovered.

Vain-glorious men, such as estimate their sufficiency by the flattery of other men, or the fortune of some precedent action, without assured ground of hope from the true knowledge of themselves, are enclined to rash engaging; and in the approach of danger, or difficulty, to retire if they can: because not seeing the way of safety, they will rather hazard their honour, which may be salved with an excuse; than their lives, for which no salve is sufficient.

## **Ambition, From Opinion Of Sufficiency**

Men that have a strong opinion of their own wisdom in matter of government, are disposed to Ambition. Because without publique Employment in counsell or magistracy, the honour of their wisdom is lost. And therefore Eloquent speakers are enclined to Ambition; for Eloquence seemeth wisdom, both to themselves and others

## **Irresolution, From Too Great Valuing Of Small Matters**

Pusillanimity disposeth men to Irresolution, and consequently to lose the occasions, and fittest opportunities of action. For after men have been in deliberation till the time of action approach, if it be not then manifest what is best to be done, tis a signe, the difference of Motives, the one way and the other, are not great: Therefore not to resolve then, is to lose the occasion by weighing of trifles; which is pusillanimity.

Frugality,(though in poor men a Vertue,) maketh a man unapt to atchieve such actions, as require the strength of many men at once: For it weakeneth their Endeavour, which is to be nourished and kept in vigor by Reward.

Confidence In Others From Ignorance Of The Marks Of Wisdome and Kindnesse Eloquence, with flattery, disposeth men to confide in them that have it; because the former is seeming Wisdome, the later seeming Kindnesse. Adde to them Military reputation, and it disposeth men to adhaere, and subject themselves to those men that have them. The two former, having given them caution against danger from him; the later gives them caution against danger from others.

## **And From The Ignorance Of Naturall Causes**

Want of Science, that is, Ignorance of causes, disposeth, or rather constraineth a man to rely on the advise, and authority of others. For all men whom the truth concernes, if they rely not on their own, must rely on the opinion of some other, whom they think wiser than themselves, and see not why he should deceive them.

## And From Want Of Understanding

Ignorance of the signification of words; which is, want of understanding, disposeth men to take on trust, not onely the truth they know not; but also the errors; and which is more, the non-sense of them they trust: For neither Error, nor non-sense, can without a perfect understanding of words, be detected.

From the same it proceedeth, that men give different names, to one and the same thing, from the difference of their own passions: As they that approve a private opinion, call it Opinion; but they that mislike it, Haeresie: and yet haeresie signifies no more than private opinion; but has onely a greater tincture of choler.

From the same also it proceedeth, that men cannot distinguish, without study and great understanding, between one action of many men, and many actions of one multitude; as for example, between the one action of all the Senators of Rome in killing Catiline, and the many actions of a number of Senators in killing Caesar; and therefore are disposed to take for the action of the people, that which is a multitude of actions done by a multitude of men, led perhaps by the perswasion of one.

Adhaerence To Custome, From Ignorance Of The Nature Of Right And Wrong Ignorance of the causes, and originall constitution of Right, Equity, Law, and Justice, disposeth a man to make Custome and Example the rule of his actions; in such manner, as to think that Unjust which it hath been the custome to punish; and that Just, of the impunity and approbation whereof they can produce an Example, or (as the Lawyers which onely use the false measure of Justice barbarously call it) a Precedent; like little children, that have no other rule of good and evill manners, but the correction they receive from their Parents, and Masters; save that children are constant to their rule, whereas men are not so; because grown strong, and stubborn, they appeale from custome to reason, and from reason to custome, as it serves their turn; receding from custome when their interest requires it, and setting themselves against reason, as oft as reason is against them: Which is the cause, that the doctrine of Right and Wrong, is perpetually disputed, both by the Pen and the Sword: whereas the doctrine

of Lines, and Figures, is not so; because men care not, in that subject what be truth, as a thing that crosses no mans ambition, profit, or lust. For I doubt not, but if it had been a thing contrary to any mans right of dominion, or to the interest of men that have dominion, That The Three Angles Of A Triangle Should Be Equall To Two Angles Of A Square; that doctrine should have been, if not disputed, yet by the burning of all books of Geometry, suppressed, as farre as he whom it concerned was able.

Adhaerence To Private Men, From Ignorance Of The Causes Of Peace  
Ignorance of remote causes, disposeth men to attribute all events, to the causes immediate, and Instrumentall: For these are all the causes they perceive. And hence it comes to passe, that in all places, men that are grieved with payments to the Publique, discharge their anger upon the Publicans, that is to say, Farmers, Collectors, and other Officers of the publique Revenue; and adhaere to such as find fault with the publike Government; and thereby, when they have engaged themselves beyond hope of justification, fall also upon the Supreme Authority, for feare of punishment, or shame of receiving pardon.

## **Credulity From Ignorance Of Nature**

Ignorance of naturall causes disposeth a man to Credulity, so as to believe many times impossibilities: for such know nothing to the contrary, but that they may be true; being unable to detect the Impossibility. And Credulity, because men love to be hearkened unto in company, disposeth them to lying: so that Ignorance it selfe without Malice, is able to make a man bothe to believe lyes, and tell them; and sometimes also to invent them.

## **Curiosity To Know, From Care Of Future Time**

Anxiety for the future time, disposeth men to enquire into the causes of things: because the knowledge of them, maketh men the better able to order the present to their best advantage.

## Naturall Religion, From The Same

Curiosity, or love of the knowledge of causes, draws a man from consideration of the effect, to seek the cause; and again, the cause of that cause; till of necessity he must come to this thought at last, that there is some cause, whereof there is no former cause, but is eternall; which is it men call God. So that it is impossible to make any profound enquiry into naturall causes, without being enclined thereby to believe there is one God Eternall; though they cannot have any Idea of him in their mind, answerable to his nature. For as a man that is born blind, hearing men talk of warming themselves by the fire, and being brought to warm himself by the same, may easily conceive, and assure himselfe, there is somewhat there, which men call Fire, and is the cause of the heat he feeles; but cannot imagine what it is like; nor have an Idea of it in his mind, such as they have that see it: so also, by the visible things of this world, and their admirable order, a man may conceive there is a cause of them, which men call God; and yet not have an Idea, or Image of him in his mind.

And they that make little, or no enquiry into the naturall causes of things, yet from the feare that proceeds from the ignorance it selfe, of what it is that hath the power to do them much good or harm, are enclined to suppose, and feign unto themselves, severall kinds of Powers Invisible; and to stand in awe of their own imaginations; and in time of distresse to invoke them; as also in the time of an expected good successe, to give them thanks; making the creatures of their own fancy, their Gods. By which means it hath come to passe, that from the innumerable variety of Fancy, men have created in the world innumerable sorts of Gods. And this Feare of things invisible, is the naturall Seed of that, which every one in himself calleth Religion; and in them that worship, or feare that Power otherwise than they do, Superstition.

And this seed of Religion, having been observed by many; some of those that have observed it, have been enclined thereby to nourish, dresse, and forme it into Lawes; and to adde to it of their own invention, any opinion of the causes of future events, by which they thought they should

best be able to govern others, and make unto themselves the greatest use of their Powers.

## **CHAPTER XII. OF RELIGION**

## **Religion, In Man Onely**

Seeing there are no signes, nor fruit of Religion, but in Man onely; there is no cause to doubt, but that the seed of Religion, is also onely in Man; and consisteth in some peculiar quality, or at least in some eminent degree thereof, not to be found in other Living creatures.

## **First, From His Desire Of Knowing Causes**

And first, it is peculiar to the nature of Man, to be inquisitive into the Causes of the Events they see, some more, some lesse; but all men so much, as to be curious in the search of the causes of their own good and evill fortune.

## **From The Consideration Of The Beginning Of Things**

Secondly, upon the sight of any thing that hath a Beginning, to think also it had a cause, which determined the same to begin, then when it did, rather than sooner or later.

## **From His Observation Of The Sequell Of Things**

Thirdly, whereas there is no other Felicity of Beasts, but the enjoying of their quotidian Food, Ease, and Lusts; as having little, or no foresight of the time to come, for want of observation, and memory of the order, consequence, and dependance of the things they see; Man observeth how one Event hath been produced by another; and remembreth in them Antecedence and Consequence; And when he cannot assure himselfe of the true causes of things, (for the causes of good and evill fortune for the most part are invisible,) he supposes causes of them, either such as his own fancy suggesteth; or trusteth to the Authority of other men, such as he thinks to be his friends, and wiser than himselfe.

The Naturall Cause Of Religion, The Anxiety Of The Time To Come  
The two first, make Anxiety. For being assured that there be causes of all things that have arrived hitherto, or shall arrive hereafter; it is impossible for a man, who continually endeavoureth to secure himselfe against the evill he feares, and procure the good he desireth, not to be in a perpetuall solicitude of the time to come; So that every man, especially those that are over provident, are in an estate like to that of Prometheus. For as Prometheus, (which interpreted, is, The Prudent Man,) was bound to the hill Caucasus, a place of large prospect, where, an Eagle feeding on his liver, devoured in the day, as much as was repayred in the night: So that man, which looks too far before him, in the care of future time, hath his heart all the day long, gnawed on by feare of death, poverty, or other calamity; and has no repose, nor pause of his anxiety, but in sleep.

## **Which Makes Them Fear The Power Of Invisible Things**

This perpetuall feare, alwayes accompanying mankind in the ignorance of causes, as it were in the Dark, must needs have for object something. And therefore when there is nothing to be seen, there is nothing to accuse, either of their good, or evill fortune, but some Power, or Agent Invisible: In which sense perhaps it was, that some of the old Poets said, that the Gods were at first created by humane Feare: which spoken of the Gods, (that is to say, of the many Gods of the Gentiles) is very true. But the acknowledging of one God Eternall, Infinite, and Omnipotent, may more easily be derived, from the desire men have to know the causes of naturall bodies, and their severall vertues, and operations; than from the feare of what was to befall them in time to come. For he that from any effect hee seeth come to passe, should reason to the next and immediate cause thereof, and from thence to the cause of that cause, and plunge himselfe profoundly in the pursuit of causes; shall at last come to this, that there must be (as even the Heathen Philosophers confessed) one First Mover; that is, a First, and an Eternall cause of all things; which is that which men mean by the name of God: And all this without thought of their fortune; the solicitude whereof, both enclines to fear, and hinders them from the search of the causes of other things; and thereby gives occasion of feigning of as many Gods, as there be men that feigne them.

## **And Suppose Them Incorporeall**

And for the matter, or substance of the Invisible Agents, so fancied; they could not by naturall cogitation, fall upon any other conceipt, but that it was the same with that of the Soule of man; and that the Soule of man, was of the same substance, with that which appeareth in a Dream, to one that sleepeth; or in a Looking-glasse, to one that is awake; which, men not knowing that such apparitions are nothing else but creatures of the Fancy, think to be reall, and externall Substances; and therefore call them Ghosts; as the Latines called them Imagines, and Umbrae; and thought them Spirits, that is, thin aereall bodies; and those Invisible Agents, which they feared, to bee like them; save that they appear, and vanish when they please. But the opinion that such Spirits were Incorporeall, or Immateriall, could never enter into the mind of any man by nature; because, though men may put together words of contradictory signification, as Spirit, and Incorporeall; yet they can never have the imagination of any thing answering to them: And therefore, men that by their own meditation, arrive to the acknowledgement of one Infinite, Omnipotent, and Eternall God, choose rather to confesse he is Incomprehensible, and above their understanding; than to define his Nature By Spirit Incorporeall, and then Confesse their definition to be unintelligible: or if they give him such a title, it is not Dogmatically, with intention to make the Divine Nature understood; but Piously, to honour him with attributes, of significations, as remote as they can from the grossnesse of Bodies Visible.

## **But Know Not The Way How They Effect Anything**

Then, for the way by which they think these Invisible Agents wrought their effects; that is to say, what immediate causes they used, in bringing things to passe, men that know not what it is that we call Causing, (that is, almost all men) have no other rule to guesse by, but by observing, and remembring what they have seen to precede the like effect at some other time, or times before, without seeing between the antecedent and subsequent Event, any dependance or connexion at all: And therefore from the like things past, they expect the like things to come; and hope for good or evill luck, superstitiously, from things that have no part at all in the causing of it: As the Athenians did for their war at Lepanto, demand another Phormio; the Pompeian faction for their warre in Afrique, another Scipio; and others have done in divers other occasions since. In like manner they attribute their fortune to a stander by, to a lucky or unlucky place, to words spoken, especially if the name of God be amongst them; as Charming, and Conjuring (the Leiturgy of Witches;) insomuch as to believe, they have power to turn a stone into bread, bread into a man, or any thing, into any thing.

## **But Honour Them As They Honour Men**

Thirdly, for the worship which naturally men exhibit to Powers invisible, it can be no other, but such expressions of their reverence, as they would use towards men; Gifts, Petitions, Thanks, Submission of Body, Considerate Addresses, sober Behaviour, premeditated Words, Swearing (that is, assuring one another of their promises,) by invoking them. Beyond that reason suggesteth nothing; but leaves them either to rest there; or for further ceremonies, to rely on those they believe to be wiser than themselves.

## **And Attribute To Them All Extraordinary Events**

Lastly, concerning how these Invisible Powers declare to men the things which shall hereafter come to passe, especially concerning their good or evill fortune in generall, or good or ill successe in any particular undertaking, men are naturally at a stand; save that using to conjecture of the time to come, by the time past, they are very apt, not onely to take casuall things, after one or two encounters, for Prognostiques of the like encounter ever after, but also to believe the like Prognostiques from other men, of whom they have once conceived a good opinion.

## **Foure Things, Naturall Seeds Of Religion**

And in these foure things, Opinion of Ghosts, Ignorance of second causes, Devotion towards what men fear, and Taking of things Casuall for Prognostiques, consisteth the Naturall seed of Religion; which by reason of the different Fancies, Judgements, and Passions of severall men, hath grown up into ceremonies so different, that those which are used by one man, are for the most part ridiculous to another.

## Made Different By Culture

For these seeds have received culture from two sorts of men. One sort have been they, that have nourished, and ordered them, according to their own invention. The other, have done it, by Gods commandement, and direction: but both sorts have done it, with a purpose to make those men that relyed on them, the more apt to Obedience, Lawes, Peace, Charity, and civill Society. So that the Religion of the former sort, is a part of humane Politiques; and teacheth part of the duty which Earthly Kings require of their Subjects. And the Religion of the later sort is Divine Politiques; and containeth Precepts to those that have yeilded themselves subjects in the Kingdome of God. Of the former sort, were all the Founders of Commonwealths, and the Law-givers of the Gentiles: Of the later sort, were Abraham, Moses, and our Blessed Saviour; by whom have been derived unto us the Lawes of the Kingdome of God.

## The Absurd Opinion Of Gentilisme

And for that part of Religion, which consisteth in opinions concerning the nature of Powers Invisible, there is almost nothing that has a name, that has not been esteemed amongst the Gentiles, in one place or another, a God, or Divell; or by their Poets feigned to be inanimated, inhabited, or possessed by some Spirit or other.

The unformed matter of the World, was a God, by the name of Chaos.

The Heaven, the Ocean, the Planets, the Fire, the Earth, the Winds, were so many Gods.

Men, Women, a Bird, a Crocodile, a Calf, a Dogge, a Snake, an Onion, a Leeke, Deified. Besides, that they filled almost all places, with spirits called Daemons; the plains, with Pan, and Panises, or Satyres; the Woods, with Fawnes, and Nymphs; the Sea, with Tritons, and other Nymphs; every River, and Fountayn, with a Ghost of his name, and with Nymphs; every house, with it Lares, or Familiars; every man, with his Genius; Hell, with Ghosts, and spirituall Officers, as Charon, Cerberus, and the Furies; and in the night time, all places with Larvae, Lemures, Ghosts of men deceased, and a whole kingdome of Fayries, and Bugbears. They have also ascribed Divinity, and built Temples to meer Accidents, and Qualities; such as are Time, Night, Day, Peace, Concord, Love, Contention, Vertue, Honour, Health, Rust, Fever, and the like; which when they prayed for, or against, they prayed to, as if there were Ghosts of those names hanging over their heads, and letting fall, or withholding that Good, or Evill, for, or against which they prayed. They invoked also their own Wit, by the name of Muses; their own Ignorance, by the name of Fortune; their own Lust, by the name of Cupid; their own Rage, by the name Furies; their own privy members by the name of Priapus; and attributed their pollutions, to Incubi, and Succubae: insomuch as there was nothing, which a Poet could introduce as a person in his Poem, which they did not make either a God, or a Divel.

The same authors of the Religion of the Gentiles, observing the second ground for Religion, which is mens Ignorance of causes; and thereby their

aptnesse to attribute their fortune to causes, on which there was no dependence at all apparent, took occasion to obtrude on their ignorance, instead of second causes, a kind of second and ministeriall Gods; ascribing the cause of Foecundity, to Venus; the cause of Arts, to Apollo; of Subtilty and Craft, to Mercury; of Tempests and stormes, to Aeolus; and of other effects, to other Gods: insomuch as there was amongst the Heathen almost as great variety of Gods, as of businesse.

And to the Worship, which naturally men conceived fit to bee used towards their Gods, namely Oblations, Prayers, Thanks, and the rest formerly named; the same Legislators of the Gentiles have added their Images, both in Picture, and Sculpture; that the more ignorant sort, (that is to say, the most part, or generality of the people,) thinking the Gods for whose representation they were made, were really included, and as it were housed within them, might so much the more stand in feare of them: And endowed them with lands, and houses, and officers, and revenues, set apart from all other humane uses; that is, consecrated, and made holy to those their Idols; as Caverns, Groves, Woods, Mountains, and whole Ilands; and have attributed to them, not onely the shapes, some of Men, some of Beasts, some of Monsters; but also the Faculties, and Passions of men and beasts; as Sense, Speech, Sex, Lust, Generation, (and this not onely by mixing one with another, to propagate the kind of Gods; but also by mixing with men, and women, to beget mongrill Gods, and but inmates of Heaven, as Bacchus, Hercules, and others;) besides, Anger, Revenge, and other passions of living creatures, and the actions proceeding from them, as Fraud, Theft, Adultery, Sodomie, and any vice that may be taken for an effect of Power, or a cause of Pleasure; and all such Vices, as amongst men are taken to be against Law, rather than against Honour.

Lastly, to the Prognostiques of time to come; which are naturally, but Conjectures upon the Experience of time past; and supernaturall, divine Revelation; the same authors of the Religion of the Gentiles, partly upon pretended Experience, partly upon pretended Revelation, have added innumerable other superstitious wayes of Divination; and made men believe they should find their fortunes, sometimes in the ambiguous or senslesse answers of the priests at Delphi, Delos, Ammon, and other famous Oracles; which answers, were made ambiguous by designe, to own the event both wayes; or absurd by the intoxicating vapour of the place, which is very frequent in sulphurous Cavernes: Sometimes in the leaves of

the Sibills; of whose Prophecyes (like those perhaps of Nostradamus; for the fragments now extant seem to be the invention of later times) there were some books in reputation in the time of the Roman Republique: Sometimes in the insignificant Speeches of Mad-men, supposed to be possessed with a divine Spirit; which Possession they called Enthusiasme; and these kinds of foretelling events, were accounted Theomancy, or Prophecy; Sometimes in the aspect of the Starres at their Nativity; which was called Horoscopy, and esteemed a part of judiciary Astrology: Sometimes in their own hopes and feares, called Thumomancy, or Presage: Sometimes in the Prediction of Witches, that pretended conference with the dead; which is called Necromancy, Conjuring, and Witchcraft; and is but juggling and confederate knavery: Sometimes in the Casuall flight, or feeding of birds; called Augury: Sometimes in the Entrayles of a sacrificed beast; which was Aruspicina: Sometimes in Dreams: Sometimes in Croaking of Ravens, or chattering of Birds: Sometimes in the Lineaments of the face; which was called Metoposcopy; or by Palmistry in the lines of the hand; in casuall words, called Omina: Sometimes in Monsters, or unusuall accidents; as Ecclipses, Comets, rare Meteors, Earthquakes, Inundations, uncouth Births, and the like, which they called Portenta and Ostenta, because they thought them to portend, or foreshew some great Calamity to come; Sometimes, in meer Lottery, as Crosse and Pile; counting holes in a sive; dipping of Verses in Homer, and Virgil; and innumerable other such vaine conceits. So easie are men to be drawn to believe any thing, from such men as have gotten credit with them; and can with gentlenesse, and dexterity, take hold of their fear, and ignorance.

The Designes Of The Authors Of The Religion Of The Heathen And therefore the first Founders, and Legislators of Common-wealths amongst the Gentiles, whose ends were only to keep the people in obedience, and peace, have in all places taken care; First, to imprint in their minds a believe, that those precepts which they gave concerning Religion, might not be thought to proceed from their own device, but from the dictates of some God, or other Spirit; or else that they themselves were of a higher nature than mere mortalls, that their Lawes might the more easily be received: So Numa Pompilius pretended to receive the Ceremonies he instituted amongst the Romans, from the Nymph Egeria: and the first King and founder of the Kingdome of Peru, pretended himselfe and his wife to be the children of the Sunne: and Mahomet, to set up his new Religion,

pretended to have conferences with the Holy Ghost, in forme of a Dove. Secondly, they have had a care, to make it believed, that the same things were displeasing to the Gods, which were forbidden by the Lawes. Thirdly, to prescribe Ceremonies, Supplications, Sacrifices, and Festivalls, by which they were to believe, the anger of the Gods might be appeased; and that ill success in War, great contagions of Sicknesse, Earthquakes, and each mans private Misery, came from the Anger of the Gods; and their Anger from the Neglect of their Worship, or the forgetting, or mistaking some point of the Ceremonies required. And though amongst the antient Romans, men were not forbidden to deny, that which in the Poets is written of the paines, and pleasures after this life; which divers of great authority, and gravity in that state have in their Harangues openly derided; yet that beliefe was alwaies more cherished, than the contrary.

And by these, and such other Institutions, they obtayned in order to their end, (which was the peace of the Commonwealth,) that the common people in their misfortunes, laying the fault on neglect, or error in their Ceremonies, or on their own disobedience to the lawes, were the lesse apt to mutiny against their Governors. And being entertained with the pomp, and pastime of Festivalls, and publike Games, made in honour of the Gods, needed nothing else but bread, to keep them from discontent, murmuring, and commotion against the State. And therefore the Romans, that had conquered the greatest part of the then known World, made no scruple of tollerating any Religion whatsoever in the City of Rome it selfe; unlesse it had something in it, that could not consist with their Civill Government; nor do we read, that any Religion was there forbidden, but that of the Jewes; who (being the peculiar Kingdome of God) thought it unlawfull to acknowledge subjection to any mortall King or State whatsoever. And thus you see how the Religion of the Gentiles was a part of their Policy.

The True Religion, And The Lawes Of Gods Kingdome The Same But where God himselfe, by supernaturall Revelation, planted Religion; there he also made to himselfe a peculiar Kingdome; and gave Lawes, not only of behaviour towards himselfe; but also towards one another; and thereby in the Kingdome of God, the Policy, and lawes Civill, are a part of Religion; and therefore the distinction of Temporall, and Spirituall Domination, hath there no place. It is true, that God is King of all the Earth: Yet may he be King of a peculiar, and chosen Nation. For there is no

more incongruity therein, than that he that hath the generall command of the whole Army, should have withall a peculiar Regiment, or Company of his own. God is King of all the Earth by his Power: but of his chosen people, he is King by Covenant. But to speake more largely of the Kingdome of God, both by Nature, and Covenant, I have in the following discourse assigned an other place.

## **The Causes Of Change In Religion**

From the propagation of Religion, it is not hard to understand the causes of the resolution of the same into its first seeds, or principles; which are only an opinion of a Deity, and Powers invisible, and supernaturall; that can never be so abolished out of humane nature, but that new Religions may againe be made to spring out of them, by the culture of such men, as for such purpose are in reputation.

For seeing all formed Religion, is founded at first, upon the faith which a multitude hath in some one person, whom they believe not only to be a wise man, and to labour to procure their happiness, but also to be a holy man, to whom God himselfe vouchsafeth to declare his will supernaturally; It followeth necessarily, when they that have the Government of Religion, shall come to have either the wisdom of those men, their sincerity, or their love suspected; or that they shall be unable to shew any probable token of divine Revelation; that the Religion which they desire to uphold, must be suspected likewise; and (without the feare of the Civill Sword) contradicted and rejected.

## **Injoyning Beleeffe Of Impossibilities**

That which taketh away the reputation of Wisedome, in him that formeth a Religion, or addeth to it when it is allready formed, is the enjoyning of a beleeffe of contradictories: For both parts of a contradiction cannot possibly be true: and therefore to enjoyne the beleeffe of them, is an argument of ignorance; which detects the Author in that; and discredits him in all things else he shall propound as from revelation supernaturall: which revelation a man may indeed have of many things above, but of nothing against naturall reason.

## **Doing Contrary To The Religion They Establish**

That which taketh away the reputation of Sincerity, is the doing, or saying of such things, as appeare to be signes, that what they require other men to believe, is not believed by themselves; all which doings, or sayings are therefore called Scandalous, because they be stumbling blocks, that make men to fall in the way of Religion: as Injustice, Cruelty, Prophanesse, Avarice, and Luxury. For who can believe, that he that doth ordinarily such actions, as proceed from any of these rootes, believeth there is any such Invisible Power to be feared, as he affrighteth other men withall, for lesser faults?

That which taketh away the reputation of Love, is the being detected of private ends: as when the beliefe they require of others, conduceth or seemeth to conduce to the acquiring of Dominion, Riches, Dignity, or secure Pleasure, to themselves onely, or specially. For that which men reap benefit by to themselves, they are thought to do for their own sakes, and not for love of others

## Want Of The Testimony Of Miracles

Lastly, the testimony that men can render of divine Calling, can be no other, than the operation of Miracles; or true Prophecy, (which also is a Miracle;) or extraordinary Felicity. And therefore, to those points of Religion, which have been received from them that did such Miracles; those that are added by such, as approve not their Calling by some Miracle, obtain no greater beliefe, than what the Custome, and Lawes of the places, in which they be educated, have wrought into them. For as in naturall things, men of judgement require naturall signes, and arguments; so in supernaturall things, they require signes supernaturall, (which are Miracles,) before they consent inwardly, and from their hearts.

All which causes of the weakening of mens faith, do manifestly appear in the Examples following. First, we have the Example of the children of Israel; who when Moses, that had approved his Calling to them by Miracles, and by the happy conduct of them out of Egypt, was absent but 40 dayes, revolted from the worship of the true God, recommended to them by him; and setting up (Exod.32 1,2) a Golden Calfe for their God, relapsed into the Idolatry of the Egyptians; from whom they had been so lately delivered. And again, after Moses, Aaron, Joshua, and that generation which had seen the great works of God in Israel, (Judges 2 11) were dead; another generation arose, and served Baal. So that Miracles fayling, Faith also failed.

Again, when the sons of Samuel, (1 Sam.8.3) being constituted by their father Judges in Bersabee, received bribes, and judged unjustly, the people of Israel refused any more to have God to be their King, in other manner than he was King of other people; and therefore cryed out to Samuel, to choose them a King after the manner of the Nations. So that Justice Fayling, Faith also fayled: Insomuch, as they deposed their God, from reigning over them.

And whereas in the planting of Christian Religion, the Oracles ceased in all parts of the Roman Empire, and the number of Christians encreased wonderfully every day, and in every place, by the preaching of the Apostles, and Evangelists; a great part of that successe, may reasonably be

attributed, to the contempt, into which the Priests of the Gentiles of that time, had brought themselves, by their uncleannesse, avarice, and juggling between Princes. Also the Religion of the Church of Rome, was partly, for the same cause abolished in England, and many other parts of Christendome; insomuch, as the fayling of Vertue in the Pastors, maketh Faith faile in the People: and partly from bringing of the Philosophy, and doctrine of Aristotle into Religion, by the Schoole-men; from whence there arose so many contradictions, and absurdities, as brought the Clergy into a reputation both of Ignorance, and of Fraudulent intention; and enclined people to revolt from them, either against the will of their own Princes, as in France, and Holland; or with their will, as in England.

Lastly, amongst the points by the Church of Rome declared necessary for Salvation, there be so many, manifestly to the advantage of the Pope, and of his spirituall subjects, residing in the territories of other Christian Princes, that were it not for the mutuall emulation of those Princes, they might without warre, or trouble, exclude all forraign Authority, as easily as it has been excluded in England. For who is there that does not see, to whose benefit it conduceth, to have it believed, that a King hath not his Authority from Christ, unlesse a Bishop crown him? That a King, if he be a Priest, cannot Marry? That whether a Prince be born in lawfull Marriage, or not, must be judged by Authority from Rome? That Subjects may be freed from their Alleageance, if by the Court of Rome, the King be judged an Heretique? That a King (as Chilperique of France) may be deposed by a Pope (as Pope Zachary,) for no cause; and his Kingdome given to one of his Subjects? That the Clergy, and Regulars, in what Country soever, shall be exempt from the Jurisdiction of their King, in cases criminall? Or who does not see, to whose profit redound the Fees of private Masses, and Vales of Purgatory; with other signes of private interest, enough to mortifie the most lively Faith, if (as I sayd) the civill Magistrate, and Custome did not more sustain it, than any opinion they have of the Sanctity, Wisdome, or Probity of their Teachers? So that I may attribute all the changes of Religion in the world, to one and the some cause; and that is, unpleasing Priests; and those not onely amongst Catholiques, but even in that Church that hath presumed most of Reformation.

## CHAPTER XIII. OF THE NATURALL CONDITION OF MANKIND,

### AS CONCERNING THEIR FELICITY, AND MISERY

Nature hath made men so equall, in the faculties of body, and mind; as that though there bee found one man sometimes manifestly stronger in body, or of quicker mind then another; yet when all is reckoned together, the difference between man, and man, is not so considerable, as that one man can thereupon claim to himselfe any benefit, to which another may not pretend, as well as he. For as to the strength of body, the weakest has strength enough to kill the strongest, either by secret machination, or by confederacy with others, that are in the same danger with himselfe.

And as to the faculties of the mind, (setting aside the arts grounded upon words, and especially that skill of proceeding upon generall, and infallible rules, called Science; which very few have, and but in few things; as being not a native faculty, born with us; nor attained, (as Prudence,) while we look after somewhat els,) I find yet a greater equality amongst men, than that of strength. For Prudence, is but Experience; which equall time, equally bestowes on all men, in those things they equally apply themselves unto. That which may perhaps make such equality incredible, is but a vain conceit of ones owne wisdom, which almost all men think they have in a greater degree, than the Vulgar; that is, than all men but themselves, and a few others, whom by Fame, or for concurring with themselves, they approve. For such is the nature of men, that howsoever they may acknowledge many others to be more witty, or more eloquent, or more learned; Yet they will hardly believe there be many so wise as themselves: For they see their own wit at hand, and other mens at a distance. But this proveth rather that men are in that point equall, than unequall. For there is not ordinarily a greater signe of the equall distribution of any thing, than that every man is contented with his share.

## **From Equality Proceeds Diffidence**

From this equality of ability, ariseth equality of hope in the attaining of our Ends. And therefore if any two men desire the same thing, which neverthelesse they cannot both enjoy, they become enemies; and in the way to their End, (which is principally their owne conservation, and sometimes their delectation only,) endeavour to destroy, or subdue one an other. And from hence it comes to passe, that where an Invader hath no more to feare, than an other mans single power; if one plant, sow, build, or possesse a convenient Seat, others may probably be expected to come prepared with forces united, to dispossesse, and deprive him, not only of the fruit of his labour, but also of his life, or liberty. And the Invader again is in the like danger of another.

## From Diffidence Warre

And from this diffidence of one another, there is no way for any man to secure himselfe, so reasonable, as Anticipation; that is, by force, or wiles, to master the persons of all men he can, so long, till he see no other power great enough to endanger him: And this is no more than his own conservation requireth, and is generally allowed. Also because there be some, that taking pleasure in contemplating their own power in the acts of conquest, which they pursue farther than their security requires; if others, that otherwise would be glad to be at ease within modest bounds, should not by invasion increase their power, they would not be able, long time, by standing only on their defence, to subsist. And by consequence, such augmentation of dominion over men, being necessary to a mans conservation, it ought to be allowed him.

Againe, men have no pleasure, (but on the contrary a great deale of grieffe) in keeping company, where there is no power able to over-awe them all. For every man looketh that his companion should value him, at the same rate he sets upon himselfe: And upon all signes of contempt, or undervaluing, naturally endeavours, as far as he dares (which amongst them that have no common power, to keep them in quiet, is far enough to make them destroy each other,) to extort a greater value from his contemners, by dommage; and from others, by the example.

So that in the nature of man, we find three principall causes of quarrel. First, Competition; Secondly, Diffidence; Thirdly, Glory.

The first, maketh men invade for Gain; the second, for Safety; and the third, for Reputation. The first use Violence, to make themselves Masters of other mens persons, wives, children, and cattell; the second, to defend them; the third, for trifles, as a word, a smile, a different opinion, and any other signe of undervalue, either direct in their Persons, or by reflexion in their Kindred, their Friends, their Nation, their Profession, or their Name.

## **Out Of Civil States,**

There Is Alwayes Warre Of Every One Against Every One Hereby it is manifest, that during the time men live without a common Power to keep them all in awe, they are in that condition which is called Warre; and such a warre, as is of every man, against every man. For WARRE, consisteth not in Battell onely, or the act of fighting; but in a tract of time, wherein the Will to contend by Battell is sufficiently known: and therefore the notion of Time, is to be considered in the nature of Warre; as it is in the nature of Weather. For as the nature of Foule weather, lyeth not in a showre or two of rain; but in an inclination thereto of many dayes together: So the nature of War, consisteth not in actuall fighting; but in the known disposition thereto, during all the time there is no assurance to the contrary. All other time is PEACE.

## **The Incommodities Of Such A War**

Whatsoever therefore is consequent to a time of Warre, where every man is Enemy to every man; the same is consequent to the time, wherein men live without other security, than what their own strength, and their own invention shall furnish them withall. In such condition, there is no place for Industry; because the fruit thereof is uncertain; and consequently no Culture of the Earth; no Navigation, nor use of the commodities that may be imported by Sea; no commodious Building; no Instruments of moving, and removing such things as require much force; no Knowledge of the face of the Earth; no account of Time; no Arts; no Letters; no Society; and which is worst of all, continuall feare, and danger of violent death; And the life of man, solitary, poore, nasty, brutish, and short.

It may seem strange to some man, that has not well weighed these things; that Nature should thus dissociate, and render men apt to invade, and destroy one another: and he may therefore, not trusting to this Inference, made from the Passions, desire perhaps to have the same confirmed by Experience. Let him therefore consider with himselfe, when taking a journey, he armes himselfe, and seeks to go well accompanied; when going to sleep, he locks his doores; when even in his house he locks his chests; and this when he knows there bee Lawes, and publike Officers, armed, to revenge all injuries shall bee done him; what opinion he has of his fellow subjects, when he rides armed; of his fellow Citizens, when he locks his doores; and of his children, and servants, when he locks his chests. Does he not there as much accuse mankind by his actions, as I do by my words? But neither of us accuse mans nature in it. The Desires, and other Passions of man, are in themselves no Sin. No more are the Actions, that proceed from those Passions, till they know a Law that forbids them; which till Lawes be made they cannot know: nor can any Law be made, till they have agreed upon the Person that shall make it.

It may peradventure be thought, there was never such a time, nor condition of warre as this; and I believe it was never generally so, over all the world: but there are many places, where they live so now. For the savage people in many places of America, except the government of small

Families, the concord whereof dependeth on naturall lust, have no government at all; and live at this day in that brutish manner, as I said before. Howsoever, it may be perceived what manner of life there would be, where there were no common Power to feare; by the manner of life, which men that have formerly lived under a peacefull government, use to degenerate into, in a civill Warre.

But though there had never been any time, wherein particular men were in a condition of warre one against another; yet in all times, Kings, and persons of Sovereigne authority, because of their Independency, are in continuall jealousies, and in the state and posture of Gladiators; having their weapons pointing, and their eyes fixed on one another; that is, their Forts, Garrisons, and Guns upon the Frontiers of their Kingdomes; and continuall Spyes upon their neighbours; which is a posture of War. But because they uphold thereby, the Industry of their Subjects; there does not follow from it, that misery, which accompanies the Liberty of particular men.

## **In Such A Warre, Nothing Is Unjust**

To this warre of every man against every man, this also is consequent; that nothing can be Unjust. The notions of Right and Wrong, Justice and Injustice have there no place. Where there is no common Power, there is no Law: where no Law, no Injustice. Force, and Fraud, are in warre the two Cardinall vertues. Justice, and Injustice are none of the Faculties neither of the Body, nor Mind. If they were, they might be in a man that were alone in the world, as well as his Senses, and Passions. They are Qualities, that relate to men in Society, not in Solitude. It is consequent also to the same condition, that there be no Propriety, no Dominion, no Mine and Thine distinct; but onely that to be every mans that he can get; and for so long, as he can keep it. And thus much for the ill condition, which man by meer Nature is actually placed in; though with a possibility to come out of it, consisting partly in the Passions, partly in his Reason.

## **The Passions That Incline Men To Peace**

The Passions that encline men to Peace, are Feare of Death; Desire of such things as are necessary to commodious living; and a Hope by their Industry to obtain them. And Reason suggesteth convenient Articles of Peace, upon which men may be drawn to agreement. These Articles, are they, which otherwise are called the Lawes of Nature: whereof I shall speak more particularly, in the two following Chapters.

**CHAPTER XIV. OF THE FIRST AND SECOND  
NATURALL LAWES, AND OF CONTRACTS**

## **Right Of Nature What**

The RIGHT OF NATURE, which Writers commonly call Jus Naturale, is the Liberty each man hath, to use his own power, as he will himselfe, for the preservation of his own Nature; that is to say, of his own Life; and consequently, of doing any thing, which in his own Judgement, and Reason, hee shall conceive to be the aptest means thereunto.

## **Liberty What**

By LIBERTY, is understood, according to the proper signification of the word, the absence of externall Impediments: which Impediments, may oft take away part of a mans power to do what hee would; but cannot hinder him from using the power left him, according as his judgement, and reason shall dictate to him.

## **A Law Of Nature What**

A LAW OF NATURE, (Lex Naturalis,) is a Precept, or generall Rule, found out by Reason, by which a man is forbidden to do, that, which is destructive of his life, or taketh away the means of preserving the same; and to omit, that, by which he thinketh it may be best preserved. For though they that speak of this subject, use to confound Jus, and Lex, Right and Law; yet they ought to be distinguished; because RIGHT, consisteth in liberty to do, or to forbear; Whereas LAW, determineth, and bindeth to one of them: so that Law, and Right, differ as much, as Obligation, and Liberty; which in one and the same matter are inconsistent.

## **Naturally Every Man Has Right To Everything**

And because the condition of Man, (as hath been declared in the precedent Chapter) is a condition of Warre of every one against every one; in which case every one is governed by his own Reason; and there is nothing he can make use of, that may not be a help unto him, in preserving his life against his enemyes; It followeth, that in such a condition, every man has a Right to every thing; even to one anothers body. And therefore, as long as this naturall Right of every man to every thing endureth, there can be no security to any man, (how strong or wise soever he be,) of living out the time, which Nature ordinarily alloweth men to live.

## **The Fundamental Law Of Nature**

And consequently it is a precept, or generall rule of Reason, "That every man, ought to endeavour Peace, as farre as he has hope of obtaining it; and when he cannot obtain it, that he may seek, and use, all helps, and advantages of Warre." The first branch, of which Rule, containeth the first, and Fundamentall Law of Nature; which is, "To seek Peace, and follow it." The Second, the summe of the Right of Nature; which is, "By all means we can, to defend our selves."

## **The Second Law Of Nature**

From this Fundamentall Law of Nature, by which men are commanded to endeavour Peace, is derived this second Law; "That a man be willing, when others are so too, as farre-forth, as for Peace, and defence of himselfe he shall think it necessary, to lay down this right to all things; and be contented with so much liberty against other men, as he would allow other men against himselfe." For as long as every man holdeth this Right, of doing any thing he liketh; so long are all men in the condition of Warre. But if other men will not lay down their Right, as well as he; then there is no Reason for any one, to devest himselfe of his: For that were to expose himselfe to Prey, (which no man is bound to) rather than to dispose himselfe to Peace. This is that Law of the Gospell; "Whatsoever you require that others should do to you, that do ye to them." And that Law of all men, "Quod tibi feiri non vis, alteri ne feceris."

## **What it is to lay down a Right**

To Lay Downe a mans Right to any thing, is to Devest himselfe of the Liberty, of hindring another of the benefit of his own Right to the same. For he that renounceth, or passeth away his Right, giveth not to any other man a Right which he had not before; because there is nothing to which every man had not Right by Nature: but onely standeth out of his way, that he may enjoy his own originall Right, without hindrance from him; not without hindrance from another. So that the effect which redoundeth to one man, by another mans defect of Right, is but so much diminution of impediments to the use of his own Right originall.

## **Renouncing (or) Transferring Right What; Obligation Duty Justice**

Right is layd aside, either by simply Renouncing it; or by Transferring it to another. By Simply RENOUNCING; when he cares not to whom the benefit thereof redoundeth. By TRANSFERRING; when he intendeth the benefit thereof to some certain person, or persons. And when a man hath in either manner abandoned, or granted away his Right; then is he said to be OBLIGED, or BOUND, not to hinder those, to whom such Right is granted, or abandoned, from the benefit of it: and that he Ought, and it his DUTY, not to make voyd that voluntary act of his own: and that such hindrance is INJUSTICE, and INJURY, as being Sine Jure; the Right being before renounced, or transferred. So that Injury, or Injustice, in the controversies of the world, is somewhat like to that, which in the disputations of Scholers is called Absurdity. For as it is there called an Absurdity, to contradict what one maintained in the Beginning: so in the world, it is called Injustice, and Injury, voluntarily to undo that, which from the beginning he had voluntarily done. The way by which a man either simply Renounceth, or Transferreth his Right, is a Declaration, or Signification, by some voluntary and sufficient signe, or signes, that he doth so Renounce, or Transferre; or hath so Renounced, or Transferred the same, to him that accepteth it. And these Signes are either Words onely, or Actions onely; or (as it happeneth most often) both Words and Actions. And the same are the BONDS, by which men are bound, and obliged: Bonds, that have their strength, not from their own Nature, (for nothing is more easily broken then a mans word,) but from Feare of some evill consequence upon the rupture.

## **Not All Rights Are Alienable**

Whensoever a man Transferreth his Right, or Renounceth it; it is either in consideration of some Right reciprocally transferred to himselfe; or for some other good he hopeth for thereby. For it is a voluntary act: and of the voluntary acts of every man, the object is some Good To Himselfe. And therefore there be some Rights, which no man can be understood by any words, or other signes, to have abandoned, or transferred. As first a man cannot lay down the right of resisting them, that assault him by force, to take away his life; because he cannot be understood to ayme thereby, at any Good to himselfe. The same may be sayd of Wounds, and Chayns, and Imprisonment; both because there is no benefit consequent to such patience; as there is to the patience of suffering another to be wounded, or imprisoned: as also because a man cannot tell, when he seeth men proceed against him by violence, whether they intend his death or not. And lastly the motive, and end for which this renouncing, and transferring or Right is introduced, is nothing else but the security of a mans person, in his life, and in the means of so preserving life, as not to be weary of it. And therefore if a man by words, or other signes, seem to despoyle himselfe of the End, for which those signes were intended; he is not to be understood as if he meant it, or that it was his will; but that he was ignorant of how such words and actions were to be interpreted.

## **Contract What**

**The mutuall transferring of Right, is that which men call  
CONTRACT.**

There is difference, between transferring of Right to the Thing; and transferring, or tradition, that is, delivery of the Thing it selfe. For the Thing may be delivered together with the Translation of the Right; as in buying and selling with ready mony; or exchange of goods, or lands: and it may be delivered some time after.

## **Covenant What**

Again, one of the Contractors, may deliver the Thing contracted for on his part, and leave the other to perform his part at some determinate time after, and in the mean time be trusted; and then the Contract on his part, is called PACT, or COVENANT: Or both parts may contract now, to performe hereafter: in which cases, he that is to performe in time to come, being trusted, his performance is called Keeping Of Promise, or Faith; and the fayling of performance (if it be voluntary) Violation Of Faith.

## **Free-gift**

When the transferring of Right, is not mutuall; but one of the parties transferreth, in hope to gain thereby friendship, or service from another, or from his friends; or in hope to gain the reputation of Charity, or Magnanimity; or to deliver his mind from the pain of compassion; or in hope of reward in heaven; This is not Contract, but GIFT, FREEGIFT, GRACE: which words signifie one and the same thing.

## **Signes Of Contract Expresse**

Signes of Contract, are either Expresse, or By Inference. Expresse, are words spoken with understanding of what they signifie; And such words are either of the time Present, or Past; as, I Give, I Grant, I Have Given, I Have Granted, I Will That This Be Yours: Or of the future; as, I Will Give, I Will Grant; which words of the future, are called Promise.

## **Signes Of Contract By Inference**

Signes by Inference, are sometimes the consequence of Words; sometimes the consequence of Silence; sometimes the consequence of Actions; sometimes the consequence of Forbearing an Action: and generally a signe by Inference, of any Contract, is whatsoever sufficiently argues the will of the Contractor.

## **Free Gift Passeth By Words Of The Present Or Past**

Words alone, if they be of the time to come, and contain a bare promise, are an insufficient signe of a Free-gift and therefore not obligatory. For if they be of the time to Come, as, To Morrow I Will Give, they are a signe I have not given yet, and consequently that my right is not transferred, but remaineth till I transferre it by some other Act. But if the words be of the time Present, or Past, as, "I have given, or do give to be delivered to morrow," then is my to morrows Right given away to day; and that by the vertue of the words, though there were no other argument of my will. And there is a great difference in the signification of these words, Volos Hoc Tuum Esse Cras, and Cros Dabo; that is between "I will that this be thine to morrow," and, "I will give it to thee to morrow:" For the word I Will, in the former manner of speech, signifies an act of the will Present; but in the later, it signifies a promise of an act of the will to Come: and therefore the former words, being of the Present, transferre a future right; the later, that be of the Future, transferre nothing. But if there be other signes of the Will to transferre a Right, besides Words; then, though the gift be Free, yet may the Right be understood to passe by words of the future: as if a man propound a Prize to him that comes first to the end of a race, The gift is Free; and though the words be of the Future, yet the Right passeth: for if he would not have his words so be understood, he should not have let them runne.

Signes Of Contract Are Words Both Of The Past, Present, and Future In Contracts, the right passeth, not onely where the words are of the time Present, or Past; but also where they are of the Future; because all Contract is mutuall translation, or change of Right; and therefore he that promiseth onely, because he hath already received the benefit for which he promiseth, is to be understood as if he intended the Right should passe: for unlesse he had been content to have his words so understood, the other would not have performed his part first. And for that cause, in buying, and selling, and other acts of Contract, A Promise is equivalent to a Covenant; and therefore obligatory.

## Merit What

He that performeth first in the case of a Contract, is said to MERIT that which he is to receive by the performance of the other; and he hath it as Due. Also when a Prize is propounded to many, which is to be given to him onely that winneth; or mony is thrown amongst many, to be enjoyed by them that catch it; though this be a Free Gift; yet so to Win, or so to Catch, is to Merit, and to have it as DUE. For the Right is transferred in the Propounding of the Prize, and in throwing down the mony; though it be not determined to whom, but by the Event of the contention. But there is between these two sorts of Merit, this difference, that In Contract, I Merit by vertue of my own power, and the Contractors need; but in this case of Free Gift, I am enabled to Merit onely by the benignity of the Giver; In Contract, I merit at The Contractors hand that hee should depart with his right; In this case of gift, I Merit not that the giver should part with his right; but that when he has parted with it, it should be mine, rather than anothers. And this I think to be the meaning of that distinction of the Schooles, between Meritum Congrui, and Meritum Condigni. For God Almighty, having promised Paradise to those men (hoodwinkt with carnall desires,) that can walk through this world according to the Precepts, and Limits prescribed by him; they say, he that shall so walk, shall Merit Paradise Ex Congruo. But because no man can demand a right to it, by his own Righteousnesse, or any other power in himselfe, but by the Free Grace of God onely; they say, no man can Merit Paradise Ex Condigno. This I say, I think is the meaning of that distinction; but because Disputers do not agree upon the signification of their own termes of Art, longer than it serves their turn; I will not affirme any thing of their meaning: onely this I say; when a gift is given indefinitely, as a prize to be contended for, he that winneth Meriteth, and may claime the Prize as Due.

## **Covenants Of Mutuall Trust, When Invalid**

If a Covenant be made, wherein neither of the parties performe presently, but trust one another; in the condition of meer Nature, (which is a condition of Warre of every man against every man,) upon any reasonable suspition, it is Voyd; But if there be a common Power set over them bothe, with right and force sufficient to compell performance; it is not Voyd. For he that performeth first, has no assurance the other will performe after; because the bonds of words are too weak to bridle mens ambition, avarice, anger, and other Passions, without the feare of some coerceive Power; which in the condition of meer Nature, where all men are equall, and judges of the justnesse of their own fears cannot possibly be supposed. And therefore he which performeth first, does but betray himselfe to his enemy; contrary to the Right (he can never abandon) of defending his life, and means of living.

But in a civill estate, where there is a Power set up to constrain those that would otherwise violate their faith, that feare is no more reasonable; and for that cause, he which by the Covenant is to perform first, is obliged so to do.

The cause of Feare, which maketh such a Covenant invalid, must be alwayes something arising after the Covenant made; as some new fact, or other signe of the Will not to performe; else it cannot make the Covenant Voyd. For that which could not hinder a man from promising, ought not to be admitted as a hindrance of performing.

## **Right To The End, Containeth Right To The Means**

He that transferreth any Right, transferreth the Means of enjoying it, as farre as lyeth in his power. As he that selleth Land, is understood to transferre the Herbage, and whatsoever growes upon it; Nor can he that sells a Mill turn away the Stream that drives it. And they that give to a man The Right of government in Sovereignty, are understood to give him the right of levying mony to maintain Souldiers; and of appointing Magistrates for the administration of Justice.

## **No Covenant With Beasts**

To make Covenant with bruit Beasts, is impossible; because not understanding our speech, they understand not, nor accept of any translation of Right; nor can translate any Right to another; and without mutuall acceptation, there is no Covenant.

## **Nor With God Without Speciall Revelation**

To make Covenant with God, is impossible, but by Mediation of such as God speaketh to, either by Revelation supernaturall, or by his Lieutenants that govern under him, and in his Name; For otherwise we know not whether our Covenants be accepted, or not. And therefore they that Vow any thing contrary to any law of Nature, Vow in vain; as being a thing unjust to pay such Vow. And if it be a thing commanded by the Law of Nature, it is not the Vow, but the Law that binds them.

## **No Covenant, But Of Possible And Future**

The matter, or subject of a Covenant, is alwayes something that falleth under deliberation; (For to Covenant, is an act of the Will; that is to say an act, and the last act, of deliberation;) and is therefore alwayes understood to be something to come; and which is judged Possible for him that Covenanteth, to performe.

And therefore, to promise that which is known to be Impossible, is no Covenant. But if that prove impossible afterwards, which before was thought possible, the Covenant is valid, and bindeth, (though not to the thing it selfe,) yet to the value; or, if that also be impossible, to the unfeigned endeavour of performing as much as is possible; for to more no man can be obliged.

## **Covenants How Made Voyd**

Men are freed of their Covenants two wayes; by Performing; or by being Forgiven. For Performance, is the naturall end of obligation; and Forgivenesse, the restitution of liberty; as being a retransferring of that Right, in which the obligation consisted.

## **Covenants Extorted By Feare Are Valide**

Covenants entred into by feare, in the condition of meer Nature, are obligatory. For example, if I Covenant to pay a ransome, or service for my life, to an enemy; I am bound by it. For it is a Contract, wherein one receiveth the benefit of life; the other is to receive mony, or service for it; and consequently, where no other Law (as in the condition, of meer Nature) forbiddeth the performance, the Covenant is valid. Therefore Prisoners of warre, if trusted with the payment of their Ransome, are obliged to pay it; And if a weaker Prince, make a disadvantageous peace with a stronger, for feare; he is bound to keep it; unlesse (as hath been sayd before) there ariseth some new, and just cause of feare, to renew the war. And even in Common-wealths, if I be forced to redeem my selfe from a Theefe by promising him mony, I am bound to pay it, till the Civill Law discharge me. For whatsoever I may lawfully do without Obligation, the same I may lawfully Covenant to do through feare: and what I lawfully Covenant, I cannot lawfully break.

## **The Former Covenant To One, Makes Voyd The Later To Another**

A former Covenant, makes voyd a later. For a man that hath passed away his Right to one man to day, hath it not to passe to morrow to another: and therefore the later promise passeth no Right, but is null.

## **A Mans Covenant Not To Defend Himself, Is Voyd**

A Covenant not to defend my selfe from force, by force, is alwayes voyd. For (as I have shewed before) no man can transferre, or lay down his Right to save himselfe from Death, Wounds, and Imprisonment, (the avoyding whereof is the onely End of laying down any Right,) and therefore the promise of not resisting force, in no Covenant transferreth any right; nor is obliging. For though a man may Covenant thus, "Unlesse I do so, or so, kill me;" he cannot Covenant thus "Unless I do so, or so, I will not resist you, when you come to kill me." For man by nature chooseth the lesser evill, which is danger of death in resisting; rather than the greater, which is certain and present death in not resisting. And this is granted to be true by all men, in that they lead Criminals to Execution, and Prison, with armed men, notwithstanding that such Criminals have consented to the Law, by which they are condemned.

## **No Man Obligated To Accuse Himselfe**

A Covenant to accuse ones Selfe, without assurance of pardon, is likewise invalide. For in the condition of Nature, where every man is Judge, there is no place for Accusation: and in the Civill State, the Accusation is followed with Punishment; which being Force, a man is not obliged not to resist. The same is also true, of the Accusation of those, by whose Condemnation a man falls into misery; as of a Father, Wife, or Benefactor. For the Testimony of such an Accuser, if it be not willingly given, is praesumed to be corrupted by Nature; and therefore not to be received: and where a mans Testimony is not to be credited, his not bound to give it. Also Accusations upon Torture, are not to be reputed as Testimonies. For Torture is to be used but as means of conjecture, and light, in the further examination, and search of truth; and what is in that case confessed, tendeth to the ease of him that is Tortured; not to the informing of the Torturers: and therefore ought not to have the credit of a sufficient Testimony: for whether he deliver himselfe by true, or false Accusation, he does it by the Right of preserving his own life.

## **The End Of An Oath; The Forme Of As Oath**

The force of Words, being (as I have formerly noted) too weak to hold men to the performance of their Covenants; there are in mans nature, but two imaginable helps to strengthen it. And those are either a Feare of the consequence of breaking their word; or a Glory, or Pride in appearing not to need to breake it. This later is a Generosity too rarely found to be presumed on, especially in the pursuers of Wealth, Command, or sensuall Pleasure; which are the greatest part of Mankind. The Passion to be reckoned upon, is Fear; whereof there be two very generall Objects: one, the Power of Spirits Invisible; the other, the Power of those men they shall therein Offend. Of these two, though the former be the greater Power, yet the feare of the later is commonly the greater Feare. The Feare of the former is in every man, his own Religion: which hath place in the nature of man before Civill Society. The later hath not so; at least not place enough, to keep men to their promises; because in the condition of meer Nature, the inequality of Power is not discerned, but by the event of Battell. So that before the time of Civill Society, or in the interruption thereof by Warre, there is nothing can strengthen a Covenant of Peace agreed on, against the temptations of Avarice, Ambition, Lust, or other strong desire, but the feare of that Invisible Power, which they every one Worship as God; and Feare as a Revenger of their perfidy. All therefore that can be done between two men not subject to Civill Power, is to put one another to swear by the God he feareth: Which Swearing or OATH, is a Forme Of Speech, Added To A Promise; By Which He That Promiseth, Signifieth, That Unlesse He Performe, He Renounceth The Mercy Of His God, Or Calleth To Him For Vengeance On Himselfe. Such was the Heathen Forme, "Let Jupiter kill me else, as I kill this Beast." So is our Forme, "I shall do thus, and thus, so help me God." And this, with the Rites and Ceremonies, which every one useth in his own Religion, that the feare of breaking faith might be the greater.

## **No Oath, But By God**

By this it appears, that an Oath taken according to any other Forme, or Rite, then his, that sweareth, is in vain; and no Oath: And there is no Swearing by any thing which the Swearer thinks not God. For though men have sometimes used to swear by their Kings, for feare, or flattery; yet they would have it thereby understood, they attributed to them Divine honour. And that Swearing unnecessarily by God, is but prophaning of his name: and Swearing by other things, as men do in common discourse, is not Swearing, but an impious Custome, gotten by too much vehemence of talking.

## **An Oath Addes Nothing To The Obligation**

It appears also, that the Oath addes nothing to the Obligation. For a Covenant, if lawfull, binds in the sight of God, without the Oath, as much as with it; if unlawfull, bindeth not at all; though it be confirmed with an Oath.

# **CHAPTER XV. OF OTHER LAWES OF NATURE**

## **The Third Law Of Nature, Justice**

From that law of Nature, by which we are obliged to transferre to another, such Rights, as being retained, hinder the peace of Mankind, there followeth a Third; which is this, That Men Performe Their Covenants Made: without which, Covenants are in vain, and but Empty words; and the Right of all men to all things remaining, wee are still in the condition of Warre.

## Justice And Injustice What

And in this law of Nature, consisteth the Fountain and Originall of JUSTICE. For where no Covenant hath preceded, there hath no Right been transferred, and every man has right to every thing; and consequently, no action can be Unjust. But when a Covenant is made, then to break it is Unjust: And the definition of INJUSTICE, is no other than The Not Performance Of Covenant. And whatsoever is not Unjust, is Just.

Justice And Propriety Begin With The Constitution of Common-wealth But because Covenants of mutuall trust, where there is a feare of not performance on either part, (as hath been said in the former Chapter,) are invalid; though the Originall of Justice be the making of Covenants; yet Injustice actually there can be none, till the cause of such feare be taken away; which while men are in the naturall condition of Warre, cannot be done. Therefore before the names of Just, and Unjust can have place, there must be some coercive Power, to compell men equally to the performance of their Covenants, by the terrour of some punishment, greater than the benefit they expect by the breach of their Covenant; and to make good that Propriety, which by mutuall Contract men acquire, in recompence of the universall Right they abandon: and such power there is none before the erection of a Common-wealth. And this is also to be gathered out of the ordinary definition of Justice in the Schooles: For they say, that "Justice is the constant Will of giving to every man his own." And therefore where there is no Own, that is, no Propriety, there is no Injustice; and where there is no coercive Power erected, that is, where there is no Common-wealth, there is no Propriety; all men having Right to all things: Therefore where there is no Common-wealth, there nothing is Unjust. So that the nature of Justice, consisteth in keeping of valid Covenants: but the Validity of Covenants begins not but with the Constitution of a Civill Power, sufficient to compell men to keep them: And then it is also that Propriety begins.

## Justice Not Contrary To Reason

The Foole hath sayd in his heart, there is no such thing as Justice; and sometimes also with his tongue; seriously alleaging, that every mans conservation, and contentment, being committed to his own care, there could be no reason, why every man might not do what he thought conduced thereunto; and therefore also to make, or not make; keep, or not keep Covenants, was not against Reason, when it conduced to ones benefit. He does not therein deny, that there be Covenants; and that they are sometimes broken, sometimes kept; and that such breach of them may be called Injustice, and the observance of them Justice: but he questioneth, whether Injustice, taking away the feare of God, (for the same Foole hath said in his heart there is no God,) may not sometimes stand with that Reason, which dictateth to every man his own good; and particularly then, when it conduceth to such a benefit, as shall put a man in a condition, to neglect not onely the dispraise, and revilings, but also the power of other men. The Kingdome of God is gotten by violence; but what if it could be gotten by unjust violence? were it against Reason so to get it, when it is impossible to receive hurt by it? and if it be not against Reason, it is not against Justice; or else Justice is not to be approved for good. From such reasoning as this, Succesfull wickednesse hath obtained the Name of Vertue; and some that in all other things have disallowed the violation of Faith; yet have allowed it, when it is for the getting of a Kingdome. And the Heathen that believed, that Saturn was deposed by his son Jupiter, believed neverthelesse the same Jupiter to be the avenger of Injustice: Somewhat like to a piece of Law in Cokes Commentaries on Litleton; where he sayes, If the right Heire of the Crown be attainted of Treason; yet the Crown shall descend to him, and Eo Instante the Atteynder be voyd; From which instances a man will be very prone to inferre; that when the Heire apparent of a Kingdome, shall kill him that is in possession, though his father; you may call it Injustice, or by what other name you will; yet it can never be against Reason, seeing all the voluntary actions of men tend to the benefit of themselves; and those actions are most Reasonable, that conduce most to their ends. This specious reasoning is nevertheless false.

For the question is not of promises mutuall, where there is no security of performance on either side; as when there is no Civill Power erected over the parties promising; for such promises are no Covenants: But either where one of the parties has performed already; or where there is a Power to make him performe; there is the question whether it be against reason, that is, against the benefit of the other to performe, or not. And I say it is not against reason. For the manifestation whereof, we are to consider; First, that when a man doth a thing, which notwithstanding any thing can be foreseen, and reckoned on, tendeth to his own destruction, howsoever some accident which he could not expect, arriving may turne it to his benefit; yet such events do not make it reasonably or wisely done. Secondly, that in a condition of Warre, wherein every man to every man, for want of a common Power to keep them all in awe, is an Enemy, there is no man can hope by his own strength, or wit, to defend himselfe from destruction, without the help of Confederates; where every one expects the same defence by the Confederation, that any one else does: and therefore he which declares he thinks it reason to deceive those that help him, can in reason expect no other means of safety, than what can be had from his own single Power. He therefore that breaketh his Covenant, and consequently declareth that he thinks he may with reason do so, cannot be received into any Society, that unite themselves for Peace and defence, but by the error of them that receive him; nor when he is received, be retayned in it, without seeing the danger of their error; which errors a man cannot reasonably reckon upon as the means of his security; and therefore if he be left, or cast out of Society, he perisheth; and if he live in Society, it is by the errors of other men, which he could not foresee, nor reckon upon; and consequently against the reason of his preservation; and so, as all men that contribute not to his destruction, forbear him onely out of ignorance of what is good for themselves.

As for the Instance of gaining the secure and perpetuall felicity of Heaven, by any way; it is frivolous: there being but one way imaginable; and that is not breaking, but keeping of Covenant.

And for the other Instance of attaining Sovereignty by Rebellion; it is manifest, that though the event follow, yet because it cannot reasonably be expected, but rather the contrary; and because by gaining it so, others are taught to gain the same in like manner, the attempt thereof is against reason. Justice therefore, that is to say, Keeping of Covenant, is a Rule of

Reason, by which we are forbidden to do any thing destructive to our life; and consequently a Law of Nature.

There be some that proceed further; and will not have the Law of Nature, to be those Rules which conduce to the preservation of mans life on earth; but to the attaining of an eternall felicity after death; to which they think the breach of Covenant may conduce; and consequently be just and reasonable; (such are they that think it a work of merit to kill, or depose, or rebell against, the Soveraigne Power constituted over them by their own consent.) But because there is no naturall knowledge of mans estate after death; much lesse of the reward that is then to be given to breach of Faith; but onely a believe grounded upon other mens saying, that they know it supernaturally, or that they know those, that knew them, that knew others, that knew it supernaturally; Breach of Faith cannot be called a Precept of Reason, or Nature.

## **Covenants Not Discharged By The Vice Of The Person To Whom Made**

Others, that allow for a Law of Nature, the keeping of Faith, do neverthelesse make exception of certain persons; as Heretiques, and such as use not to performe their Covenant to others: And this also is against reason. For if any fault of a man, be sufficient to discharge our Covenant made; the same ought in reason to have been sufficient to have hindred the making of it.

## **Justice Of Men, And Justice Of Actions What**

The names of Just, and Unjust, when they are attributed to Men, signifie one thing; and when they are attributed to Actions, another. When they are attributed to Men, they signifie Conformity, or Inconformity of Manners, to Reason. But when they are attributed to Actions, they signifie the Conformity, or Inconformity to Reason, not of Manners, or manner of life, but of particular Actions. A Just man therefore, is he that taketh all the care he can, that his Actions may be all Just: and an Unjust man, is he that neglecteth it. And such men are more often in our Language stiled by the names of Righteous, and Unrighteous; then Just, and Unjust; though the meaning be the same. Therefore a Righteous man, does not lose that Title, by one, or a few unjust Actions, that proceed from sudden Passion, or mistake of Things, or Persons: nor does an Unrighteous man, lose his character, for such Actions, as he does, or forbears to do, for feare: because his Will is not framed by the Justice, but by the apparant benefit of what he is to do. That which gives to humane Actions the relish of Justice, is a certain Noblenesse or Gallantnesse of courage, (rarely found,) by which a man scorns to be beholding for the contentment of his life, to fraud, or breach of promise. This Justice of the Manners, is that which is meant, where Justice is called a Vertue; and Injustice a Vice.

But the Justice of Actions denominates men, not Just, but Guiltlesse; and the Injustice of the same, (which is also called Injury,) gives them but the name of Guilty.

## **Justice Of Manners, And Justice Of Actions**

Again, the Injustice of Manners, is the disposition, or aptitude to do Injurie; and is Injustice before it proceed to Act; and without supposing any individuall person injured. But the Injustice of an Action, (that is to say Injury,) supposeth an individuall person Injured; namely him, to whom the Covenant was made: And therefore many times the injury is received by one man, when the dammage redoundeth to another. As when The Master commandeth his servant to give mony to a stranger; if it be not done, the Injury is done to the Master, whom he had before Covenanted to obey; but the dammage redoundeth to the stranger, to whom he had no Obligation; and therefore could not Injure him. And so also in Commonwealths, private men may remit to one another their debts; but not robberies or other violences, whereby they are endammaged; because the detaining of Debt, is an Injury to themselves; but Robbery and Violence, are Injuries to the Person of the Common-wealth.

## **Nothing Done To A Man, By His Own Consent Can Be Injury**

Whatsoever is done to a man, conformable to his own Will signified to the doer, is no Injury to him. For if he that doeth it, hath not passed away his originall right to do what he please, by some Antecedent Covenant, there is no breach of Covenant; and therefore no Injury done him. And if he have; then his Will to have it done being signified, is a release of that Covenant; and so again there is no Injury done him.

## **Justice Commutative, And Distributive**

Justice of Actions, is by Writers divided into Commutative, and Distributive; and the former they say consisteth in proportion Arithmetically; the later in proportion Geometrically. Commutative therefore, they place in the equality of value of the things contracted for; And Distributive, in the distribution of equal benefit, to men of equal merit. As if it were Injustice to sell dearer than we buy; or to give more to a man than he merits. The value of all things contracted for, is measured by the Appetite of the Contractors: and therefore the just value, is that which they be contented to give. And Merit (besides that which is by Covenant, where the performance on one part, meriteth the performance of the other part, and falls under Justice Commutative, not Distributive,) is not due by Justice; but is rewarded of Grace only. And therefore this distinction, in the sense wherein it useth to be expounded, is not right. To speak properly, Commutative Justice, is the Justice of a Contractor; that is, a Performance of Covenant, in Buying, and Selling; Hiring, and Letting to Hire; Lending, and Borrowing; Exchanging, Bartering, and other acts of Contract.

And Distributive Justice, the Justice of an Arbitrator; that is to say, the act of defining what is Just. Wherein, (being trusted by them that make him Arbitrator,) if he performe his Trust, he is said to distribute to every man his own: and his is indeed Just Distribution, and may be called (though improperly) Distributive Justice; but more properly Equity; which also is a Law of Nature, as shall be shewn in due place.

## **The Fourth Law Of Nature, Gratitude**

As Justice dependeth on Antecedent Covenant; so does Gratitude depend on Antecedent Grace; that is to say, Antecedent Free-gift: and is the fourth Law of Nature; which may be conceived in this Forme, "That a man which receiveth Benefit from another of meer Grace, Endeavour that he which giveth it, have no reasonable cause to repent him of his good will." For no man giveth, but with intention of Good to himselfe; because Gift is Voluntary; and of all Voluntary Acts, the Object is to every man his own Good; of which if men see they shall be frustrated, there will be no beginning of benevolence, or trust; nor consequently of mutuall help; nor of reconciliation of one man to another; and therefore they are to remain still in the condition of War; which is contrary to the first and Fundamentall Law of Nature, which commandeth men to Seek Peace. The breach of this Law, is called Ingratitude; and hath the same relation to Grace, that Injustice hath to Obligation by Covenant.

## **The Fifth, Mutuall accommodation, or Compleasance**

A fifth Law of Nature, is COMPLEASANCE; that is to say, "That every man strive to accommodate himselfe to the rest." For the understanding whereof, we may consider, that there is in mens aptnesse to Society; a diversity of Nature, rising from their diversity of Affections; not unlike to that we see in stones brought together for building of an Aedifice. For as that stone which by the asperity, and irregularity of Figure, takes more room from others, than it selfe fills; and for the hardnesse, cannot be easily made plain, and thereby hindereth the building, is by the builders cast away as unprofitable, and troublesome: so also, a man that by asperity of Nature, will strive to retain those things which to himselfe are superfluous, and to others necessary; and for the stubbornness of his Passions, cannot be corrected, is to be left, or cast out of Society, as combersome thereunto. For seeing every man, not onely by Right, but also by necessity of Nature, is supposed to endeavour all he can, to obtain that which is necessary for his conservation; He that shall oppose himselfe against it, for things superfluous, is guilty of the warre that thereupon is to follow; and therefore doth that, which is contrary to the fundamentall Law of Nature, which commandeth To Seek Peace. The observers of this Law, may be called SOCIABLE, (the Latines call them Comodi;) The contrary, Stubborn, Insociable, Froward, Intractable.

## **The Sixth, Facility To Pardon**

A sixth Law of Nature is this, "That upon caution of the Future time, a man ought to pardon the offences past of them that repenting, desire it." For PARDON, is nothing but granting of Peace; which though granted to them that persevere in their hostility, be not Peace, but Feare; yet not granted to them that give caution of the Future time, is signe of an aversion to Peace; and therefore contrary to the Law of Nature.

## **The Seventh, That In Revenges, Men Respect Onely The Future Good**

A seventh is, " That in Revenges, (that is, retribution of evil for evil,) Men look not at the greatnesse of the evill past, but the greatnesse of the good to follow." Whereby we are forbidden to inflict punishment with any other designe, than for correction of the offender, or direction of others. For this Law is consequent to the next before it, that commandeth Pardon, upon security of the Future Time. Besides, Revenge without respect to the Example, and profit to come, is a triumph, or glorying in the hurt of another, tending to no end; (for the End is alwayes somewhat to Come;) and glorying to no end, is vain-glory, and contrary to reason; and to hurt without reason, tendeth to the introduction of Warre; which is against the Law of Nature; and is commonly stiled by the name of Cruelty.

## **The Eighth, Against Contumely**

And because all signes of hatred, or contempt, provoke to fight; insomuch as most men choose rather to hazard their life, than not to be revenged; we may in the eighth place, for a Law of Nature set down this Precept, "That no man by deed, word, countenance, or gesture, declare Hatred, or Contempt of another." The breach of which Law, is commonly called Contumely.

## **The Ninth, Against Pride**

The question who is the better man, has no place in the condition of meer Nature; where, (as has been shewn before,) all men are equall. The inequallity that now is, has been introduced by the Lawes civill. I know that Aristotle in the first booke of his Politiques, for a foundation of his doctrine, maketh men by Nature, some more worthy to Command, meaning the wiser sort (such as he thought himselfe to be for his Philosophy;) others to Serve, (meaning those that had strong bodies, but were not Philosophers as he;) as if Master and Servant were not introduced by consent of men, but by difference of Wit; which is not only against reason; but also against experience. For there are very few so foolish, that had not rather governe themselves, than be governed by others: Nor when the wise in their own conceit, contend by force, with them who distrust their owne wisdom, do they alwaies, or often, or almost at any time, get the Victory. If Nature therefore have made men equall, that equalitie is to be acknowledged; or if Nature have made men unequall; yet because men that think themselves equall, will not enter into conditions of Peace, but upon Equall termes, such equalitie must be admitted. And therefore for the ninth Law of Nature, I put this, "That every man acknowledge other for his Equall by Nature." The breach of this Precept is Pride.

## **The Tenth Against Arrogance**

On this law, dependeth another, "That at the entrance into conditions of Peace, no man require to reserve to himselfe any Right, which he is not content should be reserved to every one of the rest." As it is necessary for all men that seek peace, to lay down certaine Rights of Nature; that is to say, not to have libertie to do all they list: so is it necessarie for mans life, to retaine some; as right to governe their owne bodies; enjoy aire, water, motion, waies to go from place to place; and all things else without which a man cannot live, or not live well. If in this case, at the making of Peace, men require for themselves, that which they would not have to be granted to others, they do contrary to the precedent law, that commandeth the acknowledgement of naturall equalitie, and therefore also against the law of Nature. The observers of this law, are those we call Modest, and the breakers Arrogant Men. The Greeks call the violation of this law pleonexia; that is, a desire of more than their share.

## **The Eleventh Equity**

Also "If a man be trusted to judge between man and man," it is a precept of the Law of Nature, "that he deale Equally between them." For without that, the Controversies of men cannot be determined but by Warre. He therefore that is partiall in judgment, doth what in him lies, to deterre men from the use of Judges, and Arbitrators; and consequently, (against the fundamentall Lawe of Nature) is the cause of Warre.

The observance of this law, from the equall distribution to each man, of that which in reason belongeth to him, is called EQUITY, and (as I have sayd before) distributive justice: the violation, Acception Of Persons, Prosopolepsia.

## **The Twelfth, Equall Use Of Things Common**

And from this followeth another law, "That such things as cannot be divided, be enjoyed in Common, if it can be; and if the quantity of the thing permit, without Stint; otherwise Proportionably to the number of them that have Right." For otherwise the distribution is Unequall, and contrary to Equitie.

## **The Thirteenth, Of Lot**

But some things there be, that can neither be divided, nor enjoyed in common. Then, The Law of Nature, which prescribeth Equity, requireth, "That the Entire Right; or else, (making the use alternate,) the First Possession, be determined by Lot." For equall distribution, is of the Law of Nature; and other means of equall distribution cannot be imagined.

## **The Fourteenth, Of Primogeniture, And First Seising**

Of Lots there be two sorts, Arbitrary, and Naturall. Arbitrary, is that which is agreed on by the Competitors; Naturall, is either Primogeniture, (which the Greek calls Kleronomia, which signifies, Given by Lot;) or First Seisure.

And therefore those things which cannot be enjoyed in common, nor divided, ought to be adjudged to the First Possessor; and in some cases to the First-Borne, as acquired by Lot.

## **The Fifteenth, Of Mediators**

It is also a Law of Nature, "That all men that mediate Peace, be allowed safe Conduct." For the Law that commandeth Peace, as the End, commandeth Intercession, as the Means; and to Intercession the Means is safe Conduct.

## **The Sixteenth, Of Submission To Arbitrement**

And because, though men be never so willing to observe these Lawes, there may neverthesse arise questions concerning a mans action; First, whether it were done, or not done; Secondly (if done) whether against the Law, or not against the Law; the former whereof, is called a question Of Fact; the later a question Of Right; therefore unlesse the parties to the question, Covenant mutually to stand to the sentence of another, they are as farre from Peace as ever. This other, to whose Sentence they submit, is called an ARBITRATOR. And therefore it is of the Law of Nature, "That they that are at controversie, submit their Right to the judgement of an Arbitrator."

## **The Seventeenth, No Man Is His Own Judge**

And seeing every man is presumed to do all things in order to his own benefit, no man is a fit Arbitrator in his own cause: and if he were never so fit; yet Equity allowing to each party equall benefit, if one be admitted to be Judge, the other is to be admitted also; & so the controversie, that is, the cause of War, remains, against the Law of Nature.

## **The Eighteenth, No Man To Be Judge, That Has In Him Cause Of Partiality**

For the same reason no man in any Cause ought to be received for Arbitrator, to whom greater profit, or honour, or pleasure apparently ariseth out of the victory of one party, than of the other: for he hath taken (though an unavoydable bribe, yet) a bribe; and no man can be obliged to trust him. And thus also the controversie, and the condition of War remaineth, contrary to the Law of Nature.

## **The Nineteenth, Of Witnesse**

And in a controversie of Fact, the Judge being to give no more credit to one, than to the other, (if there be no other Arguments) must give credit to a third; or to a third and fourth; or more: For else the question is undecided, and left to force, contrary to the Law of Nature.

These are the Lawes of Nature, dictating Peace, for a means of the conservation of men in multitudes; and which onely concern the doctrine of Civill Society. There be other things tending to the destruction of particular men; as Drunkenness, and all other parts of Intemperance; which may therefore also be reckoned amongst those things which the Law of Nature hath forbidden; but are not necessary to be mentioned, nor are pertinent enough to this place.

## **A Rule, By Which The Laws Of Nature May Easily Be Examined**

And though this may seem too subtile a deduction of the Lawes of Nature, to be taken notice of by all men; whereof the most part are too busie in getting food, and the rest too negligent to understand; yet to leave all men unexcusable, they have been contracted into one easie sum, intelligible even to the meanest capacity; and that is, "Do not that to another, which thou wouldest not have done to thy selfe;" which sheweth him, that he has no more to do in learning the Lawes of Nature, but, when weighing the actions of other men with his own, they seem too heavy, to put them into the other part of the ballance, and his own into their place, that his own passions, and selfe-love, may adde nothing to the weight; and then there is none of these Lawes of Nature that will not appear unto him very reasonable.

## **The Lawes Of Nature Oblige In Conscience Always,**

But In Effect Then Onely When There Is Security The Lawes of Nature oblige In Foro Interno; that is to say, they bind to a desire they should take place: but In Foro Externo; that is, to the putting them in act, not alwayes. For he that should be modest, and tractable, and performe all he promises, in such time, and place, where no man els should do so, should but make himselfe a prey to others, and procure his own certain ruine, contrary to the ground of all Lawes of Nature, which tend to Natures preservation. And again, he that shall observe the same Lawes towards him, observes them not himselfe, seeketh not Peace, but War; & consequently the destruction of his Nature by Violence.

And whatsoever Lawes bind In Foro Interno, may be broken, not onely by a fact contrary to the Law but also by a fact according to it, in case a man think it contrary. For though his Action in this case, be according to the Law; which where the Obligation is In Foro Interno, is a breach.

## **The Laws Of Nature Are Eternal;**

The Lawes of Nature are Immutable and Eternall, For Injustice, Ingratitude, Arrogance, Pride, Iniquity, Acception of persons, and the rest, can never be made lawfull. For it can never be that Warre shall preserve life, and Peace destroy it.

## **And Yet Easie**

The same Lawes, because they oblige onely to a desire, and endeavour, I mean an unfeigned and constant endeavour, are easie to be observed. For in that they require nothing but endeavour; he that endeavoureth their performance, fulfilleth them; and he that fulfilleth the Law, is Just.

## **The Science Of These Lawes, Is The True Morall Philosophy**

And the Science of them, is the true and onely Moral Philosophy. For Morall Philosophy is nothing else but the Science of what is Good, and Evill, in the conversation, and Society of mankind. Good, and Evill, are names that signifie our Appetites, and Aversions; which in different tempers, customes, and doctrines of men, are different: And divers men, differ not onely in their Judgement, on the senses of what is pleasant, and unpleasant to the tast, smell, hearing, touch, and sight; but also of what is conformable, or disagreeable to Reason, in the actions of common life. Nay, the same man, in divers times, differs from himselfe; and one time praiseth, that is, calleth Good, what another time he dispraiseth, and calleth Evil: From whence arise Disputes, Controversies, and at last War. And therefore so long as man is in the condition of meer Nature, (which is a condition of War,) as private Appetite is the measure of Good, and Evill: and consequently all men agree on this, that Peace is Good, and therefore also the way, or means of Peace, which (as I have shewed before) are Justice, Gratitude, Modesty, Equity, Mercy, & the rest of the Laws of Nature, are good; that is to say, Morall Vertues; and their contrarie Vices, Evill. Now the science of Vertue and Vice, is Morall Philosophie; and therefore the true Doctrine of the Lawes of Nature, is the true Morall Philosophie. But the Writers of Morall Philosophie, though they acknowledge the same Vertues and Vices; Yet not seeing wherein consisted their Goodnesse; nor that they come to be praised, as the meanes of peaceable, sociable, and comfortable living; place them in a mediocrity of passions: as if not the Cause, but the Degree of daring, made Fortitude; or not the Cause, but the Quantity of a gift, made Liberality.

These dictates of Reason, men use to call by the name of Lawes; but improperly: for they are but Conclusions, or Theoremes concerning what conduceth to the conservation and defence of themselves; whereas Law, properly is the word of him, that by right hath command over others. But yet if we consider the same Theoremes, as delivered in the word of God, that by right commandeth all things; then are they properly called Lawes.

## **CHAPTER XVI. OF PERSONS, AUTHORS, AND THINGS PERSONATED**

A Person What

A PERSON, is he "whose words or actions are considered, either as his own, or as representing the words or actions of an other man, or of any other thing to whom they are attributed, whether Truly or by Fiction."

## **Person Naturall, And Artificiall**

When they are considered as his owne, then is he called a Naturall Person: And when they are considered as representing the words and actions of an other, then is he a Feigned or Artificiall person.

## The Word Person, Whence

The word Person is latine: instead whereof the Greeks have Prosopon, which signifies the Face, as Persona in latine signifies the Disguise, or Outward Appearance of a man, counterfeited on the Stage; and sometimes more particularly that part of it, which disguiseth the face, as a Mask or Visard: And from the Stage, hath been translated to any Representer of speech and action, as well in Tribunalls, as Theaters. So that a Person, is the same that an Actor is, both on the Stage and in common Conversation; and to Personate, is to Act, or Represent himselfe, or an other; and he that acteth another, is said to beare his Person, or act in his name; (in which sence Cicero useth it where he saies, "Unus Sustineo Tres Personas; Mei, Adversarii, & Judicis, I beare three Persons; my own, my Adversaries, and the Judges;") and is called in diverse occasions, diversly; as a Representer, or Representative, a Lieutenant, a Vicar, an Attorney, a Deputy, a Procurator, an Actor, and the like.

## **Actor, Author; Authority**

Of Persons Artificiall, some have their words and actions Owned by those whom they represent. And then the Person is the Actor; and he that owneth his words and actions, is the AUTHOR: In which case the Actor acteth by Authority. For that which in speaking of goods and possessions, is called an Owner, and in latine Dominus, in Greeke Kurios; speaking of Actions, is called Author. And as the Right of possession, is called Dominion; so the Right of doing any Action, is called AUTHORITY. So that by Authority, is alwayes understood a Right of doing any act: and Done By Authority, done by Commission, or Licence from him whose right it is.

## **Covenants By Authority, Bind The Author**

From hence it followeth, that when the Actor maketh a Covenant by Authority, he bindeth thereby the Author, no lesse than if he had made it himselfe; and no lesse subjecteth him to all the consequences of the same. And therefore all that hath been said formerly, (Chap. 14) of the nature of Covenants between man and man in their naturall capacity, is true also when they are made by their Actors, Representers, or Procurators, that have authority from them, so far-forth as is in their Commission, but no farther.

And therefore he that maketh a Covenant with the Actor, or Representer, not knowing the Authority he hath, doth it at his own perill. For no man is obliged by a Covenant, whereof he is not Author; nor consequently by a Covenant made against, or beside the Authority he gave.

## **But Not The Actor**

When the Actor doth any thing against the Law of Nature by command of the Author, if he be obliged by former Covenant to obey him, not he, but the Author breaketh the Law of Nature: for though the Action be against the Law of Nature; yet it is not his: but contrarily; to refuse to do it, is against the Law of Nature, that forbiddeth breach of Covenant.

## **The Authority Is To Be Shewne**

And he that maketh a Covenant with the Author, by mediation of the Actor, not knowing what Authority he hath, but onely takes his word; in case such Authority be not made manifest unto him upon demand, is no longer obliged: For the Covenant made with the Author, is not valid, without his Counter-assurance. But if he that so Covenanteth, knew before hand he was to expect no other assurance, than the Actors word; then is the Covenant valid; because the Actor in this case maketh himselfe the Author. And therefore, as when the Authority is evident, the Covenant obligeth the Author, not the Actor; so when the Authority is feigned, it obligeth the Actor onely; there being no Author but himselfe.

## **Things Personated, Inanimate**

There are few things, that are incapable of being represented by Fiction. Inanimate things, as a Church, an Hospital, a Bridge, may be Personated by a Rector, Master, or Overseer. But things Inanimate, cannot be Authors, nor therefore give Authority to their Actors: Yet the Actors may have Authority to procure their maintenance, given them by those that are Owners, or Governours of those things. And therefore, such things cannot be Personated, before there be some state of Civill Government.

## **Irrational**

Likewise Children, Fooles, and Mad-men that have no use of Reason, may be Personated by Guardians, or Curators; but can be no Authors (during that time) of any action done by them, longer then (when they shall recover the use of Reason) they shall judge the same reasonable. Yet during the Folly, he that hath right of governing them, may give Authority to the Guardian. But this again has no place but in a State Civill, because before such estate, there is no Dominion of Persons.

## **False Gods**

An Idol, or meer Figment of the brain, may be Personated; as were the Gods of the Heathen; which by such Officers as the State appointed, were Personated, and held Possessions, and other Goods, and Rights, which men from time to time dedicated, and consecrated unto them. But idols cannot be Authors: for an Idol is nothing. The Authority proceeded from the State: and therefore before introduction of Civill Government, the Gods of the Heathen could not be Personated.

## **The True God**

The true God may be Personated. As he was; first, by Moses; who governed the Israelites, (that were not his, but Gods people,) not in his own name, with Hoc Dicit Moses; but in Gods Name, with Hoc Dicit Dominus. Secondly, by the son of man, his own Son our Blessed Saviour Jesus Christ, that came to reduce the Jewes, and induce all Nations into the Kingdome of his Father; not as of himselfe, but as sent from his Father. And thirdly, by the Holy Ghost, or Comforter, speaking, and working in the Apostles: which Holy Ghost, was a Comforter that came not of himselfe; but was sent, and proceeded from them both.

## **A Multitude Of Men, How One Person**

A Multitude of men, are made One Person, when they are by one man, or one Person, Represented; so that it be done with the consent of every one of that Multitude in particular. For it is the Unity of the Representer, not the Unity of the Represented, that maketh the Person One. And it is the Representer that beareth the Person, and but one Person: And Unity, cannot otherwise be understood in Multitude.

## **Every One Is Author**

And because the Multitude naturally is not One, but Many; they cannot be understood for one; but many Authors, of every thing their Representative faith, or doth in their name; Every man giving their common Representer, Authority from himselfe in particular; and owning all the actions the Representer doth, in case they give him Authority without stint: Otherwise, when they limit him in what, and how farre he shall represent them, none of them owneth more, than they gave him commission to Act.

## **An Actor May Be Many Men Made One By Plurality Of Voyces**

And if the Representative consist of many men, the voyce of the greater number, must be considered as the voyce of them all. For if the lesser number pronounce (for example) in the Affirmative, and the greater in the Negative, there will be Negatives more than enough to destroy the Affirmatives; and thereby the excesse of Negatives, standing uncontradicted, are the onely voyce the Representative hath.

## **Representatives, When The Number Is Even, Unprofitable**

And a Representative of even number, especially when the number is not great, whereby the contradictory voyces are oftentimes equall, is therefore oftentimes mute, and uncapable of Action. Yet in some cases contradictory voyces equall in number, may determine a question; as in condemning, or absolving, equality of votes, even in that they condemne not, do absolve; but not on the contrary condemne, in that they absolve not. For when a Cause is heard; not to condemne, is to absolve; but on the contrary, to say that not absolving, is condemning, is not true. The like it is in a deliberation of executing presently, or deferring till another time; For when the voyces are equall, the not decreeing Execution, is a decree of Dilation.

## Negative Voyce

Or if the number be odde, as three, or more, (men, or assemblies;) whereof every one has by a Negative Voice, authority to take away the effect of all the Affirmative Voices of the rest, This number is no Representative; because by the diversity of Opinions, and Interests of men, it becomes oftentimes, and in cases of the greatest consequence, a mute Person, and unapt, as for may things else, so for the government of a Multitude, especially in time of Warre.

Of Authors there be two sorts. The first simply so called; which I have before defined to be him, that owneth the Action of another simply. The second is he, that owneth an Action, or Covenant of another conditionally; that is to say, he undertaketh to do it, if the other doth it not, at, or before a certain time. And these Authors conditionall, are generally called SURETYES, in Latine Fidejussores, and Sponsores; and particularly for Debt, Praedes; and for Appearance before a Judge, or Magistrate, Vades.

## **PART II. OF COMMON-WEALTH**

**CHAPTER XVII. OF THE CAUSES,  
GENERATION, AND DEFINITION OF A**

COMMON-WEALTH

## **The End Of Common-wealth, Particular Security**

The finall Cause, End, or Designe of men, (who naturally love Liberty, and Dominion over others,) in the introduction of that restraint upon themselves, (in which wee see them live in Common-wealths,) is the foresight of their own preservation, and of a more contented life thereby; that is to say, of getting themselves out from that miserable condition of Warre, which is necessarily consequent (as hath been shewn) to the naturall Passions of men, when there is no visible Power to keep them in awe, and tye them by feare of punishment to the performance of their Covenants, and observation of these Lawes of Nature set down in the fourteenth and fifteenth Chapters.

## **Which Is Not To Be Had From The Law Of Nature:**

For the Lawes of Nature (as Justice, Equity, Modesty, Mercy, and (in summe) Doing To Others, As Wee Would Be Done To,) if themselves, without the terrour of some Power, to cause them to be observed, are contrary to our naturall Passions, that carry us to Partiality, Pride, Revenge, and the like. And Covenants, without the Sword, are but Words, and of no strength to secure a man at all. Therefore notwithstanding the Lawes of Nature, (which every one hath then kept, when he has the will to keep them, when he can do it safely,) if there be no Power erected, or not great enough for our security; every man will and may lawfully rely on his own strength and art, for caution against all other men. And in all places, where men have lived by small Families, to robbe and spoyle one another, has been a Trade, and so farre from being reputed against the Law of Nature, that the greater spoyles they gained, the greater was their honour; and men observed no other Lawes therein, but the Lawes of Honour; that is, to abstain from cruelty, leaving to men their lives, and instruments of husbandry. And as small Familyes did then; so now do Cities and Kingdomes which are but greater Families (for their own security) enlarge their Dominions, upon all pretences of danger, and fear of Invasion, or assistance that may be given to Invaders, endeavour as much as they can, to subdue, or weaken their neighbours, by open force, and secret arts, for want of other Caution, justly; and are remembred for it in after ages with honour.

## **Nor From The Conjunction Of A Few Men Or Familyes**

Nor is it the joyning together of a small number of men, that gives them this security; because in small numbers, small additions on the one side or the other, make the advantage of strength so great, as is sufficient to carry the Victory; and therefore gives encouragement to an Invasion. The Multitude sufficient to confide in for our Security, is not determined by any certain number, but by comparison with the Enemy we feare; and is then sufficient, when the odds of the Enemy is not of so visible and conspicuous moment, to determine the event of warre, as to move him to attempt.

## **Nor From A Great Multitude, Unlesse Directed By One Judgement**

And be there never so great a Multitude; yet if their actions be directed according to their particular judgements, and particular appetites, they can expect thereby no defence, nor protection, neither against a Common enemy, nor against the injuries of one another. For being distracted in opinions concerning the best use and application of their strength, they do not help, but hinder one another; and reduce their strength by mutuall opposition to nothing: whereby they are easily, not onely subdued by a very few that agree together; but also when there is no common enemy, they make warre upon each other, for their particular interests. For if we could suppose a great Multitude of men to consent in the observation of Justice, and other Lawes of Nature, without a common Power to keep them all in awe; we might as well suppose all Man-kind to do the same; and then there neither would be nor need to be any Civill Government, or Common-wealth at all; because there would be Peace without subjection.

## **And That Continually**

Nor is it enough for the security, which men desire should last all the time of their life, that they be governed, and directed by one judgement, for a limited time; as in one Battell, or one Warre. For though they obtain a Victory by their unanimous endeavour against a forraign enemy; yet afterwards, when either they have no common enemy, or he that by one part is held for an enemy, is by another part held for a friend, they must needs by the difference of their interests dissolve, and fall again into a Warre amongst themselves.

# **Why Certain Creatures Without Reason, Or Speech,**

## **Do Neverthelesse Live In Society, Without Any Coercive Power**

It is true, that certain living creatures, as Bees, and Ants, live sociably one with another, (which are therefore by Aristotle numbred amongst Politicall creatures;) and yet have no other direction, than their particular judgements and appetites; nor speech, whereby one of them can signifie to another, what he thinks expedient for the common benefit: and therefore some man may perhaps desire to know, why Man-kind cannot do the same. To which I answer,

First, that men are continually in competition for Honour and Dignity, which these creatures are not; and consequently amongst men there ariseth on that ground, Envy and Hatred, and finally Warre; but amongst these not so.

Secondly, that amongst these creatures, the Common good differeth not from the Private; and being by nature enclined to their private, they procure thereby the common benefit. But man, whose Joy consisteth in comparing himselfe with other men, can relish nothing but what is eminent.

Thirdly, that these creatures, having not (as man) the use of reason, do not see, nor think they see any fault, in the administration of their common businesse: whereas amongst men, there are very many, that thinke themselves wiser, and abler to govern the Publique, better than the rest; and these strive to reforme and innovate, one this way, another that way; and thereby bring it into Distraction and Civill warre.

Fourthly, that these creatures, though they have some use of voice, in making knowne to one another their desires, and other affections; yet they want that art of words, by which some men can represent to others, that which is Good, in the likenesse of Evill; and Evill, in the likenesse of Good; and augment, or diminish the apparent greatnesse of Good and Evill; discontenting men, and troubling their Peace at their pleasure.

Fiftly, irracionall creatures cannot distinguish betweene Injury, and Dammage; and therefore as long as they be at ease, they are not offended

with their fellowes: whereas Man is then most troublesome, when he is most at ease: for then it is that he loves to shew his Wisdome, and controule the Actions of them that governe the Common-wealth.

Lastly, the agreement of these creatures is Naturall; that of men, is by Covenant only, which is Artificiall: and therefore it is no wonder if there be somewhat else required (besides Covenant) to make their Agreement constant and lasting; which is a Common Power, to keep them in awe, and to direct their actions to the Common Benefit.

## The Generation Of A Common-wealth

The only way to erect such a Common Power, as may be able to defend them from the invasion of Forraigners, and the injuries of one another, and thereby to secure them in such sort, as that by their owne industrie, and by the fruites of the Earth, they may nourish themselves and live contentedly; is, to conferre all their power and strength upon one Man, or upon one Assembly of men, that may reduce all their Wills, by plurality of voices, unto one Will: which is as much as to say, to appoint one man, or Assembly of men, to beare their Person; and every one to owne, and acknowledge himselfe to be Author of whatsoever he that so beareth their Person, shall Act, or cause to be Acted, in those things which concerne the Common Peace and Safetie; and therein to submit their Wills, every one to his Will, and their Judgements, to his Judgment. This is more than Consent, or Concord; it is a reall Unitie of them all, in one and the same Person, made by Covenant of every man with every man, in such manner, as if every man should say to every man, "I Authorise and give up my Right of Governing my selfe, to this Man, or to this Assembly of men, on this condition, that thou give up thy Right to him, and Authorise all his Actions in like manner." This done, the Multitude so united in one Person, is called a COMMON-WEALTH, in latine CIVITAS. This is the Generation of that great LEVIATHAN, or rather (to speake more reverently) of that Mortall God, to which wee owe under the Immortall God, our peace and defence. For by this Authoritie, given him by every particular man in the Common-Wealth, he hath the use of so much Power and Strength conferred on him, that by terror thereof, he is inabled to forme the wills of them all, to Peace at home, and mutuall ayd against their enemies abroad.

## **The Definition Of A Common-wealth**

And in him consisteth the Essence of the Common-wealth; which (to define it,) is "One Person, of whose Acts a great Multitude, by mutuall Covenants one with another, have made themselves every one the Author, to the end he may use the strength and means of them all, as he shall think expedient, for their Peace and Common Defence."

## **Soveraigne, And Subject, What**

And he that carryeth this Person, as called SOVERAIGNE, and said to have Soveraigne Power; and every one besides, his SUBJECT.

The attaining to this Soveraigne Power, is by two wayes. One, by Naturall force; as when a man maketh his children, to submit themselves, and their children to his government, as being able to destroy them if they refuse, or by Warre subdueth his enemies to his will, giving them their lives on that condition. The other, is when men agree amongst themselves, to submit to some Man, or Assembly of men, voluntarily, on confidence to be protected by him against all others. This later, may be called a Politicall Common-wealth, or Common-wealth by Institution; and the former, a Common-wealth by Acquisition. And first, I shall speak of a Common-wealth by Institution.

**CHAPTER XVIII. OF THE RIGHTS OF  
SOVERAIGNES BY INSTITUTION**

## **The Act Of Instituting A Common-wealth, What**

A Common-wealth is said to be Instituted, when a Multitude of men do Agree, and Covenant, Every One With Every One, that to whatsoever Man, or Assembly Of Men, shall be given by the major part, the Right to Present the Person of them all, (that is to say, to be their Representative;) every one, as well he that Voted For It, as he that Voted Against It, shall Authorise all the Actions and Judgements, of that Man, or Assembly of men, in the same manner, as if they were his own, to the end, to live peaceably amongst themselves, and be protected against other men.

**The Consequences To Such Institution, Are**

# **I. The Subjects Cannot Change The Forme Of Government**

## **From this Institution of a Common-wealth are derived all the Rights, and**

Faculties of him, or them, on whom the Sovereign Power is conferred by the consent of the People assembled.

First, because they Covenant, it is to be understood, they are not obliged by former Covenant to any thing repugnant hereunto. And Consequently they that have already Instituted a Common-wealth, being thereby bound by Covenant, to own the Actions, and Judgements of one, cannot lawfully make a new Covenant, amongst themselves, to be obedient to any other, in any thing whatsoever, without his permission. And therefore, they that are subjects to a Monarch, cannot without his leave cast off Monarchy, and return to the confusion of a disunited Multitude; nor transferre their Person from him that beareth it, to another Man, or other Assembly of men: for they are bound, every man to every man, to Own, and be reputed Author of all, that he that already is their Sovereign, shall do, and judge fit to be done: so that any one man dissenting, all the rest should break their Covenant made to that man, which is injustice: and they have also every man given the Sovereignty to him that beareth their Person; and therefore if they depose him, they take from him that which is his own, and so again it is injustice. Besides, if he that attempteth to depose his Sovereign, be killed, or punished by him for such attempt, he is author of his own punishment, as being by the Institution, Author of all his Sovereign shall do: And because it is injustice for a man to do any thing, for which he may be punished by his own authority, he is also upon that title, unjust. And whereas some men have pretended for their disobedience to their Sovereign, a new Covenant, made, not with men, but with God; this also is unjust: for there is no Covenant with God, but by mediation of some body that representeth Gods Person; which none doth but Gods Lieutenant, who hath the Sovereignty under God. But this pretence of Covenant with God, is so evident a lye, even in the pretenders own consciences, that it is not onely an act of an unjust, but also of a vile, and unmanly disposition.

## 2. Sovereigne Power Cannot Be Forfeited

Secondly, Because the Right of bearing the Person of them all, is given to him they make Sovereigne, by Covenant onely of one to another, and not of him to any of them; there can happen no breach of Covenant on the part of the Sovereigne; and consequently none of his Subjects, by any pretence of forfeiture, can be freed from his Subjection. That he which is made Sovereigne maketh no Covenant with his Subjects beforehand, is manifest; because either he must make it with the whole multitude, as one party to the Covenant; or he must make a severall Covenant with every man. With the whole, as one party, it is impossible; because as yet they are not one Person: and if he make so many severall Covenants as there be men, those Covenants after he hath the Sovereignty are voyd, because what act soever can be pretended by any one of them for breach thereof, is the act both of himselfe, and of all the rest, because done in the Person, and by the Right of every one of them in particular. Besides, if any one, or more of them, pretend a breach of the Covenant made by the Sovereigne at his Institution; and others, or one other of his Subjects, or himselfe alone, pretend there was no such breach, there is in this case, no Judge to decide the controversie: it returns therefore to the Sword again; and every man recovereth the right of Protecting himselfe by his own strength, contrary to the designe they had in the Institution. It is therefore in vain to grant Sovereignty by way of precedent Covenant. The opinion that any Monarch receiveth his Power by Covenant, that is to say on Condition, proceedeth from want of understanding this easie truth, that Covenants being but words, and breath, have no force to oblige, contain, constrain, or protect any man, but what it has from the publique Sword; that is, from the untied hands of that Man, or Assembly of men that hath the Sovereignty, and whose actions are avouched by them all, and performed by the strength of them all, in him united. But when an Assembly of men is made Sovereigne; then no man imagineth any such Covenant to have past in the Institution; for no man is so dull as to say, for example, the People of Rome, made a Covenant with the Romans, to hold the Sovereignty on such or such conditions; which not performed, the Romans might lawfully

depose the Roman People. That men see not the reason to be alike in a Monarchy, and in a Popular Government, proceedeth from the ambition of some, that are kinder to the government of an Assembly, whereof they may hope to participate, than of Monarchy, which they despair to enjoy.

### **3. No Man Can Without Injustice Protest Against The**

Institution Of The Sovereigne Declared By The Major Part. Thirdly, because the major part hath by consenting voices declared a Sovereigne; he that dissented must now consent with the rest; that is, be contented to avow all the actions he shall do, or else justly be destroyed by the rest. For if he voluntarily entered into the Congregation of them that were assembled, he sufficiently declared thereby his will (and therefore tacitely covenanted) to stand to what the major part should ordayne: and therefore if he refuse to stand thereto, or make Protestation against any of their Decrees, he does contrary to his Covenant, and therefore unjustly. And whether he be of the Congregation, or not; and whether his consent be asked, or not, he must either submit to their decrees, or be left in the condition of warre he was in before; wherein he might without injustice be destroyed by any man whatsoever.

## **4. The Sovereigns Actions Cannot Be Justly Accused By The Subject**

Fourthly, because every Subject is by this Institution Author of all the Actions, and Judgements of the Sovereign Instituted; it followes, that whatsoever he doth, it can be no injury to any of his Subjects; nor ought he to be by any of them accused of Injustice. For he that doth any thing by authority from another, doth therein no injury to him by whose authority he acteth: But by this Institution of a Common-wealth, every particular man is Author of all the Sovereign doth; and consequently he that complaineth of injury from his Sovereign, complaineth of that whereof he himselfe is Author; and therefore ought not to accuse any man but himselfe; no nor himselfe of injury; because to do injury to ones selfe, is impossible. It is true that they that have Sovereign power, may commit Iniquity; but not Injustice, or Injury in the proper signification.

## **5. What Soever The Sovereigne Doth, Is Unpunishable By The Subject**

Fiftly, and consequently to that which was sayd last, no man that hath Sovereigne power can justly be put to death, or otherwise in any manner by his Subjects punished. For seeing every Subject is author of the actions of his Sovereigne; he punisheth another, for the actions committed by himselfe.

## **6. The Sovereigne Is Judge Of What Is Necessary For The Peace**

### **And Defence Of His Subjects**

And because the End of this Institution, is the Peace and Defence of them all; and whosoever has right to the End, has right to the Means; it belongeth of Right, to whatsoever Man, or Assembly that hath the Sovereignty, to be Judge both of the meanes of Peace and Defence; and also of the hindrances, and disturbances of the same; and to do whatsoever he shall think necessary to be done, both beforehand, for the preserving of Peace and Security, by prevention of discord at home and Hostility from abroad; and, when Peace and Security are lost, for the recovery of the same. And therefore,

## **And Judge Of What Doctrines Are Fit To Be Taught Them**

Sixtly, it is annexed to the Sovereignty, to be Judge of what Opinions and Doctrines are averse, and what conducing to Peace; and consequently, on what occasions, how farre, and what, men are to be trusted withall, in speaking to Multitudes of people; and who shall examine the Doctrines of all bookes before they be published. For the Actions of men proceed from their Opinions; and in the wel governing of Opinions, consisteth the well governing of mens Actions, in order to their Peace, and Concord. And though in matter of Doctrine, nothing ought to be regarded but the Truth; yet this is not repugnant to regulating of the same by Peace. For Doctrine Repugnant to Peace, can no more be True, than Peace and Concord can be against the Law of Nature. It is true, that in a Common-wealth, where by the negligence, or unskilfullnesse of Governours, and Teachers, false Doctrines are by time generally received; the contrary Truths may be generally offensive; Yet the most sudden, and rough busling in of a new Truth, that can be, does never breake the Peace, but onely somtimes awake the Warre. For those men that are so remissely governed, that they dare take up Armes, to defend, or introduce an Opinion, are still in Warre; and their condition not Peace, but only a Cessation of Armes for feare of one another; and they live as it were, in the procincts of battaile continually. It belongeth therefore to him that hath the Sovereign Power, to be Judge, or constitute all Judges of Opinions and Doctrines, as a thing necessary to Peace, thereby to prevent Discord and Civill Warre.

## **7. The Right Of Making Rules, Whereby The Subject May**

### **Every Man Know What Is So His Owne, As No Other Subject**

Can Without Injustice Take It From Him

Seventhly, is annexed to the Soveraigntie, the whole power of prescribing the Rules, whereby every man may know, what Goods he may enjoy and what Actions he may doe, without being molested by any of his fellow Subjects: And this is it men Call Propriety. For before constitution of Soveraign Power (as hath already been shewn) all men had right to all things; which necessarily causeth Warre: and therefore this Proprietie, being necessary to Peace, and depending on Soveraign Power, is the Act of the Power, in order to the publique peace. These Rules of Propriety (or Meum and Tuum) and of Good, Evill, Lawfull and Unlawfull in the actions of subjects, are the Civill Lawes, that is to say, the lawes of each Commonwealth in particular; though the name of Civill Law be now restrained to the antient Civill Lawes of the City of Rome; which being the head of a great part of the World, her Lawes at that time were in these parts the Civill Law.

## **8. To Him Also Belongeth The Right Of All Judicature**

### **And Decision Of Controversies:**

Eightly, is annexed to the Soveraigntie, the Right of Judicature; that is to say, of hearing and deciding all Controversies, which may arise concerning Law, either Civill, or naturall, or concerning Fact. For without the decision of Controversies, there is no protection of one Subject, against the injuries of another; the Lawes concerning Meum and Tuum are in vaine; and to every man remaineth, from the naturall and necessary appetite of his own conservation, the right of protecting himselfe by his private strength, which is the condition of Warre; and contrary to the end for which every Common-wealth is instituted.

## **9. And Of Making War, And Peace, As He Shall Think Best:**

Ninthly, is annexed to the Sovereignty, the Right of making Warre, and Peace with other Nations, and Common-wealths; that is to say, of Judging when it is for the publique good, and how great forces are to be assembled, armed, and payd for that end; and to levy mony upon the Subjects, to defray the expenses thereof. For the Power by which the people are to be defended, consisteth in their Armies; and the strength of an Army, in the union of their strength under one Command; which Command the Sovereign Instituted, therefore hath; because the command of the Militia, without other Institution, maketh him that hath it Sovereign. And therefore whosoever is made Generall of an Army, he that hath the Sovereign Power is alwayes Generallissimo.

## **10. And Of Choosing All Counsellours, And Ministers,**

### **Both Of Peace, And Warre:**

Tenthly, is annexed to the Sovereignty, the choosing of all Counsellours, Ministers, Magistrates, and Officers, both in peace, and War. For seeing the Sovereign is charged with the End, which is the common Peace and Defence; he is understood to have Power to use such Means, as he shall think most fit for his discharge.

## **11. And Of Rewarding, And Punishing, And That (Where No**

**Former Law hath Determined The Measure Of It) Arbitrary:**

Eleventhly, to the Sovereign is committed the Power of Rewarding with riches, or honour; and of Punishing with corporall, or pecuniary punishment, or with ignominy every Subject according to the Lawe he hath formerly made; or if there be no Law made, according as he shall judge most to conduce to the encouraging of men to serve the Commonwealth, or deterring of them from doing dis-service to the same.

## **12. And Of Honour And Order**

Lastly, considering what values men are naturally apt to set upon themselves; what respect they look for from others; and how little they value other men; from whence continually arise amongst them, Emulation, Quarrells, Factions, and at last Warre, to the destroying of one another, and diminution of their strength against a Common Enemy; It is necessary that there be Lawes of Honour, and a publique rate of the worth of such men as have deserved, or are able to deserve well of the Common-wealth; and that there be force in the hands of some or other, to put those Lawes in execution. But it hath already been shown, that not onely the whole Militia, or forces of the Common-wealth; but also the Judicature of all Controversies, is annexed to the Sovereignty. To the Sovereign therefore it belongeth also to give titles of Honour; and to appoint what Order of place, and dignity, each man shall hold; and what signes of respect, in publique or private meetings, they shall give to one another.

## **These Rights Are Indivisible**

These are the Rights, which make the Essence of Sovereignty; and which are the markes, whereby a man may discern in what Man, or Assembly of men, the Sovereign Power is placed, and resideth. For these are incommunicable, and inseparable. The Power to coyn Mony; to dispose of the estate and persons of Infant heires; to have praeemption in Markets; and all other Statute Praerogatives, may be transferred by the Sovereign; and yet the Power to protect his Subject be retained. But if he transferre the Militia, he retains the Judicature in vain, for want of execution of the Lawes; Or if he grant away the Power of raising Mony; the Militia is in vain: or if he give away the government of doctrines, men will be frighted into rebellion with the feare of Spirits. And so if we consider any one of the said Rights, we shall presently see, that the holding of all the rest, will produce no effect, in the conservation of Peace and Justice, the end for which all Common-wealths are Instituted. And this division is it, whereof it is said, "A kingdome divided in it selfe cannot stand:" For unlesse this division precede, division into opposite Armies can never happen. If there had not first been an opinion received of the greatest part of England, that these Powers were divided between the King, and the Lords, and the House of Commons, the people had never been divided, and fallen into this Civill Warre; first between those that disagreed in Politiques; and after between the Dissenters about the liberty of Religion; which have so instructed men in this point of Sovereign Right, that there be few now (in England,) that do not see, that these Rights are inseparable, and will be so generally acknowledged, at the next return of Peace; and so continue, till their miseries are forgotten; and no longer, except the vulgar be better taught than they have hetherto been.

# **And Can By No Grant Passe Away Without Direct**

## **Renouncing Of The Sovereign Power**

And because they are essentiall and inseparable Rights, it follows necessarily, that in whatsoever, words any of them seem to be granted away, yet if the Sovereign Power it selfe be not in direct termes renounced, and the name of Sovereign no more given by the Grantees to him that Grants them, the Grant is voyd: for when he has granted all he can, if we grant back the Sovereignty, all is restored, as inseparably annexed thereunto.

# **The Power And Honour Of Subjects Vanisheth In The Presence**

## **Of The Power Sovereign**

This great Authority being indivisible, and inseparably annexed to the Sovereignty, there is little ground for the opinion of them, that say of Sovereign Kings, though they be *Singulis Majores*, of greater Power than every one of their Subjects, yet they be *Universis Minores*, of lesse power than them all together. For if by All Together, they mean not the collective body as one person, then All Together, and Every One, signifie the same; and the speech is absurd. But if by All Together, they understand them as one Person (which person the Sovereign bears,) then the power of all together, is the same with the Sovereigns power; and so again the speech is absurd; which absurdity they see well enough, when the Sovereignty is in an Assembly of the people; but in a Monarch they see it not; and yet the power of Sovereignty is the same in whomsoever it be placed.

And as the Power, so also the Honour of the Sovereign, ought to be greater, than that of any, or all the Subjects. For in the Sovereignty is the fountain of Honour. The dignities of Lord, Earle, Duke, and Prince are his Creatures. As in the presence of the Master, the Servants are equall, and without any honour at all; So are the Subjects, in the presence of the Sovereign. And though they shine some more, some lesse, when they are out of his sight; yet in his presence, they shine no more than the Starres in presence of the Sun.

# **Sovereigne Power Not Hurtfull As The Want Of It,**

## **And The Hurt Proceeds For The Greatest Part From Not**

Submitting Readily, To A Lesse

But a man may here object, that the Condition of Subjects is very miserable; as being obnoxious to the lusts, and other irregular passions of him, or them that have so unlimited a Power in their hands. And commonly they that live under a Monarch, think it the fault of Monarchy; and they that live under the government of Democracy, or other Sovereign Assembly, attribute all the inconvenience to that forme of Commonwealth; whereas the Power in all formes, if they be perfect enough to protect them, is the same; not considering that the estate of Man can never be without some incommodity or other; and that the greatest, that in any forme of Government can possibly happen to the people in generall, is scarce sensible, in respect of the miseries, and horrible calamities, that accompany a Civill Warre; or that dissolute condition of masterlesse men, without subjection to Lawes, and a coercive Power to tye their hands from rapine, and revenge: nor considering that the greatest pressure of Sovereign Governours, proceedeth not from any delight, or profit they can expect in the dammage, or weakening of their subjects, in whose vigor, consisteth their own selves, that unwillingly contributing to their own defence, make it necessary for their Governours to draw from them what they can in time of Peace, that they may have means on any emergent occasion, or sudden need, to resist, or take advantage on their Enemies. For all men are by nature provided of notable multiplying glasses, (that is their Passions and Self-love,) through which, every little payment appeareth a great grievance; but are destitute of those prospective glasses, (namely Morall and Civill Science,) to see a farre off the miseries that hang over them, and cannot without such payments be avoyded.

**CHAPTER XIX. OF THE SEVERALL KINDS  
OF COMMON-WEALTH BY INSTITUTION,  
AND OF SUCCESSION TO THE SOVERAIGNE POWER**

## **The Different Formes Of Common-wealths But Three**

The difference of Common-wealths, consisteth in the difference of the Sovereign, or the Person representative of all and every one of the Multitude. And because the Sovereignty is either in one Man, or in an Assembly of more than one; and into that Assembly either Every man hath right to enter, or not every one, but Certain men distinguished from the rest; it is manifest, there can be but Three kinds of Common-wealth. For the Representative must needs be One man, or More: and if more, then it is the Assembly of All, or but of a Part. When the Representative is One man, then is the Common-wealth a MONARCHY: when an Assembly of All that will come together, then it is a DEMOCRACY, or Popular Common-wealth: when an Assembly of a Part onely, then it is called an ARISTOCRACY. Other kind of Common-wealth there can be none: for either One, or More, or All must have the Sovereign Power (which I have shewn to be indivisible) entire.

## **Tyranny And Oligarchy, But Different Names Of Monarchy, And Aristocracy**

There be other names of Government, in the Histories, and books of Policy; as Tyranny, and Oligarchy: But they are not the names of other Formes of Government, but of the same Formes misliked. For they that are discontented under Monarchy, call it Tyranny; and they that are displeas'd with Aristocracy, call it Oligarchy: so also, they which find themselves griev'd under a Democracy, call it Anarchy, (which signifies want of Government;) and yet I think no man believes, that want of Government, is any new kind of Government: nor by the same reason ought they to believe, that the Government is of one kind, when they like it, and another, when they dislike it, or are oppress'd by the Governours.

## **Subordinate Representatives Dangerous**

It is manifest, that men who are in absolute liberty, may, if they please, give Authority to One Man, to represent them every one; as well as give such Authority to any Assembly of men whatsoever; and consequently may subject themselves, if they think good, to a Monarch, as absolutely, as to any other Representative. Therefore, where there is already erected a Sovereign Power, there can be no other Representative of the same people, but onely to certain particular ends, by the Sovereign limited. For that were to erect two Sovereigns; and every man to have his person represented by two Actors, that by opposing one another, must needs divide that Power, which (if men will live in Peace) is indivisible, and thereby reduce the Multitude into the condition of Warre, contrary to the end for which all Sovereignty is instituted. And therefore as it is absurd, to think that a Sovereign Assembly, inviting the People of their Dominion, to send up their Deputies, with power to make known their Advise, or Desires, should therefore hold such Deputies, rather than themselves, for the absolute Representative of the people: so it is absurd also, to think the same in a Monarchy. And I know not how this so manifest a truth, should of late be so little observed; that in a Monarchy, he that had the Sovereignty from a descent of 600 years, was alone called Sovereign, had the title of Majesty from every one of his Subjects, and was unquestionably taken by them for their King; was notwithstanding never considered as their Representative; that name without contradiction passing for the title of those men, which at his command were sent up by the people to carry their Petitions, and give him (if he permitted it) their advise. Which may serve as an admonition, for those that are the true, and absolute Representative of a People, to instruct men in the nature of that Office, and to take heed how they admit of any other generall Representation upon any occasion whatsoever, if they mean to discharge the truth committed to them.

## **Comparison Of Monarchy, With Sovereign Assemblyes**

The difference between these three kindes of Common-wealth, consisteth not in the difference of Power; but in the difference of Convenience, or Aptitude to produce the Peace, and Security of the people; for which end they were instituted. And to compare Monarchy with the other two, we may observe; First, that whosoever beareth the Person of the people, or is one of that Assembly that bears it, beareth also his own naturall Person. And though he be carefull in his politique Person to procure the common interest; yet he is more, or no lesse carefull to procure the private good of himselfe, his family, kindred and friends; and for the most part, if the publique interest chance to crosse the private, he prefers the private: for the Passions of men, are commonly more potent than their Reason. From whence it follows, that where the publique and private interest are most closely united, there is the publique most advanced. Now in Monarchy, the private interest is the same with the publique. The riches, power, and honour of a Monarch arise onely from the riches, strength and reputation of his Subjects. For no King can be rich, nor glorious, nor secure; whose Subjects are either poore, or contemptible, or too weak through want, or dissention, to maintain a war against their enemies: Whereas in a Democracy, or Aristocracy, the publique prosperity conferres not so much to the private fortune of one that is corrupt, or ambitious, as doth many times a perfidious advice, a treacherous action, or a Civill warre.

Secondly, that a Monarch receiveth counsell of whom, when, and where he pleaseth; and consequently may heare the opinion of men versed in the matter about which he deliberates, of what rank or quality soever, and as long before the time of action, and with as much secrecy, as he will. But when a Sovereigne Assembly has need of Counsell, none are admitted but such as have a Right thereto from the beginning; which for the most part are of those who have beene versed more in the acquisition of Wealth than of Knowledge; and are to give their advice in long discourses, which may, and do commonly excite men to action, but not governe them in it. For the

Understanding is by the flame of the Passions, never enlightned, but dazled: Nor is there any place, or time, wherein an Assemblie can receive Counsell with secrecie, because of their owne Multitude.

Thirdly, that the Resolutions of a Monarch, are subject to no other Inconstancy, than that of Humane Nature; but in Assemblies, besides that of Nature, there ariseth an Inconstancy from the Number. For the absence of a few, that would have the Resolution once taken, continue firme, (which may happen by security, negligence, or private impediments,) or the diligent appearance of a few of the contrary opinion, undoes to day, all that was concluded yesterday.

Fourthly, that a Monarch cannot disagree with himselfe, out of envy, or interest; but an Assembly may; and that to such a height, as may produce a Civill Warre.

Fifthly, that in Monarchy there is this inconvenience; that any Subject, by the power of one man, for the enriching of a favourite or flatterer, may be deprived of all he possesseth; which I confesse is a great and inevitable inconvenience. But the same may as well happen, where the Sovereigne Power is in an Assembly: for their power is the same; and they are as subject to evill Counsell, and to be seduced by Orators, as a Monarch by Flatterers; and becoming one an others Flatterers, serve one anothers Covetousnesse and Ambition by turnes. And whereas the Favorites of an Assembly, are many; and the Kindred much more numerous, than of any Monarch. Besides, there is no Favourite of a Monarch, which cannot as well succour his friends, as hurt his enemies: But Orators, that is to say, Favourites of Sovereigne Assemblies, though they have great power to hurt, have little to save. For to accuse, requires lesse Eloquence (such is mans Nature) than to excuse; and condemnation, than absolution more resembles Justice.

Sixtly, that it is an inconvenience in Monarchie, that the Soveraigntie may descend upon an Infant, or one that cannot discern between Good and Evill: and consisteth in this, that the use of his Power, must be in the hand of another Man, or of some Assembly of men, which are to governe by his right, and in his name; as Curators, and Protectors of his Person, and Authority. But to say there is inconvenience, in putting the use of the Sovereign Power, into the hand of a Man, or an Assembly of men; is to say that all Government is more Inconvenient, than Confusion, and Civill

Warre. And therefore all the danger that can be pretended, must arise from the Contention of those, that for an office of so great honour, and profit, may become Competitors. To make it appear, that this inconvenience, proceedeth not from that forme of Government we call Monarchy, we are to consider, that the precedent Monarch, hath appointed who shall have the Tuition of his Infant Successor, either expressly by Testament, or tacitly, by not controlling the Custome in that case received: And then such inconvenience (if it happen) is to be attributed, not to the Monarchy, but to the Ambition, and Injustice of the Subjects; which in all kinds of Government, where the people are not well instructed in their Duty, and the Rights of Sovereignty, is the same. Or else the precedent Monarch, hath not at all taken order for such Tuition; And then the Law of Nature hath provided this sufficient rule, That the Tuition shall be in him, that hath by Nature most interest in the preservation of the Authority of the Infant, and to whom least benefit can accrue by his death, or diminution. For seeing every man by nature seeketh his own benefit, and promotion; to put an Infant into the power of those, that can promote themselves by his destruction, or dammage, is not Tuition, but Trechery. So that sufficient provision being taken, against all just quarrell, about the Government under a Child, if any contention arise to the disturbance of the publique Peace, it is not to be attributed to the forme of Monarchy, but to the ambition of Subjects, and ignorance of their Duty. On the other side, there is no great Common-wealth, the Sovereignty whereof is in a great Assembly, which is not, as to consultations of Peace, and Warre, and making of Lawes, in the same condition, as if the Government were in a Child. For as a Child wants the judgement to dissent from counsell given him, and is thereby necessitated to take the advise of them, or him, to whom he is committed: So an Assembly wanteth the liberty, to dissent from the counsell of the major part, be it good, or bad. And as a Child has need of a Tutor, or Protector, to preserve his Person, and Authority: So also (in great Common-wealths,) the Sovereign Assembly, in all great dangers and troubles, have need of Custodes Libertatis; that is of Dictators, or Protectors of their Authoritie; which are as much as Temporary Monarchs; to whom for a time, they may commit the entire exercise of their Power; and have (at the end of that time) been oftner deprived thereof, than Infant Kings, by their Protectors, Regents, or any other Tutors.

Though the Kinds of Soveraigntie be, as I have now shewn, but three; that is to say, Monarchie, where one Man has it; or Democracie, where the generall Assembly of Subjects hath it; or Aristocracie, where it is in an Assembly of certain persons nominated, or otherwise distinguished from the rest: Yet he that shall consider the particular Common-wealthes that have been, and are in the world, will not perhaps easily reduce them to three, and may thereby be inclined to think there be other Formes, arising from these mingled together. As for example, Elective Kingdomes; where Kings have the Soveraigne Power put into their hands for a time; of Kingdomes, wherein the King hath a power limited: which Governments, are nevertheless by most Writers called Monarchie. Likewise if a Popular, or Aristocraticall Common-wealth, subdue an Enemies Countrie, and govern the same, by a President, Procurator, or other Magistrate; this may seeme perhaps at first sight, to be a Democraticall, or Aristocraticall Government. But it is not so. For Elective Kings, are not Soveraignes, but Ministers of the Soveraigne; nor limited Kings Soveraignes, but Ministers of them that have the Soveraigne Power: nor are those Provinces which are in subjection to a Democracie, or Aristocracie of another Common-wealth, Democratically, or Aristocratically governed, but Monarchically.

And first, concerning an Elective King, whose power is limited to his life, as it is in many places of Christendome at this day; or to certaine Yeares or Moneths, as the Dictators power amongst the Romans; If he have Right to appoint his Successor, he is no more Elective but Hereditary. But if he have no Power to elect his Successor, then there is some other Man, or Assembly known, which after his decease may elect a new, or else the Common-wealth dieth, and dissolveth with him, and returneth to the condition of Warre. If it be known who have the power to give the Soveraigntie after his death, it is known also that the Soveraigntie was in them before: For none have right to give that which they have not right to possesse, and keep to themselves, if they think good. But if there be none that can give the Soveraigntie, after the decease of him that was first elected; then has he power, nay he is obliged by the Law of Nature, to provide, by establishing his Successor, to keep those that had trusted him with the Government, from relapsing into the miserable condition of Civill warre. And consequently he was, when elected, a Soveraign absolute.

Secondly, that King whose power is limited, is not superiour to him, or them that have the power to limit it; and he that is not superiour, is not

supreme; that is to say not Sovereign. The Sovereignty therefore was alwaies in that Assembly which had the Right to Limit him; and by consequence the government not Monarchy, but either Democracy, or Aristocracy; as of old time in Sparta; where the Kings had a priviledge to lead their Armies; but the Sovereignty was in the Ephori.

Thirdly, whereas heretofore the Roman People, governed the land of Judea (for example) by a President; yet was not Judea therefore a Democracy; because they were not governed by any Assembly, into which, any of them, had right to enter; nor by an Aristocracy; because they were not governed by any Assembly, into which, any man could enter by their Election: but they were governed by one Person, which though as to the people of Rome was an Assembly of the people, or Democracy; yet as to the people of Judea, which had no right at all of participating in the government, was a Monarch. For though where the people are governed by an Assembly, chosen by themselves out of their own number, the government is called a Democracy, or Aristocracy; yet when they are governed by an Assembly, not of their own choosing, 'tis a Monarchy; not of One man, over another man; but of one people, over another people.

## Of The Right Of Succession

Of all these Formes of Government, the matter being mortall, so that not onely Monarchs, but also whole Assemblies dy, it is necessary for the conservation of the peace of men, that as there was order taken for an Artificiall Man, so there be order also taken, for an Artificiall Eternity of life; without which, men that are governed by an Assembly, should return into the condition of Warre in every age; and they that are governed by One man, as soon as their Governour dyeth. This Artificiall Eternity, is that which men call the Right of Succession.

There is no perfect forme of Government, where the disposing of the Succession is not in the present Sovereign. For if it be in any other particular Man, or private Assembly, it is in a person subject, and may be assumed by the Sovereign at his pleasure; and consequently the Right is in himselfe. And if it be in no particular man, but left to a new choyce; then is the Common-wealth dissolved; and the Right is in him that can get it; contrary to the intention of them that did institute the Common-wealth, for their perpetuall, and not temporary security.

In a Democracy, the whole Assembly cannot faile, unlesse the Multitude that are to be governed faile. And therefore questions of the right of Succession, have in that forme of Government no place at all.

In an Aristocracy, when any of the Assembly dyeth, the election of another into his room belongeth to the Assembly, as the Sovereign, to whom belongeth the choosing of all Counsellours, and Officers. For that which the Representative doth, as Actor, every one of the Subjects doth, as Author. And though the Sovereign assembly, may give Power to others, to elect new men, for supply of their Court; yet it is still by their Authority, that the Election is made; and by the same it may (when the publique shall require it) be recalled.

The Present Monarch Hath Right To Dispose Of The Succession The greatest difficultie about the right of Succession, is in Monarchy: And the difficulty ariseth from this, that at first sight, it is not manifest who is to appoint the Successor; nor many times, who it is whom he hath appointed.

For in both these cases, there is required a more exact ratiocination, than every man is accustomed to use. As to the question, who shall appoint the Successor, of a Monarch that hath the Sovereign Authority; that is to say, (for Elective Kings and Princes have not the Sovereign Power in propriety, but in use only,) we are to consider, that either he that is in possession, has right to dispose of the Succession, or else that right is again in the dissolved Multitude. For the death of him that hath the Sovereign power in propriety, leaves the Multitude without any Sovereign at all; that is, without any Representative in whom they should be united, and be capable of doing any one action at all: And therefore they are incapable of Election of any new Monarch; every man having equall right to submit himselfe to such as he thinks best able to protect him, or if he can, protect himselfe by his owne sword; which is a returne to Confusion, and to the condition of a War of every man against every man, contrary to the end for which Monarchy had its first Institution. Therefore it is manifest, that by the Institution of Monarchy, the disposing of the Successor, is alwaies left to the Judgment and Will of the present Possessor.

And for the question (which may arise sometimes) who it is that the Monarch in possession, hath designed to the succession and inheritance of his power; it is determined by his expresse Words, and Testament; or by other tacite signes sufficient.

## **Succession Passeth By Expresse Words;**

By expresse Words, or Testament, when it is declared by him in his life time, viva voce, or by Writing; as the first Emperours of Rome declared who should be their Heires. For the word Heire does not of it selfe imply the Children, or nearest Kindred of a man; but whomsoever a man shall any way declare, he would have to succeed him in his Estate. If therefore a Monarch declare expresly, that such a man shall be his Heire, either by Word or Writing, then is that man immediately after the decease of his Predecessor, Invested in the right of being Monarch.

## **Or, By Not Controlling A Custome;**

But where Testament, and expresse Words are wanting, other naturall signes of the Will are to be followed: whereof the one is Custome. And therefore where the Custome is, that the next of Kindred absolutely succeedeth, there also the next of Kindred hath right to the Succession; for that, if the will of him that was in possession had been otherwise, he might easily have declared the same in his life time. And likewise where the Custome is, that the next of the Male Kindred succeedeth, there also the right of Succession is in the next of the Kindred Male, for the same reason. And so it is if the Custome were to advance the Female. For whatsoever Custome a man may by a word controule, and does not, it is a naturall signe he would have that Custome stand.

## **Or, By Presumption Of Naturall Affection**

But where neither Custome, nor Testament hath preceded, there it is to be understood, First, that a Monarchs will is, that the government remain Monarchicall; because he hath approved that government in himselfe. Secondly, that a Child of his own, Male, or Female, be preferred before any other; because men are presumed to be more enclined by nature, to advance their own children, than the children of other men; and of their own, rather a Male than a Female; because men, are naturally fitter than women, for actions of labour and danger. Thirdly, where his own Issue faileth, rather a Brother than a stranger; and so still the neerer in bloud, rather than the more remote, because it is alwayes presumed that the neerer of kin, is the neerer in affection; and 'tis evident that a man receives alwayes, by reflexion, the most honour from the greatnesse of his nearest kindred.

# **To Dispose Of The Succession, Though To A King Of Another Nation,**

## **Not Unlawfull**

But if it be lawfull for a Monarch to dispose of the Succession by words of Contract, or Testament, men may perhaps object a great inconvenience: for he may sell, or give his Right of governing to a stranger; which, because strangers (that is, men not used to live under the same government, not speaking the same language) do commonly undervalue one another, may turn to the oppression of his Subjects; which is indeed a great inconvenience; but it proceedeth not necessarily from the subjection to a strangers government, but from the unskilfulnesse of the Governours, ignorant of the true rules of Politiques. And therefore the Romans when they had subdued many Nations, to make their Government digestible, were wont to take away that grievance, as much as they thought necessary, by giving sometimes to whole Nations, and sometimes to Principall men of every Nation they conquered, not onely the Privileges, but also the Name of Romans; and took many of them into the Senate, and Offices of charge, even in the Roman City. And this was it our most wise King, King James, aymed at, in endeavouring the Union of his two Realms of England and Scotland. Which if he could have obtained, had in all likelihood prevented the Civill warres, which make both those Kingdomes at this present, miserable. It is not therefore any injury to the people, for a Monarch to dispose of the Succession by Will; though by the fault of many Princes, it hath been sometimes found inconvenient. Of the lawfulnessse of it, this also is an argument, that whatsoever inconvenience can arrive by giving a Kingdome to a stranger, may arrive also by so marrying with strangers, as the Right of Succession may descend upon them: yet this by all men is accounted lawfull.

## **CHAPTER XX. OF DOMINION PATERNALL AND DESPOTICALL**

A Common-wealth by Acquisition, is that, where the Sovereign Power is acquired by Force; And it is acquired by force, when men singly, or many together by plurality of voyces, for fear of death, or bonds, do authorise all the actions of that Man, or Assembly, that hath their lives and liberty in his Power.

## **Wherein Different From A Common-wealth By Institution**

And this kind of Dominion, or Sovereignty, differeth from Sovereignty by Institution, onely in this, That men who choose their Sovereign, do it for fear of one another, and not of him whom they Institute: But in this case, they subject themselves, to him they are afraid of. In both cases they do it for fear: which is to be noted by them, that hold all such Covenants, as proceed from fear of death, or violence, voyd: which if it were true, no man, in any kind of Common-wealth, could be obliged to Obedience. It is true, that in a Common-wealth once Instituted, or acquired, Promises proceeding from fear of death, or violence, are no Covenants, nor obliging, when the thing promised is contrary to the Lawes; But the reason is not, because it was made upon fear, but because he that promiseth, hath no right in the thing promised. Also, when he may lawfully performe, and doth not, it is not the Invalidity of the Covenant, that absolveth him, but the Sentence of the Sovereign. Otherwise, whensoever a man lawfully promiseth, he unlawfully breaketh: But when the Sovereign, who is the Actor, acquitteth him, then he is acquitted by him that exorted the promise, as by the Author of such absolution.

## **The Rights Of Sovereignty The Same In Both**

But the Rights, and Consequences of Sovereignty, are the same in both. His Power cannot, without his consent, be Transferred to another: He cannot Forfeit it: He cannot be Accused by any of his Subjects, of Injury: He cannot be Punished by them: He is Judge of what is necessary for Peace; and Judge of Doctrines: He is Sole Legislator; and Supreme Judge of Controversies; and of the Times, and Occasions of Warre, and Peace: to him it belongeth to choose Magistrates, Counsellours, Commanders, and all other Officers, and Ministers; and to determine of Rewards, and punishments, Honour, and Order. The reasons whereof, are the same which are alledged in the precedent Chapter, for the same Rights, and Consequences of Sovereignty by Institution.

## **Dominion Paternall How Attained Not By Generation, But By Contract**

Dominion is acquired two wayes; By Generation, and by Conquest. The right of Dominion by Generation, is that, which the Parent hath over his Children; and is called PATERNALL. And is not so derived from the Generation, as if therefore the Parent had Dominion over his Child because he begat him; but from the Childs Consent, either expresse, or by other sufficient arguments declared. For as to the Generation, God hath ordained to man a helper; and there be alwayes two that are equally Parents: the Dominion therefore over the Child, should belong equally to both; and he be equally subject to both, which is impossible; for no man can obey two Masters. And whereas some have attributed the Dominion to the Man onely, as being of the more excellent Sex; they misreckon in it. For there is not alwayes that difference of strength or prudence between the man and the woman, as that the right can be determined without War. In Common-wealths, this controversie is decided by the Civill Law: and for the most part, (but not alwayes) the sentence is in favour of the Father; because for the most part Common-wealths have been erected by the Fathers, not by the Mothers of families. But the question lyeth now in the state of meer Nature; where there are supposed no lawes of Matrimony; no lawes for the Education of Children; but the Law of Nature, and the naturall inclination of the Sexes, one to another, and to their children. In this condition of meer Nature, either the Parents between themselves dispose of the dominion over the Child by Contract; or do not dispose thereof at all. If they dispose thereof, the right passeth according to the Contract. We find in History that the Amazons Contracted with the Men of the neighbouring Countries, to whom they had recourse for issue, that the issue Male should be sent back, but the Female remain with themselves: so that the dominion of the Females was in the Mother.

## **Or Education;**

If there be no Contract, the Dominion is in the Mother. For in the condition of Meer Nature, where there are no Matrimoniall lawes, it cannot be known who is the Father, unlesse it be declared by the Mother: and therefore the right of Dominion over the Child dependeth on her will, and is consequently hers. Again, seeing the Infant is first in the power of the Mother; so as she may either nourish, or expose it, if she nourish it, it oweth its life to the Mother; and is therefore obliged to obey her, rather than any other; and by consequence the Dominion over it is hers. But if she expose it, and another find, and nourish it, the Dominion is in him that nourisheth it. For it ought to obey him by whom it is preserved; because preservation of life being the end, for which one man becomes subject to another, every man is supposed to promise obedience, to him, in whose power it is to save, or destroy him.

## **Or Precedent Subjection Of One Of The Parents To The Other**

If the Mother be the Fathers subject, the Child, is in the Fathers power: and if the Father be the Mothers subject, (as when a Sovereign Queen marrieth one of her subjects,) the Child is subject to the Mother; because the Father also is her subject.

If a man and a woman, Monarches of two severall Kingdomes, have a Child, and contract concerning who shall have the Dominion of him, the Right of the Dominion passeth by the Contract. If they contract not, the Dominion followeth the Dominion of the place of his residence. For the Sovereign of each Country hath Dominion over all that reside therein.

He that hath the Dominion over the Child, hath Dominion also over their Childrens Children. For he that hath Dominion over the person of a man, hath Dominion over all that is his; without which, Dominion were but a Title, without the effect.

## **The Right Of Succession Followeth The Rules Of The Rights Of Possession**

The Right of Succession to Paternall dominion, proceedeth in the same manner, as doth the Right of Succession to Monarchy; of which I have already sufficiently spoken in the precedent chapter.

## **Despotically Dominion, How Attained**

Dominion acquired by Conquest, or Victory in war, is that which some Writers call DESPOTICALLY, from Despotes, which signifieth a Lord, or Master; and is the Dominion of the Master over his Servant. And this Dominion is then acquired to the Victor, when the Vanquished, to avoid the present stroke of death, covenanteth either in expresse words, or by other sufficient signes of the Will, that so long as his life, and the liberty of his body is allowed him, the Victor shall have the use thereof, at his pleasure. And after such Covenant made, the Vanquished is a SERVANT, and not before: for by the word Servant (whether it be derived from Servire, to Serve, or from Servare, to Save, which I leave to Grammarians to dispute) is not meant a Captive, which is kept in prison, or bonds, till the owner of him that took him, or bought him of one that did, shall consider what to do with him: (for such men, (commonly called Slaves,) have no obligation at all; but may break their bonds, or the prison; and kill, or carry away captive their Master, justly:) but one, that being taken, hath corporall liberty allowed him; and upon promise not to run away, nor to do violence to his Master, is trusted by him.

## **Not By The Victory, But By The Consent Of The Vanquished**

It is not therefore the Victory, that giveth the right of Dominion over the Vanquished, but his own Covenant. Nor is he obliged because he is Conquered; that is to say, beaten, and taken, or put to flight; but because he commeth in, and submitteth to the Victor; Nor is the Victor obliged by an enemies rendring himselfe, (without promise of life,) to spare him for this his yeelding to discretion; which obliges not the Victor longer, than in his own discretion hee shall think fit.

And that men do, when they demand (as it is now called) Quarter, (which the Greeks called Zogria, taking alive,) is to evade the present fury of the Victor, by Submission, and to compound for their life, with Ransome, or Service: and therefore he that hath Quarter, hath not his life given, but deferred till farther deliberation; For it is not an yeelding on condition of life, but to discretion. And then onely is his life in security, and his service due, when the Victor hath trusted him with his corporall liberty. For Slaves that work in Prisons, or Fetters, do it not of duty, but to avoyd the cruelty of their task-masters.

The Master of the Servant, is Master also of all he hath; and may exact the use thereof; that is to say, of his goods, of his labour, of his servants, and of his children, as often as he shall think fit. For he holdeth his life of his Master, by the covenant of obedience; that is, of owning, and authorising whatsoever the Master shall do. And in case the Master, if he refuse, kill him, or cast him into bonds, or otherwise punish him for his disobedience, he is himselfe the author of the same; and cannot accuse him of injury.

In summe the Rights and Consequences of both Paternall and Despoticall Dominion, are the very same with those of a Sovereign by Institution; and for the same reasons: which reasons are set down in the precedent chapter. So that for a man that is Monarch of divers Nations, whereof he hath, in one the Sovereignty by Institution of the people assembled, and in another by Conquest, that is by the Submission of each

particular, to avoyd death or bonds; to demand of one Nation more than of the other, from the title of Conquest, as being a Conquered Nation, is an act of ignorance of the Rights of Sovereignty. For the Sovereign is absolute over both alike; or else there is no Sovereignty at all; and so every man may Lawfully protect himselfe, if he can, with his own sword, which is the condition of war.

## **Difference Between A Family And A Kingdom**

By this it appears, that a great Family if it be not part of some Commonwealth, is of it self, as to the Rights of Sovereignty, a little Monarchy; whether that Family consist of a man and his children; or of a man and his servants; or of a man, and his children, and servants together: wherein the Father of Master is the Sovereign. But yet a Family is not properly a Commonwealth; unlesse it be of that power by its own number, or by other opportunities, as not to be subdued without the hazard of war. For where a number of men are manifestly too weak to defend themselves united, every one may use his own reason in time of danger, to save his own life, either by flight, or by submission to the enemy, as hee shall think best; in the same manner as a very small company of souldiers, surprised by an army, may cast down their armes, and demand quarter, or run away, rather than be put to the sword. And thus much shall suffice; concerning what I find by speculation, and deduction, of Sovereign Rights, from the nature, need, and designes of men, in erecting of Commonwealths, and putting themselves under Monarchs, or Assemblies, entrusted with power enough for their protection.

## **The Right Of Monarchy From Scripture**

Let us now consider what the Scripture teacheth in the same point. To Moses, the children of Israel say thus. (Exod. 20. 19) "Speak thou to us, and we will heare thee; but let not God speak to us, lest we dye." This is absolute obedience to Moses. Concerning the Right of Kings, God himself by the mouth of Samuel, saith, (1 Sam. 8. 11, 12, &c.) "This shall be the Right of the King you will have to reigne over you. He shall take your sons, and set them to drive his Chariots, and to be his horsemen, and to run before his chariots; and gather in his harvest; and to make his engines of War, and Instruments of his chariots; and shall take your daughters to make perfumes, to be his Cookes, and Bakers. He shall take your fields, your vine-yards, and your olive-yards, and give them to his servants. He shall take the tyth of your corne and wine, and give it to the men of his chamber, and to his other servants. He shall take your man-servants, and your maid-servants, and the choice of your youth, and employ them in his businesse. He shall take the tyth of your flocks; and you shall be his servants." This is absolute power, and summed up in the last words, "you shall be his servants." Againe, when the people heard what power their King was to have, yet they consented thereto, and say thus, (Verse. 19 &c.) "We will be as all other nations, and our King shall judge our causes, and goe before us, to conduct our wars." Here is confirmed the Right that Sovereigns have, both to the Militia, and to all Judicature; in which is contened as absolute power, as one man can possibly transerre to another. Again, the prayer of King Salomon to God, was this. (1 Kings 3. 9) "Give to thy servant understanding, to judge thy people, and to discern between Good and Evill." It belongeth therefore to the Sovereigne to bee Judge, and to praescribe the Rules of Discerning Good and Evill; which Rules are Lawes; and therefore in him is the Legislative Power. Saul sought the life of David; yet when it was in his power to slay Saul, and his Servants would have done it, David forbad them, saying (1 Sam. 24. 9) "God forbid I should do such an act against my Lord, the anoynted of God." For obedience of servants St. Paul saith, (Coll. 3. 20) "Servants obey your masters in All things," and, (Verse. 22) "Children obey your Parents in All

things." There is simple obedience in those that are subject to Paternall, or Despotically Dominion. Again, (Math. 23. 2,3) "The Scribes and Pharisees sit in Moses chayre and therefore All that they shall bid you observe, that observe and do." There again is simple obedience. And St. Paul, (Tit. 3. 2) "Warn them that they subject themselves to Princes, and to those that are in Authority, & obey them." This obedience is also simple. Lastly, our Saviour himselfe acknowledges, that men ought to pay such taxes as are by Kings imposed, where he sayes, "Give to Caesar that which is Caesars;" and payed such taxes himselfe. And that the Kings word, is sufficient to take any thing from any subject, when there is need; and that the King is Judge of that need: For he himselfe, as King of the Jewes, commanded his Disciples to take the Asses, and Asses Colts to carry him into Jerusalem, saying, (Mat. 21. 2,3) "Go into the Village over against you, and you shall find a shee Ass tied, and her Colt with her, untie them, and bring them to me. And if any man ask you, what you mean by it, Say the Lord hath need of them: And they will let them go." They will not ask whether his necessity be a sufficient title; nor whether he be judge of that necessity; but acquiesce in the will of the Lord.

To these places may be added also that of Genesis, (Gen. 3. 5) "You shall be as Gods, knowing Good and Evill." and verse 11. "Who told thee that thou wast naked? hast thou eaten of the tree, of which I commanded thee thou shouldest not eat?" For the Cognisance of Judicature of Good and Evill, being forbidden by the name of the fruit of the tree of Knowledge, as a triall of Adams obedience; The Divell to enflame the Ambition of the woman, to whom that fruit already seemed beautifull, told her that by tasting it, they should be as Gods, knowing Good and Evill. Whereupon having both eaten, they did indeed take upon them Gods office, which is Judicature of Good and Evill; but acquired no new ability to distinguish between them aright. And whereas it is sayd, that having eaten, they saw they were naked; no man hath so interpreted that place, as if they had formerly blind, as saw not their own skins: the meaning is plain, that it was then they first judged their nakednesse (wherein it was Gods will to create them) to be uncomely; and by being ashamed, did tacitely censure God himselfe. And thereupon God saith, "Hast thou eaten, &c." as if he should say, doest thou that owest me obedience, take upon thee to judge of my Commandements? Whereby it is cleerly, (though

Allegorically,) signified, that the Commands of them that have the right to command, are not by their Subjects to be censured, nor disputed.

## **Sovereign Power Ought In All Common-wealths To Be Absolute**

So it appeareth plainly, to my understanding, both from Reason, and Scripture, that the Sovereign Power, whether placed in One Man, as in Monarchy, or in one Assembly of men, as in Popular, and Aristocraticall Common-wealths, is as great, as possibly men can be imagined to make it. And though of so unlimited a Power, men may fancy many evill consequences, yet the consequences of the want of it, which is perpetuall warre of every man against his neighbour, are much worse. The condition of man in this life shall never be without Inconveniencies; but there happeneth in no Common-wealth any great Inconvenience, but what proceeds from the Subjects disobedience, and breach of those Covenants, from which the Common-wealth had its being. And whosoever thinking Sovereign Power too great, will seek to make it lesse; must subject himselfe, to the Power, that can limit it; that is to say, to a greater.

The greatest objection is, that of the Practise; when men ask, where, and when, such Power has by Subjects been acknowledged. But one may ask them again, when, or where has there been a Kingdome long free from Sedition and Civill Warre. In those Nations, whose Common-wealths have been long-lived, and not been destroyed, but by forraign warre, the Subjects never did dispute of the Sovereign Power. But howsoever, an argument for the Practise of men, that have not sifted to the bottom, and with exact reason weighed the causes, and nature of Common-wealths, and suffer daily those miseries, that proceed from the ignorance thereof, is invalid. For though in all places of the world, men should lay the foundation of their houses on the sand, it could not thence be inferred, that so it ought to be. The skill of making, and maintaining Common-wealths, consisteth in certain Rules, as doth Arithmetique and Geometry; not (as Tennis-play) on Practise onely: which Rules, neither poor men have the leisure, nor men that have had the leisure, have hitherto had the curiosity, or the method to find out.

**CHAPTER XXI. OF THE LIBERTY OF  
SUBJECTS**

## Liberty What

Liberty, or FREEDOME, signifieth (properly) the absence of Opposition; (by Opposition, I mean externall Impediments of motion;) and may be applied no lesse to Irrational, and Inanimate creatures, than to Rationall. For whatsoever is so tyed, or environed, as it cannot move, but within a certain space, which space is determined by the opposition of some externall body, we say it hath not Liberty to go further. And so of all living creatures, whilst they are imprisoned, or restrained, with walls, or chayns; and of the water whilst it is kept in by banks, or vessels, that otherwise would spread it selfe into a larger space, we use to say, they are not at Liberty, to move in such manner, as without those externall impediments they would. But when the impediment of motion, is in the constitution of the thing it selfe, we use not to say, it wants the Liberty; but the Power to move; as when a stone lyeth still, or a man is fastned to his bed by sicknesse.

## **What It Is To Be Free**

And according to this proper, and generally received meaning of the word, A FREE-MAN, is "he, that in those things, which by his strength and wit he is able to do, is not hindred to doe what he has a will to." But when the words Free, and Liberty, are applyed to any thing but Bodies, they are abused; for that which is not subject to Motion, is not subject to Impediment: And therefore, when 'tis said (for example) The way is free, no liberty of the way is signified, but of those that walk in it without stop. And when we say a Guift is free, there is not meant any liberty of the Guift, but of the Giver, that was not bound by any law, or Covenant to give it. So when we Speak Freely, it is not the liberty of voice, or pronounciation, but of the man, whom no law hath obliged to speak otherwise then he did. Lastly, from the use of the word Freewill, no liberty can be inferred to the will, desire, or inclination, but the liberty of the man; which consisteth in this, that he finds no stop, in doing what he has the will, desire, or inclination to doe.

## **Feare And Liberty Consistent**

Feare and Liberty are consistent; as when a man throweth his goods into the Sea for Feare the ship should sink, he doth it neverthelesse very willingly, and may refuse to doe it if he will: It is therefore the action, of one that was Free; so a man sometimes pays his debt, only for Feare of Imprisonment, which because no body hindred him from detaining, was the action of a man at Liberty. And generally all actions which men doe in Common-wealths, for Feare of the law, or actions, which the doers had Liberty to omit.

## **Liberty And Necessity Consistent**

Liberty and Necessity are Consistent: As in the water, that hath not only Liberty, but a Necessity of descending by the Channel: so likewise in the Actions which men voluntarily doe; which (because they proceed from their will) proceed from Liberty; and yet because every act of mans will, and every desire, and inclination proceedeth from some cause, which causes in a continuall chaine (whose first link in the hand of God the first of all causes) proceed from Necessity. So that to him that could see the connexion of those causes, the Necessity of all mens voluntary actions, would appeare manifest. And therefore God, that seeth, and disposeth all things, seeth also that the Liberty of man in doing what he will, is accompanied with the Necessity of doing that which God will, & no more, nor lesse. For though men may do many things, which God does not command, nor is therefore Author of them; yet they can have no passion, nor appetite to any thing, of which appetite Gods will is not the cause. And did not his will assure the Necessity of mans will, and consequently of all that on mans will dependeth, the Liberty of men would be a contradiction, and impediment to the omnipotence and Liberty of God. And this shall suffice, (as to the matter in hand) of that naturall Liberty, which only is properly called Liberty.

## **Artificial Bonds, Or Covenants**

But as men, for the atteyning of peace, and conservation of themselves thereby, have made an Artificiall Man, which we call a Common-wealth; so also have they made Artificiall Chains, called Civill Lawes, which they themselves, by mutuall covenants, have fastned at one end, to the lips of that Man, or Assembly, to whom they have given the Sovereigne Power; and at the other end to their own Ears. These Bonds in their own nature but weak, may neverthelesse be made to hold, by the danger, though not by the difficulty of breaking them.

## **Liberty Of Subjects Consisteth In Liberty From Covenants**

In relation to these Bonds only it is, that I am to speak now, of the Liberty of Subjects. For seeing there is no Common-wealth in the world, for the regulating of all the actions, and words of men, (as being a thing impossible:) it followeth necessarily, that in all kinds of actions, by the laws praetermitted, men have the Liberty, of doing what their own reasons shall suggest, for the most profitable to themselves. For if wee take Liberty in the proper sense, for corporall Liberty; that is to say, freedome from chains, and prison, it were very absurd for men to clamor as they doe, for the Liberty they so manifestly enjoy. Againe, if we take Liberty, for an exemption from Lawes, it is no lesse absurd, for men to demand as they doe, that Liberty, by which all other men may be masters of their lives. And yet as absurd as it is, this is it they demand; not knowing that the Lawes are of no power to protect them, without a Sword in the hands of a man, or men, to cause those laws to be put in execution. The Liberty of a Subject, lyeth therefore only in those things, which in regulating their actions, the Sovereign hath praetermitted; such as is the Liberty to buy, and sell, and otherwise contract with one another; to choose their own aboad, their own diet, their own trade of life, and institute their children as they themselves think fit; & the like.

## **Liberty Of The Subject Consistent With Unlimited Power Of The Sovereign**

Nevertheless we are not to understand, that by such Liberty, the Sovereign Power of life, and death, is either abolished, or limited. For it has been already shewn, that nothing the Sovereign Representative can doe to a Subject, on what pretence soever, can properly be called Injustice, or Injury; because every Subject is Author of every act the Sovereign doth; so that he never wanteth Right to any thing, otherwise, than as he himself is the Subject of God, and bound thereby to observe the laws of Nature. And therefore it may, and doth often happen in Common-wealths, that a Subject may be put to death, by the command of the Sovereign Power; and yet neither doe the other wrong: as when Jephtha caused his daughter to be sacrificed: In which, and the like cases, he that so dieth, had Liberty to doe the action, for which he is nevertheless, without Injury put to death. And the same holdeth also in a Sovereign Prince, that putteth to death an Innocent Subject. For though the action be against the law of Nature, as being contrary to Equitie, (as was the killing of Uriah, by David;) yet it was not an Injurie to Uriah; but to God. Not to Uriah, because the right to doe what he pleased, was given him by Uriah himself; And yet to God, because David was Gods Subject; and prohibited all Iniquitie by the law of Nature. Which distinction, David himself, when he repented the fact, evidently confirmed, saying, "To thee only have I sinned." In the same manner, the people of Athens, when they banished the most potent of their Common-wealth for ten years, thought they committed no Injustice; and yet they never questioned what crime he had done; but what hurt he would doe: Nay they commanded the banishment of they knew not whom; and every Citizen bringing his Oystershell into the market place, written with the name of him he desired should be banished, without actuall accusing him, sometimes banished an Aristides, for his reputation of Justice; And sometimes a scurrilous Jester, as Hyperbolus, to make a Jest of it. And yet a man cannot say, the Sovereign People of Athens wanted right to banish them; or an Athenian the Libertie to Jest, or to be Just.

# **The Liberty Which Writers Praise, Is The Liberty Of Sovereigns;**

## **Not Of Private Men**

The Libertie, whereof there is so frequent, and honourable mention, in the Histories, and Philosophy of the Antient Greeks, and Romans, and in the writings, and discourse of those that from them have received all their learning in the Politiques, is not the Libertie of Particular men; but the Libertie of the Common-wealth: which is the same with that, which every man then should have, if there were no Civil Laws, nor Common-wealth at all. And the effects of it also be the same. For as amongst masterlesse men, there is perpetuall war, of every man against his neighbour; no inheritance, to transmit to the Son, nor to expect from the Father; no propriety of Goods, or Lands; no security; but a full and absolute Libertie in every Particular man: So in States, and Common-wealths not dependent on one another, every Common-wealth, (not every man) has an absolute Libertie, to doe what it shall judge (that is to say, what that Man, or Assemblie that representeth it, shall judge) most conducing to their benefit. But withall, they live in the condition of a perpetuall war, and upon the confines of battel, with their frontiers armed, and canons planted against their neighbours round about. The Athenians, and Romanes, were free; that is, free Common-wealths: not that any particular men had the Libertie to resist their own Representative; but that their Representative had the Libertie to resist, or invade other people. There is written on the Turrets of the city of Luca in great characters at this day, the word LIBERTAS; yet no man can thence inferre, that a particular man has more Libertie, or Immunitie from the service of the Commonwealth there, than in Constantinople. Whether a Common-wealth be Monarchicall, or Popular, the Freedome is still the same.

But it is an easy thing, for men to be deceived, by the specious name of Libertie; and for want of Judgement to distinguish, mistake that for their Private Inheritance, and Birth right, which is the right of the Publique only. And when the same error is confirmed by the authority of men in

reputation for their writings in this subject, it is no wonder if it produce sedition, and change of Government. In these western parts of the world, we are made to receive our opinions concerning the Institution, and Rights of Common-wealths, from Aristotle, Cicero, and other men, Greeks and Romanes, that living under Popular States, derived those Rights, not from the Principles of Nature, but transcribed them into their books, out of the Practice of their own Common-wealths, which were Popular; as the Grammarians describe the Rules of Language, out of the Practise of the time; or the Rules of Poetry, out of the Poems of Homer and Virgil. And because the Athenians were taught, (to keep them from desire of changing their Government,) that they were Freemen, and all that lived under Monarchy were slaves; therefore Aristotle puts it down in his Politiques, (lib.6.cap.2) "In democracy, Liberty is to be supposed: for 'tis commonly held, that no man is Free in any other Government." And as Aristotle; so Cicero, and other Writers have grounded their Civill doctrine, on the opinions of the Romans, who were taught to hate Monarchy, at first, by them that having deposed their Sovereign, shared amongst them the Sovereignty of Rome; and afterwards by their Successors. And by reading of these Greek, and Latine Authors, men from their childhood have gotten a habit (under a false shew of Liberty,) of favouring tumults, and of licentious controlling the actions of their Sovereigns; and again of controlling those controllers, with the effusion of so much blood; as I think I may truly say, there was never any thing so deerly bought, as these Western parts have bought the learning of the Greek and Latine tongues.

## **Liberty Of The Subject How To Be Measured**

To come now to the particulars of the true Liberty of a Subject; that is to say, what are the things, which though commanded by the Sovereign, he may neverthelesse, without Injustice, refuse to do; we are to consider, what Rights we passe away, when we make a Common-wealth; or (which is all one,) what Liberty we deny our selves, by owning all the Actions (without exception) of the Man, or Assembly we make our Sovereign. For in the act of our Submission, consisteth both our Obligation, and our Liberty; which must therefore be inferred by arguments taken from thence; there being no Obligation on any man, which ariseth not from some Act of his own; for all men equally, are by Nature Free. And because such arguments, must either be drawn from the expresse words, "I Authorise all his Actions," or from the Intention of him that submitteth himselfe to his Power, (which Intention is to be understood by the End for which he so submitteth;) The Obligation, and Liberty of the Subject, is to be derived, either from those Words, (or others equivalent;) or else from the End of the Institution of Sovereignty; namely, the Peace of the Subjects within themselves, and their Defence against a common Enemy.

# **Subjects Have Liberty To Defend Their Own Bodies,**

## **Even Against Them That Lawfully Invade Them**

First therefore, seeing Sovereignty by Institution, is by Covenant of every one to every one; and Sovereignty by Acquisition, by Covenants of the Vanquished to the Victor, or Child to the Parent; It is manifest, that every Subject has Liberty in all those things, the right whereof cannot by Covenant be transferred. I have shewn before in the 14. Chapter, that Covenants, not to defend a mans own body, are voyd. Therefore,

## **Are Not Bound To Hurt Themselves;**

If the Sovereign command a man (though justly condemned,) to kill, wound, or mayme himselfe; or not to resist those that assault him; or to abstain from the use of food, ayre, medicine, or any other thing, without which he cannot live; yet hath that man the Liberty to disobey.

If a man be interrogated by the Sovereign, or his Authority, concerning a crime done by himselfe, he is not bound (without assurance of Pardon) to confesse it; because no man (as I have shewn in the same Chapter) can be obliged by Covenant to accuse himselfe.

Again, the Consent of a Subject to Sovereign Power, is contained in these words, "I Authorise, or take upon me, all his actions;" in which there is no restriction at all, of his own former naturall Liberty: For by allowing him to Kill Me, I am not bound to Kill my selfe when he commands me. "'Tis one thing to say 'Kill me, or my fellow, if you please;' another thing to say, 'I will kill my selfe, or my fellow.'" It followeth therefore, that

No man is bound by the words themselves, either to kill himselfe, or any other man; And consequently, that the Obligation a man may sometimes have, upon the Command of the Sovereign to execute any dangerous, or dishonourable Office, dependeth not on the Words of our Submission; but on the Intention; which is to be understood by the End thereof. When therefore our refusall to obey, frustrates the End for which the Sovereignty was ordained; then there is no Liberty to refuse: otherwise there is.

## **Nor To Warfare, Unless They Voluntarily Undertake It**

Upon this ground, a man that is commanded as a Souldier to fight against the enemy, though his Sovereign have Right enough to punish his refusall with death, may neverthesse in many cases refuse, without Injustice; as when he substituteth a sufficient Souldier in his place: for in this case he deserteth not the service of the Common-wealth. And there is allowance to be made for naturall timorousnesse, not onely to women, (of whom no such dangerous duty is expected,) but also to men of feminine courage. When Armies fight, there is on one side, or both, a running away; yet when they do it not out of trechery, but fear, they are not esteemed to do it unjustly, but dishonourably. For the same reason, to avoyd battell, is not Injustice, but Cowardise. But he that inrowleth himselfe a Souldier, or taketh imprest mony, taketh away the excuse of a timorous nature; and is obliged, not onely to go to the battell, but also not to run from it, without his Captaines leave. And when the Defence of the Common-wealth, requireth at once the help of all that are able to bear Arms, every one is obliged; because otherwise the Institution of the Common-wealth, which they have not the purpose, or courage to preserve, was in vain.

To resist the Sword of the Common-wealth, in defence of another man, guilty, or innocent, no man hath Liberty; because such Liberty, takes away from the Sovereign, the means of Protecting us; and is therefore destructive of the very essence of Government. But in case a great many men together, have already resisted the Sovereign Power Unjustly, or committed some Capitall crime, for which every one of them expecteth death, whether have they not the Liberty then to joyn together, and assist, and defend one another? Certainly they have: For they but defend their lives, which the guilty man may as well do, as the Innocent. There was indeed injustice in the first breach of their duty; Their bearing of Arms subsequent to it, though it be to maintain what they have done, is no new unjust act. And if it be onely to defend their persons, it is not unjust at all. But the offer of Pardon taketh from them, to whom it is offered, the plea

of self-defence, and maketh their perseverance in assisting, or defending the rest, unlawfull.

## **The Greatest Liberty Of Subjects, Dependeth On The Silence Of The Law**

As for other Liberties, they depend on the silence of the Law. In cases where the Sovereign has prescribed no rule, there the Subject hath the liberty to do, or forbear, according to his own discretion. And therefore such Liberty is in some places more, and in some lesse; and in some times more, in other times lesse, according as they that have the Sovereignty shall think most convenient. As for Example, there was a time, when in England a man might enter in to his own Land, (and dispossesse such as wrongfully possessed it) by force. But in after-times, that Liberty of Forcible entry, was taken away by a Statute made (by the King) in Parliament. And in some places of the world, men have the Liberty of many wives: in other places, such Liberty is not allowed.

If a Subject have a controversie with his Sovereigne, of Debt, or of right of possession of lands or goods, or concerning any service required at his hands, or concerning any penalty corporall, or pecuniary, grounded on a precedent Law; He hath the same Liberty to sue for his right, as if it were against a Subject; and before such Judges, as are appointed by the Sovereign. For seeing the Sovereign demandeth by force of a former Law, and not by vertue of his Power; he declareth thereby, that he requireth no more, than shall appear to be due by that Law. The sute therefore is not contrary to the will of the Sovereign; and consequently the Subject hath the Liberty to demand the hearing of his Cause; and sentence, according to that Law. But if he demand, or take any thing by pretence of his Power; there lyeth, in that case, no action of Law: for all that is done by him in Vertue of his Power, is done by the Authority of every subject, and consequently, he that brings an action against the Sovereign, brings it against himselfe.

If a Monarch, or Sovereign Assembly, grant a Liberty to all, or any of his Subjects; which Grant standing, he is disabled to provide for their safety, the Grant is voyd; unlesse he directly renounce, or transferre the Sovereignty to another. For in that he might openly, (if it had been his

will,) and in plain termes, have renounced, or transferred it, and did not; it is to be understood it was not his will; but that the Grant proceeded from ignorance of the repugnancy between such a Liberty and the Sovereign Power; and therefore the Sovereignty is still retain'd; and consequently all those Powers, which are necessary to the exercising thereof; such as are the Power of Warre, and Peace, of Judicature, of appointing Officers, and Councillours, of levying Mony, and the rest named in the 18th Chapter.

## **In What Cases Subjects Absolved Of Their Obedience To Their Sovereign**

The Obligation of Subjects to the Sovereign is understood to last as long, and no longer, than the power lasteth, by which he is able to protect them. For the right men have by Nature to protect themselves, when none else can protect them, can by no Covenant be relinquished. The Sovereignty is the Soule of the Common-wealth; which once departed from the Body, the members doe no more receive their motion from it. The end of Obedience is Protection; which, wheresoever a man seeth it, either in his own, or in anothers sword, Nature applyeth his obedience to it, and his endeavour to maintaine it. And though Sovereignty, in the intention of them that make it, be immortall; yet is it in its own nature, not only subject to violent death, by forreign war; but also through the ignorance, and passions of men, it hath in it, from the very institution, many seeds of a naturall mortality, by Intestine Discord.

## **In Case Of Captivity**

If a Subject be taken prisoner in war; or his person, or his means of life be within the Guards of the enemy, and hath his life and corporall Libertie given him, on condition to be Subject to the Victor, he hath Libertie to accept the condition; and having accepted it, is the subject of him that took him; because he had no other way to preserve himselfe. The case is the same, if he be deteined on the same termes, in a forreign country. But if a man be held in prison, or bonds, or is not trusted with the libertie of his bodie; he cannot be understood to be bound by Covenant to subjection; and therefore may, if he can, make his escape by any means whatsoever.

## **In Case The Sovereign Cast Off The Government From Himself And Heyrs**

If a Monarch shall relinquish the Sovereignty, both for himself, and his heires; His Subjects returne to the absolute Libertie of Nature; because, though Nature may declare who are his Sons, and who are the nerest of his Kin; yet it dependeth on his own will, (as hath been said in the precedent chapter,) who shall be his Heyr. If therefore he will have no Heyre, there is no Sovereignty, nor Subjection. The case is the same, if he dye without known Kindred, and without declaration of his Heyre. For then there can no Heire be known, and consequently no Subjection be due.

## **In Case Of Banishment**

If the Sovereign Banish his Subject; during the Banishment, he is not Subject. But he that is sent on a message, or hath leave to travell, is still Subject; but it is, by Contract between Sovereigns, not by vertue of the covenant of Subjection. For whosoever entreth into anothers dominion, is Subject to all the Lawes thereof; unless he have a privilege by the amity of the Sovereigns, or by speciall licence.

## **In Case The Sovereign Render Himself Subject To Another**

If a Monarch subdued by war, render himself Subject to the Victor; his Subjects are delivered from their former obligation, and become obliged to the Victor. But if he be held prisoner, or have not the liberty of his own Body; he is not understood to have given away the Right of Soveraigntie; and therefore his Subjects are obliged to yield obedience to the Magistrates formerly placed, governing not in their own name, but in his. For, his Right remaining, the question is only of the Administration; that is to say, of the Magistrates and Officers; which, if he have not means to name, he is supposed to approve those, which he himself had formerly appointed.

**CHAPTER XXII. OF SYSTEMES SUBJECT,  
POLITICALL, AND PRIVATE**

## The Divers Sorts Of Systemes Of People

Having spoken of the Generation, Forme, and Power of a Commonwealth, I am in order to speak next of the parts thereof. And first of Systemes, which resemble the similar parts, or Muscles of a Body naturall. By SYSTEMES; I understand any numbers of men joyned in one Interest, or one Businesse. Of which, some are Regular, and some Irregular. Regular are those, where one Man, or Assembly of men, is constituted Representative of the whole number. All other are Irregular.

Of Regular, some are Absolute, and Independent, subject to none but their own Representative: such are only Common-wealths; Of which I have spoken already in the 5. last preceding chapters. Others are Dependent; that is to say, Subordinate to some Sovereign Power, to which every one, as also their Representative is Subject.

Of Systemes subordinate, some are Politicall, and some Private. Politicall (otherwise Called Bodies Politique, and Persons In Law,) are those, which are made by authority from the Sovereign Power of the Common-wealth. Private, are those, which are constituted by Subjects amongst themselves, or by authoritie from a stranger. For no authority derived from forraign power, within the Dominion of another, is Publique there, but Private.

And of Private Systemes, some are Lawfull; some Unlawfull: Lawfull, are those which are allowed by the Common-wealth: all other are Unlawfull. Irregular Systemes, are those which having no Representative, consist only in concourse of People; which if not forbidden by the Common-wealth, nor made on evill designe, (such as are conflux of People to markets, or shews, or any other harmelesse end,) are Lawfull. But when the Intention is evill, or (if the number be considerable) unknown, they are Unlawfull.

## **In All Bodies Politique The Power Of The Representative Is Limited**

In Bodies Politique, the power of the Representative is alwaies Limited: And that which prescribeth the limits thereof, is the Power Sovereign. For Power Unlimited, is absolute Sovereignty. And the Sovereign, in every Commonwealth, is the absolute Representative of all the Subjects; and therefore no other, can be Representative of any part of them, but so far forth, as he shall give leave; And to give leave to a Body Politique of Subjects, to have an absolute Representative to all intents and purposes, were to abandon the Government of so much of the Commonwealth, and to divide the Dominion, contrary to their Peace and Defence, which the Sovereign cannot be understood to doe, by any Grant, that does not plainly, and directly discharge them of their subjection. For consequences of words, are not the signes of his will, when other consequences are signes of the contrary; but rather signes of error, and misreckoning; to which all mankind is too prone.

The bounds of that Power, which is given to the Representative of a Bodie Politique, are to be taken notice of, from two things. One is their Writt, or Letters from the Sovereign: the other is the Law of the Commonwealth.

## **By Letters Patents**

For though in the Institution or Acquisition of a Common-wealth, which is independent, there needs no Writing, because the Power of the Representative has there no other bounds, but such as are set out by the unwritten Law of Nature; yet in subordinate bodies, there are such diversities of Limitation necessary, concerning their businesses, times, and places, as can neither be remembered without Letters, nor taken notice of, unlesse such Letters be Patent, that they may be read to them, and withall sealed, or testified, with the Seales, or other permanent signes of the Authority Sovereign.

## **And The Lawes**

And because such Limitation is not alwaies easie, or perhaps possible to be described in writing; the ordinary Lawes, common to all Subjects, must determine, that the Representative may lawfully do, in all Cases, where the Letters themselves are silent. And therefore

## **When The Representative Is One Man, His Unwarranted Acts His Own Onely**

In a Body Politique, if the Representative be one man, whatsoever he does in the Person of the Body, which is not warranted in his Letters, nor by the Lawes, is his own act, and not the act of the Body, nor of any other Member thereof besides himselfe: Because further than his Letters, or the Lawes limit, he representeth no mans person, but his own. But what he does according to these, is the act of every one: For of the Act of the Sovereign every one is Author, because he is their Representative unlimited; and the act of him that recedes not from the Letters of the Sovereign, is the act of the Sovereign, and therefore every member of the Body is Author of it.

## **When It Is An Assembly, It Is The Act Of Them That Assented Onely**

But if the Representative be an Assembly, whatsoever that Assembly shall Decree, not warranted by their Letters, or the Lawes, is the act of the Assembly, or Body Politique, and the act of every one by whose Vote the Decree was made; but not the act of any man that being present Voted to the contrary; nor of any man absent, unlesse he Voted it by procuracy. It is the act of the Assembly, because Voted by the major part; and if it be a crime, the Assembly may be punished, as farre-forth as it is capable, as by dissolution, or forfeiture of their Letters (which is to such artificiall, and fictitious Bodies, capitall,) or (if the Assembly have a Common stock, wherein none of the Innocent Members have propriety,) by pecuniary Mulct. For from corporall penalties Nature hath exempted all Bodies Politique. But they that gave not their Vote, are therefore Innocent, because the Assembly cannot Represent any man in things unwarranted by their Letters, and consequently are not involved in their Votes.

When The Representative Is One Man, If He Borrow Mony, Or Owe It, By Contract; He Is Lyable Onely, The Members Not If the person of the Body Politique being in one man, borrow mony of a stranger, that is, of one that is not of the same Body, (for no Letters need limit borrowing, seeing it is left to mens own inclinations to limit lending) the debt is the Representatives. For if he should have Authority from his Letters, to make the members pay what he borroweth, he should have by consequence the Sovereignty of them; and therefore the grant were either voyd, as proceeding from Errour, commonly incident to humane Nature, and an insufficient signe of the will of the Granter; or if it be avowed by him, then is the Representer Sovereign, and falleth not under the present question, which is onely of Bodies subordinate. No member therefore is obliged to pay the debt so borrowed, but the Representative himselfe: because he that lendeth it, being a stranger to the Letters, and to the qualification of the Body, understandeth those onely for his debtors, that are engaged; and seeing the Representer can ingage himselfe, and none

else, has him onely for Debtor; who must therefore pay him, out of the common stock (if there be any), or (if there be none) out of his own estate.

If he come into debt by Contract, or Mulct, the case is the same.

## **When It Is An Assembly, They Onely Are Liable That Have Assented**

But when the Representative is an Assembly, and the debt to a stranger; all they, and onely they are responsible for the debt, that gave their votes to the borrowing of it, or to the Contract that made it due, or to the fact for which the Mulct was imposed; because every one of those in voting did engage himselfe for the payment: For he that is author of the borrowing, is obliged to the payment, even of the whole debt, though when payd by any one, he be discharged.

## **If The Debt Be To One Of The Assembly, The Body Onely Is Obliged**

But if the debt be to one of the Assembly, the Assembly onely is obliged to the payment, out of their common stock (if they have any:) For having liberty of Vote, if he Vote the Mony, shall be borrowed, he Votes it shall be payd; If he Vote it shall not be borrowed, or be absent, yet because in lending, he voteth the borrowing, he contradicteth his former Vote, and is obliged by the later, and becomes both borrower and lender, and consequently cannot demand payment from any particular man, but from the common Treasure onely; which fayling he hath no remedy, nor complaint, but against himselfe, that being privy to the acts of the Assembly, and their means to pay, and not being enforced, did neverthelesse through his own folly lend his mony.

## **Protestation Against The Decrees Of Bodies Politique**

Sometimes Lawful; But Against Sovereign Power Never It is manifest by this, that in Bodies Politique subordinate, and subject to a Sovereign Power, it is sometimes not onely lawfull, but expedient, for a particular man to make open protestation against the decrees of the Representative Assembly, and cause their dissent to be Registred, or to take witness of it; because otherwise they may be obliged to pay debts contracted, and be responsible for crimes committed by other men: But in a Sovereign Assembly, that liberty is taken away, both because he that protesteth there, denies their Sovereignty; and also because whatsoever is commanded by the Sovereign Power, is as to the Subject (though not so alwayes in the sight of God) justified by the Command; for of such command every Subject is the Author.

## **Bodies Politique For Government Of A Province, Colony, Or Town**

The variety of Bodies Politique, is almost infinite; for they are not onely distinguished by the severall affaires, for which they are constituted, wherein there is an unspeakable diversitie; but also by the times, places, and numbers, subject to many limitations. And as to their affaires, some are ordained for Government; As first, the Government of a Province may be committed to an Assembly of men, wherein all resolutions shall depend on the Votes of the major part; and then this Assembly is a Body Politique, and their power limited by Commission. This word Province signifies a charge, or care of businesse, which he whose businesse it is, committeth to another man, to be administred for, and under him; and therefore when in one Common-wealth there be divers Countries, that have their Lawes distinct one from another, or are farre distant in place, the Administration of the Government being committed to divers persons, those Countries where the Sovereign is not resident, but governs by Commission, are called Provinces. But of the government of a Province, by an Assembly residing in the Province it selfe, there be few examples. The Romans who had the Sovereignty of many Provinces; yet governed them alwaies by Presidents, and Praetors; and not by Assemblies, as they governed the City of Rome, and Territories adjacent. In like manner, when there were Colonies sent from England, to Plant Virginia, and Sommer-Ilands; though the government of them here, were committed to Assemblies in London, yet did those Assemblies never commit the Government under them to any Assembly there; but did to each Plantation send one Governour; For though every man, where he can be present by Nature, desires to participate of government; yet where they cannot be present, they are by Nature also enclined, to commit the Government of their common Interest rather to a Monarchicall, then a Popular form of Government: which is also evident in those men that have great private estates; who when they are unwilling to take the paines of administring the businesse that belongs to them, choose rather to trust one Servant, than a Assembly either of their friends or servants. But howsoever it be in fact, yet we may suppose the

Government of a Province, or Colony committed to an Assembly: and when it is, that which in this place I have to say, is this; that whatsoever debt is by that Assembly contracted; or whatsoever unlawfull Act is decreed, is the Act onely of those that assented, and not of any that dissented, or were absent, for the reasons before alledged. Also that an Assembly residing out of the bounds of that Colony whereof they have the government, cannot execute any power over the persons, or goods of any of the Colonie, to seize on them for debt, or other duty, in any place without the Colony it selfe, as having no Jurisdiction, nor Authoritie elsewhere, but are left to the remedie, which the Law of the place alloweth them. And though the Assembly have right, to impose a Mulct upon any of their members, that shall break the Lawes they make; yet out of the Colonie it selfe, they have no right to execute the same. And that which is said here, of the Rights of an Assembly, for the government of a Province, or a Colony, is appliable also to an Assembly for the Government of a Town, or University, or a College, or a Church, or for any other Government over the persons of men.

And generally, in all Bodies Politique, if any particular member conceive himself Injured by the Body it self, the Cognisance of his cause belongeth to the Sovereign, and those the Sovereign hath ordained for Judges in such causes, or shall ordaine for that particular cause; and not to the Body it self. For the whole Body is in this case his fellow subject, which in a Sovereign Assembly, is otherwise: for there, if the Sovereign be not Judge, though in his own cause, there can be no Judge at all.

## **Bodies Politique For Ordering Of Trade**

In a Bodie Politique, for the well ordering of forraigne Traffique, the most commodious Representative is an Assembly of all the members; that is to say, such a one, as every one that adventureth his mony, may be present at all the Deliberations, and Resolutions of the Body, if they will themselves. For proof whereof, we are to consider the end, for which men that are Merchants, and may buy and sell, export, and import their Merchandise, according to their own discretions, doe neverthelesse bind themselves up in one Corporation. It is true, there be few Merchants, that with the Merchandise they buy at home, can fraight a Ship, to export it; or with that they buy abroad, to bring it home; and have therefore need to joyn together in one Society; where every man may either participate of the gaine, according to the proportion of his adventure; or take his own; and sell what he transports, or imports, at such prices as he thinks fit. But this is no Body Politique, there being no Common Representative to oblige them to any other Law, than that which is common to all other subjects. The End of their Incorporating, is to make their gaine the greater; which is done two wayes; by sole buying, and sole selling, both at home, and abroad. So that to grant to a Company of Merchants to be a Corporation, or Body Politique, is to grant them a double Monopoly, whereof one is to be sole buyers; another to be sole sellers. For when there is a Company incorporate for any particular forraign Country, they only export the Commodities vendible in that Country; which is sole buying at home, and sole selling abroad. For at home there is but one buyer, and abroad but one that selleth: both which is gainfull to the Merchant, because thereby they buy at home at lower, and sell abroad at higher rates: And abroad there is but one buyer of forraign Merchandise, and but one that sels them at home; both which againe are gainfull to the adventurers.

Of this double Monopoly one part is disadvantageous to the people at home, the other to forraigners. For at home by their sole exportation they set what price they please on the husbandry and handy-works of the people; and by the sole importation, what price they please on all forraign commodities the people have need of; both which are ill for the people. On

the contrary, by the sole selling of the native commodities abroad, and sole buying the forraign commodities upon the place, they raise the price of those, and abate the price of these, to the disadvantage of the forraigner: For where but one selleth, the Merchandise is the dearer; and where but one buyeth the cheaper: Such Corporations therefore are no other then Monopolies; though they would be very profitable for a Common-wealth, if being bound up into one body in forraigne Markets they were at liberty at home, every man to buy, and sell at what price he could.

The end then of these Bodies of Merchants, being not a Common benefit to the whole Body, (which have in this case no common stock, but what is deducted out of the particular adventures, for building, buying, victualling and manning of Ships,) but the particular gaine of every adventurer, it is reason that every one be acquainted with the employment of his own; that is, that every one be of the Assembly, that shall have the power to order the same; and be acquainted with their accounts. And therefore the Representative of such a Body must be an Assembly, where every member of the Body may be present at the consultations, if he will.

If a Body Politique of Merchants, contract a debt to a stranger by the act of their Representative Assembly, every Member is lyable by himself for the whole. For a stranger can take no notice of their private Lawes, but considereth them as so many particular men, obliged every one to the whole payment, till payment made by one dischargeth all the rest: But if the debt be to one of the Company, the creditor is debter for the whole to himself, and cannot therefore demand his debt, but only from the common stock, if there be any.

If the Common-wealth impose a Tax upon the Body, it is understood to be layd upon every member proportionably to his particular adventure in the Company. For there is in this case no other common stock, but what is made of their particular adventures.

If a Mulct be layd upon the Body for some unlawfull act, they only are lyable by whose votes the act was decreed, or by whose assistance it was executed; for in none of the rest is there any other crime but being of the Body; which if a crime, (because the Body was ordeyned by the authority of the Common-wealth,) is not his.

If one of the Members be indebted to the Body, he may be sued by the Body; but his goods cannot be taken, nor his person imprisoned by the

authority of the Body; but only by Authority of the Common-wealth: for if they can doe it by their own Authority, they can by their own Authority give judgement that the debt is due, which is as much as to be Judge in their own Cause.

## **A Bodie Politique For Counsel To Be Give To The Sovereign**

These Bodies made for the government of Men, or of Traffique, be either perpetuall, or for a time prescribed by writing. But there be Bodies also whose times are limited, and that only by the nature of their businesse. For example, if a Sovereign Monarch, or a Sovereign Assembly, shall think fit to give command to the towns, and other severall parts of their territory, to send to him their Deputies, to enforme him of the condition, and necessities of the Subjects, or to advise with him for the making of good Lawes, or for any other cause, as with one Person representing the whole Country, such Deputies, having a place and time of meeting assigned them, are there, and at that time, a Body Politique, representing every Subject of that Dominion; but it is onely for such matters as shall be propounded unto them by that Man, or Assembly, that by the Sovereign Authority sent for them; and when it shall be declared that nothing more shall be propounded, nor debated by them, the Body is dissolved. For if they were the absolute Representative of the people, then were it the Sovereign Assembly; and so there would be two Sovereign Assemblies, or two Sovereigns, over the same people; which cannot consist with their Peace. And therefore where there is once a Sovereignty, there can be no absolute Representation of the people, but by it. And for the limits of how farre such a Body shall represent the whole People, they are set forth in the Writing by which they were sent for. For the People cannot choose their Deputies to other intent, than is in the Writing directed to them from their Sovereign expressed.

## **A Regular Private Body, Lawfull, As A Family**

Private Bodies Regular, and Lawfull, are those that are constituted without Letters, or other written Authority, saving the Lawes common to all other Subjects. And because they be united in one Person Representative, they are held for Regular; such as are all Families, in which the Father, or Master ordereth the whole Family. For he obligeth his Children, and Servants, as farre as the Law permitteth, though not further, because none of them are bound to obedience in those actions, which the Law hath forbidden to be done. In all other actions, during the time they are under domestique government, they are subject to their Fathers, and Masters, as to their immediate Sovereigns. For the Father, and Master being before the Institution of Common-wealth, absolute Sovereigns in their own Families, they lose afterward no more of their Authority, than the Law of the Common-wealth taketh from them.

## **Private Bodies Regular, But Unlawfull**

Private Bodies Regular, but Unlawfull, are those that unite themselves into one person Representative, without any publique Authority at all; such as are the Corporations of Beggars, Theeves and Gipsies, the better to order their trade of begging, and stealing; and the Corporations of men, that by Authority from any forraign Person, unite themselves in anothers Dominion, for easier propagation of Doctrines, and for making a party, against the Power of the Common-wealth.

## **Systemes Irregular, Such As Are Private Leagues**

Irregular Systemes, in their nature, but Leagues, or sometimes meer concourse of people, without union to any particular designe, not by obligation of one to another, but proceeding onely from a similitude of wills and inclinations, become Lawfull, or Unlawfull, according to the lawfulness, or unlawfulness of every particular mans design therein: And his designe is to be understood by the occasion.

The Leagues of Subjects, (because Leagues are commonly made for mutuall defence,) are in a Common-wealth (which is no more than a League of all the Subjects together) for the most part unnecessary, and savour of unlawfull designe; and are for that cause Unlawfull, and go commonly by the name of factions, or Conspiracies. For a League being a connexion of men by Covenants, if there be no power given to any one Man or Assembly, (as in the condition of meer Nature) to compell them to performance, is so long onely valid, as there ariseth no just cause of distrust: and therefore Leagues between Common-wealths, over whom there is no humane Power established, to keep them all in awe, are not onely lawfull, but also profitable for the time they last. But Leagues of the Subjects of one and the same Common-wealth, where every one may obtain his right by means of the Sovereign Power, are unnecessary to the maintaining of Peace and Justice, and (in case the designe of them be evill, or Unknown to the Common-wealth) unlawfull. For all uniting of strength by private men, is, if for evill intent, unjust; if for intent unknown, dangerous to the Publique, and unjustly concealed.

## Secret Cabals

If the Sovereign Power be in a great Assembly, and a number of men, part of the Assembly, without authority, consult a part, to contrive the guidance of the rest; This is a Faction, or Conspiracy unlawfull, as being a fraudulent seducing of the Assembly for their particular interest. But if he, whose private interest is to be debated, and judged in the Assembly, make as many friends as he can; in him it is no Injustice; because in this case he is no part of the Assembly. And though he hire such friends with mony, (unlesse there be an expresse Law against it,) yet it is not Injustice. For sometimes, (as mens manners are,) Justice cannot be had without mony; and every man may think his own cause just, till it be heard, and judged.

## **Feuds Of Private Families**

In all Common-wealths, if a private man entertain more servants, than the government of his estate, and lawfull employment he has for them requires, it is Faction, and unlawfull. For having the protection of the Common-wealth, he needeth not the defence of private force. And whereas in Nations not throughly civilized, severall numerous Families have lived in continuall hostility, and invaded one another with private force; yet it is evident enough, that they have done unjustly; or else that they had no Common-wealth.

## Factions For Government

And as Factions for Kindred, so also Factions for Government of Religion, as of Papists, Protestants, &c. or of State, as Patricians, and Plebeians of old time in Rome, and of Aristocraticalls and Democraticalls of old time in Greece, are unjust, as being contrary to the peace and safety of the people, and a taking of the Sword out of the hand of the Sovereign.

Concourse of people, is an Irregular Systeme, the lawfulness, or unlawfulness, whereof dependeth on the occasion, and on the number of them that are assembled. If the occasion be lawfull, and manifest, the Concourse is lawfull; as the usuall meeting of men at Church, or at a publique Shew, in usuall numbers: for if the numbers be extraordinarily great, the occasion is not evident; and consequently he that cannot render a particular and good account of his being amongst them, is to be judged conscious of an unlawfull, and tumultuous designe. It may be lawfull for a thousand men, to joyn in a Petition to be delivered to a Judge, or Magistrate; yet if a thousand men come to present it, it is a tumultuous Assembly; because there needs but one or two for that purpose. But in such cases as these, it is not a set number that makes the Assembly Unlawfull, but such a number, as the present Officers are not able to suppress, and bring to Justice.

When an unusuall number of men, assemble against a man whom they accuse; the Assembly is an Unlawfull tumult; because they may deliver their accusation to the Magistrate by a few, or by one man. Such was the case of St. Paul at Ephesus; where Demetrius, and a great number of other men, brought two of Pauls companions before the Magistrate, saying with one Voyce, "Great is Diana of the Ephesians;" which was their way of demanding Justice against them for teaching the people such doctrine, as was against their Religion, and Trade. The occasion here, considering the Lawes of that People, was just; yet was their Assembly Judged Unlawfull, and the Magistrate reprehended them for it, in these words,(Acts 19. 40) "If Demetrius and the other work-men can accuse any man, of any thing, there be Pleas, and Deputies, let them accuse one another. And if you have any other thing to demand, your case may be judged in an Assembly

Lawfully called. For we are in danger to be accused for this dayes sedition, because, there is no cause by which any man can render any reason of this Concourse of People." Where he calleth an Assembly, whereof men can give no just account, a Sedition, and such as they could not answer for. And this is all I shall say concerning Systemes, and Assemblyes of People, which may be compared (as I said,) to the Similar parts of mans Body; such as be Lawfull, to the Muscles; such as are Unlawfull, to Wens, Biles, and Apostemes, engendred by the unnaturall conflux of evill humours.

## **CHAPTER XXIII. OF THE PUBLIQUE MINISTERS OF SOVERAIGN POWER**

In the last Chapter I have spoken of the Similar parts of a Commonwealth; In this I shall speak of the parts Organicall, which are Publique Ministers.

## **Publique Minister Who**

A PUBLIQUE MINISTER, is he, that by the Sovereign, (whether a Monarch, or an Assembly,) is employed in any affaires, with Authority to represent in that employment, the Person of the Common-wealth. And whereas every man, or assembly that hath Sovereignty, representeth two Persons, or (as the more common phrase is) has two Capacities, one Naturall, and another Politique, (as a Monarch, hath the person not onely of the Common-wealth, but also of a man; and a Sovereign Assembly hath the Person not onely of the Common-wealth, but also of the Assembly); they that be servants to them in their naturall Capacity, are not Publique Ministers; but those onely that serve them in the Administration of the Publique businesse. And therefore neither Ushers, nor Sergeants, nor other Officers that waite on the Assembly, for no other purpose, but for the commodity of the men assembled, in an Aristocracy, or Democracy; nor Stewards, Chamberlains, Cofferers, or any other Officers of the houshold of a Monarch, are Publique Ministers in a Monarchy.

## **Ministers For The Generall Administration**

Of Publique Ministers, some have charge committed to them of a general Administration, either of the whole Dominion, or of a part thereof. Of the whole, as to a Protector, or Regent, may bee committed by the Predecessor of an Infant King, during his minority, the whole Administration of his Kingdome. In which case, every Subject is so far obliged to obedience, as the Ordinances he shall make, and the commands he shall give be in the Kings name, and not inconsistent with his Sovereigne Power. Of a Part, or Province; as when either a Monarch, or a Sovereign Assembly, shall give the generall charge thereof to a Governour, Lieutenant, Praefect, or Vice-Roy: And in this case also, every one of that Province, is obliged to all he shall doe in the name of the Sovereign, and that not incompatible with the Soveraigns Right. For such Protectors, Vice-Roys, and Governours, have no other right, but what depends on the Soveraigns Will; and no Commission that can be given them, can be interpreted for a Declaration of the will to transference the Sovereignty, without expresse and perspicuous words to that purpose. And this kind of Publique Ministers resembleth the Nerves, and Tendons that move the severall limbs of a body naturall.

## **For Speciall Administration, As For Oeconomy**

Others have speciall Administration; that is to say, charges of some speciall businesse, either at home, or abroad: As at home, First, for the Oeconomy of a Common-wealth, They that have Authority concerning the Treasure, as Tributes, Impositions, Rents, Fines, or whatsoever publique revenue, to collect, receive, issue, or take the Accounts thereof, are Publique Ministers: Ministers, because they serve the Person Representative, and can doe nothing against his Command, nor without his Authority: Publique, because they serve him in his Politicall Capacity.

Secondly, they that have Authority concerning the Militia; to have the custody of Armes, Forts, Ports; to Levy, Pay, or Conduct Souldiers; or to provide for any necessary thing for the use of war, either by Land or Sea, are publique Ministers. But a Souldier without Command, though he fight for the Common-wealth, does not therefore represent the Person of it; because there is none to represent it to. For every one that hath command, represents it to them only whom he commandeth.

## **For Instruction Of The People**

They also that have authority to teach, or to enable others to teach the people their duty to the Sovereign Power, and instruct them in the knowledge of what is just, and unjust, thereby to render them more apt to live in godlinesse, and in peace among themselves, and resist the publique enemy, are Publique Ministers: Ministers, in that they doe it not by their own Authority, but by anothers; and Publique, because they doe it (or should doe it) by no Authority, but that of the Sovereign. The Monarch, or the Sovereign Assembly only hath immediate Authority from God, to teach and instruct the people; and no man but the Sovereign, receiveth his power *Dei Gratia* simply; that is to say, from the favour of none but God: All other, receive theirs from the favour and providence of God, and their Sovereigns; as in a Monarchy *Dei Gratia & Regis*; or *Dei Providentia & Voluntate Regis*.

## For Judicature

They also to whom Jurisdiction is given, are Publique Ministers. For in their Seats of Justice they represent the person of the Sovereign; and their Sentence, is his Sentence; For (as hath been before declared) all Judicature is essentially annexed to the Sovereignty; and therefore all other Judges are but Ministers of him, or them that have the Sovereign Power. And as Controversies are of two sorts, namely of Fact, and of Law; so are judgements, some of Fact, some of Law: And consequently in the same controversie, there may be two Judges, one of Fact, another of Law.

And in both these controversies, there may arise a controversie between the party Judged, and the Judge; which because they be both Subjects to the Sovereign, ought in Equity to be Judged by men agreed on by consent of both; for no man can be Judge in his own cause. But the Sovereign is already agreed on for Judge by them both, and is therefore either to heare the Cause, and determine it himself, or appoint for Judge such as they shall both agree on. And this agreement is then understood to be made between them divers wayes; as first, if the Defendant be allowed to except against such of his Judges, whose interest maketh him suspect them, (for as to the Complaynant he hath already chosen his own Judge,) those which he excepteth not against, are Judges he himself agrees on. Secondly, if he appeale to any other Judge, he can appeale no further; for his appeale is his choice. Thirdly, if he appeale to the Sovereign himself, and he by himself, or by Delegates which the parties shall agree on, give Sentence; that Sentence is finall: for the Defendant is Judged by his own Judges, that is to say, by himself.

These properties of just and rationally Judicature considered, I cannot forbear to observe the excellent constitution of the Courts of Justice, established both for Common, and also for Publique Pleas in England. By Common Pleas, I meane those, where both the Complaynant and Defendant are Subjects: and by Publique, (which are also called Pleas of the Crown) those, where the Complaynant is the Sovereign. For whereas there were two orders of men, whereof one was Lords, the other Commons; The Lords had this Priviledge, to have for Judges in all Capitall

crimes, none but Lords; and of them, as many as would be present; which being ever acknowledged as a Priviledge of favour, their Judges were none but such as they had themselves desired. And in all controversies, every Subject (as also in civill controversies the Lords) had for Judges, men of the Country where the matter in controversie lay; against which he might make his exceptions, till at last Twelve men without exception being agreed on, they were Judged by those twelve. So that having his own Judges, there could be nothing alledged by the party, why the sentence should not be finall, These publique persons, with Authority from the Sovereign Power, either to Instruct, or Judge the people, are such members of the Common-wealth, as may fitly be compared to the organs of Voice in a Body naturall.

## For Execution

Publique Ministers are also all those, that have Authority from the Sovereign, to procure the Execution of Judgements given; to publish the Sovereigns Commands; to suppress Tumults; to apprehend, and imprison Malefactors; and other acts tending to the conservation of the Peace. For every act they doe by such Authority, is the act of the Common-wealth; and their service, answerable to that of the Hands, in a Bodie naturall.

Publique Ministers abroad, are those that represent the Person of their own Sovereign, to forraign States. Such are Ambassadors, Messengers, Agents, and Heralds, sent by publique Authoritie, and on publique Businesse.

But such as are sent by Authoritie only of some private partie of a troubled State, though they be received, are neither Publique, nor Private Ministers of the Common-wealth; because none of their actions have the Common-wealth for Author. Likewise, an Ambassador sent from a Prince, to congratulate, condole, or to assist at a solemnity, though Authority be Publique; yet because the businesse is Private, and belonging to him in his naturall capacity; is a Private person. Also if a man be sent into another Country, secretly to explore their counsels, and strength; though both the Authority, and the Businesse be Publique; yet because there is none to take notice of any Person in him, but his own; he is but a Private Minister; but yet a Minister of the Common-wealth; and may be compared to an Eye in the Body naturall. And those that are appointed to receive the Petitions or other informations of the People, and are as it were the publique Eare, are Publique Ministers, and represent their Sovereign in that office.

# **Counsellors Without Other Employment Then To Advise**

## **Are Not Publique Ministers**

Neither a Counsellor, nor a Councill of State, if we consider it with no Authority of Judicature or Command, but only of giving Advice to the Sovereign when it is required, or of offering it when it is not required, is a Publique Person. For the Advice is addressed to the Sovereign only, whose person cannot in his own presence, be represented to him, by another. But a Body of Counsellors, are never without some other Authority, either of Judicature, or of immediate Administration: As in a Monarchy, they represent the Monarch, in delivering his Commands to the Publique Ministers: In a Democracy, the Councill, or Senate propounds the Result of their deliberations to the people, as a Councill; but when they appoint Judges, or heare Causes, or give Audience to Ambassadors, it is in the quality of a Minister of the People: And in an Aristocracy the Councill of State is the Sovereign Assembly it self; and gives counsell to none but themselves.

## CHAPTER XXIV. OF THE NUTRITION, AND PROCREATION OF A COMMON-WEALTH

The Nourishment Of A Common-wealth Consisteth In The Commodities

Of Sea And Land

The NUTRITION of a Common-wealth consisteth, in the Plenty, and Distribution of Materials conducing to Life: In Concoction, or Preparation; and (when concocted) in the Conveyance of it, by convenient conduits, to the Publique use.

As for the Plenty of Matter, it is a thing limited by Nature, to those commodities, which from (the two breasts of our common Mother) Land, and Sea, God usually either freely giveth, or for labour selleth to mankind.

For the Matter of this Nutriment, consisting in Animals, Vegetals, and Minerals, God hath freely layd them before us, in or neer to the face of the Earth; so as there needeth no more but the labour, and industry of receiving them. Insomuch as Plenty dependeth (next to Gods favour) meerly on the labour and industry of men.

This Matter, commonly called Commodities, is partly Native, and partly Forraign: Native, that which is to be had within the Territory of the Common-wealth; Forraign, that which is imported from without. And because there is no Territory under the Dominion of one Common-wealth, (except it be of very vast extent,) that produceth all things needfull for the maintenance, and motion of the whole Body; and few that produce not something more than necessary; the superfluous commodities to be had within, become no more superfluous, but supply these wants at home, by importation of that which may be had abroad, either by Exchange, or by just Warre, or by Labour: for a mans Labour also, is a commodity exchangeable for benefit, as well as any other thing: And there have been Common-wealths that having no more Territory, than hath served them for habitation, have neverthesse, not onely maintained, but also encreased their Power, partly by the labour of trading from one place to another, and

partly by selling the Manufactures, whereof the Materials were brought in from other places.

## **And The Right Of Distribution Of Them**

The Distribution of the Materials of this Nourishment, is the constitution of Mine, and Thine, and His, that is to say, in one word Propriety; and belongeth in all kinds of Common-wealth to the Sovereign Power. For where there is no Common-wealth, there is, (as hath been already shewn) a perpetuall warre of every man against his neighbour; And therefore every thing is his that getteth it, and keepeth it by force; which is neither Propriety nor Community; but Uncertainty. Which is so evident, that even Cicero, (a passionate defender of Liberty,) in a publique pleading, attributeth all Propriety to the Law Civil, "Let the Civill Law," saith he, "be once abandoned, or but negligently guarded, (not to say oppressed,) and there is nothing, that any man can be sure to receive from his Ancestor, or leave to his Children." And again; "Take away the Civill Law, and no man knows what is his own, and what another mans." Seeing therefore the Introduction of Propriety is an effect of Common-wealth; which can do nothing but by the Person that Represents it, it is the act onely of the Sovereign; and consisteth in the Lawes, which none can make that have not the Sovereign Power. And this they well knew of old, who called that Nomos, (that is to say, Distribution,) which we call Law; and defined Justice, by distributing to every man his own.

# **All Private Estates Of Land Proceed Originally**

## **From The Arbitrary Distribution Of The Sovereign**

In this Distribution, the First Law, is for Division of the Land it self: wherein the Sovereign assigneth to every man a portion, according as he, and not according as any Subject, or any number of them, shall judge agreeable to Equity, and the Common Good. The Children of Israel, were a Common-wealth in the Wildernesse; but wanted the commodities of the Earth, till they were masters of the Land of Promise; which afterward was divided amongst them, not by their own discretion, but by the discretion of Eleazar the Priest, and Joshua their Generall: who when there were twelve Tribes, making them thirteen by subdivision of the Tribe of Joseph; made neverthelesse but twelve portions of the Land; and ordained for the Tribe of Levi no land; but assigned them the Tenth part of the whole fruits; which division was therefore Arbitrary. And though a People comming into possession of a land by warre, do not alwaies exterminate the antient Inhabitants, (as did the Jewes,) but leave to many, or most, or all of them their Estates; yet it is manifest they hold them afterwards, as of the Victors distribution; as the people of England held all theirs of William the Conquerour.

**Propriety Of A Subject Excludes Not The  
Dominion Of The Sovereign,  
But Onely Of Another Subject**

From whence we may collect, that the Propriety which a subject hath in his lands, consisteth in a right to exclude all other subjects from the use of them; and not to exclude their Sovereign, be it an Assembly, or a Monarch. For seeing the Sovereign, that is to say, the Common-wealth (whose Person he representeth,) is understood to do nothing but in order to the common Peace and Security, this Distribution of lands, is to be understood as done in order to the same: And consequently, whatsoever Distribution he shall make in prejudice thereof, is contrary to the will of every subject, that committed his Peace, and safety to his discretion, and conscience; and therefore by the will of every one of them, is to be reputed voyd. It is true, that a Sovereign Monarch, or the greater part of a Sovereign Assembly, may ordain the doing of many things in pursuit of their Passions, contrary to their own consciences, which is a breach of trust, and of the Law of Nature; but this is not enough to authorise any subject, either to make warre upon, or so much as to accuse of Injustice, or any way to speak evill of their Sovereign; because they have authorised all his actions, and in bestowing the Sovereign Power, made them their own. But in what cases the Commands of Sovereigns are contrary to Equity, and the Law of Nature, is to be considered hereafter in another place.

## **The Publique Is Not To Be Dieted**

In the Distribution of land, the Common-wealth it selfe, may be conceived to have a portion, and possesse, and improve the same by their Representative; and that such portion may be made sufficient, to susteine the whole expence to the common Peace, and defence necessarily required: Which were very true, if there could be any Representative conceived free from humane passions, and infirmities. But the nature of men being as it is, the setting forth of Publique Land, or of any certaine Revenue for the Common-wealth, is in vaine; and tendeth to the dissolution of Government, and to the condition of meere Nature, and War, assoon as ever the Sovereign Power falleth into the hands of a Monarch, or of an Assembly, that are either too negligent of mony, or too hazardous in engaging the publique stock, into a long, or costly war. Common-wealths can endure no Diet: For seeing their expence is not limited by their own appetite, but by externall Accidents, and the appetites of their neighbours, the Publique Riches cannot be limited by other limits, than those which the emergent occasions shall require. And whereas in England, there were by the Conquerour, divers Lands reserved to his own use, (besides Forrests, and Chases, either for his recreation, or for preservation of Woods,) and divers services reserved on the Land he gave his Subjects; yet it seems they were not reserved for his Maintenance in his Publique, but in his Naturall capacity: For he, and his Successors did for all that, lay Arbitrary Taxes on all Subjects land, when they judged it necessary. Or if those publique Lands, and Services, were ordained as a sufficient maintenance of the Common-wealth, it was contrary to the scope of the Institution; being (as it appeared by those ensuing Taxes) insufficient, and (as it appears by the late Revenue of the Crown) Subject to Alienation, and Diminution. It is therefore in vaine, to assign a portion to the Common-wealth; which may sell, or give it away; and does sell, and give it away when tis done by their Representative.

# **The Places And Matter Of Traffique Depend, As Their Distribution,**

## **On The Sovereign**

As the Distribution of Lands at home; so also to assigne in what places, and for what commodities, the Subject shall traffique abroad, belongeth to the Sovereign. For if it did belong to private persons to use their own discretion therein, some of them would bee drawn for gaine, both to furnish the enemy with means to hurt the Common-wealth, and hurt it themselves, by importing such things, as pleasing mens appetites, be neverthelesse noxious, or at least unprofitable to them. And therefore it belongeth to the Common-wealth, (that is, to the Sovereign only,) to approve, or disapprove both of the places, and matter of forraign Traffique.

## **The Laws Of Transferring Property Belong Also To The Sovereign**

Further, seeing it is not enough to the Sustentation of a Commonwealth, that every man have a propriety in a portion of Land, or in some few commodities, or a naturall property in some usefull art, and there is no art in the world, but is necessary either for the being, or well being almost of every particular man; it is necessary, that men distribute that which they can spare, and transferre their propriety therein, mutually one to another, by exchange, and mutuall contract. And therefore it belongeth to the Commonwealth, (that is to say, to the Sovereign,) to appoint in what manner, all kinds of contract between Subjects, (as buying, selling, exchanging, borrowing, lending, letting, and taking to hire,) are to bee made; and by what words, and signes they shall be understood for valid. And for the Matter, and Distribution of the Nourishment, to the severall Members of the Commonwealth, thus much (considering the modell of the whole worke) is sufficient.

## **Mony The Bloud Of A Common-wealth**

By Concoction, I understand the reducing of all commodities, which are not presently consumed, but reserved for Nourishment in time to come, to some thing of equal value, and withall so portably, as not to hinder the motion of men from place to place; to the end a man may have in what place soever, such Nourishment as the place affordeth. And this is nothing else but Gold, and Silver, and Mony. For Gold and Silver, being (as it happens) almost in all Countries of the world highly valued, is a commodious measure for the value of all things else between Nations; and Mony (of what matter soever coyned by the Sovereign of a Common-wealth,) is a sufficient measure of the value of all things else, between the Subjects of that Common-wealth. By the means of which measures, all commodities, Moveable, and Immoveable, are made to accompany a man, to all places of his resort, within and without the place of his ordinary residence; and the same passeth from Man to Man, within the Common-wealth; and goes round about, Nourishing (as it passeth) every part thereof; In so much as this Concoction, is as it were the Sanguification of the Common-wealth: For naturall Bloud is in like manner made of the fruits of the Earth; and circulating, nourisheth by the way, every Member of the Body of Man.

And because Silver and Gold, have their value from the matter it self; they have first this priviledge, that the value of them cannot be altered by the power of one, nor of a few Common-wealths; as being a common measure of the commodities of all places. But base Mony, may easily be enhanced, or abased. Secondly, they have the priviledge to make Common-wealths, move, and stretch out their armes, when need is, into forraign Countries; and supply, not only private Subjects that travell, but also whole Armies with provision. But that Coyne, which is not considerable for the Matter, but for the Stamp of the place, being unable to endure change of ayr, hath its effect at home only; where also it is subject to the change of Laws, and thereby to have the value diminished, to the prejudice many times of those that have it.

## **The Conduits And Way Of Mony To The Publique Use**

The Conduits, and Wayes by which it is conveyed to the Publique use, are of two sorts; One, that Conveyeth it to the Publique Coffers; The other, that Issueth the same out againe for publique payments. Of the first sort, are Collectors, Receivers, and Treasurers; of the second are the Treasurers againe, and the Officers appointed for payment of severall publique or private Ministers. And in this also, the Artificiall Man maintains his resemblance with the Naturall; whose Veins receiving the Bloud from the severall Parts of the Body, carry it to the Heart; where being made Vitall, the Heart by the Arteries sends it out again, to enliven, and enable for motion all the Members of the same.

## **The Children Of A Common-wealth Colonies**

The Procreation, or Children of a Common-wealth, are those we call Plantations, or Colonies; which are numbers of men sent out from the Common-wealth, under a Conductor, or Governour, to inhabit a Forraign Country, either formerly voyd of Inhabitants, or made voyd then, by warre. And when a Colony is settled, they are either a Common-wealth of themselves, discharged of their subjection to their Sovereign that sent them, (as hath been done by many Common-wealths of antient time,) in which case the Common-wealth from which they went was called their Metropolis, or Mother, and requires no more of them, then Fathers require of the Children, whom they emancipate, and make free from their domestique government, which is Honour, and Friendship; or else they remain united to their Metropolis, as were the Colonies of the people of Rome; and then they are no Common-wealths themselves, but Provinces, and parts of the Common-wealth that sent them. So that the Right of Colonies (saving Honour, and League with their Metropolis,) dependeth wholly on their Licence, or Letters, by which their Sovereign authorised them to Plant.

## **CHAPTER XXV. OF COUNSELL**

## **Counsell What**

How fallacious it is to judge of the nature of things, by the ordinary and inconstant use of words, appeareth in nothing more, than in the confusion of Counsels, and Commands, arising from the Imperative manner of speaking in them both, and in many other occasions besides. For the words "Doe this," are the words not onely of him that Commandeth; but also of him that giveth Counsell; and of him that Exhorteth; and yet there are but few, that see not, that these are very different things; or that cannot distinguish between them, when they perceive who it is that speaketh, and to whom the Speech is directed, and upon what occasion. But finding those phrases in mens writings, and being not able, or not willing to enter into a consideration of the circumstances, they mistake sometimes the Precepts of Counsellours, for the Precepts of them that command; and sometimes the contrary; according as it best agreeth with the conclusions they would inferre, or the actions they approve. To avoyd which mistakes, and render to those termes of Commanding, Counselling, and Exhorting, their proper and distinct significations, I define them thus.

## Differences Between Command And Counsell

COMMAND is, where a man saith, "Doe this," or "Doe this not," without expecting other reason than the Will of him that sayes it. From this it followeth manifestly, that he that Commandeth, pretendeth thereby his own Benefit: For the reason of his Command is his own Will onely, and the proper object of every mans Will, is some Good to himselfe.

COUNSELL, is where a man saith, "Doe" or "Doe not this," and deduceth his own reasons from the benefit that arriveth by it to him to whom he saith it. And from this it is evident, that he that giveth Counsell, pretendeth onely (whatsoever he intendeth) the good of him, to whom he giveth it.

Therefore between Counsell and Command, one great difference is, that Command is directed to a mans own benefit; and Counsell to the benefit of another man. And from this ariseth another difference, that a man may be obliged to do what he is Commanded; as when he hath covenanted to obey: But he cannot be obliged to do as he is Counsell'd, because the hurt of not following it, is his own; or if he should covenant to follow it, then is the Counsell turned into the nature of a Command. A third difference between them is, that no man can pretend a right to be of another mans Counsell; because he is not to pretend benefit by it to himselfe; but to demand right to Counsell another, argues a will to know his designes, or to gain some other Good to himselfe; which (as I said before) is of every mans will the proper object.

This also is incident to the nature of Counsell; that whatsoever it be, he that asketh it, cannot in equity accuse, or punish it: For to ask Counsell of another, is to permit him to give such Counsell as he shall think best; And consequently, he that giveth counsell to his Sovereign, (whether a Monarch, or an Assembly) when he asketh it, cannot in equity be punished for it, whether the same be conformable to the opinion of the most, or not, so it be to the Proposition in debate. For if the sense of the Assembly can be taken notice of, before the Debate be ended, they should neither ask, nor take any further Counsell; For the Sense of the Assembly, is the Resolution of the Debate, and End of all Deliberation. And generally he

that demandeth Counsell, is Author of it; and therefore cannot punish it; and what the Sovereign cannot, no man else can. But if one Subject giveth Counsell to another, to do any thing contrary to the Lawes, whether that Counsell proceed from evill intention, or from ignorance onely, it is punishable by the Common-wealth; because ignorance of the Law, is no good excuse, where every man is bound to take notice of the Lawes to which he is subject.

## **Exhortation And Dehortation What**

EXHORTATION, and DEHORTATION, is Counsell, accompanied with signes in him that giveth it, of vehement desire to have it followed; or to say it more briefly, Counsell Vehemently Pressed. For he that Exhorteth, doth not deduce the consequences of what he adviseth to be done, and tye himselfe therein to the rigour of true reasoning; but encourages him he Counselleth, to Action: As he that Dehorteth, deterreth him from it. And therefore they have in their speeches, a regard to the common Passions, and opinions of men, in deducing their reasons; and make use of Similitudes, Metaphors, Examples, and other tooles of Oratory, to perswade their Hearers of the Utility, Honour, or Justice of following their advise.

From whence may be inferred, First, that Exhortation and Dehortation, is directed to the Good of him that giveth the Counsell, not of him that asketh it, which is contrary to the duty of a Counsellour; who (by the definition of Counsell) ought to regard, not his own benefits, but his whom he adviseth. And that he directeth his Counsell to his own benefit, is manifest enough, by the long and vehement urging, or by the artificial giving thereof; which being not required of him, and consequently proceeding from his own occasions, is directed principally to his own benefit, and but accidentally to the good of him that is Counsell'd, or not at all.

Secondly, that the use of Exhortation and Dehortation lyeth onely, where a man is to speak to a Multitude; because when the Speech is addressed to one, he may interrupt him, and examine his reasons more rigorously, than can be done in a Multitude; which are too many to enter into Dispute, and Dialogue with him that speaketh indifferently to them all at once. Thirdly, that they that Exhort and Dehort, where they are required to give Counsell, are corrupt Counsellours, and as it were bribed by their own interest. For though the Counsell they give be never so good; yet he that gives it, is no more a good Counsellour, than he that giveth a Just Sentence for a reward, is a just Judge. But where a man may lawfully Command, as a Father in his Family, or a Leader in an Army, his Exhortations and Dehortations, are

not onely lawfull, but also necessary, and laudable: But then they are no more Counsells, but Commands; which when they are for Execution of soure labour; sometimes necessity, and alwayes humanity requireth to be sweetned in the delivery, by encouragement, and in the tune and phrase of Counsell, rather then in harsher language of Command.

Examples of the difference between Command and Counsell, we may take from the formes of Speech that expresse them in Holy Scripture. "Have no other Gods but me; Make to thy selfe no graven Image; Take not Gods name in vain; Sanctifie the Sabbath; Honour thy Parents; Kill not; Steale not," &c. are Commands; because the reason for which we are to obey them, is drawn from the will of God our King, whom we are obliged to obey. But these words, "Sell all thou hast; give it to the poore; and follow me," are Counsell; because the reason for which we are to do so, is drawn from our own benefit; which is this, that we shall have "Treasure in Heaven." These words, "Go into the village over against you, and you shall find an Asse tyed, and her Colt; loose her, and bring her to me," are a Command: for the reason of their fact is drawn from the will of their Master: but these words, "Repent, and be Baptized in the Name of Jesus," are Counsell; because the reason why we should so do, tendeth not to any benefit of God Almighty, who shall still be King in what manner soever we rebell; but of our selves, who have no other means of avoyding the punishment hanging over us for our sins.

## Differences Of Fit And Unfit Counsellours

As the difference of Counsell from Command, hath been now deduced from the nature of Counsell, consisting in a deducing of the benefit, or hurt that may arise to him that is to be Counsell'd, by the necessary or probable consequences of the action he propoundeth; so may also the differences between apt, and inept counsellours be derived from the same. For Experience, being but Memory of the consequences of like actions formerly observed, and Counsell but the Speech whereby that experience is made known to another; the Vertues, and Defects of Counsell, are the same with the Vertues, and Defects Intellectuall: And to the Person of a Common-wealth, his Counsellours serve him in the place of Memory, and Mentall Discourse. But with this resemblance of the Common-wealth, to a naturall man, there is one dissimilitude joynd, of great importance; which is, that a naturall man receiveth his experience, from the naturall objects of sense, which work upon him without passion, or interest of their own; whereas they that give Counsell to the Representative person of a Common-wealth, may have, and have often their particular ends, and passions, that render their Counsells alwayes suspected, and many times unfaithfull. And therefore we may set down for the first condition of a good Counsellour, That His Ends, And Interest, Be Not Inconsistent With The Ends And Interest Of Him He Counselleth.

Secondly, Because the office of a Counsellour, when an action comes into deliberation, is to make manifest the consequences of it, in such manner, as he that is Counsell'd may be truly and evidently informed; he ought to propound his advise, in such forme of speech, as may make the truth most evidently appear; that is to say, with as firme ratiocination, as significant and proper language, and as briefly, as the evidence will permit. And therefore Rash, And Unevident Inferences; (such as are fetched onely from Examples, or authority of Books, and are not arguments of what is good, or evill, but witnesses of fact, or of opinion,) Obscure, Confused, And Ambiguous Expressions, Also All Metaphoricall Speeches, Tending To The Stirring Up Of Passion, (because such reasoning, and such expressions, are usefull onely to deceive, or to lead

him we Counsell towards other ends than his own) Are Repugnant To The Office Of A Counsellour.

Thirdly, Because the Ability of Counselling proceedeth from Experience, and long study; and no man is presumed to have experience in all those things that to the Administration of a great Common-wealth are necessary to be known, No Man Is Presumed To Be A Good Counsellour, But In Such Businesse, As He Hath Not Onely Been Much Versed In, But Hath Also Much Meditated On, And Considered. For seeing the businesse of a Common-wealth is this, to preserve the people at home, and defend them against forraign Invasion, we shall find, it requires great knowledge of the disposition of Man-kind, of the Rights of Government, and of the nature of Equity, Law, Justice, and Honour, not to be attained without study; And of the Strength, Commodities, Places, both of their own Country, and their Neighbours; as also of the inclinations, and designes of all Nations that may any way annoy them. And this is not attained to, without much experience. Of which things, not onely the whole summe, but every one of the particulars requires the age, and observation of a man in years, and of more than ordinary study. The wit required for Counsel, as I have said before is Judgement. And the differences of men in that point come from different education, of some to one kind of study, or businesse, and of others to another. When for the doing of any thing, there be Infallible rules, (as in Engines, and Edifices, the rules of Geometry,) all the experience of the world cannot equall his Counsell, that has learnt, or found out the Rule. And when there is no such Rule, he that hath most experience in that particular kind of businesse, has therein the best Judgement, and is the best Counsellour.

Fourthly, to be able to give Counsell to a Common-wealth, in a businesse that hath reference to another Common-wealth, It Is Necessary To Be Acquainted With The Intelligences, And Letters That Come From Thence, And With All The Records Of Treaties, And Other Transactions Of State Between Them; which none can doe, but such as the Representative shall think fit. By which we may see, that they who are not called to Counsell, can have no good Counsell in such cases to obtrude.

Fifthly, Supposing the number of Counsellors equall, a man is better Counsell'd by hearing them apart, then in an Assembly; and that for many causes. First, in hearing them apart, you have the advice of every man; but

in an Assembly may of them deliver their advise with I, or No, or with their hands, or feet, not moved by their own sense, but by the eloquence of another, or for feare of displeasing some that have spoken, or the whole Assembly, by contradiction; or for feare of appearing duller in apprehension, than those that have applauded the contrary opinion. Secondly, in an Assembly of many, there cannot choose but be some whose interests are contrary to that of the Publique; and these their Interests make passionate, and Passion eloquent, and Eloquence drawes others into the same advice. For the Passions of men, which asunder are moderate, as the heat of one brand; in Assembly are like many brands, that enflame one another, (especially when they blow one another with Orations) to the setting of the Common-wealth on fire, under pretence of Counselling it. Thirdly, in hearing every man apart, one may examine (when there is need) the truth, or probability of his reasons, and of the grounds of the advise he gives, by frequent interruptions, and objections; which cannot be done in an Assembly, where (in every difficult question) a man is rather astonied, and dazled with the variety of discourse upon it, than informed of the course he ought to take. Besides, there cannot be an Assembly of many, called together for advice, wherein there be not some, that have the ambition to be thought eloquent, and also learned in the Politiques; and give not their advice with care of the businesse propounded, but of the applause of their motly orations, made of the divers colored threds, or shreds of Authors; which is an Impertinence at least, that takes away the time of serious Consultation, and in the secret way of Counselling apart, is easily avoided. Fourthly, in Deliberations that ought to be kept secret, (whereof there be many occasions in Publique Businesse,) the Counsells of many, and especially in Assemblies, are dangerous; And therefore great Assemblies are necessitated to commit such affaires to lesser numbers, and of such persons as are most versed, and in whose fidelity they have most confidence.

To conclude, who is there that so far approves the taking of Counsell from a great Assembly of Counsellours, that wisheth for, or would accept of their pains, when there is a question of marrying his Children, disposing of his Lands, governing his Household, or managing his private Estate, especially if there be amongst them such as wish not his prosperity? A man that doth his businesse by the help of many and prudent Counsellours, with every one consulting apart in his proper element, does it best, as he

that useth able Seconds at Tennis play, placed in their proper stations. He does next best, that useth his own Judgement only; as he that has no Second at all. But he that is carried up and down to his businesse in a framed Counsell, which cannot move but by the plurality of consenting opinions, the execution whereof is commonly (out of envy, or interest) retarded by the part dissenting, does it worst of all, and like one that is carried to the ball, though by good Players, yet in a Wheele-barrough, or other frame, heavy of it self, and retarded also by the inconcurrent judgements, and endeavours of them that drive it; and so much the more, as they be more that set their hands to it; and most of all, when there is one, or more amongst them, that desire to have him lose. And though it be true, that many eys see more then one; yet it is not to be understood of many Counsellours; but then only, when the finall Resolution is in one man. Otherwise, because many eyes see the same thing in divers lines, and are apt to look asquint towards their private benefit; they that desire not to misse their marke, though they look about with two eyes, yet they never ayme but with one; And therefore no great Popular Common-wealth was ever kept up; but either by a forraign Enemy that united them; or by the reputation of some one eminent Man amongst them; or by the secret Counsell of a few; or by the mutuall feare of equall factions; and not by the open Consultations of the Assembly. And as for very little Common-wealths, be they Popular, or Monarchicall, there is no humane wisdome can uphold them, longer then the Jealousy lasteth of their potent Neighbours.

## **CHAPTER XXVI. OF CIVILL LAWES**

## Civill Law what

By CIVILL LAWES, I understand the Lawes, that men are therefore bound to observe, because they are Members, not of this, or that Commonwealth in particular, but of a Common-wealth. For the knowledge of particular Lawes belongeth to them, that professe the study of the Lawes of their severall Countries; but the knowledge of Civill Law in generall, to any man. The antient Law of Rome was called their Civil Law, from the word Civitas, which signifies a Common-wealth; And those Countries, which having been under the Roman Empire, and governed by that Law, retaine still such part thereof as they think fit, call that part the Civill Law, to distinguish it from the rest of their own Civill Lawes. But that is not it I intend to speak of here; my designe being not to shew what is Law here, and there; but what is Law; as Plato, Aristotle, Cicero, and divers others have done, without taking upon them the profession of the study of the Law.

And first it manifest, that Law in generall, is not Counsell, but Command; nor a Command of any man to any man; but only of him, whose Command is addressed to one formerly obliged to obey him. And as for Civill Law, it addeth only the name of the person Commanding, which is Persona Civitatis, the Person of the Common-wealth.

Which considered, I define Civill Law in this Manner. "CIVILL LAW, Is to every Subject, those Rules, which the Common-wealth hath Commanded him, by Word, Writing, or other sufficient Sign of the Will, to make use of, for the Distinction of Right, and Wrong; that is to say, of what is contrary, and what is not contrary to the Rule."

In which definition, there is nothing that is not at first sight evident. For every man seeth, that some Lawes are addressed to all the Subjects in generall; some to particular Provinces; some to particular Vocations; and some to particular Men; and are therefore Lawes, to every of those to whom the Command is directed; and to none else. As also, that Lawes are the Rules of Just, and Unjust; nothing being reputed Unjust, that is not contrary to some Law. Likewise, that none can make Lawes but the Common-wealth; because our Subjection is to the Common-wealth only:

and that Commands, are to be signified by sufficient Signs; because a man knows not otherwise how to obey them. And therefore, whatsoever can from this definition by necessary consequence be deduced, ought to be acknowledged for truth. Now I deduce from it this that followeth.

## **The Sovereign Is Legislator**

1. The Legislator in all Common-wealths, is only the Sovereign, be he one Man, as in a Monarchy, or one Assembly of men, as in a Democracy, or Aristocracy. For the Legislator, is he that maketh the Law. And the Common-wealth only, praescribes, and commandeth the observation of those rules, which we call Law: Therefore the Common-wealth is the Legislator. But the Common-wealth is no Person, nor has capacity to doe any thing, but by the Representative, (that is, the Sovereign;) and therefore the Sovereign is the sole Legislator. For the same reason, none can abrogate a Law made, but the Sovereign; because a Law is not abrogated, but by another Law, that forbiddeth it to be put in execution.

## **And Not Subject To Civill Law**

2. The Sovereign of a Common-wealth, be it an Assembly, or one Man, is not subject to the Civill Lawes. For having power to make, and repeale Lawes, he may when he pleaseth, free himselfe from that subjection, by repealing those Lawes that trouble him, and making of new; and consequently he was free before. For he is free, that can be free when he will: Nor is it possible for any person to be bound to himselfe; because he that can bind, can release; and therefore he that is bound to himselfe onely, is not bound.

## **Use, A Law Not By Vertue Of Time, But Of The Soveraigns Consent**

3. When long Use obtaineth the authority of a Law, it is not the Length of Time that maketh the Authority, but the Will of the Soveraign signified by his silence, (for Silence is sometimes an argument of Consent;) and it is no longer Law, then the Soveraign shall be silent therein. And therefore if the Soveraign shall have a question of Right grounded, not upon his present Will, but upon the Lawes formerly made; the Length of Time shall bring no prejudice to his Right; but the question shall be judged by Equity. For many unjust Actions, and unjust Sentences, go uncontrolled a longer time, than any man can remember. And our Lawyers account no Customes Law, but such as are reasonable, and that evill Customes are to be abolished; But the Judgement of what is reasonable, and of what is to be abolished, belongeth to him that maketh the Law, which is the Soveraign Assembly, or Monarch.

## **The Law Of Nature, And The Civill Law Contain Each Other**

4. The Law of Nature, and the Civill Law, contain each other, and are of equall extent. For the Lawes of Nature, which consist in Equity, Justice, Gratitude, and other morall Vertues on these depending, in the condition of meer Nature (as I have said before in the end of the 15th Chapter,) are not properly Lawes, but qualities that dispose men to peace, and to obedience. When a Common-wealth is once settled, then are they actually Lawes, and not before; as being then the commands of the Common-wealth; and therefore also Civill Lawes: for it is the Sovereign Power that obliges men to obey them. For in the differences of private men, to declare, what is Equity, what is Justice, and what is morall Vertue, and to make them binding, there is need of the Ordinances of Sovereign Power, and Punishments to be ordained for such as shall break them; which Ordinances are therefore part of the Civill Law. The Law of Nature therefore is a part of the Civill Law in all Common-wealths of the world. Reciprocally also, the Civill Law is a part of the Dictates of Nature. For Justice, that is to say, Performance of Covenant, and giving to every man his own, is a Dictate of the Law of Nature. But every subject in a Common-wealth, hath covenanted to obey the Civill Law, (either one with another, as when they assemble to make a common Representative, or with the Representative it selfe one by one, when subdued by the Sword they promise obedience, that they may receive life;) And therefore Obedience to the Civill Law is part also of the Law of Nature. Civill, and Naturall Law are not different kinds, but different parts of Law; whereof one part being written, is called Civill, the other unwritten, Naturall. But the Right of Nature, that is, the naturall Liberty of man, may by the Civill Law be abridged, and restrained: nay, the end of making Lawes, is no other, but such Restraint; without the which there cannot possibly be any Peace. And Law was brought into the world for nothing else, but to limit the naturall liberty of particular men, in such manner, as they might not hurt, but assist one another, and joyn together against a common Enemy.

## **Provinciall Lawes Are Not Made By Custome, But By The Sovereign Power**

5. If the Sovereign of one Common-wealth, subdue a people that have lived under other written Lawes, and afterwards govern them by the same Lawes, by which they were governed before; yet those Lawes are the Civill Lawes of the Victor, and not of the Vanquished Common-wealth, For the Legislator is he, not by whose authority the Lawes were first made, but by whose authority they now continue to be Lawes. And therefore where there be divers Provinces, within the Dominion of a Common-wealth, and in those Provinces diversity of Lawes, which commonly are called the Customes of each severall Province, we are not to understand that such Customes have their Force, onely from Length of Time; but that they were antiently Lawes written, or otherwise made known, for the Constitutions, and Statutes of their Sovereigns; and are now Lawes, not by vertue of the Praescription of time, but by the Constitutions of their present Sovereigns. But if an unwritten Law, in all the Provinces of a Dominion, shall be generally observed, and no iniquity appear in the use thereof; that law can be no other but a Law of Nature, equally obliging all man-kind.

## **Some Foolish Opinions Of Lawyers Concerning The Making Of Lawes**

6. Seeing then all Lawes, written, and unwritten, have their Authority, and force, from the Will of the Common-wealth; that is to say, from the Will of the Representative; which in a Monarchy is the Monarch, and in other Common-wealths the Sovereign Assembly; a man may wonder from whence proceed such opinions, as are found in the Books of Lawyers of eminence in severall Common-wealths, directly, or by consequence making the Legislative Power depend on private men, or subordinate Judges. As for example, "That the Common Law, hath no Controuler but the Parliament;" which is true onely where a Parliament has the Sovereign Power, and cannot be assembled, nor dissolved, but by their own discretion. For if there be a right in any else to dissolve them, there is a right also to controule them, and consequently to controule their controulings. And if there be no such right, then the Controuler of Lawes is not Parlamentum, but Rex In Parlamento. And where a Parliament is Sovereign, if it should assemble never so many, or so wise men, from the Countries subject to them, for whatsoever cause; yet there is no man will believe, that such an Assembly hath thereby acquired to themselves a Legislative Power. Item, that the two arms of a Common-wealth, are Force, and Justice; The First Whereof Is In The King; The Other Deposited In The Hands Of The Parliament. As if a Common-wealth could consist, where the Force were in any hand, which Justice had not the Authority to command and govern.

7. That Law can never be against Reason, our Lawyers are agreed; and that not the Letter,(that is, every construction of it,) but that which is according to the Intention of the Legislator, is the Law. And it is true: but the doubt is, of whose Reason it is, that shall be received for Law. It is not meant of any private Reason; for then there would be as much contradiction in the Lawes, as there is in the Schooles; nor yet (as Sr. Ed, Coke makes it (Sir Edward Coke, upon Littleton Lib.2. Ch.6 fol 97.b),) an Artificiall Perfection of Reason, Gotten By Long Study, Observation, And Experience, (as his was.) For it is possible long study may encrease, and

confirm erroneous Sentences: and where men build on false grounds, the more they build, the greater is the ruine; and of those that study, and observe with equall time, and diligence, the reasons and resolutions are, and must remain discordant: and therefore it is not that Juris Prudentia, or wisdom of subordinate Judges; but the Reason of this our Artificiall Man the Common-wealth, and his Command, that maketh Law: And the Common-wealth being in their Representative but one Person, there cannot easily arise any contradiction in the Lawes; and when there doth, the same Reason is able, by interpretation, or alteration, to take it away. In all Courts of Justice, the Sovereign (which is the Person of the Common-wealth,) is he that Judgeth: The subordinate Judge, ought to have regard to the reason, which moved his Sovereign to make such Law, that his Sentence may be according thereunto; which then is his Sovereigns Sentence; otherwise it is his own, and an unjust one.

## **Law Made, If Not Also Made Known, Is No Law**

8. From this, that the Law is a Command, and a Command consisteth in declaration, or manifestation of the will of him that commandeth, by voyce, writing, or some other sufficient argument of the same, we may understand, that the Command of the Common-wealth, is Law onely to those, that have means to take notice of it. Over naturall fooles, children, or mad-men there is no Law, no more than over brute beasts; nor are they capable of the title of just, or unjust; because they had never power to make any covenant, or to understand the consequences thereof; and consequently never took upon them to authorise the actions of any Sovereign, as they must do that make to themselves a Common-wealth. And as those from whom Nature, or Accident hath taken away the notice of all Lawes in generall; so also every man, from whom any accident, not proceeding from his own default, hath taken away the means to take notice of any particular Law, is excused, if he observe it not; And to speak properly, that Law is no Law to him. It is therefore necessary, to consider in this place, what arguments, and signes be sufficient for the knowledge of what is the Law; that is to say, what is the will of the Sovereign, as well in Monarchies, as in other formes of government.

## Unwritten Lawes Are All Of Them Lawes Of Nature

And first, if it be a Law that obliges all the Subjects without exception, and is not written, nor otherwise published in such places as they may take notice thereof, it is a Law of Nature. For whatsoever men are to take knowledge of for Law, not upon other mens words, but every one from his own reason, must be such as is agreeable to the reason of all men; which no Law can be, but the Law of Nature. The Lawes of Nature therefore need not any publishing, nor Proclamation; as being contained in this one Sentence, approved by all the world, "Do not that to another, which thou thinkest unreasonable to be done by another to thy selfe."

Secondly, if it be a Law that obliges only some condition of men, or one particular man and be not written, nor published by word, then also it is a Law of Nature; and known by the same arguments, and signs, that distinguish those in such a condition, from other Subjects. For whatsoever Law is not written, or some way published by him that makes it Law, can be known no way, but by the reason of him that is to obey it; and is therefore also a Law not only Civill, but Naturall. For example, if the Sovereign employ a Publique Minister, without written Instructions what to doe; he is obliged to take for Instructions the Dictates of Reason; As if he make a Judge, The Judge is to take notice, that his Sentence ought to be according to the reason of his Sovereign, which being alwaies understood to be Equity, he is bound to it by the Law of Nature: Or if an Ambassador, he is (in al things not contened in his written Instructions) to take for Instruction that which Reason dictates to be most conducing to his Sovereigns interest; and so of all other Ministers of the Sovereignty, publique and private. All which Instructions of naturall Reason may be comprehended under one name of Fidelity; which is a branch of naturall Justice.

The Law of Nature excepted, it belongeth to the essence of all other Lawes, to be made known, to every man that shall be obliged to obey them, either by word, or writing, or some other act, known to proceed from

the Sovereign Authority. For the will of another, cannot be understood, but by his own word, or act, or by conjecture taken from his scope and purpose; which in the person of the Common-wealth, is to be supposed alwaies consonant to Equity and Reason. And in antient time, before letters were in common use, the Lawes were many times put into verse; that the rude people taking pleasure in singing, or reciting them, might the more easily reteine them in memory. And for the same reason Solomon adviseth a man, to bind the ten Commandements (Prov. 7. 3) upon his ten fingers. And for the Law which Moses gave to the people of Israel at the renewing of the Covenant, (Deut. 11. 19) he biddeth them to teach it their Children, by discoursing of it both at home, and upon the way; at going to bed, and at rising from bed; and to write it upon the posts, and dores of their houses; and (Deut. 31. 12) to assemble the people, man, woman, and child, to heare it read.

## **Nothing Is Law Where The Legislator Cannot Be Known**

Nor is it enough the Law be written, and published; but also that there be manifest signs, that it proceedeth from the will of the Sovereign. For private men, when they have, or think they have force enough to secure their unjust designes, and convoy them safely to their ambitious ends, may publish for Lawes what they please, without, or against the Legislative Authority. There is therefore requisite, not only a Declaration of the Law, but also sufficient signes of the Author, and Authority. The Author, or Legislator is supposed in every Common-wealth to be evident, because he is the Sovereign, who having been Constituted by the consent of every one, is supposed by every one to be sufficiently known. And though the ignorance, and security of men be such, for the most part, as that when the memory of the first Constitution of their Common-wealth is worn out, they doe not consider, by whose power they use to be defended against their enemies, and to have their industry protected, and to be righted when injury is done them; yet because no man that considers, can make question of it, no excuse can be derived from the ignorance of where the Sovereignty is placed. And it is a Dictate of Naturall Reason, and consequently an evident Law of Nature, that no man ought to weaken that power, the protection whereof he hath himself demanded, or wittingly received against others. Therefore of who is Sovereign, no man, but by his own fault, (whatsoever evill men suggest,) can make any doubt. The difficulty consisteth in the evidence of the Authority derived from him; The removing whereof, dependeth on the knowledge of the publique Registers, publique Counsels, publique Ministers, and publique Seales; by which all Lawes are sufficiently verified.

## **Difference Between Verifying And Authorising**

Verified, I say, not Authorised: for the Verification, is but the Testimony and Record; not the Authority of the law; which consisteth in the Command of the Sovereign only.

## **The Law Verified By The Subordinate Judge**

If therefore a man have a question of Injury, depending on the Law of Nature; that is to say, on common Equity; the Sentence of the Judge, that by Commission hath Authority to take cognisance of such causes, is a sufficient Verification of the Law of Nature in that individuall case. For though the advice of one that professeth the study of the Law, be usefull for the avoyding of contention; yet it is but advice; tis the Judge must tell men what is Law, upon the hearing of the Controversy.

## **By The Publique Registers**

But when the question is of injury, or crime, upon a written Law; every man by recourse to the Registers, by himself, or others, may (if he will) be sufficiently enformed, before he doe such injury, or commit the crime, whither it be an injury, or not: Nay he ought to doe so: for when a man doubts whether the act he goeth about, be just, or unjust; and may informe himself, if he will; the doing is unlawfull. In like manner, he that supposeth himself injured, in a case determined by the written Law, which he may by himself, or others see and consider; if he complaine before he consults with the Law, he does unjustly, and bewrayeth a disposition rather to vex other men, than to demand his own right.

## **By Letters Patent, And Publique Seale**

If the question be of Obedience to a publique Officer; To have seen his Commission, with the Publique Seale, and heard it read; or to have had the means to be informed of it, if a man would, is a sufficient Verification of his Authority. For every man is obliged to doe his best endeavour, to informe himself of all written Lawes, that may concerne his own future actions.

## **The Interpretation Of The Law Dependeth On The Sovereign Power**

The Legislator known; and the Lawes, either by writing, or by the light of Nature, sufficiently published; there wanteth yet another very materiall circumstance to make them obligatory. For it is not the Letter, but the Intendment, or Meaning; that is to say, the authentique Interpretation of the Law (which is the sense of the Legislator,) in which the nature of the Law consisteth; And therefore the Interpretation of all Lawes dependeth on the Authority Sovereign; and the Interpreters can be none but those, which the Sovereign, (to whom only the Subject oweth obedience) shall appoint. For else, by the craft of an Interpreter, the Law my be made to beare a sense, contrary to that of the Sovereign; by which means the Interpreter becomes the Legislator.

## **All Lawes Need Interpretation**

All Laws, written, and unwritten, have need of Interpretation. The unwritten Law of Nature, though it be easy to such, as without partiality, and passion, make use of their naturall reason, and therefore leaves the violators thereof without excuse; yet considering there be very few, perhaps none, that in some cases are not blinded by self love, or some other passion, it is now become of all Laws the most obscure; and has consequently the greatest need of able Interpreters. The written Laws, if they be short, are easily mis-interpreted, from the divers significations of a word, or two; if long, they be more obscure by the diverse significations of many words: in so much as no written Law, delivered in few, or many words, can be well understood, without a perfect understanding of the finall causes, for which the Law was made; the knowledge of which finall causes is in the Legislator. To him therefore there can not be any knot in the Law, insoluble; either by finding out the ends, to undoe it by; or else by making what ends he will, (as Alexander did with his sword in the Gordian knot,) by the Legislative power; which no other Interpreter can doe.

## **The Authentically Interpretation Of Law Is Not That Of Writers**

The Interpretation of the Lawes of Nature, in a Common-wealth, dependeth not on the books of Morall Philosophy. The Authority of writers, without the Authority of the Common-wealth, maketh not their opinions Law, be they never so true. That which I have written in this Treatise, concerning the Morall Vertues, and of their necessity, for the procuring, and maintaining peace, though it bee evident Truth, is not therefore presently Law; but because in all Common-wealths in the world, it is part of the Civill Law: For though it be naturally reasonable; yet it is by the Sovereigne Power that it is Law: Otherwise, it were a great error, to call the Lawes of Nature unwritten Law; whereof wee see so many volumes published, and in them so many contradictions of one another, and of themselves.

# **The Interpreter Of The Law Is The Judge Giving Sentence Viva Voce**

## **In Every Particular Case**

The Interpretation of the Law of Nature, is the Sentence of the Judge constituted by the Sovereign Authority, to heare and determine such controversies, as depend thereon; and consisteth in the application of the Law to the present case. For in the act of Judicature, the Judge doth no more but consider, whither the demand of the party, be consonant to naturall reason, and Equity; and the Sentence he giveth, is therefore the Interpretation of the Law of Nature; which Interpretation is Authentique; not because it is his private Sentence; but because he giveth it by Authority of the Sovereign, whereby it becomes the Sovereigns Sentence; which is Law for that time, to the parties pleading.

# **The Sentence Of A Judge, Does Not Bind Him, Or Another Judge**

## **To Give Like Sentence In Like Cases Ever After**

But because there is no Judge Subordinate, nor Sovereign, but may erre in a Judgement of Equity; if afterward in another like case he find it more consonant to Equity to give a contrary Sentence, he is obliged to doe it. No mans error becomes his own Law; nor obliges him to persist in it. Neither (for the same reason) becomes it a Law to other Judges, though sworn to follow it. For though a wrong Sentence given by authority of the Sovereign, if he know and allow it, in such Lawes as are mutable, be a constitution of a new Law, in cases, in which every little circumstance is the same; yet in Lawes immutable, such as are the Lawes of Nature, they are no Lawes to the same, or other Judges, in the like cases for ever after. Princes succeed one another; and one Judge passeth, another commeth; nay, Heaven and Earth shall passe; but not one title of the Law of Nature shall passe; for it is the Eternall Law of God. Therefore all the Sentences of precedent Judges that have ever been, cannot all together make a Law contrary to naturall Equity: Nor any Examples of former Judges, can warrant an unreasonable Sentence, or discharge the present Judge of the trouble of studying what is Equity (in the case he is to Judge,) from the principles of his own naturall reason. For example sake, 'Tis against the Law of Nature, To Punish The Innocent; and Innocent is he that acquitteth himselfe Judicially, and is acknowledged for Innocent by the Judge. Put the case now, that a man is accused of a capitall crime, and seeing the powers and malice of some enemy, and the frequent corruption and partiality of Judges, runneth away for feare of the event, and afterwards is taken, and brought to a legall triall, and maketh it sufficiently appear, he was not guilty of the crime, and being thereof acquitted, is neverthesse condemned to lose his goods; this is a manifest condemnation of the Innocent. I say therefore, that there is no place in the world, where this can be an interpretation of a Law of Nature, or be made a Law by the Sentences of precedent Judges, that had done the same. For he that judged

it first, judged unjustly; and no Injustice can be a pattern of Judgement to succeeding Judges. A written Law may forbid innocent men to fly, and they may be punished for flying: But that flying for feare of injury, should be taken for presumption of guilt, after a man is already absolved of the crime Judicially, is contrary to the nature of a Presumption, which hath no place after Judgement given. Yet this is set down by a great Lawyer for the common Law of England. "If a man," saith he, "that is Innocent, be accused of Felony, and for feare flyeth for the same; albeit he judicially acquitteth himselfe of the Felony; yet if it be found that he fled for the Felony, he shall notwithstanding his Innocency, Forfeit all his goods, chattels, debts, and duties. For as to the Forfeiture of them, the Law will admit no prooffe against the Presumption in Law, grounded upon his flight." Here you see, An Innocent Man, Judicially Acquitted, Notwithstanding His Innocency, (when no written Law forbad him to fly) after his acquitall, Upon A Presumption In Law, condemned to lose all the goods he hath. If the Law ground upon his flight a Presumption of the fact, (which was Capitall,) the Sentence ought to have been Capitall: if the presumption were not of the Fact, for what then ought he to lose his goods? This therefore is no Law of England; nor is the condemnation grounded upon a Presumption of Law, but upon the Presumption of the Judges. It is also against Law, to say that no Prooffe shall be admitted against a Presumption of Law. For all Judges, Sovereign and subordinate, if they refuse to heare Prooffe, refuse to do Justice: for though the Sentence be Just, yet the Judges that condemn without hearing the Proofes offered, are Unjust Judges; and their Presumption is but Prejudice; which no man ought to bring with him to the Seat of Justice, whatsoever precedent judgements, or examples he shall pretend to follow. There be other things of this nature, wherein mens Judgements have been perverted, by trusting to Precedents: but this is enough to shew, that though the Sentence of the Judge, be a Law to the party pleading, yet it is no Law to any Judge, that shall succeed him in that Office.

In like manner, when question is of the Meaning of written Lawes, he is not the Interpreter of them, that writeth a Commentary upon them. For Commentaries are commonly more subject to cavill, than the Text; and therefore need other Commentaries; and so there will be no end of such Interpretation. And therefore unlesse there be an Interpreter authorised by the Sovereign, from which the subordinate Judges are not to recede, the

Interpreter can be no other than the ordinary Judges, in the some manner, as they are in cases of the unwritten Law; and their Sentences are to be taken by them that plead, for Lawes in that particular case; but not to bind other Judges, in like cases to give like judgements. For a Judge may erre in the Interpretation even of written Lawes; but no error of a subordinate Judge, can change the Law, which is the generall Sentence of the Sovereigne.

## **The Difference Between The Letter And Sentence Of The Law**

In written Lawes, men use to make a difference between the Letter, and the Sentence of the Law: And when by the Letter, is meant whatsoever can be gathered from the bare words, 'tis well distinguished. For the significations of almost all words, are either in themselves, or in the metaphoricall use of them, ambiguous; and may be drawn in argument, to make many senses; but there is onely one sense of the Law. But if by the Letter, be meant the Literall sense, then the Letter, and the Sentence or intention of the Law, is all one. For the literall sense is that, which the Legislator is alwayes supposed to be Equity: For it were a great contumely for a Judge to think otherwise of the Sovereigne. He ought therefore, if the Word of the Law doe not fully authorise a reasonable Sentence, to supply it with the Law of Nature; or if the case be difficult, to respit Judgement till he have received more ample authority. For Example, a written Law ordaineth, that he which is thrust out of his house by force, shall be restored by force: It happens that a man by negligence leaves his house empty, and returning is kept out by force, in which case there is no speciall Law ordained. It is evident, that this case is contained in the same Law: for else there is no remedy for him at all; which is to be supposed against the Intention of the Legislator. Again, the word of the Law, commandeth to Judge according to the Evidence: A man is accused falsly of a fact, which the Judge saw himself done by another; and not by him that is accused. In this case neither shall the Letter of the Law be followed to the condemnation of the Innocent, nor shall the Judge give Sentence against the evidence of the Witnesses; because the Letter of the Law is to the contrary: but procure of the Sovereign that another be made Judge, and himselfe Witnesse. So that the incommodity that follows the bare words of a written Law, may lead him to the Intention of the Law, whereby to interpret the same the better; though no Incommodity can warrant a Sentence against the Law. For every Judge of Right, and Wrong, is not Judge of what is Commodious, or Incommodious to the Common-wealth.

## The Abilities Required In A Judge

The abilities required in a good Interpreter of the Law, that is to say, in a good Judge, are not the same with those of an Advocate; namely the study of the Lawes. For a Judge, as he ought to take notice of the Fact, from none but the Witnesses; so also he ought to take notice of the Law, from nothing but the Statutes, and Constitutions of the Sovereign, alledged in the pleading, or declared to him by some that have authority from the Sovereign Power to declare them; and need not take care before-hand, what hee shall Judge; for it shall be given him what hee shall say concerning the Fact, by Witnesses; and what hee shall say in point of Law, from those that shall in their pleadings shew it, and by authority interpret it upon the place. The Lords of Parliament in England were Judges, and most difficult causes have been heard and determined by them; yet few of them were much versed in the study of the Lawes, and fewer had made profession of them: and though they consulted with Lawyers, that were appointed to be present there for that purpose; yet they alone had the authority of giving Sentence. In like manner, in the ordinary trialls of Right, Twelve men of the common People, are the Judges, and give Sentence, not onely of the Fact, but of the Right; and pronounce simply for the Complaynant, or for the Defendant; that is to say, are Judges not onely of the Fact, but also of the Right: and in a question of crime, not onely determine whether done, or not done; but also whether it be Murder, Homicide, Felony, Assault, and the like, which are determinations of Law: but because they are not supposed to know the Law of themselves, there is one that hath Authority to enforme them of it, in the particular case they are to Judge of. But yet if they judge not according to that he tells them, they are not subject thereby to any penalty; unlesse it be made appear, they did it against their consciences, or had been corrupted by reward. The things that make a good Judge, or good Interpreter of the Lawes, are, first A Right Understanding of that principall Law of Nature called Equity; which depending not on the reading of other mens Writings, but on the goodnesse of a mans own naturall Reason, and Meditation, is presumed to be in those most, that have had most leisure, and had the most inclination

to meditate thereon. Secondly, Contempt Of Unnecessary Riches, and Preferments. Thirdly, To Be Able In Judgement To Devest Himselfe Of All Feare, Anger, Hatred, Love, And Compassion. Fourthly, and lastly, Patience To Heare; Diligent Attention In Hearing; And Memory To Retain, Digest And Apply What He Hath Heard.

## Divisions Of Law

The difference and division of the Lawes, has been made in divers manners, according to the different methods, of those men that have written of them. For it is a thing that dependeth not on Nature, but on the scope of the Writer; and is subservient to every mans proper method. In the Institutions of Justinian, we find seven sorts of Civill Lawes.

1. The Edicts, Constitutions, and Epistles Of The Prince, that is, of the Emperour; because the whole power of the people was in him. Like these, are the Proclamations of the Kings of England.

2. The Decrees Of The Whole People Of Rome (comprehending the Senate,) when they were put to the Question by the Senate. These were Lawes, at first, by the vertue of the Sovereign Power residing in the people; and such of them as by the Emperours were not abrogated, remained Lawes by the Authority Imperiall. For all Lawes that bind, are understood to be Lawes by his authority that has power to repeale them. Somewhat like to these Lawes, are the Acts of Parliament in England.

3. The Decrees Of The Common People (excluding the Senate,) when they were put to the question by the Tribune of the people. For such of them as were not abrogated by the Emperours, remained Lawes by the Authority Imperiall. Like to these, were the Orders of the House of Commons in England.

4. *Senatus Consulta*, the Orders Of The Senate; because when the people of Rome grew so numerous, as it was inconvenient to assemble them; it was thought fit by the Emperour, that men should Consult the Senate in stead of the people: And these have some resemblance with the Acts of Counsell.

5. The Edicts Of Praetors, and (in some Cases) of the Aediles: such as are the Chiefe Justices in the Courts of England.

6. *Responsa Prudentum*; which were the Sentences, and Opinions of those Lawyers, to whom the Emperour gave Authority to interpret the Law, and to give answer to such as in matter of Law demanded their advice; which Answers, the Judges in giving Judgement were obliged by the

Constitutions of the Emperour to observe; And should be like the Reports of Cases Judged, if other Judges be by the Law of England bound to observe them. For the Judges of the Common Law of England, are not properly Judges, but Juris Consulti; of whom the Judges, who are either the Lords, or Twelve men of the Country, are in point of Law to ask advice.

7. Also, Unwritten Customes, (which in their own nature are an imitation of Law,) by the tacite consent of the Emperour, in case they be not contrary to the Law of Nature, are very Lawes.

Another division of Lawes, is into Naturall and Positive. Naturall are those which have been Lawes from all Eternity; and are called not onely Naturall, but also Morall Lawes; consisting in the Morall Vertues, as Justice, Equity, and all habits of the mind that conduce to Peace, and Charity; of which I have already spoken in the fourteenth and fifteenth Chapters.

Positive, are those which have not been for Eternity; but have been made Lawes by the Will of those that have had the Sovereign Power over others; and are either written, or made known to men, by some other argument of the Will of their Legislator.

## **Another Division Of Law**

Again, of Positive Lawes some are Humane, some Divine; And of Humane positive lawes, some are Distributive, some Penal. Distributive are those that determine the Rights of the Subjects, declaring to every man what it is, by which he acquireth and holdeth a propriety in lands, or goods, and a right or liberty of action; and these speak to all the Subjects. Penal are those, which declare, what Penalty shall be inflicted on those that violate the Law; and speak to the Ministers and Officers ordained for execution. For though every one ought to be informed of the Punishments ordained beforehand for their transgression; neverthelesse the Command is not addressed to the Delinquent, (who cannot be supposed will faithfully punish himselfe,) but to publique Ministers appointed to see the Penalty executed. And these Penal Lawes are for the most part written together with the Lawes Distributive; and are sometimes called Judgements. For all Lawes are generall judgements, or Sentences of the Legislator; as also every particular Judgement, is a Law to him, whose case is Judged.

## **Divine Positive Law How Made Known To Be Law**

Divine Positive Lawes (for Naturall Lawes being Eternall, and Universall, are all Divine,) are those, which being the Commandements of God, (not from all Eternity, nor universally addressed to all men, but onely to a certain people, or to certain persons,) are declared for such, by those whom God hath authorised to declare them. But this Authority of man to declare what be these Positive Lawes of God, how can it be known? God may command a man by a supernaturall way, to deliver Lawes to other men. But because it is of the essence of Law, that he who is to be obliged, be assured of the Authority of him that declareth it, which we cannot naturally take notice to be from God, How Can A Man Without Supernaturall Revelation Be Assured Of The Revelation Received By The Declarer? and How Can He Be Bound To Obey Them? For the first question, how a man can be assured of the Revelation of another, without a Revelation particularly to himselfe, it is evidently impossible: for though a man may be induced to believe such Revelation, from the Miracles they see him doe, or from seeing the Extraordinary sanctity of his life, or from seeing the Extraordinary wisdom, or Extraordinary felicity of his Actions, all which are marks of Gods extraordinary favour; yet they are not assured evidence of speciall Revelation. Miracles are Marvellous workes: but that which is marvellous to one, may not be so to another. Sanctity may be feigned; and the visible felicities of this world, are most often the work of God by Naturall, and ordinary causes. And therefore no man can infallibly know by naturall reason, that another has had a supernaturall revelation of Gods will; but only a believe; every one (as the signs thereof shall appear greater, or lesser) a firmer, or a weaker belief.

But for the second, how he can be bound to obey them; it is not so hard. For if the Law declared, be not against the Law of Nature (which is undoubtedly Gods Law) and he undertake to obey it, he is bound by his own act; bound I say to obey it, but not bound to believe it: for mens believe, and interiour cogitations, are not subject to the commands, but only to the operation of God, ordinary, or extraordinary. Faith of Supernaturall Law, is not a fulfilling, but only an assenting to the same;

and not a duty that we exhibite to God, but a gift which God freely giveth to whom he pleaseth; as also Unbelief is not a breach of any of his Lawes; but a rejection of them all, except the Lawes Naturall. But this that I say, will be made yet cleerer, by the Examples, and Testimonies concerning this point in holy Scripture. The Covenant God made with Abraham (in a Supernaturall Manner) was thus, (Gen. 17. 10) "This is the Covenant which thou shalt observe between Me and Thee and thy Seed after thee." Abrahams Seed had not this revelation, nor were yet in being; yet they are a party to the Covenant, and bound to obey what Abraham should declare to them for Gods Law; which they could not be, but in vertue of the obedience they owed to their Parents; who (if they be Subject to no other earthly power, as here in the case of Abraham) have Sovereign power over their children, and servants. Againe, where God saith to Abraham, "In thee shall all Nations of the earth be blessed: For I know thou wilt command thy children, and thy house after thee to keep the way of the Lord, and to observe Righteousnesse and Judgement," it is manifest, the obedience of his Family, who had no Revelation, depended on their former obligation to obey their Sovereign. At Mount Sinai Moses only went up to God; the people were forbidden to approach on paine of death; yet were they bound to obey all that Moses declared to them for Gods Law. Upon what ground, but on this submission of their own, "Speak thou to us, and we will heare thee; but let not God speak to us, lest we dye?" By which two places it sufficiently appeareth, that in a Common-wealth, a subject that has no certain and assured Revelation particularly to himself concerning the Will of God, is to obey for such, the Command of the Common-wealth: for if men were at liberty, to take for Gods Commandements, their own dreams, and fancies, or the dreams and fancies of private men; scarce two men would agree upon what is Gods Commandement; and yet in respect of them, every man would despise the Commandements of the Common-wealth. I conclude therefore, that in all things not contrary to the Morall Law, (that is to say, to the Law of Nature,) all Subjects are bound to obey that for divine Law, which is declared to be so, by the Lawes of the Common-wealth. Which also is evident to any mans reason; for whatsoever is not against the Law of Nature, may be made Law in the name of them that have the Sovereign power; and there is no reason men should be the lesse obliged by it, when tis propounded in the name of God. Besides, there is no place in the world where men are permitted to pretend

other Commandements of God, than are declared for such by the Common-wealth. Christian States punish those that revolt from Christian Religion, and all other States, those that set up any Religion by them forbidden. For in whatsoever is not regulated by the Common-wealth, tis Equity (which is the Law of Nature, and therefore an eternall Law of God) that every man equally enjoy his liberty.

## **Another Division Of Lawes**

There is also another distinction of Lawes, into Fundamentall, and Not Fundamentall: but I could never see in any Author, what a Fundamentall Law signifieth. Neverthelesse one may very reasonably distinguish Lawes in that manner.

## **A Fundamentall Law What**

For a Fundamentall Law in every Common-wealth is that, which being taken away, the Common-wealth faileth, and is utterly dissolved; as a building whose Foundation is destroyed. And therefore a Fundamentall Law is that, by which Subjects are bound to uphold whatsoever power is given to the Sovereign, whether a Monarch, or a Sovereign Assembly, without which the Common-wealth cannot stand, such as is the power of War and Peace, of Judicature, of Election of Officers, and of doing whatsoever he shall think necessary for the Publique good. Not Fundamentall is that the abrogating whereof, draweth not with it the dissolution of the Common-Wealth; such as are the Lawes Concerning Controversies between subject and subject. Thus much of the Division of Lawes.

## **Difference Between Law And Right**

I find the words *Lex Civilis*, and *Jus Civile*, that is to say, Law and Right Civil, promiscuously used for the same thing, even in the most learned Authors; which neverthelesse ought not to be so. For Right is Liberty, namely that Liberty which the Civil Law leaves us: But Civill Law is an Obligation; and takes from us the Liberty which the Law of Nature gave us. Nature gave a Right to every man to secure himselfe by his own strength, and to invade a suspected neighbour, by way of prevention; but the Civill Law takes away that Liberty, in all cases where the protection of the Lawe may be safely stayd for. Insomuch as *Lex* and *Jus*, are as different as Obligation and Liberty.

## **And Between A Law And A Charter**

Likewise Lawes and Charters are taken promiscuously for the same thing. Yet Charters are Donations of the Sovereign; and not Lawes, but exemptions from Law. The phrase of a Law is Jubeo, Injungo, I Command, and Enjoyn: the phrase of a Charter is Dedi, Concessi, I Have Given, I Have Granted: but what is given or granted, to a man, is not forced upon him, by a Law. A Law may be made to bind All the Subjects of a Common-wealth: a Liberty, or Charter is only to One man, or some One part of the people. For to say all the people of a Common-wealth, have Liberty in any case whatsoever; is to say, that in such case, there hath been no Law made; or else having been made, is now abrogated.

## CHAPTER XXVII. OF CRIMES, EXCUSES, AND EXTENUATIONS

Sinne What

A Sinne, is not onely a Transgression of a Law, but also any Contempt of the Legislator. For such Contempt, is a breach of all his Lawes at once. And therefore may consist, not onely in the Commission of a Fact, or in the Speaking of Words by the Lawes forbidden, or in the Omission of what the Law commandeth, but also in the Intention, or purpose to transgresse. For the purpose to breake the Law, is some degree of Contempt of him, to whom it belongeth to see it executed. To be delighted in the Imagination onely, of being possessed of another mans goods, servants, or wife, without any intention to take them from him by force, or fraud, is no breach of the Law, that sayth, "Thou shalt not covet:" nor is the pleasure a man my have in imagining, or dreaming of the death of him, from whose life he expecteth nothing but dammage, and displeasure, a Sinne; but the resolving to put some Act in execution, that tendeth thereto. For to be pleased in the fiction of that, which would please a man if it were reall, is a Passion so adhaerent to the Nature both of a man, and every other living creature, as to make it a Sinne, were to make Sinne of being a man. The consideration of this, has made me think them too severe, both to themselves, and others, that maintain, that the First motions of the mind, (though checked with the fear of God) be Sinnes. But I confesse it is safer to erre on that hand, than on the other.

## A Crime What

A Crime, is a sinne, consisting in the Committing (by Deed, or Word) of that which the Law forbiddeth, or the Omission of what it hath commanded. So that every Crime is a sinne; but not every sinne a Crime. To intend to steale, or kill, is a sinne, though it never appeare in Word, or Fact: for God that seeth the thoughts of man, can lay it to his charge: but till it appear by some thing done, or said, by which the intention may be Crime; which distinction the Greeks observed in the word amartema, and egklema, or aitia; wherof the former, (which is translated Sinne,) signifieth any swarving from the Law whatsoever; but the two later, (which are translated Crime,) signifie that sinne onely, whereof one man may accuse another. But of Intentions, which never appear by any outward act, there is no place for humane accusation. In like manner the Latines by Peccatum, which is Sinne, signifie all manner of deviation from the Law; but by crimen, (which word they derive from Cerno, which signifies to perceive,) they mean onely such sinnes, as may be made appear before a Judge; and therefore are not meer Intentions.

## **Where No Civill Law Is, There Is No Crime**

From this relation of Sinne to the Law, and of Crime to the Civill Law, may be inferred, First, that where Law ceaseth, Sinne ceaseth. But because the Law of Nature is eternall, Violation of Covenants, Ingratitude, Arrogance, and all Facts contrary to any Morall vertue, can never cease to be Sinne. Secondly, that the Civill Law ceasing, Crimes cease: for there being no other Law remaining, but that of Nature, there is no place for Accusation; every man being his own Judge, and accused onely by his own Conscience, and cleared by the Uprightnesse of his own Intention. When therefore his Intention is Right, his fact is no Sinne: if otherwise, his fact is Sinne; but not Crime. Thirdly, That when the Soveraign Power ceaseth, Crime also ceaseth: for where there is no such Power, there is no protection to be had from the Law; and therefore every one may protect himself by his own power: for no man in the Institution of Soveraign Power can be supposed to give away the Right of preserving his own body; for the safety whereof all Soveraignty was ordained. But this is to be understood onely of those, that have not themselves contributed to the taking away of the Power that protected them: for that was a Crime from the beginning.

## **Ignorance Of The Law Of Nature Excuseth No Man**

The source of every Crime, is some defect of the Understanding; or some error in Reasoning, or some sudden force of the Passions. Defect in the Understanding, is Ignorance; in Reasoning, Erroneous Opinion. Again, ignorance is of three sort; of the Law, and of the Sovereign, and of the Penalty. Ignorance of the Law of Nature Excuseth no man; because every man that hath attained to the use of Reason, is supposed to know, he ought not to do to another, what he would not have done to himselfe. Therefore into what place soever a man shall come, if he do any thing contrary to that Law, it is a Crime. If a man come from the Indies hither, and perswade men here to receive a new Religion, or teach them any thing that tendeth to disobedience of the Lawes of this Country, though he be never so well perswaded of the truth of what he teacheth, he commits a Crime, and may be justly punished for the same, not onely because his doctrine is false, but also because he does that which he would not approve in another, namely, that comming from hence, he should endeavour to alter the Religion there. But ignorance of the Civill Law, shall Excuse a man in a strange Country, till it be declared to him; because, till then no Civill Law is binding.

## **Ignorance Of The Civill Law Excuseth Sometimes**

In the like manner, if the Civill Law of a mans own Country, be not so sufficiently declared, as he may know it if he will; nor the Action against the Law of Nature; the Ignorance is a good Excuse: In other cases ignorance of the Civill Law, Excuseth not.

## **Ignorance Of The Sovereign Excuseth Not**

Ignorance of the Sovereign Power, in the place of a mans ordinary residence, Excuseth him not; because he ought to take notice of the Power, by which he hath been protected there.

## **Ignorance Of The Penalty Excuseth Not**

Ignorance of the Penalty, where the Law is declared, Excuseth no man: For in breaking the Law, which without a fear of penalty to follow, were not a Law, but vain words, he undergoeth the penalty, though he know not what it is; because, whosoever voluntarily doth any action, accepteth all the known consequences of it; but Punishment is a known consequence of the violation of the Lawes, in every Common-wealth; which punishment, if it be determined already by the Law, he is subject to that; if not, then is he subject to Arbitrary punishment. For it is reason, that he which does Injury, without other limitation than that of his own Will, should suffer punishment without other limitation, than that of his Will whose Law is thereby violated.

# **Punishments Declared Before The Fact, Excuse From Greater Punishments**

## **After It**

But when a penalty, is either annexed to the Crime in the Law it selfe, or hath been usually inflicted in the like cases; there the Delinquent is Excused from a greater penalty. For the punishment foreknown, if not great enough to deterre men from the action, is an invitement to it: because when men compare the benefit of their Injustice, with the harm of their punishment, by necessity of Nature they choose that which appeareth best for themselves; and therefore when they are punished more than the Law had formerly determined, or more than others were punished for the same Crime; it the Law that tempted, and deceiveth them.

## **Nothing Can Be Made A Crime By A Law Made After The Fact**

No Law, made after a Fact done, can make it a Crime: because if the Fact be against the Law of Nature, the Law was before the Fact; and a Positive Law cannot be taken notice of, before it be made; and therefore cannot be Obligatory. But when the Law that forbiddeth a Fact, is made before the Fact be done; yet he that doth the Fact, is lyable to the Penalty ordained after, in case no lesser Penalty were made known before, neither by Writing, nor by Example, for the reason immediatly before alledged.

## **False Principles Of Right And Wrong Causes Of Crime**

From defect in Reasoning, (that is to say, from Error,) men are prone to violate the Lawes, three wayes. First, by Presumption of false Principles; as when men from having observed how in all places, and in all ages, unjust Actions have been authorised, by the force, and victories of those who have committed them; and that potent men, breaking through the Cob-web Lawes of their Country, the weaker sort, and those that have failed in their Enterprises, have been esteemed the onely Criminals; have thereupon taken for Principles, and grounds of their Reasoning, "That Justice is but a vain word: That whatsoever a man can get by his own Industry, and hazard, is his own: That the Practice of all Nations cannot be unjust: That examples of former times are good Arguments of doing the like again;" and many more of that kind: Which being granted, no Act in it selfe can be a Crime, but must be made so (not by the Law, but) by the successe of them that commit it; and the same Fact be vertuous, or vicious, as Fortune pleaseth; so that what Marius makes a Crime, Sylla shall make meritorious, and Caesar (the same Lawes standing) turn again into a Crime, to the perpetuall disturbance of the Peace of the Commonwealth.

## **False Teachers Mis-interpreting The Law Of Nature Secondly, by false**

Teachers, that either mis-interpret the Law of Nature, making it thereby repugnant to the Law Civill; or by teaching for Lawes, such Doctrines of their own, or Traditions of former times, as are inconsistent with the duty of a Subject.

## **And False Inferences From True Principles, By Teachers**

Thirdly, by Erroneous Inferences from True Principles; which happens commonly to men that are hasty, and praecipitate in concluding, and resolving what to do; such as are they, that have both a great opinion of their own understanding, and believe that things of this nature require not time and study, but onely common experience, and a good naturall wit; whereof no man thinks himselfe unprovided: whereas the knowledge, of Right and Wrong, which is no lesse difficult, there is no man will pretend to, without great and long study. And of those defects in Reasoning, there is none that can Excuse (though some of them may Extenuate) a Crime, in any man, that pretendeth to the administration of his own private businesse; much lesse in them that undertake a publique charge; because they pretend to the Reason, upon the want whereof they would ground their Excuse.

## **By Their Passions;**

Of the Passions that most frequently are the causes of Crime, one, is Vain-glory, or a foolish over-rating of their own worth; as if difference of worth, were an effect of their wit, or riches, or bloud, or some other naturall quality, not depending on the Will of those that have the Sovereign Authority. From whence proceedeth a Presumption that the punishments ordained by the Lawes, and extended generally to all Subjects, ought not to be inflicted on them, with the same rigour they are inflicted on poore, obscure, and simple men, comprehended under the name of the Vulgar.

## **Presumption Of Riches**

Therefore it happeneth commonly, that such as value themselves by the greatnesse of their wealth, adventure on Crimes, upon hope of escaping punishment, by corrupting publique Justice, or obtaining Pardon by Mony, or other rewards.

## **And Friends**

And that such as have multitude of Potent Kindred; and popular men, that have gained reputation amongst the Multitude, take courage to violate the Lawes, from a hope of oppressing the Power, to whom it belongeth to put them in execution.

## Wisedome

And that such as have a great, and false opinion of their own Wisedome, take upon them to reprehend the actions, and call in question the Authority of them that govern, and so to unsettle the Lawes with their publique discourse, as that nothing shall be a Crime, but what their own designes require should be so. It happeneth also to the same men, to be prone to all such Crimes, as consist in Craft, and in deceiving of their Neighbours; because they think their designes are too subtile to be perceived. These I say are effects of a false presumption of their own Wisedome. For of them that are the first movers in the disturbance of Common-wealth, (which can never happen without a Civill Warre,) very few are left alive long enough, to see their new Designes established: so that the benefit of their Crimes, redoundeth to Posterity, and such as would least have wished it: which argues they were not as wise, as they thought they were. And those that deceive upon hope of not being observed, do commonly deceive themselves, (the darknesse in which they believe they lye hidden, being nothing else but their own blindnesse;) and are no wiser than Children, that think all hid, by hiding their own eyes.

And generally all vain-glorious men, (unlesse they be withall timorous,) are subject to Anger; as being more prone than others to interpret for contempt, the ordinary liberty of conversation: And there are few Crimes that may not be produced by Anger.

## **Hatred, Lust, Ambition, Covetousnesse, Causes Of Crime**

As for the Passions, of Hate, Lust, Ambition, and Covetousnesse, what Crimes they are apt to produce, is so obvious to every mans experience and understanding, as there needeth nothing to be said of them, saving that they are infirmities, so annexed to the nature, both of man, and all other living creatures, as that their effects cannot be hindred, but by extraordinary use of Reason, or a constant severity in punishing them. For in those things men hate, they find a continuall, and unavoydable molestation; whereby either a mans patience must be everlasting, or he must be eased by removing the power of that which molesteth him; The former is difficult; the later is many times impossible, without some violation of the Law. Ambition, and Covetousnesse are Passions also that are perpetually incumbent, and pressing; whereas Reason is not perpetually present, to resist them: and therefore whensoever the hope of impunity appears, their effects proceed. And for Lust, what it wants in the lasting, it hath in the vehemence, which sufficeth to weigh down the apprehension of all easie, or uncertain punishments.

# **Fear Sometimes Cause Of Crime, As When The Danger Is Neither Present,**

## **Nor Corporeall**

Of all Passions, that which enclineth men least to break the Lawes, is Fear. Nay, (excepting some generous natures,) it is the onely thing, (when there is apparence of profit, or pleasure by breaking the Lawes,) that makes men keep them. And yet in many cases a Crime may be committed through Feare.

For not every Fear justifies the Action it produceth, but the fear onely of corporeall hurt, which we call Bodily Fear, and from which a man cannot see how to be delivered, but by the action. A man is assaulted, fears present death, from which he sees not how to escape, but by wounding him that assaulteth him; If he wound him to death, this is no Crime; because no man is supposed at the making of a Common-wealth, to have abandoned the defence of his life, or limbes, where the Law cannot arrive time enough to his assistance. But to kill a man, because from his actions, or his threatnings, I may argue he will kill me when he can, (seeing I have time, and means to demand protection, from the Sovereign Power,) is a Crime. Again, a man receives words of disgrace, or some little injuries (for which they that made the Lawes, had assigned no punishment, nor thought it worthy of a man that hath the use of Reason, to take notice of,) and is afraid, unlesse he revenge it, he shall fall into contempt, and consequently be obnoxious to the like injuries from others; and to avoyd this, breaks the Law, and protects himselfe for the future, by the terrour of his private revenge. This is a Crime; For the hurt is not Corporeall, but Phantasticall, and (though in this corner of the world, made sensible by a custome not many years since begun, amongst young and vain men,) so light, as a gallant man, and one that is assured of his own courage, cannot take notice of. Also a man may stand in fear of Spirits, either through his own superstition, or through too much credit given to other men, that tell him of strange Dreams and visions; and thereby be made believe they will hurt him, for doing, or omitting divers things, which neverthelesse, to do, or

omit, is contrary to the Lawes; And that which is so done, or omitted, is not to be Excused by this fear; but is a Crime. For (as I have shewn before in the second Chapter) Dreams be naturally but the fancies remaining in sleep, after the impressions our Senses had formerly received waking; and when men are by any accident unassured they have slept, seem to be reall Visions; and therefore he that presumes to break the Law upon his own, or anothers Dream, or pretended Vision, or upon other Fancy of the power of Invisible Spirits, than is permitted by the Common-wealth, leaveth the Law of Nature, which is a certain offence, and followeth the imagery of his own, or another private mans brain, which he can never know whether it signifieth any thing, or nothing, nor whether he that tells his Dream, say true, or lye; which if every private man should have leave to do, (as they must by the Law of Nature, if any one have it) there could no Law be made to hold, and so all Common-wealth would be dissolved.

## **Crimes Not Equall**

From these different sources of Crimes, it appeares already, that all Crimes are not (as the Stoicks of old time maintained) of the same allay. There is place, not only for EXCUSE, by which that which seemed a Crime, is proved to be none at all; but also for EXTENUATION, by which the Crime, that seemed great, is made lesse. For though all Crimes doe equally deserve the name of Injustice, as all deviation from a strait line is equally crookednesse, which the Stoicks rightly observed; yet it does not follow that all Crimes are equally unjust, no more than that all crooked lines are equally crooked; which the Stoicks not observing, held it as great a Crime, to kill a Hen, against the Law, as to kill ones Father.

## Total Excuses

That which totally Excuseth a Fact, and takes away from it the nature of a Crime, can be none but that, which at the same time, taketh away the obligation of the Law. For the fact committed once against the Law, if he that committed it be obliged to the Law, can be no other than a Crime.

The want of means to know the Law, totally Excuseth: For the Law whereof a man has no means to enforme himself, is not obligatory. But the want of diligence to enquire, shall not be considered as a want of means; Nor shall any man, that pretendeth to reason enough for the Government of his own affairs, be supposed to want means to know the Lawes of Nature; because they are known by the reason he pretends to: only Children, and Madmen are Excused from offences against the Law Naturall.

Where a man is captive, or in the power of the enemy, (and he is then in the power of the enemy, when his person, or his means of living, is so,) if it be without his own fault, the Obligation of the Law ceaseth; because he must obey the enemy, or dye; and consequently such obedience is no Crime: for no man is obliged (when the protection of the Law faileth,) not to protect himself, by the best means he can.

If a man by the terrour of present death, be compelled to doe a fact against the Law, he is totally Excused; because no Law can oblige a man to abandon his own preservation. And supposing such a Law were obligatory; yet a man would reason thus, "If I doe it not, I die presently; if I doe it, I die afterwards; therefore by doing it, there is time of life gained;" Nature therefore compells him to the fact.

When a man is destitute of food, or other thing necessary for his life, and cannot preserve himselfe any other way, but by some fact against the Law; as if in a great famine he take the food by force, or stealth, which he cannot obtaine for mony nor charity; or in defence of his life, snatch away another mans Sword, he is totally Excused, for the reason next before alledged.

## Excuses Against The Author

Again, Facts done against the Law, by the authority of another, are by that authority Excused against the Author; because no man ought to accuse his own fact in another, that is but his instrument: but it is not Excused against a third person thereby injured; because in the violation of the law, bothe the Author, and Actor are Criminalls. From hence it followeth that when that Man, or Assembly, that hath the Soveraign Power, commandeth a man to do that which is contrary to a former Law, the doing of it is totally Excused: For he ought not to condemn it himselfe, because he is the Author; and what cannot justly be condemned by the Soveraign, cannot justly be punished by any other. Besides, when the Soveraign commandeth any thing to be done against his own former Law, the Command, as to that particular fact, is an abrogation of the Law.

If that Man, or Assembly, that hath the Soveraign Power, disclaime any Right essentiall to the Soveraignty, whereby there accrueth to the Subject, any liberty inconsistent with the Soveraign Power, that is to say, with the very being of a Common-wealth, if the Subject shall refuse to obey the Command in any thing, contrary to the liberty granted, this is neverthelesse a Sinne, and contrary to the duty of the Subject: for he ought to take notice of what is inconsistent with the Soveraignty, because it was erected by his own consent, and for his own defence; and that such liberty as is inconsistent with it, was granted through ignorance of the evill consequence thereof. But if he not onely disobey, but also resist a publique Minister in the execution of it, then it is a Crime; because he might have been righted, (without any breach of the Peace,) upon complaint.

The Degrees of Crime are taken on divers Scales, and measured, First, by the malignity of the Source, or Cause: Secondly, by the contagion of the Example: Thirdly, by the mischief of the Effect; and Fourthly, by the concurrence of Times, Places, and Persons.

## **Presumption Of Power, Aggravateth**

The same Fact done against the Law, if it proceed from Presumption of strength, riches, or friends to resist those that are to execute the Law, is a greater Crime, than if it proceed from hope of not being discovered, or of escape by flight: For Presumption of impunity by force, is a Root, from whence springeth, at all times, and upon all temptations, a contempt of all Lawes; whereas in the later case, the apprehension of danger, that makes a man fly, renders him more obedient for the future. A Crime which we know to be so, is greater than the same Crime proceeding from a false perswasion that it is lawfull: For he that committeth it against his own conscience, presumeth on his force, or other power, which encourages him to commit the same again: but he that doth it by error, after the error shewn him, is conformable to the Law.

## **Evill Teachers, Extenuate**

Hee, whose error proceeds from the authority of a Teacher, or an Interpreter of the Law publicely authorised, is not so faulty, as he whose error proceedeth from a peremptory pursute of his own principles, and reasoning: For what is taught by one that teacheth by publique Authority, the Common-wealth teacheth, and hath a resemblance of Law, till the same Authority controuleth it; and in all Crimes that contain not in them a denyall of the Sovereign Power, nor are against an evident Law, Excuseth totally: whereas he that groundeth his actions, on his private Judgement, ought according to the rectitude, or error thereof, to stand, or fall.

## **Examples Of Impunity, Extenuate**

The same Fact, if it have been constantly punished in other men, as a greater Crime, than if there have been many precedent Examples of impunity. For those Examples, are so many hopes of Impunity given by the Sovereign himselfe: And because he which furnishes a man with such a hope, and presumption of mercy, as encourageth him to offend, hath his part in the offence; he cannot reasonably charge the offender with the whole.

## **Praemeditation, Aggravateth**

A Crime arising from a sudden Passion, is not so great, as when the same ariseth from long meditation: For in the former case there is a place for Extenuation, in the common infirmity of humane nature: but he that doth it with praemeditation, has used circumspection, and cast his eye, on the Law, on the punishment, and on the consequence thereof to humane society; all which in committing the Crime, hee hath contemned, and postposed to his own appetite. But there is no suddenesse of Passion sufficient for a totall Excuse: For all the time between the first knowing of the Law, and the Commission of the Fact, shall be taken for a time of deliberation; because he ought by meditation of the Law, to rectifie the irregularity of his Passions.

Where the Law is publiquely, and with assiduity, before all the people read, and interpreted; a fact done against it, is a greater Crime, than where men are left without such instruction, to enquire of it with difficulty, uncertainty, and interruption of their Callings, and be informed by private men: for in this case, part of the fault is discharged upon common infirmity; but in the former there is apparent negligence, which is not without some contempt of the Sovereign Power.

## **Tacite Approbation Of The Sovereign, Extenuates**

Those facts which the Law expressly condemneth, but the Law-maker by other manifest signes of his will tacitly approveth, are lesse Crimes, than the same facts, condemned both by the Law, and Lawmaker. For seeing the will of the Law-maker is a Law, there appear in this case two contradictory Lawes; which would totally Excuse, if men were bound to take notice of the Sovereigns approbation, by other arguments, than are expressed by his command. But because there are punishments consequent, not onely to the transgression of his Law, but also to the observing of it, he is in part a cause of the transgression, and therefore cannot reasonably impute the whole Crime to the Delinquent. For example, the Law condemneth Duells; the punishment is made capitall: On the contrary part, he that refuseth Duell, is subject to contempt and scorne, without remedy; and sometimes by the Sovereign himselfe thought unworthy to have any charge, or preferment in Warre: If thereupon he accept Duell, considering all men lawfully endeavour to obtain the good opinion of them that have the Sovereign Power, he ought not in reason to be rigorously punished; seeing part of the fault may be discharged on the punisher; which I say, not as wishing liberty of private revenges, or any other kind of disobedience; but a care in Governours, not to countenance any thing obliquely, which directly they forbid. The examples of Princes, to those that see them, are, and ever have been, more potent to govern their actions, than the Lawes themselves. And though it be our duty to do, not what they do, but what they say; yet will that duty never be performed, till it please God to give men an extraordinary, and supernaturall grace to follow that Precept.

## Comparison Of Crimes From Their Effects

Again, if we compare Crimes by the mischiefe of their Effects, First, the same fact, when it redounds to the dammage of many, is greater, than when it redounds to the hurt of few. And therefore, when a fact hurteth, not onely in the present, but also, (by example) in the future, it is a greater Crime, than if it hurt onely in the present: for the former, is a fertile Crime, and multiplies to the hurt of many; the later is barren. To maintain doctrines contrary to the Religion established in the Common-wealth, is a greater fault, in an authorised Preacher, than in a private person: So also is it, to live prophanely, incontinently, or do any irreligious act whatsoever. Likewise in a Professor of the Law, to maintain any point, or do any act, that tendeth to the weakning of the Soveraign Power, as a greater Crime, than in another man: Also in a man that hath such reputation for wisdom, as that his counsells are followed, or his actions imitated by many, his fact against the Law, is a greater Crime, than the same fact in another: For such men not onely commit Crime, but teach it for Law to all other men. And generally all Crimes are the greater, by the scandall they give; that is to say, by becoming stumbling-blocks to the weak, that look not so much upon the way they go in, as upon the light that other men carry before them.

## **Laesae Majestas**

Also Facts of Hostility against the present state of the Common-wealth, are greater Crimes, than the same acts done to private men; For the dammage extends it selfe to all: Such are the betraying of the strengths, or revealing of the secrets of the Common-wealth to an Enemy; also all attempts upon the Representative of the Common-wealth, be it a monarch, or an Assembly; and all endeavours by word, or deed to diminish the Authority of the same, either in the present time, or in succession: which Crimes the Latines understand by Crimina Laesae Majestatis, and consist in designe, or act, contrary to a Fundamentall Law.

## **Bribery And False Testimony**

Likewise those Crimes, which render Judgements of no effect, are greater Crimes, than Injuries done to one, or a few persons; as to receive mony to give False judgement, or testimony, is a greater Crime, than otherwise to deceive a man of the like, or a greater summe; because not onely he has wrong, that falls by such judgements; but all Judgements are rendered uselesse, and occasion ministred to force, and private revenges.

## **Depeculation**

Also Robbery, and Depeculation of the Publique treasure, or Revenues, is a greater Crime, than the robbing, or defrauding of a Private man; because to robbe the publique, is to robbe many at once.

## **Counterfeiting Authority**

Also the Counterfeit usurpation of publique Ministry, the Counterfeiting of publique Seales, or publique Coine, than counterfeiting of a private mans person, or his seale; because the fraud thereof, extendeth to the damage of many.

## Crimes Against Private Men Compared

Of facts against the Law, done to private men, the greater Crime, is that, where the damage in the common opinion of men, is most sensible. And therefore

To kill against the Law, is a greater Crime, than any other injury, life preserved.

And to kill with Torment, greater, than simply to kill.

And Mutilation of a limb, greater, than the spoiling a man of his goods.

And the spoiling a man of his goods, by Terror of death, or wounds, than by clandestine surreption.

And by clandestine Surreption, than by consent fraudulently obtained.

And the violation of chastity by Force, greater, than by flattery.

And of a woman Married, than of a woman not married.

For all these things are commonly so valued; though some men are more, and some lesse sensible of the same offence. But the Law regardeth not the particular, but the generall inclination of mankind.

And therefore the offence men take, from contumely, in words, or gesture, when they produce no other harme, than the present griefe of him that is reproached, hath been neglected in the Lawes of the Greeks, Romans, and other both antient, and moderne Common-wealths; supposing the true cause of such griefe to consist, not in the contumely, (which takes no hold upon men conscious of their own Vertue,) but in the Pusillanimity of him that is offended by it.

Also a Crime against a private man, is much aggravated by the person, time, and place. For to kill ones Parent, is a greater Crime, than to kill another: for the Parent ought to have the honour of a Sovereign, (though he have surrendred his Power to the Civill Law,) because he had it originally by Nature. And to Robbe a poore man, is a greater Crime, than to robbe a rich man; because 'tis to the poore a more sensible damage.

And a Crime committed in the Time, or Place appointed for Devotion, is greater, than if committed at another time or place: for it proceeds from a greater contempt of the Law.

Many other cases of Aggravation, and Extenuation might be added: but by these I have set down, it is obvious to every man, to take the altitude of any other Crime proposed.

## **Publique Crimes What**

Lastly, because in almost all Crimes there is an Injury done, not onely to some Private man, but also to the Common-wealth; the same Crime, when the accusation is in the name of the Common-wealth, is called Publique Crime; and when in the name of a Private man, a Private Crime; And the Pleas according thereunto called Publique, *Judicia Publica*, Pleas of the Crown; or Private Pleas. As in an Accusation of Murder, if the accuser be a Private man, the plea is a Private plea; if the accuser be the Sovereign, the plea is a Publique plea.

**CHAPTER XXVIII. OF PUNISHMENTS, AND  
REWARDS**

## **The Definition Of Punishment**

"A PUNISHMENT, is an Evill inflicted by publique Authority, on him that hath done, or omitted that which is Judged by the same Authority to be a Transgression of the Law; to the end that the will of men may thereby the better be disposed to obedience."

## **Right To Punish Whence Derived**

Before I inferre any thing from this definition, there is a question to be answered, of much importance; which is, by what door the Right, or Authority of Punishing in any case, came in. For by that which has been said before, no man is supposed bound by Covenant, not to resist violence; and consequently it cannot be intended, that he gave any right to another to lay violent hands upon his person. In the making of a Common-wealth, every man giveth away the right of defending another; but not of defending himselfe. Also he obligeth himselfe, to assist him that hath the Sovereignty, in the Punishing of another; but of himselfe not. But to covenant to assist the Sovereign, in doing hurt to another, unlesse he that so covenanteth have a right to doe it himselfe, is not to give him a Right to Punish. It is manifest therefore that the Right which the Common-wealth (that is, he, or they that represent it) hath to Punish, is not grounded on any concession, or gift of the Subjects. But I have also shewed formerly, that before the Institution of Common-wealth, every man had a right to every thing, and to do whatsoever he thought necessary to his own preservation; subduing, hurting, or killing any man in order thereunto. And this is the foundation of that right of Punishing, which is exercised in every Common-wealth. For the Subjects did not give the Sovereign that right; but onely in laying down theirs, strengthened him to use his own, as he should think fit, for the preservation of them all: so that it was not given, but left to him, and to him onely; and (excepting the limits set him by naturall Law) as entire, as in the condition of meer Nature, and of warre of every one against his neighbour.

## **Private Injuries, And Revenges No Punishments**

From the definition of Punishment, I inferre, First, that neither private revenges, nor injuries of private men, can properly be stiled Punishment; because they proceed not from publique Authority.

## **Nor Denyall Of Preferment**

Secondly, that to be neglected, and unpreferred by the publique favour, is not a Punishment; because no new evill is thereby on any man Inflicted; he is onely left in the estate he was in before.

## **Nor Pain Inflicted Without Publique Hearing**

Thirdly, that the evill inflicted by publique Authority, without precedent publique condemnation, is not to be stiled by the name of Punishment; but of an hostile act; because the fact for which a man is Punished, ought first to be Judged by publique Authority, to be a transgression of the Law.

## **Nor Pain Inflicted By Usurped Power**

Fourthly, that the evill inflicted by usurped power, and Judges without Authority from the Sovereign, is not Punishment; but an act of hostility; because the acts of power usurped, have not for Author, the person condemned; and therefore are not acts of publique Authority.

## **Nor Pain Inflicted Without Respect To The Future Good**

Fifthly, that all evill which is inflicted without intention, or possibility of disposing the Delinquent, or (by his example) other men, to obey the Lawes, is not Punishment; but an act of hostility; because without such an end, no hurt done is contained under that name.

## **Naturall Evill Consequences, No Punishments**

Sixthly, whereas to certain actions, there be annexed by Nature, divers hurtfull consequences; as when a man in assaulting another, is himselfe slain, or wounded; or when he falleth into sicknesse by the doing of some unlawfull act; such hurt, though in respect of God, who is the author of Nature, it may be said to be inflicted, and therefore a Punishment divine; yet it is not contained in the name of Punishment in respect of men, because it is not inflicted by the Authority of man.

# **Hurt Inflicted, If Lesse Than The Benefit Of Transgressing,**

## **Is Not Punishment**

Seventhly, If the harm inflicted be lesse than the benefit, or contentment that naturally followeth the crime committed, that harm is not within the definition; and is rather the Price, or Redemption, than the Punishment of a Crime: Because it is of the nature of Punishment, to have for end, the disposing of men to obey the Law; which end (if it be lesse than the benefit of the transgression) it attaineth not, but worketh a contrary effect.

# **Where The Punishment Is Annexed To The Law, A Greater Hurt Is Not**

## **Punishment, But Hostility**

Eighthly, If a Punishment be determined and prescribed in the Law it selfe, and after the crime committed, there be a greater Punishment inflicted, the excesse is not Punishment, but an act of hostility. For seeing the aym of Punishment is not a revenge, but terrour; and the terrour of a great Punishment unknown, is taken away by the declaration of a lesse, the unexpected addition is no part of the Punishment. But where there is no Punishment at all determined by the Law, there whatsoever is inflicted, hath the nature of Punishment. For he that goes about the violation of a Law, wherein no penalty is determined, expecteth an indeterminate, that is to say, an arbitrary Punishment.

## **Hurt Inflicted For A Fact Done Before The Law, No Punishment**

Ninthly, Harm inflicted for a Fact done before there was a Law that forbade it, is not Punishment, but an act of Hostility: For before the Law, there is no transgression of the Law: But Punishment supposeth a fact judged, to have been a transgression of the Law; Therefore Harm inflicted before the Law made, is not Punishment, but an act of Hostility.

# **The Representative Of The Common-wealth Unpunishable**

Tenthly, Hurt inflicted on the Representative of the Common-wealth, is not Punishment, but an act of Hostility: Because it is of the nature of Punishment, to be inflicted by publique Authority, which is the Authority only of the Representative it self.

# **Hurt To Revolted Subjects Is Done By Right Of War, Not**

## **By Way Of Punishment**

Lastly, Harmes inflicted upon one that is a declared enemy, falls not under the name of Punishment: Because seeing they were either never subject to the Law, and therefore cannot transgresse it; or having been subject to it, and professing to be no longer so, by consequence deny they can transgresse it, all the Harmes that can be done them, must be taken as acts of Hostility. But in declared Hostility, all infliction of evill is lawfull. From whence it followeth, that if a subject shall by fact, or word, wittingly, and deliberately deny the authority of the Representative of the Common-wealth, (whatsoever penalty hath been formerly ordained for Treason,) he may lawfully be made to suffer whatsoever the Representative will: For in denying subjection, he denyes such Punishment as by the Law hath been ordained; and therefore suffers as an enemy of the Common-wealth; that is, according to the will of the Representative. For the Punishments set down in the Law, are to Subjects, not to Enemies; such as are they, that having been by their own act Subjects, deliberately revolting, deny the Sovereign Power.

The first, and most generall distribution of Punishments, is into Divine, and Humane. Of the former I shall have occasion, to speak, in a more convenient place hereafter.

Humane, are those Punishments that be inflicted by the Commandement of Man; and are either Corporall, or Pecuniary, or Ignominy, or Imprisonment, or Exile, or mixt of these.

## **Punishments Corporall**

Corporall Punishment is that, which is inflicted on the body directly, and according to the intention of him that inflicteth it: such as are stripes, or wounds, or deprivation of such pleasures of the body, as were before lawfully enjoyed.

## Capitall

And of these, some be Capitall, some Lesse than Capitall. Capitall, is the Infliction of Death; and that either simply, or with torment. Lesse than Capitall, are Stripes, Wounds, Chains, and any other corporall Paine, not in its own nature mortall. For if upon the Infliction of a Punishment death follow not in the Intention of the Inflicter, the Punishment is not be esteemed Capitall, though the harme prove mortall by an accident not to be foreseen; in which case death is not inflicted, but hastened.

Pecuniary Punishment, is that which consisteth not only in the deprivation of a Summe of Mony, but also of Lands, or any other goods which are usually bought and sold for mony. And in case the Law, that ordaineth such a punishment, be made with design to gather mony, from such as shall transgresse the same, it is not properly a Punishment, but the Price of priviledge, and exemption from the Law, which doth not absolutely forbid the fact, but only to those that are not able to pay the mony: except where the Law is Naturall, or part of Religion; for in that case it is not an exemption from the Law, but a transgression of it. As where a Law exacteth a Pecuniary mulct, of them that take the name of God in vaine, the payment of the mulct, is not the price of a dispensation to sweare, but the Punishment of the transgression of a Law undispensable. In like manner if the Law impose a Summe of Mony to be payd, to him that has been Injured; this is but a satisfaction for the hurt done him; and extinguisheth the accusation of the party injured, not the crime of the offender.

## **Ignominy**

Ignominy, is the infliction of such Evill, as is made Dishonorable; or the deprivation of such Good, as is made Honourable by the Common-wealth. For there be some things Honorable by Nature; as the effects of Courage, Magnanimity, Strength, Wisdome, and other abilities of body and mind: Others made Honorable by the Common-wealth; as Badges, Titles, Offices, or any other singular marke of the Soveraigns favour. The former, (though they may faile by nature, or accident,) cannot be taken away by a Law; and therefore the losse of them is not Punishment. But the later, may be taken away by the publique authority that made them Honorable, and are properly Punishments: Such are degrading men condemned, of their Badges, Titles, and Offices; or declaring them incapable of the like in time to come.

## **Imprisonment**

Imprisonment, is when a man is by publique Authority deprived of liberty; and may happen from two divers ends; whereof one is the safe custody of a man accused; the other is the inflicting of paine on a man condemned. The former is not Punishment; because no man is supposed to be Punisht, before he be Judicially heard, and declared guilty. And therefore whatsoever hurt a man is made to suffer by bonds, or restraint, before his cause be heard, over and above that which is necessary to assure his custody, is against the Law of Nature. But the Later is Punishment, because Evill, and inflicted by publique Authority, for somewhat that has by the same Authority been Judged a Transgression of the Law. Under this word Imprisonment, I comprehend all restraint of motion, caused by an externall obstacle, be it a House, which is called by the generall name of a Prison; or an Iland, as when men are said to be confined to it; or a place where men are set to worke, as in old time men have been condemned to Quarries, and in these times to Gallies; or be it a Chaine, or any other such impediment.

## Exile

Exile, (Banishment) is when a man is for a crime, condemned to depart out of the dominion of the Common-wealth, or out of a certaine part thereof; and during a prefixed time, or for ever, not to return into it: and seemeth not in its own nature, without other circumstances, to be a Punishment; but rather an escape, or a publique commandement to avoid Punishment by flight. And Cicero sayes, there was never any such Punishment ordained in the City of Rome; but calls it a refuge of men in danger. For if a man banished, be neverthelesse permitted to enjoy his Goods, and the Revenue of his Lands, the meer change of ayr is no punishment; nor does it tend to that benefit of the Common-wealth, for which all Punishments are ordained, (that is to say, to the forming of mens wils to the observation of the Law;) but many times to the dammage of the Common-wealth. For a Banished man, is a lawfull enemy of the Common-wealth that banished him; as being no more a Member of the same. But if he be withall deprived of his Lands, or Goods, then the Punishment lyeth not in the Exile, but is to be reckoned amongst Punishments Pecuniary.

## **The Punishment Of Innocent Subjects Is Contrary To The Law Of Nature**

All Punishments of Innocent subjects, be they great or little, are against the Law of Nature; For Punishment is only of Transgression of the Law, and therefore there can be no Punishment of the Innocent. It is therefore a violation, First, of that Law of Nature, which forbiddeth all men, in their Revenges, to look at any thing but some future good: For there can arrive no good to the Common-wealth, by Punishing the Innocent. Secondly, of that, which forbiddeth Ingratitude: For seeing all Sovereign Power, is originally given by the consent of every one of the Subjects, to the end they should as long as they are obedient, be protected thereby; the Punishment of the Innocent, is a rendring of Evill for Good. And thirdly, of the Law that commandeth Equity; that is to say, an equall distribution of Justice; which in Punishing the Innocent is not observed.

## **But The Harme Done To Innocents In War, Not So**

But the Infliction of what evill soever, on an Innocent man, that is not a Subject, if it be for the benefit of the Common-wealth, and without violation of any former Covenant, is no breach of the Law of Nature. For all men that are not Subjects, are either Enemies, or else they have ceased from being so, by some precedent covenants. But against Enemies, whom the Common-wealth judgeth capable to do them hurt, it is lawfull by the originall Right of Nature to make warre; wherein the Sword Judgeth not, nor doth the Victor make distinction of Nocent and Innocent, as to the time past; nor has other respect of mercy, than as it conduceth to the good of his own People. And upon this ground it is, that also in Subjects, who deliberately deny the Authority of the Common-wealth established, the vengeance is lawfully extended, not onely to the Fathers, but also to the third and fourth generation not yet in being, and consequently innocent of the fact, for which they are afflicted: because the nature of this offence, consisteth in the renouncing of subjection; which is a relapse into the condition of warre, commonly called Rebellion; and they that so offend, suffer not as Subjects, but as Enemies. For Rebellion, is but warre renewed.

## **Reward, Is Either Salary, Or Grace**

REWARD, is either of Gift, or by Contract. When by Contract, it is called Salary, and Wages; which is benefit due for service performed, or promised. When of Gift, it is benefit proceeding from the Grace of them that bestow it, to encourage, or enable men to do them service. And therefore when the Sovereign of a Common-wealth appointeth a Salary to any publique Office, he that receiveth it, is bound in Justice to performe his office; otherwise, he is bound onely in honour, to acknowledgement, and an endeavour of requitall. For though men have no lawfull remedy, when they be commanded to quit their private businesse, to serve the publique, without Reward, or Salary; yet they are not bound thereto, by the Law of Nature, nor by the institution of the Common-wealth, unlesse the service cannot otherwise be done; because it is supposed the Sovereign may make use of all their means, insomuch as the most common Souldier, may demand the wages of his warrefare, as a debt.

## **Benefits Bestowed For Fear, Are Not Rewards**

The benefits which a Sovereign bestoweth on a Subject, for fear of some power, and ability he hath to do hurt to the Common-wealth, are not properly Rewards; for they are not Salaryes; because there is in this case no contract supposed, every man being obliged already not to do the Common-wealth disservice: nor are they Graces; because they be extorted by feare, which ought not to be incident to the Sovereign Power: but are rather Sacrifices, which the Sovereign (considered in his naturall person, and not in the person of the Common-wealth) makes, for the appeasing the discontent of him he thinks more potent than himselfe; and encourage not to obedience, but on the contrary, to the continuance, and increasing of further extortion.

## Salaries Certain And Casuall

And whereas some Salaries are certain, and proceed from the publique Treasure; and others uncertain, and casuall, proceeding from the execution of the Office for which the Salary is ordained; the later is in some cases hurtfull to the Common-wealth; as in the case of Judicature. For where the benefit of the Judges, and Ministers of a Court of Justice, ariseth for the multitude of Causes that are brought to their cognisance, there must needs follow two Inconveniencies: One, is the nourishing of sutes; for the more sutes, the greater benefit: and another that depends on that, which is contention about Jurisdiction; each Court drawing to it selfe, as many Causes as it can. But in offices of Execution there are not those Inconveniencies; because their employment cannot be encreased by any endeavour of their own. And thus much shall suffice for the nature of Punishment, and Reward; which are, as it were, the Nerves and Tendons, that move the limbes and joynts of a Common-wealth.

Hitherto I have set forth the nature of Man, (whose Pride and other Passions have compelled him to submit himselfe to Government;) together with the great power of his Governour, whom I compared to Leviathan, taking that comparison out of the two last verses of the one and fortieth of Job; where God having set forth the great power of Leviathan, called him King of the Proud. "There is nothing," saith he, "on earth, to be compared with him. He is made so as not be afraid. Hee seeth every high thing below him; and is King of all the children of pride." But because he is mortall, and subject to decay, as all other Earthly creatures are; and because there is that in heaven, (though not on earth) that he should stand in fear of, and whose Lawes he ought to obey; I shall in the next following Chapters speak of his Diseases, and the causes of his Mortality; and of what Lawes of Nature he is bound to obey.

# CHAPTER XXIX. OF THOSE THINGS THAT WEAKEN, OR TEND TO THE DISSOLUTION OF

## A COMMON-WEALTH

### Dissolution Of Common-wealths Proceedeth From Imperfect Institution

Though nothing can be immortall, which mortals make; yet, if men had the use of reason they pretend to, their Common-wealths might be secured, at least, from perishing by internall diseases. For by the nature of their Institution, they are designed to live, as long as Man-kind, or as the Lawes of Nature, or as Justice it selfe, which gives them life. Therefore when they come to be dissolved, not by externall violence, but intestine disorder, the fault is not in men, as they are the Matter; but as they are the Makers, and orderers of them. For men, as they become at last weary of irregular justling, and hewing one another, and desire with all their hearts, to conforme themselves into one firme and lasting edifice; so for want, both of the art of making fit Laws, to square their actions by, and also of humility, and patience, to suffer the rude and combersome points of their present greatnesse to be taken off, they cannot without the help of a very able Architect, be compiled, into any other than a crasie building, such as hardly lasting out their own time, must assuredly fall upon the heads of their posterity.

Amongst the Infirmities therefore of a Common-wealth, I will reckon in the first place, those that arise from an Imperfect Institution, and resemble the diseases of a naturall body, which proceed from a Defectuous Procreation.

## Want Of Absolute Power

Of which, this is one, "That a man to obtain a Kingdome, is sometimes content with lesse Power, than to the Peace, and defence of the Commonwealth is necessarily required." From whence it commeth to passe, that when the exercise of the Power layd by, is for the publique safety to be resumed, it hath the resemblance of as unjust act; which disposeth great numbers of men (when occasion is presented) to rebell; In the same manner as the bodies of children, gotten by diseased parents, are subject either to untimely death, or to purge the ill quality, derived from their vicious conception, by breaking out into biles and scabbs. And when Kings deny themselves some such necessary Power, it is not alwayes (though sometimes) out of ignorance of what is necessary to the office they undertake; but many times out of a hope to recover the same again at their pleasure: Wherein they reason not well; because such as will hold them to their promises, shall be maintained against them by forraign Commonwealths; who in order to the good of their own Subjects let slip few occasions to Weaken the estate of their Neighbours. So was Thomas Beckett Archbishop of Canterbury, supported against Henry the Second, by the Pope; the subjection of Ecclesiastiques to the Commonwealth, having been dispensed with by William the Conqueror at his reception, when he took an Oath, not to infringe the liberty of the Church. And so were the Barons, whose power was by William Rufus (to have their help in transferring the Succession from his Elder brother, to himselfe,) encreased to a degree, inconsistent with the Sovereign Power, maintained in their Rebellion against King John, by the French. Nor does this happen in Monarchy onely. For whereas the stile of the antient Roman Commonwealth, was, The Senate, and People of Rome; neither Senate, nor People pretended to the whole Power; which first caused the seditions, of Tiberius Gracchus, Caius Gracchus, Lucius Saturnius, and others; and afterwards the warres between the Senate and the People, under Marius and Sylla; and again under Pompey and Caesar, to the Extinction of their Democracy, and the setting up of Monarchy.

The people of Athens bound themselves but from one onely Action; which was, that no man on pain of death should propound the renewing of the warre for the Island of Salamis; And yet thereby, if Solon had not caused to be given out he was mad, and afterwards in gesture and habit of a mad-man, and in verse, propounded it to the People that flocked about him, they had had an enemy perpetually in readinesse, even at the gates of their Citie; such dammage, or shifts, are all Common-wealths forced to, that have their Power never so little limited.

## **Private Judgement Of Good and Evill**

In the second place, I observe the Diseases of a Common-wealth, that proceed from the poyson of seditious doctrines; whereof one is, "That every private man is Judge of Good and Evill actions." This is true in the condition of meer Nature, where there are no Civill Lawes; and also under Civill Government, in such cases as are not determined by the Law. But otherwise, it is manifest, that the measure of Good and Evill actions, is the Civill Law; and the Judge the Legislator, who is alwayes Representative of the Common-wealth. From this false doctrine, men are disposed to debate with themselves, and dispute the commands of the Common-wealth; and afterwards to obey, or disobey them, as in their private judgements they shall think fit. Whereby the Common-wealth is distracted and Weakened.

## **Erroneous Conscience**

Another doctrine repugnant to Civill Society, is, that "Whatsoever a man does against his Conscience, is Sinne;" and it dependeth on the presumption of making himself judge of Good and Evill. For a mans Conscience, and his Judgement is the same thing; and as the Judgement, so also the Conscience may be erroneous. Therefore, though he that is subject to no Civill Law, sinneth in all he does against his Conscience, because he has no other rule to follow but his own reason; yet it is not so with him that lives in a Common-wealth; because the Law is the publique Conscience, by which he hath already undertaken to be guided. Otherwise in such diversity, as there is of private Consciences, which are but private opinions, the Common-wealth must needs be distracted, and no man dare to obey the Sovereign Power, farther than it shall seem good in his own eyes.

## **Pretence Of Inspiration**

It hath been also commonly taught, "That Faith and Sanctity, are not to be attained by Study and Reason, but by supernaturall Inspiration, or Infusion," which granted, I see not why any man should render a reason of his Faith; or why every Christian should not be also a Prophet; or why any man should take the Law of his Country, rather than his own Inspiration, for the rule of his action. And thus wee fall again into the fault of taking upon us to Judge of Good and Evill; or to make Judges of it, such private men as pretend to be supernaturally Inspired, to the Dissolution of all Civill Government. Faith comes by hearing, and hearing by those accidents, which guide us into the presence of them that speak to us; which accidents are all contrived by God Almighty; and yet are not supernaturall, but onely, for the great number of them that concurre to every effect, unobservable. Faith, and Sanctity, are indeed not very frequent; but yet they are not Miracles, but brought to passe by education, discipline, correction, and other naturall wayes, by which God worketh them in his elect, as such time as he thinketh fit. And these three opinions, pernicious to Peace and Government, have in this part of the world, proceeded chiefly from the tongues, and pens of unlearned Divines; who joyning the words of Holy Scripture together, otherwise than is agreeable to reason, do what they can, to make men think, that Sanctity and Naturall Reason, cannot stand together.

## **Subjecting The Sovereign Power To Civill Lawes**

A fourth opinion, repugnant to the nature of a Common-wealth, is this, "That he that hath the Sovereign Power, is subject to the Civill Lawes." It is true, that Sovereigns are all subjects to the Lawes of Nature; because such lawes be Divine, and cannot by any man, or Common-wealth be abrogated. But to those Lawes which the Sovereign himselfe, that is, which the Common-wealth maketh, he is not subject. For to be subject to Lawes, is to be subject to the Common-wealth, that is to the Sovereign Representative, that is to himselfe; which is not subjection, but freedome from the Lawes. Which error, because it setteth the Lawes above the Sovereign, setteth also a Judge above him, and a Power to punish him; which is to make a new Sovereign; and again for the same reason a third, to punish the second; and so continually without end, to the Confusion, and Dissolution of the Common-wealth.

## **Attributing Of Absolute Propriety To The Subjects**

A Fifth doctrine, that tendeth to the Dissolution of a Common-wealth, is, "That every private man has an absolute Propriety in his Goods; such, as excludeth the Right of the Sovereign." Every man has indeed a Propriety that excludes the Right of every other Subject: And he has it onely from the Sovereign Power; without the protection whereof, every other man should have equall Right to the same. But if the Right of the Sovereign also be excluded, he cannot performe the office they have put him into; which is, to defend them both from forraign enemies, and from the injuries of one another; and consequently there is no longer a Common-wealth.

And if the Propriety of Subjects, exclude not the Right of the Sovereign Representative to their Goods; much lesse to their offices of Judicature, or Execution, in which they Represent the Sovereign himselfe.

## **Dividing Of The Sovereign Power**

There is a Sixth doctrine, plainly, and directly against the essence of a Common-wealth; and 'tis this, "That the Sovereign Power may be divided." For what is it to divide the Power of a Common-wealth, but to Dissolve it; for Powers divided mutually destroy each other. And for these doctrines, men are chiefly beholding to some of those, that making profession of the Lawes, endeavour to make them depend upon their own learning, and not upon the Legislative Power.

## **Imitation Of Neighbour Nations**

And as False Doctrine, so also often-times the Example of different Government in a neighbouring Nation, disposeth men to alteration of the forme already settled. So the people of the Jewes were stirred up to reject God, and to call upon the Prophet Samuel, for a King after the manner of the Nations; So also the lesser Cities of Greece, were continually disturbed, with seditions of the Aristocraticall, and Democraticall factions; one part of almost every Common-wealth, desiring to imitate the Lacedaemonians; the other, the Athenians. And I doubt not, but many men, have been contented to see the late troubles in England, out of an imitation of the Low Countries; supposing there needed no more to grow rich, than to change, as they had done, the forme of their Government. For the constitution of mans nature, is of it selfe subject to desire novelty: When therefore they are provoked to the same, by the neighbourhood also of those that have been enriched by it, it is almost impossible for them, not to be content with those that solícite them to change; and love the first beginnings, though they be grieved with the continuance of disorder; like hot blouds, that having gotten the itch, tear themselves with their own nayles, till they can endure the smart no longer.

## Imitation Of The Greeks, And Romans

And as to Rebellion in particular against Monarchy; one of the most frequent causes of it, is the Reading of the books of Policy, and Histories of the antient Greeks, and Romans; from which, young men, and all others that are unprovided of the Antidote of solid Reason, receiving a strong, and delightfull impression, of the great exploits of warre, atchieved by the Conductors of their Armies, receive withall a pleasing Idea, of all they have done besides; and imagine their great prosperity, not to have proceeded from the aemulation of particular men, but from the vertue of their popular form of government: Not considering the frequent Seditions, and Civill Warres, produced by the imperfection of their Policy. From the reading, I say, of such books, men have undertaken to kill their Kings, because the Greek and Latine writers, in their books, and discourses of Policy, make it lawfull, and laudable, for any man so to do; provided before he do it, he call him Tyrant. For they say not Regicide, that is, killing of a King, but Tyrannicide, that is, killing of a Tyrant is lawfull. From the same books, they that live under a Monarch conceive an opinion, that the Subjects in a Popular Common-wealth enjoy Liberty; but that in a Monarchy they are all Slaves. I say, they that live under a Monarchy conceive such an opinion; not they that live under a Popular Government; for they find no such matter. In summe, I cannot imagine, how anything can be more prejudiciall to a Monarchy, than the allowing of such books to be publikely read, without present applying such correctives of discreet Masters, as are fit to take away their Venime; Which Venime I will not doubt to compare to the biting of a mad Dogge, which is a disease the Physicians call Hydrophobia, or Fear Of Water. For as he that is so bitten, has a continuall torment of thirst, and yet abhorreth water; and is in such an estate, as if the poyson endeavoured to convert him into a Dogge: So when a Monarchy is once bitten to the quick, by those Democraticall writers, that continually snarle at that estate; it wanteth nothing more than a strong Monarch, which neverthesse out of a certain Tyrannophobia, or feare of being strongly governed, when they have him, they abhorre.

As here have been Doctors, that hold there be three Soules in a man; so there be also that think there may be more Soules, (that is, more Sovereigns,) than one, in a Common-wealth; and set up a Supremacy against the Sovereignty; Canons against Lawes; and a Ghostly Authority against the Civill; working on mens minds, with words and distinctions, that of themselves signifie nothing, but bewray (by their obscurity) that there walketh (as some think invisibly) another Kingdome, as it were a Kingdome of Fayries, in the dark. Now seeing it is manifest, that the Civill Power, and the Power of the Common-wealth is the same thing; and that Supremacy, and the Power of making Canons, and granting Faculties, implyeth a Common-wealth; it followeth, that where one is Sovereign, another Supreme; where one can make Lawes, and another make Canons; there must needs be two Common-wealths, of one & the same Subjects; which is a Kingdome divided in it selfe, and cannot stand. For notwithstanding the insignificant distinction of Temporall, and Ghostly, they are still two Kingdomes, and every Subject is subject to two Masters. For seeing the Ghostly Power challengeth the Right to declare what is Sinne it challengeth by consequence to declare what is Law, (Sinne being nothing but the transgression of the Law;) and again, the Civill Power challenging to declare what is Law, every Subject must obey two Masters, who bothe will have their Commands be observed as Law; which is impossible. Or, if it be but one Kingdome, either the Civill, which is the Power of the Common-wealth, must be subordinate to the Ghostly; or the Ghostly must be subordinate to the Temporall and then there is no Supremacy but the Temporall. When therefore these two Powers oppose one another, the Common-wealth cannot but be in great danger of Civill warre, and Dissolution. For the Civill Authority being more visible, and standing in the cleerer light of naturall reason cannot choose but draw to it in all times a very considerable part of the people: And the Spirituall, though it stand in the darknesse of Schoole distinctions, and hard words; yet because the fear of Darknesse, and Ghosts, is greater than other fears, cannot want a party sufficient to Trouble, and sometimes to Destroy a Common-wealth. And this is a Disease which not unfitly may be compared to the Epilepsie, or Falling-sicknesse (which the Jewes took to be one kind of possession by Spirits) in the Body Naturall. For as in this Disease, there is an unnaturall spirit, or wind in the head that obstructeth the roots of the Nerves, and moving them violently, taketh away the motion which

naturally they should have from the power of the Soule in the Brain, and thereby causeth violent, and irregular motions (which men call Convulsions) in the parts; insomuch as he that is seized therewith, falleth down sometimes into the water, and sometimes into the fire, as a man deprived of his senses; so also in the Body Politique, when the Spirituall power, moveth the Members of a Common-wealth, by the terrour of punishments, and hope of rewards (which are the Nerves of it,) otherwise than by the Civill Power (which is the Soule of the Common-wealth) they ought to be moved; and by strange, and hard words suffocates the people, and either Overwhelm the Common-wealth with Oppression, or cast it into the Fire of a Civill warre.

## Mixt Government

Sometimes also in the meerly Civill government, there be more than one Soule: As when the Power of levying mony, (which is the Nutritive faculty,) has depended on a generall Assembly; the Power of conduct and command, (which is the Motive Faculty,) on one man; and the Power of making Lawes, (which is the Rationall faculty,) on the accidentall consent, not onely of those two, but also of a third; This endangereth the Common-wealth, somtimes for want of consent to good Lawes; but most often for want of such Nourishment, as is necessary to Life, and Motion. For although few perceive, that such government, is not government, but division of the Common-wealth into three Factions, and call it mixt Monarchy; yet the truth is, that it is not one independent Common-wealth, but three independent Factions; nor one Representative Person, but three. In the Kingdome of God, there may be three Persons independent, without breach of unity in God that Reigneth; but where men Reigne, that be subject to diversity of opinions, it cannot be so. And therefore if the King bear the person of the People, and the generall Assembly bear also the person of the People, and another assembly bear the person of a Part of the people, they are not one Person, nor one Sovereign, but three Persons, and three Sovereigns.

To what Disease in the Naturall Body of man, I may exactly compare this irregularity of a Common-wealth, I know not. But I have seen a man, that had another man growing out of his side, with an head, armes, breast, and stomach, of his own: If he had had another man growing out of his other side, the comparison might then have been exact.

## Want Of Mony

Hitherto I have named such Diseases of a Common-wealth, as are of the greatest, and most present danger. There be other, not so great; which neverthelesse are not unfit to be observed. As first, the difficulty of raising Mony, for the necessary uses of the Common-wealth; especially in the approach of warre. This difficulty ariseth from the opinion, that every Subject hath of a Propriety in his lands and goods, exclusive of the Sovereigns Right to the use of the same. From whence it commeth to passe, that the Sovereign Power, which foreseeeth the necessities and dangers of the Common-wealth, (finding the passage of mony to the publique Treasure obstructed, by the tenacity of the people,) whereas it ought to extend it selfe, to encounter, and prevent such dangers in their beginnings, contracteth it selfe as long as it can, and when it cannot longer, struggles with the people by strategems of Law, to obtain little summes, which not sufficing, he is fain at last violently to open the way for present supply, or Perish; and being put often to these extremities, at last reduceth the people to their due temper; or else the Common-wealth must perish. Insomuch as we may compare this Distemper very aptly to an Ague; wherein, the fleshy parts being congealed, or by venomous matter obstructed; the Veins which by their naturall course empty themselves into the Heart, are not (as they ought to be) supplied from the Arteries, whereby there succeedeth at first a cold contraction, and trembling of the limbes; and afterwards a hot, and strong endeavour of the Heart, to force a passage for the Bloud; and before it can do that, contenteth it selfe with the small refreshments of such things as coole of a time, till (if Nature be strong enough) it break at last the contumacy of the parts obstructed, and dissipateth the venome into sweat; or (if Nature be too weak) the Patient dyeth.

## **Monopolies And Abuses Of Publicans**

Again, there is sometimes in a Common-wealth, a Disease, which resembleth the Pleurisie; and that is, when the Treasure of the Common-wealth, flowing out of its due course, is gathered together in too much abundance, in one, or a few private men, by Monopolies, or by Farmes of the Publique Revenues; in the same manner as the Blood in a Pleurisie, getting into the Membrane of the breast, breedeth there an Inflammation, accompanied with a Fever, and painfull stitches.

## Popular Men

Also, the Popularity of a potent Subject, (unlesse the Common-wealth have very good caution of his fidelity,) is a dangerous Disease; because the people (which should receive their motion from the Authority of the Sovereign,) by the flattery, and by the reputation of an ambitious man, are drawn away from their obedience to the Lawes, to follow a man, of whose vertues, and designes they have no knowledge. And this is commonly of more danger in a Popular Government, than in a Monarchy; as it may easily be made believe, they are the People. By this means it was, that Julius Caesar, who was set up by the People against the Senate, having won to himselfe the affections of his Army, made himselfe Master, both of Senate and People. And this proceeding of popular, and ambitious men, is plain Rebellion; and may be resembled to the effects of Witchcraft.

## **Excessive Greatnesse Of A Town, Multitude Of Corporations**

Another infirmity of a Common-wealth, is the immoderate greatnesse of a Town, when it is able to furnish out of its own Circuit, the number, and expence of a great Army: As also the great number of Corporations; which are as it were many lesser Common-wealths in the bowels of a greater, like wormes in the entrayles of a naturall man.

## **Liberty Of Disputing Against Sovereign Power**

To which may be added, the Liberty of Disputing against absolute Power, by pretenders to Political Prudence; which though bred for the most part in the Lees of the people; yet animated by False Doctrines, are perpetually meddling with the Fundamentall Lawes, to the molestation of the Common-wealth; like the little Wormes, which Physicians call Ascarides.

We may further adde, the insatiable appetite, or Bulimia, of enlarging Dominion; with the incurable Wounds thereby many times received from the enemy; And the Wens, of ununited conquests, which are many times a burthen, and with lesse danger lost, than kept; As also the Lethargy of Ease, and Consumption of Riot and Vain Expence.

## **Dissolution Of The Common-wealth**

Lastly, when in a warre (forraign, or intestine,) the enemies got a final Victory; so as (the forces of the Common-wealth keeping the field no longer) there is no farther protection of Subjects in their loyalty; then is the Common-wealth DISSOLVED, and every man at liberty to protect himselfe by such courses as his own discretion shall suggest unto him. For the Sovereign, is the publique Soule, giving Life and Motion to the Common-wealth; which expiring, the Members are governed by it no more, than the Carcasse of a man, by his departed (though Immortal) Soule. For though the Right of a Sovereign Monarch cannot be extinguished by the act of another; yet the Obligation of the members may. For he that wants protection, may seek it anywhere; and when he hath it, is obliged (without fraudulent pretence of having submitted himselfe out of fear,) to protect his Protection as long as he is able. But when the Power of an Assembly is once suppressed, the Right of the same perisheth utterly; because the Assembly it selfe is extinct; and consequently, there is no possibility for the Sovereignty to re-enter.

**CHAPTER XXX. OF THE OFFICE OF THE  
SOVERAIGN REPRESENTATIVE**

## **The Procuration Of The Good Of The People**

The OFFICE of the Sovereign, (be it a Monarch, or an Assembly,) consisteth in the end, for which he was trusted with the Sovereign Power, namely the procuration of the Safety Of The People; to which he is obliged by the Law of Nature, and to render an account thereof to God, the Author of that Law, and to none but him. But by Safety here, is not meant a bare Preservation, but also all other Contentments of life, which every man by lawfull Industry, without danger, or hurt to the Common-wealth, shall acquire to himselfe.

## **By Instruction & Lawes**

And this is intended should be done, not by care applyed to Individualls, further than their protection from injuries, when they shall complain; but by a generall Providence, contained in publique Instruction, both of Doctrine, and Example; and in the making, and executing of good Lawes, to which individuall persons may apply their own cases.

# **Against The Duty Of A Sovereign To Relinquish Any Essentiall Right**

## **of Sovereignty Or Not To See The People Taught The Grounds Of Them**

And because, if the essentiall Rights of Sovereignty (specified before in the eighteenth Chapter) be taken away, the Common-wealth is thereby dissolved, and every man returneth into the condition, and calamity of a warre with every other man, (which is the greatest evill that can happen in this life;) it is the Office of the Sovereign, to maintain those Rights entire; and consequently against his duty, First, to transferre to another, or to lay from himselfe any of them. For he that deserteth the Means, deserteth the Ends; and he deserteth the Means, that being the Sovereign, acknowledgeth himselfe subject to the Civill Lawes; and renounceth the Power of Supreme Judicature; or of making Warre, or Peace by his own Authority; or of Judging of the Necessities of the Common-wealth; or of levying Mony, and Souldiers, when, and as much as in his own conscience he shall judge necessary; or of making Officers, and Ministers both of Warre, and Peace; or of appointing Teachers, and examining what Doctrines are conformable, or contrary to the Defence, Peace, and Good of the people. Secondly, it is against his duty, to let the people be ignorant, or mis-in-formed of the grounds, and reasons of those his essentiall Rights; because thereby men are easie to be seduced, and drawn to resist him, when the Common-wealth shall require their use and exercise.

And the grounds of these Rights, have the rather need to be diligently, and truly taught; because they cannot be maintained by any Civill Law, or terrour of legal punishment. For a Civill Law, that shall forbid Rebellion, (and such is all resistance to the essentiall Rights of Sovereignty,) is not (as a Civill Law) any obligation, but by vertue onely of the Law of Nature, that forbiddeth the violation of Faith; which naturall obligation if men know not, they cannot know the Right of any Law the Sovereign maketh. And for the Punishment, they take it but for an act of Hostility; which

when they think they have strength enough, they will endeavour by acts of Hostility, to avoyd.

# **Objection Of Those That Say There Are No Principles Of Reason For**

## **Absolute Sovereignty**

As I have heard some say, that Justice is but a word, without substance; and that whatsoever a man can by force, or art, acquire to himselfe, (not onely in the condition of warre, but also in a Common-wealth,) is his own, which I have already shewed to be false: So there be also that maintain, that there are no grounds, nor Principles of Reason, to sustain those essentiall Rights, which make Sovereignty absolute. For if there were, they would have been found out in some place, or other; whereas we see, there has not hitherto been any Common-wealth, where those Rights have been acknowledged, or challenged. Wherein they argue as ill, as if the Savage people of America, should deny there were any grounds, or Principles of Reason, so to build a house, as to last as long as the materials, because they never yet saw any so well built. Time, and Industry, produce every day new knowledge. And as the art of well building, is derived from Principles of Reason, observed by industrious men, that had long studied the nature of materials, and the divers effects of figure, and proportion, long after mankind began (though poorly) to build: So, long time after men have begun to constitute Common-wealths, imperfect, and apt to relapse into disorder, there may, Principles of Reason be found out, by industrious meditation, to make use of them, or be neglected by them, or not, concerneth my particular interest, at this day, very little. But supposing that these of mine are not such Principles of Reason; yet I am sure they are Principles from Authority of Scripture; as I shall make it appear, when I shall come to speak of the Kingdome of God, (administred by Moses,) over the Jewes, his peculiar people by Covenant.

## **Objection From The Incapacity Of The Vulgar**

But they say again, that though the Principles be right, yet Common people are not of capacity enough to be made to understand them. I should be glad, that the Rich, and Potent Subjects of a Kingdome, or those that are accounted the most Learned, were no lesse incapable than they. But all men know, that the obstructions to this kind of doctrine, proceed not so much from the difficulty of the matter, as from the interest of them that are to learn. Potent men, digest hardly any thing that setteth up a Power to bridle their affections; and Learned men, any thing that discovereth their errours, and thereby lesseneth their Authority: whereas the Common-peoples minds, unlesse they be tainted with dependance on the Potent, or scribbled over with the opinions of their Doctors, are like clean paper, fit to receive whatsoever by Publique Authority shall be imprinted in them. Shall whole Nations be brought to Acquiesce in the great Mysteries of Christian Religion, which are above Reason; and millions of men be made believe, that the same Body may be in innumerable places, at one and the same time, which is against Reason; and shall not men be able, by their teaching, and preaching, protected by the Law, to make that received, which is so consonant to Reason, that any unprejudicated man, needs no more to learn it, than to hear it? I conclude therefore, that in the instruction of the people in the Essentiall Rights (which are the Naturall, and Fundamentall Lawes) of Soveraignty, there is no difficulty, (whilst a Soveraign has his Power entire,) but what proceeds from his own fault, or the fault of those whom he trusteth in the administration of the Commonwealth; and consequently, it is his Duty, to cause them so to be instructed; and not onely his Duty, but his Benefit also, and Security, against the danger that may arrive to himselfe in his naturall Person, from Rebellion.

## **Subjects Are To Be Taught, Not To Affect Change Of Government**

And (to descend to particulars) the People are to be taught, First, that they ought not to be in love with any forme of Government they see in their neighbour Nations, more than with their own, nor (whatsoever present prosperity they behold in Nations that are otherwise governed than they,) to desire change. For the prosperity of a People ruled by an Aristocraticall, or Democraticall assembly, commeth not from Aristocracy, nor from Democracy, but from the Obedience, and Concord of the Subjects; nor do the people flourish in a Monarchy, because one man has the right to rule them, but because they obey him. Take away in any kind of State, the Obedience, (and consequently the Concord of the People,) and they shall not onely not flourish, but in short time be dissolved. And they that go about by disobedience, to doe no more than reforme the Commonwealth, shall find they do thereby destroy it; like the foolish daughters of Peleus (in the fable;) which desiring to renew the youth of their decrepit Father, did by the Counsell of Medea, cut him in pieces, and boyle him, together with strange herbs, but made not of him a new man. This desire of change, is like the breach of the first of Gods Commandements: For there God says, Non Habebis Deos Alienos; Thou shalt not have the Gods of other Nations; and in another place concerning Kings, that they are Gods.

## **Nor Adhere (Against The Sovereign) To Popular Men**

Secondly, they are to be taught, that they ought not to be led with admiration of the vertue of any of their fellow Subjects, how high soever he stand, nor how conspicuously soever he shine in the Common-wealth; nor of any Assembly, (except the Sovereign Assembly,) so as to deferre to them any obedience, or honour, appropriate to the Sovereign onely, whom (in their particular stations) they represent; nor to receive any influence from them, but such as is conveighed by them from the Sovereign Authority. For that Sovereign, cannot be imagined to love his People as he ought, that is not Jealous of them, but suffers them by the flattery of Popular men, to be seduced from their loyalty, as they have often been, not onely secretly, but openly, so as to proclaime Marriage with them In Facie Ecclesiae by Preachers; and by publishing the same in the open streets: which may fitly be compared to the violation of the second of the ten Commandements.

### **Nor To Dispute The Sovereign Power**

Thirdly, in consequence to this, they ought to be informed, how great fault it is, to speak evill of the Sovereign Representative, (whether One man, or an Assembly of men;) or to argue and dispute his Power, or any way to use his Name irreverently, whereby he may be brought into Contempt with his People, and their Obedience (in which the safety of the Common-wealth consisteth) slackened. Which doctrine the third Commandement by resemblance pointeth to.

## **And To Have Dayes Set Apart To Learn Their Duty**

Fourthly, seeing people cannot be taught this, nor when 'tis taught, remember it, nor after one generation past, so much as know in whom the Sovereign Power is placed, without setting a part from their ordinary labour, some certain times, in which they may attend those that are appointed to instruct them; It is necessary that some such times be determined, wherein they may assemble together, and (after prayers and praises given to God, the Sovereign of Sovereigns) hear those their Duties told them, and the Positive Lawes, such as generally concern them all, read and expounded, and be put in mind of the Authority that maketh them Lawes. To this end had the Jewes every seventh day, a Sabbath, in which the Law was read and expounded; and in the solemnity whereof they were put in mind, that their King was God; that having created the world in six days, he rested the seventh day; and by their resting on it from their labour, that that God was their King, which redeemed them from their servile, and painfull labour in Egypt, and gave them a time, after they had rejoyced in God, to take joy also in themselves, by lawfull recreation. So that the first Table of the Commandements, is spent all, in setting down the summe of Gods absolute Power; not onely as God, but as King by pact, (in peculiar) of the Jewes; and may therefore give light, to those that have the Sovereign Power conferred on them by the consent of men, to see what doctrine they Ought to teach their Subjects.

## **And To Honour Their Parents**

And because the first instruction of Children, dependeth on the care of their Parents; it is necessary that they should be obedient to them, whilst they are under their tuition; and not onely so, but that also afterwards (as gratitude requireth,) they acknowledge the benefit of their education, by externall signes of honour. To which end they are to be taught, that originally the Father of every man was also his Sovereign Lord, with power over him of life and death; and that the Fathers of families, when by instituting a Common-wealth, they resigned that absolute Power, yet it was never intended, they should lose the honour due unto them for their education. For to relinquish such right, was not necessary to the Institution of Sovereign Power; nor would there be any reason, why any man should desire to have children, or take the care to nourish, and instruct them, if they were afterwards to have no other benefit from them, than from other men. And this accordeth with the fifth Commandement.

## **And To Avoyd Doing Of Injury:**

Again, every Sovereign Ought to cause Justice to be taught, which (consisting in taking from no man what is his) is as much as to say, to cause men to be taught not to deprive their Neighbour, by violence, or fraud, of any thing which by the Sovereign Authority is theirs. Of things held in propriety, those that are dearest to a man are his own life, & limbs; and in the next degree, (in most men,) those that concern conjugall affection; and after them riches and means of living. Therefore the People are to be taught, to abstain from violence to one anothers person, by private revenges; from violation of conjugall honour; and from forcibly rapine, and fraudulent surreption of one anothers goods. For which purpose also it is necessary they be shewed the evill consequences of false Judgement, by corruption either of Judges or Witnesses, whereby the distinction of propriety is taken away, and Justice becomes of no effect: all which things are intimated in the sixth, seventh, eighth, and ninth Commandements.

## **And To Do All This Sincerely From The Heart**

Lastly, they are to be taught, that not onely the unjust facts, but the designes and intentions to do them, (though by accident hindred,) are Injustice; which consisteth in the pravity of the will, as well as in the irregularity of the act. And this is the intention of the tenth Commandement, and the summe of the Second Table; which is reduced all to this one Commandement of mutuall Charity, "Thou shalt love thy neighbour as thy selfe:" as the summe of the first Table is reduced to "the love of God;" whom they had then newly received as their King.

## The Use Of Universities

As for the Means, and Conduits, by which the people may receive this Instruction, wee are to search, by what means so may Opinions, contrary to the peace of Man-kind, upon weak and false Principles, have neverthelesse been so deeply rooted in them. I mean those, which I have in the precedent Chapter specified: as That men shall Judge of what is lawfull and unlawfull, not by the Law it selfe, but by their own private Judgements; That Subjects sinne in obeying the Commands of the Common-wealth, unlesse they themselves have first judged them to be lawfull: That their Propriety in their riches is such, as to exclude the Dominion, which the Common-wealth hath over the same: That it is lawfull for Subjects to kill such, as they call Tyrants: That the Sovereign Power may be divided, and the like; which come to be instilled into the People by this means. They whom necessity, or covetousnesse keepeth attent on their trades, and labour; and they, on the other side, whom superfluity, or sloth carrieth after their sensuall pleasures, (which two sorts of men take up the greatest part of Man-kind,) being diverted from the deep meditation, which the learning of truth, not onely in the matter of Naturall Justice, but also of all other Sciences necessarily requireth, receive the Notions of their duty, chiefly from Divines in the Pulpit, and partly from such of their Neighbours, or familiar acquaintance, as having the Faculty of discoursing readily, and plausibly, seem wiser and better learned in cases of Law, and Conscience, than themselves. And the Divines, and such others as make shew of Learning, derive their knowledge from the Universities, and from the Schooles of Law, or from the Books, which by men eminent in those Schooles, and Universities have been published. It is therefore manifest, that the Instruction of the people, dependeth wholly, on the right teaching of Youth in the Universities. But are not (may some men say) the Universities of England learned enough already to do that? or is it you will undertake to teach the Universities? Hard questions. Yet to the first, I doubt not to answer; that till towards the later end of Henry the Eighth, the Power of the Pope, was alwayes upheld against the Power of the Common-wealth, principally by the Universities;

and that the doctrines maintained by so many Preachers, against the Sovereign Power of the King, and by so many Lawyers, and others, that had their education there, is a sufficient argument, that though the Universities were not authors of those false doctrines, yet they knew not how to plant the true. For in such a contradiction of Opinions, it is most certain, that they have not been sufficiently instructed; and 'tis no wonder, if they yet retain a relish of that subtile liquor, wherewith they were first seasoned, against the Civill Authority. But to the later question, it is not fit, nor needfull for me to say either I, or No: for any man that sees what I am doing, may easily perceive what I think.

The safety of the People, requireth further, from him, or them that have the Sovereign Power, that Justice be equally administred to all degrees of People; that is, that as well the rich, and mighty, as poor and obscure persons, may be righted of the injuries done them; so as the great, may have no greater hope of impunity, when they doe violence, dishonour, or any Injury to the meaner sort, than when one of these, does the like to one of them: For in this consisteth Equity; to which, as being a Precept of the Law of Nature, a Sovereign is as much subject, as any of the meanest of his People. All breaches of the Law, are offences against the Commonwealth: but there be some, that are also against private Persons. Those that concern the Common-wealth onely, may without breach of Equity be pardoned; for every man may pardon what is done against himselfe, according to his own discretion. But an offence against a private man, cannot in Equity be pardoned, without the consent of him that is injured; or reasonable satisfaction.

The Inequality of Subjects, proceedeth from the Acts of Sovereign Power; and therefore has no more place in the presence of the Sovereign; that is to say, in a Court of Justice, then the Inequality between Kings, and their Subjects, in the presence of the King of Kings. The honour of great Persons, is to be valued for their beneficence, and the aydes they give to men of inferiour rank, or not at all. And the violences, oppressions, and injuries they do, are not extenuated, but aggravated by the greatnesse of their persons; because they have least need to commit them. The consequences of this partiality towards the great, proceed in this manner. Impunity maketh Insolence; Insolence Hatred; and Hatred, an Endeavour to pull down all oppressing and contumelious greatnesse, though with the ruine of the Common-wealth.

## Equall Taxes

To Equall Justice, appertaineth also the Equall imposition of Taxes; the equality whereof dependeth not on the Equality of riches, but on the Equality of the debt, that every man oweth to the Common-wealth for his defence. It is not enough, for a man to labour for the maintenance of his life; but also to fight, (if need be,) for the securing of his labour. They must either do as the Jewes did after their return from captivity, in re-edifying the Temple, build with one hand, and hold the Sword in the other; or else they must hire others to fight for them. For the Impositions that are layd on the People by the Sovereign Power, are nothing else but the Wages, due to them that hold the publique Sword, to defend private men in the exercise of severall Trades, and Callings. Seeing then the benefit that every one receiveth thereby, is the enjoyment of life, which is equally dear to poor, and rich; the debt which a poor man oweth them that defend his life, is the same which a rich man oweth for the defence of his; saving that the rich, who have the service of the poor, may be debtors not onely for their own persons, but for many more. Which considered, the Equality of Imposition, consisteth rather in the Equality of that which is consumed, than of the riches of the persons that consume the same. For what reason is there, that he which laboureth much, and sparing the fruits of his labour, consumeth little, should be more charged, then he that living idly, getteth little, and spendeth all he gets; seeing the one hath no more protection from the Common-wealth, then the other? But when the Impositions, are layd upon those things which men consume, every man payeth Equally for what he useth: Nor is the Common-wealth defrauded, by the luxurious waste of private men.

## **Publique Charity**

And whereas many men, by accident unavoidable, become unable to maintain themselves by their labour; they ought not to be left to the Charity of private persons; but to be provided for, (as far-forth as the necessities of Nature require,) by the Lawes of the Common-wealth. For as it is Uncharitableness in any man, to neglect the impotent; so it is in the Sovereign of a Common-wealth, to expose them to the hazard of such uncertain Charity.

## Prevention Of Idlennesse

But for such as have strong bodies, the case is otherwise: they are to be forced to work; and to avoyd the excuse of not finding employment, there ought to be such Lawes, as may encourage all manner of Arts; as Navigation, Agriculture, Fishing, and all manner of Manufacture that requires labour. The multitude of poor, and yet strong people still encreasing, they are to be transplanted into Countries not sufficiently inhabited: where neverthelesse, they are not to exterminate those they find there; but constrain them to inhabit closer together, and not range a great deal of ground, to snatch what they find; but to court each little Plot with art and labour, to give them their sustenance in due season. And when all the world is overchargd with Inhabitants, then the last remedy of all is Warre; which provideth for every man, by Victory, or Death.

## **Good Lawes What**

To the care of the Sovereign, belongeth the making of Good Lawes. But what is a good Law? By a Good Law, I mean not a Just Law: for no Law can be Unjust. The Law is made by the Sovereign Power, and all that is done by such Power, is warranted, and owned by every one of the people; and that which every man will have so, no man can say is unjust. It is in the Lawes of a Common-wealth, as in the Lawes of Gaming: whatsoever the Gamesters all agree on, is Injustice to none of them. A good Law is that, which is Needfull, for the Good Of The People, and withall Perspicuous.

## **Such As Are Necessary**

For the use of Lawes, (which are but Rules Authorised) is not to bind the People from all Voluntary actions; but to direct and keep them in such a motion, as not to hurt themselves by their own impetuous desires, rashnesse, or indiscretion, as Hedges are set, not to stop Travellers, but to keep them in the way. And therefore a Law that is not Needfull, having not the true End of a Law, is not Good. A Law may be conceived to be Good, when it is for the benefit of the Sovereign; though it be not Necessary for the People; but it is not so. For the good of the Sovereign and People, cannot be separated. It is a weak Sovereign, that has weak Subjects; and a weak People, whose Sovereign wanteth Power to rule them at his will. Unnecessary Lawes are not good Lawes; but trapps for Mony: which where the right of Sovereign Power is acknowledged, are superfluous; and where it is not acknowledged, insufficient to defend the People.

## Such As Are Perspicuous

The Perspicuity, consisteth not so much in the words of the Law it selfe, as in a Declaration of the Causes, and Motives, for which it was made. That is it, that shewes us the meaning of the Legislator, and the meaning of the Legislator known, the Law is more easily understood by few, than many words. For all words, are subject to ambiguity; and therefore multiplication of words in the body of the Law, is multiplication of ambiguity: Besides it seems to imply, (by too much diligence,) that whosoever can evade the words, is without the compasse of the Law. And this is a cause of many unnecessary Processes. For when I consider how short were the Lawes of antient times; and how they grew by degrees still longer; me thinks I see a contention between the Penners, and Pleaders of the Law; the former seeking to circumscribe the later; and the later to evade their circumscriptions; and that the Pleaders have got the Victory. It belongeth therefore to the Office of a Legislator, (such as is in all Common-wealths the Supreme Representative, be it one Man, or an Assembly,) to make the reason Perspicuous, why the Law was made; and the Body of the Law it selfe, as short, but in as proper, and significant termes, as may be.

## **Punishments**

It belongeth also to the Office of the Sovereign, to make a right application of Punishments, and Rewards. And seeing the end of punishing is not revenge, and discharge of choler; but correction, either of the offender, or of others by his example; the severest Punishments are to be inflicted for those Crimes, that are of most Danger to the Publique; such as are those which proceed from malice to the Government established; those that spring from contempt of Justice; those that provoke Indignation in the Multitude; and those, which unpunished, seem Authorised, as when they are committed by Sonnes, Servants, or Favorites of men in Authority: For Indignation carrieth men, not onely against the Actors, and Authors of Injustice; but against all Power that is likely to protect them; as in the case of Tarquin; when for the Insolent act of one of his Sonnes, he was driven out of Rome, and the Monarchy it selfe dissolved. But Crimes of Infirmitie; such as are those which proceed from great provocation, from great fear, great need, or from ignorance whether the Fact be a great Crime, or not, there is place many times for Lenity, without prejudice to the Common-wealth; and Lenity when there is such place for it, is required by the Law of Nature. The Punishment of the Leaders, and teachers in a Commotion; not the poore seduced People, when they are punished, can profit the Common-wealth by their example. To be severe to the People, is to punish that ignorance, which may in great part be imputed to the Sovereign, whose fault it was, they were no better instructed.

## Rewards

In like manner it belongeth to the Office, and Duty of the Sovereign, to apply his Rewards alwayes so, as there may arise from them benefit to the Common-wealth: wherein consisteth their Use, and End; and is then done, when they that have well served the Common-wealth, are with as little expence of the Common Treasure, as is possible, so well recompenced, as others thereby may be encouraged, both to serve the same as faithfully as they can, and to study the arts by which they may be enabled to do it better. To buy with Mony, or Preferment, from a Popular ambitious Subject, to be quiet, and desist from making ill impressions in the mindes of the People, has nothing of the nature of Reward; (which is ordained not for disservice, but for service past;) nor a signe of Gratitude, but of Fear: nor does it tend to the Benefit, but to the Dammage of the Publique. It is a contention with Ambition, like that of Hercules with the Monster Hydra, which having many heads, for every one that was vanquished, there grew up three. For in like manner, when the stubbornnesse of one Popular man, is overcome with Reward, there arise many more (by the Example) that do the same Mischiefe, in hope of like Benefit: and as all sorts of Manufacture, so also Malice encreaseth by being vendible. And though sometimes a Civill warre, may be differred, by such wayes as that, yet the danger growes still the greater, and the Publique ruine more assured. It is therefore against the Duty of the Sovereign, to whom the Publique Safety is committed, to Reward those that aspire to greatnesse by disturbing the Peace of their Country, and not rather to oppose the beginnings of such men, with a little danger, than after a longer time with greater.

## Counsellours

Another Businesse of the Sovereign, is to choose good Counsellours; I mean such, whose advice he is to take in the Government of the Commonwealth. For this word Counsell, Consilium, corrupted from Considium, is a large signification, and comprehendeth all Assemblies of men that sit together, not onely to deliberate what is to be done hereafter, but also to judge of Facts past, and of Law for the present. I take it here in the first sense onely: And in this sense, there is no choyce of Counsell, neither in a Democracy, nor Aristocracy; because the persons Counselling are members of the person Counsell'd. The choyce of Counsellours therefore is to Monarchy; In which, the Sovereign that endeavoureth not to make choyce of those, that in every kind are the most able, dischargeth not his Office as he ought to do. The most able Counsellours, are they that have least hope of benefit by giving evill Counsell, and most knowledge of those things that conduce to the Peace, and Defence of the Commonwealth. It is a hard matter to know who expecteth benefit from publique troubles; but the signes that guide to a just suspicion, is the soothing of the people in their unreasonable, or irremediable grievances, by men whose estates are not sufficient to discharge their accustomed expences, and may easily be observed by any one whom it concerns to know it. But to know, who has most knowledge of the Publique affaires, is yet harder; and they that know them, need them a great deale the lesse. For to know, who knowes the Rules almost of any Art, is a great degree of the knowledge of the same Art; because no man can be assured of the truth of anothers Rules, but he that is first taught to understand them. But the best signes of Knowledge of any Art, are, much conversing in it, and constant good effects of it. Good Counsell comes not by Lot, nor by Inheritance; and therefore there is no more reason to expect good Advice from the rich, or noble, in matter of State, than in delineating the dimensions of a fortresse; unlesse we shall think there needs no method in the study of the Politiques, (as there does in the study of Geometry,) but onely to be lookers on; which is not so. For the Politiques is the harder study of the two. Whereas in these parts of Europe, it hath been taken for a Right of

certain persons, to have place in the highest Councell of State by Inheritance; it is derived from the Conquests of the antient Germans; wherein many absolute Lords joyning together to conquer other Nations, would not enter in to the Confederacy, without such Priviledges, as might be marks of difference in time following, between their Posterity, and the posterity of their Subjects; which Priviledges being inconsistent with the Sovereign Power, by the favour of the Sovereign, they may seem to keep; but contending for them as their Right, they must needs by degrees let them go, and have at last no further honour, than adhaereth naturally to their abilities.

And how able soever be the Counsellours in any affaire, the benefit of their Counsell is greater, when they give every one his Advice, and reasons of it apart, than when they do it in an Assembly, by way of Orations; and when they have praemeditated, than when they speak on the sudden; both because they have more time, to survey the consequences of action; and are lesse subject to be carried away to contradiction, through Envy, Emulation, or other Passions arising from the difference of opinion.

The best Counsell, in those things that concern not other Nations, but onely the ease, and benefit the Subjects may enjoy, by Lawes that look onely inward, is to be taken from the generall informations, and complaints of the people of each Province, who are best acquainted with their own wants, and ought therefore, when they demand nothing in derogation of the essentiall Rights of Sovereignty, to be diligently taken notice of. For without those Essentiall Rights, (as I have often before said,) the Common-wealth cannot at all subsist.

## Commanders

A Commander of an Army in chiefe, if he be not Popular, shall not be beloved, nor feared as he ought to be by his Army; and consequently cannot performe that office with good successe. He must therefore be Industrious, Valiant, Affable, Liberall and Fortunate, that he may gain an opinion both of sufficiency, and of loving his Souldiers. This is Popularity, and breeds in the Souldiers both desire, and courage, to recommend themselves to his favour; and protects the severity of the Generall, in punishing (when need is) the Mutinous, or negligent Souldiers. But this love of Souldiers, (if caution be not given of the Commanders fidelity,) is a dangerous thing to Sovereign Power; especially when it is in the hands of an Assembly not popular. It belongeth therefore to the safety of the People, both that they be good Conductors, and faithfull subjects, to whom the Sovereign Commits his Armies.

But when the Sovereign himselfe is Popular, that is, revered and beloved of his People, there is no danger at all from the Popularity of a Subject. For Souldiers are never so generally unjust, as to side with their Captain; though they love him, against their Sovereign, when they love not onely his Person, but also his Cause. And therefore those, who by violence have at any time suppressed the Power of their Lawfull Sovereign, before they could settle themselves in his place, have been alwayes put to the trouble of contriving their Titles, to save the People from the shame of receiving them. To have a known Right to Sovereign Power, is so popular a quality, as he that has it needs no more, for his own part, to turn the hearts of his Subjects to him, but that they see him able absolutely to govern his own Family: Nor, on the part of his enemies, but a disbanding of their Armies. For the greatest and most active part of Mankind, has never hetherto been well contented with the present.

Concerning the Offices of one Sovereign to another, which are comprehended in that Law, which is commonly called the Law of Nations, I need not say any thing in this place; because the Law of Nations, and the Law of Nature, is the same thing. And every Sovereign hath the same Right, in procuring the safety of his People, that any particular man can

have, in procuring the safety of his own Body. And the same Law, that dictateth to men that have no Civil Government, what they ought to do, and what to avoyd in regard of one another, dictateth the same to Common-wealths, that is, to the Consciences of Sovereign Princes, and Sovereign Assemblies; there being no Court of Naturall Justice, but in the Conscience onely; where not Man, but God raigneth; whose Lawes, (such of them as oblige all Mankind,) in respect of God, as he is the Author of Nature, are Naturall; and in respect of the same God, as he is King of Kings, are Lawes. But of the Kingdome of God, as King of Kings, and as King also of a peculiar People, I shall speak in the rest of this discourse.

**CHAPTER XXXI. OF THE KINGDOME OF  
GOD BY NATURE**

## **The Scope Of The Following Chapters**

That the condition of meer Nature, that is to say, of absolute Liberty, such as is theirs, that neither are Sovereigns, nor Subjects, is Anarchy, and the condition of Warre: That the Praecepts, by which men are guided to avoyd that condition, are the Lawes of Nature: That a Common-wealth, without Sovereign Power, is but a word, without substance, and cannot stand: That Subjects owe to Sovereigns, simple Obedience, in all things, wherein their obedience is not repugnant to the Lawes of God, I have sufficiently proved, in that which I have already written. There wants onely, for the entire knowledge of Civill duty, to know what are those Lawes of God. For without that, a man knows not, when he is commanded any thing by the Civill Power, whether it be contrary to the Law of God, or not: and so, either by too much civill obedience, offends the Divine Majesty, or through feare of offending God, transgresses the commandements of the Common-wealth. To avoyd both these Rocks, it is necessary to know what are the Lawes Divine. And seeing the knowledge of all Law, dependeth on the knowledge of the Sovereign Power; I shall say something in that which followeth, of the KINGDOME OF GOD.

## Who Are Subjects In The Kingdome Of God

"God is King, let the Earth rejoyce," saith the Psalmist. (Psal. 96. 1). And again, "God is King though the Nations be angry; and he that sitteth on the Cherubins, though the earth be moved." (Psal. 98. 1). Whether men will or not, they must be subject alwayes to the Divine Power. By denying the Existence, or Providence of God, men may shake off their Ease, but not their Yoke. But to call this Power of God, which extendeth it selfe not onely to Man, but also to Beasts, and Plants, and Bodies inanimate, by the name of Kingdome, is but a metaphoricall use of the word. For he onely is properly said to Raigne, that governs his Subjects, by his Word, and by promise of Rewards to those that obey it, and by threatning them with Punishment that obey it not. Subjects therefore in the Kingdome of God, are not Bodies Inanimate, nor creatures Irrationall; because they understand no Precepts as his: Nor Atheists; nor they that believe not that God has any care of the actions of mankind; because they acknowledge no Word for his, nor have hope of his rewards, or fear of his threatnings. They therefore that believe there is a God that governeth the world, and hath given Praecepts, and propounded Rewards, and Punishments to Mankind, are Gods Subjects; all the rest, are to be understood as Enemies.

## **A Threefold Word Of God, Reason, Revelation, Prophecy**

To rule by Words, requires that such Words be manifestly made known; for else they are no Lawes: For to the nature of Lawes belongeth a sufficient, and clear Promulgation, such as may take away the excuse of Ignorance; which in the Lawes of men is but of one onely kind, and that is, Proclamation, or Promulgation by the voyce of man. But God declareth his Lawes three wayes; by the Dictates of Naturall Reason, By Revelation, and by the Voyce of some Man, to whom by the operation of Miracles, he procureth credit with the rest. From hence there ariseth a triple Word of God, Rational, Sensible, and Prophetique: to which Correspondeth a triple Hearing; Right Reason, Sense Supernaturall, and Faith. As for Sense Supernaturall, which consisteth in Revelation, or Inspiration, there have not been any Universall Lawes so given, because God speaketh not in that manner, but to particular persons, and to divers men divers things.

A Twofold Kingdome Of God, Naturall And Prophetique From the difference between the other two kinds of Gods Word, Rationall, and Prophetique, there may be attributed to God, a two-fold Kingdome, Naturall, and Prophetique: Naturall, wherein he governeth as many of Mankind as acknowledge his Providence, by the naturall Dictates of Right Reason; And Prophetique, wherein having chosen out one peculiar Nation (the Jewes) for his Subjects, he governed them, and none but them, not onely by naturall Reason, but by Positive Lawes, which he gave them by the mouths of his holy Prophets. Of the Naturall Kingdome of God I intend to speak in this Chapter.

The Right Of Gods Sovereignty Is Derived From His Omnipotence The Right of Nature, whereby God reigneth over men, and punisheth those that break his Lawes, is to be derived, not from his Creating them, as if he required obedience, as of Gratitude for his benefits; but from his Irresistible Power. I have formerly shewn, how the Sovereign Right ariseth from Pact: To shew how the same Right may arise from Nature, requires no more, but to shew in what case it is never taken away. Seeing all men

by Nature had Right to All things, they had Right every one to reigne over all the rest. But because this Right could not be obtained by force, it concerned the safety of every one, laying by that Right, to set up men (with Sovereign Authority) by common consent, to rule and defend them: whereas if there had been any man of Power Irresistible; there had been no reason, why he should not by that Power have ruled, and defended both himselfe, and them, according to his own discretion. To those therefore whose Power is irresistible, the dominion of all men adhaereth naturally by their excellence of Power; and consequently it is from that Power, that the Kingdome over men, and the Right of afflicting men at his pleasure, belongeth Naturally to God Almighty; not as Creator, and Gracious; but as Omnipotent. And though Punishment be due for Sinne onely, because by that word is understood Affliction for Sinne; yet the Right of Afflicting, is not alwayes derived from mens Sinne, but from Gods Power.

## **Sinne Not The Cause Of All Affliction**

This question, "Why Evill men often Prosper, and Good men suffer Adversity," has been much disputed by the Antient, and is the same with this of ours, "By what Right God dispenseth the Prosperities and Adversities of this life;" and is of that difficulty, as it hath shaken the faith, not onely of the Vulgar, but of Philosophers, and which is more, of the Saints, concerning the Divine Providence. "How Good," saith David, "is the God of Israel to those that are Upright in Heart; and yet my feet were almost gone, my treadings had well-nigh slipt; for I was grieved at the Wicked, when I saw the Ungodly in such Prosperity." And Job, how earnestly does he expostulate with God, for the many Afflictions he suffered, notwithstanding his Righteousnesse? This question in the case of Job, is decided by God himselfe, not by arguments derived from Job's Sinne, but his own Power. For whereas the friends of Job drew their arguments from his Affliction to his Sinne, and he defended himselfe by the conscience of his Innocence, God himselfe taketh up the matter, and having justified the Affliction by arguments drawn from his Power, such as this "Where was thou when I layd the foundations of the earth," and the like, both approved Job's Innocence, and reprov'd the Erroneous doctrine of his friends. Conformable to this doctrine is the sentence of our Saviour, concerning the man that was born Blind, in these words, "Neither hath this man sinned, nor his fathers; but that the works of God might be made manifest in him." And though it be said "That Death entred into the world by sinne," (by which is meant that if Adam had never sinned, he had never dyed, that is, never suffered any separation of his soule from his body,) it follows not thence, that God could not justly have Afflicted him, though he had not Sinned, as well as he afflicteth other living creatures, that cannot sinne.

## **Divine Lawes**

Having spoken of the Right of Gods Sovereignty, as grounded onely on Nature; we are to consider next, what are the Divine Lawes, or Dictates of Naturall Reason; which Lawes concern either the naturall Duties of one man to another, or the Honour naturally due to our Divine Sovereign. The first are the same Lawes of Nature, of which I have spoken already in the 14. and 15. Chapters of this Treatise; namely, Equity, Justice, Mercy, Humility, and the rest of the Morall Vertues. It remaineth therefore that we consider, what Praecepts are dictated to men, by their Naturall Reason onely, without other word of God, touching the Honour and Worship of the Divine Majesty.

## Honour And Worship What

Honour consisteth in the inward thought, and opinion of the Power, and Goodnesse of another: and therefore to Honour God, is to think as Highly of his Power and Goodnesse, as is possible. And of that opinion, the externall signes appearing in the Words, and Actions of men, are called Worship; which is one part of that which the Latines understand by the word Cultus: For Cultus signifieth properly, and constantly, that labour which a man bestowes on any thing, with a purpose to make benefit by it. Now those things whereof we make benefit, are either subject to us, and the profit they yeeld, followeth the labour we bestow upon them, as a naturall effect; or they are not subject to us, but answer our labour, according to their own Wills. In the first sense the labour bestowed on the Earth, is called Culture; and the education of Children a Culture of their mindes. In the second sense, where mens wills are to be wrought to our purpose, not by Force, but by Compleasance, it signifieth as much as Courting, that is, a winning of favour by good offices; as by praises, by acknowledging their Power, and by whatsoever is pleasing to them from whom we look for any benefit. And this is properly Worship: in which sense Publicola, is understood for a Worshipper of the People, and Cultus Dei, for the Worship of God.

## **Severall Signes Of Honour**

From internall Honour, consisting in the opinion of Power and Goodnesse, arise three Passions; Love, which hath reference to Goodnesse; and Hope, and Fear, that relate to Power: And three parts of externall worship; Praise, Magnifying, and Blessing: The subject of Praise, being Goodnesse; the subject of Magnifying, and Blessing, being Power, and the effect thereof Felicity. Praise, and Magnifying are significant both by Words, and Actions: By Words, when we say a man is Good, or Great: By Actions, when we thank him for his Bounty, and obey his Power. The opinion of the Happinesse of another, can onely be expressed by words.

## **Worship Naturall And Arbitrary**

There be some signes of Honour, (both in Attributes and Actions,) that be Naturally so; as amongst Attributes, Good, Just, Liberall, and the like; and amongst Actions, Prayers, Thanks, and Obedience. Others are so by Institution, or Custome of men; and in some times and places are Honourable; in others Dishonourable; in others Indifferent: such as are the Gestures in Salutation, Prayer, and Thanksgiving, in different times and places, differently used. The former is Naturall; the later Arbitrary Worship.

## **Worship Commanded And Free**

And of Arbitrary Worship, there bee two differences: For sometimes it is a Commanded, sometimes Voluntary Worship: Commanded, when it is such as hee requireth, who is Worshipped: Free, when it is such as the Worshipper thinks fit. When it is Commanded, not the words, or gestures, but the obedience is the Worship. But when Free, the Worship consists in the opinion of the beholders: for if to them the words, or actions by which we intend honour, seem ridiculous, and tending to contumely; they are not Worship; because a signe is not a signe to him that giveth it, but to him to whom it is made; that is, to the spectator.

## **Worship Publique And Private**

Again, there is a Publique, and a Private Worship. Publique, is the Worship that a Common-wealth performeth, as one Person. Private, is that which a Private person exhibiteth. Publique, in respect of the whole Common-wealth, is Free; but in respect of Particular men it is not so. Private, is in secret Free; but in the sight of the multitude, it is never without some Restraint, either from the Lawes, or from the Opinion of men; which is contrary to the nature of Liberty.

## **The End Of Worship**

The End of Worship amongst men, is Power. For where a man seeth another worshipped he supposeth him powerfull, and is the readier to obey him; which makes his Power greater. But God has no Ends: the worship we do him, proceeds from our duty, and is directed according to our capacity, by those rules of Honour, that Reason dictateth to be done by the weak to the more potent men, in hope of benefit, for fear of dammage, or in thankfulnessse for good already received from them.

## Attributes Of Divine Honour

That we may know what worship of God is taught us by the light of Nature, I will begin with his Attributes. Where, First, it is manifest, we ought to attribute to him Existence: For no man can have the will to honour that, which he thinks not to have any Being.

Secondly, that those Philosophers, who sayd the World, or the Soule of the World was God, spake unworthily of him; and denyed his Existence: For by God, is understood the cause of the World; and to say the World is God, is to say there is no cause of it, that is, no God.

Thirdly, to say the World was not Created, but Eternall, (seeing that which is Eternall has no cause,) is to deny there is a God.

Fourthly, that they who attributing (as they think) Ease to God, take from him the care of Mankind; take from him his Honour: for it takes away mens love, and fear of him; which is the root of Honour.

Fifthly, in those things that signifie Greatnesse, and Power; to say he is Finite, is not to Honour him: For it is not a signe of the Will to Honour God, to attribute to him lesse than we can; and Finite, is lesse than we can; because to Finite, it is easie to adde more.

Therefore to attribute Figure to him, is not Honour; for all Figure is Finite:

Nor to say we conceive, and imagine, or have an Idea of him, in our mind: for whatsoever we conceive is Finite:

Not to attribute to him Parts, or Totality; which are the Attributes onely of things Finite:

Nor to say he is this, or that Place: for whatsoever is in Place, is bounded, and Finite:

Nor that he is Moved, or Resteth: for both these Attributes ascribe to him Place:

Nor that there be more Gods than one; because it implies them all Finite: for there cannot be more than one Infinite: Nor to ascribe to him (unlesse Metaphorically, meaning not the Passion, but the Effect) Passions

that partake of Griefe; as Repentance, Anger, Mercy: or of Want; as Appetite, Hope, Desire; or of any Passive faculty: For Passion, is Power limited by somewhat else.

And therefore when we ascribe to God a Will, it is not to be understood, as that of Man, for a Rationall Appetite; but as the Power, by which he effecteth every thing.

Likewise when we attribute to him Sight, and other acts of Sense; as also Knowledge, and Understanding; which in us is nothing else, but a tumult of the mind, raised by externall things that presse the organicall parts of mans body: For there is no such thing in God; and being things that depend on naturall causes, cannot be attributed to him.

Hee that will attribute to God, nothing but what is warranted by naturall Reason, must either use such Negative Attributes, as Infinite, Eternall, Incomprehensible; or Superlatives, as Most High, Most Great, and the like; or Indefinite, as Good, Just, Holy, Creator; and in such sense, as if he meant not to declare what he is, (for that were to circumscribe him within the limits of our Fancy,) but how much wee admire him, and how ready we would be to obey him; which is a signe of Humility, and of a Will to honour him as much as we can: For there is but one Name to signifie our Conception of his Nature, and that is, I AM: and but one Name of his Relation to us, and that is God; in which is contained Father, King, and Lord.

## **Actions That Are Signes Of Divine Honour**

Concerning the actions of Divine Worship, it is a most generall Precept of Reason, that they be signes of the Intention to Honour God; such as are, First, Prayers: For not the Carvers, when they made Images, were thought to make them Gods; but the People that Prayed to them.

Secondly, Thanksgiving; which differeth from Prayer in Divine Worship, no otherwise, than that Prayers precede, and Thanks succeed the benefit; the end both of the one, and the other, being to acknowledge God, for Author of all benefits, as well past, as future.

Thirdly, Gifts; that is to say, Sacrifices, and Oblations, (if they be of the best,) are signes of Honour: for they are Thanksgivings.

Fourthly, Not to swear by any but God, is naturally a signe of Honour: for it is a confession that God onely knoweth the heart; and that no mans wit, or strength can protect a man against Gods vengeance on the perjured.

Fifthly, it is a part of Rationall Worship, to speak Considerately of God; for it argues a Fear of him, and Fear, is a confession of his Power. Hence followeth, That the name of God is not to be used rashly, and to no purpose; for that is as much, as in Vain: And it is to no purpose; unlesse it be by way of Oath, and by order of the Common-wealth, to make Judgements certain; or between Common-wealths, to avoyd Warre. And that disputing of Gods nature is contrary to his Honour: For it is supposed, that in this naturall Kingdome of God, there is no other way to know any thing, but by naturall Reason; that is, from the Principles of naturall Science; which are so farre from teaching us any thing of Gods nature, as they cannot teach us our own nature, nor the nature of the smallest creature living. And therefore, when men out of the Principles of naturall Reason, dispute of the Attributes of God, they but dishonour him: For in the Attributes which we give to God, we are not to consider the signification of Philosophicall Truth; but the signification of Pious Intention, to do him the greatest Honour we are able. From the want of which consideration, have proceeded the volumes of disputation about the Nature of God, that tend not to his Honour, but to the honour of our own

wits, and learning; and are nothing else but inconsiderate, and vain abuses of his Sacred Name.

Sixthly, in Prayers, Thanksgivings, Offerings and Sacrifices, it is a Dictate of naturall Reason, that they be every one in his kind the best, and most significant of Honour. As for example, that Prayers, and Thanksgiving, be made in Words and Phrases, not sudden, nor light, nor Plebeian; but beautifull and well composed; For else we do not God as much honour as we can. And therefore the Heathens did absurdly, to worship Images for Gods: But their doing it in Verse, and with Musick, both of Voyce, and Instruments, was reasonable. Also that the Beasts they offered in sacrifice, and the Gifts they offered, and their actions in Worshipping, were full of submission, and commemorative of benefits received, was according to reason, as proceeding from an intention to honour him.

Seventhly, Reason directeth not onely to worship God in Secret; but also, and especially, in Publique, and in the sight of men: For without that, (that which in honour is most acceptable) the procuring others to honour him, is lost.

Lastly, Obedience to his Lawes (that is, in this case to the Lawes of Nature,) is the greatest worship of all. For as Obedience is more acceptable to God than sacrifice; so also to set light by his Commandements, is the greatest of all contumelies. And these are the Lawes of that Divine Worship, which naturall Reason dictateth to private men.

## **Publique Worship Consisteth In Uniformity**

But seeing a Common-wealth is but one Person, it ought also to exhibite to God but one Worship; which then it doth, when it commandeth it to be exhibited by Private men, Publiquely. And this is Publique Worship; the property whereof, is to be Uniforme: For those actions that are done differently, by different men, cannot be said to be a Publique Worship. And therefore, where many sorts of Worship be allowed, proceeding from the different Religions of Private men, it cannot be said there is any Publique Worship, nor that the Common-wealth is of any Religion at all.

## **All Attributes Depend On The Lawes Civill**

And because words (and consequently the Attributes of God) have their signification by agreement, and constitution of men; those Attributes are to be held significative of Honour, that men intend shall so be; and whatsoever may be done by the wills of particular men, where there is no Law but Reason, may be done by the will of the Common-wealth, by Lawes Civill. And because a Common-wealth hath no Will, nor makes no Lawes, but those that are made by the Will of him, or them that have the Sovereign Power; it followeth, that those Attributes which the Sovereign ordaineth, in the Worship of God, for signes of Honour, ought to be taken and used for such, by private men in their publique Worship.

## **Not All Actions**

But because not all Actions are signes by Constitution; but some are Naturally signes of Honour, others of Contumely, these later (which are those that men are ashamed to do in the sight of them they reverence) cannot be made by humane power a part of Divine worship; nor the former (such as are decent, modest, humble Behaviour) ever be separated from it. But whereas there be an infinite number of Actions, and Gestures, of an indifferent nature; such of them as the Common-wealth shall ordain to be Publiquely and Universally in use, as signes of Honour, and part of Gods Worship, are to be taken and used for such by the Subjects. And that which is said in the Scripture, "It is better to obey God than men," hath place in the kingdome of God by Pact, and not by Nature.

## Naturall Punishments

Having thus briefly spoken of the Naturall Kingdome of God, and his Naturall Lawes, I will adde onely to this Chapter a short declaration of his Naturall Punishments. There is no action of man in this life, that is not the beginning of so long a chayn of Consequences, as no humane Providence, is high enough, to give a man a prospect to the end. And in this Chayn, there are linked together both pleasing and unpleasing events; in such manner, as he that will do any thing for his pleasure, must engage himselfe to suffer all the pains annexed to it; and these pains, are the Naturall Punishments of those actions, which are the beginning of more Harme than Good. And hereby it comes to passe, that Intemperance, is naturally punished with Diseases; Rashnesse, with Mischances; Injustice, with the Violence of Enemies; Pride, with Ruine; Cowardise, with Oppression; Negligent government of Princes, with Rebellion; and Rebellion, with Slaughter. For seeing Punishments are consequent to the breach of Lawes; Naturall Punishments must be naturally consequent to the breach of the Lawes of Nature; and therefore follow them as their naturall, not arbitrary effects.

## The Conclusion Of The Second Part

And thus farre concerning the Constitution, Nature, and Right of Sovereigns; and concerning the Duty of Subjects, derived from the Principles of Naturall Reason. And now, considering how different this Doctrine is, from the Practise of the greatest part of the world, especially of these Western parts, that have received their Morall learning from Rome, and Athens; and how much depth of Morall Philosophy is required, in them that have the Administration of the Sovereign Power; I am at the point of believing this my labour, as uselesse, and the Common-wealth of Plato; For he also is of opinion that it is impossible for the disorders of State, and change of Governments by Civill Warre, ever to be taken away, till Sovereigns be Philosophers. But when I consider again, that the Science of Naturall Justice, is the onely Science necessary for Sovereigns, and their principall Ministers; and that they need not be charged with the Sciences Mathematicall, (as by Plato they are,) further, than by good Lawes to encourage men to the study of them; and that neither Plato, nor any other Philosopher hitherto, hath put into order, and sufficiently, or probably proved all the Theoremes of Morall doctrine, that men may learn thereby, both how to govern, and how to obey; I recover some hope, that one time or other, this writing of mine, may fall into the hands of a Sovereign, who will consider it himselfe, (for it is short, and I think clear,) without the help of any interested, or envious Interpreter; and by the exercise of entire Sovereignty, in protecting the Publique teaching of it, convert this Truth of Speculation, into the Utility of Practice.

**PART III. OF A CHRISTIAN COMMON-  
WEALTH**

## CHAPTER XXXII. OF THE PRINCIPLES OF CHRISTIAN POLITIQUES

The Word Of God Delivered By Prophets Is The Main Principle  
Of Christian Politiques

I have derived the Rights of Sovereigne Power, and the duty of Subjects hitherto, from the Principles of Nature onely; such as Experience has found true, or Consent (concerning the use of words) has made so; that is to say, from the nature of Men, known to us by Experience, and from Definitions (of such words as are Essentiall to all Politicall reasoning) universally agreed on. But in that I am next to handle, which is the Nature and Rights of a CHRISTIAN COMMON-WEALTH, whereof there dependeth much upon Supernaturall Revelations of the Will of God; the ground of my Discourse must be, not only the Naturall Word of God, but also the Propheticall.

Nevertheless, we are not to renounce our Senses, and Experience; nor (that which is the undoubted Word of God) our naturall Reason. For they are the talents which he hath put into our hands to negotiate, till the coming again of our blessed Saviour; and therefore not to be folded up in the Napkin of an Implicate Faith, but employed in the purchase of Justice, Peace, and true Religion, For though there be many things in Gods Word above Reason; that is to say, which cannot by naturall reason be either demonstrated, or confuted; yet there is nothing contrary to it; but when it seemeth so, the fault is either in our unskilfull Interpretation, or erroneous Ratiocination.

Therefore, when any thing therein written is too hard for our examination, wee are bidden to captivate our understanding to the Words; and not to labour in sifting out a Philosophicall truth by Logick, of such mysteries as are not comprehensible, nor fall under any rule of naturall science. For it is with the mysteries of our Religion, as with wholesome pills for the sick, which swallowed whole, have the vertue to cure; but chewed, are for the most part cast up again without effect.

## **What It Is To Captivate The Understanding**

But by the Captivity of our Understanding, is not meant a Submission of the Intellectual faculty, to the Opinion of any other man; but of the Will to Obedience, where obedience is due. For Sense, Memory, Understanding, Reason, and Opinion are not in our power to change; but alwaies, and necessarily such, as the things we see, hear, and consider suggest unto us; and therefore are not effects of our Will, but our Will of them. We then Captivate our Understanding and Reason, when we forbear contradiction; when we so speak, as (by lawfull Authority) we are commanded; and when we live accordingly; which in sum, is Trust, and Faith reposed in him that speaketh, though the mind be incapable of any Notion at all from the words spoken.

## How God Speaketh To Men

When God speaketh to man, it must be either immediately; or by mediation of another man, to whom he had formerly spoken by himself immediately. How God speaketh to a man immediately, may be understood by those well enough, to whom he hath so spoken; but how the same should be understood by another, is hard, if not impossible to know. For if a man pretend to me, that God hath spoken to him supernaturally, and immediately, and I make doubt of it, I cannot easily perceive what argument he can produce, to oblige me to beleefe it. It is true, that if he be my Sovereign, he may oblige me to obedience, so, as not by act or word to declare I beleefe him not; but not to think any otherwise then my reason perswades me. But if one that hath not such authority over me, shall pretend the same, there is nothing that exacteth either beleefe, or obedience.

For to say that God hath spoken to him in the Holy Scripture, is not to say God hath spoken to him immediately, but by mediation of the Prophets, or of the Apostles, or of the Church, in such manner as he speaks to all other Christian men. To say he hath spoken to him in a Dream, is no more than to say he dreamed that God spake to him; which is not of force to win beleef from any man, that knows dreams are for the most part naturall, and may proceed from former thoughts; and such dreams as that, from selfe conceit, and foolish arrogance, and false opinion of a mans own godlinesse, or other vertue, by which he thinks he hath merited the favour of extraordinary Revelation. To say he hath seen a Vision, or heard a Voice, is to say, that he hath dreamed between sleeping and waking: for in such manner a man doth many times naturally take his dream for a vision, as not having well observed his own slumbering. To say he speaks by supernaturall Inspiration, is to say he finds an ardent desire to speak, or some strong opinion of himself, for which he can alledge no naturall and sufficient reason. So that though God Almighty can speak to a man, by Dreams, Visions, Voice, and Inspiration; yet he obliges no man to beleefe he hath so done to him that pretends it; who (being a man), may erre, and (which is more) may lie.

## By What Marks Prophets Are Known

How then can he, to whom God hath never revealed his Will immediately (saving by the way of natural reason) know when he is to obey, or not to obey his Word, delivered by him, that sayes he is a Prophet? (1 Kings 22) Of 400 Prophets, of whom the K. of Israel asked counsel, concerning the warre he made against Ramoth Gilead, only Micaiah was a true one.(1 Kings 13) The Prophet that was sent to prophecy against the Altar set up by Jeroboam, though a true Prophet, and that by two miracles done in his presence appears to be a Prophet sent from God, was yet deceived by another old Prophet, that perswaded him as from the mouth of God, to eat and drink with him. If one Prophet deceive another, what certainty is there of knowing the will of God, by other way than that of Reason? To which I answer out of the Holy Scripture, that there be two marks, by which together, not asunder, a true Prophet is to be known. One is the doing of miracles; the other is the not teaching any other Religion than that which is already established. Asunder (I say) neither of these is sufficient. (Deut. 13 v. 1,2,3,4,5 ) "If a Prophet rise amongst you, or a Dreamer of dreams, and shall pretend the doing of a miracle, and the miracle come to passe; if he say, Let us follow strange Gods, which thou hast not known, thou shalt not hearken to him, &c. But that Prophet and Dreamer of dreams shall be put to death, because he hath spoken to you to Revolt from the Lord your God." In which words two things are to be observed, First, that God wil not have miracles alone serve for arguments, to approve the Prophets calling; but (as it is in the third verse) for an experiment of the constancy of our adherence to himself. For the works of the Egyptian Sorcerers, though not so great as those of Moses, yet were great miracles. Secondly, that how great soever the miracle be, yet if it tend to stir up revolt against the King, or him that governeth by the Kings authority, he that doth such miracle, is not to be considered otherwise than as sent to make triall of their allegiance. For these words, "revolt from the Lord your God," are in this place equivalent to "revolt from your King." For they had made God their King by pact at the foot of Mount Sinai; who ruled them by Moses only; for he only spake with God, and from time to

time declared Gods Commandements to the people. In like manner, after our Saviour Christ had made his Disciples acknowledge him for the Messiah, (that is to say, for Gods anointed, whom the nation of the Jews daily expected for their King, but refused when he came,) he omitted not to advertise them of the danger of miracles. "There shall arise," (saith he) "false Christs, and false Prophets, and shall doe great wonders and miracles, even to the seducing (if it were possible) of the very Elect." (Mat. 24. 24) By which it appears, that false Prophets may have the power of miracles; yet are wee not to take their doctrin for Gods Word. St. Paul says further to the Galatians, that "if himself, or an Angell from heaven preach another Gospel to them, than he had preached, let him be accursed." (Gal. 1. 8) That Gospel was, that Christ was King; so that all preaching against the power of the King received, in consequence to these words, is by St. Paul accursed. For his speech is addressed to those, who by his preaching had already received Jesus for the Christ, that is to say, for King of the Jews.

# **The Marks Of A Prophet In The Old Law, Miracles, And Doctrine**

## **Conformable To The Law**

And as Miracles, without preaching that Doctrine which God hath established; so preaching the true Doctrine, without the doing of Miracles, is an insufficient argument of immediate Revelation. For if a man that teacheth not false Doctrine, should pretend to be a Prophet without shewing any Miracle, he is never the more to be regarded for his pretence, as is evident by Deut. 18. v. 21, 22. "If thou say in thy heart, How shall we know that the Word (of the Prophet) is not that which the Lord hath spoken. When the Prophet shall have spoken in the name of the Lord, that which shall not come to passe, that's the word which the Lord hath not spoken, but the Prophet has spoken it out of the pride of his own heart, fear him not." But a man may here again ask, When the Prophet hath foretold a thing, how shall we know whether it will come to passe or not? For he may foretel it as a thing to arrive after a certain long time, longer then the time of mans life; or indefinitely, that it will come to passe one time or other: in which case this mark of a Prophet is unusefull; and therefore the miracles that oblige us to beleve a Prophet, ought to be confirmed by an immediate, or a not long deferr'd event. So that it is manifest, that the teaching of the Religion which God hath established, and the showing of a present Miracle, joined together, were the only marks whereby the Scripture would have a true Prophet, that is to say immediate Revelation to be acknowledged; neither of them being singly sufficient to oblige any other man to regard what he saith.

## **Miracles Ceasing, Prophets Cease, The Scripture Supplies Their Place**

Seeing therefore Miracles now cease, we have no sign left, whereby to acknowledge the pretended Revelations, or Inspirations of any private man; nor obligation to give ear to any Doctrine, farther than it is conformable to the Holy Scriptures, which since the time of our Saviour, supply the want of all other Prophecy; and from which, by wise and careful ratiocination, all rules and precepts necessary to the knowledge of our duty both to God and man, without Enthusiasme, or supernaturall Inspiration, may easily be deduced. And this Scripture is it, out of which I am to take the Principles of my Discourse, concerning the Rights of those that are the Supream Govenors on earth, of Christian Common-wealths; and of the duty of Christian Subjects towards their Sovereigns. And to that end, I shall speak in the next Chapter, of the Books, Writers, Scope and Authority of the Bible.

**CHAPTER XXXIII. OF THE NUMBER,  
ANTIQUITY, SCOPE, AUTHORITY,  
AND INTERPRETERS OF THE BOOKS OF HOLY  
SCRIPTURES**

## Of The Books Of Holy Scripture

By the Books of Holy SCRIPTURE, are understood those, which ought to be the Canon, that is to say, the Rules of Christian life. And because all Rules of life, which men are in conscience bound to observe, are Laws; the question of the Scripture, is the question of what is Law throughout all Christendome, both Naturall, and Civill. For though it be not determined in Scripture, what Laws every Christian King shall constitute in his own Dominions; yet it is determined what laws he shall not constitute. Seeing therefore I have already proved, that Sovereigns in their own Dominions are the sole Legislators; those Books only are Canonically, that is, Law, in every nation, which are established for such by the Sovereign Authority. It is true, that God is the Sovereign of all Sovereigns; and therefore, when he speaks to any Subject, he ought to be obeyed, whatsoever any earthly Potentate command to the contrary. But the question is not of obedience to God, but of When, and What God hath said; which to Subjects that have no supernaturall revelation, cannot be known, but by that naturall reason, which guided them, for the obtaining of Peace and Justice, to obey the authority of their severall Common-wealths; that is to say, of their lawfull Sovereigns. According to this obligation, I can acknowledge no other Books of the Old Testament, to be Holy Scripture, but those which have been commanded to be acknowledged for such, by the Authority of the Church of England. What Books these are, is sufficiently known, without a Catalogue of them here; and they are the same that are acknowledged by St. Jerome, who holdeth the rest, namely, the Wisdome of Solomon, Ecclesiasticus, Judith, Tobias, the first and second of Maccabees, (though he had seen the first in Hebrew) and the third and fourth of Esdras, for Apocrypha. Of the Canonically, Josephus a learned Jew, that wrote in the time of the Emperor Domitian, reckoneth Twenty Two, making the number agree with the Hebrew Alphabet. St. Jerome does the same, though they reckon them in different manner. For Josephus numbers Five Books of Moses, Thirteen of Prophets, that writ the History of their own times (which how it agrees with the Prophets writings contained in the Bible wee shall see hereafter), and Four of Hymnes and Morall Precepts. But St.

Jerome reckons Five Books of Moses, Eight of Prophets, and Nine of other Holy writ, which he calls of Hagiographa. The Septuagint, who were 70. learned men of the Jews, sent for by Ptolemy King of Egypt, to translate the Jewish Law, out of the Hebrew into the Greek, have left us no other for holy Scripture in the Greek tongue, but the same that are received in the Church of England.

As for the Books of the New Testament, they are equally acknowledged for Canon by all Christian Churches, and by all sects of Christians, that admit any Books at all for Canonically.

## **Their Antiquity**

Who were the originall writers of the severall Books of Holy Scripture, has not been made evident by any sufficient testimony of other History, (which is the only proof of matter of fact); nor can be by any arguments of naturall Reason; for Reason serves only to convince the truth (not of fact, but) of consequence. The light therefore that must guide us in this question, must be that which is held out unto us from the Bookes themselves: And this light, though it show us not the writer of every book, yet it is not unusefull to give us knowledge of the time, wherein they were written.

## **The Pentateuch Not Written By Moses**

And first, for the Pentateuch, it is not argument enough that they were written by Moses, because they are called the five Books of Moses; no more than these titles, The Book of Joshua, the Book of Judges, The Book of Ruth, and the Books of the Kings, are arguments sufficient to prove, that they were written by Joshua, by the Judges, by Ruth, and by the Kings. For in titles of Books, the subject is marked, as often as the writer. The History Of Livy, denotes the Writer; but the History Of Scanderbeg, is denominated from the subject. We read in the last Chapter of Deuteronomie, Ver. 6. concerning the sepulcher of Moses, "that no man knoweth of his sepulcher to this day," that is, to the day wherein those words were written. It is therefore manifest, that those words were written after his interment. For it were a strange interpretation, to say Moses spake of his own sepulcher (though by Prophecy), that it was not found to that day, wherein he was yet living. But it may perhaps be alledged, that the last Chapter only, not the whole Pentateuch, was written by some other man, but the rest not: Let us therefore consider that which we find in the Book of Genesis, Chap. 12. Ver. 6 "And Abraham passed through the land to the place of Sichem, unto the plain of Moreh, and the Canaanite was then in the land;" which must needs bee the words of one that wrote when the Canaanite was not in the land; and consequently, not of Moses, who dyed before he came into it. Likewise Numbers 21. Ver. 14. the Writer citeth another more ancient Book, Entitled, The Book of the Warres of the Lord, wherein were registred the Acts of Moses, at the Red-sea, and at the brook of Arnon. It is therefore sufficiently evident, that the five Books of Moses were written after his time, though how long after it be not so manifest.

But though Moses did not compile those Books entirely, and in the form we have them; yet he wrote all that which hee is there said to have written: as for example, the Volume of the Law, which is contained, as it seemeth in the 11 of Deuteronomie, and the following Chapters to the 27. which was also commanded to be written on stones, in their entry into the land of Canaan. (Deut. 31. 9) And this did Moses himself write, and deliver to the

Priests and Elders of Israel, to be read every seventh year to all Israel, at their assembling in the feast of Tabernacles. And this is that Law which God commanded, that their Kings (when they should have established that form of Government) should take a copy of from the Priests and Levites to lay in the side of the Arke; (Deut. 31. 26) and the same which having been lost, was long time after found again by Hilkiyah, and sent to King Josias, who causing it to be read to the People, renewed the Covenant between God and them. (2 King. 22. 8 & 23. 1,2,3)

## **The Book of Joshua Written After His Time**

That the Book of Joshua was also written long after the time of Joshua, may be gathered out of many places of the Book it self. Joshua had set up twelve stones in the midst of Jordan, for a monument of their passage; (Josh 4. 9) of which the Writer saith thus, "They are there unto this day;" (Josh 5. 9) for "unto this day", is a phrase that signifieth a time past, beyond the memory of man. In like manner, upon the saying of the Lord, that he had rolled off from the people the Reproach of Egypt, the Writer saith, "The place is called Gilgal unto this day;" which to have said in the time of Joshua had been improper. So also the name of the Valley of Achor, from the trouble that Achan raised in the Camp, (Josh. 7. 26) the Writer saith, "remaineth unto this day;" which must needs bee therefore long after the time of Joshua. Arguments of this kind there be many other; as Josh. 8. 29. 13. 13. 14. 14. 15. 63.

## **The Booke Of Judges And Ruth Written Long After The Captivity**

The same is manifest by like arguments of the Book of Judges, chap. 1. 21,26 6.24 10.4 15.19 17.6 and Ruth 1. 1. but especially Judg. 18. 30. where it is said, that Jonathan "and his sonnes were Priests to the Tribe of Dan, untill the day of the captivity of the land."

## **The Like Of The Bookes Of Samuel**

That the Books of Samuel were also written after his own time, there are the like arguments, 1 Sam. 5.5. 7.13,15. 27.6. & 30.25. where, after David had adjudged equall part of the spoiles, to them that guarded the Ammunition, with them that fought, the Writer saith, "He made it a Statute and an Ordinance to Israel to this day." (2. Sam. 6.4.) Again, when David (displeased, that the Lord had slain Uzzah, for putting out his hand to sustain the Ark,) called the place Perez-Uzzah, the Writer saith, it is called so "to this day": the time therefore of the writing of that Book, must be long after the time of the fact; that is, long after the time of David.

## **The Books Of The Kings, And The Chronicles**

As for the two Books of the Kings, and the two books of the Chronicles, besides the places which mention such monuments, as the Writer saith, remained till his own days; such as are 1 Kings 9.13. 9.21. 10. 12. 12.19. 2 Kings 2.22. 8.22. 10.27. 14.7. 16.6. 17.23. 17.34. 17.41. 1 Chron. 4.41. 5.26. It is argument sufficient they were written after the captivity in Babylon, that the History of them is continued till that time. For the Facts Registered are alwaies more ancient than such Books as make mention of, and quote the Register; as these Books doe in divers places, referring the Reader to the Chronicles of the Kings of Juda, to the Chronicles of the Kings of Israel, to the Books of the Prophet Samuel, or the Prophet Nathan, of the Prophet Ahijah; to the Vision of Jehdo, to the Books of the Prophet Serveiah, and of the Prophet Addo.

## **Ezra And Nehemiah**

The Books of Esdras and Nehemiah were written certainly after their return from captivity; because their return, the re-edification of the walls and houses of Jerusalem, the renovation of the Covenant, and ordination of their policy are therein contained.

## **Esther**

The History of Queen Esther is of the time of the Captivity; and therefore the Writer must have been of the same time, or after it.

## Job

The Book of Job hath no mark in it of the time wherein it was written: and though it appear sufficiently (Exekiel 14.14, and James 5.11.) that he was no fained person; yet the Book it self seemeth not to be a History, but a Treatise concerning a question in ancient time much disputed, "why wicked men have often prospered in this world, and good men have been afflicted;" and it is the most probably, because from the beginning, to the third verse of the third chapter, where the complaint of Job beginneth, the Hebrew is (as St. Jerome testifies) in prose; and from thence to the sixth verse of the last chapter in Hexameter Verses; and the rest of that chapter again in prose. So that the dispute is all in verse; and the prose is added, but as a Preface in the beginning, and an Epilogue in the end. But Verse is no usuall stile of such, as either are themselves in great pain, as Job; or of such as come to comfort them, as his friends; but in Philosophy, especially morall Philosophy, in ancient time frequent.

## **The Psalter**

The Psalmes were written the most part by David, for the use of the Quire. To these are added some songs of Moses, and other holy men; and some of them after the return from the Captivity; as the 137. and the 126. whereby it is manifest that the Psalter was compiled, and put into the form it now hath, after the return of the Jews from Babylon.

## **The Proverbs**

The Proverbs, being a Collection of wise and godly Sayings, partly of Solomon, partly of Agur the son of Jakeh; and partly of the Mother of King Lemuel, cannot probably be thought to have been collected by Solomon, rather than by Agur, or the Mother of Lemuel; and that, though the sentences be theirs, yet the collection or compiling them into this one Book, was the work of some other godly man, that lived after them all.

## **Ecclesiastes And The Canticles**

The Books of Ecclesiastes and the Canticles have nothing that was not Solomons, except it be the Titles, or Incriptions. For "The Words of the Preacher, the Son of David, King in Jerusalem;" and, "the Song of Songs, which is Solomon's," seem to have been made for distinctions sake, then, when the Books of Scripture were gathered into one body of the Law; to the end, that not the Doctrine only, but the Authors also might be extant.

## The Prophets

Of the Prophets, the most ancient, are Sophoniah, Jonas, Amos, Hosea, Isaiah and Michaiah, who lived in the time of Amaziah, and Azariah, otherwise Ozias, Kings of Judah. But the Book of Jonas is not properly a Register of his Prophecy, (for that is contained in these few words, "Forty dayes and Ninivy shall be destroyed,") but a History or Narration of his frowardenesse and disputing Gods commandements; so that there is small probability he should be the Author, seeing he is the subject of it. But the Book of Amos is his Prophecy.

Jeremiah, Abdias, Nahum, and Habakkuk prophecyed in the time of Josiah.

Ezekiel, Daniel, Aggeus, and Zacharias, in the Captivity.

When Joel and Malachi prophecyed, is not evident by their Writings. But considering the Inscriptions, or Titles of their Books, it is manifest enough, that the whole Scripture of the Old Testament, was set forth in the form we have it, after the return of the Jews from their Captivity in Babylon, and before the time of Ptolemaeus Philadelphus, that caused it to bee translated into Greek by seventy men, which were sent him out of Judea for that purpose. And if the Books of Apocrypha (which are recommended to us by the Church, though not for Canonicall, yet for profitable Books for our instruction) may in this point be credited, the Scripture was set forth in the form we have it in, by Esdras; as may appear by that which he himself saith, in the second book, chapt. 14. verse 21, 22, &c. where speaking to God, he saith thus, "Thy law is burnt; therefore no man knoweth the things which thou has done, or the works that are to begin. But if I have found Grace before thee, send down the holy Spirit into me, and I shall write all that hath been done in the world, since the beginning, which were written in thy Law, that men may find thy path, and that they which will live in the later days, may live." And verse 45. "And it came to passe when the forty dayes were fulfilled, that the Highest spake, saying, 'The first that thou hast written, publish openly, that the worthy and unworthy may read it; but keep the seventy last, that thou mayst deliver them onely to such as be wise among the people.'" And thus

much concerning the time of the writing of the Bookes of the Old Testament.

## The New Testament

The Writers of the New Testament lived all in lesse then an age after Christs Ascension, and had all of them seen our Saviour, or been his Disciples, except St. Paul, and St. Luke; and consequently whatsoever was written by them, is as ancient as the time of the Apostles. But the time wherein the Books of the New Testament were received, and acknowledged by the Church to be of their writing, is not altogether so ancient. For, as the Bookes of the Old Testament are derived to us, from no higher time then that of Esdras, who by the direction of Gods Spirit retrived them, when they were lost: Those of the New Testament, of which the copies were not many, nor could easily be all in any one private mans hand, cannot bee derived from a higher time, that that wherein the Governours of the Church collected, approved, and recommended them to us, as the writings of those Apostles and Disciples; under whose names they go. The first enumeration of all the Bookes, both of the Old, and New Testament, is in the Canons of the Apostles, supposed to be collected by Clement the first (after St. Peter) Bishop of Rome. But because that is but supposed, and by many questioned, the Councill of Laodicea is the first we know, that recommended the Bible to the then Christian Churches, for the Writings of the Prophets and Apostles: and this Councill was held in the 364. yeer after Christ. At which time, though ambition had so far prevailed on the great Doctors of the Church, as no more to esteem Emperours, though Christian, for the Shepherds of the people, but for Sheep; and Emperours not Christian, for Wolves; and endeavoured to passe their Doctrine, not for Counsell, and Information, as Preachers; but for Laws, as absolute Governours; and thought such frauds as tended to make the people the more obedient to Christian Doctrine, to be pious; yet I am perswaded they did not therefore falsifie the Scriptures, though the copies of the Books of the New Testament, were in the hands only of the Ecclesiasticks; because if they had had an intention so to doe, they would surely have made them more favorable to their power over Christian Princes, and Civill Sovereignty, than they are. I see not therefore any reason to doubt, but that the Old, and New Testament, as we have them

now, are the true Registers of those things, which were done and said by the Prophets, and Apostles. And so perhaps are some of those Books which are called Apocrypha, if left out of the Canon, not for inconformity of Doctrine with the rest, but only because they are not found in the Hebrew. For after the conquest of Asia by Alexander the Great, there were few learned Jews, that were not perfect in the Greek tongue. For the seventy Interpreters that converted the Bible into Greek, were all of them Hebrews; and we have extant the works of Philo and Josephus both Jews, written by them eloquently in Greek. But it is not the Writer, but the authority of the Church, that maketh a Book Canonically.

## **Their Scope**

And although these Books were written by divers men, yet it is manifest the Writers were all indued with one and the same Spirit, in that they conspire to one and the same end, which is the setting forth of the Rights of the Kingdome of God, the Father, Son, and Holy Ghost. For the Book of Genesis, deriveth the Genealogy of Gods people, from the creation of the World, to the going into Egypt: the other four Books of Moses, contain the Election of God for their King, and the Laws which hee prescribed for their Government: The Books of Joshua, Judges, Ruth, and Samuel, to the time of Saul, describe the acts of Gods people, till the time they cast off Gods yoke, and called for a King, after the manner of their neighbour nations; The rest of the History of the Old Testament, derives the succession of the line of David, to the Captivity, out of which line was to spring the restorer of the Kingdome of God, even our blessed Saviour God the Son, whose coming was foretold in the Bookes of the Prophets, after whom the Evangelists writt his life, and actions, and his claim to the Kingdome, whilst he lived on earth: and lastly, the Acts, and Epistles of the Apostles, declare the coming of God, the Holy Ghost, and the Authority he left with them, and their successors, for the direction of the Jews, and for the invitation of the Gentiles. In summe, the Histories and the Prophecies of the old Testament, and the Gospels, and Epistles of the New Testament, have had one and the same scope, to convert men to the obedience of God; 1. in Moses, and the Priests; 2. in the man Christ; and 3. in the Apostles and the successors to Apostolicall power. For these three at several times did represent the person of God: Moses, and his successors the High Priests, and Kings of Judah, in the Old Testament: Christ himself, in the time he lived on earth: and the Apostles, and their successors, from the day of Pentecost (when the Holy Ghost descended on them) to this day.

## **The Question Of The Authority Of The Scriptures Stated.**

It is a question much disputed between the divers sects of Christian Religion, From Whence The Scriptures Derive Their Authority; which question is also propounded sometimes in other terms, as, How Wee Know Them To Be The Word Of God, or, Why We Beleeve Them To Be So: and the difficulty of resolving it, ariseth chiefly from the impropernesse of the words wherein the question it self is couched. For it is beleeved on all hands, that the first and originall Author of them is God; and consequently the question disputed, is not that. Again, it is manifest, that none can know they are Gods Word, (though all true Christians beleeve it,) but those to whom God himself hath revealed it supernaturally; and therefore the question is not rightly moved, of our Knowledge of it. Lastly, when the question is propounded of our Beleeve; because some are moved to beleeve for one, and others for other reasons, there can be rendred no one generall answer for them all. The question truly stated is, By What Authority They Are Made Law.

## **Their Authority And Interpretation**

As far as they differ not from the Laws of Nature, there is no doubt, but they are the Law of God, and carry their Authority with them, legible to all men that have the use of naturall reason: but this is no other Authority, then that of all other Morall Doctrine consonant to Reason; the Dictates whereof are Laws, not Made, but Eternall.

If they be made Law by God himselfe, they are of the nature of written Law, which are Laws to them only to whom God hath so sufficiently published them, as no man can excuse himself, by saying, he know not they were his.

He therefore, to whom God hath not supernaturally revealed, that they are his, nor that those that published them, were sent by him, is not obliged to obey them, by any Authority, but his, whose Commands have already the force of Laws; that is to say, by any other Authority, then that of the Common-wealth, residing in the Sovereign, who only has the Legislative power. Again, if it be not the Legislative Authority of the Common-wealth, that giveth them the force of Laws, it must be some other Authority derived from God, either private, or publique: if private, it obliges onely him, to whom in particular God hath been pleased to reveale it. For if every man should be obliged, to take for Gods Law, what particular men, on pretence of private Inspiration, or Revelation, should obtrude upon him, (in such a number of men, that out of pride, and ignorance, take their own Dreams, and extravagant Fancies, and Madnesse, for testimonies of Gods Spirit; or out of ambition, pretend to such Divine testimonies, falsely, and contrary to their own consciences,) it were impossible that any Divine Law should be acknowledged. If publique, it is the Authority of the Common-wealth, or of the Church. But the Church, if it be one person, is the same thing with a Common-wealth of Christians; called a Common-wealth, because it consisteth of men united in one person, their Sovereign; and a Church, because it consisteth in Christian men, united in one Christian Sovereign. But if the Church be not one person, then it hath no authority at all; it can neither command, nor doe any action at all; nor is capable of having any power, or right to any thing;

nor has any Will, Reason, nor Voice; for all these qualities are personall. Now if the whole number of Christians be not contained in one Commonwealth, they are not one person; nor is there an Universall Church that hath any authority over them; and therefore the Scriptures are not made Laws, by the Universall Church: or if it bee one Common-wealth, then all Christian Monarchs, and States are private persons, and subject to bee judged, deposed, and punished by an Universall Soveraigne of all Christendome. So that the question of the Authority of the Scriptures is reduced to this, "Whether Christian Kings, and the Soveraigne Assemblies in Christian Common-wealths, be absolute in their own Territories, immediately under God; or subject to one Vicar of Christ, constituted over the Universall Church; to bee judged, condemned, deposed, and put to death, as hee shall think expedient, or necessary for the common good."

Which question cannot bee resolved, without a more particular consideration of the Kingdome of God; from whence also, wee are to judge of the Authority of Interpreting the Scripture. For, whosoever hath a lawfull power over any Writing, to make it Law, hath the power also to approve, or disapprove the interpretation of the same.

**CHAPTER XXXIV. OF THE SIGNIFICATION  
OF SPIRIT, ANGEL, AND INSPIRATION IN**

THE BOOKS OF HOLY SCRIPTURE

## **Body And Spirit How Taken In The Scripture**

Seeing the foundation of all true Ratiocination, is the constant Signification of words; which in the Doctrine following, dependeth not (as in naturall science) on the Will of the Writer, nor (as in common conversation) on vulgar use, but on the sense they carry in the Scripture; It is necessary, before I proceed any further, to determine, out of the Bible, the meaning of such words, as by their ambiguity, may render what I am to inferre upon them, obscure, or disputable. I will begin with the words BODY, and SPIRIT, which in the language of the Schools are termed, Substances, Corporeall, and Incorporeall.

The Word Body, in the most generall acceptation, signifieth that which filleth, or occupyeth some certain room, or imagined place; and dependeth not on the imagination, but is a reall part of that we call the Universe. For the Universe, being the Aggregate of all Bodies, there is no reall part thereof that is not also Body; nor any thing properly a Body, that is not also part of (that Aggregate of all Bodies) the Universe. The same also, because Bodies are subject to change, that is to say, to variety of apparence to the sense of living creatures, is called Substance, that is to say, Subject, to various accidents, as sometimes to be Moved, sometimes to stand Still; and to seem to our senses sometimes Hot, sometimes Cold, sometimes of one Colour, Smel, Tast, or Sound, somtimes of another. And this diversity of Seeming, (produced by the diversity of the operation of bodies, on the organs of our sense) we attribute to alterations of the Bodies that operate, & call them Accidents of those Bodies. And according to this acceptation of the word, Substance and Body, signifie the same thing; and therefore Substance Incorporeall are words, which when they are joined together, destroy one another, as if a man should say, an Incorporeall Body.

But in the sense of common people, not all the Universe is called Body, but only such parts thereof as they can discern by the sense of Feeling, to resist their force, or by the sense of their Eyes, to hinder them from a farther prospect. Therefore in the common language of men, Aire, and Aeriall Substances, use not to be taken for Bodies, but (as often as men are sensible of their effects) are called Wind, or Breath, or (because the some

are called in the Latine Spiritus) Spirits; as when they call that aeriall substance, which in the body of any living creature, gives it life and motion, Vitall and Animall Spirits. But for those Idols of the brain, which represent Bodies to us, where they are not, as in a Looking-glasse, in a Dream, or to a Distempered brain waking, they are (as the Apostle saith generally of all Idols) nothing; Nothing at all, I say, there where they seem to bee; and in the brain it self, nothing but tumult, proceeding either from the action of the objects, or from the disorderly agitation of the Organs of our Sense. And men, that are otherwise imployed, then to search into their causes, know not of themselves, what to call them; and may therefore easily be perswaded, by those whose knowledge they much reverence, some to call them Bodies, and think them made of aire compacted by a power supernaturall, because the sight judges them corporeall; and some to call them Spirits, because the sense of Touch discerneth nothing in the place where they appear, to resist their fingers: So that the proper signification of Spirit in common speech, is either a subtile, fluid, and invisible Body, or a Ghost, or other Idol or Phantasme of the Imagination. But for metaphoricall significations, there be many: for sometimes it is taken for Disposition or Inclination of the mind; as when for the disposition to controwl the sayings of other men, we say, A Spirit Contradiction; For A Disposition to Uncleanesse, An Unclean Spirit; for Perversenesse, A Froward Spirit; for Sullenesse, A Dumb Spirit, and for Inclination To Godlinesse, And Gods Service, the Spirit of God: sometimes for any eminent ability, or extraordinary passion, or disease of the mind, as when Great Wisdome is called the Spirit Of Wisdome; and Mad Men are said to be Possessed With A Spirit.

Other signification of Spirit I find no where any; and where none of these can satisfie the sense of that word in Scripture, the place falleth not under humane Understanding; and our Faith therein consisteth not in our Opinion, but in our Submission; as in all places where God is said to be a Spirit; or where by the Spirit of God, is meant God himselfe. For the nature of God is incomprehensible; that is to say, we understand nothing of What He Is, but only That He Is; and therefore the Attributes we give him, are not to tell one another, What He Is, Nor to signifie our opinion of his Nature, but our desire to honor him with such names as we conceive most honorable amongst our selves.

## **Spirit Of God Taken In The Scripture Sometimes For A Wind, Or Breath**

Gen. 1. 2. "The Spirit of God moved upon the face of the Waters." Here if by the Spirit of God be meant God himself, then is Motion attributed to God, and consequently Place, which are intelligible only of Bodies, and not of substances incorporeall; and so the place is above our understanding, that can conceive nothing moved that changes not place, or that has not dimension; and whatsoever has dimension, is Body. But the meaning of those words is best understood by the like place, Gen. 8. 1. Where when the earth was covered with Waters, as in the beginning, God intending to abate them, and again to discover the dry land, useth like words, "I will bring my Spirit upon the Earth, and the waters shall be diminished:" in which place by Spirit is understood a Wind, (that is an Aire or Spirit Moved,) which might be called (as in the former place) the Spirit of God, because it was Gods Work.

## **Secondly, For Extraordinary Gifts Of The Understanding**

Gen. 41. 38. Pharaoh calleth the Wisdome of Joseph, the Spirit of God. For Joseph having advised him to look out a wise and discreet man, and to set him over the land of Egypt, he saith thus, "Can we find such a man as this is, in whom is the Spirit of God?" and Exod. 28.3. "Thou shalt speak (saith God) to all that are wise hearted, whom I have filled with the Spirit of Wisdome, to make Aaron Garments, to consecrate him." Where extraordinary Understanding, though but in making Garments, as being the Gift of God, is called the Spirit of God. The same is found again, Exod. 31.3,4,5,6. and 35.31. And Isaiah 11.2,3. where the Prophet speaking of the Messiah, saith, "The Spirit of the Lord shall abide upon him, the Spirit of wisdome and understanding, the Spirit of counsell, and fortitude; and the Spirit of the fear of the Lord." Where manifestly is meant, not so many Ghosts, but so many eminent Graces that God would give him.

## **Thirdly, For Extraordinary Affections**

In the Book of Judges, an extraordinary Zeal, and Courage in the defence of Gods people, is called the Spirit of God; as when it excited Othoniel, Gideon, Jephtha, and Samson to deliver them from servitude, Judg. 3.10. 6.34. 11.29. 13.25. 14.6,19. And of Saul, upon the newes of the insolence of the Ammonites towards the men of Jabeth Gilead, it is said (1 Sam.11.6.) that "The Spirit of God came upon Saul, and his Anger (or, as it is in the Latine, His Fury) was kindled greatly." Where it is not probable was meant a Ghost, but an extraordinary Zeal to punish the cruelty of the Ammonites. In like manner by the Spirit of God, that came upon Saul, when hee was amongst the Prophets that praised God in Songs, and Musick (1 Sam.19.20.) is to be understood, not a Ghost, but an unexpected and sudden Zeal to join with them in their devotions.

## **Fourthly, For The Gift Of Prediction By Dreams And Visions**

The false Prophet Zedekiah, saith to Micaiah (1 Kings 22.24.) "Which way went the Spirit of the Lord from me to speak to thee?" Which cannot be understood of a Ghost; for Micaiah declared before the Kings of Israel and Judah, the event of the battle, as from a Vision, and not as from a Spirit, speaking in him.

In the same manner it appeareth, in the Books of the Prophets, that though they spake by the Spirit of God, that is to say, by a speciall grace of Prediction; yet their knowledge of the future, was not by a Ghost within them, but by some supernaturall Dream or Vision.

## **Fiftly, For Life**

Gen. 2.7. It is said, "God made man of the dust of the Earth, and breathed into his nostrills (spiraculum vitae) the breath of life, and man was made a living soul." There the Breath of Life inspired by God, signifies no more, but that God gave him life; And (Job 27.3.) "as long as the Spirit of God is in my nostrils;" is no more then to say, "as long as I live." So in Ezek. 1.20. "the Spirit of life was in the wheels," is equivalent to, "the wheels were alive." And (Ezek. 2.30.) "the spirit entred into me, and set me on my feet," that is, "I recovered my vitall strength;" not that any Ghost, or incorporeal substance entred into, and possessed his body.

## **Sixtly, For A Subordination To Authority**

In the 11 chap. of Numbers. verse 17. "I will take (saith God) of the Spirit, which is upon thee, and will put it upon them, and they shall bear the burthen of the people with thee;" that is, upon the seventy Elders: whereupon two of the seventy are said to prophecy in the campe; of whom some complained, and Joshua desired Moses to forbid them; which Moses would not doe. Whereby it appears; that Joshua knew not they had received authority so to do, and prophecyed according to the mind of Moses, that is to say, by a Spirit, or Authority subordinate to his own.

In the like sense we read (Deut. 34.9.) that "Joshua was full of the Spirit of wisdom," because Moses had laid his hands upon him: that is, because he was Ordained by Moses, to prosecute the work hee had himselfe begun, (namely, the bringing of Gods people into the promised land), but prevented by death, could not finish.

In the like sense it is said, (Rom. 8.9.) "If any man have not the Spirit of Christ, he is none of his:" not meaning thereby the Ghost of Christ, but a Submission to his Doctrine. As also (1 John 4.2.) "Hereby you shall know the Spirit of God; Every Spirit that confesseth that Jesus Christ is come in the flesh, is of God;" by which is meant the Spirit of unfained Christianity, or Submission to that main Article of Christian faith, that Jesus is the Christ; which cannot be interpreted of a Ghost.

Likewise these words (Luke 4.1.) "And Jesus full of the Holy Ghost" (that is, as it is exprest, Mat. 4.1. and Mar. 1.12. "of the Holy Spirit",) may be understood, for Zeal to doe the work for which hee was sent by God the Father: but to interpret it of a Ghost, is to say, that God himselfe (for so our Saviour was,) was filled with God; which is very unproper, and insignificant. How we came to translate Spirits, by the word Ghosts, which signifieth nothing, neither in heaven, nor earth, but the Imaginary inhabitants of mans brain, I examine not: but this I say, the word Spirit in the text signifieth no such thing; but either properly a reall Substance, or Metaphorically, some extraordinary Ability of Affection of the Mind, or of the Body.

## Seventhly, For Aeriall Bodies

The Disciples of Christ, seeing him walking upon the sea, (Mat. 14.26. and Marke 6.49.) supposed him to be a Spirit, meaning thereby an Aeriall Body, and not a Phantasme: for it is said, they all saw him; which cannot be understood of the delusions of the brain, (which are not common to many at once, as visible Bodies are; but singular, because of the differences of Fancies), but of Bodies only. In like manner, where he was taken for a Spirit, by the same Apostles (Luke 24.3,7.): So also (Acts 12.15) when St. Peter was delivered out of Prison, it would not be beleevd; but when the Maid said he was at the dore, they said it was his Angel; by which must be meant a corporeall substance, or we must say, the Disciples themselves did follow the common opinion of both Jews and Gentiles, that some such apparitions were not Imaginary, but Reall; and such as needed not the fancy of man for their Existence: These the Jews called Spirits, and Angels, Good or Bad; as the Greeks called the same by the name of Daemons. And some such apparitions may be reall, and substantiall; that is to say, subtile Bodies, which God can form by the same power, by which he formed all things, and make use of, as of Ministers, and Messengers (that is to say, Angels) to declare his will, and execute the same when he pleaseth, in extraordinary and supernaturall manner. But when hee hath so formed them they are Substances, endued with dimensions, and take up roome, and can be moved from place to place, which is peculiar to Bodies; and therefore are not Ghosts Incorporeall, that is to say, Ghosts that are in No Place; that is to say, that are No Where; that is to say, that seeming to be Somewhat, are Nothing. But if corporeall be taken in the most vulgar manner, for such Substances as are perceptible by our externall Senses; then is Substance Incorporeall, a thing not Imaginary, but Reall; namely, a thin Substance Invisible, but that hath the same dimensions that are in grosser Bodies.

## Angel What

By the name of ANGEL, is signified generally, a Messenger; and most often, a Messenger of God: And by a Messenger of God, is signified, any thing that makes known his extraordinary Presence; that is to say, the extraordinary manifestation of his power, especially by a Dream, or Vision.

Concerning the creation of Angels, there is nothing delivered in the Scriptures. That they are Spirits, is often repeated: but by the name of Spirit, is signified both in Scripture, and vulgarly, both amongst Jews, and Gentiles, sometimes thin Bodies; as the Aire, the Wind, the Spirits Vitall, and Animall, of living creatures; and sometimes the Images that rise in the fancy in Dreams, and Visions; which are not reall Substances, but accidents of the brain; yet when God raiseth them supernaturally, to signifie his Will, they are not improperly termed Gods Messengers, that is to say, his Angels.

And as the Gentiles did vulgarly conceive the Imagery of the brain, for things really subsistent without them, and not dependent on the fancy; and out of them framed their opinions of Daemons, Good and Evill; which because they seemed to subsist really, they called Substances; and because they could not feel them with their hands, Incorporeall: so also the Jews upon the same ground, without any thing in the Old Testament that constrained them thereunto, had generally an opinion, (except the sect of the Sadduces,) that those apparitions (which it pleased God sometimes to produce in the fancie of men, for his own service, and therefore called them his Angels) were substances, not dependent on the fancy, but permanent creatures of God; whereof those which they thought were good to them, they esteemed the Angels of God, and those they thought would hurt them, they called Evill Angels, or Evill Spirits; such as was the Spirit of Python, and the Spirits of Mad-men, of Lunatiques, and Epileptiques: For they esteemed such as were troubled with such diseases, Daemoniaques.

But if we consider the places of the Old Testament where Angels are mentioned, we shall find, that in most of them, there can nothing else be

understood by the word Angel, but some image raised (supernaturally) in the fancy, to signifie the presence of God in the execution of some supernaturall work; and therefore in the rest, where their nature is not exprest, it may be understood in the same manner.

For we read Gen. 16. that the same apparition is called, not onely an Angel, but God; where that which (verse 7.) is called the Angel of the Lord, in the tenth verse, saith to Agar, "I will multiply thy seed exceedingly;" that is, speaketh in the person of God. Neither was this apparition a Fancy figured, but a Voice. By which it is manifest, that Angel signifieth there, nothing but God himself, that caused Agar supernaturally to apprehend a voice supernaturall, testifying Gods speciall presence there. Why therefore may not the Angels that appeared to Lot, and are called Gen. 19.13. Men; and to whom, though they were but two, Lot speaketh (ver. 18.) as but one, and that one, as God, (for the words are, "Lot said unto them, Oh not so my Lord") be understood of images of men, supernaturally formed in the Fancy; as well as before by Angel was understood a fancied Voice? When the Angel called to Abraham out of heaven, to stay his hand (Gen. 22.11.) from slaying Isaac, there was no Apparition, but a Voice; which neverthesse was called properly enough a Messenger, or Angel of God, because it declared Gods will supernaturally, and saves the labour of supposing any permanent Ghosts. The Angels which Jacob saw on the Ladder of Heaven (Gen. 28.12.) were a Vision of his sleep; therefore onely Fancy, and a Dream; yet being supernaturall, and signs of Gods Speciall presence, those apparitions are not improperly called Angels. The same is to be understood (Gen.31.11.) where Jacob saith thus, "The Angel of the Lord appeared to mee in my sleep." For an apparition made to a man in his sleep, is that which all men call a Dreame, whether such Dreame be naturall, or supernaturall: and that which there Jacob calleth an Angel, was God himselfe; for the same Angel saith (verse 13.) "I am the God of Bethel."

Also (Exod.14.9.) the Angel that went before the Army of Israel to the Red Sea, and then came behind it, is (verse 19.) the Lord himself; and he appeared not in the form of a beautifull man, but in form (by day) of a Pillar Of Cloud and (by night) in form of a Pillar Of Fire; and yet this Pillar was all the apparition, and Angel promised to Moses (Exod. 14.9.) for the Armies guide: For this cloudy pillar, is said, to have descended, and stood at the dore of the Tabernacle, and to have talked with Moses.

There you see Motion, and Speech, which are commonly attributed to Angels, attributed to a Cloud, because the Cloud served as a sign of Gods presence; and was no lesse an Angel, then if it had had the form of a Man, or Child of never so great beauty; or Wings, as usually they are painted, for the false instruction of common people. For it is not the shape; but their use, that makes them Angels. But their use is to be significations of Gods presence in supernaturall operations; As when Moses (Exod. 33.14.) had desired God to goe along with the Campe, (as he had done alwaies before the making of the Golden Calfe,) God did not answer, "I will goe," nor "I will send an Angel in my stead;" but thus, "my presence shall goe with thee."

To mention all the places of the Old Testament where the name of Angel is found, would be too long. Therefore to comprehend them all at once, I say, there is no text in that part of the Old Testament, which the Church of England holdeth for Canonically, from which we can conclude, there is, or hath been created, any permanent thing (understood by the name of Spirit or Angel,) that hath not quantity; and that may not be, by the understanding divided; that is to say, considered by parts; so as one part may bee in one place, and the next part in the next place to it; and, in summe, which is not (taking Body for that, which is some what, or some where) Corporeall; but in every place, the sense will bear the interpretation of Angel, for Messenger; as John Baptist is called an Angel, and Christ the Angel of the Covenant; and as (according to the same Analogy) the Dove, and the Fiery Tongues, in that they were signes of Gods speciall presence, might also be called Angels. Though we find in Daniel two names of Angels, Gabriel, and Michael; yet is cleer out of the text it selfe, (Dan. 12.1) that by Michael is meant Christ, not as an Angel, but as a Prince: and that Gabriel (as the like apparitions made to other holy men in their sleep) was nothing but a supernaturall phantasme, by which it seemed to Daniel, in his dream, that two Saints being in talke, one of them said to the other, "Gabriel, let us make this man understand his Vision:" For God needeth not, to distinguish his Celestiall servants by names, which are usefull onely to the short memories of Mortalls. Nor in the New Testament is there any place, out of which it can be proved, that Angels (except when they are put for such men, as God hath made the Messengers, and Ministers of his word, or works) are things permanent, and withall incorporeall. That they are permanent, may bee gathered from

the words of our Saviour himselfe, (Mat. 25.41.) where he saith, it shall be said to the wicked in the last day, "Go ye cursed into everlasting fire prepared for the Devil and his Angels:" which place is manifest for the permanence of Evill Angels, (unlesse wee might think the name of Devill and his Angels may be understood of the Churches Adversaries and their Ministers;) but then it is repugnant to their Immateriality; because Everlasting fire is no punishment to impatible substances, such as are all things Incorporeall. Angels therefore are not thence proved to be Incorporeall. In like manner where St. Paul sayes (1 Cor. 6.3.) "Knew ye not that wee shall judge the Angels?" And (2 Pet. 2.4.) "For if God spared not the Angels that sinned, but cast them down into Hell." And (Jude 1,6.) "And the Angels that kept not their first estate, but left their owne habitation, hee hath reserved in everlasting chaines under darknesse unto the Judgement of the last day;" though it prove the Permanence of Angelicall nature, it confirmeth also their Materiality. And (Mat. 22.30.) In the resurrection men doe neither marry, nor give in marriage, but are as the Angels of God in heaven:" but in the resurrection men shall be Permanent, and not Incorporeall; so therefore also are the Angels.

There be divers other places out of which may be drawn the like conclusion. To men that understand the signification of these words, Substance, and Incorporeall; as Incorporeall is taken not for subtile body, but for Not Body, they imply a contradiction: insomuch as to say, an Angel, or Spirit is (in that sense) an Incorporeall Substance, is to say in effect, there is no Angel nor Spirit at all. Considering therefore the signification of the word Angel in the Old Testament, and the nature of Dreams and Visions that happen to men by the ordinary way of Nature; I was enclined to this opinion, that Angels were nothing but supernaturall apparitions of the Fancy, raised by the speciall and extraordinary operation of God, thereby to make his presence and commandements known to mankind, and chiefly to his own people. But the many places of the New Testament, and our Saviours own words, and in such texts, wherein is no suspicion of corruption of the Scripture, have extorted from my feeble Reason, an acknowledgement, and beleef, that there be also Angels substantiall, and permanent. But to beleefe they be in no place, that is to say, no where, that is to say, nothing, as they (though indirectly) say, that will have them Incorporeall, cannot by Scripture bee evinced.

## Inspiration What

On the signification of the word Spirit, dependeth that of the word INSPIRATION; which must either be taken properly; and then it is nothing but the blowing into a man some thin and subtile aire, or wind, in such manner as a man filleth a bladder with his breath; or if Spirits be not corporeal, but have their existence only in the fancy, it is nothing but the blowing in of a Phantasme; which is improper to say, and impossible; for Phantasmes are not, but only seem to be somewhat. That word therefore is used in the Scripture metaphorically onely: As (Gen. 2.7.) where it is said, that God Inspired into man the breath of life, no more is meant, then that God gave unto him vitall motion. For we are not to think that God made first a living breath, and then blew it into Adam after he was made, whether that breath were reall, or seeming; but only as it is (Acts 17.25.) "that he gave him life and breath;" that is, made him a living creature. And where it is said (2 Tim. 3.16.) "all Scripture is given by Inspiration from God," speaking there of the Scripture of the Old Testament, it is an easie metaphor, to signifie, that God enclined the spirit or mind of those Writers, to write that which should be usefull, in teaching, reprovng, correcting, and instructing men in the way of righteous living. But where St. Peter (2 Pet. 1.21.) saith, that "Prophecy came not in old time by the will of man, but the holy men of God spake as they were moved by the Holy Spirit," by the Holy Spirit, is meant the voice of God in a Dream, or Vision supernaturall, which is not Inspiration; Nor when our Saviour breathing on his Disciples, said, "Receive the Holy Spirit," was that Breath the Spirit, but a sign of the spirituall graces he gave unto them. And though it be said of many, and of our Saviour himself, that he was full of the Holy Spirit; yet that Fulnesse is not to be understood for Infusion of the substance of God, but for accumulation of his gifts, such as are the gift of sanctity of life, of tongues, and the like, whether attained supernaturallly, or by study and industry; for in all cases they are the gifts of God. So likewise where God sayes (Joel 2.28.) "I will powre out my Spirit upon all flesh, and your Sons and your Daughters shall prophecy, your Old men shall dream Dreams, and your Young men shall see

Visions," wee are not to understand it in the proper sense, as if his Spirit were like water, subject to effusion, or infusion; but as if God had promised to give them Propheticall Dreams, and Visions. For the proper use of the word Infused, in speaking of the graces of God, is an abuse of it; for those graces are Vertues, not Bodies to be carryed hither and thither, and to be powred into men, as into barrels.

In the same manner, to take Inspiration in the proper sense, or to say that Good Spirits entred into men to make them prophecy, or Evill Spirits into those that became Phrenetique, Lunatique, or Epileptique, is not to take the word in the sense of the Scripture; for the Spirit there is taken for the power of God, working by causes to us unknown. As also (Acts 2.2.) the wind, that is there said to fill the house wherein the Apostles were assembled on the day of Pentecost, is not to be understood for the Holy Spirit, which is the Deity it self; but for an Externall sign of Gods speciall working on their hearts, to effect in them the internall graces, and holy vertues hee thought requisite for the performance of their Apostleship.

**CHAPTER XXXV. OF THE SIGNIFICATION IN  
SCRIPTURE OF KINGDOME OF GOD, OF**

HOLY, SACRED, AND SACRAMENT

# **Kingdom Of God Taken By Divines Metaphorically But In The Scriptures**

## **Properly**

The Kingdome of God in the Writings of Divines, and specially in Sermons, and Treatises of Devotion, is taken most commonly for Eternall Felicity, after this life, in the Highest Heaven, which they also call the Kingdome of Glory; and sometimes for (the earnest of that felicity) Sanctification, which they terme the Kingdome of Grace, but never for the Monarchy, that is to say, the Sovereign Power of God over any Subjects acquired by their own consent, which is the proper signification of Kingdome.

To the contrary, I find the KINGDOME OF GOD, to signifie in most places of Scripture, a Kingdome Properly So Named, constituted by the Votes of the People of Israel in peculiar manner; wherein they chose God for their King by Covenant made with him, upon Gods promising them the possession of the land of Canaan; and but seldom metaphorically; and then it is taken for Dominion Over Sinne; (and only in the New Testament;) because such a Dominion as that, every Subject shall have in the Kingdome of God, and without prejudice to the Sovereign.

From the very Creation, God not only reigned over all men Naturally by his might; but also had Peculiar Subjects, whom he commanded by a Voice, as one man speaketh to another. In which manner he Reigned over Adam, and gave him commandement to abstaine from the tree of cognizance of Good and Evill; which when he obeyed not, but tasting thereof, took upon him to be as God, judging between Good and Evill, not by his Creators commandement, but by his own sense, his punishment was a privation of the estate of Eternall life, wherein God had at first created him: And afterwards God punished his posterity, for their vices, all but eight persons, with an universall deluge; And in these eight did consist the then Kingdome Of God.

## **The Originall Of The Kingdome Of God**

After this, it pleased God to speak to Abraham, and (Gen. 17.7,8.) to make a Covenant with him in these words, "I will establish my Covenant between me, and thee, and thy seed after thee in their generations, for an everlasting Covenant, to be a God to thee, and to thy seed after thee; And I will give unto thee, and to thy seed after thee, the land wherein thou art a stranger, all the land of Canaan for an everlasting possession." And for a memoriall, and a token of this Covenant, he ordaineth (verse 11.) the Sacrament of Circumcision. This is it which is called the Old Covenant, or Testament; and containeth a Contract between God and Abraham; by which Abraham obligeth himself, and his posterity, in a peculiar manner to be subject to Gods positive Law; for to the Law Morall he was obliged before, as by an Oath of Allegiance. And though the name of King be not yet given to God, nor of Kingdome to Abraham and his seed; yet the thing is the same; namely, an Institution by pact, of Gods peculiar Sovereignty over the seed of Abraham; which in the renewing of the same Covenant by Moses, at Mount Sinai, is expressly called a peculiar Kingdome of God over the Jews: and it is of Abraham (not of Moses) St. Paul saith (Rom. 4.11.) that he is the "Father of the Faithfull," that is, of those that are loyall, and doe not violate their Allegiance sworn to God, then by Circumcision, and afterwards in the New Covenant by Baptisme.

# **That The Kingdome Of God Is Properly His Civill Soveraignty Over**

## **A Peculiar People By Pact**

This Covenant, at the Foot of Mount Sinai, was renewed by Moses (Exod. 19.5.) where the Lord commandeth Moses to speak to the people in this manner, "If you will obey my voice indeed, and keep my Covenant, then yee shall be a peculiar people to me, for all the Earth is mine; and yee shall be unto me a Sacerdotall Kingdome, and an holy Nation." For a "Peculiar people" the vulgar Latine hath, Peculium De Cunctis Populis: the English translation made in the beginning of the Reign of King James, hath, a "Peculiar treasure unto me above all Nations;" and the Geneva French, "the most precious Jewel of all Nations." But the truest Translation is the first, because it is confirmed by St. Paul himself (Tit. 2.14.) where he saith, alluding to that place, that our blessed Saviour "gave himself for us, that he might purifie us to himself, a peculiar (that is, an extraordinary) people:" for the word is in the Greek periousios, which is opposed commonly to the word epiousios: and as this signifieth Ordinary, Quotidian, or (as in the Lords Prayer) Of Daily Use; so the other signifieth that which is Overplus, and Stored Up, and Enjoyed In A Speciall Manner; which the Latines call Peculium; and this meaning of the place is confirmed by the reason God rendereth of it, which followeth immediately, in that he addeth, "For all the Earth is mine," as if he should say, "All the Nations of the world are mine;" but it is not so that you are mine, but in a Speciall Manner: For they are all mine, by reason of my Power; but you shall be mine, by your own Consent, and Covenant; which is an addition to his ordinary title, to all nations.

The same is again confirmed in expresse words in the same Text, "Yee shall be to me a Sacerdotall Kingdome, and an holy Nation." The Vulgar Latine hath it, Regnum Sacerdotale, to which agreeth the Translation of that place (1 Pet. 2.9.) Sacerdotium Regale, A Regal Priesthood; as also the Institution it self, by which no man might enter into the Sanctum Sanctorum, that is to say, no man might enquire Gods will immediately of

God himselfe, but onely the High Priest. The English Translation before mentioned, following that of Geneva, has, "a Kingdome of Priests;" which is either meant of the succession of one High Priest after another, or else it accordeth not with St. Peter, nor with the exercise of the High Priesthood; For there was never any but the High Priest onely, that was to informe the People of Gods Will; nor any Convocation of Priests ever allowed to enter into the Sanctum Sanctorum.

Again, the title of a Holy Nation confirms the same: For Holy signifies, that which is Gods by speciall, not by generall Right. All the Earth (as is said in the text) is Gods; but all the Earth is not called Holy, but that onely which is set apart for his especiall service, as was the Nation of the Jews. It is therefore manifest enough by this one place, that by the Kingdome of God, is properly meant a Common-wealth, instituted (by the consent of those which were to be subject thereto) for their Civill Government, and the regulating of their behaviour, not onely towards God their King, but also towards one another in point of justice, and towards other Nations both in peace and warre; which properly was a Kingdome, wherein God was King, and the High priest was to be (after the death of Moses) his sole Viceroy, or Lieutenant.

But there be many other places that clearly prove the same. As first (1 Sam. 8.7.) when the Elders of Israel (grieved with the corruption of the Sons of Samuel) demanded a King, Samuel displeas'd therewith, prayed unto the Lord; and the Lord answering said unto him, "Hearken unto the voice of the People, for they have not rejected thee, but they have rejected me, that I should not reign over them." Out of which it is evident, that God himselfe was then their King; and Samuel did not command the people, but only delivered to them that which God from time to time appointed him.

Again, (1 Sam. 12.12.) where Samuel saith to the People, "When yee saw that Nahash King of the Children of Ammon came against you, ye said unto me, Nay, but a King shall reign over us, when the Lord your God was your King:" It is manifest that God was their King, and governed the Civill State of their Common-wealth.

And after the Israelites had rejected God, the Prophets did foretell his restitution; as (Isaiah 24.23.) "Then the Moon shall be confounded, and the Sun ashamed when the Lord of Hosts shall reign in Mount Zion, and in Jerusalem;" where he speaketh expressly of his Reign in Zion, and

Jerusalem; that is, on Earth. And (Micah 4.7.) "And the Lord shall reign over them in Mount Zion:" This Mount Zion is in Jerusalem upon the Earth. And (Ezek. 20.33.) "As I live, saith the Lord God, surely with a mighty hand, and a stretched out arme, and with fury powred out, I wil rule over you; and (verse 37.) I will cause you to passe under the rod, and I will bring you into the bond of the Covenant;" that is, I will reign over you, and make you to stand to that Covenant which you made with me by Moses, and brake in your rebellion against me in the days of Samuel, and in your election of another King.

And in the New testament, the Angel Gabriel saith of our Saviour (Luke 1.32,33) "He shall be great, and be called the Son of the Most High, and the Lord shall give him the throne of his Father David; and he shall reign over the house of Jacob for ever; and of his Kingdome there shall be no end." This is also a Kingdome upon Earth; for the claim whereof, as an enemy to Caesar, he was put to death; the title of his crosse, was, Jesus of Nazareth, King of the Jews; hee was crowned in scorn with a crown of Thornes; and for the proclaiming of him, it is said of the Disciples (Acts 17.7.) "That they did all of them contrary to the decrees of Caesar, saying there was another King, one Jesus. The Kingdome therefore of God, is a reall, not a metaphoricall Kingdome; and so taken, not onely in the Old Testament, but the New; when we say, "For thine is the Kingdome, the Power, and Glory," it is to be understood of Gods Kingdome, by force of our Covenant, not by the Right of Gods Power; for such a Kingdome God alwaies hath; so that it were superfluous to say in our prayer, "Thy Kingdome come," unlesse it be meant of the Restauration of that Kingdome of God by Christ, which by revolt of the Israelites had been interrupted in the election of Saul. Nor had it been proper to say, "The Kingdome of Heaven is at hand," or to pray, "Thy Kingdome come," if it had still continued.

There be so many other places that confirm this interpretation, that it were a wonder there is no greater notice taken of it, but that it gives too much light to Christian Kings to see their right of Ecclesiastical Government. This they have observed, that in stead of a Sacerdotall Kingdome, translate, a Kingdome of Priests: for they may as well translate a Royall Priesthood, (as it is in St. Peter) into a Priesthood of Kings. And whereas, for a Peculiar People, they put a Pretious Jewel, or Treasure, a

man might as well call the speciall Regiment, or Company of a Generall, the Generalls pretious Jewel, or his Treasure.

In short, the Kingdome of God is a Civill Kingdome; which consisted, first in the obligation of the people of Israel to those Laws, which Moses should bring unto them from Mount Sinai; and which afterwards the High Priest of the time being, should deliver to them from before the Cherubins in the Sanctum Sanctorum; and which kingdome having been cast off, in the election of Saul, the Prophets foretold, should be restored by Christ; and the Restauration whereof we daily pray for, when we say in the Lords Prayer, "Thy Kingdome come;" and the Right whereof we acknowledge, when we adde, "For thine is the Kingdome, the Power, and Glory, for ever and ever, Amen;" and the Proclaiming whereof, was the Preaching of the Apostles; and to which men are prepared, by the Teachers of the Gospel; to embrace which Gospel, (that is to say, to promise obedience to Gods government) is, to bee in the Kingdome of Grace, because God hath gratis given to such the power to bee the subjects (that is, Children) of God hereafter, when Christ shall come in Majesty to judge the world, and actually to govern his owne people, which is called the Kingdome of Glory. If the Kingdome of God (called also the Kingdome of Heaven, from the gloriousnesse, and admirable height of that throne) were not a Kingdome which God by his Lieutenant, or Vicars, who deliver his Commandements to the people, did exercise on Earth; there would not have been so much contention, and warre, about who it is, by whom God speaketh to us; neither would many Priests have troubled themselves with Spirituall Jurisdiction, nor any King have denied it them.

Out of this literall interpretation of the Kingdome of God, ariseth also the true interpretation of the word HOLY. For it is a word, which in Gods Kingdome answereth to that, which men in their Kingdomes use to call Publique, or the Kings.

The King of any Countrey is the Publique Person, or Representative of all his own Subjects. And God the King of Israel was the Holy One of Israel. The Nation which is subject to one earthly Sovereign, is the Nation of that Sovereign, that is, of the Publique Person. So the Jews, who were Gods Nation, were called (Exod. 19.6.) "a Holy Nation." For by Holy, is alwaies understood, either God himselfe, or that which is Gods in propriety; as by Publique is alwaies meant, either the Person of the

Common-wealth it self, or something that is so the Common-wealths, as no private person can claim any propriety therein.

Therefore the Sabbath (Gods day) is a Holy Day; the Temple, (Gods house) a Holy House; Sacrifices, Tithes, and Offerings (Gods tribute) Holy Duties; Priests, Prophets, and anointed Kings, under Christ (Gods ministers) Holy Men; The Coelestiall ministring Spirits (Gods Messengers) Holy Angels; and the like: and wheresoever the word Holy is taken properly, there is still something signified of Propriety, gotten by consent. In saying "Hallowed be thy name," we do but pray to God for grace to keep the first Commandement, of "having no other Gods but Him." Mankind is Gods Nation in propriety: but the Jews only were a Holy Nation. Why, but because they became his Propriety by covenant.

## **Sacred What**

And the word Profane, is usually taken in the Scripture for the same with Common; and consequently their contraries, Holy, and Proper, in the Kingdome of God must be the same also. But figuratively, those men also are called Holy, that led such godly lives, as if they had forsaken all worldly designes, and wholly devoted, and given themselves to God. In the proper sense, that which is made Holy by Gods appropriating or separating it to his own use, is said to be Sanctified by God, as the Seventh day in the fourth Commandement; and as the Elect in the New Testament were said to bee Sanctified, when they were endued with the Spirit of godlinesse. And that which is made Holy by the dedication of men, and given to God, so as to be used onely in his publique service, is called also SACRED, and said to be consecrated, as Temples, and other Houses of Publique Prayer, and their Utensils, Priests, and Ministers, Victimes, Offerings, and the externall matter of Sacraments.

## **Degrees of Sanctity**

Of Holinesse there be degrees: for of those things that are set apart for the service of God, there may bee some set apart again, for a neerer and more especial service. The whole Nation of the Israelites were a people Holy to God; yet the tribe of Levi was amongst the Israelites a Holy tribe; and amongst the Levites, the Priests were yet more Holy; and amongst the Priests, the High Priest was the most Holy. So the Land of Judea was the Holy Land; but the Holy City wherein God was to be worshipped, was more Holy; and again, the Temples more Holy than the City; and the Sanctum Sanctorum more Holy than the rest of the Temple.

## Sacrament

A SACRAMENT, is a separation of some visible thing from common use; and a consecration of it to Gods service, for a sign, either of our admission into the Kingdome of God, to be of the number of his peculiar people, or for a Commemoration of the same. In the Old Testament, the sign of Admission was Circumcision; in the New Testament, Baptisme. The Commemoration of it in the Old Testament, was the Eating (at a certain time, which was Anniversary) of the Paschall Lamb; by which they were put in mind of the night wherein they were delivered out of their bondage in Egypt; and in the New Testament, the celebrating of the Lords Supper; by which, we are put in mind, of our deliverance from the bondage of sin, by our Blessed Saviours death upon the crosse. The Sacraments of Admission, are but once to be used, because there needs but one Admission; but because we have need of being often put in mind of our deliverance, and of our Alleageance, The Sacraments of Commemoration have need to be reiterated. And these are the principall Sacraments, and as it were the solemne oathes we make of our Alleageance. There be also other Consecrations, that may be called Sacraments, as the word implyeth onely Consecration to Gods service; but as it implies an oath, or promise of Alleageance to God, there were no other in the Old Testament, but Circumcision, and the Passover; nor are there any other in the New Testament, but Baptisme, and the Lords Supper.

**CHAPTER XXXVI. OF THE WORD OF GOD,  
AND OF PROPHETS**

## **Word What**

When there is mention of the Word of God, or of Man, it doth not signifie a part of Speech, such as Grammarians call a Noun, or a Verb, or any simple voice, without a contexture with other words to make it significative; but a perfect Speech or Discourse, whereby the speaker Affirmeth, Denieth, Commandeth, Promiseth, Threateneth, Wisheth, or Interrogateth. In which sense it is not Vocabulum, that signifies a Word; but Sermo, (in Greek Logos) that is some Speech, Discourse, or Saying.

# **The Words Spoken By God And Concerning God, Both Are Called Gods Word**

## **In Scripture**

Again, if we say the Word of God, or of Man, it may be understood sometimes of the Speaker, (as the words that God hath spoken, or that a Man hath spoken): In which sense, when we say, the Gospel of St. Matthew, we understand St. Matthew to be the Writer of it: and sometimes of the Subject: In which sense, when we read in the Bible, "The words of the days of the Kings of Israel, or Judah," 'tis meant, that the acts that were done in those days, were the Subject of those Words; And in the Greek, which (in the Scripture) retaineth many Hebraismes, by the Word of God is oftentimes meant, not that which is spoken by God, but concerning God, and his government; that is to say, the Doctrine of Religion: Insomuch, as it is all one, to say Logos Theou, and Theologia; which is, that Doctrine which we usually call Divinity, as is manifest by the places following (Acts 13.46.) "Then Paul and Barnabas waxed bold, and said, It was necessary that the Word of God should first have been spoken to you, but seeing you put it from you, and judge your selves unworthy of everlasting life, loe, we turn to the Gentiles." That which is here called the Word of god, was the Doctrine of Christian Religion; as it appears evidently by that which goes before. And (Acts 5.20.) where it is said to the Apostles by an Angel, "Go stand and speak in the Temple, all the Words of this life;" by the Words of this life, is meant, the Doctrine of the Gospel; as is evident by what they did in the Temple, and is expressed in the last verse of the same Chap. "Daily in the Temple, and in every house they ceased not to teach and preach Christ Jesus:" In which place it is manifest, that Jesus Christ was the subject of this Word of Life; or (which is all one) the subject of the Words of this Life Eternall, that our saviour offered them. So (Acts 15.7.) the Word of God, is called the Word of the Gospel, because it containeth the Doctrine of the Kingdome of Christ; and the same Word (Rom. 10.8,9.) is called the Word of Faith; that is, as is there expressed, the Doctrine of Christ come, and raised from the dead. Also (Mat. 13. 19.)

"When any one heareth the Word of the Kingdome;" that is, the Doctrine of the Kingdome taught by Christ. Again, the same Word, is said (Acts 12. 24.) "to grow and to be multiplied;" which to understand of the Evangelicall Doctrine is easie, but of the Voice, or Speech of God, hard and strange. In the same sense the Doctrine of Devils, signifieth not the Words of any Devill, but the Doctrine of Heathen men concerning Daemons, and those Phantasms which they worshipped as Gods. (1 Tim. 4.1.)

Considering these two significations of the WORD OF GOD, as it is taken in Scripture, it is manifest in this later sense (where it is taken for the Doctrine of the Christian Religion,) that the whole scripture is the Word of God: but in the former sense not so. For example, though these words, "I am the Lord thy God, &c." to the end of the Ten Commandements, were spoken by God to Moses; yet the Preface, "God spake these words and said," is to be understood for the Words of him that wrote the holy History. The Word of God, as it is taken for that which he hath spoken, is understood sometimes Properly, sometimes Metaphorically. Properly, as the words, he hath spoken to his Prophets; Metaphorically, for his Wisdome, Power, and eternall Decree, in making the world; in which sense, those Fiats, "Let there be light," "Let there be a firmament," "Let us make man," &c. (Gen. 1.) are the Word of God. And in the same sense it is said (John 1.3.) "All things were made by it, and without it was nothing made that was made; And (Heb. 1.3.) "He upholdeth all things by the word of his Power;" that is, by the Power of his Word; that is, by his Power; and (Heb. 11.3.) "The worlds were framed by the Word of God;" and many other places to the same sense: As also amongst the Latines, the name of Fate, which signifieth properly The Word Spoken, is taken in the same sense.

## Secondly, For The Effect Of His Word

Secondly, for the effect of his Word; that is to say, for the thing it self, which by his Word is Affirmed, Commanded, Threatned, or Promised; as (Psalm 105.19.) where Joseph is said to have been kept in prison, "till his Word was come;" that is, till that was come to passe which he had (Gen. 40.13.) foretold to Pharaohs Butler, concerning his being restored to his office: for there by His Word Was Come, is meant, the thing it self was come to passe. So also (1 King. 18.36.) Elijah saith to God, "I have done all these thy Words," in stead of "I have done all these things at thy Word," or commandement: and (Jer. 17.15.) "Where is the Word of the Lord," is put for, "Where is the Evill he threatened:" And (Ezek. 12.28.) "There shall none of my Words be prolonged any more:" by "Words" are understood those Things, which God promised to his people. And in the New Testament (Mat. 24.35.) "heaven and earth shal pass away, but my Words shall not pass away;" that is, there is nothing that I have promised or foretold, that shall not come to passe. And in this sense it is, that St. John the Evangelist, and, I think, St. John onely calleth our Saviour himself as in the flesh "the Word of God (as Joh. 1.14.) the Word was made Flesh;" that is to say, the Word, or Promise that Christ should come into the world, "who in the beginning was with God;" that is to say, it was in the purpose of God the Father, to send God the Son into the world, to enlighten men in the way of Eternall life, but it was not till then put in execution, and actually incarnate; So that our Saviour is there called "the Word," not because he was the promise, but the thing promised. They that taking occasion from this place, doe commonly call him the Verbe of God, do but render the text more obscure. They might as well term him the Nown of God: for as by Nown, so also by Verbe, men understand nothing but a part of speech, a voice, a sound, that neither affirms, nor denies, nor commands, nor promiseth, nor is any substance corporeall, or spirituall; and therefore it cannot be said to bee either God, or Man; whereas our Saviour is both. And this Word which St. John in his Gospel saith was with God, is (in his 1 Epistle, verse 1.) called "the Word of Life;" and (verse 2.) "The eternall life, which was with the Father:" so that he can be in no other

sense called the Word, then in that, wherein he is called Eternall life; that is, "he that hath procured us Eternall life," by his comming in the flesh. So also (Apocalypse 19.13.) the Apostle speaking of Christ, clothed in a garment dipt in bloud, saith; his name is "the Word of God;" which is to be understood, as if he had said his name had been, "He that was come according to the purpose of God from the beginning, and according to his Word and promises delivered by the Prophets." So that there is nothing here of the Incarnation of a Word, but of the Incarnation of God the Son, therefore called the Word, because his Incarnation was the Performance of the Promise; In like manner as the Holy Ghost is called The Promise. (Acts 1.4. Luke 24.49.)

## **Thirdly, For The Words Of Reason And Equity**

There are also places of the Scripture, where, by the Word of God, is signified such Words as are consonant to reason, and equity, though spoken sometimes neither by prophet, nor by a holy man. For Pharaoh Necho was an Idolator; yet his Words to the good King Josiah, in which he advised him by Messengers, not to oppose him in his march against Carchemish, are said to have proceeded from the mouth of God; and that Josiah not hearkning to them, was slain in the battle; as is to be read 2 Chron. 35. vers. 21,22,23. It is true, that as the same History is related in the first book of Esdras, not Pharaoh, but Jeremiah spake these words to Josiah, from the mouth of the Lord. But wee are to give credit to the Canonickall Scripture, whatsoever be written in the Apocrypha.

The Word of God, is then also to be taken for the Dictates of reason, and equity, when the same is said in the Scriptures to bee written in mans heart; as Psalm 36.31. Jerem. 31.33. Deut.30.11, 14. and many other like places.

## Divers Acceptions Of The Word Prophet

The name of PROPHET, signifieth in Scripture sometimes Prolocutor; that is, he that speaketh from God to Man, or from man to God: And sometimes Praedictor, or a foreteller of things to come; And sometimes one that speaketh incoherently, as men that are distracted. It is most frequently used in the sense of speaking from God to the People. So Moses, Samuel, Elijah, Isaiah, Jeremiah, and others were Prophets. And in this sense the High Priest was a Prophet, for he only went into the Sanctum Sanctorum, to enquire of God; and was to declare his answer to the people. And therefore when Caiphaz said, it was expedient that one man should die for the people, St. John saith (chap. 11.51.) that "He spake not this of himselfe, but being High Priest that year, he prophesied that one man should dye for the nation." Also they that in Christian Congregations taught the people, (1 Cor. 14.3.) are said to Prophecy. In the like sense it is, that God saith to Moses (Exod. 4.16.) concerning Aaron, "He shall be thy Spokes-man to the People; and he shall be to thee a mouth, and thou shalt be to him in stead of God;" that which here is Spokesman, is (chap.7.1.) interpreted Prophet; "See (saith God) I have made thee a God to Pharaoh, and Aaron thy Brother shall be thy Prophet." In the sense of speaking from man to God, Abraham is called a Prophet (Genes. 20.7.) where God in a Dream speaketh to Abimelech in this manner, "Now therefore restore the man his wife, for he is a Prophet, and shall pray for thee;" whereby may be also gathered, that the name of Prophet may be given, not unproperly to them that in Christian Churches, have a Calling to say publique prayers for the Congregation. In the same sense, the Prophets that came down from the High place (or Hill of God) with a Psaltery, and a Tabret, and a Pipe, and a Harp (1 Sam. 10.5,6.) and (vers. 10.) Saul amongst them, are said to Prophecy, in that they praised God, in that manner publicely. In the like sense, is Miriam (Exod. 15.20.) called a Prophetesse. So is it also to be taken (1 Cor. 11.4,5.) where St. Paul saith, "Every man that prayeth or prophecyeth with his head covered, &c. and every woman that prayeth or prophecyeth with her head uncovered: For Prophecy in that place, signifieth no more, but praising God in Psalmes, and Holy Songs; which

women might doe in the Church, though it were not lawfull for them to speak to the Congregation. And in this signification it is, that the Poets of the Heathen, that composed Hymnes and other sorts of Poems in the honor of their Gods, were called Vates (Prophets) as is well enough known by all that are versed in the Books of the Gentiles, and as is evident (Tit. 1.12.) where St. Paul saith of the Cretians, that a Prophet of their owne said, they were Liars; not that St. Paul held their Poets for Prophets, but acknowledgeth that the word Prophet was commonly used to signifie them that celebrated the honour of God in Verse

## **Praediction Of Future Contingents, Not Alwaies Prophecy**

When by Prophecy is meant Praediction, or foretelling of future Contingents; not only they were Prophets, who were Gods Spokesmen, and foretold those things to others, which God had foretold to them; but also all those Imposters, that pretend by the helpe of familiar spirits, or by superstitious divination of events past, from false causes, to foretell the like events in time to come: of which (as I have declared already in the 12. chapter of this Discourse) there be many kinds, who gain in the opinion of the common sort of men, a greater reputation of Prophecy, by one casuall event that may bee but wrested to their purpose, than can be lost again by never so many failings. Prophecy is not an art, nor (when it is taken for Praediction) a constant Vocation; but an extraordinary, and temporary Employment from God, most often of Good men, but sometimes also of the Wicked. The woman of Endor, who is said to have had a familiar spirit, and thereby to have raised a Phantasme of Samuel, and foretold Saul his death, was not therefore a Prophetesse; for neither had she any science, whereby she could raise such a Phantasme; nor does it appear that God commanded the raising of it; but onely guided that Imposture to be a means of Sauls terror and discouragement; and by consequent, of the discomfiture, by which he fell. And for Incoherent Speech, it was amongst the Gentiles taken for one sort of Prophecy, because the Prophets of their Oracles, intoxicated with a spirit, or vapour from the cave of the Pythian Oracle at Delphi, were for the time really mad, and spake like mad-men; of whose loose words a sense might be made to fit any event, in such sort, as all bodies are said to be made of *Materia prima*. In the Scripture I find it also so taken (1 Sam. 18. 10.) in these words, "And the Evill spirit came upon Saul, and he Prophecyed in the midst of the house."

## **The Manner How God Hath Spoken To The Prophets**

And although there be so many significations in Scripture of the word Prophet; yet is that the most frequent, in which it is taken for him, to whom God speaketh immediately, that which the Prophet is to say from him, to some other man, or to the people. And hereupon a question may be asked, in what manner God speaketh to such a Prophet. Can it (may some say) be properly said, that God hath voice and language, when it cannot be properly said, he hath a tongue, or other organs, as a man? The Prophet David argueth thus, "Shall he that made the eye, not see? or he that made the ear, not hear?" But this may be spoken, not (as usually) to signifie Gods nature, but to signifie our intention to honor him. For to See, and Hear, are Honorable Attributes, and may be given to God, to declare (as far as our capacity can conceive) his Almighty power. But if it were to be taken in the strict, and proper sense, one might argue from his making of all parts of mans body, that he had also the same use of them which we have; which would be many of them so uncomely, as it would be the greatest contumely in the world to ascribe them to him. Therefore we are to interpret Gods speaking to men immediately, for that way (whatsoever it be), by which God makes them understand his will: And the wayes whereby he doth this, are many; and to be sought onely in the Holy Scripture: where though many times it be said, that God spake to this, and that person, without declaring in what manner; yet there be again many places, that deliver also the signes by which they were to acknowledge his presence, and commandement; and by these may be understood, how he spake to many of the rest.

# **To The Extraordinary Prophets Of The Old Testament He Spake**

## **By Dreams, Or Visions**

In what manner God spake to Adam, and Eve, and Cain, and Noah, is not expressed; nor how he spake to Abraham, till such time as he came out of his own countrey to Sichem in the land of Canaan; and then (Gen. 12.7.) God is said to have Appeared to him. So there is one way, whereby God made his presence manifest; that is, by an Apparition, or Vision. And again, (Gen. 15.1.) The Word of the Lord came to Abraham in a Vision; that is to say, somewhat, as a sign of Gods presence, appeared as Gods Messenger, to speak to him. Again, the Lord appeared to Abraham (Gen. 18. 1.) by an apparition of three Angels; and to Abimelech (Gen. 20. 3.) in a dream: To Lot (Gen. 19. 1.) by an apparition of Two Angels: And to Hagar (Gen. 21. 17.) by the apparition of one Angel: And to Abraham again (Gen. 22. 11.) by the apparition of a voice from heaven: And (Gen. 26. 24.) to Isaac in the night; (that is, in his sleep, or by dream): And to Jacob (Gen. 28. 12.) in a dream; that is to say (as are the words of the text) "Jacob dreamed that he saw a ladder, &c." And (Gen. 32. 1.) in a Vision of Angels: And to Moses (Exod. 3.2.) in the apparition of a flame of fire out of the midst of a bush: And after the time of Moses, (where the manner how God spake immediately to man in the Old Testament, is expressed) hee spake alwaies by a Vision, or by a Dream; as to Gideon, Samuel, Eliah, Elisha, Isaiah, Ezekiel, and the rest of the Prophets; and often in the New Testament, as to Joseph, to St. Peter, to St. Paul, and to St. John the Evangelist in the Apocalypse.

Onely to Moses hee spake in a more extraordinary manner in Mount Sinai, and in the Tabernacle; and to the High Priest in the Tabernacle, and in the Sanctum Sanctorum of the Temple. But Moses, and after him the High Priests were Prophets of a more eminent place, and degree in Gods favour; And God himself in express words declareth, that to other Prophets hee spake in Dreams and Visions, but to his servant Moses, in such manner as a man speaketh to his friend. The words are these (Numb. 12. 6,7,8.) "If

there be a Prophet among you, I the Lord will make my self known to him in a Vision, and will speak unto him in a Dream. My servant Moses is not so, who is faithfull in all my house; with him I will speak mouth to mouth, even apparently, not in dark speeches; and the similitude of the Lord shall he behold." And (Exod. 33. 11.) "The Lord spake to Moses face to face, as a man speaketh to his friend." And yet this speaking of God to Moses, was by mediation of an Angel, or Angels, as appears expressly, Acts 7. ver. 35. and 53. and Gal. 3. 19. and was therefore a Vision, though a more cleer Vision than was given to other Prophets. And conformable hereunto, where God saith (Deut. 13. 1.) "If there arise amongst you a Prophet, or Dreamer of Dreams," the later word is but the interpretation of the former. And (Joel 2. 28.) "Your sons and your daughters shall Prophecy; your old men shall dream Dreams, and your young men shall see Visions:" where again, the word Prophecy is expounded by Dream, and Vision. And in the same manner it was, that God spake to Solomon, promising him Wisdome, Riches, and Honor; for the text saith, (1 Kings 3. 15.) "And Solomon awoak, and behold it was a Dream:" So that generally the Prophets extraordinary in the old Testament took notice of the Word of God no otherwise, than from their Dreams, or Visions, that is to say, from the imaginations which they had in their sleep, or in an Extasie; which imaginations in every true Prophet were supernaturall; but in false Prophets were either naturall, or feigned.

The same Prophets were neverthesse said to speak by the Spirit; as (Zach. 7. 12.) where the Prophet speaking of the Jewes, saith, "They made their hearths hard as Adamant, lest they should hear the law, and the words which the Lord of Hosts hath sent in his Spirit by the former Prophets." By which it is manifest, that speaking by the Spirit, or Inspiration, was not a particular manner of Gods speaking, different from Vision, when they that were said to speak by the Spirit, were extraordinary Prophets, such as for every new message, were to have a particular Commission, or (which is all one) a new Dream, or Vision.

To Prophets Of Perpetuall Calling, And Supreme, God Spake In The Old Testament From The Mercy Seat, In A Manner Not Expressed In The Scripture. Of Prophets, that were so by a perpetuall Calling in the Old Testament, some were Supreme, and some Subordinate: Supreme were first Moses; and after him the High Priest, every one for his time, as long as the Priesthood was Royall; and after the people of the Jews, had

rejected God, that he should no more reign over them, those Kings which submitted themselves to Gods government, were also his chief Prophets; and the High Priests office became Ministeriall. And when God was to be consulted, they put on the holy vestments, and enquired of the Lord, as the King commanded them, and were deprived of their office, when the King thought fit. For King Saul (1 Sam. 13. 9.) commanded the burnt offering to be brought, and (1 Sam. 14. 18.) he commands the Priest to bring the Ark neer him; and (ver. 19.) again to let it alone, because he saw an advantage upon his enemies. And in the same chapter Saul asketh counsell of God. In like manner King David, after his being anointed, though before he had possession of the Kingdome, is said to "enquire of the Lord" (1 Sam. 23. 2.) whether he should fight against the Philistines at Keilah; and (verse 10.) David commandeth the Priest to bring him the Ephod, to enquire whether he should stay in Keilah, or not. And King Solomon (1 Kings 2. 27.) took the Priesthood from Abiathar, and gave it (verse 35.) to Zadoc. Therefore Moses, and the High Priests, and the pious Kings, who enquired of God on all extraordinary occasions, how they were to carry themselves, or what event they were to have, were all Sovereign Prophets. But in what manner God spake unto them, is not manifest. To say that when Moses went up to God in Mount Sinai, it was a Dream, or Vision, such as other Prophets had, is contrary to that distinction which God made between Moses, and other Prophets, Numb. 12. 6,7,8. To say God spake or appeared as he is in his own nature, is to deny his Infinitenesse, Invisibility, Incomprehensibility. To say he spake by Inspiration, or Infusion of the Holy Spirit, as the Holy Spirit signifieth the Deity, is to make Moses equall with Christ, in whom onely the Godhead (as St. Paul speaketh Col. 2.9.) dwelleth bodily. And lastly, to say he spake by the Holy Spirit, as it signifieth the graces, or gifts of the Holy Spirit, is to attribute nothing to him supernaturall. For God disposeth men to Piety, Justice, Mercy, Truth, Faith, and all manner of Vertue, both Morall, and Intellectuall, by doctrine, example, and by severall occasions, naturall, and ordinary.

And as these ways cannot be applyed to God, in his speaking to Moses, at Mount Sinai; so also, they cannot be applyed to him, in his speaking to the High Priests, from the Mercy-Seat. Therefore in what manner God spake to those Sovereign Prophets of the Old Testament, whose office it was to enquire of him, is not intelligible. In the time of the New

Testament, there was no Sovereign Prophet, but our Saviour; who was both God that spake, and the Prophet to whom he spake.

To Prophets Of Perpetuall Calling, But Subordinate, God Spake By The Spirit. To subordinate Prophets of perpetuall Calling, I find not any place that proveth God spake to them supernaturallly; but onely in such manner, as naturally he inclineth men to Piety, to Beleef, to Righteousnesse, and to other vertues all other Christian Men. Which way, though it consist in Constitution, Instruction, Education, and the occasions and invitements men have to Christian vertues; yet it is truly attributed to the operation of the Spirit of God, or Holy Spirit (which we in our language call the Holy Ghost): For there is no good inclination, that is not of the operation of God. But these operations are not alwaies supernaturall. When therefore a Prophet is said to speak in the Spirit, or by the Spirit of God, we are to understand no more, but that he speaks according to Gods will, declared by the supreme Prophet. For the most common acceptation of the word Spirit, is in the signification of a mans intention, mind, or disposition.

In the time of Moses, there were seventy men besides himself, that Prophecyed in the Campe of the Israelites. In what manner God spake to them, is declared in the 11 of Numbers, verse 25. "The Lord came down in a cloud, and spake unto Moses, and took of the Spirit that was upon him, and gave it to the seventy Elders. And it came to passe, when the Spirit rested upon them, they Prophecyed, and did not cease," By which it is manifest, first, that their Prophecying to the people, was subservient, and subordinate to the Prophecying of Moses; for that God took of the Spirit of Moses, to put upon them; so that they Prophecyed as Moses would have them: otherwise they had not been suffered to Prophecy at all. For there was (verse 27.) a complaint made against them to Moses; and Joshua would have Moses to have forbidden them; which he did not, but said to Joshua, Bee not jealous in my behalf. Secondly, that the Spirit of God in that place, signifieth nothing but the Mind and Disposition to obey, and assist Moses in the administration of the Government. For if it were meant they had the substantial Spirit of God; that is, the Divine nature, inspired into them, then they had it in no lesse manner than Christ himself, in whom onely the Spirit of God dwelt bodily. It is meant therefore of the Gift and Grace of God, that guided them to co-operate with Moses; from whom their Spirit was derived. And it appeareth (verse 16.) that, they were such as Moses himself should appoint for Elders and Officers of the

People: For the words are, "Gather unto me seventy men, whom thou knowest to be Elders and Officers of the people:" where, "thou knowest," is the same with "thou appointest," or "hast appointed to be such." For we are told before (Exod. 18.) that Moses following the counsell of Jethro his Father-in-law, did appoint Judges, and Officers over the people, such as feared God; and of these, were those Seventy, whom God by putting upon them Moses spirit, inclined to aid Moses in the Administration of the Kingdome: and in this sense the Spirit of God is said (1 Sam. 16. 13, 14.) presently upon the anointing of David, to have come upon David, and left Saul; God giving his graces to him he chose to govern his people, and taking them away from him, he rejected. So that by the Spirit is meant Inclination to Gods service; and not any supernaturall Revelation.

## **God Sometimes Also Spake By Lots**

God spake also many times by the event of Lots; which were ordered by such as he had put in Authority over his people. So wee read that God manifested by the Lots which Saul caused to be drawn (1 Sam. 14. 43.) the fault that Jonathan had committed, in eating a honey-comb, contrary to the oath taken by the people. And (Josh. 18. 10.) God divided the land of Canaan amongst the Israelite, by the "lots that Joshua did cast before the Lord in Shiloh." In the same manner it seemeth to be, that God discovered (Joshua 7.16., &c.) the crime of Achan. And these are the wayes whereby God declared his Will in the Old Testament.

All which ways he used also in the New Testament. To the Virgin Mary, by a Vision of an Angel: To Joseph in a Dream: again to Paul in the way to Damascus in a Vision of our Saviour: and to Peter in the Vision of a sheet let down from heaven, with divers sorts of flesh, of clean and unclean, beasts; and in prison, by Vision of an Angel: And to all the Apostles, and Writers of the New Testament, by the graces of his Spirit; and to the Apostles again (at the choosing of Matthias in the place of Judas Iscariot) by lot.

# Every Man Ought To Examine The Probability Of A Pretended Prophets

## Calling

Seeing then all Prophecy supposeth Vision, or Dream, (which two, when they be naturall, are the same,) or some especiall gift of God, so rarely observed in mankind, as to be admired where observed; and seeing as well such gifts, as the most extraordinary Dreams, and Visions, may proceed from God, not onely by his supernaturall, and immediate, but also by his naturall operation, and by mediation of second causes; there is need of Reason and Judgement to discern between naturall, and supernaturall Gifts, and between naturall, and supernaturall Visions, or Dreams. And consequently men had need to be very circumspect, and wary, in obeying the voice of man, that pretending himself to be a Prophet, requires us to obey God in that way, which he in Gods name telleth us to be the way to happinesse. For he that pretends to teach men the way of so great felicity, pretends to govern them; that is to say, to rule, and reign over them; which is a thing, that all men naturally desire, and is therefore worthy to be suspected of Ambition and Imposture; and consequently, ought to be examined, and tryed by every man, before hee yeeld them obedience; unlesse he have yeelded it them already, in the institution of a Commonwealth; as when the Prophet is the Civill Sovereign, or by the Civil Sovereign Authorized. And if this examination of Prophets, and Spirits, were not allowed to every one of the people, it had been to no purpose, to set out the marks, by which every man might be able, to distinguish between those, whom they ought, and those whom they ought not to follow. Seeing therefore such marks are set out (Deut. 13. 1,&c.) to know a Prophet by; and (1 John 4.1.&c) to know a Spirit by: and seeing there is so much Prophecy in the Old Testament; and so much Preaching in the New Testament against Prophets; and so much greater a number ordinarily of false Prophets, then of true; every one is to beware of obeying their directions, at their own perill. And first, that there were many more false than true Prophets, appears by this, that when Ahab (1 Kings 12.)

consulted four hundred Prophets, they were all false Imposters, but onely one Michaiah. And a little before the time of the Captivity, the Prophets were generally lyars. "The Prophets" (saith the Lord by Jerem. cha. 14. verse 14.) "prophecy Lies in my name. I sent them not, neither have I commanded them, nor spake unto them, they prophecy to you a false Vision, a thing of naught; and the deceit of their heart." In so much as God commanded the People by the mouth of the Prophet Jeremiah (chap. 23. 16.) not to obey them. "Thus saith the Lord of Hosts, hearken not unto the words of the Prophets, that prophecy to you. They make you vain, they speak a Vision of their own heart, and not out of the mouth of the Lord."

# **All Prophecy But Of The Sovereign Prophet Is To Be Examined**

## **By Every Subject**

Seeing then there was in the time of the Old Testament, such quarrells amongst the Visionary Prophets, one contesting with another, and asking When departed the Spirit from me, to go to thee? as between Michaiah, and the rest of the four hundred; and such giving of the Lye to one another, (as in Jerem. 14.14.) and such controversies in the New Testament at this day, amongst the Spirituall Prophets: Every man then was, and now is bound to make use of his Naturall Reason, to apply to all Prophecy those Rules which God hath given us, to discern the true from the false. Of which rules, in the Old Testament, one was, conformable doctrine to that which Moses the Sovereign Prophet had taught them; and the other the miraculous power of foretelling what God would bring to passe, as I have already shown out of Deut. 13. 1. &c. and in the New Testament there was but one onely mark; and that was the preaching of this Doctrine, That Jesus Is The Christ, that is, the King of the Jews, promised in the Old Testament. Whosoever denyed that Article, he was a false Prophet, whatsoever miracles he might seem to work; and he that taught it was a true Prophet. For St. John (1 Epist, 4. 2, &c) speaking expressely of the means to examine Spirits, whether they be of God, or not; after he hath told them that there would arise false Prophets, saith thus, "Hereby know ye the Spirit of God. Every Spirit that confesseth that Jesus Christ is come in the flesh, is of God;" that is, is approved and allowed as a Prophet of God: not that he is a godly man, or one of the Elect, for this, that he confesseth, professeth, or preacheth Jesus to be the Christ; but for that he is a Prophet avowed. For God sometimes speaketh by Prophets, whose persons he hath not accepted; as he did by Baalam; and as he foretold Saul of his death, by the Witch of Endor. Again in the next verse, "Every Spirit that confesseth not that Jesus Christ is come in the Flesh, is not of Christ. And this is the Spirit of Antichrist." So that the rule is perfect on both sides; that he is a true Prophet, which preacheth the Messiah already come,

in the person of Jesus; and he a false one that denyeth him come, and looketh for him in some future Imposter, that shall take upon him that honour falsely, whom the Apostle there properly calleth Antichrist. Every man therefore ought to consider who is the Sovereign Prophet; that is to say, who it is, that is Gods Viceregent on earth; and hath next under God, the Authority of Governing Christian men; and to observe for a Rule, that Doctrine, which in the name of God, hee commanded to bee taught; and thereby to examine and try out the truth of those Doctrines, which pretended Prophets with miracles, or without, shall at any time advance: and if they find it contrary to that Rule, to doe as they did, that came to Moses, and complained that there were some that Prophecyed in the Campe, whose Authority so to doe they doubted of; and leave to the Sovereign, as they did to Moses to uphold, or to forbid them, as hee should see cause; and if hee disavow them, then no more to obey their voice; or if he approve them, then to obey them, as men to whom God hath given a part of the Spirit of their Sovereigne. For when Christian men, take not their Christian Sovereign, for Gods Prophet; they must either take their owne Dreams, for the prophecy they mean to bee governed by, and the tumour of their own hearts for the Spirit of God; or they must suffer themselves to bee lead by some strange Prince; or by some of their fellow subjects, that can bewitch them, by slander of the government, into rebellion, without other miracle to confirm their calling, then sometimes an extraordinary successe, and Impunity; and by this means destroying all laws, both divine, and humane, reduce all Order, Government, and Society, to the first Chaos of Violence, and Civill warre.

**CHAPTER XXXVII. OF MIRACLES, AND  
THEIR USE**

## **A Miracle Is A Work That causeth Admiration**

By Miracles are signified the Admirable works of God: & therefore they are also called Wonders. And because they are for the most part, done, for a signification of his commandement, in such occasions, as without them, men are apt to doubt, (following their private naturall reasoning,) what he hath commanded, and what not, they are commonly in Holy Scripture, called Signes, in the same sense, as they are called by the Latines, Ostenta, and Portenta, from shewing, and fore-signifying that, which the Almighty is about to bring to passe.

## **And Must Therefore Be Rare, Whereof There Is No Naturall Cause Known**

To understand therefore what is a Miracle, we must first understand what works they are, which men wonder at, and call Admirable. And there be but two things which make men wonder at any event: The one is, if it be strange, that is to say, such, as the like of it hath never, or very rarely been produced: The other is, if when it is produced, we cannot imagine it to have been done by naturall means, but onely by the immediate hand of God. But when wee see some possible, naturall cause of it, how rarely soever the like has been done; or if the like have been often done, how impossible soever it be to imagine a naturall means thereof, we no more wonder, nor esteem it for a Miracle.

Therefore, if a Horse, or Cow should speak, it were a Miracle; because both the thing is strange, & the Naturall cause difficult to imagin: So also were it, to see a strange deviation of nature, in the production of some new shape of a living creature. But when a man, or other Animal, engenders his like, though we know no more how this is done, than the other; yet because 'tis usuall, it is no Miracle. In like manner, if a man be metamorphosed into a stone, or into a pillar, it is a Miracle; because strange: but if a peece of wood be so changed; because we see it often, it is no Miracle: and yet we know no more, by what operation of God, the one is brought to passe, than the other.

The first Rainbow that was seen in the world, was a Miracle, because the first; and consequently strange; and served for a sign from God, placed in heaven, to assure his people, there should be no more an universall destruction of the world by Water. But at this day, because they are frequent, they are not Miracles, neither to them that know their naturall causes, nor to them who know them not. Again, there be many rare works produced by the Art of man: yet when we know they are done; because thereby wee know also the means how they are done, we count them not for Miracles, because not wrought by the immediate hand of God, but by mediation of humane Industry.

## **That Which Seemeth A Miracle To One Man, May Seem Otherwise To Another**

Furthermore, seeing Admiration and Wonder, is consequent to the knowledge and experience, wherewith men are endued, some more, some lesse; it followeth, that the same thing, may be a Miracle to one, and not to another. And thence it is, that ignorant, and superstitious men make great Wonders of those works, which other men, knowing to proceed from Nature, (which is not the immediate, but the ordinary work of God,) admire not at all: As when Ecclipses of the Sun and Moon have been taken for supernaturall works, by the common people; when neverthelesse, there were others, could from their naturall causes, have foretold the very hour they should arrive: Or, as when a man, by confederacy, and secret intelligence, getting knowledge of the private actions of an ignorant, unwary man, thereby tells him, what he has done in former time; it seems to him a Miraculous thing; but amongst wise, and cautelous men, such Miracles as those, cannot easily be done.

## The End Of Miracles

Again, it belongeth to the nature of a Miracle, that it be wrought for the procuring of credit to Gods Messengers, Ministers, and Prophets, that thereby men may know, they are called, sent, and employed by God, and thereby be the better inclined to obey them. And therefore, though the creation of the world, and after that the destruction of all living creatures in the universall deluge, were admirable works; yet because they were not done to procure credit to any Prophet, or other Minister of God, they use not to be called Miracles. For how admirable soever any work be, the Admiration consisteth not in that it could be done, because men naturally beleeve the Almighty can doe all things, but because he does it at the Prayer, or Word of a man. But the works of God in Egypt, by the hand of Moses, were properly Miracles; because they were done with intention to make the people of Israel beleeve, that Moses came unto them, not out of any design of his owne interest, but as sent from God. Therefore after God had commanded him to deliver the Israelites from the Egyptian bondage, when he said (Exod 4.1. &c.) "They will not beleeve me, but will say, the Lord hath not appeared unto me," God gave him power, to turn the Rod he had in his hand into a Serpent, and again to return it into a Rod; and by putting his hand into his bosome, to make it leprous; and again by pulling it out to make it whole, to make the Children of Israel beleeve (as it is verse 5.) that the God of their Fathers had appeared unto him; And if that were not enough, he gave him power to turn their waters into bloud. And when hee had done these Miracles before the people, it is said (verse 41.) that "they beleeved him." Neverthelesse, for fear of Pharaoh, they durst not yet obey him. Therefore the other works which were done to plague Pharaoh and the Egyptians, tended all to make the Israelites beleeve in Moses, and were properly Miracles. In like manner if we consider all the Miracles done by the hand of Moses, and all the rest of the Prophets, till the Captivity; and those of our Saviour, and his Apostles afterward; we shall find, their end was alwaies to beget, or confirm beleeve, that they came not of their own motion, but were sent by God. Wee may further observe in Scripture, that the end of Miracles, was to beget beleeve, not

universally in all men, elect, and reprobate; but in the elect only; that is to say, is such as God had determined should become his Subjects. For those miraculous plagues of Egypt, had not for end, the conversion of Pharaoh; For God had told Moses before, that he would harden the heart of Pharaoh, that he should not let the people goe: And when he let them goe at last, not the Miracles perswaded him, but the plagues forced him to it. So also of our Saviour, it is written, (Mat. 13. 58.) that he wrought not many Miracles in his own countrey, because of their unbeleef; and (in Marke 6.5.) in stead of, "he wrought not many," it is, "he could work none." It was not because he wanted power; which to say, were blasphemy against God; nor that the end of Miracles was not to convert incredulous men to Christ; for the end of all the Miracles of Moses, of Prophets, of our Saviour, and of his Apostles was to adde men to the Church; but it was, because the end of their Miracles, was to adde to the Church (not all men, but) such as should be saved; that is to say, such as God had elected. Seeing therefore our Saviour sent from his Father, hee could not use his power in the conversion of those, whom his Father had rejected. They that expounding this place of St. Marke, say, that his word, "Hee could not," is put for, "He would not," do it without example in the Greek tongue, (where Would Not, is put sometimes for Could Not, in things inanimate, that have no will; but Could Not, for Would Not, never,) and thereby lay a stumbling block before weak Christians; as if Christ could doe no Miracles, but amongst the credulous.

## The Definition Of A Miracle

From that which I have here set down, of the nature, and use of a Miracle, we may define it thus, "A MIRACLE, is a work of God, (besides his operation by the way of Nature, ordained in the Creation,) done for the making manifest to his elect, the mission of an extraordinary Minister for their salvation."

And from this definition, we may inferre; First, that in all Miracles, the work done, is not the effect of any vertue in the Prophet; because it is the effect of the immediate hand of God; that is to say God hath done it, without using the Prophet therein, as a subordinate cause.

Secondly, that no Devil, Angel, or other created Spirit, can do a Miracle. For it must either be by vertue of some naturall science, or by Incantation, that is, vertue of words. For if the Inchanters do it by their own power independent, there is some power that proceedeth not from God; which all men deny: and if they doe it by power given them, then is the work not from the immediate hand of God, but naturall, and consequently no Miracle.

There be some texts of Scripture, that seem to attribute the power of working wonders (equall to some of those immediate Miracles, wrought by God himself,) to certain Arts of Magick, and Incantation. As for example, when we read that after the Rod of Moses being cast on the ground became a Serpent, (Exod. 7. 11.) "the Magicians of Egypt did the like by their Enchantments;" and that after Moses had turned the waters of the Egyptian Streams, Rivers, Ponds, and Pooles of water into blood, (Exod. 7. 22.) "the Magicians of Egypt did so likewise, with their Enchantments;" and that after Moses had by the power of God brought frogs upon the land, (Exod. 8. 7.) "the Magicians also did so with their Enchantments, and brought up frogs upon the land of Egypt;" will not a man be apt to attribute Miracles to Enchantments; that is to say, to the efficacy of the sound of Words; and think the same very well proved out of this, and other such places? and yet there is no place of Scripture, that telleth us what on Enchantment is. If therefore Enchantment be not, as many think it, a working of strange effects by spells, and words; but

Imposture, and delusion, wrought by ordinary means; and so far from supernaturall, as the Impostors need not the study so much as of naturall causes, but the ordinary ignorance, stupidity, and superstition of mankind, to doe them; those texts that seem to countenance the power of Magick, Witchcraft, and Enchantment, must needs have another sense, than at first sight they seem to bear.

## **That Men Are Apt To Be Deceived By False Miracles**

For it is evident enough, that Words have no effect, but on those that understand them; and then they have no other, but to signifie the intentions, or passions of them that speak; and thereby produce, hope, fear, or other passions, or conceptions in the hearer. Therefore when a Rod seemeth a Serpent, or the Water Bloud, or any other Miracle seemeth done by Enchantment; if it be not to the edification of Gods people, not the Rod, nor the Water, nor any other thing is enchanted; that is to say, wrought upon by the Words, but the Spectator. So that all the Miracle consisteth in this, that the Enchanter has deceived a man; which is no Miracle, but a very easie matter to doe.

For such is the ignorance, and aptitude to error generally of all men, but especially of them that have not much knowledge of naturall causes, and of the nature, and interests of men; as by innumerable and easie tricks to be abused. What opinion of miraculous power, before it was known there was a Science of the course of the Stars, might a man have gained, that should have told the people, This hour, or day the Sun should be darkned? A juggler by the handling of his goblets, and other trinkets, if it were not now ordinarily practised, would be thought to do his wonders by the power at least of the Devil. A man that hath practised to speak by drawing in of his breath, (which kind of men in antient time were called Ventriloqui,) and so make the weaknesse of his voice seem to proceed, not from the weak impulsion of the organs of Speech, but from distance of place, is able to make very many men beleieve it is a voice from Heaven, whatsoever he please to tell them. And for a crafty man, that hath enquired into the secrets, and familiar confessions that one man ordinarily maketh to another of his actions and adventures past, to tell them him again is no hard matter; and yet there be many, that by such means as that, obtain the reputation of being Conjurers. But it is too long a businesse, to reckon up the severall sorts of those men, which the Greeks called Thaumaturgi, that is to say, workers of things wonderfull; and yet these do all they do, by their own single dexterity. But if we looke upon the Impostures wrought by

Confederacy, there is nothing how impossible soever to be done, that is impossible to bee beleaved. For two men conspiring, one to seem lame, the other to cure him with a charme, will deceive many: but many conspiring, one to seem lame, another so to cure him, and all the rest to bear witness; will deceive many more.

## Cautions Against The Imposture Of Miracles

In this aptitude of mankind, to give too hasty beleefe to pretended Miracles, there can be no better, nor I think any other caution, than that which God hath prescribed, first by Moses, (as I have said before in the precedent chapter,) in the beginning of the 13. and end of the 18. of Deuteronomy; That wee take not any for Prophets, that teach any other Religion, then that which Gods Lieutenant, (which at that time was Moses,) hath established; nor any, (though he teach the same Religion,) whose Praediction we doe not see come to passe. Moses therefore in his time, and Aaron, and his successors in their times, and the Sovereign Governour of Gods people, next under God himself, that is to say, the Head of the Church in all times, are to be consulted, what doctrine he hath established, before wee give credit to a pretended Miracle, or Prophet. And when that is done, the thing they pretend to be a Miracle, we must both see it done, and use all means possible to consider, whether it be really done; and not onely so, but whether it be such, as no man can do the like by his naturall power, but that it requires the immediate hand of God. And in this also we must have recourse to Gods Lieutenant; to whom in all doubtfull cases, wee have submitted our private judgments. For Example; if a man pretend, that after certain words spoken over a peece of bread, that presently God hath made it not bread, but a God, or a man, or both, and neverthelesse it looketh still as like bread as ever it did; there is no reason for any man to think it really done; nor consequently to fear him, till he enquire of God, by his Vicar, or Lieutenant, whether it be done, or not. If he say not, then followeth that which Moses saith, (Deut. 18. 22.) "he hath spoken it presumptuously, thou shalt not fear him." If he say 'tis done, then he is not to contradict it. So also if wee see not, but onely hear tell of a Miracle, we are to consult the Lawful Church; that is to say, the lawful Head thereof, how far we are to give credit to the relators of it. And this is chiefly the case of men, that in these days live under Christian Sovereigns. For in these times, I do not know one man, that ever saw any such wondrous work, done by the charm, or at the word, or prayer of a man, that a man endued but with a mediocrity of reason, would think supernaturall:

and the question is no more, whether what we see done, be a Miracle; whether the Miracle we hear, or read of, were a reall work, and not the Act of a tongue, or pen; but in plain terms, whether the report be true, or a lye. In which question we are not every one, to make our own private Reason, or Conscience, but the Publique Reason, that is, the reason of Gods Supreme Lieutenant, Judge; and indeed we have made him Judge already, if we have given him a Sovereign power, to doe all that is necessary for our peace and defence. A private man has alwaies the liberty, (because thought is free,) to beleve, or not beleve in his heart, those acts that have been given out for Miracles, according as he shall see, what benefit can accrew by mens belief, to those that pretend, or countenance them, and thereby conjecture, whether they be Miracles, or Lies. But when it comes to confession of that faith, the Private Reason must submit to the Publique; that is to say, to Gods Lieutenant. But who is this Lieutenant of God, and Head of the Church, shall be considered in its proper place thereafter.

# **CHAPTER XXXVIII. OF THE SIGNIFICATION IN SCRIPTURE OF ETERNALL LIFE, HELL, SALVATION, THE WORLD TO COME, AND REDEMPTION**

The maintenance of Civill Society, depending on Justice; and Justice on the power of Life and Death, and other lesse Rewards and Punishments, residing in them that have the Sovereignty of the Common-wealth; It is impossible a Common-wealth should stand, where any other than the Sovereign, hath a power of giving greater rewards than Life; and of inflicting greater punishments than Death. Now seeing Eternall Life is a greater reward, than the Life Present; and Eternall Torment a greater punishment than the Death of Nature; It is a thing worthy to be well considered, of all men that desire (by obeying Authority) to avoid the calamities of Confusion, and Civill war, what is meant in Holy Scripture, by Life Eternall, and Torment Eternall; and for what offences, against whom committed, men are to be Eternally Tormented; and for what actions, they are to obtain Eternall Life.

## **Place Of Adams Eternity If He Had Not Sinned, The Terrestrial Paradise**

And first we find, that Adam was created in such a condition of life, as had he not broken the commandement of God, he had enjoyed it in the Paradise of Eden Everlastingly. For there was the Tree of Life; whereof he was so long allowed to eat, as he should forbear to eat of the tree of Knowledge of Good an Evill; which was not allowed him. And therefore as soon as he had eaten of it, God thrust him out of Paradise, "lest he should put forth his hand, and take also of the tree of life, and live for ever." (Gen. 3. 22.) By which it seemeth to me, (with submission neverthesse both in this, and in all questions, whereof the determination dependeth on the Scriptures, to the interpretation of the Bible authorized by the Commonwealth, whose Subject I am,) that Adam if he had not sinned, had had an Eternall Life on Earth: and that Mortality entred upon himself, and his posterity, by his first Sin. Not that actual Death then entred; for Adam then could never have had children; whereas he lived long after, and saw a numerous posterity ere he dyed. But where it is said, "In the day that thou eatest thereof, thou shalt surely die," it must needs bee meant of his Mortality, and certitude of death. Seeing then Eternall life was lost by Adams forfeiture, in committing sin, he that should cancell that forfeiture was to recover thereby, that Life again. Now Jesus Christ hath satisfied for the sins of all that beleve in him; and therefore recovered to all beleevers, that ETERNALL LIFE, which was lost by the sin of Adam. And in this sense it is, that the comparison of St. Paul holdeth (Rom. 5.18, 19.) "As by the offence of one, Judgment came upon all men to condemnation, even so by the righteousnesse of one, the free gift came upon all men to Justification of Life." Which is again (1 Cor. 15.21,22) more perspicuously delivered in these words, "For since by man came death, by man came also the resurrection of the dead. For as in Adam all die, even so in Christ shall all be made alive."

## **Texts Concerning The Place Of Life Eternall For Beleevers**

Concerning the place wherein men shall enjoy that Eternall Life, which Christ hath obtained for them, the texts next before alledged seem to make it on Earth. For if as in Adam, all die, that is, have forfeited Paradise, and Eternall Life on Earth; even so in Christ all shall be made alive; then all men shall be made to live on Earth; for else the comparison were not proper. Hereunto seemeth to agree that of the Psalmist, (Psal. 133.3.) "Upon Zion God commanded the blessing, even Life for evermore;" for Zion, is in Jerusalem, upon Earth: as also that of S. Joh. (Rev. 2.7.) "To him that overcommeth I will give to eat of the tree of life, which is in the midst of the Paradise of God." This was the tree of Adams Eternall life; but his life was to have been on Earth. The same seemeth to be confirmed again by St. Joh. (Rev. 21.2.) where he saith, "I John saw the Holy City, New Jerusalem, coming down from God out of heaven, prepared as a Bride adorned for her husband:" and again v. 10. to the same effect: As if he should say, the new Jerusalem, the Paradise of God, at the coming again of Christ, should come down to Gods people from Heaven, and not they goe up to it from Earth. And this differs nothing from that, which the two men in white clothing (that is, the two Angels) said to the Apostles, that were looking upon Christ ascending (Acts 1.11.) "This same Jesus, who is taken up from you into Heaven, shall so come, as you have seen him go up into Heaven." Which soundeth as if they had said, he should come down to govern them under his Father, Eternally here; and not take them up to govern them in Heaven; and is conformable to the Restauration of the Kingdom of God, instituted under Moses; which was a Political government of the Jews on Earth. Again, that saying of our Saviour (Mat. 22.30.) "that in the Resurrection they neither marry, nor are given in marriage, but are as the Angels of God in heaven," is a description of an Eternall Life, resembling that which we lost in Adam in the point of Marriage. For seeing Adam, and Eve, if they had not sinned, had lived on Earth Eternally, in their individuall persons; it is manifest, they should not continually have procreated their kind. For if Immortals should have

generated, as Mankind doth now; the Earth in a small time, would not have been able to afford them a place to stand on. The Jews that asked our Saviour the question, whose wife the woman that had married many brothers, should be, in the resurrection, knew not what were the consequences of Immortality; that there shall be no Generation, and consequently no marriage, no more than there is Marriage, or generation among the Angels. The comparison between that Eternall life which Adam lost, and our Saviour by his Victory over death hath recovered; holdeth also in this, that as Adam lost Eternall Life by his sin, and yet lived after it for a time; so the faithful Christian hath recovered Eternal Life by Christs passion, though he die a natural death, and remaine dead for a time; namely, till the Resurrection. For as Death is reckoned from the Condemnation of Adam, not from the Execution; so life is reckoned from the Absolution, not from the Resurrection of them that are elected in Christ.

## Ascension Into Heaven

That the place wherein men are to live Eternally, after the Resurrection, is the Heavens, meaning by Heaven, those parts of the world, which are the most remote from Earth, as where the stars are, or above the stars, in another Higher Heaven, called Caelum Empyreum, (whereof there is no mention in Scripture, nor ground in Reason) is not easily to be drawn from any text that I can find. By the Kingdome of Heaven, is meant the Kingdome of the King that dwelleth in Heaven; and his Kingdome was the people of Israel, whom he ruled by the Prophets his Lieutenants, first Moses, and after him Eleazar, and the Sovereign Priests, till in the days of Samuel they rebelled, and would have a mortall man for their King, after the manner of other Nations. And when our Saviour Christ, by the preaching of his Ministers, shall have perswaded the Jews to return, and called the Gentiles to his obedience, then shall there be a new Kingdome of Heaven, because our King shall then be God, whose Throne is Heaven; without any necessity evident in the Scripture, that man shall ascend to his happinesse any higher than Gods Footstool the Earth. On the contrary, we find written (Joh. 3.13.) that "no man hath ascended into Heaven, but he that came down from Heaven, even the Son of man, that is in Heaven." Where I observe by the way, that these words are not, as those which go immediately before, the words of our Saviour, but of St. John himself; for Christ was then not in Heaven, but upon the Earth. The like is said of David (Acts 2.34.) where St. Peter, to prove the Ascension of Christ, using the words of the Psalmist, (Psal. 16.10.) "Thou wilt not leave my soule in Hell, nor suffer thine Holy one to see corruption," saith, they were spoken (not of David, but) of Christ; and to prove it, addeth this Reason, "For David is not ascended into Heaven." But to this a man may easily answer, and say, that though their bodies were not to ascend till the generall day of Judgment, yet their souls were in Heaven as soon as they were departed from their bodies; which also seemeth to be confirmed by the words of our Saviour (Luke 20.37,38.) who proving the Resurrection out of the word of Moses, saith thus, "That the dead are raised, even Moses shewed, at the bush, when he calleth the Lord, the God of Abraham, and the God of Isaac,

and the God of Jacob. For he is not a God of the Dead, but of the Living; for they all live to him." But if these words be to be understood only of the Immortality of the Soul, they prove not at all that which our Saviour intended to prove, which was the Resurrection of the Body, that is to say, the Immortality of the Man. Therefore our Saviour meaneth, that those Patriarchs were Immortall; not by a property consequent to the essence, and nature of mankind, but by the will of God, that was pleased of his mere grace, to bestow Eternall Life upon the faithfull. And though at that time the Patriarchs and many other faithfull men were Dead, yet as it is in the text, they Lived To God; that is, they were written in the Book of Life with them that were absolved of their sinnes, and ordained to Life eternall at the Resurrection. That the Soul of man is in its own nature Eternall, and a living Creature independent on the Body; or that any meer man is Immortall, otherwise than by the Resurrection in the last day, (except Enos and Elias,) is a doctrine not apparent in Scripture. The whole 14. Chapter of Job, which is the speech not of his friends, but of himselfe, is a complaint of this Mortality of Nature; and yet no contradiction of the Immortality at the Resurrection. "There is hope of a tree," (saith hee verse 7.) "if it be cast down, Though the root thereof wax old, and the stock thereof die in the ground, yet when it scenteth the water it will bud, and bring forth boughes like a Plant. But man dyeth, and wasteth away, yea, man giveth up the Ghost, and where is he?" and (verse 12.) "man lyeth down, and riseth not, till the heavens be no more." But when is it, that the heavens shall be no more? St. Peter tells us, that it is at the generall Resurrection. For in his 2. Epistle, 3. Chapter, and 7. verse, he saith, that "the Heavens and the Earth that are now, are reserved unto fire against the day of Judgment, and perdition of ungodly men," and (verse 12.) "looking for, and hasting to the comming of God, wherein the Heavens shall be on fire, and shall be dissolved, and the Elements shall melt with fervent heat. Neverthelesse, we according to the promise look for new Heavens, and a new Earth, wherein dwelleth righteousnesse." Therefore where Job saith, man riseth not till the Heavens be no more; it is all one, as if he had said, the Immortall Life (and Soule and Life in the Scripture, do usually signifie the same thing) beginneth not in man, till the Resurrection, and day of Judgment; and hath for cause, not his specificall nature, and generation; but the Promise. For St. Peter saies not, "Wee look for new heavens, and a new earth, (from Nature) but from Promise."

Lastly, seeing it hath been already proved out of divers evident places of Scripture, in the 35. chapter of this book, that the Kingdom of God is a Civil Common-wealth, where God himself is Sovereign, by vertue first of the Old, and since of the New Covenant, wherein he reigneth by his Vicar, or Lieutenant; the same places do therefore also prove, that after the coming again of our Saviour in his Majesty, and glory, to reign actually, and Eternally; the Kingdom of God is to be on Earth. But because this doctrine (though proved out of places of Scripture not few, nor obscure) will appear to most men a novelty; I doe but propound it; maintaining nothing in this, or any other paradox of Religion; but attending the end of that dispute of the sword, concerning the Authority, (not yet amongst my Countrey-men decided,) by which all sorts of doctrine are to bee approved, or rejected; and whose commands, both in speech, and writing, (whatsoever be the opinions of private men) must by all men, that mean to be protected by their Laws, be obeyed. For the points of doctrine concerning the Kingdome (of) God, have so great influence on the Kingdome of Man, as not to be determined, but by them, that under God have the Sovereign Power.

# **The Place After Judgment, Of Those Who Were Never In The Kingdome**

## **Of God, Or Having Been In, Are Cast Out**

As the Kingdome of God, and Eternall Life, so also Gods Enemies, and their Torments after Judgment, appear by the Scripture, to have their place on Earth. The name of the place, where all men remain till the Resurrection, that were either buried, or swallowed up of the Earth, is usually called in Scripture, by words that signifie Under Ground; which the Latines read generally *Infernus*, and *Inferni*, and the Greeks *Hades*; that is to say, a place where men cannot see; and containeth as well the Grave, as any other deeper place. But for the place of the damned after the Resurrection, it is not determined, neither in the Old, nor New Testament, by any note of situation; but onely by the company: as that it shall bee, where such wicked men were, as God in former times in extraordinary, and miraculous manner, had destroyed from off the face of the Earth: As for Example, that they are in *Inferno*, in *Tartarus*, or in the bottomelesse pit; because *Corah*, *Dathan*, and *Abirom*, were swallowed up alive into the earth. Not that the Writers of the Scripture would have us beleeve, there could be in the globe of the Earth, which is not only finite, but also (compared to the height of the Stars) of no considerable magnitude, a pit without a bottome; that is, a hole of infinite depth, such as the Greeks in their *Daemonologie* (that is to say, in their doctrine concerning *Daemons*;) and after them, the Romans called *Tartarus*; of which *Virgill* sayes,

*Bis patet in praeceps, tantem tenditque sub umbras,  
Quantus ad aethereum coeli suspectus Olympum:*

for that is a thing the proportion of Earth to Heaven cannot bear: but that wee should beleeve them there, indefinitely, where those men are, on whom God inflicted that Exemplary punnishment.

## **The Congregation Of Giants**

Again, because those mighty men of the Earth, that lived in the time of Noah, before the floud, (which the Greeks called Heroes, and the Scripture Giants, and both say, were begotten, by copulation of the children of God, with the children of men,) were for their wicked life destroyed by the generall deluge; the place of the Damned, is therefore also sometimes marked out, by the company of those deceased Giants; as Proverbs 21.16. "The man that wandreth out of the way of understanding, shall remain in the congregation of the Giants," and Job 26.5. "Behold the Giants groan under water, and they that dwell with them." Here the place of the Damned, is under the water. And Isaiah 14.9. "Hell is troubled how to meet thee," (that is, the King of Babylon) "and will displace the Giants for thee:" and here again the place of the Damned, (if the sense be literall,) is to be under water.

## Lake Of Fire

Thirdly, because the Cities of Sodom, and Gomorrah, by the extraordinary wrath of God, were consumed for their wickednesse with Fire and Brimstone, and together with them the countrey about made a stinking bituminous Lake; the place of the Damned is sometimes expressed by Fire, and a Fiery Lake: as in the Apocalypse ch.21.8. "But the timorous, incredulous, and abominable, and Murderers, and Whoremongers, and Sorcerers, and Idolators, and all Lyars, shall have their part in the Lake that burneth with Fire, and Brimstone; which is the second Death." So that it is manifest, that Hell Fire, which is here expressed by Metaphor, from the reall Fire of Sodome, signifieth not any certain kind, or place of Torment; but is to be taken indefinitely, for Destruction, as it is in the 20. Chapter, at the 14. verse; where it is said, that "Death and Hell were cast into the Lake of Fire;" that is to say, were abolished, and destroyed; as if after the day of Judgment, there shall be no more Dying, nor no more going into Hell; that is, no more going to Hades (from which word perhaps our word Hell is derived,) which is the same with no more Dying.

## Utter Darknesse

Fourthly, from the Plague of Darknesse inflicted on the Egyptians, of which it is written (Exod. 10.23.) "They saw not one another, neither rose any man from his place for three days; but all the Children of Israel had light in their dwellings;" the place of the wicked after Judgment, is called Utter Darknesse, or (as it is in the originall) Darknesse Without. And so it is expressed (Mat. 22.13.) where the King commandeth his Servants, "to bind hand and foot the man that had not on his Wedding garment, and to cast him out," Eis To Skotos To Exoteron, Externall Darknesse, or Darknesse Without: which though translated Utter Darknesse, does not signifie How Great, but Where that darknesse is to be; namely, Without The Habitation of Gods Elect.

## **Gehenna, And Tophet**

Lastly, whereas there was a place neer Jerusalem, called the Valley of the Children of Hinnon; in a part whereof, called Tophet, the Jews had committed most grievous Idolatry, sacrificing their children to the Idol Moloch; and wherein also God had afflicted his enemies with most grievous punishments; and wherein Josias had burnt the Priests of Moloch upon their own Altars, as appeareth at large in the 2 of Kings chap. 23. the place served afterwards, to receive the filth, and garbage which was carried thither, out of the City; and there used to be fires made, from time to time, to purifie the aire, and take away the stench of Carrion. From this abominable place, the Jews used ever after to call the place of the Damned, by the name of Gehenna, or Valley of Hinnon. And this Gehenna, is that word, which is usually now translated HELL; and from the fires from time to time there burning, we have the notion of Everlasting, and Unquenchable Fire.

## **Of The Literall Sense Of The Scripture Concerning Hell**

Seeing now there is none, that so interprets the Scripture, as that after the day of Judgment, the wicked are all Eternally to be punished in the Valley of Hinnon; or that they shall so rise again, as to be ever after under ground, or under water; or that after the Resurrection, they shall no more see one another; nor stir from one place to another; it followeth, me thinks, very necessarily, that that which is thus said concerning Hell Fire, is spoken metaphorically; and that therefore there is a proper sense to be enquired after, (for of all Metaphors there is some reall ground, that may be expressed in proper words) both of the Place of Hell, and the nature of Hellish Torment, and Tormenters.

## **Satan, Devill, Not Proper Names, But Appellatives**

And first for the Tormenters, wee have their nature, and properties, exactly and properly delivered by the names of, The Enemy, or Satan; The Accuser, or Diabolus; The Destroyer, or Abbadon. Which significant names, Satan, Devill, Abbadon, set not forth to us any Individuall person, as proper names use to doe; but onely an office, or quality; and are therefore Appellatives; which ought not to have been left untranslated, as they are, in the Latine, and Modern Bibles; because thereby they seem to be the proper names of Daemons; and men are the more easily seduced to beleve the doctrine of Devills; which at that time was the Religion of the Gentiles, and contrary to that of Moses, and of Christ.

And because by the Enemy, the Accuser, and Destroyer, is meant, the Enemy of them that shall be in the Kingdome of God; therefore if the Kingdome of God after the Resurrection, bee upon the Earth, (as in the former Chapter I have shewn by Scripture it seems to be,) The Enemy, and his Kingdome must be on Earth also. For so also was it, in the time before the Jews had deposed God. For Gods Kingdome was in Palestine; and the Nations round about, were the Kingdomes of the Enemy; and consequently by Satan, is meant any Earthly Enemy of the Church.

## Torments Of Hell

The Torments of Hell, are expressed sometimes, by "weeping, and gnashing of teeth," as Mat. 8.12. Sometimes, by "the worm of Conscience;" as Isa.66.24. and Mark 9.44, 46, 48; sometimes, by Fire, as in the place now quoted, "where the worm dyeth not, and the fire is not quenched," and many places beside: sometimes by "Shame, and contempt," as Dan. 12.2. "And many of them that sleep in the dust of the Earth, shall awake; some to Everlasting life; and some to shame, and everlasting contempt." All which places design metaphorically a grief, and discontent of mind, from the sight of that Eternall felicity in others, which they themselves through their own incredulity, and disobedience have lost. And because such felicity in others, is not sensible but by comparison with their own actuall miseries; it followeth that they are to suffer such bodily paines, and calamities, as are incident to those, who not onely live under evill and cruell Governours, but have also for Enemy, the Eternall King of the Saints, God Almighty. And amongst these bodily paines, is to be reckoned also to every one of the wicked a second Death. For though the Scripture bee clear for an universall Resurrection; yet wee do not read, that to any of the Reprobate is promised an Eternall life. For whereas St. Paul (1 Cor. 15.42, 43.) to the question concerning what bodies men shall rise with again, saith, that "the body is sown in corruption, and is raised in incorruption; It is sown in dishonour, it is raised in glory; it is sown in weaknesse, it is raised in power;" Glory and Power cannot be applyed to the bodies of the wicked: Nor can the name of Second Death, bee applyed to those that can never die but once: And although in Metaphoricall speech, a Calamitous life Everlasting, may bee called an Everlasting Death yet it cannot well be understood of a Second Death. The fire prepared for the wicked, is an Everlasting Fire: that is to say, the estate wherein no man can be without torture, both of body and mind, after the Resurrection, shall endure for ever; and in that sense the Fire shall be unquenchable, and the torments Everlasting: but it cannot thence be inferred, that hee who shall be cast into that fire, or be tormented with those torments, shall endure, and resist them so, as to be eternally burnt, and tortured, and yet never be

destroyed, nor die. And though there be many places that affirm Everlasting Fire, and Torments (into which men may be cast successively one after another for ever;) yet I find none that affirm there shall bee an Eternall Life therein of any individuall person; but on the contrary, an Everlasting Death, which is the Second Death: (Apoc. 20. 13,14.) "For after Death, and the Grave shall have delivered up the dead which were in them, and every man be judged according to his works; Death and the Grave shall also be cast into the Lake of Fire. This is the Second Death." Whereby it is evident, that there is to bee a Second Death of every one that shall bee condemned at the day of Judgement, after which hee shall die no more.

# **The Joyes Of Life Eternall, And Salvation The Same Thing,**

## **Salvation From Sin, And From Misery, All One**

The joyes of Life Eternall, are in Scripture comprehended all under the name of SALVATION, or Being Saved. To be saved, is to be secured, either respectively, against speciall Evills, or absolutely against all Evill, comprehending Want, Sicknesse, and Death it self. And because man was created in a condition Immortall, not subject to corruption, and consequently to nothing that tendeth to the dissolution of his nature; and fell from that happinesse by the sin of Adam; it followeth, that to be Saved From Sin, is to be saved from all the Evill, and Calamities that Sinne hath brought upon us. And therefore in the Holy Scripture, Remission of Sinne, and Salvation from Death and Misery, is the same thing, as it appears by the words of our Saviour, who having cured a man sick of the Palsey, by saying, (Mat. 9.2.) "Son be of good cheer, thy Sins be forgiven thee;" and knowing that the Scribes took for blasphemy, that a man should pretend to forgive Sins, asked them (v.5.) "whether it were easier to say, Thy Sinnes be forgiven thee, or, Arise and walk;" signifying thereby, that it was all one, as to the saving of the sick, to say, "Thy Sins are forgiven," and "Arise and walk;" and that he used that form of speech, onely to shew he had power to forgive Sins. And it is besides evident in reason, that since Death and Misery, were the punishments of Sin, the discharge of Sinne, must also be a discharge of Death and Misery; that is to say, Salvation absolute, such as the faithfull are to enjoy after the day of Judgment, by the power, and favour of Jesus Christ, who for that cause is called our SAVIOUR.

Concerning Particular Salvations, such as are understood, 1 Sam. 14.39. "as the Lord liveth that saveth Israel," that is, from their temporary enemies, and 2 Sam. 22.4. "Thou art my Saviour, thou savest me from violence;" and 2 Kings 13.5. "God gave the Israelites a Saviour, and so they were delivered from the hand of the Assyrians," and the like, I need say nothing; there being neither difficulty, nor interest, to corrupt the interpretation of texts of that kind.

## The Place Of Eternall Salvation

But concerning the Generall Salvation, because it must be in the Kingdome of Heaven, there is great difficulty concerning the Place. On one side, by Kingdome (which is an estate ordained by men for their perpetuall security against enemies, and want) it seemeth that this Salvation should be on Earth. For by Salvation is set forth unto us, a glorious Reign of our King, by Conquest; not a safety by Escape: and therefore there where we look for Salvation, we must look also for Triumph; and before Triumph, for Victory; and before Victory, for Battell; which cannot well be supposed, shall be in Heaven. But how good soever this reason may be, I will not trust to it, without very evident places of Scripture. The state of Salvation is described at large, Isaiah, 33. ver. 20,21,22,23,24.

"Look upon Zion, the City of our solemnities, thine eyes shall see Jerusalem a quiet habitation, a tabernacle that shall not be taken down; not one of the stakes thereof shall ever be removed, neither shall any of the cords thereof be broken.

But there the glorious Lord will be unto us a place of broad rivers, and streams; wherein shall goe no Gally with oares; neither shall gallant ship passe thereby.

For the Lord is our Judge, the Lord is our Lawgiver, the Lord is our King, he will save us.

Thy tacklings are loosed; they could not well strengthen their mast; they could not spread the sail: then is the prey of a great spoil divided; the lame take the prey.

And the Inhabitant shall not say, I am sicke; the people that shall dwell therein shall be forgiven their Iniquity."

In which words wee have the place from whence Salvation is to proceed, "Jerusalem, a quiet habitation;" the Eternity of it, "a tabernacle that shall not be taken down," &c. The Saviour of it, "the Lord, their Judge, their Lawgiver, their King, he will save us;" the Salvation, "the Lord shall be to them as a broad mote of swift waters," &c. the condition of their Enemies,

"their tacklings are loose, their masts weake, the lame shal take the spoil of them." The condition of the Saved, "The Inhabitants shall not say, I am sick:" And lastly, all this is comprehended in Forgivenessse of sin, "The people that dwell therein shall be forgiven their iniquity." By which it is evident, that Salvation shall be on Earth, then, when God shall reign, (at the coming again of Christ) in Jerusalem; and from Jerusalem shall proceed the Salvation of the Gentiles that shall be received into Gods Kingdome; as is also more expressly declared by the same Prophet, Chap. 66.20, 21. "And they," (that is, the Gentiles who had any Jew in bondage) "shall bring all your brethren, for an offering to the Lord, out of all nations, upon horses, and in charets, and in litters, and upon mules, and upon swift beasts, to my holy mountain, Jerusalem, saith the Lord, as the Children of Israel bring an offering in a clean vessell into the House of the Lord. And I will also take of them for Priests and for Levites, saith the Lord:" Whereby it is manifest, that the chief seat of Gods Kingdome (which is the Place, from whence the Salvation of us that were Gentiles, shall proceed) shall be Jerusalem; And the same is also confirmed by our Saviour, in his discourse with the woman of Samaria, concerning the place of Gods worship; to whom he saith, John 4.22. that the Samaritans worshipped they know not what, but the Jews worship what they knew, "For Salvation is of the Jews (Ex Judais, that is, begins at the Jews): as if he should say, you worship God, but know not by whom he wil save you, as we doe, that know it shall be one of the tribe of Judah, a Jew, not a Samaritan. And therefore also the woman not impertinently answered him again, "We know the Messias shall come." So that which our saviour saith, "Salvation is from the Jews," is the same that Paul sayes (Rom. 1.16,17.) "The Gospel is the power of God to Salvation to every one that beleeveth; To the Jew first, and also to the Greek. For therein is the righteousnesse of God revealed from faith to faith;" from the faith of the Jew, to the faith of the Gentile. In the like sense the Prophet Joel describing the day of Judgment, (chap. 2.30,31.) that God would "shew wonders in heaven, and in earth, bloud, and fire, and pillars of smoak. The Sun should be turned to darknesse, and the Moon into bloud, before the great and terrible day of the Lord come," he addeth verse 32. "and it shall come to passe, that whosoever shall call upon the name of the Lord, shall be saved. For in Mount Zion, and in Jerusalem shall be Salvation." And Obadiah verse 17 saith the same, "Upon Mount Zion shall be Deliverance; and there shall be

holinesse, and the house of Jacob shall possesse their possessions," that is, the possessions of the Heathen, which possessions he expresseth more particularly in the following verses, by the Mount of Esau, the Land of the Philistines, the Fields of Ephraim, of Samaria, Gilead, and the Cities of the South, and concludes with these words, "the Kingdom shall be the Lords." All these places are for Salvation, and the Kingdome of God (after the day of Judgement) upon Earth. On the other side, I have not found any text that can probably be drawn, to prove any Ascension of the Saints into Heaven; that is to say, into any Coelum Empyreum, or other aetheriall Region; saving that it is called the Kingdome of Heaven; which name it may have, because God, that was King of the Jews, governed them by his commands, sent to Moses by Angels from Heaven, to reduce them to their obedience; and shall send him thence again, to rule both them, and all other faithfull men, from the day of Judgment, Everlastingly: or from that, that the Throne of this our Great King is in Heaven; whereas the Earth is but his Footstoole. But that the Subjects of God should have any place as high as his throne, or higher than his Footstoole, it seemeth not sutable to the dignity of a King, nor can I find any evident text for it in holy Scripture.

From this that hath been said of the Kingdom of God, and of Salvation, it is not hard to interpret, what is meant by the WORLD TO COME. There are three worlds mentioned in Scripture, the Old World, the Present World, and the World to Come. Of the first, St. Peter speaks, (2 Pet. 2.5.) "If God spared not the Old World, but saved Noah the eighth person, a Preacher of righteousness, bringing the flood upon the world of the ungodly," &c. So the First World, was from Adam to the generall Flood. Of the present World, our Saviour speaks (John 18.36.) "My Kingdome is not of this World." For he came onely to teach men the way of Salvation, and to renew the Kingdome of his Father, by his doctrine. Of the World to come, St. Peter speaks, (2 Pet. 3. 13.) "Neverthelesse we according to his promise look for new Heavens, and a new Earth." This is that WORLD, wherein Christ coming down from Heaven, in the clouds, with great power, and glory, shall send his Angels, and shall gather together his elect, from the four winds, and from the uttermost parts of the Earth, and thence forth reign over them, (under his Father) Everlastingly.

## Redemption

Salvation of a sinner, supposeth a precedent REDEMPTION; for he that is once guilty of Sin, is obnoxious to the Penalty of the same; and must pay (or some other for him) such Ransome, as he that is offended, and has him in his power, shall require. And seeing the person offended, is Almighty God, in whose power are all things; such Ransome is to be paid before Salvation can be acquired, as God hath been pleased to require. By this Ransome, is not intended a satisfaction for Sin, equivalent to the Offence, which no sinner for himselfe, nor righteous man can ever be able to make for another; The dammage a man does to another, he may make amends for by restitution, or recompence, but sin cannot be taken away by recompence; for that were to make the liberty to sin, a thing vendible. But sins may bee pardoned to the repentant, either Gratis, or upon such penalty, as God is pleased to accept. That which God usually accepted in the Old Testament, was some Sacrifice, or Oblation. To forgive sin is not an act of Injustice, though the punishment have been threatned. Even amongst men, though the promise of Good, bind the promiser; yet threats, that is to say, promises, of Evill, bind them not; much lesse shall they bind God, who is infinitely more mercifull then men. Our Saviour Christ therefore to Redeem us, did not in that sense satisfie for the Sins of men, as that his Death, of its own vertue, could make it unjust in God to punish sinners with Eternall death; but did make that Sacrifice, and Oblation of himself, at his first coming, which God was pleased to require, for the Salvation at his second coming, of such as in the mean time should repent, and beleeve in him. And though this act of our Redemption, be not alwaies in Scripture called a Sacrifice, and Oblation, but sometimes a Price, yet by Price we are not to understand any thing, by the value whereof, he could claim right to a pardon for us, from his offended Father, but that Price which God the Father was pleased in mercy to demand.

**CHAPTER XXXIX. OF THE SIGNIFICATION  
IN SCRIPTURE OF THE WORD CHURCH**

## **Church The Lords House**

The word Church, (Ecclesia) signifieth in the Books of Holy Scripture divers things. Sometimes (though not often) it is taken for Gods House, that is to say, for a Temple, wherein Christians assemble to perform holy duties publicquely; as, 1 Cor. 14. ver. 34. "Let your women keep silence in the Churches:" but this is Metaphorically put, for the Congregation there assembled; and hath been since used for the Edifice it self, to distinguish between the Temples of Christians, and Idolaters. The Temple of Jerusalem was Gods House, and the House of Prayer; and so is any Edifice dedicated by Christians to the worship of Christ, Christs House: and therefore the Greek Fathers call it Kuriake, The Lords House; and thence, in our language it came to be called Kyrke, and Church.

## **Ecclesia Properly What**

Church (when not taken for a House) signifieth the same that Ecclesia signified in the Grecian Common-wealths; that is to say, a Congregation, or an Assembly of Citizens, called forth, to hear the Magistrate speak unto them; and which in the Common-wealth of Rome was called Concio, as he that spake was called Ecclesiastes, and Concionator. And when they were called forth by lawfull Authority, (Acts 19.39.) it was Ecclesia Legitima, a Lawfull Church, Ennomos Ecclesia. But when they were excited by tumultuous, and seditious clamor, then it was a confused Church, Ecclesia Sugkechumene.

It is taken also sometimes for the men that have right to be of the Congregation, though not actually assembled; that is to say, for the whole multitude of Christian men, how far soever they be dispersed: as (Act. 8.3.) where it is said, that "Saul made havock of the Church:" And in this sense is Christ said to be Head of the Church. And sometimes for a certain part of Christians, as (Col. 4.15.) "Salute the Church that is in his house." Sometimes also for the Elect onely; as (Ephes. 5.27.) "A Glorious Church, without spot, or wrinkle, holy, and without blemish;" which is meant of the Church Triumphant, or, Church To Come. Sometimes, for a Congregation assembled, of professors of Christianity, whether their profession be true, or counterfeit, as it is understood, Mat. 18.17. where it is said, "Tell it to the Church, and if hee neglect to hear the Church, let him be to thee as a Gentile, or Publican."

## **In What Sense The Church Is One Person Church Defined**

And in this last sense only it is that the Church can be taken for one Person; that is to say, that it can be said to have power to will, to pronounce, to command, to be obeyed, to make laws, or to doe any other action whatsoever; For without authority from a lawfull Congregation, whatsoever act be done in a concourse of people, it is the particular act of every one of those that were present, and gave their aid to the performance of it; and not the act of them all in grosse, as of one body; much lesse that act of them that were absent, or that being present, were not willing it should be done. According to this sense, I define a CHURCH to be, "A company of men professing Christian Religion, united in the person of one Sovereign; at whose command they ought to assemble, and without whose authority they ought not to assemble." And because in all Commonwealths, that Assembly, which is without warrant from the Civil Sovereign, is unlawful; that Church also, which is assembled in any Common-wealth, that hath forbidden them to assemble, is an unlawfull Assembly.

# **A Christian Common-wealth, And A Church All One**

It followeth also, that there is on Earth, no such universall Church as all Christians are bound to obey; because there is no power on Earth, to which all other Common-wealths are subject: There are Christians, in the Dominions of severall Princes and States; but every one of them is subject to that Common-wealth, whereof he is himself a member; and consequently, cannot be subject to the commands of any other Person. And therefore a Church, such as one as is capable to Command, to Judge, Absolve, Condemn, or do any other act, is the same thing with a Civil Common-wealth, consisting of Christian men; and is called a Civill State, for that the subjects of it are Men; and a Church, for that the subjects thereof are Christians. Temporall and Spirituall Government, are but two words brought into the world, to make men see double, and mistake their Lawfull Sovereign. It is true, that the bodies of the faithfull, after the Resurrection shall be not onely Spirituall, but Eternall; but in this life they are grosse, and corruptible. There is therefore no other Government in this life, neither of State, nor Religion, but Temporall; nor teaching of any doctrine, lawfull to any Subject, which the Governour both of the State, and of the Religion, forbiddeth to be taught: And that Governor must be one; or else there must needs follow Faction, and Civil war in the Common-wealth, between the Church and State; between Spiritualists, and Temporalists; between the Sword Of Justice, and the Shield Of Faith; and (which is more) in every Christian mans own brest, between the Christian, and the Man. The Doctors of the Church, are called Pastors; so also are Civill Sovereignes: But if Pastors be not subordinate one to another, so as that there may bee one chief Pastor, men will be taught contrary Doctrines, whereof both may be, and one must be false. Who that one chief Pastor is, according to the law of Nature, hath been already shewn; namely, that it is the Civill Sovereign; And to whom the Scripture hath assigned that Office, we shall see in the Chapters following.

# **CHAPTER XL**

**OF THE RIGHTS OF THE KINGDOME OF GOD, IN  
ABRAHAM, MOSES, HIGH PRIESTS,**

**AND THE KINGS OF JUDAH**

## **The Sovereign Rights Of Abraham**

The Father of the Faithfull, and first in the Kingdome of God by Covenant, was Abraham. For with him was the Covenant first made; wherein he obliged himself, and his seed after him, to acknowledge and obey the commands of God; not onely such, as he could take notice of, (as Morall Laws,) by the light of Nature; but also such, as God should in speciall manner deliver to him by Dreams and Visions. For as to the Morall law, they were already obliged, and needed not have been contracted withall, by promise of the Land of Canaan. Nor was there any Contract, that could adde to, or strengthen the Obligation, by which both they, and all men else were bound naturally to obey God Almighty: And therefore the Covenant which Abraham made with God, was to take for the Commandement of God, that which in the name of God was commanded him, in a Dream, or Vision, and to deliver it to his family, and cause them to observe the same.

## **Abraham Had The Sole Power Of Ordering The Religion Of His Own People**

In this Contract of God with Abraham, wee may observe three points of important consequence in the government of Gods people. First, that at the making of this Covenant, God spake onely to Abraham; and therefore contracted not with any of his family, or seed, otherwise then as their wills (which make the essence of all Covenants) were before the Contract involved in the will of Abraham; who was therefore supposed to have had a lawfull power, to make them perform all that he covenanted for them. According whereunto (Gen 18.18, 19.) God saith, "All the Nations of the Earth shall be blessed in him, For I know him that he will command his children and his houshold after him, and they shall keep the way of the Lord." From whence may be concluded this first point, that they to whom God hath not spoken immediately, are to receive the positive commandements of God, from their Sovereign; as the family and seed of Abraham did from Abraham their Father, and Lord, and Civill Sovereign. And Consequently in every Common-wealth, they who have no supernaturall Revelation to the contrary, ought to obey the laws of their own Sovereign, in the externall acts and profession of Religion. As for the inward Thought, and beleef of men, which humane Governours can take no notice of, (for God onely knoweth the heart) they are not voluntary, nor the effect of the laws, but of the unrevealed will, and of the power of God; and consequently fall not under obligation.

## **No Pretence Of Private Spirit Against The Religion Of Abraham**

From whence proceedeth another point, that it was not unlawfull for Abraham, when any of his Subjects should pretend Private Vision, or Spirit, or other Revelation from God, for the countenancing of any doctrine which Abraham should forbid, or when they followed, or adhered to any such pretender, to punish them; and consequently that it is lawfull now for the Sovereign to punish any man that shall oppose his Private Spirit against the Laws: For hee hath the same place in the Commonwealth, that Abraham had in his own Family.

## **Abraham Sole Judge, And Interpreter Of What God Spake**

There ariseth also from the same, a third point; that as none but Abraham in his family, so none but the Sovereign in a Christian Commonwealth, can take notice what is, or what is not the Word of God. For God spake onely to Abraham; and it was he onely, that was able to know what God said, and to interpret the same to his family: And therefore also, they that have the place of Abraham in a Common-wealth, are the onely Interpreters of what God hath spoken.

## **The Authority Of Moses Whereon Grounded**

The same Covenant was renewed with Isaac; and afterwards with Jacob; but afterwards no more, till the Israelites were freed from the Egyptians, and arrived at the Foot of Mount Sinai: and then it was renewed by Moses (as I have said before, chap. 35.) in such manner, as they became from that time forward the Peculiar Kingdome of God; whose Lieutenant was Moses, for his owne time; and the succession to that office was settled upon Aaron, and his heirs after him, to bee to God a Sacerdotall Kingdome for ever.

By this constitution, a Kingdome is acquired to God. But seeing Moses had no authority to govern the Israelites, as a successor to the right of Abraham, because he could not claim it by inheritance; it appeareth not as yet, that the people were obliged to take him for Gods Lieutenant, longer than they beleaved that God spake unto him. And therefore his authority (notwithstanding the Covenant they made with God) depended yet merely upon the opinion they had of his Sanctity, and of the reality of his Conferences with God, and the verity of his Miracles; which opinion coming to change, they were no more obliged to take any thing for the law of God, which he propounded to them in Gods name. We are therefore to consider, what other ground there was, of their obligation to obey him. For it could not be the commandement of God that could oblige them; because God spake not to them immediately, but by the mediation of Moses Himself; And our Saviour saith of himself, (John 5. 31.) "If I bear witness of my self, my witness is not true," much lesse if Moses bear witness of himselfe, (especially in a claim of Kingly power over Gods people) ought his testimony to be received. His authority therefore, as the authority of all other Princes, must be grounded on the Consent of the People, and their Promise to obey him. And so it was: for "the people" (Exod. 20.18.) "when they saw the Thunderings, and the Lightnings, and the noyse of the Trumpet, and the mountaine smoaking, removed, and stood a far off. And they said unto Moses, speak thou with us, and we will hear, but let not God speak with us lest we die." Here was their promise of obedience; and by

this it was they obliged themselves to obey whatsoever he should deliver unto them for the Commandement of God.

# **Moses Was (Under God) Sovereign Of The Jews, All His Own Time,**

## **Though Aaron Had The Priesthood**

And notwithstanding the Covenant constituted a Sacerdotall Kingdome, that is to say, a Kingdome hereditary to Aaron; yet that is to be understood of the succession, after Moses should bee dead. For whosoever ordereth, and establisheth the Policy, as first founder of a Common-wealth (be it Monarchy, Aristocracy, or Democracy) must needs have Sovereign Power over the people all the while he is doing of it. And that Moses had that power all his own time, is evidently affirmed in the Scripture. First, in the text last before cited, because the people promised obedience, not to Aaron but to him. Secondly, (Exod. 24.1, 2.) "And God said unto Moses, Come up unto the Lord, thou, and Aaron, Nadab and Abihu, and seventy of the Elders of Israel. And Moses alone shall come neer the Lord, but they shall not come nigh, neither shall the people goe up with him." By which it is plain, that Moses who was alone called up to God, (and not Aaron, nor the other Priests, nor the Seventy Elders, nor the People who were forbidden to come up) was alone he, that represented to the Israelites the Person of God; that is to say, was their sole Sovereign under God. And though afterwards it be said (verse 9.) "Then went up Moses, and Aaron, Nadab, and Abihu, and seventy of the Elders of Israel, and they saw the God of Israel, and there was under his feet, as it were a paved work of a saphire stone," &c. yet this was not till after Moses had been with God before, and had brought to the people the words which God had said to him. He onely went for the businesse of the people; the others, as the Nobles of his retinue, were admitted for honour to that speciall grace, which was not allowed to the people; which was, (as in the verse after appeareth) to see God and live. "God laid not his hand upon them, they saw God and did eat and drink" (that is, did live), but did not carry any commandement from him to the people. Again, it is every where said, "The Lord spake unto Moses," as in all other occasions of Government; so also in the ordering of the Ceremonies of Religion, contained in the 25, 26, 27, 28, 29, 30, and 31

Chapters of Exodus, and throughout Leviticus: to Aaron seldome. The Calfe that Aaron made, Moses threw into the fire. Lastly, the question of the Authority of Aaron, by occasion of his and Miriams mutiny against Moses, was (Numbers 12.) judged by God himself for Moses. So also in the question between Moses, and the People, when Corah, Dathan, and Abiram, and two hundred and fifty Princes of the Assembly "gathered themselves together" (Numbers 16. 3) "against Moses, and against Aaron, and said unto them, 'Ye take too much upon you, seeing all the congregation are Holy, every one of them, and the Lord is amongst them, why lift you up your selves above the congregation of the Lord?'" God caused the Earth to swallow Corah, Dathan, and Abiram with their wives and children alive, and consumed those two hundred and fifty Princes with fire. Therefore neither Aaron, nor the People, nor any Aristocracy of the chief Princes of the People, but Moses alone had next under God the Sovereignty over the Israelites: And that not onely in causes of Civill Policy, but also of Religion; For Moses onely spake with God, and therefore onely could tell the People, what it was that God required at their hands. No man upon pain of death might be so presumptuous as to approach the Mountain where God talked with Moses. "Thou shalt set bounds" (saith the Lord, Exod 19. 12.) "to the people round about, and say, Take heed to your selves that you goe not up into the Mount, or touch the border of it; whosoever toucheth the Mount shall surely be put to death." and again (verse 21.) "Get down, charge the people, lest they break through unto the Lord to gaze." Out of which we may conclude, that whosoever in a Christian Common-wealth holdeth the place of Moses, is the sole Messenger of God, and Interpreter of his Commandements. And according hereunto, no man ought in the interpretation of the Scripture to proceed further then the bounds which are set by their severall Sovereigns. For the Scriptures since God now speaketh in them, are the Mount Sinai; the bounds whereof are the Laws of them that represent Gods Person on Earth. To look upon them and therein to behold the wondrous works of God, and learn to fear him is allowed; but to interpret them; that is, to pry into what God saith to him whom he appointeth to govern under him, and make themselves Judges whether he govern as God commandeth him, or not, is to transgresse the bounds God hath set us, and to gaze upon God irreverently.

## **All Spirits Were Subordinate To The Spirit Of Moses**

There was no Prophet in the time of Moses, nor pretender to the Spirit of God, but such as Moses had approved, and Authorized. For there were in his time but Seventy men, that are said to Prophecy by the Spirit of God, and these were of all Moses his election; concerning whom God saith to Moses (Numb. 11.16.) "Gather to mee Seventy of the Elders of Israel, whom thou knowest to be the Elders of the People." To these God imparted his Spirit; but it was not a different Spirit from that of Moses; for it is said (verse 25.) "God came down in a cloud, and took of the Spirit that was upon Moses, and gave it to the Seventy Elders." But as I have shewn before (chap. 36.) by Spirit, is understood the Mind; so that the sense of the place is no other than this, that God endued them with a mind conformable, and subordinate to that of Moses, that they might Prophecy, that is to say, speak to the people in Gods name, in such manner, as to set forward (as Ministers of Moses, and by his authority) such doctrine as was agreeable to Moses his doctrine. For they were but Ministers; and when two of them Prophecyed in the Camp, it was thought a new and unlawfull thing; and as it is in the 27. and 28. verses of the same Chapter, they were accused of it, and Joshua advised Moses to forbid them, as not knowing that it was by Moses his Spirit that they Prophecyed. By which it is manifest, that no Subject ought to pretend to Prophecy, or to the Spirit, in opposition to the doctrine established by him, whom God hath set in the place of Moses.

## **After Moses The Sovereignty Was In The High Priest**

Aaron being dead, and after him also Moses, the Kingdome, as being a Sacerdotall Kingdome, descended by vertue of the Covenant, to Aarons Son, Eleazar the High Priest: And God declared him (next under himself) for Sovereign, at the same time that he appointed Joshua for the Generall of their Army. For thus God saith expressly (Numb. 27.21.) concerning Joshua; "He shall stand before Eleazar the Priest, who shall ask counsell for him, before the Lord, at his word shall they goe out, and at his word they shall come in, both he, and all the Children of Israel with him:" Therefore the Supreme Power of making War and Peace, was in the Priest. The Supreme Power of Judicature belonged also to the High Priest: For the Book of the Law was in their keeping; and the Priests and Levites onely were the subordinate Judges in causes Civill, as appears in Deut. 17.8, 9, 10. And for the manner of Gods worship, there was never doubt made, but that the High Priest till the time of Saul, had the Supreme Authority. Therefore the Civill and Ecclesiasticall Power were both joined together in one and the same person, the High Priest; and ought to bee so, in whosoever governeth by Divine Right; that is, by Authority immediate from God.

## **Of The Sovereign Power Between The Time Of Joshua And Of Saul**

After the death of Joshua, till the time of Saul, the time between is noted frequently in the Book of Judges, "that there was in those dayes no King in Israel;" and sometimes with this addition, that "every man did that which was right in his own eyes." By which is to bee understood, that where it is said, "there was no King," is meant, "there was no Sovereign Power" in Israel. And so it was, if we consider the Act, and Exercise of such power. For after the death of Joshua, & Eleazar, "there arose another generation" (Judges 2.10.) "that knew not the Lord, nor the works which he had done for Israel, but did evill in the sight of the Lord, and served Baalim." And the Jews had that quality which St. Paul noteth, "to look for a sign," not onely before they would submit themselves to the government of Moses, but also after they had obliged themselves by their submission. Whereas Signs, and Miracles had for End to procure Faith, not to keep men from violating it, when they have once given it; for to that men are obliged by the law of Nature. But if we consider not the Exercise, but the Right of governing, the Sovereign power was still in the High Priest. Therefore whatsoever obedience was yeilded to any of the Judges, (who were men chosen by God extraordinarily, to save his rebellious subjects out of the hands of the enemy,) it cannot bee drawn into argument against the Right the High Priest had to the Sovereign Power, in all matters, both of Policy and Religion. And neither the Judges, nor Samuel himselfe had an ordinary, but extraordinary calling to the Government; and were obeyed by the Israelites, not out of duty, but out of reverence to their favour with God, appearing in their wisdom, courage, or felicity. Hitherto therefore the Right of Regulating both the Policy, and the Religion, were inseparable.

## Of The Rights Of The Kings Of Israel

To the Judges, succeeded Kings; And whereas before, all authority, both in Religion, and Policy, was in the High Priest; so now it was all in the King. For the Sovereignty over the people, which was before, not onely by vertue of the Divine Power, but also by a particular pact of the Israelites in God, and next under him, in the High Priest, as his Viceregent on earth, was cast off by the People, with the consent of God himselfe. For when they said to Samuel (1 Sam. 8.5.) "make us a King to judge us, like all the Nations," they signified that they would no more bee governed by the commands that should bee laid upon them by the Priest, in the name of God; but by one that should command them in the same manner that all other nations were commanded; and consequently in deposing the High Priest of Royall authority, they deposed that peculiar Government of God. And yet God consented to it, saying to Samuel (verse 7.) "Hearken unto the voice of the People, in all that they shall say unto thee; for they have not rejected thee, but they have rejected mee, that I should not reign over them." Having therefore rejected God, in whose Right the Priests governed, there was no authority left to the Priests, but such as the King was pleased to allow them; which was more, or lesse, according as the Kings were good, or evill. And for the Government of Civill affaires, it is manifest, it was all in the hands of the King. For in the same Chapter, verse 20. They say they will be like all the Nations; that their King shall be their Judge, and goe before them, and fight their battells; that is, he shall have the whole authority, both in Peace and War. In which is contained also the ordering of Religion; for there was no other Word of God in that time, by which to regulate Religion, but the Law of Moses, which was their Civill Law. Besides, we read (1 Kings 2.27.) that Solomon "thrust out Abiathar from being Priest before the Lord:" He had therefore authority over the High Priest, as over any other Subject; which is a great mark of Supremacy in Religion. And we read also (1 Kings 8.) that hee dedicated the Temple; that he blessed the People; and that he himselfe in person made that excellent prayer, used in the Consecrations of all Churches, and houses of Prayer; which is another great mark of Supremacy in Religion.

Again, we read (2 Kings 22.) that when there was question concerning the Book of the Law found in the Temple, the same was not decided by the High Priest, but Josiah sent both him, and others to enquire concerning it, of Hulda, the Prophetesse; which is another mark of the Supremacy in Religion. Lastly, wee read (1 Chro. 26.30.) that David made Hashabiah and his brethren, Hebronites, Officers of Israel among them Westward, "in all businesse of the Lord, and in the service of the King." Likewise (verse 32.) that hee made other Hebronites, "rulers over the Reubenites, the Gadites, and the halfe tribe of Manasseh" (these were the rest of Israel that dwelt beyond Jordan) "for every matter pertaining to God, and affairs of the King." Is not this full Power, both Temporall and Spirituall, as they call it, that would divide it? To conclude; from the first institution of Gods Kingdome, to the Captivity, the Supremacy of Religion, was in the same hand with that of the Civill Sovereignty; and the Priests office after the election of Saul, was not Magisteriall, but Ministeriall.

# **The Practice Of Supremacy In Religion, Was Not In The Time Of The Kings,**

## **According To The Right Thereof**

Notwithstanding the government both in Policy and Religion, were joined, first in the High Priests, and afterwards in the Kings, so far forth as concerned the Right; yet it appeareth by the same Holy History, that the people understood it not; but there being amongst them a great part, and probably the greatest part, that no longer than they saw great miracles, or (which is equivalent to a miracle) great abilities, or great felicity in the enterprises of their Governours, gave sufficient credit, either to the fame of Moses, or to the Colloquies between God and the Priests; they took occasion as oft as their Governours displeased them, by blaming sometimes the Policy, sometimes the Religion, to change the Government, or revolt from their Obedience at their pleasure: And from thence proceeded from time to time the civill troubles, divisions, and calamities of the Nation. As for example, after the death of Eleazar and Joshua, the next generation which had not seen the wonders of God, but were left to their own weak reason, not knowing themselves obliged by the Covenant of a Sacerdotall Kingdome, regarded no more the Commandement of the Priest, nor any law of Moses, but did every man that which was right in his own eyes; and obeyed in Civill affairs, such men, as from time to time they thought able to deliver them from the neighbour Nations that oppressed them; and consulted not with God (as they ought to doe,) but with such men, or women, as they guessed to bee Prophets by their Praedictions of things to come; and thought they had an Idol in their Chappel, yet if they had a Levite for their Chaplain, they made account they worshipped the God of Israel.

And afterwards when they demanded a King, after the manner of the nations; yet it was not with a design to depart from the worship of God their King; but despairing of the justice of the sons of Samuel, they would have a King to judg them in Civill actions; but not that they would allow their King to change the Religion which they thought was recommended to

them by Moses. So that they alwaies kept in store a pretext, either of Justice, or Religion, to discharge themselves of their obedience, whensoever they had hope to prevaile. Samuel was displeas'd with the people, for that they desired a King, (for God was their King already, and Samuel had but an authority under him); yet did Samuel, when Saul observed not his counsell, in destroying Agag as God had commanded, anoint another King, namely David, to take the succession from his heirs. Rehoboam was no Idolater; but when the people thought him an Oppressor; that Civil pretence carried from him ten Tribes to Jeroboam an Idolater. And generally through the whole History of the Kings, as well of Judah, as of Israel, there were Prophets that alwaies controlled the Kings, for transgressing the Religion; and sometimes also for Errours of State; (2 Chro. 19. 2.) as Jehosaphat was reprov'd by the Prophet Jehu, for aiding the King of Israel against the Syrians; and Hezekiah, by Isaiah, for shewing his treasures to the Ambassadors of Babylon. By all which it appeareth, that though the power both of State and Religion were in the Kings; yet none of them were uncontrolled in the use of it, but such as were gracious for their own naturall abilities, or felicities. So that from the practise of those times, there can no argument be drawn, that the right of Supremacy in Religion was not in the Kings, unlesse we place it in the Prophets; and conclude, that because Hezekiah praying to the Lord before the Cherubins, was not answered from thence, nor then, but afterwards by the Prophet Isaiah, therefore Isaiah was supreme Head of the Church; or because Josiah consulted Hulda the Prophetesse, concerning the Book of the Law, that therefore neither he, nor the High Priest, but Hulda the Prophetesse had the Supreme authority in matter of Religion; which I thinke is not the opinion of any Doctor.

## **After The Captivity The Jews Had No Setled Common-wealth**

**During the Captivity, the Jews had no Common-wealth at all**

And after their return, though they renewed their Covenant with God, yet there was no promise made of obedience, neither to Esdras, nor to any other; And presently after they became subjects to the Greeks (from whose Customes, and Daemonology, and from the doctrine of the Cabalists, their Religion became much corrupted): In such sort as nothing can be gathered from their confusion, both in State and Religion, concerning the Supremacy in either. And therefore so far forth as concerneth the Old Testament, we may conclude, that whosoever had the Sovereignty of the Common-wealth amongst the Jews, the same had also the Supreme Authority in matter of Gods externall worship; and represented Gods Person; that is the person of God the Father; though he were not called by the name of Father, till such time as he sent into the world his Son Jesus Christ, to redeem mankind from their sins, and bring them into his Everlasting Kingdome, to be saved for evermore. Of which we are to speak in the Chapter following.

**CHAPTER XLI. OF THE OFFICE OF OUR  
BLESSED SAVIOUR**

## **Three Parts Of The Office Of Christ**

We find in Holy Scripture three parts of the Office of the Messiah: the first of a Redeemer, or Saviour: The second of a Pastor, Counsellour, or Teacher, that is, of a Prophet sent from God, to convert such as God hath elected to Salvation; The third of a King, and Eternall King, but under his Father, as Moses and the High Priests were in their severall times. And to these three parts are corespondent three times. For our Redemption he wrought at his first coming, by the Sacrifice, wherein he offered up himself for our sinnes upon the Crosse: our conversion he wrought partly then in his own Person; and partly worketh now by his Ministers; and will continue to work till his coming again. And after his coming again, shall begin that his glorious Reign over his elect, which is to last eternally.

## His Office As A Redeemer

To the Office of a Redeemer, that is, of one that payeth the Ransome of Sin, (which Ransome is Death,) it appertaineth, that he was Sacrificed, and thereby bare upon his own head, and carryed away from us our iniquities, in such sort as God had required. Not that the death of one man, though without sinne, can satisfie for the offences of all men, in the rigour of Justice, but in the Mercy of God, that ordained such Sacrifices for sin, as he was pleased in his mercy to accept. In the old Law (as we may read, Leviticus the 16.) the Lord required, that there should every year once, bee made an Atonement for the Sins of all Israel, both Priests, and others; for the doing whereof, Aaron alone was to sacrifice for himself and the Priests a young Bullock; and for the rest of the people, he was to receive from them two young Goates, of which he was to Sacrifice one; but as for the other, which was the Scape Goat, he was to lay his hands on the head thereof, and by a confession of the iniquities of the people, to lay them all on that head, and then by some opportune man, to cause the Goat to be led into the wilderness, and there to Escape, and carry away with him the iniquities of the people. As the Sacrifice of the one Goat was a sufficient (because an acceptable) price for the Ransome of all Israel; so the death of the Messiah, is a sufficient price, for the Sins of all mankind, because there was no more required. Our Saviour Christs sufferings seem to be here figured, as cleerly, as in the oblation of Isaac, or in any other type of him in the Old Testament: He was both the sacrificed Goat, and the Scape Goat; "Hee was oppressed, and he was afflicted (Isa. 53.7.); he opened not his mouth; he brought as a lamb to the slaughter, and as a sheep is dumbe before the shearer, so opened he not his mouth:" Here he is the Sacrificed Goat. "He hath born our Grieffs, (ver.4.) and carried our sorrows;" And again, (ver. 6.) "the Lord hath laid upon him the iniquities of us all:" And so he is the Scape Goat. "He was cut off from the land of the living (ver. 8.) for the transgression of my People:" There again he is the Sacrificed Goat. And again (ver. 11.) "he shall bear their sins:" Hee is the Scape Goat. Thus is the Lamb of God equivalent to both those Goates; sacrificed, in

that he dyed; and escaping, in his Resurrection; being raised opportunely by his Father, and removed from the habitation of men in his Ascension.

## Christs Kingdome Not Of This World

For as much therefore, as he that Redeemeth, hath no title to the Thing Redeemed, before the Redemption, and Ransome paid; and this Ransome was the Death of the Redeemer; it is manifest, that our Saviour (as man) was not King of those that he Redeemed, before hee suffered death; that is, during that time hee conversed bodily on the Earth. I say, he was not then King in present, by vertue of the Pact, which the faithfull make with him in Baptisme; Neverthelesse, by the renewing of their Pact with God in Baptisme, they were obliged to obey him for King, (under his Father) whensoever he should be pleased to take the Kingdome upon him. According whereunto, our Saviour himself expressly saith, (John 18.36.) "My Kingdome is not of this world." Now seeing the Scripture maketh mention but of two worlds; this that is now, and shall remain to the day of Judgment, (which is therefore also called, The Last Day;) and that which shall bee a new Heaven, and a new Earth; the Kingdome of Christ is not to begin till the general Resurrection. And that is it which our Saviour saith, (Mat. 16.27.) "The Son of man shall come in the glory of his Father, with his Angels; and then he shall reward every man according to his works." To reward every man according to his works, is to execute the Office of a King; and this is not to be till he come in the glory of his Father, with his Angells. When our Saviour saith, (Mat. 23.2.) "The Scribes and Pharisees sit in Moses seat; All therefore whatsoever they bid you doe, that observe and doe;" hee declareth plainly, that hee ascribeth Kingly Power, for that time, not to himselfe, but to them. And so hee hath also, where he saith, (Luke 12.14.) "Who made mee a Judge, or Divider over you?" And (John 12.47.) "I came not to judge the world, but to save the world." And yet our Saviour came into this world that hee might bee a King, and a Judge in the world to come: For hee was the Messiah, that is, the Christ, that is, the Anointed Priest, and the Sovereign Prophet of God; that is to say, he was to have all the power that was in Moses the Prophet, in the High Priests that succeeded Moses, and in the Kings that succeeded the Priests. And St. John saies expressly (chap. 5. ver. 22.) "The Father judgeth no man, but hath committed all judgment to the Son." And this is not repugnant to that

other place, "I came not to judge the world:" for this is spoken of the world present, the other of the world to come; as also where it is said, that at the second coming of Christ, (Mat. 19. 28.) "Yee that have followed me in the Regeneration, when the Son of man shall sit in the throne of his Glory, yee shall also sit on twelve thrones, judging the twelve tribes of Israel."

**The End Of Christs Comming Was To Renew The  
Covenant Of The Kingdome**

**Of God, And To Perswade The Elect To Imbrace It, Which  
Was The Second**

## **Part Of His Office**

If then Christ while hee was on Earth, had no Kingdome in this World, to what end was his first coming? It was to restore unto God, by a new Covenant, the Kingdome, which being his by the Old Covenant, had been cut off by the rebellion of the Israelites in the election of Saul. Which to doe, he was to preach unto them, that he was the Messiah, that is, the King promised to them by the Prophets; and to offer himselfe in sacrifice for the sinnes of them that should by faith submit themselves thereto; and in case the nation generally should refuse him, to call to his obedience such as should beleve in him amongst the Gentiles. So that there are two parts of our Saviours Office during his aboad upon the Earth; One to Proclaim himself the Christ; and another by Teaching, and by working of Miracles, to perswade, and prepare men to live so, as to be worthy of the Immortality Beleevers were to enjoy, at such time as he should come in majesty, to take possession of his Fathers Kingdome. And therefore it is, that the time of his preaching, is often by himself called the Regeneration; which is not properly a Kingdome, and thereby a warrant to deny obedience to the Magistrates that then were, (for hee commanded to obey those that sate then in Moses chaire, and to pay tribute to Caesar;) but onely an earnest of the Kingdome of God that was to come, to those to whom God had given the grace to be his disciples, and to beleve in him; For which cause the Godly are said to bee already in the Kingdome of Grace, as naturalized in that heavenly Kingdome.

# **The Preaching Of Christ Not Contrary To The Then Law Of The Jews,**

## **Nor Of Caesar**

Hitherto therefore there is nothing done, or taught by Christ, that tendeth to the diminution of the Civill Right of the Jewes, or of Caesar. For as touching the Common-wealth which then was amongst the Jews, both they that bare rule amongst them, that they that were governed, did all expect the Messiah, and Kingdome of God; which they could not have done if their Laws had forbidden him (when he came) to manifest, and declare himself. Seeing therefore he did nothing, but by Preaching, and Miracles go about to prove himselfe to be that Messiah, hee did therein nothing against their laws. The Kingdome hee claimed was to bee in another world; He taught all men to obey in the mean time them that sate in Moses seat: he allowed them to give Caesar his tribute, and refused to take upon himselfe to be a Judg. How then could his words, or actions bee seditious, or tend to the overthrow of their then Civill Government? But God having determind his sacrifice, for the reduction of his elect to their former covenanted obedience, for the means, whereby he would bring the same to effect, made use of their malice, and ingratitude. Nor was it contrary to the laws of Caesar. For though Pilate himself (to gratifie the Jews) delivered him to be crucified; yet before he did so, he pronounced openly, that he found no fault in him: And put for title of his condemnation, not as the Jews required, "that he pretended to be King;" but simply, "That hee was King of the Jews;" and notwithstanding their clamour, refused to alter it; saying, "What I have written, I have written."

# **The Third Part Of His Office Was To Be King (Under His Father)**

## **Of The Elect**

As for the third part of his Office, which was to be King, I have already shewn that his Kingdome was not to begin till the Resurrection. But then he shall be King, not onely as God, in which sense he is King already, and ever shall be, of all the Earth, in vertue of his omnipotence; but also peculiarly of his own Elect, by vertue of the pact they make with him in their Baptisme. And therefore it is, that our Saviour saith (Mat. 19.28.) that his Apostles should sit upon twelve thrones, judging the twelve tribes of Israel, "When the Son of man shall sit in the throne of his glory;" whereby he signified that he should reign then in his humane nature; and (Mat. 16.27.) "The Son of man shall come in the glory of his Father, with his Angels, and then he shall reward every man according to his works." The same we may read, Marke 13..26. and 14.26. and more expressely for the time, Luke 22.29, 30. "I appoint unto you a Kingdome, as my Father hath appointed to mee, that you may eat and drink at my table in my Kingdome, and sit on thrones judging the twelve tribes of Israel." By which it is manifest that the Kingdome of Christ appointed to him by his Father, is not to be before the Son of Man shall come in Glory, and make his Apostles Judges of the twelve tribes of Israel. But a man may here ask, seeing there is no marriage in the Kingdome of Heaven, whether men shall then eat, and drink; what eating therefore is meant in this place? This is expounded by our Saviour (John 6.27.) where he saith, "Labour not for the meat which perisheth, but for that meat which endureth unto everlasting life, which the Son of man shall give you." So that by eating at Christs table, is meant the eating of the Tree of Life; that is to say, the enjoying of Immortality, in the Kingdome of the Son of Man. By which places, and many more, it is evident, that our Saviours Kingdome is to be exercised by him in his humane nature.

## **Christs Authority In The Kingdome Of God Subordinate To His Father**

Again, he is to be King then, no otherwise than as subordinate, or Viceregent of God the Father, as Moses was in the wilderness; and as the High Priests were before the reign of Saul; and as the Kings were after it. For it is one of the Prophecies concerning Christ, that he should be like (in Office) to Moses; "I will raise them up a Prophet (saith the Lord, Deut. 18.18.) from amongst their Brethren like unto thee, and will put my words into his mouth," and this similitude with Moses, is also apparent in the actions of our Saviour himself, whilst he was conversant on Earth. For as Moses chose twelve Princes of the tribes, to govern under him; so did our Saviour choose twelve Apostles, who shall sit on twelve thrones, and judge the twelve tribes of Israel; And as Moses authorized Seventy Elders, to receive the Spirit of God, and to Prophecy to the people, that is, (as I have said before,) to speak unto them in the name of God; so our Saviour also ordained seventy Disciples, to preach his Kingdome, and Salvation to all Nations. And as when a complaint was made to Moses, against those of the Seventy that prophecied in the camp of Israel, he justified them in it, as being subservient therein to his government; so also our Saviour, when St. John complained to him of a certain man that cast out Devills in his name, justified him therein, saying, (Luke 9.50.) "Forbid him not, for hee that is not against us, is on our part."

Again, our Saviour resembled Moses in the institution of Sacraments, both of Admission into the Kingdome of God, and of Commemoration of his deliverance of his Elect from their miserable condition. As the Children of Israel had for Sacrament of their Reception into the Kingdome of God, before the time of Moses, the rite of Circumcision, which rite having been omitted in the Wilderness, was again restored as soon as they came into the land of Promise; so also the Jews, before the coming of our Saviour, had a rite of Baptizing, that is, of washing with water all those that being Gentiles, embraced the God of Israel. This rite St. John the Baptist used in the reception of all them that gave their names to the Christ, whom hee preached to be already come into the world; and our

Saviour instituted the same for a Sacrament to be taken by all that beleevd in him. From what cause the rite of Baptisme first proceeded, is not expressed formally in the Scripture; but it may be probably thought to be an imitation of the law of Moses, concerning Leprousie; wherein the Leprous man was commanded to be kept out of the campe of Israel for a certain time; after which time being judged by the Priest to be clean, hee was admitted into the campe after a solemne Washing. And this may therefore bee a type of the Washing in Baptisme; wherein such men as are cleansed of the Leprousie of Sin by Faith, are received into the Church with the solemnity of Baptisme. There is another conjecture drawn from the Ceremonies of the Gentiles, in a certain case that rarely happens; and that is, when a man that was thought dead, chanced to recover, other men made scruple to converse with him, as they would doe to converse with a Ghost, unlesse hee were received again into the number of men, by Washing, as Children new born were washed from the uncleannesse of their nativity, which was a kind of new birth. This ceremony of the Greeks, in the time that Judaea was under the Dominion of Alexander, and the Greeks his successors, may probably enough have crept into the Religion of the Jews. But seeing it is not likely our Saviour would countenance a Heathen rite, it is most likely it proceeded from the Legall Ceremony of Washing after Leprosie. And for the other Sacraments, of eating the Paschall Lambe, it is manifestly imitated in the Sacrament of the Lords Supper; in which the Breaking of the Bread, and the pouring out of the Wine, do keep in memory our deliverance from the Misery of Sin, by Christs Passion, as the eating of the Paschall Lambe, kept in memory the deliverance of the Jewes out of the Bondage of Egypt. Seeing therefore the authority of Moses was but subordinate, and hee but a Lieutenant to God; it followeth, that Christ, whose authority, as man, was to bee like that of Moses, was no more but subordinate to the authority of his Father. The same is more expressly signified, by that that hee teacheth us to pray, "Our Father, Let thy Kingdome come;" and, "For thine is the Kingdome, the power and the Glory;" and by that it is said, that "Hee shall come in the Glory of his Father;" and by that which St. Paul saith, (1 Cor. 15.24.) "then commeth the end, when hee shall have delivered up the Kingdome to God, even the Father;" and by many other most expresse places.

## **One And The Same God Is The Person Represented By Moses, And By Christ**

Our Saviour therefore, both in Teaching, and Reigning, representeth (as Moses Did) the Person of God; which God from that time forward, but not before, is called the Father; and being still one and the same substance, is one Person as represented by Moses, and another Person as represented by his Sonne the Christ. For Person being a relative to a Representer, it is consequent to plurality of Representers, that there bee a plurality of Persons, though of one and the same Substance.

## **CHAPTER XLII. OF POWER ECCLESIASTICALL**

For the understanding of POWER ECCLESIASTICALL, what, and in whom it is, we are to distinguish the time from the Ascension of our Saviour, into two parts; one before the Conversion of Kings, and men endued with Sovereign Civill Power; the other after their Conversion. For it was long after the Ascension, before any King, or Civill Sovereign embraced, and publicly allowed the teaching of Christian Religion.

## **Of The Holy Spirit That Fel On The Apostles**

And for the time between, it is manifest, that the Power Ecclesiasticall, was in the Apostles; and after them in such as were by them ordained to Preach the Gospell, and to convert men to Christianity, and to direct them that were converted in the way of Salvation; and after these the Power was delivered again to others by these ordained, and this was done by Imposition of hands upon such as were ordained; by which was signified the giving of the Holy Spirit, or Spirit of God, to those whom they ordained Ministers of God, to advance his Kingdome. So that Imposition of hands, was nothing else but the Seal of their Commission to Preach Christ, and teach his Doctrine; and the giving of the Holy Ghost by that ceremony of Imposition of hands, was an imitation of that which Moses did. For Moses used the same ceremony to his Minister Joshua, as wee read Deuteronomy 34. ver. 9. "And Joshua the son of Nun was full of the Spirit of Wisdome; for Moses had laid his hands upon him." Our Saviour therefore between his Resurrection, and Ascension, gave his Spirit to the Apostles; first, by "Breathing on them, and saying," (John 20.22.) "Receive yee the Holy Spirit;" and after his Ascension (Acts 2.2, 3.) by sending down upon them, a "mighty wind, and Cloven tongues of fire;" and not by Imposition of hands; as neither did God lay his hands on Moses; and his Apostles afterward, transmitted the same Spirit by Imposition of hands, as Moses did to Joshua. So that it is manifest hereby, in whom the Power Ecclesiasticall continually remained, in those first times, where there was not any Christian Common-wealth; namely, in them that received the same from the Apostles, by successive laying on of hands.

## Of The Trinity

Here wee have the Person of God born now the third time. For as Moses, and the High Priests, were Gods Representative in the Old Testament; and our Saviour himsef as Man, during his abode on earth: So the Holy Ghost, that is to say, the Apostles, and their successors, in the Office of Preaching, and Teaching, that had received the Holy Spirit, have Represented him ever since. But a Person, (as I have shewn before, [chapt. 16.] ) is he that is Represented, as often as hee is Represented; and therefore God, who has been Represented (that is, Personated) thrice, may properly enough be said to be three Persons; though neither the word Person, nor Trinity be ascribed to him in the Bible. St. John indeed (1 Epist. 5.7.) saith, "There be three that bear witness in heaven, the Father, the Word, and the Holy Spirit; and these Three are One:" But this disagreeeth not, but accordeth fitly with three Persons in the proper signification of Persons; which is, that which is Represented by another. For so God the Father, as Represented by Moses, is one Person; and as Represented by his Sonne, another Person, and as Represented by the Apostles, and by the Doctors that taught by authority from them derived, is a third Person; and yet every Person here, is the Person of one and the same God. But a man may here ask, what it was whereof these three bare witness. St. John therefore tells us (verse 11.) that they bear witness, that "God hath given us eternall life in his Son." Again, if it should be asked, wherein that testimony appeareth, the Answer is easie; for he hath testified the same by the miracles he wrought, first by Moses; secondly, by his Son himself; and lastly by his Apostles, that had received the Holy Spirit; all which in their times Represented the Person of God; and either prophcyed, or preached Jesus Christ. And as for the Apostles, it was the character of the Apostleship, in the twelve first and great Apostles, to bear Witness of his Resurrection; as appeareth expressly (Acts 1. ver. 21,22.) where St Peter, when a new Apostle was to be chosen in the place of Judas Iscariot, useth these words, "Of these men which have companied with us all the time that the Lord Jesus went in and out amongst us, beginning at the Baptisme of John, unto that same day that hee was taken up from us,

must one bee ordained to be a Witsnesse with us of his Resurrection:" which words interpret the Bearing of Witsnesse, mentioned by St. John. There is in the same place mentioned another Trinity of Witsneses in Earth. For (ver. 8.) he saith, "there are three that bear Witsnesse in Earth, the Spirit, and the Water, and the Bloud; and these three agree in one:" that is to say, the graces of Gods Spirit, and the two Sacraments, Baptisme, and the Lords Supper, which all agree in one Testimony, to assure the consciences of beleevvers, of eternall life; of which Testimony he saith (verse 10.) "He that beleeveth on the Son of man hath the Witsnesse in himselfe." In this Trinity on Earth the Unity is not of the thing; for the Spirit, the Water, and the Bloud, are not the same substance, though they give the same testimony: But in the Trinity of Heaven, the Persons are the persons of one and the same God, though Represented in three different times and occasions. To conclude, the doctrine of the Trinity, as far as can be gathered directly from the Scripture, is in substance this; that God who is alwaies One and the same, was the Person Represented by Moses; the Person Represented by his Son Incarnate; and the Person Represented by the Apostles. As Represented by the Apostles, the Holy Spirit by which they spake, is God; As Represented by his Son (that was God and Man), the Son is that God; As represented by Moses, and the High Priests, the Father, that is to say, the Father of our Lord Jesus Christ, is that God: From whence we may gather the reason why those names Father, Son, and Holy Spirit in the signification of the Godhead, are never used in the Old Testament: For they are Persons, that is, they have their names from Representing; which could not be, till divers men had Represented Gods Person in ruling, or in directing under him.

Thus wee see how the Power Ecclesiasticall was left by our Saviour to the Apostles; and how they were (to the end they might the better exercise that Power,) endued with the Holy Spirit, which is therefore called sometime in the New Testament Paracletus which signifieth an Assister, or one called to for helpe, though it bee commonly translated a Comforter. Let us now consider the Power it selfe, what it was, and over whom.

## **The Power Ecclesiasticall Is But The Power To Teach**

Cardinall Bellarmine in his third generall Controversie, hath handled a great many questions concerning the Ecclesiasticall Power of the Pope of Rome; and begins with this, Whether it ought to be Monarchicall, Aristocraticall, or Democraticall. All which sorts of Power, are Sovereign, and Coercive. If now it should appear, that there is no Coercive Power left them by our Saviour; but onely a Power to proclaim the Kingdom of Christ, and to perswade men to submit themselves thereunto; and by precepts and good counsell, to teach them that have submitted, what they are to do, that they may be received into the Kingdom of God when it comes; and that the Apostles, and other Ministers of the Gospel, are our Schoolemasters, and not our Commanders, and their Precepts not Laws, but wholesome Counsells then were all that dispute in vain.

## **An Argument Thereof, The Power Of Christ Himself**

I have shewn already (in the last Chapter,) that the Kingdome of Christ is not of this world: therefore neither can his Ministers (unlesse they be Kings,) require obedience in his name. For if the Supreme King, have not his Regall Power in this world; by what authority can obedience be required to his Officers? As my Father sent me, (so saith our Saviour) I send you. But our Saviour was sent to perswade the Jews to return to, and to invite the Gentiles, to receive the Kingdome of his Father, and not to reign in Majesty, no not, as his Fathers Lieutenant, till the day of Judgment.

## **From The Name Of Regeneration**

The time between the Ascension, and the generall Resurrection, is called, not a Reigning, but a Regeneration; that is, a Preparation of men for the second and glorious coming of Christ, at the day of Judgment; as appeareth by the words of our Saviour, Mat. 19.28. "You that have followed me in the Regeneration, when the Son of man shall sit in the throne of his glory, you shall also sit upon twelve Thrones;" And of St. Paul (Ephes. 6.15.) "Having your feet shod with the Preparation of the Gospell of Peace."

## **From The Comparison Of It, With Fishing, Leaven, Seed**

And is compared by our Saviour, to Fishing; that is, to winning men to obedience, not by Coercion, and Punishing; but by Perswasion: and therefore he said not to his Apostles, hee would make them so many Nimrods, Hunters Of Men; But Fishers Of Men. It is compared also to Leaven; to Sowing of Seed, and to the Multiplication of a grain of Mustard-seed; by all which Compulsion is excluded; and consequently there can in that time be no actual Reigning. The work of Christs Ministers, is Evangelization; that is, a Proclamation of Christ, and a preparation for his second comming; as the Evangelization of John Baptist, was a preparation to his first coming.

## **From The Nature Of Faith:**

Again, the Office of Christs Ministers in this world, is to make men Beleeve, and have Faith in Christ: But Faith hath no relation to, nor dependence at all upon Compulsion, or Commandement; but onely upon certainty, or probability of Arguments drawn from Reason, or from something men beleeve already. Therefore the Ministers of Christ in this world, have no Power by that title, to Punish any man for not Beleeving, or for Contradicting what they say; they have I say no Power by that title of Christs Ministers, to Punish such: but if they have Sovereign Civill Power, by politick institution, then they may indeed lawfully Punish any Contradiction to their laws whatsoever: And St. Paul, of himselfe and other then Preachers of the Gospell saith in expresse words, (2 Cor. 1.24.) "Wee have no Dominion over your Faith, but are Helpers of your Joy."

## **From The Authority Christ Hath Left To Civill Princes**

Another Argument, that the Ministers of Christ in this present world have no right of Commanding, may be drawn from the lawfull Authority which Christ hath left to all Princes, as well Christians, as Infidels. St. Paul saith (Col. 3.20.) "Children obey your Parents in all things; for this is well pleasing to the Lord." And ver. 22. "Servants obey in all things your Masters according to the flesh, not with eye-service, as men-pleasers, but in singleness of heart, as fearing the Lord;" This is spoken to them whose Masters were Infidells; and yet they are bidden to obey them In All Things. And again, concerning obedience to Princes. (Rom. 13. the first 6. verses) exhorting to "be subject to the Higher Powers," he saith, "that all Power is ordained of God;" and "that we ought to be subject to them, not onely for" fear of incurring their "wrath, but also for conscience sake." And St. Peter, (1 Epist. chap. 2e ver. 13, 14, 15.) "Submit your selves to every Ordinance of Man, for the Lords sake, whether it bee to the King, as Supreme, or unto Governours, as to them that be sent by him for the punishment of evill doers, and for the praise of them that doe well; for so is the will of God." And again St. Paul (Tit. 3.1.) "Put men in mind to be subject to Principalities, and Powers, and to obey Magistrates." These Princes, and Powers, whereof St. Peter, and St. Paul here speak, were all Infidels; much more therefore we are to obey those Christians, whom God hath ordained to have Sovereign Power over us. How then can wee be obliged to doe any thing contrary to the Command of the King, or other Sovereign Representant of the Common-wealth, whereof we are members, and by whom we look to be protected? It is therefore manifest, that Christ hath not left to his Ministers in this world, unlesse they be also endued with Civill Authority, any authority to Command other men.

## What Christians May Do To Avoid Persecution

But what (may some object) if a King, or a Senate, or other Sovereign Person forbid us to beleve in Christ? To this I answer, that such forbidding is of no effect, because Beleef, and Unbeleef never follow mens Commands. Faith is a gift of God, which Man can neither give, nor take away by promise of rewards, or menaces of torture. And if it be further asked, What if wee bee commanded by our lawfull Prince, to say with our tongue, wee beleve not; must we obey such command? Profession with the tongue is but an externall thing, and no more then any other gesture whereby we signifie our obedience; and wherein a Christian, holding firmly in his heart the Faith of Christ, hath the same liberty which the Prophet Elisha allowed to Naaman the Syrian. Naaman was converted in his heart to the God of Israel; For hee saith (2 Kings 5.17.) "Thy servant will henceforth offer neither burnt offering, nor sacrifice unto other Gods but unto the Lord. In this thing the Lord pardon thy servant, that when my Master goeth into the house of Rimmon to worship there, and he leaneth on my hand, and I bow my selfe in the house of Rimmon; when I bow my selfe in the house of Rimmon, the Lord pardon thy servant in this thing." This the Prophet approved, and bid him "Goe in peace." Here Naaman beleved in his heart; but by bowing before the Idol Rimmon, he denyed the true God in effect, as much as if he had done it with his lips. But then what shall we answer to our Saviours saying, "Whosoever denyeth me before men, I will deny him before my Father which is in Heaven?" This we may say, that whatsoever a Subject, as Naaman was, is compelled to in obedience to his Sovereign, and doth it not in order to his own mind, but in order to the laws of his country, that action is not his, but his Sovereigns; nor is it he that in this case denyeth Christ before men, but his Governour, and the law of his countrey. If any man shall accuse this doctrine, as repugnant to true, and unfeigned Christianity; I ask him, in case there should be a subject in any Christian Common-wealth, that should be inwardly in his heart of the Mahometan Religion, whether if his Sovereign Command him to bee present at the divine service of the Christian Church, and that on pain of death, he think that Mamometan obliged in conscience

to suffer death for that cause, rather than to obey that command of his lawful Prince. If he say, he ought rather to suffer death, then he authorizeth all private men, to disobey their Princes, in maintenance of their Religion, true, or false; if he say, he ought to bee obedient, then he alloweth to himself, that which hee denyeth to another, contrary to the words of our Saviour, "Whatsoever you would that men should doe unto you, that doe yee unto them;" and contrary to the Law of Nature, (which is the indubitable everlasting Law of God) "Do not to another, that which thou wouldest not he should doe unto thee."

## Of Martyrs

But what then shall we say of all those Martyrs we read of in the History of the Church, that they have needlessly cast away their lives? For answer hereunto, we are to distinguish the persons that have been for that cause put to death; whereof some have received a Calling to preach, and professe the Kingdome of Christ openly; others have had no such Calling, nor more has been required of them than their owne faith. The former sort, if they have been put to death, for bearing witness to this point, that Jesus Christ is risen from the dead, were true Martyrs; For a Martyr is, (to give the true definition of the word) a Witness of the Resurrection of Jesus the Messiah; which none can be but those that conversed with him on earth, and saw him after he was risen: For a Witness must have seen what he testifieth, or else his testimony is not good. And that none but such, can properly be called Martyrs of Christ, is manifest out of the words of St. Peter, Act. 1.21, 22. "Wherefore of these men which have companied with us all the time that the Lord Jesus went in and out amongst us, beginning from the Baptisme of John unto that same day hee was taken up from us, must one be ordained to be a Martyr (that is a Witness) with us of his Resurrection:" Where we may observe, that he which is to be a Witness of the truth of the Resurrection of Christ, that is to say, of the truth of this fundamentall article of Christian Religion, that Jesus was the Christ, must be some Disciple that conversed with him, and saw him before, and after his Resurrection; and consequently must be one of his originall Disciples: whereas they which were not so, can Witness no more, but that their antecessors said it, and are therefore but Witnesses of other mens testimony; and are but second Martyrs, or Martyrs of Christs Witnesses.

He, that to maintain every doctrine which he himself draweth out of the History of our Saviours life, and of the Acts, or Epistles of the Apostles; or which he beleeveth upon the authority of a private man, wil oppose the Laws and Authority of the Civill State, is very far from being a Martyr of Christ, or a Martyr of his Martyrs. 'Tis one Article onely, which to die for, meriteth so honorable a name; and that Article is this, that Jesus Is The Christ; that is to say, He that hath redeemed us, and shall come again to

give us salvation, and eternall life in his glorious Kingdome. To die for every tenet that serveth the ambition, or profit of the Clergy, is not required; nor is it the Death of the Witsnesse, but the Testimony it self that makes the Martyr: for the word signifieth nothing else, but the man that beareth Witsnesse, whether he be put to death for his testimony, or not.

Also he that is not sent to preach this fundamentall article, but taketh it upon him of his private authority, though he be a Witsnesse, and consequently a Martyr, either primary of Christ, or secondary of his Apostles, Disciples, or their Successors; yet is he not obliged to suffer death for that cause; because being not called thereto, tis not required at his hands; nor ought hee to complain, if he loseth the reward he expecteth from those that never set him on work. None therefore can be a Martyr, neither of the first, nor second degree, that have not a warrant to preach Christ come in the flesh; that is to say, none, but such as are sent to the conversion of Infidels. For no man is a Witsnesse to him that already beleeveth, and therefore needs no Witsnesse; but to them that deny, or doubt, or have not heard it. Christ sent his Apostles, and his Seventy Disciples, with authority to preach; he sent not all that beleevd: And he sent them to unbelievers; "I send you (saith he) as sheep amongst wolves;" not as sheep to other sheep.

## **Argument From The Points Of Their Commission**

Lastly the points of their Commission, as they are expressly set down in the Gospel, contain none of them any authority over the Congregation.

## To Preach

We have first (Mat. 10.) that the twelve Apostles were sent "to the lost sheep of the house of Israel," and commanded to Preach, "that the Kingdome of God was at hand." Now Preaching in the originall, is that act, which a Crier, Herald, or other Officer useth to doe publicly in Proclaiming of a King. But a Crier hath not right to Command any man. And (Luke 10.2.) the seventy Disciples are sent out, "as Labourers, not as Lords of the Harvest;" and are bidden (verse 9.) to say, "The Kingdome of God is come nigh unto you;" and by Kingdome here is meant, not the Kingdome of Grace, but the Kingdome of Glory; for they are bidden to denounce it (ver. 11.) to those Cities which shall not receive them, as a threatning, that it shall be more tolerable in that day for Sodome, than for such a City. And (Mat. 20.28.) our Saviour telleth his Disciples, that sought Priority of place, their Office was to minister, even as the Son of man came, not to be ministred unto, but to minister. Preachers therefore have not Magisteriall, but Ministeriall power: "Bee not called Masters, (saith our Saviour, Mat. 23.10) for one is your Master, even Christ."

## **And Teach**

Another point of their Commission, is, to Teach All Nations; as it is in Mat. 28.19. or as in St. Mark 16.15 "Goe into all the world, and Preach the Gospel to every creature." Teaching therefore, and Preaching is the same thing. For they that Proclaim the coming of a King, must withall make known by what right he commeth, if they mean men shall submit themselves unto him: As St. Paul did to the Jews of Thessalonica, when "three Sabbath days he reasoned with them out of the Scriptures, opening, and alledging that Christ must needs have suffered, and risen again from the dead, and that this Jesus is Christ." But to teach out of the Old Testament that Jesus was Christ, (that is to say, King,) and risen from the dead, is not to say, that men are bound after they beleve it, to obey those that tell them so, against the laws, and commands of their Sovereigns; but that they shall doe wisely, to expect the coming of Christ hereafter, in Patience, and Faith, with Obedience to their present Magistrates.

## To Baptize;

Another point of their Commission, is to Baptize, "in the name of the Father, and of the Son, and of the Holy Ghost." What is Baptisme? Dipping into water. But what is it to Dip a man into the water in the name of any thing? The meaning of these words of Baptisme is this. He that is Baptized, is Dipped or Washed, as a sign of becomming a new man, and a loyall subject to that God, whose Person was represented in old time by Moses, and the High Priests, when he reigned over the Jews; and to Jesus Christ, his Sonne, God, and Man, that hath redeemed us, and shall in his humane nature Represent his Fathers Person in his eternall Kingdome after the Resurrection; and to acknowledge the Doctrine of the Apostles, who assisted by the Spirit of the Father, and of the Son, were left for guides to bring us into that Kingdome, to be the onely, and assured way thereunto. This, being our promise in Baptisme; and the Authority of Earthly Sovereigns being not to be put down till the day of Judgment; (for that is expressly affirmed by S. Paul 1 Cor. 15. 22, 23, 24. where he saith, "As in Adam all die, so in Christ all shall be made alive. But every man in his owne order, Christ the first fruits, afterward they that are Christs, at his comming; Then Commeth the end, when he shall have delivered up the Kingdome of God, even the Father, when he shall have put down all Rule, and all Authority and Power") it is manifest, that we do not in Baptisme constitute over us another authority, by which our externall actions are to be governed in this life; but promise to take the doctrine of the Apostles for our direction in the way to life eternall.

## **And To Forgive, And Retain Sinnes**

The Power of Remission, And Retention Of Sinnes, called also the Power of Loosing, and Binding, and sometimes the Keyes Of The Kingdome Of Heaven, is a consequence of the Authority to Baptize, or refuse to Baptize. For Baptisme is the Sacrament of Allegeance, of them that are to be received into the Kingdome of God; that is to say, into Eternall life; that is to say, to Remission of Sin: For as Eternall life was lost by the Committing, so it is recovered by the Remitting of mens Sins. The end of Baptisme is Remission of Sins: and therefore St. Peter, when they that were converted by his Sermon on the day of Pentecost, asked what they were to doe, advised them to "repent, and be Baptized in the name of Jesus, for the Remission of Sins." And therefore seeing to Baptize is to declare the Reception of men into Gods Kingdome; and to refuse to Baptize is to declare their Exclusion; it followeth, that the Power to declare them Cast out, or Retained in it, was given to the same Apostles, and their Substitutes, and Successors. And therefore after our Saviour had breathed upon them, saying, (John 20.22.) "Receive the Holy Ghost," hee addeth in the next verse, "Whose soever Sins ye Remit, they are Remitted unto them; and whose soever Sins ye Retain, they are Retained." By which words, is not granted an Authority to Forgive, or Retain Sins, simply and absolutely, as God Forgiveth or Retaineth them, who knoweth the Heart of man, and truth of his Penitence and Conversion; but conditionally, to the Penitent: And this Forgivenessse, or Absolution, in case the absolved have but a feigned Repentance, is thereby without other act, or sentence of the Absolvent, made void, and hath no effect at all to Salvation, but on the contrary, to the Aggravation of his Sin. Therefore the Apostles, and their Successors, are to follow but the outward marks of Repentance; which appearing, they have no Authority to deny Absolution; and if they appeare not, they have no authority to Absolve. The same also is to be observed in Baptisme: for to a converted Jew, or Gentile, the Apostles had not the Power to deny Baptisme; nor to grant it to the Un-penitent. But seeing no man is able to discern the truth of another mans Repentance, further than by externall marks, taken from his words, and actions, which are subject to

hypocrisie; another question will arise, Who it is that is constituted Judge of those marks. And this question is decided by our Saviour himself; (Mat. 18. 15, 16, 17.) "If thy Brother (saith he) shall trespasse against thee, go and tell him his fault between thee, and him alone; if he shall hear thee, thou hast gained thy Brother. But if he will not hear thee, then take with thee one, or two more. And if he shall neglect to hear them, tell it unto the Church, let him be unto thee as an Heathen man, and a Publican." By which it is manifest, that the Judgment concerning the truth of Repentance, belonged not to any one Man, but to the Church, that is, to the Assembly of the Faithfull, or to them that have authority to bee their Representant. But besides the Judgment, there is necessary also the pronouncing of Sentence: And this belonged alwaies to the Apostle, or some Pastor of the Church, as Prolocutor; and of this our Saviour speaketh in the 18 verse, "Whatsoever ye shall bind on earth, shall be bound in heaven; and whatsoever ye shall loose on earth, shall be loosed in heaven." And comformable hereunto was the practise of St. Paul (1 Cor. 5.3, 4, & 5.) where he saith, "For I verily, as absent in body, but present in spirit, have determined already, as though I were present, concerning him that hath so done this deed; In the name of our Lord Jesus Christ when ye are gathered together, and my spirit, with the power of our Lord Jesus Christ, To deliver such a one to Satan;" that is to say, to cast him out of the Church, as a man whose Sins are not Forgiven. Paul here pronounceth the Sentence; but the Assembly was first to hear the Cause, (for St. Paul was absent;) and by consequence to condemn him. But in the same chapter (ver. 11, 12.) the Judgment in such a case is more expressly attributed to the Assembly: "But now I have written unto you, not to keep company, if any man that is called a Brother be a Fornicator, &c. with such a one no not to eat. For what have I to do to judg them that are without? Do not ye judg them that are within?" The Sentence therefore by which a man was put out of the Church, was pronounced by the Apostle, or Pastor; but the Judgment concerning the merit of the cause, was in the Church; that is to say, (as the times were before the conversion of Kings, and men that had Sovereign Authority in the Common-wealth,) the Assembly of the Christians dwelling in the same City; as in Corinth, in the Assembly of the Christians of Corinth.

## **Of Excommunication**

This part of the Power of the Keyes, by which men were thrust out from the Kingdome of God, is that which is called Excommunication; and to excommunicate, is in the Originall, Aposunagogon Poiein, To Cast Out Of The Synagogue; that is, out of the place of Divine service; a word drawn from the custom of the Jews, to cast out of their Synagogues, such as they thought in manners, or doctrine, contagious, as Lepers were by the Law of Moses separated from the congregation of Israel, till such time as they should be by the Priest pronounced clean.

## **The Use Of Excommunication Without Civill Power.**

The Use and Effect of Excommunication, whilst it was not yet strengthened with the Civill Power, was no more, than that they, who were not Excommunicate, were to avoid the company of them that were. It was not enough to repute them as Heathen, that never had been Christians; for with such they might eate, and drink; which with Excommunicate persons they might not do; as appeareth by the words of St. Paul, (1 Cor. 5. ver. 9, 10, &c.) where he telleth them, he had formerly forbidden them to "company with Fornicators;" but (because that could not bee without going out of the world,) he restraineth it to such Fornicators, and otherwise vicious persons, as were of the brethren; "with such a one" (he saith) they ought not to keep company, "no, not to eat." And this is no more than our Saviour saith (Mat. 18.17.) "Let him be to thee as a Heathen, and as a Publican." For Publicans (which signifieth Farmers, and Receivers of the revenue of the Common-wealth) were so hated, and detested by the Jews that were to pay for it, as that Publican and Sinner were taken amongst them for the same thing: Insomuch, as when our Saviour accepted the invitation of Zacchaeus a Publican; though it were to Convert him, yet it was objected to him as a Crime. And therefore, when our Saviour, to Heathen, added Publican, he did forbid them to eat with a man Excommunicate.

As for keeping them out of their Synagogues, or places of Assembly, they had no Power to do it, but that of the owner of the place, whether he were Christian, or Heathen. And because all places are by right, in the Dominion of the Common-wealth; as well hee that was Excommunicated, as hee that never was Baptized, might enter into them by Commission from the Civill Magistrate; as Paul before his conversion entred into their Synagogues at Damascus, (Acts 9.2.) to apprehend Christians, men and women, and to carry them bound to Jerusalem, by Commission from the High Priest.

## **Of No Effect Upon An Apostate**

By which it appears, that upon a Christian, that should become an Apostate, in a place where the Civill Power did persecute, or not assist the Church, the effect of Excommunication had nothing in it, neither of dammage in this world, nor of terrour: Not of terrour, because of their unbeleef; nor of dammage, because they returned thereby into the favour of the world; and in the world to come, were to be in no worse estate, then they which never had beleaved. The dammage redounded rather to the Church, by provocation of them they cast out, to a freer execution of their malice.

## **But Upon The Faithfull Only**

Excommunication therefore had its effect onely upon those, that beleved that Jesus Christ was to come again in Glory, to reign over, and to judge both the quick, and the dead, and should therefore refuse entrance into his Kingdom, to those whose Sins were Retained; that is, to those that were Excommunicated by the Church. And thence it is that St. Paul calleth Excommunication, a delivery of the Excommunicate person to Satan. For without the Kingdom of Christ, all other Kingdome after Judgment, are comprehended in the Kingdome of Satan. This is it that the faithfull stood in fear of, as long as they stood Excommunicate, that is to say, in an estate wherein their sins were not Forgiven. Whereby wee may understand, that Excommunication in the time that Christian Religion was not authorized by the Civill Power, was used onely for a correction of manners, not of errours in opinion: for it is a punishment, whereof none could be sensible but such as beleved, and expected the coming again of our Saviour to judge the world; and they who so beleved, needed no other opinion, but onely uprightnesse of life, to be saved.

## For What Fault Lyeth Excommunication

There Lyeth Excommunication for Injustice; as (Mat. 18.) If thy Brother offend thee, tell it him privately; then with Witnesses; lastly, tell the Church; and then if he obey not, "Let him be to thee as an Heathen man, and a Publican." And there lyeth Excommunication for a Scandalous Life, as (1 Cor. 5. 11.) "If any man that is called a Brother, be a Fornicator, or Covetous, or an Idolater, or a Drunkard, or an Extortioner, with such a one yee are not to eat." But to Excommunicate a man that held this foundation, that Jesus Was The Christ, for difference of opinion in other points, by which that Foundation was not destroyed, there appeareth no authority in the Scripture, nor example in the Apostles. There is indeed in St. Paul (Titus 3.10.) a text that seemeth to be to the contrary. "A man that is an Haeretique, after the first and second admonition, reject." For an Haeretique, is he, that being a member of the Church, teacheth neverthelesse some private opinion, which the Church has forbidden: and such a one, S. Paul adviseth Titus, after the first, and second admonition, to Reject. But to Reject (in this place) is not to Excommunicate the Man; But to Give Over Admonishing Him, To Let Him Alone, To Set By Disputing With Him, as one that is to be convinced onely by himselfe. The same Apostle saith (2 Tim. 2.23.) "Foolish and unlearned questions avoid;" The word Avoid in this place, and Reject in the former, is the same in the Originall, paraitou: but Foolish questions may bee set by without Excommunication. And again, (Tit. 3.93) "Avoid Foolish questions," where the Originall, periistaso, (set them by) is equivalent to the former word Reject. There is no other place that can so much as colourably be drawn, to countenance the Casting out of the Church faithfull men, such as beleevd the foundation, onely for a singular superstructure of their own, proceeding perhaps from a good & pious conscience. But on the contrary, all such places as command avoiding such disputes, are written for a Lesson to Pastors, (such as Timothy and Titus were) not to make new Articles of Faith, by determining every small controversie, which oblige men to a needlesse burthen of Conscience, or provoke them to break the union of the Church. Which Lesson the Apostles themselves observed

well. S. Peter and S. Paul, though their controversie were great, (as we may read in Gal. 2.11.) yet they did not cast one another out of the Church. Neverthelesse, during the Apostles time, there were other Pastors that observed it not; As Diotrefes (3 John 9. &c.) who cast out of the Church, such as S. John himself thought fit to be received into it, out of a pride he took in Praeeminence; so early it was, that Vainglory, and Ambition had found entrance into the Church of Christ.

## Of Persons Liable To Excommunication

That a man be liable to Excommunication, there be many conditions requisite; as First, that he be a member of some Commonalty, that is to say, of some lawfull Assembly, that is to say, of some Christian Church, that hath power to judge of the cause for which hee is to bee Excommunicated. For where there is no community, there can bee no Excommunication; nor where there is no power to Judge, can there bee any power to give Sentence. From hence it followeth, that one Church cannot be Excommunicated by another: For either they have equall power to Excommunicate each other, in which case Excommunication is not Discipline, nor an act of Authority, but Schisme, and Dissolution of charity; or one is so subordinate to the other, as that they both have but one voice, and then they be but one Church; and the part Excommunicated, is no more a Church, but a dissolute number of individuall persons.

And because the sentence of Excommunication, importeth an advice, not to keep company, nor so much as to eat with him that is Excommunicate, if a Sovereign Prince, or Assembly bee Excommunicate, the sentence is of no effect. For all Subjects are bound to be in the company and presence of their own Sovereign (when he requireth it) by the law of Nature; nor can they lawfully either expell him from any place of his own Dominion, whether profane or holy; nor go out of his Dominion, without his leave; much lesse (if he call them to that honour,) refuse to eat with him. And as to other Princes and States, because they are not parts of one and the same congregation, they need not any other sentence to keep them from keeping company with the State Excommunicate: for the very Institution, as it uniteth many men into one Community; so it dissociateth one Community from another: so that Excommunication is not needfull for keeping Kings and States asunder; nor has any further effect then is in the nature of Policy it selfe; unlesse it be to instigate Princes to warre upon one another.

Nor is the Excommunication of a Christian Subject, that obeyeth the laws of his own Sovereign, whether Christian, or Heathen, of any effect. For if he beleve that "Jesus is the Christ, he hath the Spirit of God" (1

Joh. 4.1.) "and God dwelleth in him, and he in God," (1 Joh. 4.15.) But hee that hath the Spirit of God; hee that dwelleth in God; hee in whom God dwelleth, can receive no harm by the Excommunication of men. Therefore, he that beleeveth Jesus to be the Christ, is free from all the dangers threatned to persons Excommunicate. He that beleeveth it not, is no Christian. Therefore a true and unfeigned Christian is not liable to Excommunication; Nor he also that is a professed Christian, till his Hypocrisy appear in his Manners, that is, till his behaviour bee contrary to the law of his Sovereign, which is the rule of Manners, and which Christ and his Apostles have commanded us to be subject to. For the Church cannot judge of Manners but by externall Actions, which Actions can never bee unlawfull, but when they are against the Law of the Commonwealth.

If a mans Father, or Mother, or Master bee Excommunicate, yet are not the Children forbidden to keep them Company, nor to Eat with them; for that were (for the most part) to oblige them not to eat at all, for want of means to get food; and to authorise them to disobey their Parents, and Masters, contrary to the Precept of the Apostles.

In summe, the Power of Excommunication cannot be extended further than to the end for which the Apostles and Pastors of the Church have their Commission from our Saviour; which is not to rule by Command and Coaction, but by Teaching and Direction of men in the way of Salvation in the world to come. And as a Master in any Science, may abandon his Scholar, when hee obstinately neglecteth the practise of his rules; but not accuse him of Injustice, because he was never bound to obey him: so a Teacher of Christian doctrine may abandon his Disciples that obstinately continue in an unchristian life; but he cannot say, they doe him wrong, because they are not obliged to obey him: For to a Teacher that shall so complain, may be applyed the Answer of God to Samuel in the like place, (1 Sam. 8.) "They have not rejected thee, but mee." Excommunication therefore when it wanteth the assistance of the Civill Power, as it doth, when a Christian State, or Prince is Excommunicate by a forain Authority, is without effect; and consequently ought to be without terrour. The name of Fulmen Excommunicationis (that is, the Thunderbolt Of Excommunication) proceeded from an imagination of the Bishop of Rome, which first used it, that he was King of Kings, as the Heathen made Jupiter King of the Gods; and assigned him in their Poems, and Pictures, a

Thunderbolt, wherewith to subdue, and punish the Giants, that should dare to deny his power: Which imagination was grounded on two errors; one, that the Kingdome of Christ is of this world, contrary to our Saviours owne words, "My Kingdome is not of this world;" the other, that hee is Christs Vicar, not onely over his owne Subjects, but over all the Christians of the World; whereof there is no ground in Scripture, and the contrary shall bee proved in its due place.

# **Of The Interpreter Of The Scriptures Before Civill Soveraigns**

## **Became Christians**

St. Paul coming to Thessalonica, where was a Synagogue of the Jews, (Acts 17.2, 3.) "As his manner was, went in unto them, and three Sabbath dayes reasoned with them out of the Scriptures, Opening and alledging, that Christ must needs have suffered and risen again from the dead; and that this Jesus whom he preached was the Christ." The Scriptures here mentioned were the Scriptures of the Jews, that is, the Old Testament. The men, to whom he was to prove that Jesus was the Christ, and risen again from the dead, were also Jews, and did beleve already, that they were the Word of God. Hereupon (as it is verse 4.) some of them beleved, and (as it is in the 5. ver.) some beleved not. What was the reason, when they all beleved the Scripture, that they did not all beleve alike; but that some approved, others disapproved the Interpretation of St. Paul that cited them; and every one Interpreted them to himself? It was this; S. Paul came to them without any Legall Commission, and in the manner of one that would not Command, but Perswade; which he must needs do, either by Miracles, as Moses did to the Israelites in Egypt, that they might see his Authority in Gods works; or by Reasoning from the already received Scripture, that they might see the truth of his doctrine in Gods Word. But whosoever perswadeth by reasoning from principles written, maketh him to whom hee speaketh Judge, both of the meaning of those principles, and also of the force of his inferences upon them. If these Jews of Thessalonica were not, who else was the Judge of what S. Paul alledged out of Scripture? If S. Paul, what needed he to quote any places to prove his doctrine? It had been enough to have said, I find it so in Scripture, that is to say, in your Laws, of which I am Interpreter, as sent by Christ. The Interpreter therefore of the Scripture, to whose Interpretation the Jews of Thessalonica were bound to stand, could be none: every one might beleve, or not beleve, according as the Allegations seemed to himselfe to be agreeable, or not agreeable to the meaning of the places alledged. And generally in all cases

of the world, hee that pretendeth any prooffe, maketh Judge of his prooffe him to whom he addresseth his speech. And as to the case of the Jews in particular, they were bound by expresse words (Deut. 17.) to receive the determination of all hard questions, from the Priests and Judges of Israel for the time being. But this is to bee understood of the Jews that were yet unconverted.

For the Conversion of the Gentiles, there was no use of alledging the Scriptures, which they beleevd not. The Apostles therefore laboured by Reason to confute their Idolatry; and that done, to perswade them to the faith of Christ, by their testimony of his Life, and Resurrection. So that there could not yet bee any controversie concerning the authority to Interpret Scripture; seeing no man was obliged during his infidelity, to follow any mans Interpretation of any Scripture, except his Sovereigns Interpretation of the Laws of his countrey.

Let us now consider the Conversion it self, and see what there was therein, that could be cause of such an obligation. Men were converted to no other thing then to the Beleef of that which the Apostles preached: And the Apostles preached nothing, but that Jesus was the Christ, that is to say, the King that was to save them, and reign over them eternally in the world to come; and consequently that hee was not dead, but risen again from the dead, and gone up into Heaven, and should come again one day to judg the world, (which also should rise again to be judged,) and reward every man according to his works. None of them preached that himselfe, or any other Apostle was such an Interpreter of the Scripture, as all that became Christians, ought to take their Interpretation for Law. For to Interpret the Laws, is part of the Administration of a present Kingdome; which the Apostles had not. They prayed then, and all other Pastors ever since, "Let thy Kingdome come;" and exhorted their Converts to obey their then Ethnique Princes. The New Testament was not yet published in one Body. Every of the Evangelists was Interpreter of his own Gospel; and every Apostle of his own Epistle; And of the Old Testament, our Saviour himselfe saith to the Jews (John 5. 39.) "Search the Scriptures; for in them yee thinke to have eternall life, and they are they that testifie of me." If hee had not meant they should Interpret them, hee would not have bidden them take thence the proof of his being the Christ; he would either have Interpreted them himselfe, or referred them to the Interpretation of the Priests.

When a difficulty arose, the Apostles and Elders of the Church assembled themselves together, and determined what should be preached, and taught, and how they should Interpret the Scriptures to the People; but took not from the People the liberty to read, and Interpret them to themselves. The Apostles sent divers Letters to the Churches, and other Writings for their instruction; which had been in vain, if they had not allowed them to Interpret, that is, to consider the meaning of them. And as it was in the Apostles time, it must be till such time as there should be Pastors, that could authorise an Interpreter, whose Interpretation should generally be stood to: But that could not be till Kings were Pastors, or Pastors Kings.

## **Of The Power To Make Scripture Law**

There be two senses, wherein a Writing may be said to be Canonically; for Canon, signifieth a Rule; and a Rule is a Precept, by which a man is guided, and directed in any action whatsoever. Such Precepts, though given by a Teacher to his Disciple, or a Counsellor to his friend, without power to Compell him to observe them, are neverthelesse Canons; because they are Rules: But when they are given by one, whom he that receiveth them is bound to obey, then are those Canons, not onely Rules, but Laws: The question therefore here, is of the Power to make the Scriptures (which are the Rules of Christian Faith) Laws.

## Of The Ten Commandements

That part of the Scripture, which was first Law, was the Ten Commandements, written in two Tables of Stone, and delivered by God himselfe to Moses; and by Moses made known to the people. Before that time there was no written Law of God, who as yet having not chosen any people to bee his peculiar Kingdome, had given no Law to men, but the Law of Nature, that is to say, the Precepts of Naturall Reason, written in every mans own heart. Of these two Tables, the first containeth the law of Sovereignty; 1. That they should not obey, nor honour the Gods of other Nations, in these words, "Non habebis Deos alienos coram me," that is, "Thou shalt not have for Gods, the Gods that other Nations worship; but onely me:" whereby they were forbidden to obey, or honor, as their King and Governour, any other God, than him that spake unto them then by Moses, and afterwards by the High Priest. 2. That they "should not make any Image to represent him;" that is to say, they were not to choose to themselves, neither in heaven, nor in earth, any Representative of their own fancying, but obey Moses and Aaron, whom he had appointed to that office. 3. That "they should not take the Name of God in vain;" that is, they should not speak rashly of their King, nor dispute his Right, nor the commissions of Moses and Aaron, his Lieutenants. 4. That "they should every Seventh day abstain from their ordinary labour," and employ that time in doing him Publique Honor. The second Table containeth the Duty of one man towards another, as "To honor Parents; Not to kill; Not to Commit Adultery; Not to steale; Not to corrupt Judgment by false witnesse;" and finally, "Not so much as to designe in their heart the doing of any injury one to another." The question now is, Who it was that gave to these written Tables the obligatory force of Lawes. There is no doubt but that they were made Laws by God himselfe: But because a Law obliges not, nor is Law to any, but to them that acknowledge it to be the act of the Sovereign, how could the people of Israel that were forbidden to approach the Mountain to hear what God said to Moses, be obliged to obedience to all those laws which Moses propounded to them? Some of them were indeed the Laws of Nature, as all the Second Table; and therefore to be

acknowledged for Gods Laws; not to the Israelites alone, but to all people: But of those that were peculiar to the Israelites, as those of the first Table, the question remains; saving that they had obliged themselves, presently after the propounding of them, to obey Moses, in these words (Exod. 20.19.) "Speak them thou to us, and we will hear thee; but let not God speak to us, lest we die." It was therefore onely Moses then, and after him the High Priest, whom (by Moses) God declared should administer this his peculiar Kingdome, that had on Earth, the power to make this short Scripture of the Decalogue to bee Law in the Common-wealth of Israel. But Moses, and Aaron, and the succeeding High Priests were the Civill Sovereigns. Therefore hitherto, the Canonizing, or making of the Scripture Law, belonged to the Civill Sovereigne.

## **Of The Judicial, And Leviticall Law**

The Judiciall Law, that is to say, the Laws that God prescribed to the Magistrates of Israel, for the rule of their administration of Justice, and of the Sentences, or Judgments they should pronounce, in Pleas between man and man; and the Leviticall Law, that is to say, the rule that God prescribed touching the Rites and Ceremonies of the Priests and Levites, were all delivered to them by Moses onely; and therefore also became Lawes, by vertue of the same promise of obedience to Moses. Whether these laws were then written, or not written, but dictated to the People by Moses (after his forty dayes being with God in the Mount) by word of mouth, is not expressed in the Text; but they were all positive Laws, and equivalent to holy Scripture, and made Canonically by Moses the Civill Sovereign.

## The Second Law

After the Israelites were come into the Plains of Moab over against Jericho, and ready to enter into the land of Promise, Moses to the former Laws added divers others; which therefore are called Deuteronomy: that is, Second Laws. And are (as it is written, Deut. 29.1.) "The words of a Covenant which the Lord commanded Moses to make with the Children of Israel, besides the Covenant which he made with them in Horeb." For having explained those former Laws, in the beginning of the Book of Deuteronomy, he addeth others, that begin at the 12. Cha. and continue to the end of the 26. of the same Book. This Law (Deut. 27.1.) they were commanded to write upon great stones playstered over, at their passing over Jordan: This Law also was written by Moses himself in a Book; and delivered into the hands of the "Priests, and to the Elders of Israel," (Deut. 31.9.) and commanded (ve. 26.) "to be put in the side of the Arke;" for in the Ark it selfe was nothing but the Ten Commandements. This was the Law, which Moses (Deuteronomy 17.18.) commanded the Kings of Israel should keep a copie of: And this is the Law, which having been long time lost, was found again in the Temple in the time of Josiah, and by his authority received for the Law of God. But both Moses at the writing, and Josiah at the recovery thereof, had both of them the Civill Sovereignty. Hitherto therefore the Power of making Scripture Canonically, was in the Civill Sovereign.

Besides this Book of the Law, there was no other Book, from the time of Moses, till after the Captivity, received amongst the Jews for the Law of God. For the Prophets (except a few) lived in the time of the Captivity it selfe; and the rest lived but a little before it; and were so far from having their Prophecies generally received for Laws, as that their persons were persecuted, partly by false Prophets, and partly by the Kings which were seduced by them. And this Book it self, which was confirmed by Josiah for the Law of God, and with it all the History of the Works of God, was lost in the Captivity, and sack of the City of Jerusalem, as appears by that of 2 Esdras 14.21. "Thy Law is burnt; therefor no man knoweth the things that are done of thee, of the works that shall begin." And before the Captivity,

between the time when the Law was lost, (which is not mentioned in the Scripture, but may probably be thought to be the time of Rehoboam, when Shishak King of Egypt took the spoils of the Temple,(1 Kings 14.26.)) and the time of Josiah, when it was found againe, they had no written Word of God, but ruled according to their own discretion, or by the direction of such, as each of them esteemed Prophets.

## **The Old Testament, When Made Canonically**

From whence we may inferre, that the Scriptures of the Old Testament, which we have at this day, were not Canonically, nor a Law unto the Jews, till the renovation of their Covenant with God at their return from the Captivity, and restauration of their Common-wealth under Esdras. But from that time forward they were accounted the Law of the Jews, and for such translated into Greek by Seventy Elders of Judaea, and put into the Library of Ptolemy at Alexandria, and approved for the Word of God. Now seeing Esdras was the High Priest, and the High Priest was their Civill Sovereigne, it is manifest, that the Scriptures were never made Laws, but by the Sovereign Civill Power.

The New Testament Began To Be Canonically Under Christian Sovereigns By the Writings of the Fathers that lived in the time before that Christian Religion was received, and authorised by Constantine the Emperour, we may find, that the Books wee now have of the New Testament, were held by the Christians of that time (except a few, in respect of whose paucity the rest were called the Catholique Church, and others Haeretiques) for the dictates of the Holy Ghost; and consequently for the Canon, or Rule of Faith: such was the reverence and opinion they had of their Teachers; as generally the reverence that the Disciples bear to their first Masters, in all manner of doctrine they receive from them, is not small. Therefore there is no doubt, but when S. Paul wrote to the Churches he had converted; or any other Apostle, or Disciple of Christ, to those which had then embraced Christ, they received those their Writings for the true Christian Doctrine. But in that time, when not the Power and Authority of the Teacher, but the Faith of the Hearer caused them to receive it, it was not the Apostles that made their own Writings Canonically, but every Convert made them so to himself.

But the question here, is not what any Christian made a Law, or Canon to himself, (which he might again reject, by the same right he received it;) but what was so made a Canon to them, as without injustice they could not doe any thing contrary thereunto. That the New Testament should in this sense be Canonically, that is to say, a Law in any place where the Law of the

Common-wealth had not made it so, is contrary to the nature of a Law. For a Law, (as hath been already shewn) is the Commandement of that Man, or Assembly, to whom we have given Sovereign Authority, to make such Rules for the direction of our actions, as hee shall think fit; and to punish us, when we doe any thing contrary to the same. When therefore any other man shall offer unto us any other Rules, which the Sovereign Ruler hath not prescribed, they are but Counsell, and Advice; which, whether good, or bad, hee that is counselled, may without injustice refuse to observe, and when contrary to the Laws already established, without injustice cannot observe, how good soever he conceiveth it to be. I say, he cannot in this case observe the same in his actions, nor in his discourse with other men; though he may without blame beleve the his private Teachers, and wish he had the liberty to practise their advice; and that it were publicly received for Law. For internall faith is in its own nature invisible, and consequently exempted from all humane jurisdiction; whereas the words, and actions that proceed from it, as breaches of our Civil obedience, are injustice both before God and Man. Seeing then our Saviour hath denied his Kingdome to be in this world, seeing he hath said, he came not to judge, but to save the world, he hath not subjected us to other Laws than those of the Common-wealth; that is, the Jews to the Law of Moses, (which he saith (Mat. 5.) he came not to destroy, but to fulfill,) and other Nations to the Laws of their severall Sovereigns, and all men to the Laws of Nature; the observing whereof, both he himselfe, and his Apostles have in their teaching recommended to us, as a necessary condition of being admitted by him in the last day into his eternall Kingdome, wherein shall be Protection, and Life everlasting. Seeing then our Saviour, and his Apostles, left not new Laws to oblige us in this world, but new Doctrine to prepare us for the next; the Books of the New Testament, which containe that Doctrine, untill obedience to them was commanded, by them that God hath given power to on earth to be Legislators, were not obligatory Canons, that is, Laws, but onely good, and safe advice, for the direction of sinners in the way to salvation, which every man might take, and refuse at his owne perill, without injustice.

Again, our Saviour Christs Commission to his Apostles, and Disciples, was to Proclaim his Kingdome (not present, but) to come; and to Teach all Nations; and to Baptize them that should beleve; and to enter into the houses of them that should receive them; and where they were not

received, to shake off the dust of their feet against them; but not to call for fire from heaven to destroy them, nor to compell them to obedience by the Sword. In all which there is nothing of Power, but of Perswasion. He sent them out as Sheep unto Wolves, not as Kings to their Subjects. They had not in Commission to make Laws; but to obey, and teach obedience to Laws made; and consequently they could not make their Writings obligatory Canons, without the help of the Sovereign Civill Power. And therefore the Scripture of the New Testament is there only Law, where the lawfull Civill Power hath made it so. And there also the King, or Sovereign, maketh it a Law to himself; by which he subjecteth himselfe, not to the Doctor, or Apostle, that converted him, but to God himself, and his Son Jesus Christ, as immediately as did the Apostles themselves.

## Of The Power Of Councells To Make The Scripture Law

That which may seem to give the New Testament, in respect of those that have embraced Christian Doctrine, the force of Laws, in the times, and places of persecution, is the decrees they made amongst themselves in their Synods. For we read (Acts 15.28.) the stile of the Councell of the Apostles, the Elders, and the whole Church, in this manner, "It seemed good to the Holy Ghost, and to us, to lay upon you no greater burthen than these necessary things, &C." which is a stile that signifieth a Power to lay a burthen on them that had received their Doctrine. Now "to lay a burthen on another," seemeth the same that "to oblige;" and therefore the Acts of that Councell were Laws to the then Christians. Neverthelesse, they were no more Laws than are these other Precepts, "Repent, Be Baptized; Keep the Commandements; Beleeve the Gospel; Come unto me; Sell all that thou hast; Give it to the poor;" and "Follow me;" which are not Commands, but Invitations, and Callings of men to Christianity, like that of Esay 55.1. "Ho, every man that thirsteth, come yee to the waters, come, and buy wine and milke without money." For first, the Apostles power was no other than that of our Saviour, to invite men to embrace the Kingdome of God; which they themselves acknowledged for a Kingdome (not present, but) to come; and they that have no Kingdome, can make no Laws. And secondly, if their Acts of Councell, were Laws, they could not without sin be disobeyed. But we read not any where, that they who received not the Doctrine of Christ, did therein sin; but that they died in their sins; that is, that their sins against the Laws to which they owed obedience, were not pardoned. And those Laws were the Laws of Nature, and the Civill Laws of the State, whereto every Christian man had by pact submitted himself. And therefore by the Burthen, which the Apostles might lay on such as they had converted, are not to be understood Laws, but Conditions, proposed to those that sought Salvation; which they might accept, or refuse at their own perill, without a new sin, though not without the hazard of being condemned, and excluded out of the Kingdome of God for their sins past. And therefore of Infidels, S. John saith not, the wrath of

God shall "come" upon them, but "the wrath of God remaineth upon them;" and not that they shall be condemned; but that "they are condemned already."(John 3.36, 3.18) Nor can it be conceived, that the benefit of Faith, "is Remission of sins" unlesse we conceive withall, that the dammage of Infidelity, is "the Retention of the same sins."

But to what end is it (may some man aske), that the Apostles, and other Pastors of the Church, after their time, should meet together, to agree upon what Doctrine should be taught, both for Faith and Manners, if no man were obliged to observe their Decrees? To this may be answered, that the Apostles, and Elders of that Councell, were obliged even by their entrance into it, to teach the Doctrine therein concluded, and decreed to be taught, so far forth, as no precedent Law, to which they were obliged to yeeld obedience, was to the contrary; but not that all other Christians should be obliged to observe, what they taught. For though they might deliberate what each of them should teach; yet they could not deliberate what others should do, unless their Assembly had had a Legislative Power; which none could have but Civill Sovereigns. For though God be the Sovereign of all the world, we are not bound to take for his Law, whatsoever is propounded by every man in his name; nor any thing contrary to the Civill Law, which God hath expressly commanded us to obey.

Seeing then the Acts of Councell of the Apostles, were then no Laws, but Councells; much lesse are Laws the Acts of any other Doctors, or Councells since, if assembled without the Authority of the Civill Sovereign. And consequently, the Books of the New Testament, though most perfect Rules of Christian Doctrine, could not be made Laws by any other authority then that of Kings, or Sovereign Assemblies.

The first Councell, that made the Scriptures we now have, Canon, is not extant: For that Collection the first Bishop of Rome after S. Peter, is subject to question: For though the Canonick books bee there reckoned up; yet these words, "Sint vobis omnibus Clericis & Laicis Libris venerandi, &c." containe a distinction of Clergy, and Laity, that was not in use so neer St. Peters time. The first Councell for setling the Canonick Scripture, that is extant, is that of Laodicea, Can. 59. which forbids the reading of other Books then those in the Churches; which is a Mandate that is not addressed to every Christian, but to those onely that had

authority to read any publicly in the Church; that is, to Ecclesiastiques  
only.

# **Of The Right Of Constituting Ecclesiasticall Officers In The Time**

## **Of The Apostles**

Of Ecclesiasticall Officers in the time of the Apostles, some were Magisteriall, some Ministeriall. Magisteriall were the Offices of preaching of the Gospel of the Kingdom of God to Infidels; of administring the Sacraments, and Divine Service; and of teaching the Rules of Faith and Manners to those that were converted. Ministeriall was the Office of Deacons, that is, of them that were appointed to the administration of the secular necessities of the Church, at such time as they lived upon a common stock of mony, raised out of the voluntary contributions of the faithfull.

Amongst the Officers Magisteriall, the first, and principall were the Apostles; whereof there were at first but twelve; and these were chosen and constituted by our Saviour himselfe; and their Office was not onely to Preach, Teach, and Baptize, but also to be Martyrs, (Witnesses of our Saviours Resurrection.) This Testimony, was the specificall, and essentiall mark; whereby the Apostleship was distinguished from other Magistracy Ecclesiasticall; as being necessary for an Apostle, either to have seen our Saviour after his Resurrection, or to have conversed with him before, and seen his works, and other arguments of his Divinity, whereby they might be taken for sufficient Witnesses. And therefore at the election of a new Apostle in the place of Judas Iscariot, S. Peter saith (Acts 1.21,22.) "Of these men that have companied with us, all the time that the Lord Jesus went in and out among us, beginning from the Baptisme of John unto that same day that he was taken up from us, must one be ordained to be a Witsesse with us of his Resurrection:" where, by this word Must, is implied a necessary property of an Apostle, to have companied with the first and prime Apostles in the time that our Saviour manifested himself in the flesh.

## **Matthias Made Apostle By The Congregation.**

The first Apostle, of those which were not constituted by Christ in the time he was upon the Earth, was Matthias, chosen in this manner: There were assembled together in Jerusalem about 120 Christians (Acts 1.15.) These appointed two, Joseph the Just, and Matthias (ver. 23.) and caused lots to be drawn; "and (ver. 26.) the Lot fell on Matthias and he was numbred with the Apostles." So that here we see the ordination of this Apostle, was the act of the Congregation, and not of St. Peter, nor of the eleven, otherwise then as Members of the Assembly.

## **Paul And Barnabas Made Apostles By The Church Of Antioch**

After him there was never any other Apostle ordained, but Paul and Barnabas, which was done (as we read Acts 13.1,2,3.) in this manner. "There were in the Church that was at Antioch, certaine Prophets, and Teachers; as Barnabas, and Simeon that was called Niger, and Lucius of Cyrene, and Manaen; which had been brought up with Herod the Tetrarch, and Saul. As they ministred unto the Lord, and fasted, the Holy Ghost said, 'Separate mee Barnabas, and Saul for the worke whereunto I have called them.' And when they had fasted, and prayed, and laid their hands on them, they sent them away."

By which it is manifest, that though they were called by the Holy Ghost, their Calling was declared unto them, and their Mission authorized by the particular Church of Antioch. And that this their calling was to the Apostleship, is apparent by that, that they are both called (Acts 14.14.) Apostles: And that it was by vertue of this act of the Church of Antioch, that they were Apostles, S. Paul declareth plainly (Rom. 1.1.) in that hee useth the word, which the Holy Ghost used at his calling: For he stileth himself, "An Apostle separated unto the Gospel of God;" alluding to the words of the Holy Ghost, "Separate me Barnabas and Saul, &c." But seeing the work of an Apostle, was to be a Witnesse of the Resurrection of Christ, and man may here aske, how S. Paul that conversed not with our Saviour before his passion, could know he was risen. To which it is easily answered, that our Saviour himself appeared to him in the way to Damascus, from Heaven, after his Ascension; "and chose him for a vessell to bear his name before the Gentiles, and Kings, and Children of Israel;" and consequently (having seen the Lord after his passion) was a competent Witnesse of his Resurrection: And as for Barnabas, he was a Disciple before the Passion. It is therefore evident that Paul, and Barnabas were Apostles; and yet chosen, and authorized (not by the first Apostles alone, but) by the Church of Antioch; as Matthias was chosen, and authorized by the Church of Jerusalem.

## What Offices In The Church Are Magisteriall

Bishop, a word formed in our language, out of the Greek Episcopus, signifieth an overseer, or Superintendent of any businesse, and particularly a Pastor or Shepherd; and thence by metaphor was taken, not only amongst the Jews that were originally Shepherds, but also amongst the Heathen, to signifie the Office of a King, or any other Ruler, or Guide of People, whether he ruled by Laws, or Doctrine. And so the Apostles were the first Christian Bishops, instituted by Christ himselfe: in which sense the Apostleship of Judas is called (Acts 1.20.) his Bishoprick. And afterwards, when there were constituted Elders in the Christian Churches, with charge to guide Christs flock by their doctrine, and advice; these Elders were also called Bishops. Timothy was an Elder (which word Elder, in the New Testament is a name of Office, as well as of Age;) yet he was also a Bishop. And Bishops were then content with the Title of Elders. Nay S. John himselfe, the Apostle beloved of our Lord, beginneth his Second Epistle with these words, "The Elder to the Elect Lady." By which it is evident, that Bishop, Pastor, Elder, Doctor, that is to say, Teacher, were but so many divers names of the same Office in the time of the Apostles. For there was then no government by Coercion, but only by Doctrine, and Perswading. The Kingdome of God was yet to come, in a new world; so that there could be no authority to compell in any Church, till the Common-wealth had embraced the Christian Faith; and consequently no diversity of Authority, though there were diversity of Employments.

Besides these Magisteriall employments in the Church, namely Apostles, Bishops, Elders, Pastors, and Doctors, whose calling was to proclaim Christ to the Jews, and Infidels, and to direct, and teach those that beleaved we read in the New Testament of no other. For by the names of Evangelists and Prophets, is not signified any Office, but severall Gifts, by which severall men were profitable to the Church: as Evangelists, by writing the life and acts of our Saviour; such as were S. Matthew and S. John Apostles, and S. Marke and S. Luke Disciples, and whosoever else wrote of that subject, (as S. Thomas, and S. Barnabas are said to have done, though the Church have not received the Books that have gone under

their names:) and as Prophets, by the gift of interpreting the Old Testament; and sometimes by declaring their speciall Revelations to the Church. For neither these gifts, nor the gifts of Languages, nor the gift of Casting out Devils, or of Curing other diseases, nor any thing else did make an Officer in the Church, save onely the due calling and election to the charge of Teaching.

## Ordination Of Teachers

As the Apostles, Matthias, Paul, and Barnabas, were not made by our Saviour himself, but were elected by the Church, that is, by the Assembly of Christians; namely, Matthias by the Church of Jerusalem, and Paul, and Barnabas by the Church of Antioch; so were also the Presbyters, and Pastors in other Cities, elected by the Churches of those Cities. For proof whereof, let us consider, first, how S. Paul proceeded in the Ordination of Presbyters, in the Cities where he had converted men to the Christian Faith, immediately after he and Barnabas had received their Apostleship. We read (Acts 14.23.) that "they ordained Elders in every Church;" which at first sight may be taken for an Argument, that they themselves chose, and gave them their authority: But if we consider the Originall text, it will be manifest, that they were authorized, and chosen by the Assembly of the Christians of each City. For the words there are, "cheirotonesantes autoispresbuteros kat ekklesian," that is, "When they had Ordained them Elders by the Holding up of Hands in every Congregation." Now it is well enough known, that in all those Cities, the manner of choosing Magistrates, and Officers, was by plurality of suffrages; and (because the ordinary way of distinguishing the Affirmative Votes from the Negatives, was by Holding up of Hands) to ordain an Officer in any of the Cities, was no more but to bring the people together, to elect them by plurality of Votes, whether it were by plurality of elevated hands, or by plurality of voices, or plurality of balls, or beans, or small stones, of which every man cast in one, into a vessell marked for the Affirmative, or Negative; for divers Cities had divers customes in that point. It was therefore the Assembly that elected their own Elders: the Apostles were onely Presidents of the Assembly to call them together for such Election, and to pronounce them Elected, and to give them the benediction, which now is called Consecration. And for this cause they that were Presidents of the Assemblies, as (in the absence of the Apostles) the Elders were, were called proestotes, and in Latin Antistities; which words signifie the Principall Person of the Assembly, whose office was to number the Votes, and to declare thereby who was chosen; and where the Votes were equall,

to decide the matter in question, by adding his own; which is the Office of a President in Councill. And (because all the Churches had their Presbyters ordained in the same manner,) where the word is Constitute, (as Titus 1.5.) "ina katasteses kata polin presbuterous," "For this cause left I thee in Crete, that thou shouldest constitute Elders in every City," we are to understand the same thing; namely, that hee should call the faithfull together, and ordain them Presbyters by plurality of suffrages. It had been a strange thing, if in a Town, where men perhaps had never seen any Magistrate otherwise chosen then by an Assembly, those of the Town becomming Christians, should so much as have thought on any other way of Election of their Teachers, and Guides, that is to say, of their Presbyters, (otherwise called Bishops,) then this of plurality of suffrages, intimated by S. Paul (Acts 14.23.) in the word Cheirotonesantes: Nor was there ever any choosing of Bishops, (before the Emperors found it necessary to regulate them in order to the keeping of the peace amongst them,) but by the Assemblies of the Christians in every severall Town.

The same is also confirmed by the continuall practise even to this day, in the Election of the Bishops of Rome. For if the Bishop of any place, had the right of choosing another, to the succession of the Pastorall Office, in any City, at such time as he went from thence, to plant the same in another place; much more had he had the Right, to appoint his successour in that place, in which he last resided and dyed: And we find not, that ever any Bishop of Rome appointed his successor. For they were a long time chosen by the People, as we may see by the sedition raised about the Election, between Damascus, and Ursinicus; which Ammianus Marcellinus saith was so great, that Juventius the Praefect, unable to keep the peace between them, was forced to goe out of the City; and that there were above an hundred men found dead upon that occasion in the Church it self. And though they afterwards were chosen, first, by the whole Clergy of Rome, and afterwards by the Cardinalls; yet never any was appointed to the succession by his predecessor. If therefore they pretended no right to appoint their successors, I think I may reasonably conclude, they had no right to appoint the new power; which none could take from the Church to bestow on them, but such as had a lawfull authority, not onely to Teach, but to Command the Church; which none could doe, but the Civill Sovereign.

## **Ministers Of The Church What**

The word Minister in the Originall Diakonos signifieth one that voluntarily doth the businesse of another man; and differeth from a Servant onely in this, that Servants are obliged by their condition, to what is commanded them; whereas Ministers are obliged onely by their undertaking, and bound therefore to no more than that they have undertaken: So that both they that teach the Word of God, and they that administer the secular affairs of the Church, are both Ministers, but they are Ministers of different Persons. For the Pastors of the Church, called (Acts 6.4.) "The Ministers of the Word," are Ministers of Christ, whose Word it is: But the Ministry of a Deacon, which is called (verse 2. of the same Chapter) "Serving of Tables," is a service done to the Church, or Congregation: So that neither any one man, nor the whole Church, could ever of their Pastor say, he was their Minister; but of a Deacon, whether the charge he undertook were to serve tables, or distribute maintenance to the Christians, when they lived in each City on a common stock, or upon collections, as in the first times, or to take a care of the House of Prayer, or of the Revenue, or other worldly businesse of the Church, the whole Congregation might properly call him their Minister.

For their employment, as Deacons, was to serve the Congregation; though upon occasion they omitted not to preach the Gospel, and maintain the Doctrine of Christ, every one according to his gifts, as S. Steven did; and both to Preach, and Baptize, as Philip did: For that Philip, which (Act. 8. 5.) Preached the Gospel at Samaria, and (verse 38.) Baptized the Eunuch, was Philip the Deacon, not Philip the Apostle. For it is manifest (verse 1.) that when Philip preached in Samaria, the Apostles were at Jerusalem, and (verse 14.) "When they heard that Samaria had received the Word of God, sent Peter and John to them;" by imposition of whose hands, they that were Baptized (verse 15.) received (which before by the Baptisme of Philip they had not received) the Holy Ghost. For it was necessary for the conferring of the Holy Ghost, that their Baptisme should be administred, or confirmed by a Minister of the Word, not by a Minister of the Church. And therefore to confirm the Baptisme of those that Philip

the Deacon had Baptized, the Apostles sent out of their own number from Jerusalem to Samaria, Peter, and John; who conferred on them that before were but Baptized, those graces that were signs of the Holy Spirit, which at that time did accompany all true Beleevers; which what they were may be understood by that which S. Marke saith (chap. 16.17.) "These signs follow them that beleeve in my Name; they shall cast out Devills; they shall speak with new tongues; They shall take up Serpents, and if they drink any deadly thing, it shall not hurt them; They shall lay hands on the sick, and they shall recover." This to doe, was it that Philip could not give; but the Apostles could, and (as appears by this place) effectually did to every man that truly beleeved, and was by a Minister of Christ himself Baptized: which power either Christs Ministers in this age cannot conferre, or else there are very few true Beleevers, or Christ hath very few Ministers.

## **And How Chosen What**

That the first Deacons were chosen, not by the Apostles, but by a Congregation of the Disciples; that is, of Christian men of all sorts, is manifest out of Acts 6. where we read that the Twelve, after the number of Disciples was multiplyed, called them together, and having told them, that it was not fit that the Apostles should leave the Word of God, and serve tables, said unto them (verse 3.) "Brethren looke you out among you seven men of honest report, full of the Holy Ghost, and of Wisdome, whom we may appoint over this businesse." Here it is manifest, that though the Apostles declared them elected; yet the Congregation chose them; which also, (verse the fift) is more expressely said, where it is written, that "the saying pleased the multitude, and they chose seven, &c."

## Of Ecclesiasticall Revenue, Under The Law Of Moses

Under the Old Testament, the Tribe of Levi were onely capable of the Priesthood, and other inferiour Offices of the Church. The land was divided amongst the other Tribes (Levi excepted,) which by the subdivision of the Tribe of Joseph, into Ephraim and Manasses, were still twelve. To the Tribe of Levi were assigned certain Cities for their habitation, with the suburbs for their cattell: but for their portion, they were to have the tenth of the fruits of the land of their Brethren. Again, the Priests for their maintenance had the tenth of that tenth, together with part of the oblations, and sacrifices. For God had said to Aaron (Numb. 18. 20.) "Thou shalt have no inheritance in their land, neither shalt thou have any part amongst them, I am thy part, and thine inheritance amongst the Children of Israel." For God being then King, and having constituted the Tribe of Levi to be his Publique Ministers, he allowed them for their maintenance, the Publique revenue, that is to say, the part that God had reserved to himself; which were Tythes, and Offerings: and that it is which is meant, where God saith, I am thine inheritance. And therefore to the Levites might not unfitly be attributed the name of Clergy from Kleros, which signifieth Lot, or Inheritance; not that they were heirs of the Kingdome of God, more than other; but that Gods inheritance, was their maintenance. Now seeing in this time God himself was their King, and Moses, Aaron, and the succeeding High Priests were his Lieutenants; it is manifest, that the Right of Tythes, and Offerings was constituted by the Civill Power.

After their rejection of God in the demand of a King, they enjoyed still the same revenue; but the Right thereof was derived from that, that the Kings did never take it from them: for the Publique Revenue was at the disposing of him that was the Publique Person; and that (till the Captivity) was the King. And again, after the return from the Captivity, they paid their Tythes as before to the Priest. Hitherto therefore Church Livings were determined by the Civill Sovereign.

## **In Our Saviours Time, And After**

Of the maintenance of our Saviour, and his Apostles, we read onely they had a Purse, (which was carried by Judas Iscariot;) and, that of the Apostles, such as were Fisher-men, did sometimes use their trade; and that when our Saviour sent the Twelve Apostles to Preach, he forbad them "to carry Gold, and Silver, and Brasse in their purses, for that the workman is worthy of his hire:" (Mat. 10. 9,10.) By which it is probable, their ordinary maintenance was not unsuitable to their employment; for their employment was (ver. 8.) "freely to give, because they had freely received;" and their maintenance was the Free Gift of those that beleaved the good tyding they carryed about of the coming of the Messiah their Saviour. To which we may adde, that which was contributed out of gratitude, by such as our Saviour had healed of diseases; of which are mentioned "Certain women (Luke 8. 2,3.) which had been healed of evill spirits and infirmities; Mary Magdalen, out of whom went seven Devills; and Joanna the wife of Chuza, Herods Steward; and Susanna, and many others, which ministred unto him of their substance.

After our Saviours Ascension, the Christians of every City lived in Common, (Acts 4. 34.) upon the mony which was made of the sale of their lands and possessions, and laid down at the feet of the Apostles, of good will, not of duty; for "whilst the Land remained (saith S. Peter to Ananias Acts 5.4.) was it not thine? and after it was sold, was it not in thy power?" which sheweth he needed not to have saved his land, nor his money by lying, as not being bound to contribute any thing at all, unlesse he had pleased. And as in the time of the Apostles, so also all the time downward, till after Constantine the Great, we shall find, that the maintenance of the Bishops, and Pastors of the Christian Church, was nothing but the voluntary contribution of them that had embraced their Doctrine. There was yet no mention of Tythes: but such was in the time of Constantine, and his Sons, the affection of Christians to their Pastors, as Ammianus Marcellinus saith (describing the sedition of Damasus and Ursinicus about the Bishopricke,) that it was worth their contention, in that the Bishops of those times by the liberality of their flock, and especially of Matrons,

lived splendidly, were carryed in Coaches, and sumptuous in their fare and apparell.

The Ministers Of The Gospel Lived On The Benevolence Of Their Flocks But here may some ask, whether the Pastor were then bound to live upon voluntary contribution, as upon almes, "For who (saith S. Paul 1 Cor. 9. 7.) goeth to war at his own charges? or who feedeth a flock, and eateth not of the milke of the flock?" And again, (1 Cor. 9. 13.) "Doe ye not know that they which minister about holy things, live of the things of the Temple; and they which wait at the Altar, partake with the Altar;" that is to say, have part of that which is offered at the Altar for their maintenance? And then he concludeth, "Even so hath the Lord appointed, that they which preach the Gospel should live of the Gospel. From which place may be inferred indeed, that the Pastors of the Church ought to be maintained by their flocks; but not that the Pastors were to determine, either the quantity, or the kind of their own allowance, and be (as it were) their own Carvers. Their allowance must needs therefore be determined, either by the gratitude, and liberality of every particular man of their flock, or by the whole Congregation. By the whole Congregation it could not be, because their Acts were then no Laws: Therefore the maintenance of Pastors, before Emperours and Civill Sovereignes had made Laws to settle it, was nothing but Benevolence. They that served at the Altar lived on what was offered. In what court should they sue for it, who had no Tribunalls? Or if they had Arbitrators amongst themselves, who should execute their Judgments, when they had no power to arme their Officers? It remaineth therefore, that there could be no certaine maintenance assigned to any Pastors of the Church, but by the whole Congregation; and then onely, when their Decrees should have the force (not onely of Canons, but also) of Laws; which Laws could not be made, but by Emperours, Kings, or other Civill Sovereignes. The Right of Tythes in Moses Law, could not be applyed to the then Ministers of the Gospell; because Moses and the High Priests were the Civill Sovereignes of the people under God, whose Kingdome amongst the Jews was present; whereas the Kingdome of God by Christ is yet to come.

Hitherto hath been shewn what the Pastors of the Church are; what are the points of their Commission (as that they were to Preach, to Teach, to Baptize, to be Presidents in their severall Congregations;) what is Ecclesiasticall Censure, viz. Excommunication, that is to say, in those

places where Christianity was forbidden by the Civill Laws, a putting of themselves out of the company of the Excommunicate, and where Christianity was by the Civill Law commanded, a putting the Excommunicate out of the Congregations of Christians; who elected the Pastors and Ministers of the Church, (that it was, the Congregation); who consecrated and blessed them, (that it was the Pastor); what was their due revenue, (that it was none but their own possessions, and their own labour, and the voluntary contributions of devout and gratefull Christians). We are to consider now, what Office those persons have, who being Civill Soveraignes, have embraced also the Christian Faith.

# **The Civill Sovereign Being A Christian Hath The Right Of Appointing**

## **Pastors**

And first, we are to remember, that the Right of Judging what Doctrines are fit for Peace, and to be taught the Subjects, is in all Common-wealths inseparably annexed (as hath been already proved cha. 18.) to the Sovereign Power Civill, whether it be in one Man, or in one Assembly of men. For it is evident to the meanest capacity, that mens actions are derived from the opinions they have of the Good, or Evill, which from those actions redound unto themselves; and consequently, men that are once possessed of an opinion, that their obedience to the Sovereign Power, will bee more hurtfull to them, than their disobedience, will disobey the Laws, and thereby overthrow the Common-wealth, and introduce confusion, and Civill war; for the avoiding whereof, all Civill Government was ordained. And therefore in all Common-wealths of the Heathen, the Sovereigns have had the name of Pastors of the People, because there was no Subject that could lawfully Teach the people, but by their permission and authority.

This Right of the Heathen Kings, cannot bee thought taken from them by their conversion to the Faith of Christ; who never ordained, that Kings for beleiving in him, should be deposed, that is, subjected to any but himself, or (which is all one) be deprived of the power necessary for the conservation of Peace amongst their Subjects, and for their defence against foraign Enemies. And therefore Christian Kings are still the Supreme Pastors of their people, and have power to ordain what Pastors they please, to teach the Church, that is, to teach the People committed to their charge.

Again, let the right of choosing them be (as before the conversion of Kings) in the Church, for so it was in the time of the Apostles themselves (as hath been shewn already in this chapter); even so also the Right will be in the Civill Sovereign, Christian. For in that he is a Christian, he allowes

the Teaching; and in that he is the Sovereign (which is as much as to say, the Church by Representation,) the Teachers hee elects, are elected by the Church. And when an Assembly of Christians choose their Pastor in a Christian Common-wealth, it is the Sovereign that electeth him, because tis done by his Authority; In the same manner, as when a Town choose their Maior, it is the act of him that hath the Sovereign Power: For every act done, is the act of him, without whose consent it is invalid. And therefore whatsoever examples may be drawn out of History, concerning the Election of Pastors, by the People, or by the Clergy, they are no arguments against the Right of any Civill Sovereign, because they that elected them did it by his Authority.

Seeing then in every Christian Common-wealth, the Civill Sovereign is the Supreme Pastor, to whose charge the whole flock of his Subjects is committed, and consequently that it is by his authority, that all other Pastors are made, and have power to teach, and performe all other Pastorall offices; it followeth also, that it is from the Civill Sovereign, that all other Pastors derive their right of Teaching, Preaching, and other functions pertaining to that Office; and that they are but his Ministers; in the same manner as the Magistrates of Towns, Judges in Courts of Justice, and Commanders of Armies, are all but Ministers of him that is the Magistrate of the whole Common-wealth, Judge of all Causes, and Commander of the whole Militia, which is alwayes the Civill Sovereign. And the reason hereof, is not because they that Teach, but because they that are to Learn, are his Subjects. For let it be supposed, that a Christian King commit the Authority of Ordaining Pastors in his Dominions to another King, (as divers Christian Kings allow that power to the Pope;) he doth not thereby constitute a Pastor over himself, nor a Sovereign Pastor over his People; for that were to deprive himself of the Civill Power; which depending on the opinion men have of their Duty to him, and the fear they have of Punishment in another world, would depend also on the skill, and loyalty of Doctors, who are no lesse subject, not only to Ambition, but also to Ignorance, than any other sort of men. So that where a stranger hath authority to appoint Teachers, it is given him by the Sovereign in whose Dominions he teacheth. Christian Doctors are our Schoolmasters to Christianity; But Kings are Fathers of Families, and may receive Schoolmasters for their Subjects from the recommendation of a stranger, but not from the command; especially when the ill teaching them

shall redound to the great and manifest profit of him that recommends them: nor can they be obliged to retain them, longer than it is for the Publique good; the care of which they stand so long charged withall, as they retain any other essentiall Right of the Sovereignty.

# **The Pastorall Authority Of Sovereigns Only Is De Jure Divino,**

## **That Of Other Pastors Is Jure Civili**

If a man therefore should ask a Pastor, in the execution of his Office, as the chief Priests and Elders of the people (Mat. 21.23.) asked our Saviour, "By what authority dost thou these things, and who gave thee this authority:" he can make no other just Answer, but that he doth it by the Authority of the Common-wealth, given him by the King, or Assembly that representeth it. All Pastors, except the Supreme, execute their charges in the Right, that is by the Authority of the Civill Sovereign, that is, Jure Civili. But the King, and every other Sovereign executeth his Office of Supreme Pastor, by immediate Authority from God, that is to say, In Gods Right, or Jure Divino. And therefore none but Kings can put into their Titles (a mark of their submission to God onely ) Dei Gratia Rex, &c. Bishops ought to say in the beginning of their Mandates, "By the favour of the Kings Majesty, Bishop of such a Diocesse;" or as Civill Ministers, "In his Majesties Name." For in saying, Divina Providentia, which is the same with Dei Gratia, though disguised, they deny to have received their authority from the Civill State; and sliely slip off the Collar of their Civill Subjection, contrary to the unity and defence of the Common-wealth.

## **Christian Kings Have Power To Execute All Manner Of Pastoral Function**

But if every Christian Sovereign be the Supreme Pastor of his own Subjects, it seemeth that he hath also the Authority, not only to Preach (which perhaps no man will deny;) but also to Baptize, and to Administer the Sacrament of the Lords Supper; and to Consecrate both Temples, and Pastors to Gods service; which most men deny; partly because they use not to do it; and partly because the Administration of Sacraments, and Consecration of Persons, and Places to holy uses, requireth the Imposition of such mens hands, as by the like Imposition successively from the time of the Apostles have been ordained to the like Ministry. For proof therefore that Christian Kings have power to Baptize, and to Consecrate, I am to render a reason, both why they use not to doe it, and how, without the ordinary ceremony of Imposition of hands, they are made capable of doing it, when they will.

There is no doubt but any King, in case he were skilfull in the Sciences, might by the same Right of his Office, read Lectures of them himself, by which he authorizeth others to read them in the Universities. Neverthelesse, because the care of the summe of the businesse of the Common-wealth taketh up his whole time, it were not convenient for him to apply himself in Person to that particular. A King may also if he please, sit in Judgment, to hear and determine all manner of Causes, as well as give others authority to doe it in his name; but that the charge that lyeth upon him of Command and Government, constrain him to bee continually at the Helm, and to commit the Ministeriall Offices to others under him. In the like manner our Saviour (who surely had power to Baptize) Baptized none himselfe, but sent his Apostles and Disciples to Baptize. (John 4.2.) So also S. Paul, by the necessity of Preaching in divers and far distant places, Baptized few: Amongst all the Corinthians he Baptized only Crispus, Cajus, and Stephanus; (1 Cor.1.14,16.) and the reason was, because his principall Charge was to Preach. (1 Cor. 1.17.) Whereby it is manifest, that the greater Charge, (such as is the Government of the Church,) is a dispensation for the lesse. The reason therefore why

Christian Kings use not to Baptize, is evident, and the same, for which at this day there are few Baptized by Bishops, and by the Pope fewer.

And as concerning Imposition of Hands, whether it be needfull, for the authorizing of a King to Baptize, and Consecrate, we may consider thus.

Imposition of Hands, was a most ancient publique ceremony amongst the Jews, by which was designed, and made certain, the person, or other thing intended in a mans prayer, blessing, sacrifice, consecration, condemnation, or other speech. So Jacob in blessing the children of Joseph (Gen. 48.14.) "Laid his right Hand on Ephraim the younger, and his left Hand on Manasseh the first born;" and this he did Wittingly (though they were so presented to him by Joseph, as he was forced in doing it to stretch out his arms across) to design to whom he intended the greater blessing. So also in the sacrificing of the Burnt offering, Aaron is commanded (Exod. 29.10.) "to Lay his Hands on the head of the bullock;" and (ver. 15.) "to Lay his Hand on the head of the ramme." The same is also said again, Levit. 1.4. & 8.14. Likewise Moses when he ordained Joshua to be Captain of the Israelites, that is, consecrated him to Gods service, (Numb. 27.23.) "Laid his hands upon him, and gave him his Charge," designing and rendring certain, who it was they were to obey in war. And in the consecration of the Levites (Numb. 8.10.) God commanded that "the Children of Israel should Put their Hands upon the Levites." And in the condemnation of him that had blasphemed the Lord (Levit. 24.14.) God commanded that "all that heard him should Lay their Hands on his head, and that all the Congregation should stone him." And why should they only that heard him, Lay their Hands upon him, and not rather a Priest, Levite, or other Minister of Justice, but that none else were able to design, and demonstrate to the eyes of the Congregation, who it was that had blasphemed, and ought to die? And to design a man, or any other thing, by the Hand to the Eye is lesse subject to mistake, than when it is done to the Eare by a Name.

And so much was this ceremony observed, that in blessing the whole Congregation at once, which cannot be done by Laying on of Hands, yet "Aaron (Levit. 9.22.) did lift up his Hand towards the people when he blessed them." And we read also of the like ceremony of Consecration of Temples amongst the Heathen, as that the Priest laid his Hands on some post of the Temple, all the while he was uttering the words of

Consecration. So naturall it is to design any individuall thing, rather by the Hand, to assure the Eyes, than by Words to inform the Eare in matters of Gods Publique service.

This ceremony was not therefore new in our Saviours time. For Jairus (Mark 5.23.) whose daughter was sick, besought our Saviour (not to heal her, but) "to Lay his Hands upon her, that shee might bee healed." And (Matth. 19.13.) "they brought unto him little children, that hee should Put his Hands on them, and Pray."

According to this ancient Rite, the Apostles, and Presbyters, and the Presbytery it self, Laid Hands on them whom they ordained Pastors, and withall prayed for them that they might receive the Holy Ghost; and that not only once, but sometimes oftner, when a new occasion was presented: but the end was still the same, namely a punctuall, and religious designation of the person, ordained either to the Pastorall Charge in general, or to a particular Mission: so (Act. 6.6.) "The Apostles Prayed, and Laid their Hands" on the seven Deacons; which was done, not to give them the Holy Ghost, (for they were full of the Holy Ghost before thy were chosen, as appeareth immediately before, verse 3.) but to design them to that Office. And after Philip the Deacon had converted certain persons in Samaria, Peter and John went down (Act. 8.17.)" and laid their Hands on them, and they received the Holy Ghost." And not only an Apostle, but a Presbyter had this power: For S. Paul adviseth Timothy (1 Tim. 5.22.) "Lay Hands suddenly on no man;" that is, designe no man rashly to the Office of a Pastor. The whole Presbytery Laid their Hands on Timothy, as we read 1 Tim. 4.14. but this is to be understood, as that some did it by the appointment of the Presbytery, and most likely their Proestos, or Prolocutor, which it may be was St. Paul himself. For in his 2 Epist. to Tim. ver. 6. he saith to him, "Stirre up the gift of God which is in thee, by the Laying on of my Hands:" where note by the way, that by the Holy ghost, is not meant the third Person in the Trinity, but the Gifts necessary to the Pastorall Office. We read also, that St. Paul had Imposition of Hands twice; once from Ananias at Damascus (Acts 9.17,18.) at the time of his Baptisme; and again (Acts 13.3.) at Antioch, when he was first sent out to Preach. The use then of this ceremony considered in the Ordination of Pastors, was to design the Person to whom they gave such Power. But if there had been then any Christian, that had had the Power of Teaching before; the Baptizing of him, that is the making of him a Christian, had

given him no new Power, but had onely caused him to preach true Doctrine, that is, to use his Power aright; and therefore the Imposition of Hands had been unnecessary; Baptisme it selfe had been sufficient. But every Soveraign, before Christianity, had the power of Teaching, and Ordaining Teachers; and therefore Christianity gave them no new Right, but only directed them in the way of teaching truth; and consequently they needed no Imposition of Hands (besides that which is done in Baptisme) to authorize them to exercise any part of the Pastorall Function, as namely, to Baptize, and Consecrate. And in the Old Testament, though the Priest only had right to Consecrate, during the time that the Soveraignty was in the High Priest; yet it was not so when the Soveraignty was in the King: For we read (1 Kings 8.) That Solomon Blessed the People, Consecrated the Temple, and pronounced that Publique Prayer, which is the pattern now for Consecration of all Christian Churches, and Chappels: whereby it appears, he had not only the right of Ecclesiasticall Government; but also of exercising Ecclesiasticall Functions.

# **The Civill Sovereigne If A Christian, Is Head Of The Church**

## **In His Own Dominions**

From this consolidation of the Right Politique, and Ecclesiastique in Christian Sovereigns, it is evident, they have all manner of Power over their Subjects, that can be given to man, for the government of mens externall actions, both in Policy, and Religion; and may make such Laws, as themselves shall judge fittest, for the government of their own Subjects, both as they are the Common-wealth, and as they are the Church: for both State, and Church are the same men.

If they please therefore, they may (as many Christian Kings now doe) commit the government of their Subjects in matters of Religion to the Pope; but then the Pope is in that point Subordinate to them, and exerciseth that Charge in anothers Dominion Jure Civili, in the Right of the Civill Sovereign; not Jure Divino, in Gods Right; and may therefore be discharged of that Office, when the Sovereign for the good of his Subjects shall think it necessary. They may also if they please, commit the care of Religion to one Supreme Pastor, or to an Assembly of Pastors; and give them what power over the Church, or one over another, they think most convenient; and what titles of honor, as of Bishops, Archbishops, Priests, or Presbyters, they will; and make such Laws for their maintenance, either by Tithes, or otherwise, as they please, so they doe it out of a sincere conscience, of which God onely is the Judge. It is the Civill Sovereign, that is to appoint Judges, and Interpreters of the Canonick Scriptures; for it is he that maketh them Laws. It is he also that giveth strength to Excommunications; which but for such Laws and Punishments, as may humble obstinate Libertines, and reduce them to union with the rest of the Church, would bee contemned. In summe, he hath the Supreme Power in all causes, as well Ecclesiasticall, as Civill, as far as concerneth actions, and words, for these onely are known, and may be accused; and of that which cannot be accused, there is no Judg at all, but God, that knoweth the heart. And these Rights are incident to all Sovereigns, whether Monarchs,

or Assemblies: for they that are the Representants of a Christian People, are Representants of the Church: for a Church, and a Common-wealth of Christian People, are the same thing.

## **Cardinal Bellarmine's Books De Summo Pontifice Considered**

Though this that I have here said, and in other places of this Book, seem cleer enough for the asserting of the Supreme Ecclesiasticall Power to Christian Sovereigns; yet because the Pope of Romes challenge to that Power universally, hath been maintained chiefly, and I think as strongly as is possible, by Cardinall Bellarmine, in his Controversie De Summo Pontifice; I have thought it necessary, as briefly as I can, to examine the grounds, and strength of his Discourse.

## The First Book

Of five Books he hath written of this subject, the first containeth three Questions: One, Which is simply the best government, Monarchy, Aristocracy, or Democracy; and concludeth for neither, but for a government mixt of all there: Another, which of these is the best Government of the Church; and concludeth for the mixt, but which should most participate of Monarchy: the third, whether in this mixt Monarchy, St. Peter had the place of Monarch. Concerning his first Conclusion, I have already sufficiently proved (chapt. 18.) that all Governments which men are bound to obey, are Simple, and Absolute. In Monarchy there is but One Man Supreme; and all other men that have any kind of Power in the State, have it by his Commission, during his pleasure; and execute it in his name: And in Aristocracy, and Democracy, but One Supreme Assembly, with the same Power that in Monarchy belongeth to the Monarch, which is not a Mixt, but an Absolute Sovereignty. And of the three sorts, which is the best, is not to be disputed, where any one of them is already established; but the present ought alwaies to be preferred, maintained, and accounted best; because it is against both the Law of Nature, and the Divine positive Law, to doe any thing tending to the subversion thereof. Besides, it maketh nothing to the Power of any Pastor, (unlesse he have the Civill Sovereignty,) what kind of Government is the best; because their Calling is not to govern men by Commandement, but to teach them, and perswade them by Arguments, and leave it to them to consider, whether they shall embrace, or reject the Doctrine taught. For Monarchy, Aristocracy, and Democracy, do mark out unto us three sorts of Sovereigns, not of Pastors; or, as we may say, three sorts of Masters of Families, not three sorts of Schoolmasters for their children.

And therefore the second Conclusion, concerning the best form of Government of the Church, is nothing to the question of the Popes Power without his own Dominions: For in all other Common-wealths his Power (if hee have any at all) is that of the Schoolmaster onely, and not of the Master of the Family.

For the third Conclusion, which is, that St. Peter was Monarch of the Church, he bringeth for his chiefe argument the place of S. Matth. (chap. 16.18, 19.) "Thou art Peter, And upon this rock I will build my Church, &c. And I will give thee the keyes of Heaven; whatsoever thou shalt bind on Earth, shall be bound in Heaven, and whatsoever thou shalt loose on Earth, shall be loosed in Heaven." Which place well considered, proveth no more, but that the Church of Christ hath for foundation one onely Article; namely, that which Peter in the name of all the Apostles professing, gave occasion to our Saviour to speak the words here cited; which that wee may cleerly understand, we are to consider, that our Saviour preached by himself, by John Baptist, and by his Apostles, nothing but this Article of Faith, "that he was the Christ;" all other Articles requiring faith no otherwise, than as founded on that. John began first, (Mat. 3.2.) preaching only this, "The Kingdome of God is at hand." Then our Saviour himself (Mat. 4.17.) preached the same: And to his Twelve Apostles, when he gave them their Commission (Mat. 10.7.) there is no mention of preaching any other Article but that. This was the fundamentall Article, that is the Foundation of the Churches Faith. Afterwards the Apostles being returned to him, he asketh them all, (Mat. 16.13) not Peter onely, "Who men said he was;" and they answered, that "some said he was John the Baptist, some Elias, and others Jeremias, or one of the Prophets:" Then (ver. 15.) he asked them all again, (not Peter onely) "Whom say yee that I am?" Therefore Peter answered (for them all) "Thou art Christ, the Son of the Living God;" which I said is the Foundation of the Faith of the whole Church; from which our Saviour takes the occasion of saying, "Upon this stone I will build my Church;" By which it is manifest, that by the Foundation-Stone of the Church, was meant the Fundamentall Article of the Churches Faith. But why then (will some object) doth our Saviour interpose these words, "Thou art Peter"? If the originall of this text had been rigidly translated, the reason would easily have appeared: We are therefore to consider, that the Apostle Simon, was surnamed Stone, (which is the signification of the Syriacke word Cephas, and of the Greek word Petrus). Our Saviour therefore after the confession of that Fundamentall Article, alluding to his name, said (as if it were in English) thus, Thou art "Stone," and upon this Stone I will build my Church: which is as much as to say, this Article, that "I am the Christ," is the Foundation of all the Faith I require in those that are to bee members of my Church: Neither is this

allusion to a name, an unusuall thing in common speech: But it had been a strange, and obscure speech, if our Saviour intending to build his Church on the Person of St. Peter, had said, "thou art a Stone, and upon this Stone I will build my Church," when it was so obvious without ambiguity to have said, "I will build my Church on thee; and yet there had been still the same allusion to his name.

And for the following words, "I will give thee the Keyes of Heaven, &c." it is no more than what our Saviour gave also to all the rest of his Disciples (Matth. 18.18.) "Whatsoever yee shall bind on Earth, shall be bound in Heaven. And whatsoever ye shall loose on Earth, shall be loosed in Heaven." But howsoever this be interpreted, there is no doubt but the Power here granted belongs to all Supreme Pastors; such as are all Christian Civill Soveraignes in their own Dominions. In so much, as if St. Peter, or our Saviour himself had converted any of them to beleve him, and to acknowledge his Kingdome; yet because his Kingdome is not of this world, he had left the supreme care of converting his subjects to none but him; or else hee must have deprived him of the Soveraignty, to which the Right of Teaching is inseparably annexed. And thus much in refutation of his first Book, wherein hee would prove St. Peter to have been the Monarch Universall of the Church, that is to say, of all the Christians in the world.

## **The Second Book**

The second Book hath two Conclusions: One, that S. Peter was Bishop of Rome, and there dyed: The other, that the Popes of Rome are his Successors. Both which have been disputed by others. But supposing them to be true; yet if by Bishop of Rome bee understood either the Monarch of the Church, or the Supreme Pastor of it; not Silvester, but Constantine (who was the first Christian Emperour) was that Bishop; and as Constantine, so all other Christian Emperors were of Right supreme Bishops of the Roman Empire; I say of the Roman Empire, not of all Christendome: For other Christian Sovereigns had the same Right in their severall Territories, as to an Office essentially adhaerent to their Sovereignty. Which shall serve for answer to his second Book.

## The Third Book

In the third Book, he handleth the question whether the Pope be Antichrist. For my part, I see no argument that proves he is so, in that sense that Scripture useth the name: nor will I take any argument from the quality of Antichrist, to contradict the Authority he exerciseth, or hath heretofore exercised in the Dominions of any other Prince, or State.

It is evident that the Prophets of the Old Testament foretold, and the Jews expected a Messiah, that is, a Christ, that should re-establish amongst them the kingdom of God, which had been rejected by them in the time of Samuel, when they required a King after the manner of other Nations. This expectation of theirs, made them obnoxious to the Imposture of all such, as had both the ambition to attempt the attaining of the Kingdome, and the art to deceive the People by counterfeit miracles, by hypocriticall life, or by orations and doctrine plausible. Our Saviour therefore, and his Apostles forewarned men of False Prophets, and of False Christs. False Christs, are such as pretend to be the Christ, but are not, and are called properly Antichrists, in such sense, as when there happeneth a Schisme in the Church by the election of two Popes, the one calleth the other Antipapa, or the false Pope. And therefore Antichrist in the proper signification hath two essentiall marks; One, that he denyeth Jesus to be Christ; and another that he professeth himselfe to bee Christ. The first Mark is set down by S. John in his 1 Epist. 4. ch. 3. ver. "Every Spirit that confesseth not that Jesus Christ is come in the flesh, is not of God; And this is the Spirit of Antichrist." The other Mark is expressed in the words of our Saviour, (Mat. 24.5.) "Many shall come in my name, saying, I am Christ;" and again, "If any man shall say unto you, Loe, here is Christ, there is Christ beleeve it not." And therefore Antichrist must be a False Christ, that is, some one of them that shall pretend themselves to be Christ. And out of these two Marks, "to deny Jesus to be the Christ," and to "affirm himselfe to be the Christ," it followeth, that he must also be an "Adversary of the true Christ," which is another usuall signification of the word Antichrist. But of these many Antichrists, there is one speciall one, O Antichristos, The Antichrist, or Antichrist definitely, as one certaine

person; not indefinitely An Antichrist. Now seeing the Pope of Rome, neither pretendeth himself, nor denyeth Jesus to be the Christ, I perceive not how he can be called Antichrist; by which word is not meant, one that falsely pretendeth to be His Lieutenant, or Vicar Generall, but to be Hee. There is also some Mark of the time of this speciall Antichrist, as (Mat. 24.15.) when that abominable Destroyer, spoken of by Daniel, (Dan. 9. 27.) shall stand in the Holy place, and such tribulation as was not since the beginning of the world, nor ever shall be again, insomuch as if it were to last long, (ver. 22.) "no flesh could be saved; but for the elects sake those days shall be shortened" (made fewer). But that tribulation is not yet come; for it is to be followed immediately (ver. 29.) by a darkening of the Sun and Moon, a falling of the Stars, a concussion of the Heavens, and the glorious coming again of our Saviour, in the cloudes. And therefore The Antichrist is not yet come; whereas, many Popes are both come and gone. It is true, the Pope in taking upon him to give Laws to all Christian Kings, and Nations, usurpeth a Kingdome in this world, which Christ took not on him: but he doth it not As Christ, but as For Christ, wherein there is nothing of the Antichrist.

## **The Fourth Book**

In the fourth Book, to prove the Pope to be the supreme Judg in all questions of Faith and Manners, (which is as much as to be the absolute Monarch of all Christians in the world,) he bringeth three Propositions: The first, that his Judgments are Infallible: The second, that he can make very Laws, and punish those that observe them not: The third, that our Saviour conferred all Jurisdiction Ecclesiasticall on the Pope of Rome.

## **Texts For The Infallibility Of The Popes Judgement In Points Of Faith**

For the Infallibility of his Judgments, he alledgeth the Scriptures: and first, that of Luke 22.31. "Simon, Simon, Satan hath desired you that hee may sift you as wheat; but I have prayed for thee, that thy faith faile not; and when thou art converted, strengthen thy Brethren." This, according to Bellarmines exposition, is, that Christ gave here to Simon Peter two priviledges: one, that neither his Faith should fail, neither he, nor any of his successors should ever define any point concerning Faith, or Manners erroneously, or contrary to the definition of a former Pope: Which is a strange, and very much strained interpretation. But he that with attention readeth that chapter, shall find there is no place in the whole Scripture, that maketh more against the Popes Authority, than this very place. The Priests and Scribes seeking to kill our Saviour at the Passeover, and Judas possessed with a resolution to betray him, and the day of killing the Passeover being come, our Saviour celebrated the same with his Apostles, which he said, till the Kingdome of God was come hee would doe no more; and withall told them, that one of them was to betray him: Hereupon they questioned, which of them it should be; and withall (seeing the next Passeover their Master would celebrate should be when he was King) entred into a contention, who should then be the greater man. Our Saviour therefore told them, that the Kings of the Nations had Dominion over their Subjects, and are called by a name (in Hebrew) that signifies Bountifull; but I cannot be so to you, you must endeavour to serve one another; I ordain you a Kingdome, but it is such as my Father hath ordained mee; a Kingdome that I am now to purchase with my blood, and not to possesse till my second coming; then yee shall eat and drink at my Table, and sit on Thrones, judging the twelve Tribes of Israel: And then addressing himself to St. Peter, he saith, Simon, Simon, Satan seeks by suggesting a present domination, to weaken your faith of the future; but I have prayed for thee, that thy faith shall not fail; Thou therefore (Note this,) being converted, and understanding my Kingdome as of another world, confirm the same faith in thy Brethren: To which S. Peter answered (as one that no more

expected any authority in this world) "Lord I am ready to goe with thee, not onely to Prison, but to Death." Whereby it is manifest, S. Peter had not onely no jurisdiction given him in this world, but a charge to teach all the other Apostles, that they also should have none. And for the Infallibility of St. Peters sentence definitive in matter of Faith, there is no more to be attributed to it out of this Text, than that Peter should continue in the beleef of this point, namely, that Christ should come again, and possesse the Kingdome at the day of Judgement; which was not given by the Text to all his Successors; for wee see they claim it in the World that now is.

The second place is that of Matth. 16. "Thou art Peter, and upon this rocke I will build my Church, and the gates of Hell shall not prevail against it." By which (as I have already shewn in this chapter) is proved no more, than that the gates of Hell shall not prevail against the confession of Peter, which gave occasion to that speech; namely this, That Jesus Is Christ The Sonne Of God.

The third text is John 21. ver. 16,17. "Feed my sheep;" which contains no more but a Commission of Teaching: And if we grant the rest of the Apostles to be contained in that name of Sheep; then it is the supreme Power of Teaching: but it was onely for the time that there were no Christian Sovereignes already possessed of that Supremacy. But I have already proved, that Christian Sovereignes are in their owne Dominions the supreme Pastors, and instituted thereto, by vertue of their being Baptized, though without other Imposition of Hands. For such imposition being a Ceremony of designing the person, is needlesse, when hee is already designed to the Power of Teaching what Doctrine he will, by his institution to an Absolute Power over his Subjects. For as I have proved before, Sovereignes are supreme Teachers (in generall) by their Office and therefore oblige themselves (by their Baptisme) to teach the Doctrine of Christ: And when they suffer others to teach their people, they doe it at the perill of their own souls; for it is at the hands of the Heads of Families that God will require the account of the instruction of his Children and Servants. It is of Abraham himself, not of a hireling, that God saith (Gen. 18.19) "I know him that he will command his Children, and his household after him, that they keep the way of the Lord, and do justice and judgement.

The fourth place is that of Exod. 28.30. "Thou shalt put in the Breastplate of Judgment, the Urim and the Thummin:" which hee saith is interpreted by the Septuagint, delosin kai aletheian, that is, Evidence and Truth: And thence concludeth, God had given Evidence, and Truth, (which is almost infallibility,) to the High Priest. But be it Evidence and Truth it selfe that was given; or be it but Admonition to the Priest to endeavour to inform himself cleerly, and give judgment uprightly; yet in that it was given to the High Priest, it was given to the Civill Sovereign: For next under God was the High Priest in the Common-wealth of Israel; and is an argument for Evidence and Truth, that is, for the Ecclesiasticall Supremacy of Civill Sovereigns over their own Subjects, against the pretended Power of the Pope. These are all the Texts hee bringeth for the Infallibility of the Judgement of the Pope, in point of Faith.

## **Texts For The Same In Point Of Manners**

For the Infallibility of his Judgment concerning Manners, hee bringeth one Text, which is that of John 16.13. "When the Spirit of truth is come, hee will lead you into all truth" where (saith he) by All Truth, is meant, at least, All Truth Necessary To Salvation. But with this mitigation, he attributeth no more Infallibility to the Pope, than to any man that professeth Christianity, and is not to be damned: For if any man erre in any point, wherein not to erre is necessary to Salvation, it is impossible he should be saved; for that onely is necessary to Salvation, without which to be saved is impossible. What points these are, I shall declare out of the Scripture in the Chapter following. In this place I say no more, but that though it were granted, the Pope could not possibly teach any error at all, yet doth not this entitle him to any Jurisdiction in the Dominions of another Prince, unlesse we shall also say, a man is obliged in conscience to set on work upon all occasions the best workman, even then also when he hath formerly promised his work to another.

Besides the Text, he argueth from Reason, thus, If the Pope could erre in necessaries, then Christ hath not sufficiently provided for the Churches Salvation; because he hath commanded her to follow the Popes directions. But this Reason is invalid, unlesse he shew when, and where Christ commanded that, or took at all any notice of a Pope: Nay granting whatsoever was given to S. Peter was given to the Pope; yet seeing there is in the Scripture no command to any man to obey St. Peter, no man can bee just, that obeyeth him, when his commands are contrary to those of his lawfull Sovereign.

Lastly, it hath not been declared by the Church, nor by the Pope himselve, that he is the Civill Sovereign of all the Christians in the world; and therefore all Christians are not bound to acknowledge his Jurisdiction in point of Manners. For the Civill Sovereignty, and supreme Judicature in controversies of Manners, are the same thing: And the Makers of Civill Laws, are not onely Declarers, but also Makers of the justice, and injustice of actions; there being nothing in mens Manners that makes them righteous, or unrighteous, but their conformity with the Law of the

Sovereign. And therefore when the Pope challengeth Supremacy in controversies of Manners, hee teacheth men to disobey the Civill Sovereign; which is an erroneous Doctrine, contrary to the many precepts of our Saviour and his Apostles, delivered to us in the Scripture.

To prove the Pope has Power to make Laws, he alledgeth many places; as first, Deut. 17.12. "The man that will doe presumptuously, and will not hearken unto the Priest, (that standeth to Minister there before the Lord thy God, or unto the Judge,) even that man shall die, and thou shalt put away the evill from Israel." For answer whereunto, we are to remember that the High Priest (next and immediately under God) was the Civill Sovereign; and all Judges were to be constituted by him. The words alledged sound therefore thus. "The man that will presume to disobey the Civill Sovereign for the time being, or any of his Officers in the execution of their places, that man shall die, &c." which is cleerly for the Civill Sovereignty, against the Universall power of the Pope.

Secondly, he alledgeth that of Matth. 16. "Whatsoever yee shall bind, &c." and interpreteth it for such Binding as is attributed (Matth. 23.4.) to the Scribes and Pharisees, "They bind heavy burthens, and grievous to be born, and lay them on mens shoulders;" by which is meant (he sayes) Making of Laws; and concludes thence, the Pope can make Laws. But this also maketh onely for the Legislative power of Civill Sovereigns: For the Scribes, and Pharisees sat in Moses Chaire, but Moses next under God was Sovereign of the People of Israel: and therefore our Saviour commanded them to doe all that they should say, but not all that they should do. That is, to obey their Laws, but not follow their Example.

The third place, is John 21.16. "Feed my sheep;" which is not a Power to make Laws, but a command to Teach. Making Laws belongs to the Lord of the Family; who by his owne discretion chooseth his Chaplain, as also a Schoolmaster to Teach his children.

The fourth place John 20.21. is against him. The words are, "As my Father sent me, so send I you." But our Saviour was sent to Redeem (by his Death) such as should Beleeve; and by his own, and his Apostles preaching to prepare them for their entrance into his Kingdome; which he himself saith, is not of this world, and hath taught us to pray for the coming of it hereafter, though hee refused (Acts 1.6,7.) to tell his Apostles when it should come; and in which, when it comes, the twelve Apostles

shall sit on twelve Thrones (every one perhaps as high as that of St. Peter) to judge the twelve tribes of Israel. Seeing then God the Father sent not our Saviour to make Laws in this present world, wee may conclude from the Text, that neither did our Saviour send S. Peter to make Laws here, but to perswade men to expect his second comming with a stedfast faith; and in the mean time, if Subjects, to obey their Princes; and if Princes, both to beleieve it themselves, and to do their best to make their Subjects doe the same; which is the Office of a Bishop. Therefore this place maketh most strongly for the joining of the Ecclesiasticall Supremacy to the Civill Sovereignty, contrary to that which Cardinall Bellarmine alledgeth it for.

The fift place is Acts 15.28. "It hath seemed good to the Holy Spirit, and to us, to lay upon you no greater burden, than these necessary things, that yee abstaine from meats offered to Idols, and from bloud, and from things strangled, and from fornication." Here hee notes the word Laying Of Burdens for the Legislative Power. But who is there, that reading this Text, can say, this stile of the Apostles may not as properly be used in giving Counsell, as in making Laws? The stile of a Law is, We Command: But, We Think Good, is the ordinary stile of them, that but give Advice; and they lay a Burthen that give Advice, though it bee conditionall, that is, if they to whom they give it, will attain their ends: And such is the Burthen, of abstaining from things strangled, and from bloud; not absolute, but in case they will not erre. I have shewn before (chap. 25.) that Law, is distinguished from Counsell, in this, that the reason of a Law, is taken from the designe, and benefit of him that prescribeth it; but the reason of a Counsell, from the designe, and benefit of him, to whom the Counsell is given. But here, the Apostles aime onely at the benefit of the converted Gentiles, namely their Salvation; not at their own benefit; for having done their endeavour, they shall have their reward, whether they be obeyed, or not. And therefore the Acts of this Councell, were not Laws, but Counsells.

The sixt place is that of Rom. 13. "Let every Soul be subject to the Higher Powers, for there is no Power but of God;" which is meant, he saith not onely of Secular, but also of Ecclesiasticall Princes. To which I answer, first, that there are no Ecclesiasticall Princes but those that are also Civill Sovereignes; and their Principalities exceed not the compasse of their Civill Sovereignty; without those bounds though they may be received for Doctors, they cannot be acknowledged for Princes. For if the Apostle had meant, we should be subject both to our own Princes, and also

to the Pope, he had taught us a doctrine, which Christ himself hath told us is impossible, namely, "to serve two Masters." And though the Apostle say in another place, "I write these things being absent, lest being present I should use sharpnesse, according to the Power which the Lord hath given me;" it is not, that he challenged a Power either to put to death, imprison, banish, whip, or fine any of them, which are Punishments; but onely to Excommunicate, which (without the Civill Power) is no more but a leaving of their company, and having no more to doe with them, than with a Heathen man, or a Publican; which in many occasions might be a greater pain to the Excommunicant, than to the Excommunicate.

The seventh place is 1 Cor. 4.21. "Shall I come unto you with a Rod, or in love, and the spirit of lenity?" But here again, it is not the Power of a Magistrate to punish offenders, that is meant by a Rod; but onely the Power of Excommunication, which is not in its owne nature a Punishment, but onely a Denouncing of punishment, that Christ shall inflict, when he shall be in possession of his Kingdome, at the day of Judgment. Nor then also shall it bee properly a Punishment, as upon a Subject that hath broken the Law; but a Revenge, as upon an Enemy, or Revolter, that denyeth the Right of our Saviour to the Kingdome: And therefore this proveth not the Legislative Power of any Bishop, that has not also the Civill Power.

The eighth place is, Timothy 3.2. "A Bishop must be the husband but of one wife, vigilant, sober, &c." which he saith was a Law. I thought that none could make a Law in the Church, but the Monarch of the Church, St. Peter. But suppose this Precept made by the authority of St. Peter; yet I see no reason why to call it a Law, rather than an Advice, seeing Timothy was not a Subject, but a Disciple of St. Paul; nor the flock under the charge of Timothy, his Subjects in the Kingdome, but his Scholars in the Schoole of Christ: If all the Precepts he giveth Timothy, be Laws, why is not this also a Law, "Drink no longer water, but use a little wine for thy healths sake"? And why are not also the Precepts of good Physitians, so many Laws? but that it is not the Imperative manner of speaking, but an absolute Subjection to a Person, that maketh his Precept Laws.

In like manner, the ninth place, 1 Tim. 5. 19. "Against an Elder receive not an accusation, but before two or three Witnesses," is a wise Precept, but not a Law.

The tenth place is, Luke 10.16. "He that heareth you, heareth mee; and he that despiseth you, despiseth me." And there is no doubt, but he that despiseth the Counsell of those that are sent by Christ, despiseth the Counsell of Christ himself. But who are those now that are sent by Christ, but such as are ordained Pastors by lawfull Authority? and who are lawfully ordained, that are not ordained by the Sovereign Pastor? and who is ordained by the Sovereign Pastor in a Christian Common-wealth, that is not ordained by the authority of the Sovereign thereof? Out of this place therefore it followeth, that he which heareth his Sovereign being a Christian, heareth Christ; and hee that despiseth the Doctrine which his King being a Christian, authorizeth, despiseth the Doctrine of Christ (which is not that which Bellarmine intendeth here to prove, but the contrary). But all this is nothing to a Law. Nay more, a Christian King, as a Pastor, and Teacher of his Subjects, makes not thereby his Doctrines Laws. He cannot oblige men to beleieve; though as a Civill Sovereign he may make Laws suitable to his Doctrine, which may oblige men to certain actions, and sometimes to such as they would not otherwise do, and which he ought not to command; and yet when they are commanded, they are Laws; and the externall actions done in obedience to them, without the inward approbation, are the actions of the Sovereign, and not of the Subject, which is in that case but as an instrument, without any motion of his owne at all; because God hath commanded to obey them.

The eleventh, is every place, where the Apostle for Counsell, putteth some word, by which men use to signifie Command; or calleth the following of his Counsell, by the name of Obedience. And therefore they are alledged out of 1 Cor. 11.2. "I commend you for keeping my Precepts as I delivered them to you." The Greek is, "I commend you for keeping those things I delivered to you, as I delivered them." Which is far from signifying that they were Laws, or any thing else, but good Counsell. And that of 1 Thess. 4.2. "You know what commandements we gave you:" where the Greek word is *paraggelias edokamen*, equivalent to *paredokamen*, what wee delivered to you, as in the place next before alledged, which does not prove the Traditions of the Apostles, to be any more than Counsells; though as is said in the 8th verse, "he that despiseth them, despiseth not man, but God": For our Saviour himself came not to Judge, that is, to be King in this world; but to Sacrifice himself for Sinners, and leave Doctors in his Church, to lead, not to drive men to

Christ, who never accepteth forced actions, (which is all the Law produceth,) but the inward conversion of the heart; which is not the work of Laws, but of Counsell, and Doctrine.

And that of 2 Thess. 3.14. "If any man Obey not our word by this Epistle, note that man, and have no company with him, that he may bee ashamed": where from the word Obey, he would inferre, that this Epistle was a Law to the Thessalonians. The Epistles of the Emperours were indeed Laws. If therefore the Epistle of S. Paul were also a Law, they were to obey two Masters. But the word Obey, as it is in the Greek upakouei, signifieth Harkening To, or Putting In Practice, not onely that which is Comanded by him that has right to punish, but also that which is delivered in a way of Counsell for our good; and therefore St. Paul does not bid kill him that disobeys, nor beat, nor imprison, nor amerce him, which Legislators may all do; but avoid his company, that he may bee ashamed: whereby it is evident, it was not the Empire of an Apostle, but his Reputation amongst the Faithfull, which the Christians stood in awe of.

The last place is that of Heb. 13.17. "Obey your Leaders, and submit your selves to them, for they watch for your souls, as they that must give account:" And here also is intended by Obedience, a following of their Counsell: For the reason of our Obedience, is not drawn from the will and command of our Pastors, but from our own benefit, as being the Salvation of our Souls they watch for, and not for the Exaltation of their own Power, and Authority. If it were meant here, that all they teach were Laws, then not onely the Pope, but every Pastor in his Parish should have Legislative Power. Again, they that are bound to obey, their Pastors, have no power to examine their commands. What then shall wee say to St. John who bids us (1 Epist. chap. 4. ver. 1.) "Not to beleieve every Spirit, but to try the Spirits whether they are of God, because many false Prophets are gone out into the world"? It is therefore manifest, that wee may dispute the Doctrine of our Pastors; but no man can dispute a Law. The Commands of Civill Sovereigns are on all sides granted to be Laws: if any else can make a Law besides himselfe, all Common-wealth, and consequently all Peace, and Justice must cease; which is contrary to all Laws, both Divine and Humane. Nothing therefore can be drawn from these, or any other places of Scripture, to prove the Decrees of the Pope, where he has not also the Civill Sovereignty, to be Laws.

The Question Of Superiority Between The Pope And Other Bishops The last point hee would prove, is this, "That our Saviour Christ has committed Ecclesiasticall Jurisdiction immediately to none but the Pope." Wherein he handleth not the Question of Supremacy between the Pope and Christian Kings, but between the Pope and other Bishops. And first, he sayes it is agreed, that the Jurisdiction of Bishops, is at least in the generall De Jure Divino, that is, in the Right of God; for which he alledges S. Paul, Ephes. 4.11. where hee sayes, that Christ after his Ascension into heaven, "gave gifts to men, some Apostles, some Prophets, and some Evangelists, and some Pastors, and some Teachers:" And thence inferres, they have indeed their Jurisdiction in Gods Right; but will not grant they have it immediately from God, but derived through the Pope. But if a man may be said to have his Jurisdiction De Jure Divino, and yet not immediately; what lawfull Jurisdiction, though but Civill, is there in a Christian Common-wealth, that is not also De Jure Divino? For Christian Kings have their Civill Power from God immediately; and the Magistrates under him exercise their severall charges in vertue of his Commission; wherein that which they doe, is no lesse De Jure Divino Mediato, than that which the Bishops doe, in vertue of the Popes Ordination. All lawfull Power is of God, immediately in the Supreme Governour, and mediately in those that have Authority under him: So that either hee must grant every Constable in the State, to hold his Office in the Right of God; or he must not hold that any Bishop holds his so, besides the Pope himselfe.

But this whole Dispute, whether Christ left the Jurisdiction to the Pope onely, or to other Bishops also, if considered out of these places where the Pope has the Civill Sovereignty, is a contention De Lana Caprina: For none of them (where they are not Sovereigns) has any Jurisdiction at all. For Jurisdiction is the Power of hearing and determining Causes between man and man; and can belong to none, but him that hath the Power to prescribe the Rules of Right and Wrong; that is, to make Laws; and with the Sword of Justice to compell men to obey his Decisions, pronounced either by himself, or by the Judges he ordaineth thereunto; which none can lawfully do, but the Civill Sovereign.

Therefore when he alledgeth out of the 6 of Luke, that our Saviour called his Disciples together, and chose twelve of them which he named Apostles, he proveth that he Elected them (all, except Matthias, Paul and Barnabas,) and gave them Power and Command to Preach, but not to Judge

of Causes between man and man: for that is a Power which he refused to take upon himselfe, saying, "Who made me a Judge, or a Divider, amongst you?" and in another place, "My Kingdome is not of this world." But hee that hath not the Power to hear, and determine Causes between man and man, cannot be said to have any Jurisdiction at all. And yet this hinders not, but that our Saviour gave them Power to Preach and Baptize in all parts of the world, supposing they were not by their own lawfull Sovereign forbidden: For to our own Sovereigns Christ himself, and his Apostles have in sundry places expressly commanded us in all things to be obedient.

The arguments by which he would prove, that Bishops receive their Jurisdiction from the Pope (seeing the Pope in the Dominions of other Princes hath no Jurisdiction himself,) are all in vain. Yet because they prove, on the contrary, that all Bishops receive Jurisdiction when they have it from their Civill Sovereigns, I will not omit the recitall of them.

The first, is from Numbers 11. where Moses not being able alone to undergoe the whole burthen of administring the affairs of the People of Israel, God commanded him to choose Seventy Elders, and took part of the spirit of Moses, to put it upon those Seventy Elders: by which it is understood, not that God weakened the spirit of Moses, for that had not eased him at all; but that they had all of them their authority from him; wherein he doth truly, and ingenuously interpret that place. But seeing Moses had the entire Sovereignty in the Common-wealth of the Jews, it is manifest, that it is thereby signified, that they had their Authority from the Civill Sovereign: and therefore that place proveth, that Bishops in every Christian Common-wealth have their Authority from the Civill Sovereign; and from the Pope in his own Territories only, and not in the Territories of any other State.

The second argument, is from the nature of Monarchy; wherein all Authority is in one Man, and in others by derivation from him: But the Government of the Church, he says, is Monarchicall. This also makes for Christian Monarchs. For they are really Monarchs of their own people; that is, of their own Church (for the Church is the same thing with a Christian people;) whereas the Power of the Pope, though hee were S. Peter, is neither Monarchy, nor hath any thing of Archicall, nor Craticall,

but onely of Didacticall; For God accepteth not a forced, but a willing obedience.

The third, is, from that the Sea of S. Peter is called by S. Cyprian, the Head, the Source, the Roote, the Sun, from whence the Authority of Bishops is derived. But by the Law of Nature (which is a better Principle of Right and Wrong, than the word of any Doctor that is but a man) the Civill Sovereign in every Common-wealth, is the Head, the Source, the Root, and the Sun, from which all Jurisdiction is derived. And therefore, the Jurisdiction of Bishops, is derived from the Civill Sovereign.

The fourth, is taken from the Inequality of their Jurisdictions: For if God (saith he) had given it them immediately, he had given aswell Equality of Jurisdiction, as of Order: But wee see, some are Bishops but of own Town, some of a hundred Towns, and some of many whole Provinces; which differences were not determined by the command of God; their Jurisdiction therefore is not of God, but of Man; and one has a greater, another a lesse, as it pleaseth the Prince of the Church. Which argument, if he had proved before, that the Pope had had an Universall Jurisdiction over all Christians, had been for his purpose. But seeing that hath not been proved, and that it is notoriously known, the large Jurisdiction of the Pope was given him by those that had it, that is, by the Emperours of Rome, (for the Patriarch of Constantinople, upon the same title, namely, of being Bishop of the Capitall City of the Empire, and Seat of the Emperour, claimed to be equal to him,) it followeth, that all other Bishops have their Jurisdiction from the Sovereigns of the place wherein they exercise the same: And as for that cause they have not their Authority De Jure Divino; so neither hath the Pope his De Jure Divino, except onely where hee is also the Civill Sovereign.

His fift argument is this, "If Bishops have their Jurisdiction immediately from God, the Pope could not take it from them, for he can doe nothing contrary to Gods ordination;" And this consequence is good, and well proved. "But, (saith he) the Pope can do this, and has done it." This also is granted, so he doe it in his own Dominions, or in the Dominions of any other Prince that hath given him that Power; but not universally, in Right of the Popedome: For that power belongeth to every Christian Sovereign, within the bounds of his owne Empire, and is inseparable from the Sovereignty. Before the People of Israel had (by the

commandment of God to Samuel) set over themselves a King, after the manner of other Nations, the High Priest had the Civill Government; and none but he could make, nor depose an inferiour Priest: But that Power was afterwards in the King, as may be proved by this same argument of Bellarmine; For if the Priest (be he the High Priest or any other) had his Jurisdiction immediately from God, then the King could not take it from him; "for he could do nothing contrary to Gods ordinance: But it is certain, that King Solomon (1 Kings 2.26.) deprived Abiathar the High Priest of his office, and placed Zadok (verse 35.) in his room. Kings therefore may in the like manner Ordaine, and Deprive Bishops, as they shall thinke fit, for the well governing of their Subjects.

His sixth argument is this, If Bishops have their Jurisdiction De Jure Divino (that is, immediately from God,) they that maintaine it, should bring some Word of God to prove it: But they can bring none. The argument is good; I have therefore nothing to say against it. But it is an argument no lesse good, to prove the Pope himself to have no Jurisdiction in the Dominion of any other Prince.

Lastly, hee bringeth for argument, the testimony of two Popes, Innocent, and Leo; and I doubt not but hee might have alledged, with as good reason, the testimonies of all the Popes almost since S. Peter: For considering the love of Power naturally implanted in mankind, whosoever were made Pope, he would be tempted to uphold the same opinion. Neverthelesse, they should therein but doe, as Innocent, and Leo did, bear witness of themselves, and therefore their witness should not be good.

## Of The Popes Temporall Power

In the fift Book he hath four Conclusions. The first is, "That the Pope in not Lord of all the world:" the second, "that the Pope is not Lord of all the Christian world:" The third, "That the Pope (without his owne Territory) has not any Temporall Jurisdiction DIRECTLY:" These three Conclusions are easily granted. The fourth is, "That the Pope has (in the Dominions of other Princes) the Supreme Temporall Power INDIRECTLY:" which is denied; unlesse he mean by Indirectly, that he has gotten it by Indirect means; then is that also granted. But I understand, that when he saith he hath it Indirectly, he means, that such Temporall Jurisdiction belongeth to him of Right, but that this Right is but a Consequence of his Pastorall Authority, the which he could not exercise, unlesse he have the other with it: And therefore to the Pastorall Power (which he calls Spirituall) the Supreme Power Civill is necessarily annexed; and that thereby hee hath a Right to change Kingdomes, giving them to one, and taking them from another, when he shall think it conduces to the Salvation of Souls.

Before I come to consider the Arguments by which hee would prove this doctrine, it will not bee amisse to lay open the Consequences of it; that Princes, and States, that have the Civill Sovereignty in their severall Common-wealths, may bethink themselves, whether it bee convenient for them, and conducing to the good of their Subjects, of whom they are to give an account at the day of Judgment, to admit the same.

When it is said, the Pope hath not (in the Territories of other States) the Supreme Civill Power Directly; we are to understand, he doth not challenge it, as other Civill Sovereigns doe, from the originall submission thereto of those that are to be governed. For it is evident, and has already been sufficiently in this Treatise demonstrated, that the Right of all Sovereigns, is derived originally from the consent of every one of those that are to bee governed; whether they that choose him, doe it for their common defence against an Enemy, as when they agree amongst themselves to appoint a Man, or an Assembly of men to protect them; or whether they doe it, to save their lives, by submission to a conquering Enemy. The Pope therefore, when he disclaimeth the Supreme Civill

Power over other States Directly, denyeth no more, but that his Right cometh to him by that way; He ceaseth not for all that, to claime it another way; and that is, (without the consent of them that are to be governed) by a Right given him by God, (which hee calleth Indirectly,) in his Assumption to the Papacy. But by what way soever he pretend, the Power is the same; and he may (if it bee granted to be his Right) depose Princes and States, as often as it is for the Salvation of Soules, that is, as often as he will; for he claimeth also the Sole Power to Judge, whether it be to the salvation of mens Souls, or not. And this is the Doctrine, not onely that Bellarmine here, and many other Doctors teach in their Sermons and Books, but also that some Councells have decreed, and the Popes have decreed, and the Popes have accordingly, when the occasion hath served them, put in practise. For the fourth Councell of Lateran held under Pope Innocent the third, (in the third Chap. De Haereticis,) hath this Canon. "If a King at the Popes admonition, doe not purge his Kingdome of Haereticques, and being Excommunicate for the same, make not satisfaction within a year, his subjects are absolved of their Obedience." And the practise hereof hath been seen on divers occasions; as in the Depositing of Chilperique, King of France; in the Translation of the Roman Empire to Charlemaine; in the Oppression of John King of England; in Transferring the Kingdome of Navarre; and of late years, in the League against Henry the third of France, and in many more occurrences. I think there be few Princes that consider not this as Injust, and Inconvenient; but I wish they would all resolve to be Kings, or Subjects. Men cannot serve two Masters: They ought therefore to ease them, either by holding the Reins of Government wholly in their own hands; or by wholly delivering them into the hands of the Pope; that such men as are willing to be obedient, may be protected in their obedience. For this distinction of Temporall, and Spirituall Power is but words. Power is as really divided, and as dangerously to all purposes, by sharing with another Indirect Power, as with a Direct one. But to come now to his Arguments.

The first is this, "The Civill Power is subject to the Spirituall: Therefore he that hath the Supreme Power Spirituall, hath right to command Temporall Princes, and dispose of their Temporalls in order to the Spirituall. As for the distinction of Temporall, and Spirituall, let us consider in what sense it may be said intelligibly, that the Temporall, or Civill Power is subject to the Spirituall. There be but two ways that those

words can be made sense. For when wee say, one Power is subject to another Power, the meaning either is, that he which hath the one, is subject to him that hath the other; or that the one Power is to the other, as the means to the end. For wee cannot understand, that one Power hath Power over another Power; and that one Power can have Right or Command over another: For Subjection, Command, Right, and Power are accidents, not of Powers, but of Persons: One Power may be subordinate to another, as the art of a Sadler, to the art of a Rider. If then it be granted, that the Civill Government be ordained as a means to bring us to a Spirituall felicity; yet it does not follow, that if a King have the Civill Power, and the Pope the Spirituall, that therefore the King is bound to obey the Pope, more then every Sadler is bound to obey every Rider. Therefore as from Subordination of an Art, cannot be inferred the Subjection of the Professor; so from the Subordination of a Government, cannot be inferred the Subjection of the Governor. When therefore he saith, the Civill Power is Subject to the Spirituall, his meaning is, that the Civill Sovereign, is Subject to the Spirituall Sovereign. And the Argument stands thus, "The Civil Sovereign, is subject to the Spirituall; Therefore the Spirituall Prince may command Temporall Princes." Where the conclusion is the same, with the Antecedent he should have proved. But to prove it, he alledgeth first, this reason, "Kings and Popes, Clergy and Laity make but one Commonwealth; that is to say, but one Church: And in all Bodies the Members depend one upon another: But things Spirituall depend not of things Temporall: Therefore, Temporall depend on Spirituall. And therefore are Subject to them." In which Argumentation there be two grosse errors: one is, that all Christian Kings, Popes, Clergy, and all other Christian men, make but one Commonwealth: For it is evident that France is one Commonwealth, Spain another, and Venice a third, &c. And these consist of Christians; and therefore also are severall Bodies of Christians; that is to say, severall Churches: And their severall Sovereigns Represent them, whereby they are capable of commanding and obeying, of doing and suffering, as a natural man; which no Generall or Universall Church is, till it have a Representant; which it hath not on Earth: for if it had, there is no doubt but that all Christendome were one Commonwealth, whose Sovereign were that Representant, both in things Spirituall and Temporall: And the Pope, to make himself this Representant, wanteth three things that our Saviour hath not given him, to Command, and to Judge, and to Punish,

otherwise than (by Excommunication) to run from those that will not Learn of him: For though the Pope were Christs onely Vicar, yet he cannot exercise his government, till our Saviours second coming: And then also it is not the Pope, but St. Peter himselfe, with the other Apostles, that are to be Judges of the world.

The other error in this his first Argument is, that he sayes, the Members of every Common-wealth, as of a naturall Body, depend one of another: It is true, they cohaere together; but they depend onely on the Sovereign, which is the Soul of the Common-wealth; which failing, the Common-wealth is dissolved into a Civill war, no one man so much as cohaering to another, for want of a common Dependance on a known Sovereign; Just as the Members of the naturall Body dissolve into Earth, for want of a Soul to hold them together. Therefore there is nothing in this similitude, from whence to inferre a dependance of the Laity on the Clergy, or of the Temporall Officers on the Spirituall; but of both on the Civill Sovereign; which ought indeed to direct his Civill commands to the Salvation of Souls; but is not therefore subject to any but God himselfe. And thus you see the laboured fallacy of the first Argument, to deceive such men as distinguish not between the Subordination of Actions in the way to the End; and the Subjection of Persons one to another in the administration of the Means. For to every End, the Means are determined by Nature, or by God himselfe supernaturally: but the Power to make men use the Means, is in every nation resigned (by the Law of Nature, which forbiddeth men to violate their Faith given) to the Civill Sovereign.

His second Argument is this, "Every Common-wealth, (because it is supposed to be perfect and sufficient in it self,) may command any other Common-wealth, not subject to it, and force it to change the administration of the Government, nay depose the Prince, and set another in his room, if it cannot otherwise defend it selfe against the injuries he goes about to doe them: much more may a Spirituall Common-wealth command a Temporall one to change the administration of their Government, and may depose Princes, and institute others, when they cannot otherwise defend the Spirituall Good."

That a Common-wealth, to defend it selfe against injuries, may lawfully doe all that he hath here said, is very true; and hath already in that which hath gone before been sufficiently demonstrated. And if it were also true,

that there is now in this world a Spirituall Common-wealth, distinct from a Civill Common-wealth, then might the Prince thereof, upon injury done him, or upon want of caution that injury be not done him in time to come, repaire, and secure himself by Warre; which is in summe, deposing, killing, or subduing, or doing any act of Hostility. But by the same reason, it would be no lesse lawfull for a Civill Sovereign, upon the like injuries done, or feared, to make warre upon the Spirituall Sovereign; which I beleieve is more than Cardinall Bellarmine would have inferred from his own proposition.

But Spirituall Common-wealth there is none in this world: for it is the same thing with the Kingdome of Christ; which he himselfe saith, is not of this world; but shall be in the next world, at the Resurrection, when they that have lived justly, and beleevd that he was the Christ, shall (though they died Naturall bodies) rise Spirituall bodies; and then it is, that our Saviour shall judge the world, and conquer his Adversaries, and make a Spirituall Common-wealth. In the mean time, seeing there are no men on earth, whose bodies are Spirituall; there can be no Spirituall Common-wealth amongst men that are yet in the flesh; unlesse wee call Preachers, that have Commission to Teach, and prepare men for their reception into the Kingdome of Christ at the Resurrection, a Common-wealth; which I have proved to bee none.

The third Argument is this; "It is not lawfull for Christians to tolerate an Infidel, or Haereticall King, in case he endeavour to draw them to his Haeresie, or Infidelity. But to judge whether a King draw his subjects to Haeresie, or not, belongeth to the Pope. Therefore hath the Pope Right, to determine whether the Prince be to be deposed, or not deposed."

To this I answer, that both these assertions are false. For Christians, (or men of what Religion soever,) if they tolerate not their King, whatsoever law hee maketh, though it bee concerning Religion, doe violate their faith, contrary to the Divine Law, both Naturall and Positive: Nor is there any Judge of Haeresie amongst Subjects, but their own Civill Sovereign; for "Haeresie is nothing else, but a private opinion, obstinately maintained, contrary to the opinion which the Publique Person (that is to say, the Representant of the Common-wealth) hath commanded to bee taught." By which it is manifest, that an opinion publiquely appointed to bee taught, cannot be Haeresie; nor the Sovereign Princes that authorize them,

Haeretiquest. For Haeretiquest are none but private men, that stubbornly defend some Doctrine, prohibited by their lawful Sovereigns.

But to prove that Christians are not to tolerate Infidell, or Haereticall Kings, he alledgeth a place in Deut. 17. where God forbiddeth the Jews, when they shall set a King over themselves, to choose a stranger; And from thence inferreth, that it is unlawfull for a Christian, to choose a King, that is not a Christian. And 'tis true, that he that is a Christian, that is, hee that hath already obliged himself to receive our Saviour when he shall come, for his King, shal tempt God too much in choosing for King in this world, one that hee knoweth will endeavour, both by terrour, and perswasion to make him violate his faith. But, it is (saith hee) the same danger, to choose one that is not a Christian, for King, and not to depose him, when hee is chosen. To this I say, the question is not of the danger of not deposing; but of the Justice of deposing him. To choose him, may in some cases bee unjust; but to depose him, when he is chosen, is in no case Just. For it is alwaies violation of faith, and consequently against the Law of Nature, which is the eternal Law of God. Nor doe wee read, that any such Doctrine was accounted Christian in the time of the Apostles; nor in the time of the Romane Emperours, till the Popes had the Civill Sovereignty of Rome. But to this he hath replied, that the Christians of old, deposed not Nero, nor Diocletian, nor Julian, nor Valens an Arrian, for this cause onely, that they wanted Temporall forces. Perhaps so. But did our Saviour, who for calling for, might have had twelve Legions of immortall, invulnerable Angels to assist him, want forces to depose Caesar, or at least Pilate, that unjustly, without finding fault in him, delivered him to the Jews to bee crucified? Or if the Apostles wanted Temporall forces to depose Nero, was it therefore necessary for them in their Epistles to the new made Christians, to teach them, (as they did) to obey the Powers constituted over them, (whereof Nero in that time was one,) and that they ought to obey them, not for fear of their wrath, but for conscience sake? Shall we say they did not onely obey, but also teach what they meant not, for want of strength? It is not therefore for want of strength, but for conscience sake, that Christians are to tolerate their Heathen Princes, or Princes (for I cannot call any one whose Doctrine is the Publique Doctrine, an Haeretique) that authorize the teaching of an Errour. And whereas for the Temporall Power of the Pope, he alledgeth further, that St. Paul (1 Cor. 6.) appointed Judges under the Heathen

Princes of those times, such as were not ordained by those Princes; it is not true. For St. Paul does but advise them, to take some of their Brethren to compound their differences, as Arbitrators, rather than to goe to law one with another before the Heathen Judges; which is a wholesome Precept, and full of Charity, fit to bee practised also in the Best Christian Commonwealths. And for the danger that may arise to Religion, by the Subjects tolerating of an Heathen, or an Erring Prince, it is a point, of which a Subject is no competent Judge; or if hee bee, the Popes Temporall Subjects may judge also of the Popes Doctrine. For every Christian Prince, as I have formerly proved, is no lesse Supreme Pastor of his own Subjects, than the Pope of his.

The fourth Argument, is taken from the Baptisme of Kings; wherein, that they may be made Christians they submit their Scepters to Christ; and promise to keep, and defend the Christian Faith. This is true; for Christian Kings are no more but Christs Subjects: but they may, for all that, bee the Popes Fellowes; for they are Supreme Pastors of their own Subjects; and the Pope is no more but King, and Pastor, even in Rome it selfe.

The fifth Argument, is drawn from the words spoken by our Saviour, Feed My Sheep; by which was give all Power necessary for a Pastor; as the Power to chase away Wolves, such as are Haeretiques; the Power to shut up Rammes, if they be mad, or push at the other Sheep with their Hornes, such as are Evill (though Christian) Kings; and Power to give the Flock convenient food: From whence hee inferreth, that St. Peter had these three Powers given him by Christ. To which I answer, that the last of these Powers, is no more than the Power, or rather Command to Teach. For the first, which is to chase away Wolves, that is, Haeretiques, the place hee quoteth is (Matth. 7.15.) "Beware of false Prophets which come to you in Sheeps clothing, but inwardly are ravening Wolves." But neither are Haeretiques false Prophets, or at all Prophets: nor (admitting Haeretiques for the Wolves there meant,) were the Apostles commanded to kill them, or if they were Kings, to depose them; but to beware of, fly, and avoid them: nor was it to St. Peter, nor to any of the Apostles, but to the multitude of the Jews that followed him into the mountain, men for the most part not yet converted, that hee gave this Counsell, to Beware of false Prophets: which therefore if it conferre a Power of chasing away Kings, was given, not onely to private men; but to men that were not at all Christians. And as to the Power of Separating, and Shutting up of furious

Rammes, (by which hee meaneth Christian Kings that refuse to submit themselves to the Roman Pastor,) our Saviour refused to take upon him that Power in this world himself, but advised to let the Corn and Tares grow up together till the day of Judgment: much lesse did hee give it to St. Peter, or can S. Peter give it to the Popes. St. Peter, and all other Pastors, are bidden to esteem those Christians that disobey the Church, that is, (that disobey the Christian Sovereigne) as Heathen men, and as Publicans. Seeing then men challenge to the Pope no authority over Heathen Princes, they ought to challenge none over those that are to bee esteemed as Heathen.

But from the Power to Teach onely, hee inferreth also a Coercive Power in the Pope, over Kings. The Pastor (saith he) must give his flock convenient food: Therefore the Pope may, and ought to compell Kings to doe their duty. Out of which it followeth, that the Pope, as Pastor of Christian men, is King of Kings: which all Christian Kings ought indeed either to Confesse, or else they ought to take upon themselves the Supreme Pastorall Charge, every one in his own Dominion.

His sixth, and last Argument, is from Examples. To which I answer, first, that Examples prove nothing; Secondly, that the Examples he alledgeth make not so much as a probability of Right. The fact of Jehoiada, in Killing Athaliah (2 Kings 11.) was either by the Authority of King Joash, or it was a horrible Crime in the High Priest, which (ever after the election of King Saul) was a mere Subject. The fact of St. Ambrose, in Excommunicating Theodosius the Emperour, (if it were true hee did so,) was a Capitall Crime. And for the Popes, Gregory 1. Greg. 2. Zachary, and Leo 3. their Judgments are void, as given in their own Cause; and the Acts done by them conformably to this Doctrine, are the greatest Crimes (especially that of Zachary) that are incident to Humane Nature. And thus much of Power Ecclesiasticall; wherein I had been more briefe, forbearing to examine these Arguments of Bellarmine, if they had been his, as a Private man, and not as the Champion of the Papacy, against all other Christian Princes, and States.

**CHAPTER XLIII. OF WHAT IS NECESSARY  
FOR A MANS RECEPTION INTO THE  
KINGDOME OF HEAVEN.**

## **The Difficulty Of Obeying God And Man Both At Once**

The most frequent praetext of Sedition, and Civill Warre, in Christian Common-wealths hath a long time proceeded from a difficulty, not yet sufficiently resolved, of obeying at once, both God, and Man, then when their Commandements are one contrary to the other. It is manifest enough, that when a man receiveth two contrary Commands, and knows that one of them is Gods, he ought to obey that, and not the other, though it be the command even of his lawfull Sovereign (whether a Monarch, or a Sovereign Assembly,) or the command of his Father. The difficulty therefore consisteth in this, that men when they are commanded in the name of God, know not in divers Cases, whether the command be from God, or whether he that commandeth, doe but abuse Gods name for some private ends of his own. For as there ware in the Church of the Jews, many false Prophets, that sought reputation with the people, by feigned Dreams, and Visions; so there have been in all times in the Church of Christ, false Teachers, that seek reputation with the people, by phantasticall and false Doctrines; and by such reputation (as is the nature of Ambition,) to govern them for their private benefit.

# **Is None To Them That Distinguish Between What Is, And What Is Not**

## **Necessary To Salvation**

But this difficulty of obeying both God, and the Civill Sovereign on earth, to those that can distinguish between what is Necessary, and what is not Necessary for their Reception into the Kingdome of God, is of no moment. For if the command of the Civill Sovereign bee such, as that it may be obeyed, without the forfeiture of life Eternall; not to obey it is unjust; and the precept of the Apostle takes place; "Servants obey your Masters in all things;" and, "Children obey your Parents in all things;" and the precept of our Saviour, "The Scribes and Pharisees sit in Moses Chaire, All therefore they shall say, that observe, and doe." But if the command be such, as cannot be obeyed, without being damned to Eternall Death, then it were madnesse to obey it, and the Counsell of our Saviour takes place, (Mat. 10. 28.) "Fear not those that kill the body, but cannot kill the soule." All men therefore that would avoid, both the punishments that are to be in this world inflicted, for disobedience to their earthly Sovereign, and those that shall be inflicted in the world to come for disobedience to God, have need be taught to distinguish well between what is, and what is not Necessary to Eternall Salvation.

## **All That Is Necessary To Salvation Is Contained In Faith And Obedience**

All that is NECESSARY to Salvation, is contained in two Vertues, Faith in Christ, and Obedience to Laws. The latter of these, if it were perfect, were enough to us. But because wee are all guilty of disobedience to Gods Law, not onely originally in Adam, but also actually by our own transgressions, there is required at our hands now, not onely Obedience for the rest of our time, but also a Remission of sins for the time past; which Remission is the reward of our Faith in Christ. That nothing else is Necessarily required to Salvation, is manifest from this, that the Kingdome of Heaven, is shut to none but to Sinners; that is to say, to the disobedient, or transgressors of the Law; nor to them, in case they Repent, and Beleeve all the Articles of Christian Faith, Necessary to Salvation.

## **What Obedience Is Necessary;**

The Obedience required at our hands by God, that accepteth in all our actions the Will for the Deed, is a serious Endeavour to Obey him; and is called also by all such names as signifie that Endeavour. And therefore Obedience, is sometimes called by the names of Charity, and Love, because they imply a Will to Obey; and our Saviour himself maketh our Love to God, and to one another, a Fulfilling of the whole Law: and sometimes by the name of Righteousnesse; for Righteousnesse is but the will to give to every one his owne, that is to say, the will to obey the Laws: and sometimes by the name of Repentance; because to Repent, implyeth a turning away from sinne, which is the same, with the return of the will to Obedience. Whosoever therefore unfeignedly desireth to fulfill the Commandements of God, or repenteth him truely of his transgressions, or that loveth God with all his heart, and his neighbor as himself, hath all the Obedience Necessary to his Reception into the Kingdome of God: For if God should require perfect Innocence, there could no flesh be saved.

## And To What Laws

But what Commandements are those that God hath given us? Are all those Laws which were given to the Jews by the hand of Moses, the Commandements of God? If they bee, why are not Christians taught to obey them? If they be not, what others are so, besides the Law of Nature? For our Saviour Christ hath not given us new Laws, but Counsell to observe those wee are subject to; that is to say, the Laws of Nature, and the Laws of our severall Sovereigns: Nor did he make any new Law to the Jews in his Sermon on the Mount, but onely expounded the Laws of Moses, to which they were subject before. The Laws of God therefore are none but the Laws of Nature, whereof the principall is, that we should not violate our Faith, that is, a commandement to obey our Civill Sovereigns, which wee constituted over us, by mutuall pact one with another. And this Law of God, that commandeth Obedience to the Law Civill, commandeth by consequence Obedience to all the Precepts of the Bible, which (as I have proved in the precedent Chapter) is there onely Law, where the Civill Sovereign hath made it so; and in other places but Counsell; which a man at his own perill, may without injustice refuse to obey.

## **In The Faith Of A Christian, Who Is The Person Beleeved**

Knowing now what is the Obedience Necessary to Salvation, and to whom it is due; we are to consider next concerning Faith, whom, and why we beleeve; and what are the Articles, or Points necessarily to be beleeved by them that shall be saved. And first, for the Person whom we beleeve, because it is impossible to beleeve any Person, before we know what he saith, it is necessary he be one that wee have heard speak. The Person therefore, whom Abraham, Isaac, Jacob, Moses and the Prophets beleeved, was God himself, that spake unto them supernaturally: And the Person, whom the Apostles and Disciples that conversed with Christ beleeved, was our Saviour himself. But of them, to whom neither God the Father, nor our Saviour ever spake, it cannot be said, that the Person whom they beleeved, was God. They beleeved the Apostles, and after them the Pastors and Doctors of the Church, that recommended to their faith the History of the Old and New Testament: so that the Faith of Christians ever since our Saviours time, hath had for foundation, first, the reputation of their Pastors, and afterward, the authority of those that made the Old and New Testament to be received for the Rule of Faith; which none could do but Christian Soveraignes; who are therefore the Supreme Pastors, and the onely Persons, whom Christians now hear speak from God; except such as God speaketh to, in these days supernaturally. But because there be many false Prophets "gone out into the world," other men are to examine such Spirits (as St. John advised us, 1 Epistle, Chap. 4. ver.1.) "whether they be of God, or not." And therefore, seeing the Examination of Doctrines belongeth to the Supreme Pastor, the Person which all they that have no speciaall revelation are to beleeve, is (in every Common-wealth) the Supreme Pastor, that is to say, the Civill Soveraigne.

## **The Causes Of Christian Faith**

The causes why men beleeve any Christian Doctrine, are various; For Faith is the gift of God; and he worketh it in each severall man, by such wayes, as it seemeth good unto himself. The most ordinary immediate cause of our beleeif, concerning any point of Christian Faith, is, that wee beleeve the Bible to be the Word of God. But why wee beleeve the Bible to be the Word of God, is much disputed, as all questions must needs bee, that are not well stated. For they make not the question to be, "Why we Beleeve it," but "How wee Know it;" as if Beleeving and Knowing were all one. And thence while one side ground their Knowledge upon the Infallibility of the Church, and the other side, on the Testimony of the Private Spirit, neither side concludeth what it pretends. For how shall a man know the Infallibility of the Church, but by knowing first the Infallibility of the Scripture? Or how shall a man know his own Private spirit to be other than a beleeif, grounded upon the Authority, and Arguments of his Teachers; or upon a Presumption of his own Gifts? Besides, there is nothing in the Scripture, from which can be inferred the Infallibility of the Church; much lesse, of any particular Church; and least of all, the Infallibility of any particular man.

## Faith Comes By Hearing

It is manifest, therefore, that Christian men doe not know, but onely beleve the Scripture to be the Word of God; and that the means of making them beleve which God is pleased to afford men ordinarily, is according to the way of Nature, that is to say, from their Teachers. It is the Doctrine of St. Paul concerning Christian Faith in generall, (Rom. 10.17.) "Faith cometh by Hearing," that is, by Hearing our lawfull Pastors. He saith also (ver. 14,15. of the same Chapter) "How shall they beleve in him of whom they have not heard? and how shall they hear without a Preacher? and how shall they Preach, except they be sent?" Whereby it is evident, that the ordinary cause of beleiving that the Scriptures are the Word of God, is the same with the cause of the beleiving of all other Articles of our Faith, namely, the Hearing of those that are by the Law allowed and appointed to Teach us, as our Parents in their Houses, and our Pastors in the Churches: Which also is made more manifest by experience. For what other cause can there bee assigned, why in Christian Common-wealths all men either beleve, or at least professe the Scripture to bee the Word of God, and in other Common-wealths scarce any; but that in Christian Common-wealths they are taught it from their infancy; and in other places they are taught otherwise?

But if Teaching be the cause of Faith, why doe not all beleve? It is certain therefore that Faith is the gift of God, and hee giveth it to whom he will. Neverthelesse, because of them to whom he giveth it, he giveth it by the means of Teachers, the immediate cause of Faith is Hearing. In a School where many are taught, and some profit, others profit not, the cause of learning in them that profit, is the Master; yet it cannot be thence inferred, that learning is not the gift of God. All good things proceed from God; yet cannot all that have them, say they are Inspired; for that implies a gift supernaturall, and the immediate hand of God; which he that pretends to, pretends to be a Prophet, and is subject to the examination of the Church.

But whether men Know, or Beleve, or Grant the Scriptures to be the Word of God; if out of such places of them, as are without obscurity, I

shall shew what Articles of Faith are necessary, and onely necessary for Salvation, those men must needs Know, Beleeve, or Grant the same.

The Onely Necessary Article Of Christian Faith, The (Unum Necessarium) Onely Article of Faith, which the Scripture maketh simply Necessary to Salvation, is this, that JESUS IS THE CHRIST. By the name of Christ, is understood the King, which God had before promised by the Prophets of the Old Testament, to send into the world, to reign (over the Jews, and over such of other nations as should beleeve in him) under himself eternally; and to give them that eternall life, which was lost by the sin of Adam. Which when I have proved out of Scripture, I will further shew when, and in what sense some other Articles may bee also called Necessary.

## **Proved From The Scope Of The Evangelists**

For Proof that the Beleef of this Article, Jesus Is The Christ, is all the Faith required to Salvation, my first Argument shall bee from the Scope of the Evangelists; which was by the description of the life of our Saviour, to establish that one Article, Jesus Is The Christ. The summe of St. Matthews Gospell is this, That Jesus was of the stock of David; Born of a Virgin; which are the Marks of the true Christ: That the Magi came to worship him as King of the Jews: That Herod for the same cause sought to kill him: That John Baptist proclaimed him: That he preached by himselfe, and his Apostles that he was that King; That he taught the Law, not as a Scribe, but as a man of Authority: That he cured diseases by his Word onely, and did many other Miracles, which were foretold the Christ should doe: That he was saluted King when he entered into Jerusalem: That he fore-warned them to beware of all others that should pretend to be Christ: That he was taken, accused, and put to death, for saying, hee was King: That the cause of his condemnation written on the Crosse, was JESUS OF NAZARETH, THE KING OF THE JEWES. All which tend to no other end than this, that men should beleeve, that Jesus Is The Christ. Such therefore was the Scope of St. Matthews Gospel. But the Scope of all the Evangelists (as may appear by reading them) was the same. Therefore the Scope of the whole Gospell, was the establishing of that onely Article. And St. John expressly makes it his conclusion, John 20. 31. "These things are written, that you may know that Jesus is the Christ, the Son of the living God."

## **From The Sermons Of The Apostles:**

My second Argument is taken from the Subject of the Sermons of the Apostles, both whilst our Saviour lived on earth, and after his Ascension. The Apostles in our Saviours time were sent, Luke 9.2. to Preach the Kingdome of God: For neither there, nor Mat. 10.7. giveth he any Commission to them, other than this, "As ye go, Preach, saying, the Kingdome of Heaven is at hand;" that is, that Jesus is the Messiah, the Christ, the King which was to come. That their Preaching also after his ascension was the same, is manifest out of Acts 17.6. "They drew (saith St. Luke) Jason and certain Brethren unto the Rulers of the City, crying, These that have turned the world upside down are come hither also, whom Jason hath received. And these all do contrary to the Decrees of Caesar, saying, that there is another King, one Jesus:" And out of the 2.&3. verses of the same Chapter, where it is said, that St. Paul "as his manner was, went in unto them; and three Sabbath dayes reasoned with them out of the Scriptures; opening and alledging, that Christ must needs have suffered, and risen againe from the dead, and that this Jesus (whom he preached) is Christ."

## **From The Easinesse Of The Doctrine:**

The third Argument is, from those places of Scripture, by which all the Faith required to Salvation is declared to be Easie. For if an inward assent of the mind to all the Doctrines concerning Christian Faith now taught, (whereof the greatest part are disputed,) were necessary to Salvation, there would be nothing in the world so hard, as to be a Christian. The Thief upon the Crosse though repenting, could not have been saved for saying, "Lord remember me when thou comest into thy Kingdome;" by which he testified no beleeve of any other Article, but this, That Jesus Was The King. Nor could it bee said (as it is Mat. 11. 30.) that "Christs yoke is Easy, and his burthen Light:" Nor that "Little Children beleeve in him," as it is Matth. 18.6. Nor could St. Paul have said (1 Cor. 1. 21.) "It pleased God by the Foolishnesse of preaching, to save them that beleeve:" Nor could St. Paul himself have been saved, much lesse have been so great a Doctor of the Church so suddenly, that never perhaps thought of Transsubstantiation, nor Purgatory, nor many other Articles now obtruded.

## From Formall And Cleer Texts

The fourth Argument is taken from places expresse, and such as receive no controversie of Interpretation; as first, John 5. 39. "Search the Scriptures, for in them yee thinke yee have eternall life; and they are they that testifie of mee." Our Saviour here speaketh of the Scriptures onely of the Old Testament; for the Jews at that time could not search the Scriptures of the New Testament, which were not written. But the Old Testament hath nothing of Christ, but the Markes by which men might know him when hee came; as that he should descend from David, be born at Bethlehem, and of a Virgin; doe great Miracles, and the like. Therefore to beleeve that this Jesus was He, was sufficient to eternall life: but more than sufficient is not Necessary; and consequently no other Article is required. Again, (John 11. 26.) "Whosoever liveth and beleeveth in mee, shall not die eternally," Therefore to beleeve in Christ, is faith sufficient to eternall life; and consequently no more faith than that is Necessary, But to beleeve in Jesus, and to beleeve that Jesus is the Christ, is all one, as appeareth in the verses immediately following. For when our Saviour (verse 26.) had said to Martha, "Beleevest thou this?" she answereth (verse 27.) "Yea Lord, I beleeve that thou art the Christ, the Son of God, which should come into the world;" Therefore this Article alone is faith sufficient to life eternall; and more than sufficient is not Necessary. Thirdly, John 20. 31. "These things are written that yee might beleeve, that Jesus is the Christ, the Son of God, and that beleeving yee might have life through his name." There, to beleeve that Jesus Is The Christ, is faith sufficient to the obtaining of life; and therefore no other Article is Necessary. Fourthly, 1 John 4. 2. "Every Spirit that confesseth that Jesus Christ is come in the flesh, is of God." And 1 Joh. 5. 1. "whosoever beleeveth that Jesus is the Christ, is born of God." And verse 5. "Who is hee that overcommeth the world, but he that beleeveth that Jesus is the Son of God?" Fiftly, Act. 8. ver. 36, 37. "See (saith the Eunuch) here is water, what doth hinder me to be baptized? And Philip said, If thou beleevest with all thy heart thou mayst. And hee answered and said, I beleeve that Jesus Christ is the Son of God." Therefore this Article

beleeved, Jesus Is The Christ, is sufficient to Baptisme, that is to say, to our Reception into the Kingdome of God, and by consequence, onely Necessary. And generally in all places where our Saviour saith to any man, "Thy faith hath saved thee," the cause he saith it, is some Confession, which directly, or by consequence, implyeth a beleeef, that Jesus Is The Christ.

## **From That It Is The Foundation Of All Other Articles**

The last Argument is from the places, where this Article is made the Foundation of Faith: For he that holdeth the Foundation shall bee saved. Which places are first, Mat. 24.23. "If any man shall say unto you, Loe, here is Christ, or there, beleeve it not, for there shall arise false Christs, and false Prophets, and shall shew great signes and wonders, &c." Here wee see, this Article Jesus Is The Christ, must bee held, though hee that shall teach the contrary should doe great miracles. The second place is Gal. 1. 8. "Though we, or an Angell from Heaven preach any other Gospell unto you, than that wee have preached unto you, let him bee accursed." But the Gospell which Paul, and the other Apostles, preached, was onely this Article, that Jesus Is The Christ; Therefore for the Beleef of this Article, we are to reject the Authority of an Angell from heaven; much more of any mortall man, if he teach the contrary. This is therefore the Fundamentall Article of Christian Faith. A third place is, 1 Joh. 4.1. "Beloved, beleeve not every spirit. Hereby yee shall know the Spirit of God; every spirit that confesseth that Jesus Christ is come in the flesh, is of God." By which it is evident, that this Article, is the measure, and rule, by which to estimate, and examine all other Articles; and is therefore onely Fundamentall. A fourth is, Matt. 16.18. where after St. Peter had professed this Article, saying to our Saviour, "Thou art Christ the Son of the living God," Our Saviour answered, "Thou art Peter, and upon this Rock I will build my Church:" from whence I inferre, that this Article is that, on which all other Doctrines of the Church are built, as on their Foundation. A fift is (1 Cor. 3. ver. 11, 12, &c.) "Other Foundation can no man lay, than that which is laid, Jesus is the Christ. Now if any man build upon this Foundation, Gold, Silver, pretious Stones, Wood, Hay, Stubble; Every mans work shall be made manifest; For the Day shall declare it, because it shall be revealed by fire, and the fire shall try every mans work, of what sort it is. If any mans work abide, which he hath built thereupon, he shall receive a reward: If any mans work shall bee burnt, he shall suffer losse; but he himself shall be saved, yet so as by fire." Which words, being

partly plain and easie to understand, and partly allegoricall and difficult; out of that which is plain, may be inferred, that Pastors that teach this Foundation, that Jesus Is The Christ, though they draw from it false consequences, (which all men are sometimes subject to,) they may neverthelesse bee saved; much more that they may bee saved, who being no Pastors, but Hearers, beleieve that which is by their lawfull Pastors taught them. Therefore the beleef of this Article is sufficient; and by consequence there is no other Article of Faith Necessarily required to Salvation.

Now for the part which is Allegoricall, as "That the fire shall try every mans work," and that "They shall be saved, but so as by fire," or "through fire," (for the originall is *dia puros*,) it maketh nothing against this conclusion which I have drawn from the other words, that are plain. Neverthelesse, because upon this place there hath been an argument taken, to prove the fire of Purgatory, I will also here offer you my conjecture concerning the meaning of this triall of Doctrines, and saving of men as by Fire. The Apostle here seemeth to allude to the words of the Prophet Zachary, Ch. 13. 8,9. who speaking of the Restauration of the Kingdome of God, saith thus, "Two parts therein shall be cut off, and die, but the third shall be left therein; and I will bring the third part through the Fire, and will refine them as Silver is refined, and will try them as Gold is tryed; they shall call on the name of the Lord, and I will hear them." The day of Judgment, is the day of the Restauration of the Kingdome of God; and at that day it is, that St. Peter tells us (2 Pet. 3. v.7, 10, 12.) shall be the Conflagration of the world, wherein the wicked shall perish; but the remnant which God will save, shall passe through that Fire, unhurt, and be therein (as Silver and Gold are refined by the fire from their drosse) tryed, and refined from their Idolatry, and be made to call upon the name of the true God. Alluding whereto St. Paul here saith, that The Day (that is, the Day of Judgment, the Great Day of our Saviours comming to restore the Kingdome of God in Israel) shall try every mans doctrine, by Judging, which are Gold, Silver, Pretious Stones, Wood, Hay, Stubble; And then they that have built false Consequences on the true Foundation, shall see their Doctrines condemned; neverthelesse they themselves shall be saved, and passe unhurt through this universall Fire, and live eternally, to call upon the name of the true and onely God. In which sense there is nothing

that accordeth not with the rest of Holy Scripture, or any glimpse of the fire of Purgatory.

## **In What Sense Other Articles May Be Called Necessary**

But a man may here aske, whether it bee not as necessary to Salvation, to beleeve, that God is Omnipotent; Creator of the world; that Jesus Christ is risen; and that all men else shall rise again from the dead at the last day; as to beleeve, that Jesus Is The Christ. To which I answer, they are; and so are many more Articles: but they are such, as are contained in this one, and may be deduced from it, with more, or lesse difficulty. For who is there that does not see, that they who beleeve Jesus to be the Son of the God of Israel, and that the Israelites had for God the Omnipotent Creator of all things, doe therein also beleeve, that God is the Omnipotent Creator of all things? Or how can a man beleeve, that Jesus is the King that shall reign eternally, unlesse hee beleeve him also risen again from the dead? For a dead man cannot exercise the Office of a King. In summe, he that holdeth this Foundation, Jesus Is The Christ, holdeth Expressely all that hee seeth rightly deduced from it, and Implicitely all that is consequent thereunto, though he have not skill enough to discern the consequence. And therefore it holdeth still good, that the beleaf of this one Article is sufficient faith to obtaine remission of sinnes to the Penitent, and consequently to bring them into the Kingdome of Heaven.

## **That Faith, And Obedience Are Both Of Them Necessary To Salvation**

Now that I have shewn, that all the Obedience required to Salvation, consisteth in the will to obey the Law of God, that is to say, in Repentance; and all the Faith required to the same, is comprehended in the beleef of this Article, Jesus Is The Christ; I will further alledge those places of the Gospell, that prove, that all that is Necessary to Salvation is contained in both these joined together. The men to whom St. Peter preached on the day of Pentecost, next after the Ascension of our Saviour, asked him, and the rest of the Apostles, saying, (Act. 2.37.) "Men and Brethren what shall we doe?" to whom St. Peter answered (in the next verse) "Repent, and be Baptized every one of you, for the remission of sins, and ye shall receive the gift of the Holy Ghost." Therefore Repentance, and Baptisme, that is, beleieving that Jesus Is The Christ, is all that is Necessary to Salvation. Again, our Saviour being asked by a certain Ruler, (Luke 18.18.) "What shall I doe to inherit eternall life?" Answered (verse 20) "Thou knowest the Commandements, Doe not commit Adultery, Doe not Kill, Doe not Steal, Doe not bear false witness, Honor thy Father, and thy Mother;" which when he said he had observed, our Saviour added, "Sell all thou hast, give it to the Poor, and come and follow me:" which was as much as to say, Relye on me that am the King: Therefore to fulfill the Law, and to beleieve that Jesus is the King, is all that is required to bring a man to eternall life. Thirdly, St. Paul saith (Rom. 1.17.) "The Just shall live by Faith;" not every one, but the Just; therefore Faith and Justice (that is, the Will To Be Just, or Repentance) are all that is Necessary to life eternall. And (Mark 1.15.) our Saviour preached, saying, "The time is fulfilled, and the Kingdom of God is at hand, Repent and Beleieve the Evangile," that is, the Good news that the Christ was come. Therefore to Repent, and to Beleieve that Jesus is the Christ, is all that is required to Salvation.

## What Each Of Them Contributes Thereunto

Seeing then it is Necessary that Faith, and Obedience (implied in the word Repentance) do both concur to our Salvation; the question by which of the two we are Justified, is impertinently disputed. Neverthelesse, it will not be impertinent, to make manifest in what manner each of them contributes thereunto; and in what sense it is said, that we are to be Justified by the one, and by the other. And first, if by Righteousnesse be understood the Justice of the Works themselves, there is no man that can be saved; for there is none that hath not transgressed the Law of God. And therefore when wee are said to be Justified by Works, it is to be understood of the Will, which God doth alwaies accept for the Work it selfe, as well in good, as in evill men. And in this sense onely it is, that a man is called Just, or Unjust; and that his Justice Justifies him, that is, gives him the title, in Gods acceptation, of Just; and renders him capable of Living By His Faith, which before he was not. So that Justice Justifies in that that sense, in which to Justifie, is the same that to Denominate A Man Just; and not in the signification of discharging the Law; whereby the punishment of his sins should be unjust.

But a man is then also said to be Justified, when his Plea, though in it selfe insufficient, is accepted; as when we Plead our Will, our Endeavour to fulfill the Law, and Repent us of our failings, and God accepteth it for the Performance it selfe: And because God accepteth not the Will for the Deed, but onely in the Faithfull; it is therefore Faith that makes good our Plea; and in this sense it is, that Faith onely Justifies: So that Faith and Obedience are both Necessary to Salvation; yet in severall senses each of them is said to Justifie.

## **Obedience To God And To The Civill Sovereign Not Inconsistent**

Whether Christian, Having thus shewn what is Necessary to Salvation; it is not hard to reconcile our Obedience to the Civill Sovereign; who is either Christian, or Infidel. If he bee a Christian, he alloweth the beleefe of this Article, that Jesus Is The Christ; and of all the Articles that are contained in, or are evident consequence deduced from it: which is all the Faith Necessary to Salvation. And because he is a Sovereign, he requireth Obedience to all his owne, that is, to all the Civill Laws; in which also are contained all the Laws of Nature, that is, all the Laws of God: for besides the Laws of Nature, and the Laws of the Church, which are part of the Civill Law, (for the Church that can make Laws is the Common-wealth,) there bee no other Laws Divine. Whosoever therefore obeyeth his Christian Sovereign, is not thereby hindred, neither from beleeving, nor from obeying God. But suppose that a Christian King should from this Foundation, Jesus Is The Christ, draw some false consequences, that is to say, make some superstructions of Hay, or Stubble, and command the teaching of the same; yet seeing St. Paul says, he shal be saved; much more shall he be saved, that teacheth them by his command; and much more yet, he that teaches not, but onely beleeves his lawfull Teacher. And in case a Subject be forbidden by the Civill Sovereign to professe some of those his opinions, upon what grounds can he disobey? Christian Kings may erre in deducing a Consequence, but who shall Judge? Shall a private man Judge, when the question is of his own obedience? or shall any man Judg but he that is appointed thereto by the Church, that is, by the Civill Sovereign that representeth it? or if the Pope, or an Apostle Judge, may he not erre in deducing of a consequence? did not one of the two, St. Peter, or St. Paul erre in a superstructure, when St. Paul withstood St. Peter to his face? There can therefore be no contradiction between the Laws of God, and the Laws of a Christian Common-wealth.

## Or Infidel

And when the Civill Sovereign is an Infidel, every one of his own Subjects that resisteth him, sinneth against the Laws of God (for such as are the Laws of Nature,) and rejecteth the counsell of the Apostles, that admonisheth all Christians to obey their Princes, and all Children and Servants to obey they Parents, and Masters, in all things. And for their Faith, it is internall, and invisible; They have the licence that Naaman had, and need not put themselves into danger for it. But if they do, they ought to expect their reward in Heaven, and not complain of their Lawfull Sovereign; much lesse make warre upon him. For he that is not glad of any just occasion of Martyrdome, has not the faith be professeth, but pretends it onely, to set some colour upon his own contumacy. But what Infidel King is so unreasonable, as knowing he has a Subject, that waiteth for the second comming of Christ, after the present world shall be burnt, and intendeth then to obey him (which is the intent of beleeving that Jesus is the Christ,) and in the mean time thinketh himself bound to obey the Laws of that Infidel King, (which all Christians are obliged in conscience to doe,) to put to death, or to persecute such a Subject?

And thus much shall suffice, concerning the Kingdome of God, and Policy Ecclesiasticall. Wherein I pretend not to advance any Position of my own, but onely to shew what are the Consequences that seem to me deducible from the Principles of Christian Politiques, (which are the holy Scriptures,) in confirmation of the Power of Civill Sovereigns, and the Duty of their Subjects. And in the allegation of Scripture, I have endeavoured to avoid such Texts as are of obscure, or controverted Interpretation; and to alledge none, but is such sense as is most plain, and agreeable to the harmony and scope of the whole Bible; which was written for the re-establishment of the Kingdome of God in Christ. For it is not the bare Words, but the Scope of the writer that giveth the true light, by which any writing is to bee interpreted; and they that insist upon single Texts, without considering the main Designe, can derive no thing from them cleerly; but rather by casting atomes of Scripture, as dust before mens

eyes, make every thing more obscure than it is; an ordinary artifice of those that seek not the truth, but their own advantage.

**CHAPTER XLIV. OF SPIRITUALL  
DARKNESSE FROM MISINTERPRETATION  
OF SCRIPTURE**

## **The Kingdome Of Darknesse What**

Besides these Sovereign Powers, Divine, and Humane, of which I have hitherto discoursed, there is mention in Scripture of another Power, namely, (Eph. 6. 12.), that of "the Rulers of the Darknesse of this world," (Mat. 12. 26.), "the Kingdome of Satan," and, (Mat. 9. 34.), "the Principality of Beelzebub over Daemons," that is to say, over Phantasmes that appear in the Air: For which cause Satan is also called (Eph. 2. 2.) "the Prince of the Power of the Air;" and (because he ruleth in the darknesse of this world) (Joh. 16. 11.) "The Prince of this world;" And in consequence hereunto, they who are under his Dominion, in opposition to the faithfull (who are the Children Of The Light) are called the Children Of Darknesse. For seeing Beelzebub is Prince of Phantasmes, Inhabitants of his Dominion of Air and Darknesse, the Children of Darknesse, and these Daemons, Phantasmes, or Spirits of Illusion, signifie allegorically the same thing. This considered, the Kingdome of Darknesse, as it is set forth in these, and other places of the Scripture, is nothing else but a "Confederacy of Deceivers, that to obtain dominion over men in this present world, endeavour by dark, and erroneous Doctrines, to extinguish in them the Light, both of Nature, and of the Gospell; and so to dis-prepare them for the Kingdome of God to come."

## **The Church Not Yet Fully Freed Of Darknesse**

As men that are utterly deprived from their Nativity, of the light of the bodily Eye, have no Idea at all, of any such light; and no man conceives in his imagination any greater light, than he hath at some time, or other perceived by his outward Senses: so also is it of the light of the Gospel, and of the light of the Understanding, that no man can conceive there is any greater degree of it, than that which he hath already attained unto. And from hence it comes to passe, that men have no other means to acknowledge their owne Darknesse, but onely by reasoning from the unforeseen mischances, that befall them in their ways; The Darkest part of the Kingdome of Satan, is that which is without the Church of God; that is to say, amongst them that beleieve not in Jesus Christ. But we cannot say, that therefore the Church enjoyeth (as the land of Goshen) all the light, which to the performance of the work enjoined us by God, is necessary. Whence comes it, that in Christendome there has been, almost from the time of the Apostles, such justling of one another out of their places, both by forraign, and Civill war? such stumbling at every little asperity of their own fortune, and every little eminence of that of other men? and such diversity of ways in running to the same mark, Felicity, if it be not Night amongst us, or at least a Mist? wee are therefore yet in the Dark.

## **Four Causes Of Spirituall Darknesse**

The Enemy has been here in the Night of our naturall Ignorance, and sown the tares of Spirituall Errors; and that, First, by abusing, and putting out the light of the Scriptures: For we erre, not knowing the Scriptures. Secondly, by introducing the Daemonology of the Heathen Poets, that is to say, their fabulous Doctrine concerning Daemons, which are but Idols, or Phantasms of the braine, without any reall nature of their own, distinct from humane fancy; such as are dead mens Ghosts, and Fairies, and other matter of old Wives tales. Thirdly, by mixing with the Scripture divers reliques of the Religion, and much of the vain and erroneous Philosophy of the Greeks, especially of Aristotle. Fourthly, by mingling with both these, false, or uncertain Traditions, and fained, or uncertain History. And so we come to erre, by "giving heed to seducing Spirits," and the Daemonology of such "as speak lies in Hypocrisie," (or as it is in the Originall, 1 Tim. 4.1,2. "of those that play the part of lyars") "with a seared conscience," that is, contrary to their own knowledge. Concerning the first of these, which is the Seducing of men by abuse of Scripture, I intend to speak briefly in this Chapter.

# **Errors From Misinterpreting The Scriptures, Concerning The Kingdome**

## **Of God**

The greatest, and main abuse of Scripture, and to which almost all the rest are either consequent, or subservient, is the wresting of it, to prove that the Kingdome of God, mentioned so often in the Scripture, is the present Church, or multitude of Christian men now living, or that being dead, are to rise again at the last day: whereas the Kingdome of God was first instituted by the Ministry of Moses, over the Jews onely; who were therefore called his Peculiar People; and ceased afterward, in the election of Saul, when they refused to be governed by God any more, and demanded a King after the manner of the nations; which God himself consented unto, as I have more at large proved before, in the 35. Chapter. After that time, there was no other Kingdome of God in the world, by any Pact, or otherwise, than he ever was, is, and shall be King, of all men, and of all creatures, as governing according to his Will, by his infinite Power. Neverthelesse, he promised by his Prophets to restore this his Government to them again, when the time he hath in his secret counsell appointed for it shall bee fully come, and when they shall turn unto him by repentance, and amendment of life; and not onely so, but he invited also the Gentiles to come in, and enjoy the happinesse of his Reign, on the same conditions of conversion and repentance; and hee promised also to send his Son into the world, to expiate the sins of them all by his death, and to prepare them by his Doctrine, to receive him at his second coming: Which second coming not yet being, the Kingdome of God is not yet come, and wee are not now under any other Kings by Pact, but our Civill Sovereigns; saving onely, that Christian men are already in the Kingdome of Grace, in as much as they have already the Promise of being received at his comming againe.

## **As That The Kingdome Of God Is The Present Church**

Consequent to this Errour, that the present Church is Christs Kingdome, there ought to be some one Man, or Assembly, by whose mouth our Saviour (now in heaven) speaketh, giveth law, and which representeth his person to all Christians, or divers Men, or divers Assemblies that doe the same to divers parts of Christendome. This power Regal under Christ, being challenged, universally by that Pope, and in particular Commonwealths by Assemblies of the Pastors of the place, (when the Scripture gives it to none but to Civill Sovereigns,) comes to be so passionately disputed, that it putteth out the Light of Nature, and causeth so great a Darknesse in mens understanding, that they see not who it is to whom they have engaged their obedience.

## **And That The Pope Is His Vicar Generall**

Consequent to this claim of the Pope to Vicar Generall of Christ in the present Church, (supposed to be that Kingdom of his, to which we are addressed in the Gospel,) is the Doctrine, that it is necessary for a Christian King, to receive his Crown by a Bishop; as if it were from that Ceremony, that he derives the clause of Dei Gratia in his title; and that then onely he is made King by the favour of God, when he is crowned by the authority of Gods universall Viceregent on earth; and that every Bishop whosoever be his Sovereign, taketh at his Consecration an oath of absolute Obedience to the Pope, Consequent to the same, is the Doctrine of the fourth Councill of Lateran, held under Pope Innocent the third, (Chap. 3. De Haereticis.) "That if a King at the Popes admonition, doe not purge his Kingdome of Haeresies, and being excommunicate for the same, doe not give satisfaction within a year, his Subjects are absolved of the bond of their obedience." Where, by Haeresies are understood all opinions which the Church of Rome hath forbidden to be maintained. And by this means, as often as there is any repugnancy between the Politicall designes of the Pope, and other Christian Princes, as there is very often, there ariseth such a Mist amongst their Subjects, that they know not a stranger that thrusteth himself into the throne of their lawfull Prince, from him whom they had themselves placed there; and in this Darknesse of mind, are made to fight one against another, without discerning their enemies from their friends, under the conduct of another mans ambition.

## **And That The Pastors Are The Clergy**

From the same opinion, that the present Church is the Kingdome of God, it proceeds that Pastours, Deacons, and all other Ministers of the Church, take the name to themselves of the Clergy, giving to other Christians the name of Laity, that is, simply People. For Clergy signifies those, whose maintenance is that Revenue, which God having reserved to himselfe during his Reigne over the Israelites, assigned to the tribe of Levi (who were to be his publique Ministers, and had no portion of land set them out to live on, as their brethren) to be their inheritance. The Pope therefore, (pretending the present Church to be, as the Realme of Israel, the Kingdome of God) challenging to himselfe and his subordinate Ministers, the like revenue, as the Inheritance of God, the name of Clergy was sutable to that claime. And thence it is, that Tithes, or other tributes paid to the Levites, as Gods Right, amongst the Israelites, have a long time been demanded, and taken of Christians, by Ecclesiastiques, Jure Divino, that is, in Gods Right. By which meanes, the people every where were obliged to a double tribute; one to the State, another to the Clergy; whereof, that to the Clergy, being the tenth of their revenue, is double to that which a King of Athens (and esteemed a Tyrant) exacted of his subjects for the defraying of all publique charges: For he demanded no more but the twentieth part; and yet abundantly maintained therewith the Commonwealth. And in the Kingdome of the Jewes, during the Sacerdotall Reigne of God, the Tithes and Offerings were the whole Publique Revenue.

From the same mistaking of the present Church for the Kingdom of God, came in the distinction betweene the Civill and the Canon Laws: The civil Law being the acts of Sovereigns in their own Dominions, and the Canon Law being the Acts of the Pope in the same Dominions. Which Canons, though they were but Canons, that is, Rules Propounded, and but voluntarily received by Christian Princes, till the translation of the Empire to Charlemain; yet afterwards, as the power of the Pope encreased, became Rules Commanded, and the Emperours themselves (to avoyd greater

mischiefes, which the people blinded might be led into) were forced to let them passe for Laws.

From hence it is, that in all Dominions, where the Popes Ecclesiasticall power is entirely received, Jewes, Turkes, and Gentiles, are in the Roman Church tolerated in their Religion, as farre forth, as in the exercise and profession thereof they offend not against the civill power: whereas in a Christian, though a stranger, not to be of the Roman Religion, is Capitall; because the Pope pretendeth that all Christians are his Subjects. For otherwise it were as much against the law of Nations, to persecute a Christian stranger, for professing the Religion of his owne country, as an Infidell; or rather more, in as much as they that are not against Christ, are with him.

From the same it is, that in every Christian State there are certaine men, that are exempt, by Ecclesiasticall liberty, from the tributes, and from the tribunals of the Civil State; for so are the secular Clergy, besides Monks and Friars, which in many places, bear so great a proportion to the common people, as if need were, there might be raised out of them alone, an Army, sufficient for any warre the Church militant should imploy them in, against their owne, or other Princes.

## **Error From Mistaking Consecration For Conjuration**

A second generall abuse of Scripture, is the turning of Consecration into Conjuration, or Enchantment. To Consecrate, is in Scripture, to Offer, Give, or Dedicate, in pious and decent language and gesture, a man, or any other thing to God, by separating of it from common use; that is to say, to Sanctifie, or make it Gods, and to be used only by those, whom God hath appointed to be his Publike Ministers, (as I have already proved at large in the 35. Chapter;) and thereby to change, not the thing Consecrated, but onely the use of it, from being Profane and common, to be Holy, and peculiar to Gods service. But when by such words, the nature of qualitie of the thing it selfe, is pretended to be changed, it is not Consecration, but either an extraordinary worke of God, or a vaine and impious Conjuration. But seeing (for the frequency of pretending the change of Nature in their Consecrations,) it cannot be esteemed a work extraordinary, it is no other than a Conjuration or Incantation, whereby they would have men to beleieve an alteration of Nature that is not, contrary to the testimony of mans Sight, and of all the rest of his Senses. As for example, when the Priest, in stead of Consecrating Bread and Wine to Gods peculiar service in the Sacrament of the Lords Supper, (which is but a separation of it from the common use, to signifie, that is, to put men in mind of their Redemption, by the Passion of Christ, whose body was broken, and blood shed upon the Crosse for our transgressions,) pretends, that by saying of the words of our Saviour, "This is my Body," and "This is my Blood," the nature of Bread is no more there, but his very Body; notwithstanding there appeareth not to the Sight, or other Sense of the Receiver, any thing that appeareth not before the Consecration. The Egyptian Conjurers, that are said to have turned their Rods to Serpents, and the Water into Bloud, are thought but to have deluded the senses of the Spectators by a false shew of things, yet are esteemed Enchanters: But what should wee have thought of them, if there had appeared in their Rods nothing like a Serpent, and in the Water enchanted, nothing like Bloud, nor like any thing else but Water, but that they had faced down the King, that they were Serpents that looked like

Rods, and that it was Bloud that seemed Water? That had been both Enchantment, and Lying. And yet in this daily act of the Priest, they doe the very same, by turning the holy words into the manner of a Charme, which produceth nothing now to the Sense; but they face us down, that it hath turned the Bread into a Man; nay more, into a God; and require men to worship it, as if it were our Saviour himself present God and Man, and thereby to commit most grosse Idolatry. For if it bee enough to excuse it of Idolatry, to say it is no more Bread, but God; why should not the same excuse serve the Egyptians, in case they had the faces to say, the Leeks, and Onyons they worshipped, were not very Leeks, and Onyons, but a Divinity under their Species, or likenesse. The words, "This is my Body," are aequivalent to these, "This signifies, or represents my Body;" and it is an ordinary figure of Speech: but to take it literally, is an abuse; nor though so taken, can it extend any further, than to the Bread which Christ himself with his own hands Consecrated. For hee never said, that of what Bread soever, any Priest whatsoever, should say, "This is my Body," or, "This is Christs Body," the same should presently be transubstantiated. Nor did the Church of Rome ever establish this Transubstantiation, till the time of Innocent the third; which was not above 500. years agoe, when the Power of Popes was at the Highest, and the Darknesse of the time grown so great, as men discerned not the Bread that was given them to eat, especially when it was stamped with the figure of Christ upon the Crosse, as if they would have men beleeve it were Transubstantiated, not onely into the Body of Christ, but also into the Wood of his Crosse, and that they did eat both together in the Sacrament.

## **Incantation In The Ceremonies Of Baptisme**

The like incantation, in stead of Consecration, is used also in the Sacrament of Baptisme: Where the abuse of Gods name in each severall Person, and in the whole Trinity, with the sign of the Crosse at each name, maketh up the Charm: As first, when they make the Holy water, the Priest saith, "I Conjure thee, thou Creature of Water, in the name of God the Father Almighty, and in the name of Jesus Christ his onely Son our Lord, and in vertue of the Holy Ghost, that thou become Conjured water, to drive away all the Powers of the Enemy, and to eradicate, and supplant the Enemy, &c." And the same in the Benediction of the Salt to be mingled with it; "That thou become Conjured Salt, that all Phantasmes, and Knavery of the Devills fraud may fly and depart from the place wherein thou art sprinkled; and every unclean Spirit bee Conjured by Him that shall come to judge the quicke and the dead." The same in the Benediction of the Oyle. "That all the Power of the Enemy, all the Host of the Devill, all Assaults and Phantasmes of Satan, may be driven away by this Creature of Oyle." And for the Infant that is to be Baptized, he is subject to many Charms; First, at the Church dore the Priest blows thrice in the Childs face, and sayes, "Goe out of him unclean Spirit, and give place to the Holy Ghost the Comforter." As if all Children, till blown on by the Priest were Daemoniaques: Again, before his entrance into the Church, he saith as before, "I Conjure thee, &c. to goe out, and depart from this Servant of God:" And again the same Exorcisme is repeated once more before he be Baptized. These, and some other Incantations, and Consecrations, in administration of the Sacraments of Baptisme, and the Lords Supper; wherein every thing that serveth to those holy men (except the unhallowed Spittle of the Priest) hath some set form of Exorcisme.

## **In Marriage, In Visitation Of The Sick, And In Consecration Of Places**

Nor are the other rites, as of Marriage, of Extreme Unction, of Visitation of the Sick, of Consecrating Churches, and Church-yards, and the like, exempt from Charms; in as much as there is in them the use of Enchanted Oyle, and Water, with the abuse of the Crosse, and of the holy word of David, "Asperges me Domine Hyssopo," as things of efficacy to drive away Phantasmes, and Imaginery Spirits.

## **Errors From Mistaking Eternall Life, And Everlasting Death**

Another generall Error, is from the Misinterpretation of the words Eternall Life, Everlasting Death, and the Second Death. For though we read plainly in Holy Scripture, that God created Adam in an estate of Living for Ever, which was conditionall, that is to say, if he disobeyed not his Commandement; which was not essentiall to Humane Nature, but consequent to the vertue of the Tree of Life; whereof hee had liberty to eat, as long as hee had not sinned; and that hee was thrust out of Paradise after he had sinned, lest hee should eate thereof, and live for ever; and that Christs Passion is a Discharge of sin to all that beleeve on him; and by consequence, a restitution of Eternall Life, to all the Faithfull, and to them onely: yet the Doctrine is now, and hath been a long time far otherwise; namely, that every man hath Eternity of Life by Nature, in as much as his Soul is Immortall: So that the flaming Sword at the entrance of Paradise, though it hinder a man from coming to the Tree of Life, hinders him not from the Immortality which God took from him for his Sin; nor makes him to need the sacrificing of Christ, for the recovering of the same; and consequently, not onely the faithfull and righteous, but also the wicked, and the Heathen, shall enjoy Eternall Life, without any Death at all; much lesse a Second, and Everlasting Death. To salve this, it is said, that by Second, and Everlasting Death, is meant a Second, and Everlasting Life, but in Torments; a Figure never used, but in this very Case.

All which Doctrine is founded onely on some of the obscurer places of the New Testament; which neverthelesse, the whole scope of the Scripture considered, are cleer enough in a different sense, and unnecessary to the Christian Faith. For supposing that when a man dies, there remaineth nothing of him but his carkasse; cannot God that raised inanimated dust and clay into a living creature by his Word, as easily raise a dead carkasse to life again, and continue him alive for Ever, or make him die again, by another Word? The Soule in Scripture, signifieth alwaies, either the Life, or the Living Creature; and the Body and Soule jointly, the Body Alive. In the fift day of the Creation, God said, Let the water produce Reptile

Animae Viventis, the creeping thing that hath in it a Living Soule; the English translate it, "that hath Life:" And again, God created Whales, "& omnem animam viventem;" which in the English is, "every living Creature:" And likewise of Man, God made him of the dust of the earth, and breathed in his face the breath of Life, "& factus est Homo in animam viventem," that is, "and Man was made a Living Creature;" And after Noah came out of the Arke, God saith, hee will no more smite "omnem animam viventem," that is "every Living Creature;" And Deut. 12.23. "Eate not the Bloud, for the Bloud is the Soule;" that is "the Life." From which places, if by Soule were meant a Substance Incorporeall, with an existence separated from the Body, it might as well be inferred of any other living Creature, as of Man. But that the Souls of the Faithfull, are not of their own Nature, but by Gods speciall Grace, to remaine in their bodies, from the Resurrection to all Eternity, I have already I think sufficiently proved out of the Scriptures, in the 38. Chapter. And for the places of the New Testament, where it is said that any man shall be cast Body and Soul into Hell fire, it is no more than Body and Life; that is to say, they shall be cast alive into the perpetuall fire of Gehenna.

## **As The Doctrine Of Purgatory, And Exorcismes, And Invocation Of Saints**

This window it is, that gives entrance to the Dark Doctrine, first, of Eternall Torments; and afterwards of Purgatory, and consequently of the walking abroad, especially in places Consecrated, Solitary, or Dark, of the Ghosts of men deceased; and thereby to the pretences of Exorcisme and Conjunction of Phantasmes; as also of Invocation of men dead; and to the Doctrine of Indulgences; that is to say, of exemption for a time, or for ever, from the fire of Purgatory, wherein these Incorporeall Substances are pretended by burning to be cleansed, and made fit for Heaven. For men being generally possessed before the time of our Saviour, by contagion of the Daemonology of the Greeks, of an opinion, that the Souls of men were substances distinct from their Bodies, and therefore that when the Body was dead, the Soule of every man, whether godly, or wicked, must subsist somewhere by vertue of its own nature, without acknowledging therein any supernaturall gift of Gods; the Doctors of the Church doubted a long time, what was the place, which they were to abide in, till they should be re-united to their Bodies in the Resurrection; supposing for a while, they lay under the Altars: but afterward the Church of Rome found it more profitable, to build for them this place of Purgatory; which by some other Churches in this later age, has been demolished.

# **The Texts Alledged For The Doctrines Aforementioned Have Been Answered**

## **Before**

Let us now consider, what texts of Scripture seem most to confirm these three generall Errors, I have here touched. As for those which Cardinall Bellarmine hath alledged, for the present Kingdome of God administred by the Pope, (than which there are none that make a better show of proof,) I have already answered them; and made it evident, that the Kingdome of God, instituted by Moses, ended in the election of Saul: After which time the Priest of his own authority never deposed any King. That which the High Priest did to Athaliah, was not done in his own right, but in the right of the young King Joash her Son: But Solomon in his own right deposed the High Priest Abiathar, and set up another in his place. The most difficult place to answer, of all those than can be brought, to prove the Kingdome of God by Christ is already in this world, is alledged, not by Bellarmine, nor any other of the Church of Rome; but by Beza; that will have it to begin from the Resurrection of Christ. But whether hee intend thereby, to entitle the Presbytery to the Supreme Power Ecclesiasticall in the Common-wealth of Geneva, (and consequently to every Presbytery in every other Common-wealth,) or to Princes, and other Civill Soveraignes, I doe not know. For the Presbytery hath challenged the power to Excommunicate their owne Kings, and to bee the Supreme Moderators in Religion, in the places where they have that form of Church government, no lesse then the Pope challengeth it universally.

## **Answer To The Text On Which Beza Infereth**

That The Kingdome Of Christ Began At The Resurrection The words are (Marke 9.1.) "Verily, I say unto you, that there be some of them that stand here, which shall not tast of death, till they have seene the Kingdome of God come with power." Which words, if taken grammatically, make it certaine, that either some of those men that stood by Christ at that time, are yet alive; or else, that the Kingdome of God must be now in this present world. And then there is another place more difficult: For when the Apostles after our Saviours Resurrection, and immediately before his Ascension, asked our Saviour, saying, (Acts.1.6.) "Wilt thou at this time restore againe the Kingdome to Israel," he answered them, "It is not for you to know the times and the seasons, which the Father hath put in his own power; But ye shall receive power by the comming of the Holy Ghost upon you, and yee shall be my (Martyrs) witnesses both in Jerusalem, & in all Judaea, and in Samaria, and unto the uttermost part of the Earth:" Which is as much as to say, My Kingdome is not yet come, nor shall you foreknow when it shall come, for it shall come as a theefe in the night; But I will send you the Holy Ghost, and by him you shall have power to beare witness to all the world (by your preaching) of my Resurrection, and the workes I have done, and the doctrine I have taught, that they may beleve in me, and expect eternall life, at my comming againe: How does this agree with the comming of Christs Kingdome at the Resurrection? And that which St. Paul saies (1 Thessal. 1.9, 10.) "That they turned from Idols, to serve the living and true God, and to waite for his Sonne from Heaven:" Where to waite for his Sonne from Heaven, is to wait for his comming to be King in power; which were not necessary, if this Kingdome had beene then present. Againe, if the Kingdome of God began (as Beza on that place (Mark 9.1.) would have it) at the Resurrection; what reason is there for Christians ever since the Resurrection to say in their prayers, "Let thy Kingdome Come"? It is therefore manifest, that the words of St. Mark are not so to be interpreted. There be some of them that stand here (saith our Saviour) that shall not tast of death till they have seen the Kingdome of God come in power. If then this Kingdome were to come at the

Resurrection of Christ, why is it said, "some of them" rather than all? For they all lived till after Christ was risen.

## Explication Of The Place In Mark 9.1

But they that require an exact interpretation of this text, let them interpret first the like words of our Saviour to St. Peter concerning St. John, (chap. 21.22.) "If I will that he tarry till I come, what is that to thee?" upon which was grounded a report that hee should not dye: Neverthelesse the truth of that report was neither confirmed, as well grounded; nor refuted, as ill grounded on those words; but left as a saying not understood. The same difficulty is also in the place of St. Marke. And if it be lawfull to conjecture at their meaning, by that which immediately followes, both here, and in St. Luke, where the same is againe repeated, it is not unprobable, to say they have relation to the Transfiguration, which is described in the verses immediately following; where it is said, that "After six dayes Jesus taketh with him Peter, and James, and John (not all, but some of his Disciples) and leadeth them up into an high mountaine apart by themselves, and was transfigured before them. And his rayment became shining, exceeding white as snow; so as no Fuller on earth can white them. And there appeared unto them Elias with Moses, and they were talking with Jesus, &c." So that they saw Christ in Glory and Majestie, as he is to come; insomuch as "They were sore afraid." And thus the promise of our Saviour was accomplished by way of Vision: For it was a Vision, as may probably bee inferred out of St. Luke, that reciteth the same story (ch. 9. ve. 28.) and saith, that Peter and they that were with him, were heavy with sleep; But most certainly out of Matth. 17.9. (where the same is again related;) for our Saviour charged them, saying, "Tell no man the Vision untill the Son of man be Risen from the dead." Howsoever it be, yet there can from thence be taken no argument, to prove that the Kingdome of God taketh beginning till the day of Judgement.

## **Abuse Of Some Other Texts In Defence Of The Power Of The Pope**

As for some other texts, to prove the Popes Power over civill Soveraignes (besides those of Bellarmine;) as that the two Swords that Christ and his Apostles had amongst them, were the Spirituall and the Temporall Sword, which they say St. Peter had given him by Christ: And, that of the two Luminaries, the greater signifies the Pope, and the lesser the King; One might as well inferre out of the first verse of the Bible, that by Heaven is meant the Pope, and by Earth the King: Which is not arguing from Scripture, but a wanton insulting over Princes, that came in fashion after the time the Popes were growne so secure of their greatnesse, as to contemne all Christian Kings; and Treading on the necks of Emperours, to mocke both them, and the Scripture, in the words of the 91. Psalm, "Thou shalt Tread upon the Lion and the Adder, the young Lion and the Dragon thou shalt Trample under thy feet."

## **The Manner Of Consecrations In The Scripture, Was Without Exorcisms**

As for the rites of Consecration, though they depend for the most part upon the discretion and judgement of the governors of the Church, and not upon the Scriptures; yet those governors are obliged to such direction, as the nature of the action it selfe requireth; as that the ceremonies, words, and gestures, be both decent, and significant, or at least conformable to the action. When Moses consecrated the Tabernacle, the Altar, and the Vessels belonging to them (Exod. 40.) he anointed them with the Oyle which God had commanded to be made for that purpose; and they were holy; There was nothing Exorcised, to drive away Phantasmes. The same Moses (the civill Sovereigne of Israel) when he consecrated Aaron (the High Priest,) and his Sons, did wash them with Water, (not Exorcised water,) put their Garments upon them, and anointed them with Oyle; and they were sanctified, to minister unto the Lord in the Priests office; which was a simple and decent cleansing, and adorning them, before hee presented them to God, to be his servants. When King Solomon, (the civill Sovereigne of Israel) consecrated the Temple hee had built, (2 Kings 8.) he stood before all the Congregation of Israel; and having blessed them, he gave thanks to God, for putting into the heart of his father, to build it; and for giving to himselfe the grace to accomplish the same; and then prayed unto him, first, to accept that House, though it were not sutable to his infinite Greatnesse; and to hear the prayers of his Servants that should pray therein, or (if they were absent) towards it; and lastly, he offered a sacrifice of Peace-offering, and the House was dedicated. Here was no Procession; the King stood still in his first place; no Exorcised Water; no Asperges Me, nor other impertinent application of words spoken upon another occasion; but a decent, and rationally speech, and such as in making to God a present of his new built House, was most conformable to the occasion. We read not that St. John did Exorcise the Water of Jordan; nor Philip the Water of the river wherein he baptized the Eunuch; nor that any Pastor in the time of the Apostles, did take his spittle, and put it to the nose of the person to be Baptized, and say, "In odorem suavitatis," that is,

"for a sweet savour unto the Lord;" wherein neither the Ceremony of Spittle, for the uncleannesse; nor the application of that Scripture for the levity, can by any authority of man be justified.

# **The Immortality Of Mans Soule, Not Proved By Scripture To Be Of Nature,**

## **But Of Grace**

To prove that the Soule separated from the Body liveth eternally, not onely the Soules of the Elect, by especiall grace, and restauration of the Eternall Life which Adam lost by Sinne, and our Saviour restored by the Sacrifice of himself, to the Faithfull, but also the Soules of Reprobates, as a property naturally consequent to the essence of mankind, without other grace of God, but that which is universally given to all mankind; there are divers places, which at the first sight seem sufficiently to serve the turn: but such, as when I compare them with that which I have before (Chapter 38.) alledged out of the 14 of Job, seem to mee much more subject to a divers interpretation, than the words of Job.

And first there are the words of Solomon (Ecclesiastes 12.7.) "Then shall the Dust return to Dust, as it was, and the Spirit shall return to God that gave it." Which may bear well enough (if there be no other text directly against it) this interpretation, that God onely knows, (but Man not,) what becomes of a mans spirit, when he expireth; and the same Solomon, in the same Book, (Chap. 3. ver. 20,21.) delivereth in the same sentence in the sense I have given it: His words are, "All goe, (man and beast) to the same place; all are of the dust, and all turn to dust again; who knoweth that the spirit of Man goeth upward, and the spirit of the Beast goeth downward to the earth?" That is, none knows but God; Nor is it an unusuall phrase to say of things we understand not, "God knows what," and "God knows where." That of Gen. 5.24. "Enoch walked with God, and he was not; for God took him;" which is expounded Heb. 13.5. "He was translated, that he should not die; and was not found, because God had translated him. For before his Translation, he had this testimony, that he pleased God," making as much for the Immortality of the Body, as of the Soule, proveth, that this his translation was peculiar to them that please God; not common to them with the wicked; and depending on Grace, not on Nature. But on the contrary, what interpretation shall we give, besides

the literall sense of the words of Solomon (Eccles. 3.19.) "That which befalleth the Sons of Men, befalleth Beasts, even one thing befalleth them; as the one dyeth, so doth the other; yea, they have all one breath (one spirit;) so that a Man hath no praeeminence above a Beast, for all is vanity." By the literall sense, here is no Naturall Immortality of the Soule; nor yet any repugnancy with the Life Eternall, which the Elect shall enjoy by Grace. And (chap. 4. ver.3.) "Better is he that hath not yet been, than both they;" that is, than they that live, or have lived; which, if the Soule of all them that have lived, were Immortall, were a hard saying; for then to have an Immortall Soule, were worse than to have no Soule at all. And againe,(Chapt. 9.5.) "The living know they shall die, but the dead know not any thing;" that is, Naturally, and before the resurrection of the body.

Another place which seems to make for a Naturall Immortality of the Soule, is that, where our Saviour saith, that Abraham, Isaac, and Jacob are living: but this is spoken of the promise of God, and of their certitude to rise again, not of a Life then actuall; and in the same sense that God said to Adam, that on the day hee should eate of the forbidden fruit, he should certainly die; from that time forward he was a dead man by sentence; but not by execution, till almost a thousand years after. So Abraham, Isaac, and Jacob were alive by promise, then, when Christ spake; but are not actually till the Resurrection. And the History of Dives and Lazarus, make nothing against this, if wee take it (as it is) for a Parable.

But there be other places of the New Testament, where an Immortality seemeth to be directly attributed to the wicked. For it is evident, that they shall all rise to Judgement. And it is said besides in many places, that they shall goe into "Everlasting fire, Everlasting torments, Everlasting punishments; and that the worm of conscience never dyeth;" and all this is comprehended in the word Everlasting Death, which is ordinarily interpreted Everlasting Life In Torments: And yet I can find no where that any man shall live in torments Everlastingly. Also, it seemeth hard, to say, that God who is the Father of Mercies, that doth in Heaven and Earth all that hee will; that hath the hearts of all men in his disposing; that worketh in men both to doe, and to will; and without whose free gift a man hath neither inclination to good, nor repentance of evill, should punish mens transgressions without any end of time, and with all the extremity of torture, that men can imagine, and more. We are therefore to consider,

what the meaning is, of Everlasting Fire, and other the like phrases of Scripture.

I have shewed already, that the Kingdome of God by Christ beginneth at the day of Judgment: That in that day, the Faithfull shall rise again, with glorious, and spirituall Bodies, and bee his Subjects in that his Kingdome, which shall be Eternall; That they shall neither marry, nor be given in marriage, nor eate and drink, as they did in their naturall bodies; but live for ever in their individuall persons, without the specificall eternity of generation: And that the Reprobates also shall rise again, to receive punishments for their sins: As also, that those of the Elect, which shall be alive in their earthly bodies at that day, shall have their bodies suddenly changed, and made spirituall, and Immortall. But that the bodies of the Reprobate, who make the Kingdome of Satan, shall also be glorious, or spirituall bodies, or that they shall bee as the Angels of God, neither eating, nor drinking, nor engendring; or that their life shall be Eternall in their individuall persons, as the life of every faithfull man is, or as the life of Adam had been if hee had not sinned, there is no place of Scripture to prove it; save onely these places concerning Eternall Torments; which may otherwise be interpreted.

From whence may be inferred, that as the Elect after the Resurrection shall be restored to the estate, wherein Adam was before he had sinned; so the Reprobate shall be in the estate, that Adam, and his posterity were in after the sin committed; saving that God promised a Redeemer to Adam, and such of his seed as should trust in him, and repent; but not to them that should die in their sins, as do the Reprobate.

## **Eternall Torments What**

These things considered, the texts that mention Eternall Fire, Eternal Torments, or the Word That Never Dieth, contradict not the Doctrine of a Second, and Everlasting Death, in the proper and naturall sense of the word Death. The Fire, or Torments prepared for the wicked in Gehenna, Tophet, or in what place soever, may continue for ever; and there may never want wicked men to be tormented in them; though not every, nor any one Eternally. For the wicked being left in the estate they were in after Adams sin, may at the Resurrection live as they did, marry, and give in marriage, and have grosse and corruptible bodies, as all mankind now have; and consequently may engender perpetually, after the Resurrection, as they did before: For there is no place of Scripture to the contrary. For St. Paul, speaking of the Resurrection (1 Cor. 15.) understandeth it onely of the Resurrection to Life Eternall; and not the Resurrection to Punishment. And of the first, he saith that the Body is "Sown in Corruption, raised in Incorruption; sown in Dishonour, raised in Honour; sown in Weaknesse, raised in Power; sown a Naturall body, raised a Spirituall body:" There is no such thing can be said of the bodies of them that rise to Punishment. The text is Luke 20. Verses 34,35,36. a fertile text. "The Children of this world marry, and are given in marriage; but they that shall be counted worthy to obtaine that world, and the Resurrection from the dead, neither marry, nor are given in marriage: Neither can they die any more; for they are equall to the Angells, and are the Children of God, being the Children of the Resurrection:" The Children of this world, that are in the estate which Adam left them in, shall marry, and be given in marriage; that is corrupt, and generate successively; which is an Immortality of the Kind, but not of the Persons of men: They are not worthy to be counted amongst them that shall obtain the next world, and an absolute Resurrection from the dead; but onely a short time, as inmates of that world; and to the end onely to receive condign punishment for their contumacy. The Elect are the onely children of the Resurrection; that is to say the sole heirs of Eternall Life: they only can die no more; it is they that are equall to the Angells, and that are the children of God; and not the

Reprobate. To the Reprobate there remaineth after the Resurrection, a Second, and Eternall Death: between which Resurrection, and their Second, and Eternall death, is but a time of Punishment and Torment; and to last by succession of sinners thereunto, as long as the kind of Man by propagation shall endure, which is Eternally.

## **Answer Of The Texts Alledged For Purgatory**

Upon this Doctrine of the Naturall Eternity of separated Soules, is founded (as I said) the Doctrine of Purgatory. For supposing Eternall Life by Grace onely, there is no Life, but the Life of the Body; and no Immortality till the Resurrection. The texts for Purgatory alledged by Bellarmine out of the Canonick Scripture of the old Testament, are first, the Fasting of David for Saul and Jonathan, mentioned (2 Kings, 1. 12.); and againe, (2 Sam. 3. 35.) for the death of Abner. This Fasting of David, he saith, was for the obtaining of something for them at Gods hands, after their death; because after he had Fasted to procure the recovery of his owne child, as soone as he knew it was dead, he called for meate. Seeing then the Soule hath an existence separate from the Body, and nothing can be obtained by mens Fasting for the Soules that are already either in Heaven, or Hell, it followeth that there be some Soules of dead men, what are neither in Heaven, nor in Hell; and therefore they must bee in some third place, which must be Purgatory. And thus with hard straining, hee has wrested those places to the prooffe of a Purgatory; whereas it is manifest, that the ceremonies of Mourning, and Fasting, when they are used for the death of men, whose life was not profitable to the Mourners, they are used for honours sake to their persons; and when tis done for the death of them by whose life the Mourners had benefit, it proceeds from their particular dammage: And so David honoured Saul, and Abner, with his Fasting; and in the death of his owne child, recomforted himselfe, by receiving his ordinary food.

In the other places, which he alledgeth out of the old Testament, there is not so much as any shew, or colour of prooffe. He brings in every text wherein there is the word Anger, or Fire, or Burning, or Purging, or Clensing, in case any of the Fathers have but in a Sermon rhetorically applied it to the Doctrine of Purgatory, already beleevd. The first verse of Psalme, 37. "O Lord rebuke me not in thy wrath, nor chasten me in thy hot displeasure:" What were this to Purgatory, if Augustine had not applied the Wrath to the fire of Hell, and the Displeasure, to that of Purgatory? And what is it to Purgatory, that of Psalme, 66. 12. "Wee went through fire and

water, and thou broughtest us to a moist place;" and other the like texts, (with which the Doctors of those times entended to adorne, or extend their Sermons, or Commentaries) haled to their purposes by force of wit?

## Places Of The New Testament For Purgatory Answered

But he alledgeth other places of the New Testament, that are not so easie to be answered: And first that of Matth. 12.32. "Whosoever speaketh a word against the Sonne of man, it shall be forgiven him; but whosoever speaketh against the Holy Ghost, it shall not bee forgiven him neither in this world, nor in the world to come:" Where he will have Purgatory to be the World to come, wherein some sinnes may be forgiven, which in this World were not forgiven: notwithstanding that it is manifest, there are but three Worlds; one from the Creation to the Flood, which was destroyed by Water, and is called in Scripture the Old World; another from the Flood to the day of Judgement, which is the Present World, and shall bee destroyed by Fire; and the third, which shall bee from the day of Judgement forward, everlasting, which is called the World To Come; and in which it is agreed by all, there shall be no Purgatory; And therefore the World to come, and Purgatory, are inconsistent. But what then can bee the meaning of those our Saviours words? I confesse they are very hardly to bee reconciled with all the Doctrines now unanimously received: Nor is it any shame, to confesse the profoundnesse of the Scripture, to bee too great to be sounded by the shortnesse of humane understanding. Neverthelesse, I may propound such things to the consideration of more learned Divines, as the text it selfe suggesteth. And first, seeing to speake against the Holy Ghost, as being the third Person of the Trinity, is to speake against the Church, in which the Holy Ghost resideth; it seemeth the comparison is made, betweene the Easinesse of our Saviour, in bearing with offences done to him while he was on earth, and the Severity of the Pastors after him, against those which should deny their authority, which was from the Holy Ghost: As if he should say, You that deny my Power; nay you that shall crucifie me, shall be pardoned by mee, as often as you turne unto mee by Repentance: But if you deny the Power of them that teach you hereafter, by vertue of the Holy Ghost, they shall be inexorable, and shall not forgive you, but persecute you in this World, and leave you without absolution, (though you turn to me, unlesse you turn also to them,) to the punishments

(as much as lies in them) of the World to come: And so the words may be taken as a Prophecy, or Praediction concerning the times, as they have along been in the Christian Church: Or if this be not the meaning, (for I am not peremptory in such difficult places,) perhaps there may be place left after the Resurrection for the Repentance of some sinners: And there is also another place, that seemeth to agree therewith. For considering the words of St. Paul (1 Cor. 15. 29.) "What shall they doe which are Baptized for the dead, if the dead rise not at all? why also are they Baptized for the dead?" a man may probably inferre, as some have done, that in St. Pauls time, there was a custome by receiving Baptisme for the dead, (as men that now beleeve, are Sureties and Undertakers for the Faith of Infants, that are not capable of beleeving,) to undertake for the persons of their deceased friends, that they should be ready to obey, and receive our Saviour for their King, at his coming again; and then the forgiveness of sins in the world to come, has no need of a Purgatory. But in both these interpretations, there is so much of paradox, that I trust not to them; but propound them to those that are throughly versed in the Scripture, to inquire if there be no clearer place that contradicts them. Onely of thus much, I see evident Scripture, to perswade men, that there is neither the word, nor the thing of Purgatory, neither in this, nor any other text; nor any thing that can prove a necessity of a place for the Soule without the Body; neither for the Soule of Lazarus during the four days he was dead; nor for the Soules of them which the Romane Church pretend to be tormented now in Purgatory. For God, that could give a life to a peece of clay, hath the same power to give life again to a dead man, and renew his inanimate, and rotten Carkasse, into a glorious, spirituall, and immortall Body.

Another place is that of 1 Cor. 3. where it is said that they which built Stubble, Hay, &c. on the true Foundation, their work shall perish; but "they themselves shall be saved; but as through Fire:" This Fire, he will have to be the Fire of Purgatory. The words, as I have said before, are an allusion to those of Zach. 13. 9. where he saith, "I will bring the third part through the Fire, and refine them as Silver is refined, and will try them as Gold is tried;" Which is spoken of the comming of the Messiah in Power and Glory; that is, at the day of Judgment, and Conflagration of the present world; wherein the Elect shall not be consumed, but be refined; that is, depose their erroneous Doctrines, and Traditions, and have them as it were sindged off; and shall afterwards call upon the name of the true God. In

like manner, the Apostle saith of them, that holding this Foundation Jesus Is The Christ, shall build thereon some other Doctrines that be erroneous, that they shall not be consumed in that fire which reneweth the world, but shall passe through it to Salvation; but so, as to see, and relinquish their former Errours. The Builders, are the Pastors; the Foundation, that Jesus Is The Christ; the Stubble and Hay, False Consequences Drawn From It Through Ignorance, Or Frailty; the Gold, Silver, and pretious Stones, are their True Doctrines; and their Refining or Purging, the Relinquishing Of Their Errors. In all which there is no colour at all for the burning of Incorporeall, that is to say, Impatible Souls.

## **Baptisme For The Dead, How Understood**

A third place is that of 1 Cor. 15. before mentioned, concerning Baptisme for the Dead: out of which he concludeth, first, that Prayers for the Dead are not unprofitable; and out of that, that there is a Fire of Purgatory: But neither of them rightly. For of many interpretations of the word Baptisme, he approveth this in the first place, that by Baptisme is meant (metaphorically) a Baptisme of Penance; and that men are in this sense Baptized, when they Fast, and Pray, and give Almes: And so Baptisme for the Dead, and Prayer of the Dead, is the same thing. But this is a Metaphor, of which there is no example, neither in the Scripture, nor in any other use of language; and which is also discordant to the harmony, and scope of the Scripture. The word Baptisme is used (Mar. 10. 38. & Luk. 12. 59.) for being Dipped in ones own blood, as Christ was upon the Cross, and as most of the Apostles were, for giving testimony of him. But it is hard to say, that Prayer, Fasting, and Almes, have any similitude with Dipping. The same is used also Mat. 3. 11. (which seemeth to make somewhat for Purgatory) for a Purging with Fire. But it is evident the Fire and Purging here mentioned, is the same whereof the Prophet Zachary speaketh (chap. 13. v. 9.) "I will bring the third part through the Fire, and will Refine them, &c." And St. Peter after him (1 Epist. 1. 7.) "That the triall of your Faith, which is much more precious than of Gold that perisheth, though it be tryed with fire, might be found unto praise, and honour, and glory at the Appearing of Jesus Christ;" And St. Paul (1 Cor. 3. 13.) The Fire shall trie every mans work of what sort it is." But St. Peter, and St. Paul speak of the Fire that shall be at the Second Appearing of Christ; and the Prophet Zachary of the Day of Judgment: And therefore this place of S. Mat. may be interpreted of the same; and then there will be no necessity of the Fire of Purgatory.

Another interpretation of Baptisme for the Dead, is that which I have before mentioned, which he preferreth to the second place of probability; And thence also he inferreth the utility of Prayer for the Dead. For if after the Resurrection, such as have not heard of Christ, or not beleevd in him, may be received into Christs Kingdome; it is not in vain, after their death,

that their friends should pray for them, till they should be risen. But granting that God, at the prayers of the faithfull, may convert unto him some of those that have not heard Christ preached, and consequently cannot have rejected Christ, and that the charity of men in that point, cannot be blamed; yet this concludeth nothing for Purgatory, because to rise from Death to Life, is one thing; to rise from Purgatory to Life is another; and being a rising from Life to Life, from a Life in torments to a Life in joy.

A fourth place is that of Mat. 5. 25. "Agree with thine Adversary quickly, whilst thou art in the way with him, lest at any time the Adversary deliver thee to the Officer, and thou be cast into prison. Verily I say unto thee, thou shalt by no means come out thence, till thou has paid the uttermost farthing." In which Allegory, the Offender is the Sinner; both the Adversary and the Judge is God; the Way is this Life; the Prison is the Grave; the Officer, Death; from which, the sinner shall not rise again to life eternall, but to a second Death, till he have paid the utmost farthing, or Christ pay it for him by his Passion, which is a full Ransome for all manner of sin, as well lesser sins, as greater crimes; both being made by the passion of Christ equally veniall.

The fift place, is that of Matth. 5. 22. "Whosoever is angry with his Brother without a cause, shall be guilty in Judgment. And whosoever shall say to his Brother, RACHA, shall be guilty in the Councel. But whosoever shall say, Thou Foole, shall be guilty to hell fire." From which words he inferreth three sorts of Sins, and three sorts of Punishments; and that none of those sins, but the last, shall be punished with hell fire; and consequently, that after this life, there is punishment of lesser sins in Purgatory. Of which inference, there is no colour in any interpretation that hath yet been given to them: Shall there be a distinction after this life of Courts of Justice, as there was amongst the Jews in our Saviours time, to hear, and determine divers sorts of Crimes; as the Judges, and the Councell? Shall not all Judicature appertain to Christ, and his Apostles? To understand therefore this text, we are not to consider it solitarily, but jointly with the words precedent, and subsequent. Our Saviour in this Chapter interpreteth the Law of Moses; which the Jews thought was then fulfilled, when they had not transgressed the Grammaticall sense thereof, howsoever they had transgressed against the sentence, or meaning of the Legislator. Therefore whereas they thought the Sixth Commandement was

not broken, but by Killing a man; nor the Seventh, but when a man lay with a woman, not his wife; our Saviour tells them, the inward Anger of a man against his brother, if it be without just cause, is Homicide: You have heard (saith hee) the Law of Moses, "Thou shalt not Kill," and that "Whosoever shall Kill, shall be condemned before the Judges," or before the Session of the Seventy: But I say unto you, to be Angry with ones Brother without cause; or to say unto him Racha, or Foole, is Homicide, and shall be punished at the day of Judgment, and Session of Christ, and his Apostles, with Hell fire: so that those words were not used to distinguish between divers Crimes, and divers Courts of Justice, and divers Punishments; but to tax the distinction between sin, and sin, which the Jews drew not from the difference of the Will in Obeying God, but from the difference of their Temporall Courts of Justice; and to shew them that he that had the Will to hurt his Brother, though the effect appear but in Reviling, or not at all, shall be cast into hell fire, by the Judges, and by the Session, which shall be the same, not different Courts at the day of Judgment. This Considered, what can be drawn from this text, to maintain Purgatory, I cannot imagine.

The sixth place is Luke 16. 9. "Make yee friends of the unrighteous Mammon, that when yee faile, they may receive you into Everlasting Tabernacles." This he alledges to prove Invocation of Saints departed. But the sense is plain, That we should make friends with our Riches, of the Poore, and thereby obtain their Prayers whilst they live. "He that giveth to the Poore, lendeth to the Lord. "The seventh is Luke 23. 42. "Lord remember me when thou comest into thy Kingdome:" Therefore, saith hee, there is Remission of sins after this life. But the consequence is not good. Our Saviour then forgave him; and at his comming againe in Glory, will remember to raise him againe to Life Eternall.

The Eight is Acts 2. 24. where St. Peter saith of Christ, "that God had raised him up, and loosed the Paines of Death, because it was not possible he should be holden of it;" Which hee interprets to bee a descent of Christ into Purgatory, to loose some Soules there from their torments; whereas it is manifest, that it was Christ that was loosed; it was hee that could not bee holden of Death, or the Grave; and not the Souls in Purgatory. But if that which Beza sayes in his notes on this place be well observed, there is none that will not see, that in stead of Paynes, it should be Bands; and then there is no further cause to seek for Purgatory in this Text.

**CHAPTER XLV. OF DAEMONOLOGY, AND  
OTHER RELIQUES OF THE RELIGION OF  
THE**

GENTILES

## The Originall Of Daemonology

The impression made on the organs of Sight, by lucide Bodies, either in one direct line, or in many lines, reflected from Opaque, or refracted in the passage through Diaphanous Bodies, produceth in living Creatures, in whom God hath placed such Organs, an Imagination of the Object, from whence the Impression proceedeth; which Imagination is called Sight; and seemeth not to be a meer Imagination, but the Body it selfe without us; in the same manner, as when a man violently presseth his eye, there appears to him a light without, and before him, which no man perceiveth but himselfe; because there is indeed no such thing without him, but onely a motion in the interiour organs, pressing by resistance outward, that makes him think so. And the motion made by this pressure, continuing after the object which caused it is removed, is that we call Imagination, and Memory, and (in sleep, and sometimes in great distemper of the organs by Sicknesse, or Violence) a Dream: of which things I have already spoken briefly, in the second and third Chapters.

This nature of Sight having never been discovered by the ancient pretenders to Naturall Knowledge; much lesse by those that consider not things so remote (as that Knowledge is) from their present use; it was hard for men to conceive of those Images in the Fancy, and in the Sense, otherwise, than of things really without us: Which some (because they vanish away, they know not whither, nor how,) will have to be absolutely Incorporeall, that is to say Immateriall, of Formes without Matter; Colour and Figure, without any coloured or figured Body; and that they can put on Aiery bodies (as a garment) to make them Visible when they will to our bodily Eyes; and others say, are Bodies, and living Creatures, but made of Air, or other more subtile and aethereall Matter, which is, then, when they will be seen, condensed. But Both of them agree on one generall appellation of them, DAEMONS. As if the Dead of whom they Dreamed, were not Inhabitants of their own Brain, but of the Air, or of Heaven, or Hell; not Phantasmes, but Ghosts; with just as much reason, as if one should say, he saw his own Ghost in a Looking-Glasse, or the Ghosts of the Stars in a River; or call the ordinary apparition of the Sun, of the quantity

of about a foot, the Daemon, or Ghost of that great Sun that enlighteneth the whole visible world: And by that means have feared them, as things of an unknown, that is, of an unlimited power to doe them good, or harme; and consequently, given occasion to the Governours of the Heathen Common-wealths to regulate this their fear, by establishing that DAEMONOLOGY (in which the Poets, as Principal Priests of the Heathen Religion, were specially employed, or revered) to the Publique Peace, and to the Obedience of Subjects necessary thereunto; and to make some of them Good Daemons, and others Evill; the one as a Spurre to the Observance, the other, as Reines to withhold them from Violation of the Laws.

## **What Were The Daemons Of The Ancients**

What kind of things they were, to whom they attributed the name of Daemons, appeareth partly in the Genealogie of their Gods, written by Hesiod, one of the most ancient Poets of the Graecians; and partly in other Histories; of which I have observed some few before, in the 12. Chapter of this discourse.

## How That Doctrine Was Spread

The Graecians, by their Colonies and Conquests, communicated their Language and Writings into Asia, Egypt, and Italy; and therein, by necessary consequence their Daemonology, or (as St. Paul calles it) "their Doctrines of Devils;" And by that meanes, the contagion was derived also to the Jewes, both of Judaea, and Alexandria, and other parts, whereinto they were dispersed. But the name of Daemon they did not (as the Graecians) attribute to Spirits both Good, and Evill; but to the Evill onely: And to the Good Daemons they gave the name of the Spirit of God; and esteemed those into whose bodies they entred to be Prophets. In summe, all singularity if Good, they attributed to the Spirit of God; and if Evill, to some Daemon, but a kakodaimen, an Evill Daemon, that is, a Devill. And therefore, they called Daemoniaques, that is, possessed by the Devill, such as we call Madmen or Lunatiques; or such as had the Falling Sicknesse; or that spoke any thing, which they for want of understanding, thought absurd: As also of an Unclean person in a notorious degree, they used to say he had an Unclean Spirit; of a Dumbe man, that he had a Dumbe Devill; and of John Baptist (Math. 11. 18.) for the singularity of his fasting, that he had a Devill; and of our Saviour, because he said, hee that keepeth his sayings should not see Death In Aeternum, (John 8. 52.) "Now we know thou hast a Devill; Abraham is dead, and the Prophets are dead:" And again, because he said (John 7. 20.) "They went about to kill him," the people answered, "Thou hast a Devill, who goeth about to kill thee?" Whereby it is manifest, that the Jewes had the same opinions concerning Phantasmes, namely, that they were not Phantasmes that is, Idols of the braine, but things reall, and independent on the Fancy.

## Why Our Saviour Controlled It Not

Which doctrine if it be not true, why (may some say) did not our Saviour contradict it, and teach the Contrary? nay why does he use on diverse occasions, such forms of speech as seem to confirm it? To this I answer, that first, where Christ saith, "A Spirit hath not flesh and bone," though hee shew that there be Spirits, yet he denies not that they are Bodies: And where St. Paul sais, "We shall rise Spirituall Bodies," he acknowledgeth the nature of Spirits, but that they are Bodily Spirits; which is not difficult to understand. For Air and many other things are Bodies, though not Flesh and Bone, or any other grosse body, to bee discerned by the eye. But when our Saviour speaketh to the Devill, and commandeth him to go out of a man, if by the Devill, be meant a Disease, as Phrenesy, or Lunacy, or a corporeal Spirit, is not the speech improper? can Diseases heare? or can there be a corporeall Spirit in a Body of Flesh and Bone, full already of vitall and animall Spirits? Are there not therefore Spirits, that neither have Bodies, nor are meer Imaginations? To the first I answer, that the addressing of our Saviours command to the Madnesse, or Lunacy he cureth, is no more improper, then was his rebuking of the Fever, or of the Wind, and Sea; for neither do these hear: Or than was the command of God, to the Light, to the Firmament, to the Sunne, and Starres, when he commanded them to bee; for they could not heare before they had a beeing. But those speeches are not improper, because they signifie the power of Gods Word: no more therefore is it improper, to command Madnesse, or Lunacy (under the appellation of Devils, by which they were then commonly understood,) to depart out of a mans body. To the second, concerning their being Incorporeall, I have not yet observed any place of Scripture, from whence it can be gathered, that any man was ever possessed with any other Corporeal Spirit, but that of his owne, by which his body is naturally moved.

## **The Scriptures Doe Not Teach That Spirits Are Incorporeall**

Our Saviour, immediately after the Holy Ghost descended upon him in the form of a Dove, is said by St. Matthew (Chapt. 4. 1.) to have been "led up by the Spirit into the Wildernesse;" and the same is recited (Luke 4. 1.) in these words, "Jesus being full of the Holy Ghost, was led in the Spirit into the Wildernesse;" Whereby it is evident, that by Spirit there, is meant the Holy Ghost. This cannot be interpreted for a Possession: For Christ, and the Holy Ghost, are but one and the same substance; which is no possession of one substance, or body, by another. And whereas in the verses following, he is said "to have been taken up by the Devill into the Holy City, and set upon a pinnacle of the Temple," shall we conclude thence that hee was possessed of the Devill, or carryed thither by violence? And again, "carryed thence by the Devill into an exceeding high mountain, who shewed him them thence all the Kingdomes of the world:" herein, wee are not to beleieve he was either possessed, or forced by the Devill; nor that any Mountaine is high enough, (according to the literall sense,) to shew him one whole Hemisphere. What then can be the meaning of this place, other than that he went of himself into the Wildernesse; and that this carrying of him up and down, from the Wildernesse to the City, and from thence into a Mountaine, was a Vision? Conformable whereunto, is also the phrase of St. Luke, that hee was led into the Wildernesse, not By, but In the Spirit: whereas concerning His being Taken up into the Mountaine, and unto the Pinnacle of the Temple, hee speaketh as St. Matthew doth. Which suiteth with the nature of a Vision.

Again, where St. Luke sayes of Judas Iscariot, that "Satan entred into him, and thereupon that he went and communed with the Chief Priests, and Captaines, how he might betray Christ unto them:" it may be answered, that by the Entring of Satan (that is the Enemy) into him, is meant, the hostile and traiterous intention of selling his Lord and Master. For as by the Holy Ghost, is frequently in Scripture understood, the Graces and good Inclinations given by the Holy Ghost; so by the Entring of Satan, may bee understood the wicked Cogitations, and Designes of the Adversaries of

Christ, and his Disciples. For as it is hard to say, that the Devill was entred into Judas, before he had any such hostile designe; so it is impertinent to say, he was first Christs Enemy in his heart, and that the Devill entred into him afterwards. Therefore the Entring of Satan, and his Wicked Purpose, was one and the same thing.

But if there be no Immateriall Spirit, nor any Possession of mens bodies by any Spirit Corporeall, it may again be asked, why our Saviour and his Apostles did not teach the People so; and in such cleer words, as they might no more doubt thereof. But such questions as these, are more curious, than necessary for a Christian mans Salvation. Men may as well aske, why Christ that could have given to all men Faith, Piety, and all manner of morall Vertues, gave it to some onely, and not to all: and why he left the search of naturall Causes, and Sciences, to the naturall Reason and Industry of men, and did not reveal it to all, or any man supernaturally; and many other such questions: Of which neverthelesse there may be alledged probable and pious reasons. For as God, when he brought the Israelites into the Land of Promise, did not secure them therein, by subduing all the Nations round about them; but left many of them, as thornes in their sides, to awaken from time to time their Piety and Industry: so our Saviour, in conducting us toward his heavenly Kingdome, did not destroy all the difficulties of Naturall Questions; but left them to exercise our Industry, and Reason; the Scope of his preaching, being onely to shew us this plain and direct way to Salvation, namely, the beleef of this Article, "that he was the Christ, the Son of the living God, sent into the world to sacrifice himselfe for our Sins, and at his comming again, gloriously to reign over his Elect, and to save them from their Enemies eternally:" To which, the opinion of Possession by Spirits, or Phantasmes, are no impediment in the way; though it be to some an occasion of going out of the way, and to follow their own Inventions. If wee require of the Scripture an account of all questions, which may be raised to trouble us in the performance of Gods commands; we may as well complaine of Moses for not having set downe the time of the creation of such Spirits, as well as of the Creation of the Earth, and Sea, and of Men, and Beasts. To conclude, I find in Scripture that there be Angels, and Spirits, good and evill; but not that they are Incorporeall, as are the Apparitions men see in the Dark, or in a Dream, or Vision; which the Latines call Spectra, and took for Daemons. And I find that there are Spirits Corporeal, (though subtile and Invisible;)

but not that any mans body was possessed, or inhabited by them; And that the Bodies of the Saints shall be such, namely, Spirituall Bodies, as St. Paul calls them.

# **The Power Of Casting Out Devills, Not The Same It Was In The Primitive**

## **Church**

Neverthelesse, the contrary Doctrine, namely, that there be Incorporeall Spirits, hath hitherto so prevailed in the Church, that the use of Exorcisme, (that is to say, of ejection of Devills by Conjuratiō) is thereupon built; and (though rarely and faintly practised) is not yet totally given over. That there were many Daemoniaques in the Primitive Church, and few Mad-men, and other such singular diseases; whereas in these times we hear of, and see many Mad-men, and few Daemoniaques, proceeds not from the change of Nature; but of Names. But how it comes to passe, that whereas heretofore the Apostles, and after them for a time, the Pastors of the Church, did cure those singular Diseases, which now they are not seen to doe; as likewise, why it is not in the power of every true Beleever now, to doe all that the Faithfull did then, that is to say, as we read (Mark 16. 17.) "In Christs name to cast out Devills, to speak with new Tongues, to take up Serpents, to drink deadly Poison without harm taking, and to cure the Sick by the laying on of their hands," and all this without other words, but "in the Name of Jesus," is another question. And it is probable, that those extraordinary gifts were given to the Church, for no longer a time, than men trusted wholly to Christ, and looked for their felicity onely in his Kingdome to come; and consequently, that when they sought Authority, and Riches, and trusted to their own Subtilty for a Kingdome of this world, these supernaturall gifts of God were again taken from them.

# **Another Relique Of Gentilisme, Worshipping Images, Left In The Church**

## **Not Brought Into It**

Another relique of Gentilisme, is the Worship of Images, neither instituted by Moses in the Old, nor by Christ in the New Testament; nor yet brought in from the Gentiles; but left amongst them, after they had given their names to Christ. Before our Saviour preached, it was the generall Religion of the Gentiles, to worship for Gods, those Apparences that remain in the Brain from the impression of externall Bodies upon the organs of their Senses, which are commonly called Ideas, Idols, Phantasmes, Conceits, as being Representations of those externall Bodies, which cause them, and have nothing in them of reality, no more than there is in the things that seem to stand before us in a Dream: And this is the reason why St. Paul says, "Wee know that an Idol is Nothing:" Not that he thought that an Image of Metall, Stone, or Wood, was nothing; but that the thing which they honored, or feared in the Image, and held for a God, was a meer Figment, without place, habitation, motion, or existence, but in the motions of the Brain. And the worship of these with Divine Honour, is that which is in the Scripture called Idolatry, and Rebellion against God. For God being King of the Jews, and his Lieutenant being first Moses, and afterward the High Priest; if the people had been permitted to worship, and pray to Images, (which are Representations of their own Fancies,) they had had no farther dependence on the true God, of whom there can be no similitude; nor on his prime Ministers, Moses, and the High Priests; but every man had governed himself according to his own appetite, to the utter eversion of the Common-wealth, and their own destruction for want of Union. And therefore the first Law of God was, "They should not take for Gods, ALIENOS DEOS, that is, the Gods of other nations, but that onely true God, who vouchsafed to commune with Moses, and by him to give them laws and directions, for their peace, and for their salvation from their enemies." And the second was, that "they should not make to themselves any Image to Worship, of their own Invention." For it is the same deposing

of a King, to submit to another King, whether he be set up by a neighbour nation, or by our selves.

## **Answer To Certain Seeming Texts For Images**

The places of Scripture pretended to countenance the setting up of Images, to worship them; or to set them up at all in the places where God is worshipped, are First, two Examples; one of the Cherubins over the Ark of God; the other of the Brazen Serpent: Secondly, some texts whereby we are commanded to worship certain Creatures for their relation to God; as to worship his Footstool: And lastly, some other texts, by which is authorized, a religious honoring of Holy things. But before I examine the force of those places, to prove that which is pretended, I must first explain what is to be understood by Worshipping, and what by Images, and Idols.

## What Is Worship

I have already shewn in the 20 Chapter of this Discourse, that to Honor, is to value highly the Power of any person: and that such value is measured, by our comparing him with others. But because there is nothing to be compared with God in Power; we Honor him not but Dishonour him by any Value lesse than Infinite. And thus Honor is properly of its own nature, secret, and internall in the heart. But the inward thoughts of men, which appeare outwardly in their words and actions, are the signes of our Honoring, and these goe by the name of WORSHIP, in Latine, CULTUS. Therefore, to Pray to, to Swear by, to Obey, to bee Diligent, and Officious in Serving: in summe, all words and actions that betoken Fear to Offend, or Desire to Please, is Worship, whether those words and actions be sincere, or feigned: and because they appear as signes of Honoring, are ordinarily also called Honor.

## **Distinction Between Divine And Civill Worship**

The Worship we exhibite to those we esteem to be but men, as to Kings, and men in Authority, is Civill Worship: But the worship we exhibite to that which we think to bee God, whatsoever the words, ceremonies, gestures, or other actions be, is Divine Worship. To fall prostrate before a King, in him that thinks him but a Man, is but Civill Worship: And he that but putteth off his hat in the Church, for this cause, that he thinketh it the House of God, worshipping with Divine Worship. They that seek the distinction of Divine and Civill Worship, not in the intention of the Worshipper, but in the Words *douleia*, and *latreia*, deceive themselves. For whereas there be two sorts of Servants; that sort, which is of those that are absolutely in the power of their Masters, as Slaves taken in war, and their Issue, whose bodies are not in their own power, (their lives depending on the Will of their Masters, in such manner as to forfeit them upon the least disobedience,) and that are bought and sold as Beasts, were called *Douloi*, that is properly, Slaves, and their Service, *Douleia*: The other, which is of those that serve (for hire, or in hope of benefit from their Masters) voluntarily; are called *Thetes*; that is, *Domestique Servants*; to whose service the Masters have no further right, than is contained in the Covenants made betwixt them. These two kinds of Servants have thus much common to them both, that their labour is appointed them by another, whether, as a Slave, or a voluntary Servant: And the word *Latris*, is the general name of both, signifying him that worketh for another, whether, as a Slave, or a voluntary Servant: So that *Latreia* signifieth generally all Service; but *Douleia* the service of Bondmen onely, and the condition of Slavery: And both are used in Scripture (to signifie our Service of God) promiscuously. *Douleia*, because we are Gods Slaves; *Latreia*, because wee Serve him: and in all kinds of Service is contained, not onely Obedience, but also Worship, that is, such actions, gestures, and words, as signifie Honor.

## **An Image What Phantasmes**

An IMAGE (in the most strict signification of the word) is the Resemblance of some thing visible: In which sense the Phantasticall Formes, Apparitions, or Seemings of Visible Bodies to the Sight, are onely Images; such as are the Shew of a man, or other thing in the Water, by Reflexion, or Refraction; or of the Sun, or Stars by Direct Vision in the Air; which are nothing reall in the things seen, nor in the place where thy seem to bee; nor are their magnitudes and figures the same with that of the object; but changeable, by the variation of the organs of Sight, or by glasses; and are present oftentimes in our Imagination, and in our Dreams, when the object is absent; or changed into other colours, and shapes, as things that depend onely upon the Fancy. And these are the Images which are originally and most properly called Ideas, and IDOLS, and derived from the language of the Graecians, with whom the word Eido signifieth to See. They are also called PHANTASMES, which is in the same language, Apparitions. And from these Images it is that one of the faculties of mans Nature, is called the Imagination. And from hence it is manifest, that there neither is, nor can bee any Image made of a thing Invisible.

It is also evident, that there can be no Image of a thing Infinite: for all the Images, and Phantasmes that are made by the Impression of things visible, are figured: but Figure is a quantity every way determined: And therefore there can bee no Image of God: nor of the Soule of Man; nor of Spirits, but onely of Bodies Visible, that is, Bodies that have light in themselves, or are by such enlightened.

## **Fictions; Materiall Images**

And whereas a man can fancy Shapes he never saw; making up a Figure out of the parts of divers creatures; as the Poets make their Centaures, Chimaeras, and other Monsters never seen: So can he also give Matter to those Shapes, and make them in Wood, Clay or Metall. And these are also called Images, not for the resemblance of any corporeall thing, but for the resemblance of some Phantasticall Inhabitants of the Brain of the Maker. But in these Idols, as they are originally in the Brain, and as they are painted, carved, moulded, or moulten in matter, there is a similitude of the one to the other, for which the Materiall Body made by Art, may be said to be the Image of the Phantasticall Idoll made by Nature.

But in a larger use of the word Image, is contained also, any Representation of one thing by another. So an earthly Sovereign may be called the Image of God: And an inferiour Magistrate the Image of an earthly Sovereign. And many times in the Idolatry of the Gentiles there was little regard to the similitude of their Materiall Idoll to the Idol in their fancy, and yet it was called the Image of it. For a Stone unhewn has been set up for Neptune, and divers other shapes far different from the shapes they conceived of their Gods. And at this day we see many Images of the Virgin Mary, and other Saints, unlike one another, and without correspondence to any one mans Fancy; and yet serve well enough for the purpose they were erected for; which was no more but by the Names onely, to represent the Persons mentioned in the History; to which every man applyeth a Mentall Image of his owne making, or none at all. And thus an Image in the largest sense, is either the Resemblance, or the Representation of some thing Visible; or both together, as it happeneth for the most part.

But the name of Idoll is extended yet further in Scripture, to signifie also the Sunne, or a Starre, or any other Creature, visible or invisible, when they are worshipped for Gods.

## Idolatry What

Having shewn what is Worship, and what an Image; I will now put them together, and examine what that IDOLATRY is, which is forbidden in the Second Commandement, and other places of the Scripture.

To worship an Image, is voluntarily to doe those externall acts, which are signes of honoring either the matter of the Image, which is Wood, Stone, or Metall, or some other visible creature; or the Phantasme of the brain, for the resemblance, or representation whereof, the matter was formed and figured; or both together, as one animate Body, composed of the Matter and the Phantasme, as of a Body and Soule.

To be uncovered, before a man of Power and Authority, or before the Throne of a Prince, or in such other places as hee ordaineth to that purpose in his absence, is to Worship that man, or Prince with Civill Worship; as being a signe, not of honoring the stoole, or place, but the Person; and is not Idolatry. But if hee that doth it, should suppose the Soule of the Prince to be in the Stool, or should present a Petition to the Stool, it were Divine Worship, and Idolatry.

To pray to a King for such things, as hee is able to doe for us, though we prostrate our selves before him, is but Civill Worship; because we acknowledge no other power in him, but humane: But voluntarily to pray unto him for fair weather, or for any thing which God onely can doe for us, is Divine Worship, and Idolatry. On the other side, if a King compell a man to it by the terrour of Death, or other great corporall punishment, it is not Idolatry: For the Worship which the Sovereign commandeth to bee done unto himself by the terrour of his Laws, is not a sign that he that obeyeth him, does inwardly honour him as a God, but that he is desirous to save himselfe from death, or from a miserable life; and that which is not a sign of internall honor, is no Worship; and therefore no Idolatry. Neither can it bee said, that hee that does it, scandalizeth, or layeth any stumbling block before his Brother; because how wise, or learned soever he be that worshippeth in that manner, another man cannot from thence argue, that he approveth it; but that he doth it for fear; and that it is not his act, but the act of the Sovereign.

To worship God, in some peculiar Place, or turning a mans face towards an Image, or determinate Place, is not to worship, or honor the Place, or Image; but to acknowledge it Holy, that is to say, to acknowledge the Image, or the Place to be set apart from common use: for that is the meaning of the word Holy; which implies no new quality in the Place, or Image; but onely a new Relation by Appropriation to God; and therefore is not Idolatry; no more than it was Idolatry to worship God before the Brazen Serpent; or for the Jews when they were out of their owne countrey, to turn their faces (when they prayed) toward the Temple of Jerusalem; or for Moses to put off his Shoes when he was before the Flaming Bush, the ground appertaining to Mount Sinai; which place God had chosen to appear in, and to give his Laws to the People of Israel, and was therefore Holy ground, not by inhaerent sanctity, but by separation to Gods use; or for Christians to worship in the Churches, which are once solemnly dedicated to God for that purpose, by the Authority of the King, or other true Representant of the Church. But to worship God, is inanimating, or inhibiting, such Image, or place; that is to say, an infinite substance in a finite place, is Idolatry: for such finite Gods, are but Idols of the brain, nothing reall; and are commonly called in the Scripture by the names of Vanity, and Lyes, and Nothing. Also to worship God, not as inanimating, or present in the place, or Image; but to the end to be put in mind of him, or of some works of his, in case the Place, or Image be dedicated, or set up by private authority, and not by the authority of them that are our Sovereign Pastors, is Idolatry. For the Commandement is, "Thou shalt not make to thy selfe any graven image." God commanded Moses to set up the Brazen Serpent; hee did not make it to himselfe; it was not therefore against the Commandement. But the making of the Golden Calfe by Aaron, and the People, as being done without authority from God, was Idolatry; not onely because they held it for God, but also because they made it for a Religious use, without warrant either from God their Sovereign, or from Moses, that was his Lieutenant.

The Gentiles worshipped for Gods, Jupiter, and others; that living, were men perhaps that had done great and glorious Acts; and for the Children of God, divers men and women, supposing them gotten between an Immortall Deity, and a mortall man. This was Idolatry, because they made them so to themselves, having no authority from God, neither in his eternall Law of Reason, nor in his positive and revealed Will. But though our Saviour was

a man, whom wee also beleeve to bee God Immortall, and the Son of God; yet this is no Idolatry; because wee build not that beleeve upon our own fancy, or judgment, but upon the Word of God revealed in the Scriptures. And for the adoration of the Eucharist, if the words of Christ, "This is my Body," signifie, "that he himselfe, and the seeming bread in his hand; and not onely so, but that all the seeming morsells of bread that have ever since been, and any time hereafter shall bee consecrated by Priests, bee so many Christs bodies, and yet all of them but one body," then is that no Idolatry, because it is authorized by our Saviour: but if that text doe not signifie that, (for there is no other that can be alledged for it,) then, because it is a worship of humane institution, it is Idolatry. For it is not enough to say, God can transubstantiate the Bread into Christs Body: For the Gentiles also held God to be Omnipotent; and might upon that ground no lesse excuse their Idolatry, by pretending, as well as others, as transubstantiation of their Wood, and Stone into God Almighty.

Whereas there be, that pretend Divine Inspiration, to be a supernaturall entring of the Holy Ghost into a man, and not an acquisition of Gods grace, by doctrine, and study; I think they are in a very dangerous Dilemma. For if they worship not the men whom they beleeve to be so inspired, they fall into Impiety; as not adoring Gods supernaturall Presence. And again, if they worship them, they commit Idolatry; for the Apostles would never permit themselves to be so worshipped. Therefore the safest way is to beleeve, that by the Descending of the Dove upon the Apostles; and by Christs Breathing on them, when hee gave them the Holy Ghost; and by the giving of it by Imposition of Hands, are understood the signes which God hath been pleased to use, or ordain to be used, of his promise to assist those persons in their study to Preach his Kingdome, and in their Conversation, that it might not be Scandalous, but Edifying to others.

## Scandalous Worship Of Images

Besides the Idolatrous Worship of Images, there is also a Scandalous Worship of them; which is also a sin; but not Idolatry. For Idolatry is to worship by signes of an internall, and reall honour: but Scandalous Worship, is but Seeming Worship; and may sometimes bee joined with an inward, and hearty detestation, both of the Image, and of the Phantasticall Daemon, or Idol, to which it is dedicated; and proceed onely from the fear of death, or other grievous punishment; and is neverthelesse a sin in them that so worship, in case they be men whose actions are looked at by others, as lights to guide them by; because following their ways, they cannot but stumble, and fall in the way of Religion: Whereas the example of those we regard not, works not on us at all, but leaves us to our own diligence and caution; and consequently are no causes of our falling.

If therefore a Pastor lawfully called to teach and direct others, or any other, of whose knowledge there is a great opinion, doe externall honor to an Idol for fear; unlesse he make his feare, and unwillingnesse to it, as evident as the worship; he Scandalizeth his Brother, by seeming to approve Idolatry. For his Brother, arguing from the action of his teacher, or of him whose knowledge he esteemeth great, concludes it to bee lawfull in it selfe. And this Scandall, is Sin, and a Scandall given. But if one being no Pastor, nor of eminent reputation for knowledge in Christian Doctrine, doe the same, and another follow him; this is no Scandall given; for he had no cause to follow such example: but is a pretence of Scandall which hee taketh of himselfe for an excuse before men: For an unlearned man, that is in the power of an idolatrous King, or State, if commanded on pain of death to worship before an Idoll, hee detesteth the Idoll in his heart, hee doth well; though if he had the fortitude to suffer death, rather than worship it, he should doe better. But if a Pastor, who as Christs Messenger, has undertaken to teach Christs Doctrine to all nations, should doe the same, it were not onely a sinfull Scandall, in respect of other Christian mens consciences, but a perfidious forsaking of his charge.

The summe of that which I have said hitherto, concerning the Worship of Images, is that, that he that worshippeth in an Image, or any Creature,

either the Matter thereof, or any Fancy of his own, which he thinketh to dwell in it; or both together; or beleeveth that such things hear his Prayers, or see his Devotions, without Ears, or Eyes, committeth Idolatry: and he that counterfeith such Worship for fear of punishment, if he bee a man whose example hath power amongst his Brethren, committeth a sin: But he that worshippeth the Creator of the world before such an Image, or in such a place as he hath not made, or chosen of himselfe, but taken from the commandement of Gods Word, as the Jewes did in worshipping God before the Cherubins, and before the Brazen Serpent for a time, and in, or towards the Temple of Jerusalem, which was also but for a time, committeth not Idolatry.

Now for the Worship of Saints, and Images, and Reliques, and other things at this day practised in the Church of Rome, I say they are not allowed by the Word of God, not brought into the Church of Rome, from the Doctrine there taught; but partly left in it at the first conversion of the Gentiles; and afterwards countenanced, and confirmed, and augmented by the Bishops of Rome.

## **Answer To The Argument From The Cherubins, And Brazen Serpent**

As for the proofs alledged out of Scripture, namely, those examples of Images appointed by God to bee set up; They were not set up for the people, or any man to worship; but that they should worship God himselfe before them: as before the Cherubins over the Ark, and the Brazen Serpent. For we read not, that the Priest, or any other did worship the Cherubins; but contrarily wee read (2 Kings 18.4.) that Hezekiah brake in pieces the Brazen Serpent which Moses had set up, because the People burnt incense to it. Besides, those examples are not put for our Imitation, that we also should set up Images, under pretence of worshipping God before them; because the words of the second Commandement, "Thou shalt not make to thy selfe any graven Image, &c." distinguish between the Images that God commanded to be set up, and those which wee set up to our selves. And therefore from the Cherubins, or Brazen Serpent, to the Images of mans devising; and from the Worship commanded by God, to the Will-Worship of men, the argument is not good. This also is to bee considered, that as Hezekiah brake in pieces the Brazen Serpent, because the Jews did worship it, to the end they should doe so no more; so also Christian Sovereigns ought to break down the Images which their Subjects have been accustomed to worship; that there be no more occasion of such Idolatry. For at this day, the ignorant People, where Images are worshipped, doe really beleieve there is a Divine Power in the Images; and are told by their Pastors, that some of them have spoken; and have bled; and that miracles have been done by them; which they apprehend as done by the Saint, which they think either is the Image it self, or in it. The Israelites, when they worshipped the Calfe, did think they worshipped the God that brought them out of Egypt; and yet it was Idolatry, because they thought the Calfe either was that God, or had him in his belly. And though some man may think it impossible for people to be so stupid, as to think the Image to be God, or a Saint; or to worship it in that notion; yet it is manifest in Scripture to the contrary; where when the Golden Calfe was made, the people said, (Exod. 32. 2.) "These are thy Gods O Israel;" and

where the Images of Laban (Gen. 31.30.) are called his Gods. And wee see daily by experience in all sorts of People, that such men as study nothing but their food and ease, are content to beleve any absurdity, rather than to trouble themselves to examine it; holding their faith as it were by entaile unalienable, except by an expresse and new Law.

## **Painting Of Fancies No Idolatry: Abusing Them To Religious Worship Is**

But they inferre from some other places, that it is lawfull to paint Angels, and also God himselfe: as from Gods walking in the Garden; from Jacobs seeing God at the top of the ladder; and from other Visions, and Dreams. But Visions, and Dreams whether naturall, or supernaturall, are but Phantasmes: and he that painteth an Image of any of them, maketh not an Image of God, but of his own Phantasm, which is, making of an Idol. I say not, that to draw a Picture after a fancy, is a Sin; but when it is drawn, to hold it for a Representation of God, is against the second Commandement; and can be of no use, but to worship. And the same may be said of the Images of Angels, and of men dead; unlesse as Monuments of friends, or of men worthy remembrance: For such use of an Image, is not Worship of the Image; but a civill honoring of the Person, not that is, but that was: But when it is done to the Image which we make of a Saint, for no other reason, but that we think he heareth our prayers, and is pleased with the honour wee doe him, when dead, and without sense, wee attribute to him more than humane power; and therefore it is Idolatry.

Seeing therefore there is no authority, neither in the Law of Moses, nor in the Gospel, for the religious Worship of Images, or other Representations of God, which men set up to themselves; or for the Worship of the Image of any Creature in Heaven, or Earth, or under the Earth: And whereas Christian Kings, who are living Representants of God, are not to be worshipped by their Subjects, by any act, that signifieth a greater esteem of his power, than the nature of mortall man is capable of; It cannot be imagined, that the Religious Worship now in use, was brought into the Church, by misunderstanding of the Scripture. It resteth therefore, that it was left in it, by not destroying the Images themselves, in the conversion of the Gentiles that worshipped them.

## How Idolatry Was Left In The Church

The cause whereof, was the immoderate esteem, and prices set upon the workmanship of them, which made the owners (though converted, from worshipping them as they had done Religiously for Daemons) to retain them still in their houses, upon pretence of doing it in the honor of Christ, of the Virgin Mary, and of the Apostles, and other the Pastors of the Primitive Church; as being easie, by giving them new names, to make that an Image of the Virgin Mary, and of her Sonne our Saviour, which before perhaps was called the Image of Venus, and Cupid; and so of a Jupiter to make a Barnabas, and of Mercury a Paul, and the like. And as worldly ambition creeping by degrees into the Pastors, drew them to an endeavour of pleasing the new made Christians; and also to a liking of this kind of honour, which they also might hope for after their decease, as well as those that had already gained it: so the worshipping of the Images of Christ and his Apostles, grow more and more Idolatrous; save that somewhat after the time of Constantine, divers Emperors, and Bishops, and generall Councells observed, and opposed the unlawfulness thereof; but too late, or too weakly.

## **Canonizing Of Saints**

The Canonizing of Saints, is another Relique of Gentilisme: It is neither a misunderstanding of Scripture, nor a new invention of the Roman Church, but a custome as ancient as the Common-wealth of Rome it self. The first that ever was canonized at Rome, was Romulus, and that upon the narration of Julius Proculus, that swore before the Senate, he spake with him after his death, and was assured by him, he dwelt in Heaven, and was there called Quirinius, and would be propitious to the State of their new City: And thereupon the Senate gave Publique Testimony of his Sanctity. Julius Caesar, and other Emperors after him, had the like Testimony; that is, were Canonized for Saints; now defined; and is the same with the Apotheosis of the Heathen.

## The Name Of Pontifex

It is also from the Roman Heathen, that the Popes have received the name, and power of PONTIFEX MAXIMUS. This was the name of him that in the ancient Common-wealth of Rome, had the Supreme Authority under the Senate and People, of regulating all Ceremonies, and Doctrines concerning their Religion: And when Augustus Caesar changed the State into a Monarchy, he took to himselfe no more but this office, and that of Tribune of the People, (than is to say, the Supreme Power both in State, and Religion;) and the succeeding Emperours enjoyed the same. But when the Emperour Constantine lived, who was the first that professed and authorized Christian Religion, it was consonant to his profession, to cause Religion to be regulated (under his authority) by the Bishop of Rome: Though it doe not appear they had so soon the name of Pontifex; but rather, that the succeeding Bishops took it of themselves, to countenance the power they exercised over the Bishops of the Roman Provinces. For it is not any Priviledge of St. Peter, but the Priviledge of the City of Rome, which the Emperours were alwaies willing to uphold; that gave them such authority over other Bishops; as may be evidently seen by that, that the Bishop of Constantinople, when the Emperour made that City the Seat of the Empire, pretended to be equall to the Bishop of Rome; though at last, not without contention, the Pope carryed it, and became the Pontifex Maximus; but in right onely of the Emperour; and not without the bounds of the Empire; nor any where, after the Emperour had lost his power in Rome; though it were the Pope himself that took his power from him. From whence wee may by the way observe, that there is no place for the superiority of the Pope over other Bishops, except in the territories whereof he is himself the Civill Sovereign; and where the Emperour having Sovereign Power Civill, hath expressly chosen the Pope for the chief Pastor under himselfe, of his Christian Subjects.

## Procession Of Images

The carrying about of Images in Procession, is another Relique of the Religion of the Greeks, and Romans: For they also carried their Idols from place to place, in a kind of Chariot, which was peculiarly dedicated to that use, which the Latines called Thensa, and Vehiculum Deorum; and the Image was placed in a frame, or Shrine, which they called Ferculum: And that which they called Pompa, is the same that now is named Procession: According whereunto, amongst the Divine Honors which were given to Julius Caesar by the Senate, this was one, that in the Pompe (or Procession) at the Circaean games, he should have Thensam & Ferculum, a sacred Chariot, and a Shrine; which was as much, as to be carried up and down as a God: Just as at this day the Popes are carried by Switzers under a Canopie.

## **Wax Candles, And Torches Lighted**

To these Processions also belonged the bearing of burning Torches, and Candles, before the Images of the Gods, both amongst the Greeks, and Romans. For afterwards the Emperors of Rome received the same honor; as we read of Caligula, that at his reception to the Empire, he was carried from Misenum to Rome, in the midst of a throng of People, the wayes beset with Altars, and Beasts for Sacrifice, and burning Torches: And of Caracalla that was received into Alexandria with Incense, and with casting of Flowers, and Dadouchiais, that is, with Torches; for Dadochoi were they that amongst the Greeks carried Torches lighted in the Processions of their Gods: And in processe of time, the devout, but ignorant People, did many times honor their Bishops with the like pompe of Wax Candles, and the Images of our Saviour, and the Saints, constantly, in the Church it self. And thus came in the use of Wax Candles; and was also established by some of the ancient Councells.

The Heathens had also their Aqua Lustralis, that is to say, Holy Water. The Church of Rome imitates them also in their Holy Dayes. They had their Bacchanalia; and we have our Wakes, answering to them: They their Saturnalia, and we our Carnevalls, and Shrove-tuesdays liberty of Servants: They their Procession of Priapus; wee our fetching in, erection, and dancing about May-poles; and Dancing is one kind of Worship: They had their Procession called Ambarvalia; and we our Procession about the fields in the Rogation Week. Nor do I think that these are all the Ceremonies that have been left in the Church, from the first conversion of the Gentiles: but they are all that I can for the present call to mind; and if a man would wel observe that which is delivered in the Histories, concerning the Religious Rites of the Greeks and Romanes, I doubt not but he might find many more of these old empty Bottles of Gentilisme, which the Doctors of the Romane Church, either by Negligence, or Ambition, have filled up again with the new Wine of Christianity, that will not faile in time to break them.

**CHAPTER XLVI. OF DARKNESSE FROM VAIN  
PHILOSOPHY, AND FABULOUS TRADITIONS**

## **What Philosophy Is**

By Philosophy is understood "the Knowledge acquired by Reasoning, from the Manner of the Generation of any thing, to the Properties; or from the Properties, to some possible Way of Generation of the same; to the end to be able to produce, as far as matter, and humane force permit, such Effects, as humane life requireth." So the Geometrician, from the Construction of Figures, findeth out many Properties thereof; and from the Properties, new Ways of their Construction, by Reasoning; to the end to be able to measure Land and Water; and for infinite other uses. So the Astronomer, from the Rising, Setting, and Moving of the Sun, and Starres, in divers parts of the Heavens, findeth out the Causes of Day, and Night, and of the different Seasons of the Year; whereby he keepeth an account of Time: And the like of other Sciences.

## **Prudence No Part Of Philosophy**

By which Definition it is evident, that we are not to account as any part thereof, that originall knowledge called Experience, in which consisteth Prudence: Because it is not attained by Reasoning, but found as well in Brute Beasts, as in Man; and is but a Memory of successions of events in times past, wherein the omission of every little circumstance altering the effect, frustrateth the expectation of the most Prudent: whereas nothing is produced by Reasoning aright, but generall, eternall, and immutable Truth.

## **No False Doctrine Is Part Of Philosophy**

Nor are we therefore to give that name to any false Conclusions: For he that Reasoneth aright in words he understandeth, can never conclude an Error:

No More Is Revelation Supernaturall

Nor to that which any man knows by supernaturall Revelation; because it is not acquired by Reasoning:

## **Nor Learning Taken Upon Credit Of Authors**

Nor that which is gotten by Reasoning from the Authority of Books; because it is not by Reasoning from the Cause to the Effect, nor from the Effect to the Cause; and is not Knowledge, but Faith.

## Of The Beginnings And Progresse Of Philosophy

The faculty of Reasoning being consequent to the use of Speech, it was not possible, but that there should have been some generall Truthes found out by Reasoning, as ancient almost as Language it selfe. The Savages of America, are not without some good Morall Sentences; also they have a little Arithmetick, to adde, and divide in Numbers not too great: but they are not therefore Philosophers. For as there were Plants of Corn and Wine in small quantity dispersed in the Fields and Woods, before men knew their vertue, or made use of them for their nourishment, or planted them apart in Fields, and Vineyards; in which time they fed on Akorns, and drank Water: so also there have been divers true, generall, and profitable Speculations from the beginning; as being the naturall plants of humane Reason: But they were at first but few in number; men lived upon grosse Experience; there was no Method; that is to say, no Sowing, nor Planting of Knowledge by it self, apart from the Weeds, and common Plants of Errour and Conjecture: And the cause of it being the want of leasure from procuring the necessities of life, and defending themselves against their neighbours, it was impossible, till the erecting of great Common-wealths, it should be otherwise. Leasure is the mother of Philosophy; and Common-wealth, the mother of Peace, and Leasure: Where first were great and flourishing Cities, there was first the study of Philosophy. The Gymnosophists of India, the Magi of Persia, and the Priests of Chaldea and Egypt, are counted the most ancient Philosophers; and those Countreys were the most ancient of Kingdomes. Philosophy was not risen to the Graecians, and other people of the West, whose Common-wealths (no greater perhaps then Lucca, or Geneva) had never Peace, but when their fears of one another were equall; nor the Leasure to observe any thing but one another. At length, when Warre had united many of these Graecian lesser Cities, into fewer, and greater; then began Seven Men, of severall parts of Greece, to get the reputation of being Wise; some of them for Morall and Politique Sentences; and others for the learning of the Chaldeans and Egyptians, which was Astronomy, and Geometry. But we hear not yet of any Schools of Philosophy.

## Of The Schools Of Philosophy Amongst The Athenians

After the Athenians by the overthrow of the Persian Armies, had gotten the Dominion of the Sea; and thereby, of all the Islands, and Maritime Cities of the Archipelago, as well of Asia as Europe; and were grown wealthy; they that had no employment, neither at home, nor abroad, had little else to employ themselves in, but either (as St. Luke says, Acts 17.21.) "in telling and hearing news," or in discoursing of Philosophy publicly to the youth of the City. Every Master took some place for that purpose. Plato in certaine publique Walks called Academia, from one Academus: Aristotle in the Walk of the Temple of Pan, called Lycaeum: others in the Stoa, or covered Walk, wherein the Merchants Goods were brought to land: others in other places; where they spent the time of their Leasure, in teaching or in disputing of their Opinions: and some in any place, where they could get the youth of the City together to hear them talk. And this was it which Carneades also did at Rome, when he was Ambassadour: which caused Cato to advise the Senate to dispatch him quickly, for feare of corrupting the manners of the young men that delighted to hear him speak (as they thought) fine things.

From this it was, that the place where any of them taught, and disputed, was called Schola, which in their Tongue signifieth Leasure; and their Disputations, Diatribae, that is to say, Passing of The Time. Also the Philosophers themselves had the name of their Sects, some of them from these their Schools: For they that followed Plato's Doctrine, were called Academiques; The followers of Aristotle, Peripatetiques, from the Walk hee taught in; and those that Zeno taught, Stoiques, from the Stoa: as if we should denominate men from More-fields, from Pauls-Church, and from the Exchange, because they meet there often, to prate and loyter.

Neverthesse, men were so much taken with this custome, that in time it spread it selfe over all Europe, and the best part of Afrique; so as there were Schools publicly erected, and maintained for Lectures, and Disputations, almost in every Common-wealth.

## **Of The Schools Of The Jews**

There were also Schools, anciently, both before, and after the time of our Saviour, amongst the Jews: but they were Schools of their Law. For though they were called Synagogues, that is to say, Congregations of the People; yet in as much as the Law was every Sabbath day read, expounded, and disputed in them, they differed not in nature, but in name onely from Publique Schools; and were not onely in Jerusalem, but in every City of the Gentiles, where the Jews inhabited. There was such a Schoole at Damascus, whereinto Paul entred, to persecute. There were others at Antioch, Iconium and Thessalonica, whereinto he entred, to dispute: And such was the Synagogue of the Libertines, Cyrenians, Alexandrians, Cilicians, and those of Asia; that is to say, the Schoole of Libertines, and of Jewes, that were strangers in Jerusalem: And of this Schoole they were that disputed with Saint Steven.

## The Schoole Of Graecians Unprofitable

But what has been the Utility of those Schools? what Science is there at this day acquired by their Readings and Disputings? That wee have of Geometry, which is the Mother of all Naturall Science, wee are not indebted for it to the Schools. Plato that was the best Philosopher of the Greeks, forbad entrance into his Schoole, to all that were not already in some measure Geometricians. There were many that studied that Science to the great advantage of mankind: but there is no mention of their Schools; nor was there any Sect of Geometricians; nor did they then passe under the name of Philosophers. The naturall Philosophy of those Schools, was rather a Dream than Science, and set forth in senselesse and insignificant Language; which cannot be avoided by those that will teach Philosophy, without having first attained great knowledge in Geometry: For Nature worketh by Motion; the Wayes, and Degrees whereof cannot be known, without the knowledge of the Proportions and Properties of Lines, and Figures. Their Morall Philosophy is but a description of their own Passions. For the rule of Manners, without Civill Government, is the Law of Nature; and in it, the Law Civill; that determineth what is Honest, and Dishonest; what is Just, and Unjust; and generally what is Good, and Evill: whereas they make the Rules of Good, and Bad, by their own Liking, and Disliking: By which means, in so great diversity of taste, there is nothing generally agreed on; but every one doth (as far as he dares) whatsoever seemeth good in his own eyes, to the subversion of Common-wealth. Their Logique which should bee the Method of Reasoning, is nothing else but Captions of Words, and Inventions how to puzzle such as should goe about to pose them. To conclude there is nothing so absurd, that the old Philosophers (as Cicero saith, who was one of them) have not some of them maintained. And I beleieve that scarce any thing can be more absurdly said in naturall Philosophy, than that which now is called Aristotles Metaphisiques, nor more repugnant to Government, than much of that hee hath said in his Politiques; nor more ignorantly, than a great part of his Ethiques.

## **The Schools Of The Jews Unprofitable**

The Schoole of the Jews, was originally a Schoole of the Law of Moses; who commanded (Deut. 31.10.) that at the end of every seventh year, at the Feast of the Tabernacles, it should be read to all the people, that they might hear, and learn it: Therefore the reading of the Law (which was in use after the Captivity) every Sabbath day, ought to have had no other end, but the acquainting of the people with the Commandements which they were to obey, and to expound unto them the writings of the Prophets. But it is manifest, by the many reprehensions of them by our Saviour, that they corrupted the Text of the Law with their false Commentaries, and vain Traditions; and so little understood the Prophets, that they did neither acknowledge Christ, nor the works he did; for which the Prophets prophecyed. So that by their Lectures and Disputations in their Synagogues, they turned the Doctrine of their Law into a Phantasticall kind of Philosophy, concerning the incomprehensible nature of God, and of Spirits; which they compounded of the Vain Philosophy and Theology of the Graecians, mingled with their own fancies, drawn from the obscurer places of the Scripture, and which might most easily bee wrested to their purpose; and from the Fabulous Traditions of their Ancestors.

## University What It Is

That which is now called an University, is a Joyning together, and an Incorporation under one Government of many Publique Schools, in one and the same Town or City. In which, the principal Schools were ordained for the three Professions, that is to say, of the Romane Religion, of the Romane Law, and of the Art of Medicine. And for the study of Philosophy it hath no otherwise place, then as a handmaid to the Romane Religion: And since the Authority of Aristotle is onely current there, that study is not properly Philosophy, (the nature whereof dependeth not on Authors,) but Aristotelity. And for Geometry, till of very late times it had no place at all; as being subservient to nothing but rigide Truth. And if any man by the ingenuity of his owne nature, had attained to any degree of perfection therein, hee was commonly thought a Magician, and his Art Diabolicall.

## **Errors Brought Into Religion From Aristotles Metaphysiques**

Now to descend to the particular Tenets of Vain Philosophy, derived to the Universities, and thence into the Church, partly from Aristotle, partly from Blindnesse of understanding; I shall first consider their Principles. There is a certain Philosophia Prima, on which all other Philosophy ought to depend; and consisteth principally, in right limiting of the significations of such Appellations, or Names, as are of all others the most Universall: Which Limitations serve to avoid ambiguity, and aequivocation in Reasoning; and are commonly called Definitions; such as are the Definitions of Body, Time, Place, Matter, Forme, Essence, Subject, Substance, Accident, Power, Act, Finite, Infinite, Quantity, Quality, Motion, Action, Passion, and divers others, necessary to the explaining of a mans Conceptions concerning the Nature and Generation of Bodies. The Explication (that is, the setting of the meaning) of which, and the like Terms, is commonly in the Schools called Metaphysiques; as being a part of the Philosophy of Aristotle, which hath that for title: but it is in another sense; for there it signifieth as much, as "Books written, or placed after his naturall Philosophy:" But the Schools take them for Books Of Supernaturall Philosophy: for the word Metaphysiques will bear both these senses. And indeed that which is there written, is for the most part so far from the possibility of being understood, and so repugnant to naturall Reason, that whosoever thinketh there is any thing to bee understood by it, must needs think it supernaturall.

## Errors Concerning Abstract Essences

From these Metaphysiques, which are mingled with the Scripture to make Schoole Divinity, wee are told, there be in the world certaine Essences separated from Bodies, which they call Abstract Essences, and Substantiall Formes: For the Interpreting of which Jargon, there is need of somewhat more than ordinary attention in this place. Also I ask pardon of those that are not used to this kind of Discourse, for applying my selfe to those that are. The World, (I mean not the Earth onely, that denominates the Lovers of it Worldly Men, but the Universe, that is, the whole masse of all things that are) is Corporeall, that is to say, Body; and hath the dimensions of Magnitude, namely, Length, Breadth, and Depth: also every part of Body, is likewise Body, and hath the like dimensions; and consequently every part of the Universe, is Body, and that which is not Body, is no part of the Universe: And because the Universe is all, that which is no part of it, is Nothing; and consequently No Where. Nor does it follow from hence, that Spirits are Nothing: for they have dimensions, and are therefore really Bodies; though that name in common Speech be given to such Bodies onely, as are visible, or palpable; that is, that have some degree of Opacity: But for Spirits, they call them Incorporeall; which is a name of more honour, and may therefore with more piety bee attributed to God himselfe; in whom wee consider not what Attribute expresseth best his Nature, which is Incomprehensible; but what best expresseth our desire to honour him.

To know now upon what grounds they say there be Essences Abstract, or Substantiall Formes, wee are to consider what those words do properly signifie. The use of Words, is to register to our selves, and make manifest to others the Thoughts and Conceptions of our Minds. Of which Words, some are the names of the Things conceived; as the names of all sorts of Bodies, that work upon the Senses, and leave an Impression in the Imagination: Others are the names of the Imaginations themselves; that is to say, of those Ideas, or mentall Images we have of all things wee see, or remember: And others againe are names of Names; or of different sorts of Speech: As Universall, Plurall, Singular, Negation, True, False,

Syllogisme, Interrogation, Promise, Covenant, are the names of certain Forms of Speech. Others serve to shew the Consequence, or Repugnance of one name to another; as when one saith, "A Man is a Body," hee intendeth that the name of Body is necessarily consequent to the name of Man; as being but severall names of the same thing, Man; which Consequence is signified by coupling them together with the word Is. And as wee use the Verbe Is; so the Latines use their Verbe Est, and the Greeks their Esti through all its Declinations. Whether all other Nations of the world have in their severall languages a word that answereth to it, or not, I cannot tell; but I am sure they have not need of it: For the placing of two names in order may serve to signifie their Consequence, if it were the custome, (for Custome is it, that give words their force,) as well as the words Is, or Bee, or Are, and the like.

And if it were so, that there were a Language without any Verb answerable to Est, or Is, or Bee; yet the men that used it would bee not a jot the lesse capable of Inferring, Concluding, and of all kind of Reasoning, than were the Greeks, and Latines. But what then would become of these Terms, of Entity, Essence, Essentiall, Essentially, that are derived from it, and of many more that depend on these, applyed as most commonly they are? They are therefore no Names of Things; but Signes, by which wee make known, that wee conceive the Consequence of one name or Attribute to another: as when we say, "a Man, is, a living Body," wee mean not that the Man is one thing, the Living Body another, and the Is, or Beeing a third: but that the Man, and the Living Body, is the same thing: because the Consequence, "If hee bee a Man, hee is a living Body," is a true Consequence, signified by that word Is. Therefore, to bee a Body, to Walke, to bee Speaking, to Live, to See, and the like Infinitives; also Corporeity, Walking, Speaking, Life, Sight, and the like, that signifie just the same, are the names of Nothing; as I have elsewhere more amply expressed.

But to what purpose (may some man say) is such subtilty in a work of this nature, where I pretend to nothing but what is necessary to the doctrine of Government and Obedience? It is to this purpose, that men may no longer suffer themselves to be abused, by them, that by this doctrine of Separated Essences, built on the Vain Philosophy of Aristotle, would fright them from Obeying the Laws of their Countrey, with empty names; as men fright Birds from the Corn with an empty doublet, a hat,

and a crooked stick. For it is upon this ground, that when a Man is dead and buried, they say his Soule (that is his Life) can walk separated from his Body, and is seen by night amongst the graves. Upon the same ground they say, that the Figure, and Colour, and Tast of a peece of Bread, has a being, there, where they say there is no Bread: And upon the same ground they say, that Faith, and Wisdome, and other Vertues are sometimes powred into a man, sometimes blown into him from Heaven; as if the Vertuous, and their Vertues could be asunder; and a great many other things that serve to lessen the dependance of Subjects on the Sovereign Power of their Countrey. For who will endeavour to obey the Laws, if he expect Obedience to be Powred or Blown into him? Or who will not obey a Priest, that can make God, rather than his Sovereign; nay than God himselfe? Or who, that is in fear of Ghosts, will not bear great respect to those that can make the Holy Water, that drives them from him? And this shall suffice for an example of the Errors, which are brought into the Church, from the Entities, and Essences of Aristotle: which it may be he knew to be false Philosophy; but writ it as a thing consonant to, and corroborative of their Religion; and fearing the fate of Socrates.

Being once fallen into this Error of Separated Essences, they are thereby necessarily involved in many other absurdities that follow it. For seeing they will have these Forms to be reall, they are obliged to assign them some place. But because they hold them Incorporeall, without all dimension of Quantity, and all men know that Place is Dimension, and not to be filled, but by that which is Corporeall; they are driven to uphold their credit with a distinction, that they are not indeed any where Circumscriptive, but Definitive: Which Terms being meer Words, and in this occasion insignificant, passe onely in Latine, that the vanity of them may bee concealed. For the Circumscription of a thing, is nothing else but the Determination, or Defining of its Place; and so both the Terms of the Distinction are the same. And in particular, of the Essence of a Man, which (they say) is his Soule, they affirm it, to be All of it in his little Finger, and All of it in every other Part (how small soever) of his Body; and yet no more Soule in the Whole Body, than in any one of those Parts. Can any man think that God is served with such absurdities? And yet all this is necessary to beleieve, to those that will beleieve the Existence of an Incorporeall Soule, Separated from the Body.

And when they come to give account, how an Incorporeall Substance can be capable of Pain, and be tormented in the fire of Hell, or Purgatory, they have nothing at all to answer, but that it cannot be known how fire can burn Soules.

Again, whereas Motion is change of Place, and Incorporeall Substances are not capable of Place, they are troubled to make it seem possible, how a Soule can goe hence, without the Body to Heaven, Hell, or Purgatory; and how the Ghosts of men (and I may adde of their clothes which they appear in) can walk by night in Churches, Church-yards, and other places of Sepulture. To which I know not what they can answer, unlesse they will say, they walke Definitive, not Circumscriptive, or Spiritually, not Temporally: for such egregious distinctions are equally applicable to any difficulty whatsoever.

## **Nunc-stans**

For the meaning of Eternity, they will not have it to be an Endlesse Succession of Time; for then they should not be able to render a reason how Gods Will, and Praeordaining of things to come, should not be before his Praescience of the same, as the Efficient Cause before the Effect, or Agent before the Action; nor of many other their bold opinions concerning the Incomprehensible Nature of God. But they will teach us, that Eternity is the Standing still of the Present Time, a Nunc-stans (as the Schools call it;) which neither they, nor any else understand, no more than they would a Hic-stans for an Infinite greatnesse of Place.

## **One Body In Many Places, And Many Bodies In One Place At Once**

And whereas men divide a Body in their thought, by numbring parts of it, and in numbring those parts, number also the parts of the Place it filled; it cannot be, but in making many parts, wee make also many places of those parts; whereby there cannot bee conceived in the mind of any man, more, or fewer parts, than there are places for: yet they will have us beleieve, that by the Almighty power of God, one body may be at one and the same time in many places; and many bodies at one and the same time in one place; as if it were an acknowledgment of the Divine Power, to say, that which is, is not; or that which has been, has not been. And these are but a small part of the Incongruities they are forced to, from their disputing Philosophically, in stead of admiring, and adoring of the Divine and Incomprehensible Nature; whose Attributes cannot signifie what he is, but ought to signifie our desire to honour him, with the best Appellations we can think on. But they that venture to reason of his Nature, from these Attributes of Honour, losing their understanding in the very first attempt, fall from one Inconvenience into another, without end, and without number; in the same manner, as when a man ignorant of the Ceremonies of Court, comming into the presence of a greater Person than he is used to speak to, and stumbling at his entrance, to save himselfe from falling, lets slip his Cloake; to recover his Cloake, lets fall his Hat; and with one disorder after another, discovers his astonishment and rusticity.

## **Absurdities In Naturall Philosophy, As Gravity The Cause Of Heaviness**

Then for Physiques, that is, the knowledge of the subordinate, and secondary causes of naturall events; they render none at all, but empty words. If you desire to know why some kind of bodies sink naturally downwards toward the Earth, and others goe naturally from it; The Schools will tell you out of Aristotle, that the bodies that sink downwards, are Heavy; and that this Heaviness is it that causes them to descend: But if you ask what they mean by Heaviness, they will define it to bee an endeavour to goe to the center of the Earth: so that the cause why things sink downward, is an Endeavour to be below: which is as much as to say, that bodies descend, or ascend, because they doe. Or they will tell you the center of the Earth is the place of Rest, and Conservation for Heavy things; and therefore they endeavour to be there: As if Stones, and Metalls had a desire, or could discern the place they would bee at, as Man does; or loved Rest, as Man does not; or that a peece of Glasse were lesse safe in the Window, than falling into the Street.

## **Quantity Put Into Body Already Made**

If we would know why the same Body seems greater (without adding to it) one time, than another; they say, when it seems lesse, it is Condensed; when greater, Rarefied. What is that Condensed, and Rarefied? Condensed, is when there is in the very same Matter, lesse Quantity than before; and Rarefied, when more. As if there could be Matter, that had not some determined Quantity; when Quantity is nothing else but the Determination of Matter; that is to say of Body, by which we say one Body is greater, or lesser than another, by thus, or thus much. Or as if a Body were made without any Quantity at all, and that afterwards more, or lesse were put into it, according as it is intended the Body should be more, or lesse Dense.

## **Powring In Of Soules**

For the cause of the Soule of Man, they say, *Creatur Infundendo*, and *Creando Infunditur*: that is, "It is Created by Powring it in," and "Powred in by Creation."

## **Ubiquity Of Apparition**

For the Cause of Sense, an ubiquity of Species; that is, of the Shews or Apparitions of objects; which when they be Apparitions to the Eye, is Sight; when to the Eare, Hearing; to the Palate, Tast; to the Nostrill, Smelling; and to the rest of the Body, Feeling.

## **Will, The Cause Of Willing**

For cause of the Will, to doe any particular action, which is called Volitio, they assign the Faculty, that is to say, the Capacity in generall, that men have, to will sometimes one thing, sometimes another, which is called Voluntas; making the Power the cause of the Act: As if one should assign for cause of the good or evill Acts of men, their Ability to doe them.

## **Ignorance An Occult Cause**

And in many occasions they put for cause of Naturall events, their own Ignorance, but disguised in other words: As when they say, Fortune is the cause of things contingent; that is, of things whereof they know no cause: And as when they attribute many Effects to Occult Qualities; that is, qualities not known to them; and therefore also (as they thinke) to no Man else. And to Sympathy, Antipathy, Antiperistasis, Specificall Qualities, and other like Termes, which signifie neither the Agent that produceth them, nor the Operation by which they are produced.

If such Metaphysiques, and Physiques as this, be not Vain Philosophy, there was never any; nor needed St. Paul to give us warning to avoid it.

## **One Makes The Things Incongruent, Another The Incongruity**

And for their Morall, and Civill Philosophy, it hath the same, or greater absurdities. If a man doe an action of Injustice, that is to say, an action contrary to the Law, God they say is the prime cause of the Law, and also the prime cause of that, and all other Actions; but no cause at all of the Injustice; which is the Inconformity of the Action to the Law. This is Vain Philosophy. A man might as well say, that one man maketh both a streight line, and a crooked, and another maketh their Incongruity. And such is the Philosophy of all men that resolve of their Conclusions, before they know their Premises; pretending to comprehend, that which is Incomprehensible; and of Attributes of Honour to make Attributes of Nature; as this distinction was made to maintain the Doctrine of Free-Will, that is, of a Will of man, not subject to the Will of God.

## **Private Appetite The Rule Of Publique Good:**

Aristotle, and other Heathen Philosophers define Good, and Evill, by the Appetite of men; and well enough, as long as we consider them governed every one by his own Law: For in the condition of men that have no other Law but their own Appetites, there can be no generall Rule of Good, and Evill Actions. But in a Common-wealth this measure is false: Not the Appetite of Private men, but the Law, which is the Will and Appetite of the State is the measure. And yet is this Doctrine still practised; and men judge the Goodnesse, or Wickednesse of their own, and of other mens actions, and of the actions of the Common-wealth it selfe, by their own Passions; and no man calleth Good or Evill, but that which is so in his own eyes, without any regard at all to the Publique Laws; except onely Monks, and Friers, that are bound by Vow to that simple obedience to their Superiour, to which every Subject ought to think himself bound by the Law of Nature to the Civill Sovereign. And this private measure of Good, is a Doctrine, not onely Vain, but also Pernicious to the Publique State.

## **And That Lawfull Marriage Is Unchastity**

It is also Vain and false Philosophy, to say the work of Marriage is repugnant to Chastity, or Continnence, and by consequence to make them Morall Vices; as they doe, that pretend Chastity, and Continnence, for the ground of denying Marriage to the Clergy. For they confesse it is no more, but a Constitution of the Church, that requireth in those holy Orders that continually attend the Altar, and administration of the Eucharist, a continuall Abstinnence from women, under the name of continuall Chastity, Continnence, and Purity. Therefore they call the lawfull use of Wives, want of Chastity, and Continnence; and so make Marriage a Sin, or at least a thing so impure, and unclean, as to render a man unfit for the Altar. If the Law were made because the use of Wives is Incontinnence, and contrary to Chastity, then all marriage is vice; If because it is a thing too impure, and unclean for a man consecrated to God; much more should other naturall, necessary, and daily works which all men doe, render men unworthy to bee Priests, because they are more unclean.

But the secret foundation of this prohibition of Marriage of Priests, is not likely to have been laid so slightly, as upon such errours in Morall Philosophy; nor yet upon the preference of single life, to the estate of Matrimony; which proceeded from the wisdom of St. Paul, who perceived how inconvenient a thing it was, for those that in those times of persecution were Preachers of the Gospel, and forced to fly from one countrey to another, to be clogged with the care of wife and children; but upon the design of the Popes, and Priests of after times, to make themselves the Clergy, that is to say, sole Heirs of the Kingdome of God in this world; to which it was necessary to take from them the use of Marriage, because our Saviour saith, that at the coming of his Kingdome the Children of God shall "neither Marry, nor bee given in Marriage, but shall bee as the Angels in heaven;" that is to say, Spirituall. Seeing then they had taken on them the name of Spirituall, to have allowed themselves (when there was no need) the propriety of Wives, had been an Incongruity.

## **And That All Government But Popular, Is Tyranny**

From Aristotles Civill Philosophy, they have learned, to call all manner of Common-wealths but the Popular, (such as was at that time the state of Athens,) Tyranny. All Kings they called Tyrants; and the Aristocracy of the thirty Governours set up there by the Lacedemonians that subdued them, the thirty Tyrants: As also to call the condition of the people under the Democracy, Liberty. A Tyrant originally signified no more simply, but a Monarch: But when afterwards in most parts of Greece that kind of government was abolished, the name began to signifie, not onely the thing it did before, but with it, the hatred which the Popular States bare towards it: As also the name of King became odious after the deposing of the Kings in Rome, as being a thing naturall to all men, to conceive some great Fault to be signified in any Attribute, that is given in despight, and to a great Enemy. And when the same men shall be displeas'd with those that have the administration of the Democracy, or Aristocracy, they are not to seek for disgraceful names to expresse their anger in; but call readily the one Anarchy, and the other Oligarchy, or the Tyranny Of A Few. And that which offendeth the People, is no other thing, but that they are governed, not as every one of them would himselfe, but as the Publique Representant, be it one Man, or an Assembly of men thinks fit; that is, by an Arbitrary government: for which they give evill names to their Superiors; never knowing (till perhaps a little after a Civill warre) that without such Arbitrary government, such Warre must be perpetuall; and that it is Men, and Arms, not Words, and Promises, that make the Force and Power of the Laws.

## **That Not Men, But Law Governs**

And therefore this is another Errour of Aristotles Politiques, that in a wel ordered Common-wealth, not Men should govern, but the Laws. What man, that has his naturall Senses, though he can neither write nor read, does not find himself governed by them he fears, and beleeves can kill or hurt him when he obeyeth not? or that beleeves the Law can hurt him; that is, Words, and Paper, without the Hands, and Swords of men? And this is of the number of pernicious Errors: for they induce men, as oft as they like not their Governours, to adhaere to those that call them Tyrants, and to think it lawfull to raise warre against them: And yet they are many times cherished from the Pulpit, by the Clergy.

## Laws Over The Conscience

There is another Error in their Civill Philosophy (which they never learned of Aristotle, nor Cicero, nor any other of the Heathen,) to extend the power of the Law, which is the Rule of Actions onely, to the very Thoughts, and Consciences of men, by Examination, and Inquisition of what they Hold, notwithstanding the Conformity of their Speech and Actions: By which, men are either punished for answering the truth of their thoughts, or constrained to answer an untruth for fear of punishment. It is true, that the Civill Magistrate, intending to employ a Minister in the charge of Teaching, may enquire of him, if hee bee content to Preach such, and such Doctrines; and in case of refusall, may deny him the employment: But to force him to accuse himselfe of Opinions, when his Actions are not by Law forbidden, is against the Law of Nature; and especially in them, who teach, that a man shall bee damned to Eternall and extream torments, if he die in a false opinion concerning an Article of the Christian Faith. For who is there, that knowing there is so great danger in an error, when the naturall care of himself, compelleth not to hazard his Soule upon his own judgement, rather than that of any other man that is unconcerned in his damnation?

## Private Interpretation Of Law

For a Private man, without the Authority of the Common-wealth, that is to say, without permission from the Representant thereof, to Interpret the Law by his own Spirit, is another Error in the Politiques; but not drawn from Aristotle, nor from any other of the Heathen Philosophers. For none of them deny, but that in the Power of making Laws, is comprehended also the Power of Explaining them when there is need. And are not the Scriptures, in all places where they are Law, made Law by the Authority of the Common-wealth, and consequently, a part of the Civill Law?

Of the same kind it is also, when any but the Sovereign restraineth in any man that power which the Common-wealth hath not restrained: as they do, that impropriate the Preaching of the Gospell to one certain Order of men, where the Laws have left it free. If the State give me leave to preach, or teach; that is, if it forbid me not, no man can forbid me. If I find my self amongst the Idolaters of America, shall I that am a Christian, though not in Orders, think it a sin to preach Jesus Christ, till I have received Orders from Rome? or when I have preached, shall not I answer their doubts, and expound the Scriptures to them; that is shall I not Teach? But for this may some say, as also for administring to them the Sacraments, the necessity shall be esteemed for a sufficient Mission; which is true: But this is true also, that for whatsoever, a dispensation is due for the necessity, for the same there needs no dispensation, when there is no Law that forbids it. Therefore to deny these Functions to those, to whom the Civill Sovereigne hath not denied them, is a taking away of a lawfull Liberty, which is contrary to the Doctrine of Civill Government.

## **Language Of Schoole-Divines**

More examples of Vain Philosophy, brought into Religion by the Doctors of Schoole-Divinity, might be produced; but other men may if they please observe them of themselves. I shall onely adde this, that the Writings of Schoole-Divines, are nothing else for the most part, but insignificant Traines of strange and barbarous words, or words otherwise used, then in the common use of the Latine tongue; such as would pose Cicero, and Varro, and all the Grammarians of ancient Rome. Which if any man would see proved, let him (as I have said once before) see whether he can translate any Schoole-Divine into any of the Modern tongues, as French, English, or any other copious language: for that which cannot in most of these be made Intelligible, is no Intelligible in the Latine. Which Insignificancy of language, though I cannot note it for false Philosophy; yet it hath a quality, not onely to hide the Truth, but also to make men think they have it, and desist from further search.

## Errors From Tradition

Lastly, for the errors brought in from false, or uncertain History, what is all the Legend of fictitious Miracles, in the lives of the Saints; and all the Histories of Apparitions, and Ghosts, alledged by the Doctors of the Romane Church, to make good their Doctrines of Hell, and purgatory, the power of Exorcisme, and other Doctrines which have no warrant, neither in Reason, nor Scripture; as also all those Traditions which they call the unwritten Word of God; but old Wives Fables? Whereof, though they find dispersed somewhat in the Writings of the ancient Fathers; yet those Fathers were men, that might too easily beleieve false reports; and the producing of their opinions for testimony of the truth of what they beleieved, hath no other force with them that (according to the Counsell of St. John 1 Epist. chap. 4. verse 1.) examine Spirits, than in all things that concern the power of the Romane Church, (the abuse whereof either they suspected not, or had benefit by it,) to discredit their testimony, in respect of too rash beleeve of reports; which the most sincere men, without great knowledge of naturall causes, (such as the Fathers were) are commonly the most subject to: For naturally, the best men are the least suspicious of fraudulent purposes. Gregory the Pope, and S. Bernard have somewhat of Apparitions of Ghosts, that said they were in Purgatory; and so has our Beda: but no where, I beleieve, but by report from others. But if they, or any other, relate any such stories of their own knowledge, they shall not thereby confirm the more such vain reports; but discover their own Infirmary, or Fraud.

## Suppression Of Reason

With the Introduction of False, we may joyn also the suppression of True Philosophy, by such men, as neither by lawfull authority, nor sufficient study, are competent Judges of the truth. Our own Navigations make manifest, and all men learned in humane Sciences, now acknowledge there are Antipodes: And every day it appeareth more and more, that Years, and Dayes are determined by Motions of the Earth. Neverthelesse, men that have in their Writings but supposed such Doctrine, as an occasion to lay open the reasons for, and against it, have been punished for it by Authority Ecclesiasticall. But what reason is there for it? Is it because such opinions are contrary to true Religion? that cannot be, if they be true. Let therefore the truth be first examined by competent Judges, or confuted by them that pretend to know the contrary. Is it because they be contrary to the Religion established? Let them be silenced by the Laws of those, to whom the Teachers of them are subject; that is, by the Laws Civill: For disobedience may lawfully be punished in them, that against the Laws teach even true Philosophy. Is it because they tend to disorder in Government, as countenancing Rebellion, or Sedition? then let them be silenced, and the Teachers punished by vertue of his power to whom the care of the Publique quiet is committed; which is the Authority Civill. For whatsoever Power Ecclesiastiques take upon themselves (in any place where they are subject to the State) in their own Right, though they call it Gods Right, is but Usurpation.

**CHAPTER XLVII. OF THE BENEFIT THAT  
PROCEEDETH FROM SUCH DARKNESSE,  
AND TO WHOM IT ACCREWETH**

## **He That Receiveth Benefit By A Fact, Is Presumed To Be The Author**

Cicero maketh honorable mention of one of the Cassii, a severe Judge amongst the Romans, for a custome he had, in Criminal causes, (when the testimony of the witnesses was not sufficient,) to ask the Accusers, Cui Bono; that is to say, what Profit, Honor, or other Contentment, the accused obtained, or expected by the Fact. For amongst Praesumptions, there is none that so evidently declareth the Author, as doth the BENEFIT of the Action. By the same rule I intend in this place to examine, who they may be, that have possessed the People so long in this part of Christendome, with these Doctrines, contrary to the Peaceable Societies of Mankind.

# **That The Church Militant Is The Kingdome Of God, Was First Taught By**

## **The Church Of Rome**

And first, to this Error, That The Present Church Now Militant On Earth, Is The Kingdome Of God, (that is, the Kingdome of Glory, or the Land of Promise; not the Kingdome of Grace, which is but a Promise of the Land,) are annexed these worldly Benefits, First, that the Pastors, and Teachers of the Church, are entituled thereby, as Gods Publique Ministers, to a Right of Governing the Church; and consequently (because the Church, and Common-wealth are the same Persons) to be Rectors, and Governours of the Common-wealth. By this title it is, that the Pope prevailed with the subjects of all Christian Princes, to beleve, that to disobey him, was to disobey Christ himselfe; and in all differences between him and other Princes, (charmed with the word Power Spirituall,) to abandon their lawfull Sovereigns; which is in effect an universall Monarchy over all Christendome. For though they were first invested in the right of being Supreme Teachers of Christian Doctrine, by, and under Christian Emperors, within the limits of the Romane Empire (as is acknowledged by themselves) by the title of Pontifex Maximus, who was an Officer subject to the Civill State; yet after the Empire was divided, and dissolved, it was not hard to obtrude upon the people already subject to them, another Title, namely, the Right of St. Peter; not onely to save entire their pretended Power; but also to extend the same over the same Christian Provinces, though no more united in the Empire of Rome. This Benefit of an Universall Monarchy, (considering the desire of men to bear Rule) is a sufficient Presumption, that the popes that pretended to it, and for a long time enjoyed it, were the Authors of the Doctrine, by which it was obtained; namely, that the Church now on Earth, is the Kingdome of Christ. For that granted, it must be understood, that Christ hath some Lieutenant amongst us, by whom we are to be told what are his Commandements.

After that certain Churches had renounced this universall Power of the Pope, one would expect in reason, that the Civill Sovereigns in all those Churches, should have recovered so much of it, as (before they had unadvisedly let it goe) was their own Right, and in their own hands. And in England it was so in effect; saving that they, by whom the Kings administred the Government of Religion, by maintaining their imployment to be in Gods Right, seemed to usurp, if not a Supremacy, yet an Independency on the Civill Power: and they but seemed to usurp it, in as much as they acknowledged a Right in the King, to deprive them of the Exercise of their Functions at his pleasure.

## **And Maintained Also By The Presbytery**

But in those places where the Presbytery took that Office, though many other Doctrines of the Church of Rome were forbidden to be taught; yet this Doctrine, that the Kingdome of Christ is already come, and that it began at the Resurrection of our Saviour, was still retained. But Cui Bono? What Profit did they expect from it? The same which the Popes expected: to have a Sovereign Power over the People. For what is it for men to excommunicate their lawful King, but to keep him from all places of Gods publique Service in his own Kingdom? and with force to resist him, when he with force endeavoureth to correct them? Or what is it, without Authority from the Civill Sovereign, to excommunicate any person, but to take from him his Lawfull Liberty, that is, to usurpe an unlawfull Power over their Brethren? The Authors therefore of this Darknesse in Religion, are the Romane, and the Presbyterian Clergy.

## **Infallibility**

To this head, I referre also all those Doctrines, that serve them to keep the possession of this spirituall Sovereignty after it is gotten. As first, that the Pope In His Publique Capacity Cannot Erre. For who is there, that beleeving this to be true, will not readily obey him in whatsoever he commands?

## **Subjection Of Bishops**

Secondly, that all other Bishops, in what Common-wealth soever, have not their Right, neither immediately from God, nor mediately from their Civill Sovereigns, but from the Pope, is a Doctrine, by which there comes to be in every Christian Common-wealth many potent men, (for so are Bishops,) that have their dependance on the Pope, and owe obedience to him, though he be a forraign Prince; by which means he is able, (as he hath done many times) to raise a Civill War against the State that submits not it self to be governed according to his pleasure and Interest.

## **Exemptions Of The Clergy**

Thirdly, the exemption of these, and of all other Priests, and of all Monkes, and Fryers, from the Power of the Civill Laws. For by this means, there is a great part of every Common-wealth, that enjoy the benefit of the Laws, and are protected by the Power of the Civill State, which neverthelesse pay no part of the Publique expence; nor are lyable to the penalties, as other Subjects, due to their crimes; and consequently, stand not in fear of any man, but the Pope; and adhere to him onely, to uphold his universall Monarchy.

## **The Names Of Sacerdotes, And Sacrifices**

Fourthly, the giving to their Priests (which is no more in the New Testament but Presbyters, that is, Elders) the name of Sacerdotes, that is, Sacrificers, which was the title of the Civill Sovereign, and his publique Ministers, amongst the Jews, whilest God was their King. Also, the making the Lords Supper a Sacrifice, serveth to make the People beleieve the Pope hath the same power over all Christian, that Moses and Aaron had over the Jews; that is to say, all power, both Civill and Ecclesiasticall, as the High Priest then had.

## **The Sacramentation Of Marriage**

Fiftly, the teaching that Matrimony is a Sacrament, giveth to the Clergy the Judging of the lawfulnessse of Marriages; and thereby, of what Children are Legitimate; and consequently, of the Right of Succession to haereditary Kingdomes.

## **The Single Life Of Priests**

Sixtly, the Deniall of Marriage to Priests, serveth to assure this Power of the pope over Kings. For if a King be a Priest, he cannot Marry, and transmit his Kingdome to his Posterity; If he be not a Priest then the Pope pretendeth this Authority Ecclesiasticall over him, and over his people.

## **Auricular Confession**

Seventhly, from Auricular Confession, they obtain, for the assurance of their Power, better intelligence of the designs of Princes, and great persons in the Civill State, than these can have of the designs of the State Ecclesiasticall.

## **Canonization Of Saints, And Declaring Of Martyrs**

Eighthly, by the Canonization of Saints, and declaring who are Martyrs, they assure their Power, in that they induce simple men into an obstinacy against the Laws and Commands of their Civill Sovereigns even to death, if by the Popes excommunication, they be declared Heretiques or Enemies to the Church; that is, (as they interpret it,) to the Pope.

## **Transubstantiation, Penance, Absolution**

Ninthly, they assure the same, by the Power they ascribe to every Priest, of making Christ; and by the Power of ordaining Penance; and of Remitting, and Retaining of sins.

## **Purgatory, Indulgences, External Works**

Tenthly, by the Doctrine of Purgatory, of Justification by external works, and of Indulgences, the Clergy is enriched.

## **Daemonology And Exorcism**

Eleventhly, by their Daemonology, and the use of Exorcisme, and other things appertaining thereto, they keep (or thinke they keep) the People more in awe of their Power.

## **School-Divinity**

Lastly, the Metaphysiques, Ethiques, and Politiques of Aristotle, the frivolous Distinctions, barbarous Terms, and obscure Language of the Schoolmen, taught in the Universities, (which have been all erected and regulated by the Popes Authority,) serve them to keep these Errors from being detected, and to make men mistake the Ignis Fatuus of Vain Philosophy, for the Light of the Gospell.

## **The Authors Of Spirituall Darknesse, Who They Be**

To these, if they sufficed not, might be added other of their dark Doctrines, the profit whereof redoundeth manifestly, to the setting up of an unlawfull Power over the lawfull Sovereigns of Christian People; or for the sustaining of the same, when it is set up; or to the worldly Riches, Honour, and Authority of those that sustain it. And therefore by the aforesaid rule, of Cui Bono, we may justly pronounce for the Authors of all this Spirituall Darknesse, the Pope, and Roman Clergy, and all those besides that endeavour to settle in the mindes of men this erroneous Doctrine, that the Church now on Earth, is that Kingdome of God mentioned in the Old and New Testament.

But the Emperours, and other Christian Sovereigns, under whose Government these Errours, and the like encroachments of Ecclesiastiques upon their Office, at first crept in, to the disturbance of their possessions, and of the tranquillity of their Subjects, though they suffered the same for want of foresight of the Sequel, and of insight into the designs of their Teachers, may neverthesse bee esteemed accessories to their own, and the Publique dammage; For without their Authority there could at first no seditious Doctrine have been publicly preached. I say they might have hindred the same in the beginning: But when the people were once possessed by those spirituall men, there was no humane remedy to be applyed, that any man could invent: And for the remedies that God should provide, who never faileth in his good time to destroy all the Machinations of men against the Truth, wee are to attend his good pleasure, that suffereth many times the prosperity of his enemies, together with their ambition, to grow to such a height, as the violence thereof openeth the eyes, which the warinesse of their predecessours had before sealed up, and makes men by too much grasping let goe all, as Peters net was broken, by the struggling of too great a multitude of Fishes; whereas the Impatience of those, that strive to resist such encroachment, before their Subjects eyes were opened, did but encrease the power they resisted. I doe not therefore blame the Emperour Frederick for holding the stirrop to our countryman

Pope Adrian; for such was the disposition of his subjects then, as if hee had not doe it, hee was not likely to have succeeded in the Empire: But I blame those, that in the beginning, when their power was entire, by suffering such Doctrines to be forged in the Universities of their own Dominions, have holden the Stirrop to all the succeeding Popes, whilst they mounted into the Thrones of all Christian Sovereigns, to ride, and tire, both them, and their people, at their pleasure.

But as the Inventions of men are woven, so also are they ravelled out; the way is the same, but the order is inverted: The web begins at the first Elements of Power, which are Wisdom, Humility, Sincerity, and other vertues of the Apostles, whom the people converted, obeyed, out of Reverence, not by Obligation: Their Consciences were free, and their Words and Actions subject to none but the Civill Power. Afterwards the Presbyters (as the Flocks of Christ encreased) assembling to consider what they should teach, and thereby obliging themselves to teach nothing against the Decrees of their Assemblies, made it to be thought the people were thereby obliged to follow their Doctrine, and when they refused, refused to keep them company, (that was then called Excommunication,) not as being Infidels, but as being disobedient: And this was the first knot upon their Liberty. And the number of Presbyters encreasing, the Presbyters of the chief City or Province, got themselves an authority over the parochiall Presbyters, and appropriated to themselves the names of Bishops: And this was a second knot on Christian Liberty. Lastly, the Bishop of Rome, in regard of the Imperiall City, took upon him an Authority (partly by the wills of the Emperours themselves, and by the title of Pontifex Maximus, and at last when the Emperours were grown weak, by the priviledges of St. Peter) over all other Bishops of the Empire: Which was the third and last knot, and the whole Synthesis and Construction of the Pontificall Power.

And therefore the Analysis, or Resolution is by the same way; but beginning with the knot that was last tyed; as wee may see in the dissolution of the praeterpoliticall Church Government in England.

First, the Power of the Popes was dissolved totally by Queen Elizabeth; and the Bishops, who before exercised their Functions in Right of the Pope, did afterwards exercise the same in Right of the Queen and her Successours; though by retaining the phrase of Jure Divino, they were

thought to demand it by immediate Right from God: And so was untied the first knot. After this, the Presbyterians lately in England obtained the putting down of Episcopacy: And so was the second knot dissolved: And almost at the same time, the Power was taken also from the Presbyterians: And so we are reduced to the Independency of the Primitive Christians to follow Paul, or Cephas, or Apollos, every man as he liketh best: Which, if it be without contention, and without measuring the Doctrine of Christ, by our affection to the Person of his Minister, (the fault which the Apostle reprehended in the Corinthians,) is perhaps the best: First, because there ought to be no Power over the Consciences of men, but of the Word it selfe, working Faith in every one, not alwayes according to the purpose of them that Plant and Water, but of God himself, that giveth the Increase: and secondly, because it is unreasonable in them, who teach there is such danger in every little Errour, to require of a man endued with Reason of his own, to follow the Reason of any other man, or of the most voices of many other men; Which is little better, then to venture his Salvation at crosse and pile. Nor ought those Teachers to be displeas'd with this losse of their antient Authority: For there is none should know better then they, that power is preserved by the same Vertues by which it is acquired; that is to say, by Wisdome, Humility, Clearnesse of Doctrine, and sincerity of Conversation; and not by suppression of the Naturall Sciences, and of the Morality of Naturall Reason; nor by obscure Language; nor by Arrogating to themselves more Knowledge than they make appear; nor by Pious Frauds; nor by such other faults, as in the Pastors of Gods Church are not only Faults, but also scandalls, apt to make men stumble one time or other upon the suppression of their Authority.

## Comparison Of The Papacy With The Kingdome Of Fayries

But after this Doctrine, "that the Church now Militant, is the Kingdome of God spoken of in the Old and New Testament," was received in the World; the ambition, and canvassing for the Offices that belong thereunto, and especially for that great Office of being Christs Lieutenant, and the Pompe of them that obtained therein the principal Publique Charges, became by degrees so evident, that they lost the inward Reverence due to the Pastorall Function: in so much as the Wisest men, of them that had any power in the Civill State, needed nothing but the authority of their Princes, to deny them any further Obedience. For, from the time that the Bishop of Rome had gotten to be acknowledged for Bishop Universall, by pretence of Succession to St. Peter, their whole Hierarchy, or Kingdome of Darknesse, may be compared not unfitly to the Kingdome of Fairies; that is, to the old wives Fables in England, concerning Ghosts and Spirits, and the feats they play in the night. And if a man consider the originall of this great Ecclesiasticall Dominion, he will easily perceive, that the Papacy, is no other, than the Ghost of the deceased Romane Empire, sitting crowned upon the grave thereof: For so did the Papacy start up on a Sudden out of the Ruines of that Heathen Power.

The Language also, which they use, both in the Churches, and in their Publique Acts, being Latine, which is not commonly used by any Nation now in the world, what is it but the Ghost of the Old Romane Language.

The Fairies in what Nation soever they converse, have but one Universall King, which some Poets of ours call King Oberon; but the Scripture calls Beelzebub, Prince of Daemons. The Ecclesiastiques likewise, in whose Dominions soever they be found, acknowledge but one Universall King, the Pope.

The Ecclesiastiques are Spirituall men, and Ghostly Fathers. The Fairies are Spirits, and Ghosts. Fairies and Ghosts inhabite Darknesse, Solitudes, and Graves. The Ecclesiastiques walke in Obscurity of Doctrine, in Monasteries, Churches, and Churchyards.

The Ecclesiastiques have their Cathedral Churches; which, in what Towne soever they be erected, by vertue of Holy Water, and certain Charmes called Exorcismes, have the power to make those Townes, cities, that is to say, Seats of Empire. The Fairies also have their enchanted Castles, and certain Gigantique Ghosts, that domineer over the Regions round about them.

The fairies are not to be seized on; and brought to answer for the hurt they do. So also the Ecclesiastiques vanish away from the Tribunals of Civill Justice.

The Ecclesiastiques take from young men, the use of Reason, by certain Charms compounded of Metaphysiques, and Miracles, and Traditions, and Abused Scripture, whereby they are good for nothing else, but to execute what they command them. The Fairies likewise are said to take young Children out of their Cradles, and to change them into Naturall Fools, which Common people do therefore call Elves, and are apt to mischief.

In what Shop, or Operatory the Fairies make their Enchantment, the old Wives have not determined. But the Operatories of the Clergy, are well enough known to be the Universities, that received their Discipline from Authority Pontificall.

When the Fairies are displeased with any body, they are said to send their Elves, to pinch them. The Ecclesiastiques, when they are displeased with any Civill State, make also their Elves, that is, Superstitious, Enchanted Subjects, to pinch their Princes, by preaching Sedition; or one Prince enchanted with promises, to pinch another.

The Fairies marry not; but there be amongst them Incubi, that have copulation with flesh and bloud. The Priests also marry not.

The Ecclesiastiques take the Cream of the Land, by Donations of ignorant men, that stand in aw of them, and by Tythes: So also it is in the Fable of Fairies, that they enter into the Dairies, and Feast upon the Cream, which they skim from the Milk.

What kind of Money is currant in the Kingdome of Fairies, is not recorded in the Story. But the Ecclesiastiques in their Receipts accept of the same Money that we doe; though when they are to make any Payment, it is in Canonizations, Indulgences, and Masses.

To this, and such like resemblances between the Papacy, and the Kingdome of Fairies, may be added this, that as the Fairies have no existence, but in the Fancies of ignorant people, rising from the Traditions of old Wives, or old Poets: so the Spirituall Power of the Pope (without the bounds of his own Civill Dominion) consisteth onely in the Fear that Seduced people stand in, of their Excommunication; upon hearing of false Miracles, false Traditions, and false Interpretations of the Scripture.

It was not therefore a very difficult matter, for Henry 8. by his Exorcisme; nor for Qu. Elizabeth by hers, to cast them out. But who knows that this Spirit of Rome, now gone out, and walking by Missions through the dry places of China, Japan, and the Indies, that yeeld him little fruit, may not return, or rather an Assembly of Spirits worse than he, enter, and inhabite this clean swept house, and make the End thereof worse than the beginning? For it is not the Romane Clergy onely, that pretends the Kingdome of God to be of this World, and thereby to have a Power therein, distinct from that of the Civill State. And this is all I had a designe to say, concerning the Doctrine of the POLITIQUES. Which when I have reviewed, I shall willingly expose it to the censure of my Countrey.

## A REVIEW, AND CONCLUSION

From the contrariety of some of the Naturall Faculties of the Mind, one to another, as also of one Passion to another, and from their reference to Conversation, there has been an argument taken, to inferre an impossibility that any one man should be sufficiently disposed to all sorts of Civill duty. The Severity of Judgment, they say, makes men Censorious, and unapt to pardon the Errours and Infirmities of other men: and on the other side, Celerity of Fancy, makes the thoughts lesse stedly than is necessary, to discern exactly between Right and Wrong. Again, in all Deliberations, and in all Pleadings, the faculty of solid Reasoning, is necessary: for without it, the Resolutions of men are rash, and their Sentences unjust: and yet if there be not powerfull Eloquence, which procureth attention and Consent, the effect of Reason will be little. But these are contrary Faculties; the former being grounded upon principles of Truth; the other upon Opinions already received, true, or false; and upon the Passions and Interests of men, which are different, and mutable.

And amongst the Passions, Courage, (by which I mean the Contempt of Wounds, and violent Death) enclineth men to private Revenges, and sometimes to endeavour the unsettling of the Publique Peace; And Timorousnesse, many times disposeth to the desertion of the Publique Defence. Both these they say cannot stand together in the same person.

And to consider the contrariety of mens Opinions, and Manners in generall, It is they say, impossible to entertain a constant Civill Amity with all those, with whom the Businesse of the world constrains us to converse: Which Businesse consisteth almost in nothing else but a perpetuall contention for Honor, Riches, and Authority.

To which I answer, that these are indeed great difficulties, but not Impossibilities: For by Education, and Discipline, they may bee, and are sometimes reconciled. Judgment, and Fancy may have place in the same man; but by turnes; as the end which he aimeth at requireth. As the Israelites in Egypt, were sometimes fastened to their labour of making Bricks, and other times were ranging abroad to gather Straw: So also may the Judgment sometimes be fixed upon one certain Consideration, and the

Fancy at another time wandering about the world. So also Reason, and Eloquence, (though not perhaps in the Naturall Sciences, yet in the Morall) may stand very well together. For wheresoever there is place for adorning and preferring of Errour, there is much more place for adorning and preferring of Truth, if they have it to adorn. Nor is there any repugnancy between fearing the Laws, and not fearing a publique Enemy; nor between abstaining from Injury, and pardoning it in others. There is therefore no such Inconsistence of Humane Nature, with Civill Duties, as some think. I have known cleernesse of Judgment, and largenesse of Fancy; strength of Reason, and gracefull Elocution; a Courage for the Warre, and a Fear for the Laws, and all eminently in one man; and that was my most noble and honored friend Mr. Sidney Godolphin; who hating no man, nor hated of any, was unfortunately slain in the beginning of the late Civill warre, in the Publique quarrel, by an indiscerned, and an undiscerning hand.

To the Laws of Nature, declared in the 15. Chapter, I would have this added, "That every man is bound by Nature, as much as in him lieth, to protect in Warre, the Authority, by which he is himself protected in time of Peace." For he that pretendeth a Right of Nature to preserve his owne body, cannot pretend a Right of Nature to destroy him, by whose strength he is preserved: It is a manifest contradiction of himselfe. And though this Law may bee drawn by consequence, from some of those that are there already mentioned; yet the Times require to have it inculcated, and remembred.

And because I find by divers English Books lately printed, that the Civill warres have not yet sufficiently taught men, in what point of time it is, that a Subject becomes obliged to the Conquerour; nor what is Conquest; nor how it comes about, that it obliges men to obey his Laws: Therefore for farther satisfaction of men therein, I say, the point of time, wherein a man becomes subject of a Conquerour, is that point, wherein having liberty to submit to him, he consenteth, either by expresse words, or by other sufficient sign, to be his Subject. When it is that a man hath the liberty to submit, I have showed before in the end of the 21. Chapter; namely, that for him that hath no obligation to his former Sovereign but that of an ordinary Subject, it is then, when the means of his life is within the Guards and Garrisons of the Enemy; for it is then, that he hath no longer Protection from him, but is protected by the adverse party for his Contribution. Seeing therefore such contribution is every where, as a thing inevitable, (notwithstanding it be an assistance to the Enemy,) esteemed

lawfull; as totall Submission, which is but an assistance to the Enemy, cannot be esteemed unlawfull. Besides, if a man consider that they who submit, assist the Enemy but with part of their estates, whereas they that refuse, assist him with the whole, there is no reason to call their Submission, or Composition an Assistance; but rather a Detriment to the Enemy. But if a man, besides the obligation of a Subject, hath taken upon him a new obligation of a Souldier, then he hath not the liberty to submit to a new Power, as long as the old one keeps the field, and giveth him means of subsistence, either in his Armies, or Garrisons: for in this case, he cannot complain of want of Protection, and means to live as a Souldier: But when that also failes, a Souldier also may seek his Protection wheresoever he has most hope to have it; and may lawfully submit himself to his new Master. And so much for the Time when he may do it lawfully, if hee will. If therefore he doe it, he is undoubtedly bound to be a true Subject: For a Contract lawfully made, cannot lawfully be broken.

By this also a man may understand, when it is, that men may be said to be Conquered; and in what the nature of Conquest, and the Right of a Conquerour consisteth: For this Submission is it implyeth them all. Conquest, is not the Victory it self; but the Acquisition by Victory, of a Right, over the persons of men. He therefore that is slain, is Overcome, but not Conquered; He that is taken, and put into prison, or chaines, is not Conquered, though Overcome; for he is still an Enemy, and may save himself if hee can: But he that upon promise of Obedience, hath his Life and Liberty allowed him, is then Conquered, and a Subject; and not before. The Romanes used to say, that their Generall had Pacified such a Province, that is to say, in English, Conquered it; and that the Countrey was Pacified by Victory, when the people of it had promised Imperata Facere, that is, To Doe What The Romane People Commanded Them: this was to be Conquered. But this promise may be either expresse, or tacite: Expresse, by Promise: Tacite, by other signes. As for example, a man that hath not been called to make such an expresse Promise, (because he is one whose power perhaps is not considerable;) yet if he live under their Protection openly, hee is understood to submit himselfe to the Government: But if he live there secretly, he is lyable to any thing that may bee done to a Spie, and Enemy of the State. I say not, hee does any Injustice, (for acts of open Hostility bear not that name); but that he may be justly put to death. Likewise, if a man, when his Country is conquered, be out of it, he is not

Conquered, nor Subject: but if at his return, he submit to the Government, he is bound to obey it. So that Conquest (to define it) is the Acquiring of the Right of Sovereignty by Victory. Which Right, is acquired, in the peoples Submission, by which they contract with the Victor, promising Obedience, for Life and Liberty.

In the 29th Chapter I have set down for one of the causes of the Dissolutions of Common-wealths, their Imperfect Generation, consisting in the want of an Absolute and Arbitrary Legislative Power; for want whereof, the Civill Sovereign is fain to handle the Sword of Justice unconstantly, and as if it were too hot for him to hold: One reason whereof (which I have not there mentioned) is this, That they will all of them justify the War, by which their Power was at first gotten, and whereon (as they think) their Right dependeth, and not on the Possession. As if, for example, the Right of the Kings of England did depend on the goodnesse of the cause of William the Conquerour, and upon their lineall, and directest Descent from him; by which means, there would perhaps be no tie of the Subjects obedience to their Sovereign at this day in all the world: wherein whilst they needlessly think to justify themselves, they justify all the successefull Rebellions that Ambition shall at any time raise against them, and their Successors. Therefore I put down for one of the most effectuall seeds of the Death of any State, that the Conquerours require not onely a Submission of mens actions to them for the future, but also an Approbation of all their actions past; when there is scarce a Common-wealth in the world, whose beginnings can in conscience be justified.

And because the name of Tyranny, signifieth nothing more, nor lesse, than the name of Sovereignty, be it in one, or many men, saving that they that use the former word, are understood to bee angry with them they call Tyrants; I think the toleration of a professed hatred of Tyranny, is a Toleration of hatred to Common-wealth in general, and another evill seed, not differing much from the former. For to the Justification of the Cause of a Conqueror, the Reproach of the Cause of the Conquered, is for the most part necessary: but neither of them necessary for the Obligation of the Conquered. And thus much I have thought fit to say upon the Review of the first and second part of this Discourse.

In the 35th Chapter, I have sufficiently declared out of the Scripture, that in the Common-wealth of the Jewes, God himselfe was made the Sovereign, by Pact with the People; who were therefore called his Peculiar People, to distinguish them from the rest of the world, over whom God reigned not by their Consent, but by his own Power: And that in this Kingdome Moses was Gods Lieutenant on Earth; and that it was he that told them what Laws God appointed to doe Execution; especially in Capitall Punishments; not then thinking it a matter of so necessary consideration, as I find it since. Wee know that generally in all Commonwealths, the Execution of Corporeall Punishments, was either put upon the Guards, or other Souldiers of the Sovereign Power; or given to those, in whom want of means, contempt of honour, and hardnesse of heart, concurred, to make them sue for such an Office. But amongst the Israelites it was a Positive Law of God their Sovereign, that he that was convicted of a capitall Crime, should be stoned to death by the People; and that the Witnesses should cast the first Stone, and after the Witnesses, then the rest of the People. This was a Law that designed who were to be the Executioners; but not that any one should throw a Stone at him before Conviction and Sentence, where the Congregation was Judge. The Witnesses were neverthelesse to be heard before they proceeded to Execution, unlesse the Fact were committed in the presence of the Congregation it self, or in sight of the lawfull Judges; for then there needed no other Witnesses but the Judges themselves. Neverthelesse, this manner of proceeding being not throughly understood, hath given occasion to a dangerous opinion, that any man may kill another, in some cases, by a Right of Zeal; as if the Executions done upon Offenders in the Kingdome of God in old time, proceeded not from the Sovereign Command, but from the Authority of Private Zeal: which, if we consider the texts that seem to favour it, is quite contrary.

First, where the Levites fell upon the People, that had made and worshipped the Golden Calfe, and slew three thousand of them; it was by the Commandement of Moses, from the mouth of God; as is manifest, Exod. 32.27. And when the Son of a woman of Israel had blasphemed God, they that heard it, did not kill him, but brought him before Moses, who put him under custody, till God should give Sentence against him; as appears, Levit. 25.11, 12. Again, (Numbers 25.6, 7.) when Phinehas killed Zimri and Cosbi, it was not by right of Private Zeale: Their Crime was

committed in the sight of the Assembly; there needed no Witsnesse; the Law was known, and he the heir apparent to the Sovereignty; and which is the principall point, the Lawfulnessse of his Act depended wholly upon a subsequent Ratification by Moses, whereof he had no cause to doubt. And this Presumption of a future Ratification, is sometimes necessary to the safety [of] a Common-wealth; as in a sudden Rebellion, any man that can suppress it by his own Power in the Countrey where it begins, may lawfully doe it, and provide to have it Ratified, or Pardoned, whilst it is in doing, or after it is done. Also Numb. 35.30. it is expressly said, "Whosoever shall kill the Murtherer, shall kill him upon the word of Witnesses:" but Witnesses suppose a formall Judicature, and consequently condemn that pretence of Jus Zelotarum. The Law of Moses concerning him that enticeth to Idolatry, (that is to say, in the Kingdome of God to a renouncing of his Allegiance) (Deut. 13.8.) forbids to conceal him, and commands the Accuser to cause him to be put to death, and to cast the first stone at him; but not to kill him before he be Condemned. And (Deut. 17. ver.4, 5, 6.) the Processe against Idolatry is exactly set down: For God there speaketh to the People, as Judge, and commandeth them, when a man is Accused of Idolatry, to Enquire diligently of the Fact, and finding it true, then to Stone him; but still the hand of the Witsnesse throweth the first stone. This is not Private Zeal, but Publique Condemnation. In like manner when a Father hath a rebellious Son, the Law is (Deut. 21. 18.) that he shall bring him before the Judges of the Town, and all the people of the Town shall Stone him. Lastly, by pretence of these Laws it was, that St. Steven was Stoned, and not by pretence of Private Zeal: for before hee was carried away to Execution, he had Pleaded his Cause before the High Priest. There is nothing in all this, nor in any other part of the Bible, to countenance Executions by Private Zeal; which being oftentimes but a conjunction of Ignorance and Passion, is against both the Justice and Peace of a Common-wealth.

In the 36th Chapter I have said, that it is not declared in what manner God spake supernaturally to Moses: Not that he spake not to him sometimes by Dreams and Visions, and by a supernaturall Voice, as to other Prophets: For the manner how he spake unto him from the Mercy-seat, is expressly set down (Numbers 7.89.) in these words, "From that time forward, when Moses entred into the Tabernacle of the Congregation to speak with God, he heard a Voice which spake unto him from over the

Mercy-Seate, which is over the Arke of the Testimony, from between the Cherubins he spake unto him." But it is not declared in what consisted the praeminence of the manner of Gods speaking to Moses, above that of his speaking to other Prophets, as to Samuel, and to Abraham, to whom he also spake by a Voice, (that is, by Vision) Unlesse the difference consist in the cleernesse of the Vision. For Face to Face, and Mouth to Mouth, cannot be literally understood of the Infinitenesse, and Incomprehensibility of the Divine Nature.

And as to the whole Doctrine, I see not yet, but the principles of it are true and proper; and the Ratiocination solid. For I ground the Civill Right of Sovereigns, and both the Duty and Liberty of Subjects, upon the known naturall Inclinations of Mankind, and upon the Articles of the Law of Nature; of which no man, that pretends but reason enough to govern his private family, ought to be ignorant. And for the Power Ecclesiasticall of the same Sovereigns, I ground it on such Texts, as are both evident in themselves, and consonant to the Scope of the whole Scripture. And therefore am perswaded, that he that shall read it with a purpose onely to be informed, shall be informed by it. But for those that by Writing, or Publique Discourse, or by their eminent actions, have already engaged themselves to the maintaining of contrary opinions, they will not bee so easily satisfied. For in such cases, it is naturall for men, at one and the same time, both to proceed in reading, and to lose their attention, in the search of objections to that they had read before: Of which, in a time wherein the interests of men are changed (seeing much of that Doctrine, which serveth to the establishing of a new Government, must needs be contrary to that which conduced to the dissolution of the old,) there cannot choose but be very many.

In that part which treateth of a Christian Common-wealth, there are some new Doctrines, which, it may be, in a State where the contrary were already fully determined, were a fault for a Subject without leave to divulge, as being an usurpation of the place of a Teacher. But in this time, that men call not onely for Peace, but also for Truth, to offer such Doctrines as I think True, and that manifestly tend to Peace and Loyalty, to the consideration of those that are yet in deliberation, is no more, but to offer New Wine, to bee put into New Cask, that bothe may be preserved together. And I suppose, that then, when Novelty can breed no trouble, nor disorder in a State, men are not generally so much inclined to the

reverence of Antiquity, as to preferre Ancient Errors, before New and well proved Truth.

There is nothing I distrust more than my Elocution; which neverthelesse I am confident (excepting the Mischances of the Presse) is not obscure. That I have neglected the Ornament of quoting ancient Poets, Orators, and Philosophers, contrary to the custome of late time, (whether I have done well or ill in it,) proceedeth from my judgment, grounded on many reasons. For first, all Truth of Doctrine dependeth either upon Reason, or upon Scripture; both which give credit to many, but never receive it from any Writer. Secondly, the matters in question are not of Fact, but of Right, wherein there is no place for Witnesses. There is scarce any of those old Writers, that contradicteth not sometimes both himself, and others; which makes their Testimonies insufficient. Fourthly, such Opinions as are taken onely upon Credit of Antiquity, are not intrinsically the Judgment of those that cite them, but Words that passe (like gaping) from mouth to mouth. Fiftly, it is many times with a fraudulent Designe that men stick their corrupt Doctrine with the Cloves of other mens Wit. Sixtly, I find not that the Ancients they cite, took it for an Ornament, to doe the like with those that wrote before them. Seventhly, it is an argument of Indigestion, when Greek and Latine Sentences unchewed come up again, as they use to doe, unchanged. Lastly, though I reverence those men of Ancient time, that either have written Truth perspicuously, or set us in a better way to find it out our selves; yet to the Antiquity it self I think nothing due: For if we will reverence the Age, the Present is the Oldest. If the Antiquity of the Writer, I am not sure, that generally they to whom such honor is given, were more Ancient when they wrote, than I am that am Writing: But if it bee well considered, the praise of Ancient Authors, proceeds not from the reverence of the Dead, but from the competition, and mutuall envy of the Living.

To conclude, there is nothing in this whole Discourse, nor in that I writ before of the same Subject in Latine, as far as I can perceiv, contrary either to the Word of God, or to good Manners; or to the disturbance of the Publique Tranquillity. Therefore I think it may be profitably printed, and more profitably taught in the Universities, in case they also think so, to whom the judgment of the same belongeth. For seeing the Universities are the Fountains of Civill, and Morall Doctrine, from whence the Preachers, and the Gentry, drawing such water as they find, use to sprinkle the same

(both from the Pulpit, and in their Conversation) upon the People, there ought certainly to be great care taken, to have it pure, both from the Venime of Heathen Politicians, and from the Incantation of Deceiving Spirits. And by that means the most men, knowing their Duties, will be the less subject to serve the Ambition of a few discontented persons, in their purposes against the State; and be the lesse grieved with the Contributions necessary for their Peace, and Defence; and the Governours themselves have the lesse cause, to maintain at the Common charge any greater Army, than is necessary to make good the Publique Liberty, against the Invasions and Encroachments of forraign Enemies.

And thus I have brought to an end my Discourse of Civill and Ecclesiasticall Government, occasioned by the disorders of the present time, without partiality, without application, and without other designe, than to set before mens eyes the mutuall Relation between Protection and Obedience; of which the condition of Humane Nature, and the Laws Divine, (both Naturall and Positive) require an inviolable observation. And though in the revolution of States, there can be no very good Constellation for Truths of this nature to be born under, (as having an angry aspect from the dissolvers of an old Government, and seeing but the backs of them that erect a new;) yet I cannot think it will be condemned at this time, either by the Publique Judge of Doctrine, or by any that desires the continuance of Publique Peace. And in this hope I return to my interrupted Speculation of Bodies Naturall; wherein, (if God give me health to finish it,) I hope the Novelty will as much please, as in the Doctrine of this Artificiall Body it useth to offend. For such Truth, as opposeth no man profit, nor pleasure, is to all men welcome.

This and all associated files of various formats will be found in:  
<http://www.gutenberg.org/3/2/0/3207/>

Produced by Edward White, and David Widger

Updated editions will replace the previous one--the old editions will be renamed.

Creating the works from public domain print editions means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg-tm electronic works to protect the PROJECT GUTENBERG-tm concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for the eBooks, unless you receive specific permission. If you do not charge anything for copies of this eBook, complying with the rules is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. They may be modified and printed and given away--you may do practically ANYTHING with public domain eBooks. Redistribution is subject to the trademark license, especially commercial redistribution.

\*\*\* START: FULL LICENSE \*\*\*

THE FULL PROJECT GUTENBERG LICENSE  
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License (available with this file or online at <http://gutenberg.org/license>).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be

used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the

Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.org](http://www.gutenberg.org)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or

destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

#### 1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further

opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

## Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, are critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <http://www.pgla.org>.

## Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <http://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email [business@pglaf.org](mailto:business@pglaf.org). Email contact links and up to date contact information can be found at the Foundation's web site and official page at <http://pglaf.org>

For additional contact information:

Dr. Gregory B. Newby  
Chief Executive and Director  
[gbnewby@pglaf.org](mailto:gbnewby@pglaf.org)

#### Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <http://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: <http://pglaf.org/donate>

#### Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

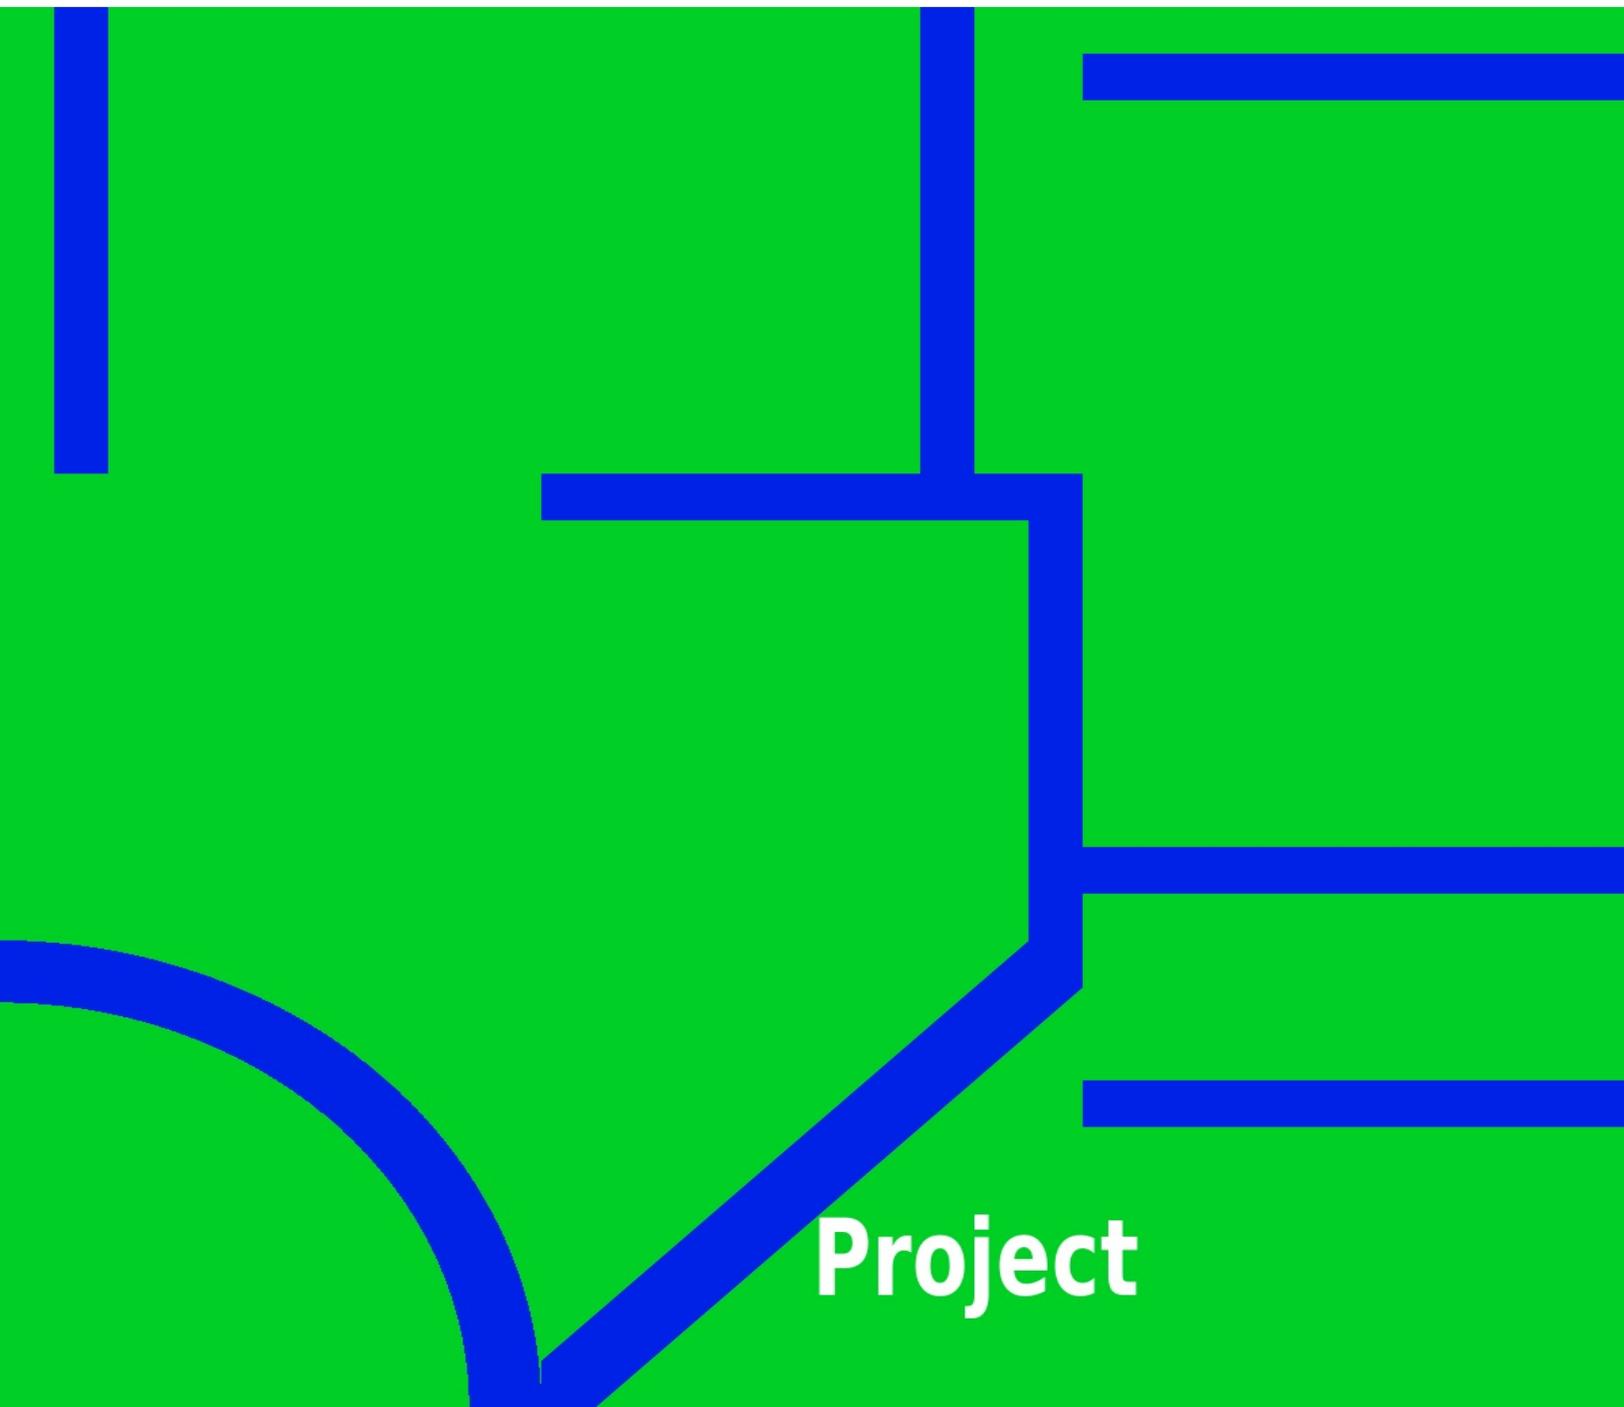

Most people start at our Web site which has the main PG search facility:

<http://www.gutenberg.org>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

# The Prince

Niccolò Machiavelli

The lower half of the image features a vibrant green background with several thick, blue, geometric lines. These lines form a complex, abstract pattern that resembles a stylized architectural structure or a modern logo. The lines are primarily horizontal and vertical, with some diagonal segments and a curved section on the left side. The word "Project" is written in white, bold, sans-serif font at the bottom right, partially overlapping the blue lines.

THE LIFE OF CASTRUCCIO CASTRACANI OF  
LUCCA

## INTRODUCTION

Niccolo Machiavelli was born at Florence on 3rd May 1469. He was the second son of Bernardo di Nicolo Machiavelli, a lawyer of some repute, and of Bartolommea di Stefano Nelli, his wife. Both parents were members of the old Florentine nobility.

His life falls naturally into three periods, each of which singularly enough constitutes a distinct and important era in the history of Florence. His youth was concurrent with the greatness of Florence as an Italian power under the guidance of Lorenzo de' Medici, Il Magnifico. The downfall of the Medici in Florence occurred in 1494, in which year Machiavelli entered the public service. During his official career Florence was free under the government of a Republic, which lasted until 1512, when the Medici returned to power, and Machiavelli lost his office. The Medici again ruled Florence from 1512 until 1527, when they were once more driven out. This was the period of Machiavelli's literary activity and increasing influence; but he died, within a few weeks of the expulsion of the Medici, on 22nd June 1527, in his fifty-eighth year, without having regained office.

## YOUTH — Act. 1-25—1469-94

Although there is little recorded of the youth of Machiavelli, the Florence of those days is so well known that the early environment of this representative citizen may be easily imagined. Florence has been described as a city with two opposite currents of life, one directed by the fervent and austere Savonarola, the other by the splendour-loving Lorenzo. Savonarola's influence upon the young Machiavelli must have been slight, for although at one time he wielded immense power over the fortunes of Florence, he only furnished Machiavelli with a subject of a gibe in "The Prince," where he is cited as an example of an unarmed prophet who came to a bad end. Whereas the magnificence of the Medicean rule during the life of Lorenzo appeared to have impressed Machiavelli strongly, for he frequently recurs to it in his writings, and it is to Lorenzo's grandson that he dedicates "The Prince."

Machiavelli, in his "History of Florence," gives us a picture of the young men among whom his youth was passed. He writes: "They were freer than their forefathers in dress and living, and spent more in other kinds of excesses, consuming their time and money in idleness, gaming, and women; their chief aim was to appear well dressed and to speak with wit and acuteness, whilst he who could wound others the most cleverly was thought the wisest." In a letter to his son Guido, Machiavelli shows why youth should avail itself of its opportunities for study, and leads us to infer that his own youth had been so occupied. He writes: "I have received your letter, which has given me the greatest pleasure, especially because you tell me you are quite restored in health, than which I could have no better news; for if God grant life to you, and to me, I hope to make a good man of you if you are willing to do your share." Then, writing of a new patron, he continues: "This will turn out well for you, but it is necessary for you to study; since, then, you have no longer the excuse of illness, take pains to study letters and music, for you see what honour is done to me for the little skill I have. Therefore, my son, if you wish to please me, and to bring success and honour to yourself, do right and study, because others will help you if you help yourself."

## OFFICE — Aet. 25-43—1494-1512

The second period of Machiavelli's life was spent in the service of the free Republic of Florence, which flourished, as stated above, from the expulsion of the Medici in 1494 until their return in 1512. After serving four years in one of the public offices he was appointed Chancellor and Secretary to the Second Chancery, the Ten of Liberty and Peace. Here we are on firm ground when dealing with the events of Machiavelli's life, for during this time he took a leading part in the affairs of the Republic, and we have its decrees, records, and dispatches to guide us, as well as his own writings. A mere recapitulation of a few of his transactions with the statesmen and soldiers of his time gives a fair indication of his activities, and supplies the sources from which he drew the experiences and characters which illustrate "The Prince."

His first mission was in 1499 to Catherina Sforza, "my lady of Forli" of "The Prince," from whose conduct and fate he drew the moral that it is far better to earn the confidence of the people than to rely on fortresses. This is a very noticeable principle in Machiavelli, and is urged by him in many ways as a matter of vital importance to princes.

In 1500 he was sent to France to obtain terms from Louis XII for continuing the war against Pisa: this king it was who, in his conduct of affairs in Italy, committed the five capital errors in statecraft summarized in "The Prince," and was consequently driven out. He, also, it was who made the dissolution of his marriage a condition of support to Pope Alexander VI; which leads Machiavelli to refer those who urge that such promises should be kept to what he has written concerning the faith of princes.

Machiavelli's public life was largely occupied with events arising out of the ambitions of Pope Alexander VI and his son, Cesare Borgia, the Duke Valentino, and these characters fill a large space of "The Prince." Machiavelli never hesitates to cite the actions of the duke for the benefit of usurpers who wish to keep the states they have seized; he can, indeed, find no precepts to offer so good as the pattern of Cesare Borgia's conduct, insomuch that Cesare is acclaimed by some critics as the "hero" of "The Prince." Yet in "The Prince" the duke is in point of fact cited as a type of the

man who rises on the fortune of others, and falls with them; who takes every course that might be expected from a prudent man but the course which will save him; who is prepared for all eventualities but the one which happens; and who, when all his abilities fail to carry him through, exclaims that it was not his fault, but an extraordinary and unforeseen fatality.

On the death of Pius III, in 1503, Machiavelli was sent to Rome to watch the election of his successor, and there he saw Cesare Borgia cheated into allowing the choice of the College to fall on Giuliano delle Rovere (Julius II), who was one of the cardinals that had most reason to fear the duke. Machiavelli, when commenting on this election, says that he who thinks new favours will cause great personages to forget old injuries deceives himself. Julius did not rest until he had ruined Cesare.

It was to Julius II that Machiavelli was sent in 1506, when that pontiff was commencing his enterprise against Bologna; which he brought to a successful issue, as he did many of his other adventures, owing chiefly to his impetuous character. It is in reference to Pope Julius that Machiavelli moralizes on the resemblance between Fortune and women, and concludes that it is the bold rather than the cautious man that will win and hold them both.

It is impossible to follow here the varying fortunes of the Italian states, which in 1507 were controlled by France, Spain, and Germany, with results that have lasted to our day; we are concerned with those events, and with the three great actors in them, so far only as they impinge on the personality of Machiavelli. He had several meetings with Louis XII of France, and his estimate of that monarch's character has already been alluded to. Machiavelli has painted Ferdinand of Aragon as the man who accomplished great things under the cloak of religion, but who in reality had no mercy, faith, humanity, or integrity; and who, had he allowed himself to be influenced by such motives, would have been ruined. The Emperor Maximilian was one of the most interesting men of the age, and his character has been drawn by many hands; but Machiavelli, who was an envoy at his court in 1507-8, reveals the secret of his many failures when he describes him as a secretive man, without force of character—ignoring the human agencies necessary to carry his schemes into effect, and never insisting on the fulfilment of his wishes.

The remaining years of Machiavelli's official career were filled with events arising out of the League of Cambrai, made in 1508 between the three great European powers already mentioned and the pope, with the object of crushing the Venetian Republic. This result was attained in the battle of Vaila, when Venice lost in one day all that she had won in eight hundred years. Florence had a difficult part to play during these events, complicated as they were by the feud which broke out between the pope and the French, because friendship with France had dictated the entire policy of the Republic. When, in 1511, Julius II finally formed the Holy League against France, and with the assistance of the Swiss drove the French out of Italy, Florence lay at the mercy of the Pope, and had to submit to his terms, one of which was that the Medici should be restored. The return of the Medici to Florence on 1st September 1512, and the consequent fall of the Republic, was the signal for the dismissal of Machiavelli and his friends, and thus put an end to his public career, for, as we have seen, he died without regaining office.

## LITERATURE AND DEATH — Act. 43-58— 1512-27

On the return of the Medici, Machiavelli, who for a few weeks had vainly hoped to retain his office under the new masters of Florence, was dismissed by decree dated 7th November 1512. Shortly after this he was accused of complicity in an abortive conspiracy against the Medici, imprisoned, and put to the question by torture. The new Medicean pope, Leo X, procured his release, and he retired to his small property at San Casciano, near Florence, where he devoted himself to literature. In a letter to Francesco Vettori, dated 13th December 1513, he has left a very interesting description of his life at this period, which elucidates his methods and his motives in writing "The Prince." After describing his daily occupations with his family and neighbours, he writes: "The evening being come, I return home and go to my study; at the entrance I pull off my peasant-clothes, covered with dust and dirt, and put on my noble court dress, and thus becomingly re-clothed I pass into the ancient courts of the men of old, where, being lovingly received by them, I am fed with that food which is mine alone; where I do not hesitate to speak with them, and to ask for the reason of their actions, and they in their benignity answer me; and for four hours I feel no weariness, I forget every trouble, poverty does not dismay, death does not terrify me; I am possessed entirely by those great men. And because Dante says:

Knowledge doth come of learning well retained,  
Unfruitful else,

I have noted down what I have gained from their conversation, and have composed a small work on 'Principalities,' where I pour myself out as fully as I can in meditation on the subject, discussing what a principality is, what kinds there are, how they can be acquired, how they can be kept, why they are lost: and if any of my fancies ever pleased you, this ought not to displease you: and to a prince, especially to a new one, it should be welcome: therefore I dedicate it to his Magnificence Giuliano. Filippo Casavecchio has seen it; he will be able to tell you what is in it, and of the

discourses I have had with him; nevertheless, I am still enriching and polishing it."

The "little book" suffered many vicissitudes before attaining the form in which it has reached us. Various mental influences were at work during its composition; its title and patron were changed; and for some unknown reason it was finally dedicated to Lorenzo de' Medici. Although Machiavelli discussed with Casavecchio whether it should be sent or presented in person to the patron, there is no evidence that Lorenzo ever received or even read it: he certainly never gave Machiavelli any employment. Although it was plagiarized during Machiavelli's lifetime, "The Prince" was never published by him, and its text is still disputable.

Machiavelli concludes his letter to Vettori thus: "And as to this little thing [his book], when it has been read it will be seen that during the fifteen years I have given to the study of statecraft I have neither slept nor idled; and men ought ever to desire to be served by one who has reaped experience at the expense of others. And of my loyalty none could doubt, because having always kept faith I could not now learn how to break it; for he who has been faithful and honest, as I have, cannot change his nature; and my poverty is a witness to my honesty."

Before Machiavelli had got "The Prince" off his hands he commenced his "Discourse on the First Decade of Titus Livius," which should be read concurrently with "The Prince." These and several minor works occupied him until the year 1518, when he accepted a small commission to look after the affairs of some Florentine merchants at Genoa. In 1519 the Medicean rulers of Florence granted a few political concessions to her citizens, and Machiavelli with others was consulted upon a new constitution under which the Great Council was to be restored; but on one pretext or another it was not promulgated.

In 1520 the Florentine merchants again had recourse to Machiavelli to settle their difficulties with Lucca, but this year was chiefly remarkable for his re-entry into Florentine literary society, where he was much sought after, and also for the production of his "Art of War." It was in the same year that he received a commission at the instance of Cardinal de' Medici to write the "History of Florence," a task which occupied him until 1525. His return to popular favour may have determined the Medici to give him this employment, for an old writer observes that "an able statesman out of work,

like a huge whale, will endeavour to overturn the ship unless he has an empty cask to play with."

When the "History of Florence" was finished, Machiavelli took it to Rome for presentation to his patron, Giuliano de' Medici, who had in the meanwhile become pope under the title of Clement VII. It is somewhat remarkable that, as, in 1513, Machiavelli had written "The Prince" for the instruction of the Medici after they had just regained power in Florence, so, in 1525, he dedicated the "History of Florence" to the head of the family when its ruin was now at hand. In that year the battle of Pavia destroyed the French rule in Italy, and left Francis I a prisoner in the hands of his great rival, Charles V. This was followed by the sack of Rome, upon the news of which the popular party at Florence threw off the yoke of the Medici, who were once more banished.

Machiavelli was absent from Florence at this time, but hastened his return, hoping to secure his former office of secretary to the "Ten of Liberty and Peace." Unhappily he was taken ill soon after he reached Florence, where he died on 22nd June 1527.

## THE MAN AND HIS WORKS

No one can say where the bones of Machiavelli rest, but modern Florence has decreed him a stately cenotaph in Santa Croce, by the side of her most famous sons; recognizing that, whatever other nations may have found in his works, Italy found in them the idea of her unity and the germs of her renaissance among the nations of Europe. Whilst it is idle to protest against the world-wide and evil signification of his name, it may be pointed out that the harsh construction of his doctrine which this sinister reputation implies was unknown to his own day, and that the researches of recent times have enabled us to interpret him more reasonably. It is due to these inquiries that the shape of an "unholy necromancer," which so long haunted men's vision, has begun to fade.

Machiavelli was undoubtedly a man of great observation, acuteness, and industry; noting with appreciative eye whatever passed before him, and with his supreme literary gift turning it to account in his enforced retirement from affairs. He does not present himself, nor is he depicted by his contemporaries, as a type of that rare combination, the successful statesman and author, for he appears to have been only moderately prosperous in his several embassies and political employments. He was misled by Catherina Sforza, ignored by Louis XII, overawed by Cesare Borgia; several of his embassies were quite barren of results; his attempts to fortify Florence failed, and the soldiery that he raised astonished everybody by their cowardice. In the conduct of his own affairs he was timid and time-serving; he dared not appear by the side of Soderini, to whom he owed so much, for fear of compromising himself; his connection with the Medici was open to suspicion, and Giuliano appears to have recognized his real forte when he set him to write the "History of Florence," rather than employ him in the state. And it is on the literary side of his character, and there alone, that we find no weakness and no failure.

Although the light of almost four centuries has been focused on "The Prince," its problems are still debatable and interesting, because they are the eternal problems between the ruled and their rulers. Such as they are, its ethics are those of Machiavelli's contemporaries; yet they cannot be said to

be out of date so long as the governments of Europe rely on material rather than on moral forces. Its historical incidents and personages become interesting by reason of the uses which Machiavelli makes of them to illustrate his theories of government and conduct.

Leaving out of consideration those maxims of state which still furnish some European and eastern statesmen with principles of action, "The Prince" is bestrewn with truths that can be proved at every turn. Men are still the dupes of their simplicity and greed, as they were in the days of Alexander VI. The cloak of religion still conceals the vices which Machiavelli laid bare in the character of Ferdinand of Aragon. Men will not look at things as they really are, but as they wish them to be—and are ruined. In politics there are no perfectly safe courses; prudence consists in choosing the least dangerous ones. Then—to pass to a higher plane—Machiavelli reiterates that, although crimes may win an empire, they do not win glory. Necessary wars are just wars, and the arms of a nation are hallowed when it has no other resource but to fight.

It is the cry of a far later day than Machiavelli's that government should be elevated into a living moral force, capable of inspiring the people with a just recognition of the fundamental principles of society; to this "high argument" "The Prince" contributes but little. Machiavelli always refused to write either of men or of governments otherwise than as he found them, and he writes with such skill and insight that his work is of abiding value. But what invests "The Prince" with more than a merely artistic or historical interest is the incontrovertible truth that it deals with the great principles which still guide nations and rulers in their relationship with each other and their neighbours.

In translating "The Prince" my aim has been to achieve at all costs an exact literal rendering of the original, rather than a fluent paraphrase adapted to the modern notions of style and expression. Machiavelli was no facile phrasemonger; the conditions under which he wrote obliged him to weigh every word; his themes were lofty, his substance grave, his manner nobly plain and serious. "Quis eo fuit unquam in partiundis rebus, in definiendis, in explanandis pressior?" In "The Prince," it may be truly said, there is reason assignable, not only for every word, but for the position of every word. To an Englishman of Shakespeare's time the translation of such a treatise was in some ways a comparatively easy task, for in those times

the genius of the English more nearly resembled that of the Italian language; to the Englishman of to-day it is not so simple. To take a single example: the word "intrattenere," employed by Machiavelli to indicate the policy adopted by the Roman Senate towards the weaker states of Greece, would by an Elizabethan be correctly rendered "entertain," and every contemporary reader would understand what was meant by saying that "Rome entertained the Aetolians and the Achaeans without augmenting their power." But to-day such a phrase would seem obsolete and ambiguous, if not unmeaning: we are compelled to say that "Rome maintained friendly relations with the Aetolians," etc., using four words to do the work of one. I have tried to preserve the pithy brevity of the Italian so far as was consistent with an absolute fidelity to the sense. If the result be an occasional asperity I can only hope that the reader, in his eagerness to reach the author's meaning, may overlook the roughness of the road that leads him to it.

The following is a list of the works of Machiavelli:

Principal works. *Discorso sopra le cose di Pisa*, 1499; *Del modo di trattare i popoli della Valdichiana ribellati*, 1502; *Del modo tenuto dal duca Valentino nell' ammazzare Vitellozzo Vitelli, Oliverotto da Fermo, etc.*, 1502; *Discorso sopra la provisione del danaro*, 1502; *Decennale primo* (poem in terza rima), 1506; *Ritratti delle cose dell' Alemagna*, 1508-12; *Decennale secondo*, 1509; *Ritratti delle cose di Francia*, 1510; *Discorsi sopra la prima deca di T. Livio*, 3 vols., 1512-17; *Il Principe*, 1513; *Andria*, comedy translated from Terence, 1513 (?); *Mandragola*, prose comedy in five acts, with prologue in verse, 1513; *Della lingua* (dialogue), 1514; *Clizia*, comedy in prose, 1515 (?); *Belfagor arcidiavolo* (novel), 1515; *Asino d'oro* (poem in terza rima), 1517; *Dell' arte della guerra*, 1519-20; *Discorso sopra il riformare lo stato di Firenze*, 1520; *Sommario delle cose della citta di Lucca*, 1520; *Vita di Castruccio Castracani da Lucca*, 1520; *Istorie fiorentine*, 8 books, 1521-5; *Frammenti storici*, 1525.

Other poems include *Sonetti*, *Canzoni*, *Ottave*, and *Canti carnascialeschi*.

Editions. Aldo, Venice, 1546; della Tertina, 1550; Cambiagi, Florence, 6 vols., 1782-5; dei Classici, Milan, 10 1813; Silvestri, 9 vols., 1820-2; Passerini, Fanfani, Milanese, 6 vols. only published, 1873-7.

Minor works. Ed. F. L. Polidori, 1852; *Lettere familiari*, ed. E. Alvisi, 1883, 2 editions, one with excisions; *Credited Writings*, ed. G. Canestrini,

1857; Letters to F. Vettori, see A. Ridolfi, *Pensieri intorno allo scopo di N. Machiavelli nel libro Il Principe, etc.*; D. Ferrara, *The Private Correspondence of Nicolo Machiavelli*, 1929.

# DEDICATION

To the Magnificent Lorenzo Di Piero De' Medici:

Those who strive to obtain the good graces of a prince are accustomed to come before him with such things as they hold most precious, or in which they see him take most delight; whence one often sees horses, arms, cloth of gold, precious stones, and similar ornaments presented to princes, worthy of their greatness.

Desiring therefore to present myself to your Magnificence with some testimony of my devotion towards you, I have not found among my possessions anything which I hold more dear than, or value so much as, the knowledge of the actions of great men, acquired by long experience in contemporary affairs, and a continual study of antiquity; which, having reflected upon it with great and prolonged diligence, I now send, digested into a little volume, to your Magnificence.

And although I may consider this work unworthy of your countenance, nevertheless I trust much to your benignity that it may be acceptable, seeing that it is not possible for me to make a better gift than to offer you the opportunity of understanding in the shortest time all that I have learnt in so many years, and with so many troubles and dangers; which work I have not embellished with swelling or magnificent words, nor stuffed with rounded periods, nor with any extrinsic allurements or adornments whatever, with which so many are accustomed to embellish their works; for I have wished either that no honour should be given it, or else that the truth of the matter and the weightiness of the theme shall make it acceptable.

Nor do I hold with those who regard it as a presumption if a man of low and humble condition dare to discuss and settle the concerns of princes; because, just as those who draw landscapes place themselves below in the plain to contemplate the nature of the mountains and of lofty places, and in order to contemplate the plains place themselves upon high mountains, even so to understand the nature of the people it needs to be a prince, and to understand that of princes it needs to be of the people.

Take then, your Magnificence, this little gift in the spirit in which I send it; wherein, if it be diligently read and considered by you, you will learn my extreme desire that you should attain that greatness which fortune and your other attributes promise. And if your Magnificence from the summit of your greatness will sometimes turn your eyes to these lower regions, you will see how unmeritedly I suffer a great and continued malignity of fortune.

# **THE PRINCE**

# **CHAPTER I — HOW MANY KINDS OF PRINCIPALITIES THERE ARE, AND BY WHAT MEANS THEY ARE ACQUIRED**

All states, all powers, that have held and hold rule over men have been and are either republics or principalities.

Principalities are either hereditary, in which the family has been long established; or they are new.

The new are either entirely new, as was Milan to Francesco Sforza, or they are, as it were, members annexed to the hereditary state of the prince who has acquired them, as was the kingdom of Naples to that of the King of Spain.

Such dominions thus acquired are either accustomed to live under a prince, or to live in freedom; and are acquired either by the arms of the prince himself, or of others, or else by fortune or by ability.

## CHAPTER II — CONCERNING HEREDITARY PRINCIPALITIES

I will leave out all discussion on republics, inasmuch as in another place I have written of them at length, and will address myself only to principalities. In doing so I will keep to the order indicated above, and discuss how such principalities are to be ruled and preserved.

I say at once there are fewer difficulties in holding hereditary states, and those long accustomed to the family of their prince, than new ones; for it is sufficient only not to transgress the customs of his ancestors, and to deal prudently with circumstances as they arise, for a prince of average powers to maintain himself in his state, unless he be deprived of it by some extraordinary and excessive force; and if he should be so deprived of it, whenever anything sinister happens to the usurper, he will regain it.

We have in Italy, for example, the Duke of Ferrara, who could not have withstood the attacks of the Venetians in '84, nor those of Pope Julius in '10, unless he had been long established in his dominions. For the hereditary prince has less cause and less necessity to offend; hence it happens that he will be more loved; and unless extraordinary vices cause him to be hated, it is reasonable to expect that his subjects will be naturally well disposed towards him; and in the antiquity and duration of his rule the memories and motives that make for change are lost, for one change always leaves the tooting for another.

## CHAPTER III — CONCERNING MIXED PRINCIPALITIES

But the difficulties occur in a new principality. And firstly, if it be not entirely new, but is, as it were, a member of a state which, taken collectively, may be called composite, the changes arise chiefly from an inherent difficulty which there is in all new principalities; for men change their rulers willingly, hoping to better themselves, and this hope induces them to take up arms against him who rules: wherein they are deceived, because they afterwards find by experience they have gone from bad to worse. This follows also on another natural and common necessity, which always causes a new prince to burden those who have submitted to him with his soldiery and with infinite other hardships which he must put upon his new acquisition.

In this way you have enemies in all those whom you have injured in seizing that principality, and you are not able to keep those friends who put you there because of your not being able to satisfy them in the way they expected, and you cannot take strong measures against them, feeling bound to them. For, although one may be very strong in armed forces, yet in entering a province one has always need of the goodwill of the natives.

For these reasons Louis the Twelfth, King of France, quickly occupied Milan, and as quickly lost it; and to turn him out the first time it only needed Lodovico's own forces; because those who had opened the gates to him, finding themselves deceived in their hopes of future benefit, would not endure the ill-treatment of the new prince. It is very true that, after acquiring rebellious provinces a second time, they are not so lightly lost afterwards, because the prince, with little reluctance, takes the opportunity of the rebellion to punish the delinquents, to clear out the suspects, and to strengthen himself in the weakest places. Thus to cause France to lose Milan the first time it was enough for the Duke Lodovico(\*) to raise insurrections on the borders; but to cause him to lose it a second time it was necessary to bring the whole world against him, and that his armies should

be defeated and driven out of Italy; which followed from the causes above mentioned.

(\*) Duke Lodovico was Lodovico Moro, a son of Francesco Sforza, who married Beatrice d'Este. He ruled over Milan from 1494 to 1500, and died in 1510.

Nevertheless Milan was taken from France both the first and the second time. The general reasons for the first have been discussed; it remains to name those for the second, and to see what resources he had, and what any one in his situation would have had for maintaining himself more securely in his acquisition than did the King of France.

Now I say that those dominions which, when acquired, are added to an ancient state by him who acquires them, are either of the same country and language, or they are not. When they are, it is easier to hold them, especially when they have not been accustomed to self-government; and to hold them securely it is enough to have destroyed the family of the prince who was ruling them; because the two peoples, preserving in other things the old conditions, and not being unlike in customs, will live quietly together, as one has seen in Brittany, Burgundy, Gascony, and Normandy, which have been bound to France for so long a time: and, although there may be some difference in language, nevertheless the customs are alike, and the people will easily be able to get on amongst themselves. He who has annexed them, if he wishes to hold them, has only to bear in mind two considerations: the one, that the family of their former lord is extinguished; the other, that neither their laws nor their taxes are altered, so that in a very short time they will become entirely one body with the old principality.

But when states are acquired in a country differing in language, customs, or laws, there are difficulties, and good fortune and great energy are needed to hold them, and one of the greatest and most real helps would be that he who has acquired them should go and reside there. This would make his position more secure and durable, as it has made that of the Turk in Greece, who, notwithstanding all the other measures taken by him for holding that state, if he had not settled there, would not have been able to keep it. Because, if one is on the spot, disorders are seen as they spring up, and one can quickly remedy them; but if one is not at hand, they are heard of only when they are great, and then one can no longer remedy them. Besides this, the country is not pillaged by your officials; the subjects are satisfied by prompt recourse to the prince; thus, wishing to be good, they have more

cause to love him, and wishing to be otherwise, to fear him. He who would attack that state from the outside must have the utmost caution; as long as the prince resides there it can only be wrested from him with the greatest difficulty.

The other and better course is to send colonies to one or two places, which may be as keys to that state, for it is necessary either to do this or else to keep there a great number of cavalry and infantry. A prince does not spend much on colonies, for with little or no expense he can send them out and keep them there, and he offends a minority only of the citizens from whom he takes lands and houses to give them to the new inhabitants; and those whom he offends, remaining poor and scattered, are never able to injure him; whilst the rest being uninjured are easily kept quiet, and at the same time are anxious not to err for fear it should happen to them as it has to those who have been despoiled. In conclusion, I say that these colonies are not costly, they are more faithful, they injure less, and the injured, as has been said, being poor and scattered, cannot hurt. Upon this, one has to remark that men ought either to be well treated or crushed, because they can avenge themselves of lighter injuries, of more serious ones they cannot; therefore the injury that is to be done to a man ought to be of such a kind that one does not stand in fear of revenge.

But in maintaining armed men there in place of colonies one spends much more, having to consume on the garrison all the income from the state, so that the acquisition turns into a loss, and many more are exasperated, because the whole state is injured; through the shifting of the garrison up and down all become acquainted with hardship, and all become hostile, and they are enemies who, whilst beaten on their own ground, are yet able to do hurt. For every reason, therefore, such guards are as useless as a colony is useful.

Again, the prince who holds a country differing in the above respects ought to make himself the head and defender of his less powerful neighbours, and to weaken the more powerful amongst them, taking care that no foreigner as powerful as himself shall, by any accident, get a footing there; for it will always happen that such a one will be introduced by those who are discontented, either through excess of ambition or through fear, as one has seen already. The Romans were brought into Greece by the Aetolians; and in every other country where they obtained a footing they

were brought in by the inhabitants. And the usual course of affairs is that, as soon as a powerful foreigner enters a country, all the subject states are drawn to him, moved by the hatred which they feel against the ruling power. So that in respect to those subject states he has not to take any trouble to gain them over to himself, for the whole of them quickly rally to the state which he has acquired there. He has only to take care that they do not get hold of too much power and too much authority, and then with his own forces, and with their goodwill, he can easily keep down the more powerful of them, so as to remain entirely master in the country. And he who does not properly manage this business will soon lose what he has acquired, and whilst he does hold it he will have endless difficulties and troubles.

The Romans, in the countries which they annexed, observed closely these measures; they sent colonies and maintained friendly relations with(\*) the minor powers, without increasing their strength; they kept down the greater, and did not allow any strong foreign powers to gain authority. Greece appears to me sufficient for an example. The Achaeans and Aetolians were kept friendly by them, the kingdom of Macedonia was humbled, Antiochus was driven out; yet the merits of the Achaeans and Aetolians never secured for them permission to increase their power, nor did the persuasions of Philip ever induce the Romans to be his friends without first humbling him, nor did the influence of Antiochus make them agree that he should retain any lordship over the country. Because the Romans did in these instances what all prudent princes ought to do, who have to regard not only present troubles, but also future ones, for which they must prepare with every energy, because, when foreseen, it is easy to remedy them; but if you wait until they approach, the medicine is no longer in time because the malady has become incurable; for it happens in this, as the physicians say it happens in hectic fever, that in the beginning of the malady it is easy to cure but difficult to detect, but in the course of time, not having been either detected or treated in the beginning, it becomes easy to detect but difficult to cure. Thus it happens in affairs of state, for when the evils that arise have been foreseen (which it is only given to a wise man to see), they can be quickly redressed, but when, through not having been foreseen, they have been permitted to grow in a way that every one can see them, there is no longer a remedy. Therefore, the Romans, foreseeing troubles, dealt with them at once, and, even to avoid a war, would not let them come to a head,

for they knew that war is not to be avoided, but is only to be put off to the advantage of others; moreover they wished to fight with Philip and Antiochus in Greece so as not to have to do it in Italy; they could have avoided both, but this they did not wish; nor did that ever please them which is forever in the mouths of the wise ones of our time:—Let us enjoy the benefits of the time—but rather the benefits of their own valour and prudence, for time drives everything before it, and is able to bring with it good as well as evil, and evil as well as good.

(\*) See remark in the introduction on the word "intrattenere."

But let us turn to France and inquire whether she has done any of the things mentioned. I will speak of Louis(\*) (and not of Charles)(+) as the one whose conduct is the better to be observed, he having held possession of Italy for the longest period; and you will see that he has done the opposite to those things which ought to be done to retain a state composed of divers elements.

(\*) Louis XII, King of France, "The Father of the People," born 1462, died 1515.

(+) Charles VIII, King of France, born 1470, died 1498.

King Louis was brought into Italy by the ambition of the Venetians, who desired to obtain half the state of Lombardy by his intervention. I will not blame the course taken by the king, because, wishing to get a foothold in Italy, and having no friends there—seeing rather that every door was shut to him owing to the conduct of Charles—he was forced to accept those friendships which he could get, and he would have succeeded very quickly in his design if in other matters he had not made some mistakes. The king, however, having acquired Lombardy, regained at once the authority which Charles had lost: Genoa yielded; the Florentines became his friends; the Marquess of Mantua, the Duke of Ferrara, the Bentivogli, my lady of Forli, the Lords of Faenza, of Pesaro, of Rimini, of Camerino, of Piombino, the Lucchese, the Pisans, the Sienese—everybody made advances to him to become his friend. Then could the Venetians realize the rashness of the course taken by them, which, in order that they might secure two towns in Lombardy, had made the king master of two-thirds of Italy.

Let any one now consider with what little difficulty the king could have maintained his position in Italy had he observed the rules above laid down, and kept all his friends secure and protected; for although they were numerous they were both weak and timid, some afraid of the Church, some of the Venetians, and thus they would always have been forced to stand in with him, and by their means he could easily have made himself secure against those who remained powerful. But he was no sooner in Milan than he did the contrary by assisting Pope Alexander to occupy the Romagna. It never occurred to him that by this action he was weakening himself, depriving himself of friends and of those who had thrown themselves into his lap, whilst he aggrandized the Church by adding much temporal power to the spiritual, thus giving it greater authority. And having committed this

prime error, he was obliged to follow it up, so much so that, to put an end to the ambition of Alexander, and to prevent his becoming the master of Tuscany, he was himself forced to come into Italy.

And as if it were not enough to have aggrandized the Church, and deprived himself of friends, he, wishing to have the kingdom of Naples, divided it with the King of Spain, and where he was the prime arbiter in Italy he takes an associate, so that the ambitious of that country and the malcontents of his own should have somewhere to shelter; and whereas he could have left in the kingdom his own pensioner as king, he drove him out, to put one there who was able to drive him, Louis, out in turn.

The wish to acquire is in truth very natural and common, and men always do so when they can, and for this they will be praised not blamed; but when they cannot do so, yet wish to do so by any means, then there is folly and blame. Therefore, if France could have attacked Naples with her own forces she ought to have done so; if she could not, then she ought not to have divided it. And if the partition which she made with the Venetians in Lombardy was justified by the excuse that by it she got a foothold in Italy, this other partition merited blame, for it had not the excuse of that necessity.

Therefore Louis made these five errors: he destroyed the minor powers, he increased the strength of one of the greater powers in Italy, he brought in a foreign power, he did not settle in the country, he did not send colonies. Which errors, had he lived, were not enough to injure him had he not made a sixth by taking away their dominions from the Venetians; because, had he not aggrandized the Church, nor brought Spain into Italy, it would have been very reasonable and necessary to humble them; but having first taken these steps, he ought never to have consented to their ruin, for they, being powerful, would always have kept off others from designs on Lombardy, to which the Venetians would never have consented except to become masters themselves there; also because the others would not wish to take Lombardy from France in order to give it to the Venetians, and to run counter to both they would not have had the courage.

And if any one should say: "King Louis yielded the Romagna to Alexander and the kingdom to Spain to avoid war," I answer for the reasons given above that a blunder ought never to be perpetrated to avoid war, because it is not to be avoided, but is only deferred to your disadvantage. And if another should allege the pledge which the king had given to the

Pope that he would assist him in the enterprise, in exchange for the dissolution of his marriage(\*) and for the cap to Rouen,(+) to that I reply what I shall write later on concerning the faith of princes, and how it ought to be kept.

(\*) Louis XII divorced his wife, Jeanne, daughter of Louis XI, and married in 1499 Anne of Brittany, widow of Charles VIII, in order to retain the Duchy of Brittany for the crown.

(+) The Archbishop of Rouen. He was Georges d'Amboise, created a cardinal by Alexander VI. Born 1460, died 1510.

Thus King Louis lost Lombardy by not having followed any of the conditions observed by those who have taken possession of countries and wished to retain them. Nor is there any miracle in this, but much that is reasonable and quite natural. And on these matters I spoke at Nantes with Rouen, when Valentino, as Cesare Borgia, the son of Pope Alexander, was usually called, occupied the Romagna, and on Cardinal Rouen observing to me that the Italians did not understand war, I replied to him that the French did not understand statecraft, meaning that otherwise they would not have allowed the Church to reach such greatness. And in fact it has been seen that the greatness of the Church and of Spain in Italy has been caused by France, and her ruin may be attributed to them. From this a general rule is drawn which never or rarely fails: that he who is the cause of another becoming powerful is ruined; because that predominancy has been brought about either by astuteness or else by force, and both are distrusted by him who has been raised to power.

## **CHAPTER IV — WHY THE KINGDOM OF DARIUS, CONQUERED BY ALEXANDER, DID NOT REBEL AGAINST THE SUCCESSORS OF ALEXANDER AT HIS DEATH**

Considering the difficulties which men have had to hold to a newly acquired state, some might wonder how, seeing that Alexander the Great became the master of Asia in a few years, and died whilst it was scarcely settled (whence it might appear reasonable that the whole empire would have rebelled), nevertheless his successors maintained themselves, and had to meet no other difficulty than that which arose among themselves from their own ambitions.

I answer that the principalities of which one has record are found to be governed in two different ways; either by a prince, with a body of servants, who assist him to govern the kingdom as ministers by his favour and permission; or by a prince and barons, who hold that dignity by antiquity of blood and not by the grace of the prince. Such barons have states and their own subjects, who recognize them as lords and hold them in natural affection. Those states that are governed by a prince and his servants hold their prince in more consideration, because in all the country there is no one who is recognized as superior to him, and if they yield obedience to another they do it as to a minister and official, and they do not bear him any particular affection.

The examples of these two governments in our time are the Turk and the King of France. The entire monarchy of the Turk is governed by one lord, the others are his servants; and, dividing his kingdom into sanjaks, he sends there different administrators, and shifts and changes them as he chooses. But the King of France is placed in the midst of an ancient body of lords, acknowledged by their own subjects, and beloved by them; they have their own prerogatives, nor can the king take these away except at his peril. Therefore, he who considers both of these states will recognize great difficulties in seizing the state of the Turk, but, once it is conquered, great ease in holding it. The causes of the difficulties in seizing the kingdom of

the Turk are that the usurper cannot be called in by the princes of the kingdom, nor can he hope to be assisted in his designs by the revolt of those whom the lord has around him. This arises from the reasons given above; for his ministers, being all slaves and bondmen, can only be corrupted with great difficulty, and one can expect little advantage from them when they have been corrupted, as they cannot carry the people with them, for the reasons assigned. Hence, he who attacks the Turk must bear in mind that he will find him united, and he will have to rely more on his own strength than on the revolt of others; but, if once the Turk has been conquered, and routed in the field in such a way that he cannot replace his armies, there is nothing to fear but the family of this prince, and, this being exterminated, there remains no one to fear, the others having no credit with the people; and as the conqueror did not rely on them before his victory, so he ought not to fear them after it.

The contrary happens in kingdoms governed like that of France, because one can easily enter there by gaining over some baron of the kingdom, for one always finds malcontents and such as desire a change. Such men, for the reasons given, can open the way into the state and render the victory easy; but if you wish to hold it afterwards, you meet with infinite difficulties, both from those who have assisted you and from those you have crushed. Nor is it enough for you to have exterminated the family of the prince, because the lords that remain make themselves the heads of fresh movements against you, and as you are unable either to satisfy or exterminate them, that state is lost whenever time brings the opportunity.

Now if you will consider what was the nature of the government of Darius, you will find it similar to the kingdom of the Turk, and therefore it was only necessary for Alexander, first to overthrow him in the field, and then to take the country from him. After which victory, Darius being killed, the state remained secure to Alexander, for the above reasons. And if his successors had been united they would have enjoyed it securely and at their ease, for there were no tumults raised in the kingdom except those they provoked themselves.

But it is impossible to hold with such tranquillity states constituted like that of France. Hence arose those frequent rebellions against the Romans in Spain, France, and Greece, owing to the many principalities there were in these states, of which, as long as the memory of them endured, the Romans

always held an insecure possession; but with the power and long continuance of the empire the memory of them passed away, and the Romans then became secure possessors. And when fighting afterwards amongst themselves, each one was able to attach to himself his own parts of the country, according to the authority he had assumed there; and the family of the former lord being exterminated, none other than the Romans were acknowledged.

When these things are remembered no one will marvel at the ease with which Alexander held the Empire of Asia, or at the difficulties which others have had to keep an acquisition, such as Pyrrhus and many more; this is not occasioned by the little or abundance of ability in the conqueror, but by the want of uniformity in the subject state.

## **CHAPTER V — CONCERNING THE WAY TO GOVERN CITIES OR PRINCIPALITIES WHICH LIVED UNDER THEIR OWN LAWS BEFORE THEY WERE ANNEXED**

Whenever those states which have been acquired as stated have been accustomed to live under their own laws and in freedom, there are three courses for those who wish to hold them: the first is to ruin them, the next is to reside there in person, the third is to permit them to live under their own laws, drawing a tribute, and establishing within it an oligarchy which will keep it friendly to you. Because such a government, being created by the prince, knows that it cannot stand without his friendship and interest, and does its utmost to support him; and therefore he who would keep a city accustomed to freedom will hold it more easily by the means of its own citizens than in any other way.

There are, for example, the Spartans and the Romans. The Spartans held Athens and Thebes, establishing there an oligarchy: nevertheless they lost them. The Romans, in order to hold Capua, Carthage, and Numantia, dismantled them, and did not lose them. They wished to hold Greece as the Spartans held it, making it free and permitting its laws, and did not succeed. So to hold it they were compelled to dismantle many cities in the country, for in truth there is no safe way to retain them otherwise than by ruining them. And he who becomes master of a city accustomed to freedom and does not destroy it, may expect to be destroyed by it, for in rebellion it has always the watchword of liberty and its ancient privileges as a rallying point, which neither time nor benefits will ever cause it to forget. And whatever you may do or provide against, they never forget that name or their privileges unless they are disunited or dispersed, but at every chance they immediately rally to them, as Pisa after the hundred years she had been held in bondage by the Florentines.

But when cities or countries are accustomed to live under a prince, and his family is exterminated, they, being on the one hand accustomed to obey and on the other hand not having the old prince, cannot agree in making one

from amongst themselves, and they do not know how to govern themselves. For this reason they are very slow to take up arms, and a prince can gain them to himself and secure them much more easily. But in republics there is more vitality, greater hatred, and more desire for vengeance, which will never permit them to allow the memory of their former liberty to rest; so that the safest way is to destroy them or to reside there.

## **CHAPTER VI — CONCERNING NEW PRINCIPALITIES WHICH ARE ACQUIRED BY ONE'S OWN ARMS AND ABILITY**

Let no one be surprised if, in speaking of entirely new principalities as I shall do, I adduce the highest examples both of prince and of state; because men, walking almost always in paths beaten by others, and following by imitation their deeds, are yet unable to keep entirely to the ways of others or attain to the power of those they imitate. A wise man ought always to follow the paths beaten by great men, and to imitate those who have been supreme, so that if his ability does not equal theirs, at least it will savour of it. Let him act like the clever archers who, designing to hit the mark which yet appears too far distant, and knowing the limits to which the strength of their bow attains, take aim much higher than the mark, not to reach by their strength or arrow to so great a height, but to be able with the aid of so high an aim to hit the mark they wish to reach.

I say, therefore, that in entirely new principalities, where there is a new prince, more or less difficulty is found in keeping them, accordingly as there is more or less ability in him who has acquired the state. Now, as the fact of becoming a prince from a private station presupposes either ability or fortune, it is clear that one or other of these things will mitigate in some degree many difficulties. Nevertheless, he who has relied least on fortune is established the strongest. Further, it facilitates matters when the prince, having no other state, is compelled to reside there in person.

But to come to those who, by their own ability and not through fortune, have risen to be princes, I say that Moses, Cyrus, Romulus, Theseus, and such like are the most excellent examples. And although one may not discuss Moses, he having been a mere executor of the will of God, yet he ought to be admired, if only for that favour which made him worthy to speak with God. But in considering Cyrus and others who have acquired or founded kingdoms, all will be found admirable; and if their particular deeds and conduct shall be considered, they will not be found inferior to those of Moses, although he had so great a preceptor. And in examining their actions

and lives one cannot see that they owed anything to fortune beyond opportunity, which brought them the material to mould into the form which seemed best to them. Without that opportunity their powers of mind would have been extinguished, and without those powers the opportunity would have come in vain.

It was necessary, therefore, to Moses that he should find the people of Israel in Egypt enslaved and oppressed by the Egyptians, in order that they should be disposed to follow him so as to be delivered out of bondage. It was necessary that Romulus should not remain in Alba, and that he should be abandoned at his birth, in order that he should become King of Rome and founder of the fatherland. It was necessary that Cyrus should find the Persians discontented with the government of the Medes, and the Medes soft and effeminate through their long peace. Theseus could not have shown his ability had he not found the Athenians dispersed. These opportunities, therefore, made those men fortunate, and their high ability enabled them to recognize the opportunity whereby their country was ennobled and made famous.

Those who by valorous ways become princes, like these men, acquire a principality with difficulty, but they keep it with ease. The difficulties they have in acquiring it rise in part from the new rules and methods which they are forced to introduce to establish their government and its security. And it ought to be remembered that there is nothing more difficult to take in hand, more perilous to conduct, or more uncertain in its success, than to take the lead in the introduction of a new order of things, because the innovator has for enemies all those who have done well under the old conditions, and lukewarm defenders in those who may do well under the new. This coolness arises partly from fear of the opponents, who have the laws on their side, and partly from the incredulity of men, who do not readily believe in new things until they have had a long experience of them. Thus it happens that whenever those who are hostile have the opportunity to attack they do it like partisans, whilst the others defend lukewarmly, in such wise that the prince is endangered along with them.

It is necessary, therefore, if we desire to discuss this matter thoroughly, to inquire whether these innovators can rely on themselves or have to depend on others: that is to say, whether, to consummate their enterprise, have they to use prayers or can they use force? In the first instance they always

succeed badly, and never compass anything; but when they can rely on themselves and use force, then they are rarely endangered. Hence it is that all armed prophets have conquered, and the unarmed ones have been destroyed. Besides the reasons mentioned, the nature of the people is variable, and whilst it is easy to persuade them, it is difficult to fix them in that persuasion. And thus it is necessary to take such measures that, when they believe no longer, it may be possible to make them believe by force.

If Moses, Cyrus, Theseus, and Romulus had been unarmed they could not have enforced their constitutions for long—as happened in our time to Fra Girolamo Savonarola, who was ruined with his new order of things immediately the multitude believed in him no longer, and he had no means of keeping steadfast those who believed or of making the unbelievers to believe. Therefore such as these have great difficulties in consummating their enterprise, for all their dangers are in the ascent, yet with ability they will overcome them; but when these are overcome, and those who envied them their success are exterminated, they will begin to be respected, and they will continue afterwards powerful, secure, honoured, and happy.

To these great examples I wish to add a lesser one; still it bears some resemblance to them, and I wish it to suffice me for all of a like kind: it is Hiero the Syracusan.(\*). This man rose from a private station to be Prince of Syracuse, nor did he, either, owe anything to fortune but opportunity; for the Syracusans, being oppressed, chose him for their captain, afterwards he was rewarded by being made their prince. He was of so great ability, even as a private citizen, that one who writes of him says he wanted nothing but a kingdom to be a king. This man abolished the old soldiery, organized the new, gave up old alliances, made new ones; and as he had his own soldiers and allies, on such foundations he was able to build any edifice: thus, whilst he had endured much trouble in acquiring, he had but little in keeping.

(\*) Hiero II, born about 307 B.C., died 216 B.C.

## CHAPTER VII — CONCERNING NEW PRINCIPALITIES WHICH ARE ACQUIRED EITHER BY THE ARMS OF OTHERS OR BY GOOD FORTUNE

Those who solely by good fortune become princes from being private citizens have little trouble in rising, but much in keeping atop; they have not any difficulties on the way up, because they fly, but they have many when they reach the summit. Such are those to whom some state is given either for money or by the favour of him who bestows it; as happened to many in Greece, in the cities of Ionia and of the Hellespont, where princes were made by Darius, in order that they might hold the cities both for his security and his glory; as also were those emperors who, by the corruption of the soldiers, from being citizens came to empire. Such stand simply elevated upon the goodwill and the fortune of him who has elevated them—two most inconstant and unstable things. Neither have they the knowledge requisite for the position; because, unless they are men of great worth and ability, it is not reasonable to expect that they should know how to command, having always lived in a private condition; besides, they cannot hold it because they have not forces which they can keep friendly and faithful.

States that rise unexpectedly, then, like all other things in nature which are born and grow rapidly, cannot leave their foundations and correspondencies(\*) fixed in such a way that the first storm will not overthrow them; unless, as is said, those who unexpectedly become princes are men of so much ability that they know they have to be prepared at once to hold that which fortune has thrown into their laps, and that those foundations, which others have laid BEFORE they became princes, they must lay AFTERWARDS.

(\*) "Le radici e corrispondenze," their roots (i.e. foundations) and correspondencies or relations with other states—a common meaning of "correspondence" and "correspondency" in the sixteenth and seventeenth centuries.

Concerning these two methods of rising to be a prince by ability or fortune, I wish to adduce two examples within our own recollection, and these are Francesco Sforza(\*) and Cesare Borgia. Francesco, by proper means and with great ability, from being a private person rose to be Duke of Milan, and that which he had acquired with a thousand anxieties he kept with little trouble. On the other hand, Cesare Borgia, called by the people Duke Valentino, acquired his state during the ascendancy of his father, and on its decline he lost it, notwithstanding that he had taken every measure and done all that ought to be done by a wise and able man to fix firmly his roots in the states which the arms and fortunes of others had bestowed on him.

(\*) Francesco Sforza, born 1401, died 1466. He married Bianca Maria Visconti, a natural daughter of Filippo Visconti, the Duke of Milan, on whose death he procured his own elevation to the duchy. Machiavelli was the accredited agent of the Florentine Republic to Cesare Borgia (1478-1507) during the transactions which led up to the assassinations of the Orsini and Vitelli at Sinigaglia, and along with his letters to his chiefs in Florence he has left an account, written ten years before "The Prince," of the proceedings of the duke in his "Descrizione del modo tenuto dal duca Valentino nello ammazzare Vitellozzo Vitelli," etc., a translation of which is appended to the present work.

Because, as is stated above, he who has not first laid his foundations may be able with great ability to lay them afterwards, but they will be laid with trouble to the architect and danger to the building. If, therefore, all the steps taken by the duke be considered, it will be seen that he laid solid foundations for his future power, and I do not consider it superfluous to discuss them, because I do not know what better precepts to give a new prince than the example of his actions; and if his dispositions were of no avail, that was not his fault, but the extraordinary and extreme malignity of fortune.

Alexander the Sixth, in wishing to aggrandize the duke, his son, had many immediate and prospective difficulties. Firstly, he did not see his way to make him master of any state that was not a state of the Church; and if he was willing to rob the Church he knew that the Duke of Milan and the Venetians would not consent, because Faenza and Rimini were already under the protection of the Venetians. Besides this, he saw the arms of Italy, especially those by which he might have been assisted, in hands that would fear the aggrandizement of the Pope, namely, the Orsini and the Colonnese and their following. It behoved him, therefore, to upset this state of affairs

and embroil the powers, so as to make himself securely master of part of their states. This was easy for him to do, because he found the Venetians, moved by other reasons, inclined to bring back the French into Italy; he would not only not oppose this, but he would render it more easy by dissolving the former marriage of King Louis. Therefore the king came into Italy with the assistance of the Venetians and the consent of Alexander. He was no sooner in Milan than the Pope had soldiers from him for the attempt on the Romagna, which yielded to him on the reputation of the king. The duke, therefore, having acquired the Romagna and beaten the Colonnese, while wishing to hold that and to advance further, was hindered by two things: the one, his forces did not appear loyal to him, the other, the goodwill of France: that is to say, he feared that the forces of the Orsini, which he was using, would not stand to him, that not only might they hinder him from winning more, but might themselves seize what he had won, and that the king might also do the same. Of the Orsini he had a warning when, after taking Faenza and attacking Bologna, he saw them go very unwillingly to that attack. And as to the king, he learned his mind when he himself, after taking the Duchy of Urbino, attacked Tuscany, and the king made him desist from that undertaking; hence the duke decided to depend no more upon the arms and the luck of others.

For the first thing he weakened the Orsini and Colonnese parties in Rome, by gaining to himself all their adherents who were gentlemen, making them his gentlemen, giving them good pay, and, according to their rank, honouring them with office and command in such a way that in a few months all attachment to the factions was destroyed and turned entirely to the duke. After this he awaited an opportunity to crush the Orsini, having scattered the adherents of the Colonna house. This came to him soon and he used it well; for the Orsini, perceiving at length that the aggrandizement of the duke and the Church was ruin to them, called a meeting of the Magione in Perugia. From this sprung the rebellion at Urbino and the tumults in the Romagna, with endless dangers to the duke, all of which he overcame with the help of the French. Having restored his authority, not to leave it at risk by trusting either to the French or other outside forces, he had recourse to his wiles, and he knew so well how to conceal his mind that, by the mediation of Signor Pagolo—whom the duke did not fail to secure with all kinds of attention, giving him money, apparel, and horses—the Orsini were reconciled, so that their simplicity brought them into his power at Sinigalia.

(\*) Having exterminated the leaders, and turned their partisans into his friends, the duke laid sufficiently good foundations to his power, having all the Romagna and the Duchy of Urbino; and the people now beginning to appreciate their prosperity, he gained them all over to himself. And as this point is worthy of notice, and to be imitated by others, I am not willing to leave it out.

(\*) Sinigalia, 31st December 1502.

When the duke occupied the Romagna he found it under the rule of weak masters, who rather plundered their subjects than ruled them, and gave them more cause for disunion than for union, so that the country was full of robbery, quarrels, and every kind of violence; and so, wishing to bring back peace and obedience to authority, he considered it necessary to give it a good governor. Thereupon he promoted Messer Ramiro d'Orco, (\*) a swift and cruel man, to whom he gave the fullest power. This man in a short time restored peace and unity with the greatest success. Afterwards the duke considered that it was not advisable to confer such excessive authority, for he had no doubt but that he would become odious, so he set up a court of judgment in the country, under a most excellent president, wherein all cities had their advocates. And because he knew that the past severity had caused some hatred against himself, so, to clear himself in the minds of the people, and gain them entirely to himself, he desired to show that, if any cruelty had been practised, it had not originated with him, but in the natural sternness of the minister. Under this pretence he took Ramiro, and one morning caused him to be executed and left on the piazza at Cesena with the block and a bloody knife at his side. The barbarity of this spectacle caused the people to be at once satisfied and dismayed.

(\*) Ramiro d'Orco. Ramiro de Lorqua.

But let us return whence we started. I say that the duke, finding himself now sufficiently powerful and partly secured from immediate dangers by having armed himself in his own way, and having in a great measure crushed those forces in his vicinity that could injure him if he wished to proceed with his conquest, had next to consider France, for he knew that the king, who too late was aware of his mistake, would not support him. And from this time he began to seek new alliances and to temporize with France in the expedition which she was making towards the kingdom of Naples against the Spaniards who were besieging Gaeta. It was his intention to

secure himself against them, and this he would have quickly accomplished had Alexander lived.

Such was his line of action as to present affairs. But as to the future he had to fear, in the first place, that a new successor to the Church might not be friendly to him and might seek to take from him that which Alexander had given him, so he decided to act in four ways. Firstly, by exterminating the families of those lords whom he had despoiled, so as to take away that pretext from the Pope. Secondly, by winning to himself all the gentlemen of Rome, so as to be able to curb the Pope with their aid, as has been observed. Thirdly, by converting the college more to himself. Fourthly, by acquiring so much power before the Pope should die that he could by his own measures resist the first shock. Of these four things, at the death of Alexander, he had accomplished three. For he had killed as many of the dispossessed lords as he could lay hands on, and few had escaped; he had won over the Roman gentlemen, and he had the most numerous party in the college. And as to any fresh acquisition, he intended to become master of Tuscany, for he already possessed Perugia and Piombino, and Pisa was under his protection. And as he had no longer to study France (for the French were already driven out of the kingdom of Naples by the Spaniards, and in this way both were compelled to buy his goodwill), he pounced down upon Pisa. After this, Lucca and Siena yielded at once, partly through hatred and partly through fear of the Florentines; and the Florentines would have had no remedy had he continued to prosper, as he was prospering the year that Alexander died, for he had acquired so much power and reputation that he would have stood by himself, and no longer have depended on the luck and the forces of others, but solely on his own power and ability.

But Alexander died five years after he had first drawn the sword. He left the duke with the state of Romagna alone consolidated, with the rest in the air, between two most powerful hostile armies, and sick unto death. Yet there were in the duke such boldness and ability, and he knew so well how men are to be won or lost, and so firm were the foundations which in so short a time he had laid, that if he had not had those armies on his back, or if he had been in good health, he would have overcome all difficulties. And it is seen that his foundations were good, for the Romagna awaited him for more than a month. In Rome, although but half alive, he remained secure; and whilst the Baglioni, the Vitelli, and the Orsini might come to Rome, they could not effect anything against him. If he could not have made Pope

him whom he wished, at least the one whom he did not wish would not have been elected. But if he had been in sound health at the death of Alexander, (\*) everything would have been different to him. On the day that Julius the Second (+) was elected, he told me that he had thought of everything that might occur at the death of his father, and had provided a remedy for all, except that he had never anticipated that, when the death did happen, he himself would be on the point to die.

(\*) Alexander VI died of fever, 18th August 1503.

(+) Julius II was Giuliano della Rovere, Cardinal of San Pietro ad Vincula, born 1443, died 1513.

When all the actions of the duke are recalled, I do not know how to blame him, but rather it appears to be, as I have said, that I ought to offer him for imitation to all those who, by the fortune or the arms of others, are raised to government. Because he, having a lofty spirit and far-reaching aims, could not have regulated his conduct otherwise, and only the shortness of the life of Alexander and his own sickness frustrated his designs. Therefore, he who considers it necessary to secure himself in his new principality, to win friends, to overcome either by force or fraud, to make himself beloved and feared by the people, to be followed and revered by the soldiers, to exterminate those who have power or reason to hurt him, to change the old order of things for new, to be severe and gracious, magnanimous and liberal, to destroy a disloyal soldiery and to create new, to maintain friendship with kings and princes in such a way that they must help him with zeal and offend with caution, cannot find a more lively example than the actions of this man.

Only can he be blamed for the election of Julius the Second, in whom he made a bad choice, because, as is said, not being able to elect a Pope to his own mind, he could have hindered any other from being elected Pope; and he ought never to have consented to the election of any cardinal whom he had injured or who had cause to fear him if they became pontiffs. For men injure either from fear or hatred. Those whom he had injured, amongst others, were San Pietro ad Vincula, Colonna, San Giorgio, and Ascanio. (\*) The rest, in becoming Pope, had to fear him, Rouen and the Spaniards excepted; the latter from their relationship and obligations, the former from his influence, the kingdom of France having relations with him. Therefore, above everything, the duke ought to have created a Spaniard Pope, and, failing him, he ought to have consented to Rouen and not San Pietro ad

Vincula. He who believes that new benefits will cause great personages to forget old injuries is deceived. Therefore, the duke erred in his choice, and it was the cause of his ultimate ruin.

(\*) San Giorgio is Raffaello Riario. Ascanio is Ascanio Sforza.

## CHAPTER VIII — CONCERNING THOSE WHO HAVE OBTAINED A PRINCIPALITY BY WICKEDNESS

Although a prince may rise from a private station in two ways, neither of which can be entirely attributed to fortune or genius, yet it is manifest to me that I must not be silent on them, although one could be more copiously treated when I discuss republics. These methods are when, either by some wicked or nefarious ways, one ascends to the principality, or when by the favour of his fellow-citizens a private person becomes the prince of his country. And speaking of the first method, it will be illustrated by two examples—one ancient, the other modern—and without entering further into the subject, I consider these two examples will suffice those who may be compelled to follow them.

Agathocles, the Sicilian, (\*) became King of Syracuse not only from a private but from a low and abject position. This man, the son of a potter, through all the changes in his fortunes always led an infamous life. Nevertheless, he accompanied his infamies with so much ability of mind and body that, having devoted himself to the military profession, he rose through its ranks to be Praetor of Syracuse. Being established in that position, and having deliberately resolved to make himself prince and to seize by violence, without obligation to others, that which had been conceded to him by assent, he came to an understanding for this purpose with Amilcar, the Carthaginian, who, with his army, was fighting in Sicily. One morning he assembled the people and the senate of Syracuse, as if he had to discuss with them things relating to the Republic, and at a given signal the soldiers killed all the senators and the richest of the people; these dead, he seized and held the principedom of that city without any civil commotion. And although he was twice routed by the Carthaginians, and ultimately besieged, yet not only was he able to defend his city, but leaving part of his men for its defence, with the others he attacked Africa, and in a short time raised the siege of Syracuse. The Carthaginians, reduced to

extreme necessity, were compelled to come to terms with Agathocles, and, leaving Sicily to him, had to be content with the possession of Africa.

(\*) Agathocles the Sicilian, born 361 B.C., died 289 B.C.

Therefore, he who considers the actions and the genius of this man will see nothing, or little, which can be attributed to fortune, inasmuch as he attained pre-eminence, as is shown above, not by the favour of any one, but step by step in the military profession, which steps were gained with a thousand troubles and perils, and were afterwards boldly held by him with many hazardous dangers. Yet it cannot be called talent to slay fellow-citizens, to deceive friends, to be without faith, without mercy, without religion; such methods may gain empire, but not glory. Still, if the courage of Agathocles in entering into and extricating himself from dangers be considered, together with his greatness of mind in enduring and overcoming hardships, it cannot be seen why he should be esteemed less than the most notable captain. Nevertheless, his barbarous cruelty and inhumanity with infinite wickedness do not permit him to be celebrated among the most excellent men. What he achieved cannot be attributed either to fortune or genius.

In our times, during the rule of Alexander the Sixth, Oliverotto da Fermo, having been left an orphan many years before, was brought up by his maternal uncle, Giovanni Fogliani, and in the early days of his youth sent to fight under Pagolo Vitelli, that, being trained under his discipline, he might attain some high position in the military profession. After Pagolo died, he fought under his brother Vitellozzo, and in a very short time, being endowed with wit and a vigorous body and mind, he became the first man in his profession. But it appearing a paltry thing to serve under others, he resolved, with the aid of some citizens of Fermo, to whom the slavery of their country was dearer than its liberty, and with the help of the Vitelleschi, to seize Fermo. So he wrote to Giovanni Fogliani that, having been away from home for many years, he wished to visit him and his city, and in some measure to look upon his patrimony; and although he had not laboured to acquire anything except honour, yet, in order that the citizens should see he had not spent his time in vain, he desired to come honourably, so would be accompanied by one hundred horsemen, his friends and retainers; and he entreated Giovanni to arrange that he should be received honourably by the Fermians, all of which would be not only to his honour, but also to that of Giovanni himself, who had brought him up.

Giovanni, therefore, did not fail in any attentions due to his nephew, and he caused him to be honourably received by the Fermians, and he lodged him in his own house, where, having passed some days, and having arranged what was necessary for his wicked designs, Oliverotto gave a solemn banquet to which he invited Giovanni Fogliani and the chiefs of Fermo. When the viands and all the other entertainments that are usual in such banquets were finished, Oliverotto artfully began certain grave discourses, speaking of the greatness of Pope Alexander and his son Cesare, and of their enterprises, to which discourse Giovanni and others answered; but he rose at once, saying that such matters ought to be discussed in a more private place, and he betook himself to a chamber, whither Giovanni and the rest of the citizens went in after him. No sooner were they seated than soldiers issued from secret places and slaughtered Giovanni and the rest. After these murders Oliverotto, mounted on horseback, rode up and down the town and besieged the chief magistrate in the palace, so that in fear the people were forced to obey him, and to form a government, of which he made himself the prince. He killed all the malcontents who were able to injure him, and strengthened himself with new civil and military ordinances, in such a way that, in the year during which he held the principality, not only was he secure in the city of Fermo, but he had become formidable to all his neighbours. And his destruction would have been as difficult as that of Agathocles if he had not allowed himself to be overreached by Cesare Borgia, who took him with the Orsini and Vitelli at Sinigalia, as was stated above. Thus one year after he had committed this parricide, he was strangled, together with Vitellozzo, whom he had made his leader in valour and wickedness.

Some may wonder how it can happen that Agathocles, and his like, after infinite treacheries and cruelties, should live for long secure in his country, and defend himself from external enemies, and never be conspired against by his own citizens; seeing that many others, by means of cruelty, have never been able even in peaceful times to hold the state, still less in the doubtful times of war. I believe that this follows from severities(\*) being badly or properly used. Those may be called properly used, if of evil it is possible to speak well, that are applied at one blow and are necessary to one's security, and that are not persisted in afterwards unless they can be turned to the advantage of the subjects. The badly employed are those which, notwithstanding they may be few in the commencement, multiply

with time rather than decrease. Those who practise the first system are able, by aid of God or man, to mitigate in some degree their rule, as Agathocles did. It is impossible for those who follow the other to maintain themselves.

(\*) Mr Burd suggests that this word probably comes near the modern equivalent of Machiavelli's thought when he speaks of "crudelta" than the more obvious "cruelties."

Hence it is to be remarked that, in seizing a state, the usurper ought to examine closely into all those injuries which it is necessary for him to inflict, and to do them all at one stroke so as not to have to repeat them daily; and thus by not unsettling men he will be able to reassure them, and win them to himself by benefits. He who does otherwise, either from timidity or evil advice, is always compelled to keep the knife in his hand; neither can he rely on his subjects, nor can they attach themselves to him, owing to their continued and repeated wrongs. For injuries ought to be done all at one time, so that, being tasted less, they offend less; benefits ought to be given little by little, so that the flavour of them may last longer.

And above all things, a prince ought to live amongst his people in such a way that no unexpected circumstances, whether of good or evil, shall make him change; because if the necessity for this comes in troubled times, you are too late for harsh measures; and mild ones will not help you, for they will be considered as forced from you, and no one will be under any obligation to you for them.

## CHAPTER IX — CONCERNING A CIVIL PRINCIPALITY

But coming to the other point—where a leading citizen becomes the prince of his country, not by wickedness or any intolerable violence, but by the favour of his fellow citizens—this may be called a civil principality: nor is genius or fortune altogether necessary to attain to it, but rather a happy shrewdness. I say then that such a principality is obtained either by the favour of the people or by the favour of the nobles. Because in all cities these two distinct parties are found, and from this it arises that the people do not wish to be ruled nor oppressed by the nobles, and the nobles wish to rule and oppress the people; and from these two opposite desires there arises in cities one of three results, either a principality, self-government, or anarchy.

A principality is created either by the people or by the nobles, accordingly as one or other of them has the opportunity; for the nobles, seeing they cannot withstand the people, begin to cry up the reputation of one of themselves, and they make him a prince, so that under his shadow they can give vent to their ambitions. The people, finding they cannot resist the nobles, also cry up the reputation of one of themselves, and make him a prince so as to be defended by his authority. He who obtains sovereignty by the assistance of the nobles maintains himself with more difficulty than he who comes to it by the aid of the people, because the former finds himself with many around him who consider themselves his equals, and because of this he can neither rule nor manage them to his liking. But he who reaches sovereignty by popular favour finds himself alone, and has none around him, or few, who are not prepared to obey him.

Besides this, one cannot by fair dealing, and without injury to others, satisfy the nobles, but you can satisfy the people, for their object is more righteous than that of the nobles, the latter wishing to oppress, while the former only desire not to be oppressed. It is to be added also that a prince can never secure himself against a hostile people, because of there being too many, whilst from the nobles he can secure himself, as they are few in

number. The worst that a prince may expect from a hostile people is to be abandoned by them; but from hostile nobles he has not only to fear abandonment, but also that they will rise against him; for they, being in these affairs more far-seeing and astute, always come forward in time to save themselves, and to obtain favours from him whom they expect to prevail. Further, the prince is compelled to live always with the same people, but he can do well without the same nobles, being able to make and unmake them daily, and to give or take away authority when it pleases him.

Therefore, to make this point clearer, I say that the nobles ought to be looked at mainly in two ways: that is to say, they either shape their course in such a way as binds them entirely to your fortune, or they do not. Those who so bind themselves, and are not rapacious, ought to be honoured and loved; those who do not bind themselves may be dealt with in two ways; they may fail to do this through pusillanimity and a natural want of courage, in which case you ought to make use of them, especially of those who are of good counsel; and thus, whilst in prosperity you honour them, in adversity you do not have to fear them. But when for their own ambitious ends they shun binding themselves, it is a token that they are giving more thought to themselves than to you, and a prince ought to guard against such, and to fear them as if they were open enemies, because in adversity they always help to ruin him.

Therefore, one who becomes a prince through the favour of the people ought to keep them friendly, and this he can easily do seeing they only ask not to be oppressed by him. But one who, in opposition to the people, becomes a prince by the favour of the nobles, ought, above everything, to seek to win the people over to himself, and this he may easily do if he takes them under his protection. Because men, when they receive good from him of whom they were expecting evil, are bound more closely to their benefactor; thus the people quickly become more devoted to him than if he had been raised to the principality by their favours; and the prince can win their affections in many ways, but as these vary according to the circumstances one cannot give fixed rules, so I omit them; but, I repeat, it is necessary for a prince to have the people friendly, otherwise he has no security in adversity.

Nabis, (\*) Prince of the Spartans, sustained the attack of all Greece, and of a victorious Roman army, and against them he defended his country and

his government; and for the overcoming of this peril it was only necessary for him to make himself secure against a few, but this would not have been sufficient had the people been hostile. And do not let any one impugn this statement with the trite proverb that "He who builds on the people, builds on the mud," for this is true when a private citizen makes a foundation there, and persuades himself that the people will free him when he is oppressed by his enemies or by the magistrates; wherein he would find himself very often deceived, as happened to the Gracchi in Rome and to Messer Giorgio Scali(+) in Florence. But granted a prince who has established himself as above, who can command, and is a man of courage, undismayed in adversity, who does not fail in other qualifications, and who, by his resolution and energy, keeps the whole people encouraged—such a one will never find himself deceived in them, and it will be shown that he has laid his foundations well.

(\*) Nabis, tyrant of Sparta, conquered by the Romans under Flaminius in 195 B.C.; killed 192 B.C.

(+) Messer Giorgio Scali. This event is to be found in Machiavelli's "Florentine History," Book III.

These principalities are liable to danger when they are passing from the civil to the absolute order of government, for such princes either rule personally or through magistrates. In the latter case their government is weaker and more insecure, because it rests entirely on the goodwill of those citizens who are raised to the magistracy, and who, especially in troubled times, can destroy the government with great ease, either by intrigue or open defiance; and the prince has not the chance amid tumults to exercise absolute authority, because the citizens and subjects, accustomed to receive orders from magistrates, are not of a mind to obey him amid these confusions, and there will always be in doubtful times a scarcity of men whom he can trust. For such a prince cannot rely upon what he observes in quiet times, when citizens have need of the state, because then every one agrees with him; they all promise, and when death is far distant they all wish to die for him; but in troubled times, when the state has need of its citizens, then he finds but few. And so much the more is this experiment dangerous, inasmuch as it can only be tried once. Therefore a wise prince ought to adopt such a course that his citizens will always in every sort and kind of circumstance have need of the state and of him, and then he will always find them faithful.

## **CHAPTER X — CONCERNING THE WAY IN WHICH THE STRENGTH OF ALL PRINCIPALITIES OUGHT TO BE MEASURED**

It is necessary to consider another point in examining the character of these principalities: that is, whether a prince has such power that, in case of need, he can support himself with his own resources, or whether he has always need of the assistance of others. And to make this quite clear I say that I consider those who are able to support themselves by their own resources who can, either by abundance of men or money, raise a sufficient army to join battle against any one who comes to attack them; and I consider those always to have need of others who cannot show themselves against the enemy in the field, but are forced to defend themselves by sheltering behind walls. The first case has been discussed, but we will speak of it again should it recur. In the second case one can say nothing except to encourage such princes to provision and fortify their towns, and not on any account to defend the country. And whoever shall fortify his town well, and shall have managed the other concerns of his subjects in the way stated above, and to be often repeated, will never be attacked without great caution, for men are always adverse to enterprises where difficulties can be seen, and it will be seen not to be an easy thing to attack one who has his town well fortified, and is not hated by his people.

The cities of Germany are absolutely free, they own but little country around them, and they yield obedience to the emperor when it suits them, nor do they fear this or any other power they may have near them, because they are fortified in such a way that every one thinks the taking of them by assault would be tedious and difficult, seeing they have proper ditches and walls, they have sufficient artillery, and they always keep in public depots enough for one year's eating, drinking, and firing. And beyond this, to keep the people quiet and without loss to the state, they always have the means of giving work to the community in those labours that are the life and strength of the city, and on the pursuit of which the people are supported; they also

hold military exercises in repute, and moreover have many ordinances to uphold them.

Therefore, a prince who has a strong city, and had not made himself odious, will not be attacked, or if any one should attack he will only be driven off with disgrace; again, because that the affairs of this world are so changeable, it is almost impossible to keep an army a whole year in the field without being interfered with. And whoever should reply: If the people have property outside the city, and see it burnt, they will not remain patient, and the long siege and self-interest will make them forget their prince; to this I answer that a powerful and courageous prince will overcome all such difficulties by giving at one time hope to his subjects that the evil will not be for long, at another time fear of the cruelty of the enemy, then preserving himself adroitly from those subjects who seem to him to be too bold.

Further, the enemy would naturally on his arrival at once burn and ruin the country at the time when the spirits of the people are still hot and ready for the defence; and, therefore, so much the less ought the prince to hesitate; because after a time, when spirits have cooled, the damage is already done, the ills are incurred, and there is no longer any remedy; and therefore they are so much the more ready to unite with their prince, he appearing to be under obligations to them now that their houses have been burnt and their possessions ruined in his defence. For it is the nature of men to be bound by the benefits they confer as much as by those they receive. Therefore, if everything is well considered, it will not be difficult for a wise prince to keep the minds of his citizens steadfast from first to last, when he does not fail to support and defend them.

## CHAPTER XI — CONCERNING ECCLESIASTICAL PRINCIPALITIES

It only remains now to speak of ecclesiastical principalities, touching which all difficulties are prior to getting possession, because they are acquired either by capacity or good fortune, and they can be held without either; for they are sustained by the ancient ordinances of religion, which are so all-powerful, and of such a character that the principalities may be held no matter how their princes behave and live. These princes alone have states and do not defend them; and they have subjects and do not rule them; and the states, although unguarded, are not taken from them, and the subjects, although not ruled, do not care, and they have neither the desire nor the ability to alienate themselves. Such principalities only are secure and happy. But being upheld by powers, to which the human mind cannot reach, I shall speak no more of them, because, being exalted and maintained by God, it would be the act of a presumptuous and rash man to discuss them.

Nevertheless, if any one should ask of me how comes it that the Church has attained such greatness in temporal power, seeing that from Alexander backwards the Italian potentates (not only those who have been called potentates, but every baron and lord, though the smallest) have valued the temporal power very slightly—yet now a king of France trembles before it, and it has been able to drive him from Italy, and to ruin the Venetians—although this may be very manifest, it does not appear to me superfluous to recall it in some measure to memory.

Before Charles, King of France, passed into Italy, (\*) this country was under the dominion of the Pope, the Venetians, the King of Naples, the Duke of Milan, and the Florentines. These potentates had two principal anxieties: the one, that no foreigner should enter Italy under arms; the other, that none of themselves should seize more territory. Those about whom there was the most anxiety were the Pope and the Venetians. To restrain the Venetians the union of all the others was necessary, as it was for the defence of Ferrara; and to keep down the Pope they made use of the barons of

Rome, who, being divided into two factions, Orsini and Colonna, had always a pretext for disorder, and, standing with arms in their hands under the eyes of the Pontiff, kept the pontificate weak and powerless. And although there might arise sometimes a courageous pope, such as Sixtus, yet neither fortune nor wisdom could rid him of these annoyances. And the short life of a pope is also a cause of weakness; for in the ten years, which is the average life of a pope, he can with difficulty lower one of the factions; and if, so to speak, one people should almost destroy the Colonna, another would arise hostile to the Orsini, who would support their opponents, and yet would not have time to ruin the Orsini. This was the reason why the temporal powers of the pope were little esteemed in Italy.

(\*) Charles VIII invaded Italy in 1494.

Alexander the Sixth arose afterwards, who of all the pontiffs that have ever been showed how a pope with both money and arms was able to prevail; and through the instrumentality of the Duke Valentino, and by reason of the entry of the French, he brought about all those things which I have discussed above in the actions of the duke. And although his intention was not to aggrandize the Church, but the duke, nevertheless, what he did contributed to the greatness of the Church, which, after his death and the ruin of the duke, became the heir to all his labours.

Pope Julius came afterwards and found the Church strong, possessing all the Romagna, the barons of Rome reduced to impotence, and, through the chastisements of Alexander, the factions wiped out; he also found the way open to accumulate money in a manner such as had never been practised before Alexander's time. Such things Julius not only followed, but improved upon, and he intended to gain Bologna, to ruin the Venetians, and to drive the French out of Italy. All of these enterprises prospered with him, and so much the more to his credit, inasmuch as he did everything to strengthen the Church and not any private person. He kept also the Orsini and Colonna factions within the bounds in which he found them; and although there was among them some mind to make disturbance, nevertheless he held two things firm: the one, the greatness of the Church, with which he terrified them; and the other, not allowing them to have their own cardinals, who caused the disorders among them. For whenever these factions have their cardinals they do not remain quiet for long, because cardinals foster the factions in Rome and out of it, and the barons are

compelled to support them, and thus from the ambitions of prelates arise disorders and tumults among the barons. For these reasons his Holiness Pope Leo(\*) found the pontificate most powerful, and it is to be hoped that, if others made it great in arms, he will make it still greater and more venerated by his goodness and infinite other virtues.

(\*) Pope Leo X was the Cardinal de' Medici.

## CHAPTER XII — HOW MANY KINDS OF SOLDIERY THERE ARE, AND CONCERNING MERCENARIES

Having discoursed particularly on the characteristics of such principalities as in the beginning I proposed to discuss, and having considered in some degree the causes of there being good or bad, and having shown the methods by which many have sought to acquire them and to hold them, it now remains for me to discuss generally the means of offence and defence which belong to each of them.

We have seen above how necessary it is for a prince to have his foundations well laid, otherwise it follows of necessity he will go to ruin. The chief foundations of all states, new as well as old or composite, are good laws and good arms; and as there cannot be good laws where the state is not well armed, it follows that where they are well armed they have good laws. I shall leave the laws out of the discussion and shall speak of the arms.

I say, therefore, that the arms with which a prince defends his state are either his own, or they are mercenaries, auxiliaries, or mixed. Mercenaries and auxiliaries are useless and dangerous; and if one holds his state based on these arms, he will stand neither firm nor safe; for they are disunited, ambitious, and without discipline, unfaithful, valiant before friends, cowardly before enemies; they have neither the fear of God nor fidelity to men, and destruction is deferred only so long as the attack is; for in peace one is robbed by them, and in war by the enemy. The fact is, they have no other attraction or reason for keeping the field than a trifle of stipend, which is not sufficient to make them willing to die for you. They are ready enough to be your soldiers whilst you do not make war, but if war comes they take themselves off or run from the foe; which I should have little trouble to prove, for the ruin of Italy has been caused by nothing else than by resting all her hopes for many years on mercenaries, and although they formerly made some display and appeared valiant amongst themselves, yet when the foreigners came they showed what they were. Thus it was that Charles,

King of France, was allowed to seize Italy with chalk in hand;(\*) and he who told us that our sins were the cause of it told the truth, but they were not the sins he imagined, but those which I have related. And as they were the sins of princes, it is the princes who have also suffered the penalty.

(\*) "With chalk in hand," "col gesso." This is one of the *bons mots* of Alexander VI, and refers to the ease with which Charles VIII seized Italy, implying that it was only necessary for him to send his quartermasters to chalk up the billets for his soldiers to conquer the country. Cf. "The History of Henry VII," by Lord Bacon: "King Charles had conquered the realm of Naples, and lost it again, in a kind of a felicity of a dream. He passed the whole length of Italy without resistance: so that it was true what Pope Alexander was wont to say: That the Frenchmen came into Italy with chalk in their hands, to mark up their lodgings, rather than with swords to fight."

I wish to demonstrate further the infelicity of these arms. The mercenary captains are either capable men or they are not; if they are, you cannot trust them, because they always aspire to their own greatness, either by oppressing you, who are their master, or others contrary to your intentions; but if the captain is not skilful, you are ruined in the usual way.

And if it be urged that whoever is armed will act in the same way, whether mercenary or not, I reply that when arms have to be resorted to, either by a prince or a republic, then the prince ought to go in person and perform the duty of a captain; the republic has to send its citizens, and when one is sent who does not turn out satisfactorily, it ought to recall him, and when one is worthy, to hold him by the laws so that he does not leave the command. And experience has shown princes and republics, single-handed, making the greatest progress, and mercenaries doing nothing except damage; and it is more difficult to bring a republic, armed with its own arms, under the sway of one of its citizens than it is to bring one armed with foreign arms. Rome and Sparta stood for many ages armed and free. The Switzers are completely armed and quite free.

Of ancient mercenaries, for example, there are the Carthaginians, who were oppressed by their mercenary soldiers after the first war with the Romans, although the Carthaginians had their own citizens for captains. After the death of Epaminondas, Philip of Macedon was made captain of their soldiers by the Thebans, and after victory he took away their liberty.

Duke Filippo being dead, the Milanese enlisted Francesco Sforza against the Venetians, and he, having overcome the enemy at Caravaggio,(\*) allied himself with them to crush the Milanese, his masters. His father, Sforza,

having been engaged by Queen Johanna(+) of Naples, left her unprotected, so that she was forced to throw herself into the arms of the King of Aragon, in order to save her kingdom. And if the Venetians and Florentines formerly extended their dominions by these arms, and yet their captains did not make themselves princes, but have defended them, I reply that the Florentines in this case have been favoured by chance, for of the able captains, of whom they might have stood in fear, some have not conquered, some have been opposed, and others have turned their ambitions elsewhere. One who did not conquer was Giovanni Acuto,(%) and since he did not conquer his fidelity cannot be proved; but every one will acknowledge that, had he conquered, the Florentines would have stood at his discretion. Sforza had the Bracceschi always against him, so they watched each other. Francesco turned his ambition to Lombardy; Braccio against the Church and the kingdom of Naples. But let us come to that which happened a short while ago. The Florentines appointed as their captain Pagolo Vitelli, a most prudent man, who from a private position had risen to the greatest renown. If this man had taken Pisa, nobody can deny that it would have been proper for the Florentines to keep in with him, for if he became the soldier of their enemies they had no means of resisting, and if they held to him they must obey him. The Venetians, if their achievements are considered, will be seen to have acted safely and gloriously so long as they sent to war their own men, when with armed gentlemen and plebians they did valiantly. This was before they turned to enterprises on land, but when they began to fight on land they forsook this virtue and followed the custom of Italy. And in the beginning of their expansion on land, through not having much territory, and because of their great reputation, they had not much to fear from their captains; but when they expanded, as under Carmignuola,(#) they had a taste of this mistake; for, having found him a most valiant man (they beat the Duke of Milan under his leadership), and, on the other hand, knowing how lukewarm he was in the war, they feared they would no longer conquer under him, and for this reason they were not willing, nor were they able, to let him go; and so, not to lose again that which they had acquired, they were compelled, in order to secure themselves, to murder him. They had afterwards for their captains Bartolomeo da Bergamo, Roberto da San Severino, the count of Pitigliano,(&) and the like, under whom they had to dread loss and not gain, as happened afterwards at Vaila,(\$) where in one battle they lost that which in eight hundred years they had acquired with so

much trouble. Because from such arms conquests come but slowly, long delayed and inconsiderable, but the losses sudden and portentous.

(\*) Battle of Caravaggio, 15th September 1448.

(+) Johanna II of Naples, the widow of Ladislao, King of Naples.

(%) Giovanni Acuto. An English knight whose name was Sir John Hawkwood. He fought in the English wars in France, and was knighted by Edward III; afterwards he collected a body of troops and went into Italy. These became the famous "White Company." He took part in many wars, and died in Florence in 1394. He was born about 1320 at Sible Hedingham, a village in Essex. He married Domnia, a daughter of Bernabo Visconti.

(#) Carmignuola. Francesco Bussone, born at Carmagnola about 1390, executed at Venice, 5th May 1432.

(&) Bartolomeo Colleoni of Bergamo; died 1457. Roberto of San Severino; died fighting for Venice against Sigismund, Duke of Austria, in 1487. "Primo capitano in Italia."—Machiavelli. Count of Pitigliano; Nicolo Orsini, born 1442, died 1510.

(\$) Battle of Vaila in 1509.

And as with these examples I have reached Italy, which has been ruled for many years by mercenaries, I wish to discuss them more seriously, in order that, having seen their rise and progress, one may be better prepared to counteract them. You must understand that the empire has recently come to be repudiated in Italy, that the Pope has acquired more temporal power, and that Italy has been divided up into more states, for the reason that many of the great cities took up arms against their nobles, who, formerly favoured by the emperor, were oppressing them, whilst the Church was favouring them so as to gain authority in temporal power: in many others their citizens became princes. From this it came to pass that Italy fell partly into the hands of the Church and of republics, and, the Church consisting of priests and the republic of citizens unaccustomed to arms, both commenced to enlist foreigners.

The first who gave renown to this soldiery was Alberigo da Conio, (\*) the Romagnian. From the school of this man sprang, among others, Braccio and Sforza, who in their time were the arbiters of Italy. After these came all the other captains who till now have directed the arms of Italy; and the end of all their valour has been, that she has been overrun by Charles, robbed by Louis, ravaged by Ferdinand, and insulted by the Switzers. The principle that has guided them has been, first, to lower the credit of infantry so that

they might increase their own. They did this because, subsisting on their pay and without territory, they were unable to support many soldiers, and a few infantry did not give them any authority; so they were led to employ cavalry, with a moderate force of which they were maintained and honoured; and affairs were brought to such a pass that, in an army of twenty thousand soldiers, there were not to be found two thousand foot soldiers. They had, besides this, used every art to lessen fatigue and danger to themselves and their soldiers, not killing in the fray, but taking prisoners and liberating without ransom. They did not attack towns at night, nor did the garrisons of the towns attack encampments at night; they did not surround the camp either with stockade or ditch, nor did they campaign in the winter. All these things were permitted by their military rules, and devised by them to avoid, as I have said, both fatigue and dangers; thus they have brought Italy to slavery and contempt.

(\*) Alberigo da Conio. Alberico da Barbiano, Count of Cunio in Romagna. He was the leader of the famous "Company of St George," composed entirely of Italian soldiers. He died in 1409.

## CHAPTER XIII — CONCERNING AUXILIARIES, MIXED SOLDIERY, AND ONE'S OWN

Auxiliaries, which are the other useless arm, are employed when a prince is called in with his forces to aid and defend, as was done by Pope Julius in the most recent times; for he, having, in the enterprise against Ferrara, had poor proof of his mercenaries, turned to auxiliaries, and stipulated with Ferdinand, King of Spain, (\*) for his assistance with men and arms. These arms may be useful and good in themselves, but for him who calls them in they are always disadvantageous; for losing, one is undone, and winning, one is their captive.

(\*) Ferdinand V (F. II of Aragon and Sicily, F. III of Naples), surnamed "The Catholic," born 1452, died 1516.

And although ancient histories may be full of examples, I do not wish to leave this recent one of Pope Julius the Second, the peril of which cannot fail to be perceived; for he, wishing to get Ferrara, threw himself entirely into the hands of the foreigner. But his good fortune brought about a third event, so that he did not reap the fruit of his rash choice; because, having his auxiliaries routed at Ravenna, and the Switzers having risen and driven out the conquerors (against all expectation, both his and others), it so came to pass that he did not become prisoner to his enemies, they having fled, nor to his auxiliaries, he having conquered by other arms than theirs.

The Florentines, being entirely without arms, sent ten thousand Frenchmen to take Pisa, whereby they ran more danger than at any other time of their troubles.

The Emperor of Constantinople, (\*) to oppose his neighbours, sent ten thousand Turks into Greece, who, on the war being finished, were not willing to quit; this was the beginning of the servitude of Greece to the infidels.

(\*) Joannes Cantacuzenus, born 1300, died 1383.

Therefore, let him who has no desire to conquer make use of these arms, for they are much more hazardous than mercenaries, because with them the

ruin is ready made; they are all united, all yield obedience to others; but with mercenaries, when they have conquered, more time and better opportunities are needed to injure you; they are not all of one community, they are found and paid by you, and a third party, which you have made their head, is not able all at once to assume enough authority to injure you. In conclusion, in mercenaries dastardy is most dangerous; in auxiliaries, valour. The wise prince, therefore, has always avoided these arms and turned to his own; and has been willing rather to lose with them than to conquer with the others, not deeming that a real victory which is gained with the arms of others.

I shall never hesitate to cite Cesare Borgia and his actions. This duke entered the Romagna with auxiliaries, taking there only French soldiers, and with them he captured Imola and Forli; but afterwards, such forces not appearing to him reliable, he turned to mercenaries, discerning less danger in them, and enlisted the Orsini and Vitelli; whom presently, on handling and finding them doubtful, unfaithful, and dangerous, he destroyed and turned to his own men. And the difference between one and the other of these forces can easily be seen when one considers the difference there was in the reputation of the duke, when he had the French, when he had the Orsini and Vitelli, and when he relied on his own soldiers, on whose fidelity he could always count and found it ever increasing; he was never esteemed more highly than when every one saw that he was complete master of his own forces.

I was not intending to go beyond Italian and recent examples, but I am unwilling to leave out Hiero, the Syracusan, he being one of those I have named above. This man, as I have said, made head of the army by the Syracusans, soon found out that a mercenary soldiery, constituted like our Italian condottieri, was of no use; and it appearing to him that he could neither keep them nor let them go, he had them all cut to pieces, and afterwards made war with his own forces and not with aliens.

I wish also to recall to memory an instance from the Old Testament applicable to this subject. David offered himself to Saul to fight with Goliath, the Philistine champion, and, to give him courage, Saul armed him with his own weapons; which David rejected as soon as he had them on his back, saying he could make no use of them, and that he wished to meet the

enemy with his sling and his knife. In conclusion, the arms of others either fall from your back, or they weigh you down, or they bind you fast.

Charles the Seventh, (\*) the father of King Louis the Eleventh, (+) having by good fortune and valour liberated France from the English, recognized the necessity of being armed with forces of his own, and he established in his kingdom ordinances concerning men-at-arms and infantry. Afterwards his son, King Louis, abolished the infantry and began to enlist the Switzers, which mistake, followed by others, is, as is now seen, a source of peril to that kingdom; because, having raised the reputation of the Switzers, he has entirely diminished the value of his own arms, for he has destroyed the infantry altogether; and his men-at-arms he has subordinated to others, for, being as they are so accustomed to fight along with Switzers, it does not appear that they can now conquer without them. Hence it arises that the French cannot stand against the Switzers, and without the Switzers they do not come off well against others. The armies of the French have thus become mixed, partly mercenary and partly national, both of which arms together are much better than mercenaries alone or auxiliaries alone, but much inferior to one's own forces. And this example proves it, for the kingdom of France would be unconquerable if the ordinance of Charles had been enlarged or maintained.

(\*) Charles VII of France, surnamed "The Victorious," born 1403, died 1461.

(+) Louis XI, son of the above, born 1423, died 1483.

But the scanty wisdom of man, on entering into an affair which looks well at first, cannot discern the poison that is hidden in it, as I have said above of hectic fevers. Therefore, if he who rules a principality cannot recognize evils until they are upon him, he is not truly wise; and this insight is given to few. And if the first disaster to the Roman Empire (\*) should be examined, it will be found to have commenced only with the enlisting of the Goths; because from that time the vigour of the Roman Empire began to decline, and all that valour which had raised it passed away to others.

(\*) "Many speakers to the House the other night in the debate on the reduction of armaments seemed to show a most lamentable ignorance of the conditions under which the British Empire maintains its existence. When Mr Balfour replied to the allegations that the Roman Empire sank under the weight of its military obligations, he said that this was 'wholly unhistorical.' He might well have added that the Roman power was at its zenith when every citizen acknowledged his liability to fight for the State, but that

it began to decline as soon as this obligation was no longer recognized."—Pall Mall Gazette, 15th May 1906.

I conclude, therefore, that no principality is secure without having its own forces; on the contrary, it is entirely dependent on good fortune, not having the valour which in adversity would defend it. And it has always been the opinion and judgment of wise men that nothing can be so uncertain or unstable as fame or power not founded on its own strength. And one's own forces are those which are composed either of subjects, citizens, or dependents; all others are mercenaries or auxiliaries. And the way to make ready one's own forces will be easily found if the rules suggested by me shall be reflected upon, and if one will consider how Philip, the father of Alexander the Great, and many republics and princes have armed and organized themselves, to which rules I entirely commit myself.

## CHAPTER XIV — THAT WHICH CONCERNS A PRINCE ON THE SUBJECT OF THE ART OF WAR

A prince ought to have no other aim or thought, nor select anything else for his study, than war and its rules and discipline; for this is the sole art that belongs to him who rules, and it is of such force that it not only upholds those who are born princes, but it often enables men to rise from a private station to that rank. And, on the contrary, it is seen that when princes have thought more of ease than of arms they have lost their states. And the first cause of your losing it is to neglect this art; and what enables you to acquire a state is to be master of the art. Francesco Sforza, through being martial, from a private person became Duke of Milan; and the sons, through avoiding the hardships and troubles of arms, from dukes became private persons. For among other evils which being unarmed brings you, it causes you to be despised, and this is one of those ignominies against which a prince ought to guard himself, as is shown later on. Because there is nothing proportionate between the armed and the unarmed; and it is not reasonable that he who is armed should yield obedience willingly to him who is unarmed, or that the unarmed man should be secure among armed servants. Because, there being in the one disdain and in the other suspicion, it is not possible for them to work well together. And therefore a prince who does not understand the art of war, over and above the other misfortunes already mentioned, cannot be respected by his soldiers, nor can he rely on them. He ought never, therefore, to have out of his thoughts this subject of war, and in peace he should addict himself more to its exercise than in war; this he can do in two ways, the one by action, the other by study.

As regards action, he ought above all things to keep his men well organized and drilled, to follow incessantly the chase, by which he accustoms his body to hardships, and learns something of the nature of localities, and gets to find out how the mountains rise, how the valleys open out, how the plains lie, and to understand the nature of rivers and marshes, and in all this to take the greatest care. Which knowledge is useful in two

ways. Firstly, he learns to know his country, and is better able to undertake its defence; afterwards, by means of the knowledge and observation of that locality, he understands with ease any other which it may be necessary for him to study hereafter; because the hills, valleys, and plains, and rivers and marshes that are, for instance, in Tuscany, have a certain resemblance to those of other countries, so that with a knowledge of the aspect of one country one can easily arrive at a knowledge of others. And the prince that lacks this skill lacks the essential which it is desirable that a captain should possess, for it teaches him to surprise his enemy, to select quarters, to lead armies, to array the battle, to besiege towns to advantage.

Philopoemen, (\*) Prince of the Achaeans, among other praises which writers have bestowed on him, is commended because in time of peace he never had anything in his mind but the rules of war; and when he was in the country with friends, he often stopped and reasoned with them: "If the enemy should be upon that hill, and we should find ourselves here with our army, with whom would be the advantage? How should one best advance to meet him, keeping the ranks? If we should wish to retreat, how ought we to pursue?" And he would set forth to them, as he went, all the chances that could befall an army; he would listen to their opinion and state his, confirming it with reasons, so that by these continual discussions there could never arise, in time of war, any unexpected circumstances that he could not deal with.

(\*) Philopoemen, "the last of the Greeks," born 252 B.C., died 183 B.C.

But to exercise the intellect the prince should read histories, and study there the actions of illustrious men, to see how they have borne themselves in war, to examine the causes of their victories and defeat, so as to avoid the latter and imitate the former; and above all do as an illustrious man did, who took as an exemplar one who had been praised and famous before him, and whose achievements and deeds he always kept in his mind, as it is said Alexander the Great imitated Achilles, Caesar Alexander, Scipio Cyrus. And whoever reads the life of Cyrus, written by Xenophon, will recognize afterwards in the life of Scipio how that imitation was his glory, and how in chastity, affability, humanity, and liberality Scipio conformed to those things which have been written of Cyrus by Xenophon. A wise prince ought to observe some such rules, and never in peaceful times stand idle, but increase his resources with industry in such a way that they may be

available to him in adversity, so that if fortune chances it may find him prepared to resist her blows.

## **CHAPTER XV — CONCERNING THINGS FOR WHICH MEN, AND ESPECIALLY PRINCES, ARE PRAISED OR BLAMED**

It remains now to see what ought to be the rules of conduct for a prince towards subject and friends. And as I know that many have written on this point, I expect I shall be considered presumptuous in mentioning it again, especially as in discussing it I shall depart from the methods of other people. But, it being my intention to write a thing which shall be useful to him who apprehends it, it appears to me more appropriate to follow up the real truth of the matter than the imagination of it; for many have pictured republics and principalities which in fact have never been known or seen, because how one lives is so far distant from how one ought to live, that he who neglects what is done for what ought to be done, sooner effects his ruin than his preservation; for a man who wishes to act entirely up to his professions of virtue soon meets with what destroys him among so much that is evil.

Hence it is necessary for a prince wishing to hold his own to know how to do wrong, and to make use of it or not according to necessity. Therefore, putting on one side imaginary things concerning a prince, and discussing those which are real, I say that all men when they are spoken of, and chiefly princes for being more highly placed, are remarkable for some of those qualities which bring them either blame or praise; and thus it is that one is reputed liberal, another miserly, using a Tuscan term (because an avaricious person in our language is still he who desires to possess by robbery, whilst we call one miserly who deprives himself too much of the use of his own); one is reputed generous, one rapacious; one cruel, one compassionate; one faithless, another faithful; one effeminate and cowardly, another bold and brave; one affable, another haughty; one lascivious, another chaste; one sincere, another cunning; one hard, another easy; one grave, another frivolous; one religious, another unbelieving, and the like. And I know that every one will confess that it would be most praiseworthy in a prince to exhibit all the above qualities that are considered good; but because they

can neither be entirely possessed nor observed, for human conditions do not permit it, it is necessary for him to be sufficiently prudent that he may know how to avoid the reproach of those vices which would lose him his state; and also to keep himself, if it be possible, from those which would not lose him it; but this not being possible, he may with less hesitation abandon himself to them. And again, he need not make himself uneasy at incurring a reproach for those vices without which the state can only be saved with difficulty, for if everything is considered carefully, it will be found that something which looks like virtue, if followed, would be his ruin; whilst something else, which looks like vice, yet followed brings him security and prosperity.

## CHAPTER XVI — CONCERNING LIBERALITY AND MEANNESS

Commencing then with the first of the above-named characteristics, I say that it would be well to be reputed liberal. Nevertheless, liberality exercised in a way that does not bring you the reputation for it, injures you; for if one exercises it honestly and as it should be exercised, it may not become known, and you will not avoid the reproach of its opposite. Therefore, any one wishing to maintain among men the name of liberal is obliged to avoid no attribute of magnificence; so that a prince thus inclined will consume in such acts all his property, and will be compelled in the end, if he wish to maintain the name of liberal, to unduly weigh down his people, and tax them, and do everything he can to get money. This will soon make him odious to his subjects, and becoming poor he will be little valued by any one; thus, with his liberality, having offended many and rewarded few, he is affected by the very first trouble and imperilled by whatever may be the first danger; recognizing this himself, and wishing to draw back from it, he runs at once into the reproach of being miserly.

Therefore, a prince, not being able to exercise this virtue of liberality in such a way that it is recognized, except to his cost, if he is wise he ought not to fear the reputation of being mean, for in time he will come to be more considered than if liberal, seeing that with his economy his revenues are enough, that he can defend himself against all attacks, and is able to engage in enterprises without burdening his people; thus it comes to pass that he exercises liberality towards all from whom he does not take, who are numberless, and meanness towards those to whom he does not give, who are few.

We have not seen great things done in our time except by those who have been considered mean; the rest have failed. Pope Julius the Second was assisted in reaching the papacy by a reputation for liberality, yet he did not strive afterwards to keep it up, when he made war on the King of France; and he made many wars without imposing any extraordinary tax on his subjects, for he supplied his additional expenses out of his long thriftiness.

The present King of Spain would not have undertaken or conquered in so many enterprises if he had been reputed liberal. A prince, therefore, provided that he has not to rob his subjects, that he can defend himself, that he does not become poor and abject, that he is not forced to become rapacious, ought to hold of little account a reputation for being mean, for it is one of those vices which will enable him to govern.

And if any one should say: Caesar obtained empire by liberality, and many others have reached the highest positions by having been liberal, and by being considered so, I answer: Either you are a prince in fact, or in a way to become one. In the first case this liberality is dangerous, in the second it is very necessary to be considered liberal; and Caesar was one of those who wished to become pre-eminent in Rome; but if he had survived after becoming so, and had not moderated his expenses, he would have destroyed his government. And if any one should reply: Many have been princes, and have done great things with armies, who have been considered very liberal, I reply: Either a prince spends that which is his own or his subjects' or else that of others. In the first case he ought to be sparing, in the second he ought not to neglect any opportunity for liberality. And to the prince who goes forth with his army, supporting it by pillage, sack, and extortion, handling that which belongs to others, this liberality is necessary, otherwise he would not be followed by soldiers. And of that which is neither yours nor your subjects' you can be a ready giver, as were Cyrus, Caesar, and Alexander; because it does not take away your reputation if you squander that of others, but adds to it; it is only squandering your own that injures you.

And there is nothing wastes so rapidly as liberality, for even whilst you exercise it you lose the power to do so, and so become either poor or despised, or else, in avoiding poverty, rapacious and hated. And a prince should guard himself, above all things, against being despised and hated; and liberality leads you to both. Therefore it is wiser to have a reputation for meanness which brings reproach without hatred, than to be compelled through seeking a reputation for liberality to incur a name for rapacity which begets reproach with hatred.

## CHAPTER XVII — CONCERNING CRUELTY AND CLEMENCY, AND WHETHER IT IS BETTER TO BE LOVED THAN FEARED

Coming now to the other qualities mentioned above, I say that every prince ought to desire to be considered clement and not cruel. Nevertheless he ought to take care not to misuse this clemency. Cesare Borgia was considered cruel; notwithstanding, his cruelty reconciled the Romagna, unified it, and restored it to peace and loyalty. And if this be rightly considered, he will be seen to have been much more merciful than the Florentine people, who, to avoid a reputation for cruelty, permitted Pistoia to be destroyed.(\*). Therefore a prince, so long as he keeps his subjects united and loyal, ought not to mind the reproach of cruelty; because with a few examples he will be more merciful than those who, through too much mercy, allow disorders to arise, from which follow murders or robberies; for these are wont to injure the whole people, whilst those executions which originate with a prince offend the individual only.

(\*). During the rioting between the Cancellieri and Panciatichi factions in 1502 and 1503.

And of all princes, it is impossible for the new prince to avoid the imputation of cruelty, owing to new states being full of dangers. Hence Virgil, through the mouth of Dido, excuses the inhumanity of her reign owing to its being new, saying:

"Res dura, et regni novitas me talia cogunt  
Moliri, et late fines custode tueri."(\*)

Nevertheless he ought to be slow to believe and to act, nor should he himself show fear, but proceed in a temperate manner with prudence and humanity, so that too much confidence may not make him incautious and too much distrust render him intolerable.

(\*). . . . against my will, my fate  
A throne unsettled, and an infant state,  
Bid me defend my realms with all my pow'rs,  
And guard with these severities my shores.

Christopher Pitt.

Upon this a question arises: whether it be better to be loved than feared or feared than loved? It may be answered that one should wish to be both, but, because it is difficult to unite them in one person, it is much safer to be feared than loved, when, of the two, either must be dispensed with. Because this is to be asserted in general of men, that they are ungrateful, fickle, false, cowardly, covetous, and as long as you succeed they are yours entirely; they will offer you their blood, property, life, and children, as is said above, when the need is far distant; but when it approaches they turn against you. And that prince who, relying entirely on their promises, has neglected other precautions, is ruined; because friendships that are obtained by payments, and not by greatness or nobility of mind, may indeed be earned, but they are not secured, and in time of need cannot be relied upon; and men have less scruple in offending one who is beloved than one who is feared, for love is preserved by the link of obligation which, owing to the baseness of men, is broken at every opportunity for their advantage; but fear preserves you by a dread of punishment which never fails.

Nevertheless a prince ought to inspire fear in such a way that, if he does not win love, he avoids hatred; because he can endure very well being feared whilst he is not hated, which will always be as long as he abstains from the property of his citizens and subjects and from their women. But when it is necessary for him to proceed against the life of someone, he must do it on proper justification and for manifest cause, but above all things he must keep his hands off the property of others, because men more quickly forget the death of their father than the loss of their patrimony. Besides, pretexts for taking away the property are never wanting; for he who has once begun to live by robbery will always find pretexts for seizing what belongs to others; but reasons for taking life, on the contrary, are more difficult to find and sooner lapse. But when a prince is with his army, and has under control a multitude of soldiers, then it is quite necessary for him to disregard the reputation of cruelty, for without it he would never hold his army united or disposed to its duties.

Among the wonderful deeds of Hannibal this one is enumerated: that having led an enormous army, composed of many various races of men, to fight in foreign lands, no dissensions arose either among them or against the prince, whether in his bad or in his good fortune. This arose from nothing else than his inhuman cruelty, which, with his boundless valour, made him revered and terrible in the sight of his soldiers, but without that cruelty, his

other virtues were not sufficient to produce this effect. And short-sighted writers admire his deeds from one point of view and from another condemn the principal cause of them. That it is true his other virtues would not have been sufficient for him may be proved by the case of Scipio, that most excellent man, not only of his own times but within the memory of man, against whom, nevertheless, his army rebelled in Spain; this arose from nothing but his too great forbearance, which gave his soldiers more license than is consistent with military discipline. For this he was upbraided in the Senate by Fabius Maximus, and called the corrupter of the Roman soldiery. The Locrians were laid waste by a legate of Scipio, yet they were not avenged by him, nor was the insolence of the legate punished, owing entirely to his easy nature. Insomuch that someone in the Senate, wishing to excuse him, said there were many men who knew much better how not to err than to correct the errors of others. This disposition, if he had been continued in the command, would have destroyed in time the fame and glory of Scipio; but, he being under the control of the Senate, this injurious characteristic not only concealed itself, but contributed to his glory.

Returning to the question of being feared or loved, I come to the conclusion that, men loving according to their own will and fearing according to that of the prince, a wise prince should establish himself on that which is in his own control and not in that of others; he must endeavour only to avoid hatred, as is noted.

# CHAPTER XVIII(\*) — CONCERNING THE WAY IN WHICH PRINCES SHOULD KEEP FAITH

(\*) "The present chapter has given greater offence than any other portion of Machiavelli's writings." Burd, "Il Principe," p. 297.

Every one admits how praiseworthy it is in a prince to keep faith, and to live with integrity and not with craft. Nevertheless our experience has been that those princes who have done great things have held good faith of little account, and have known how to circumvent the intellect of men by craft, and in the end have overcome those who have relied on their word. You must know there are two ways of contesting, (\*) the one by the law, the other by force; the first method is proper to men, the second to beasts; but because the first is frequently not sufficient, it is necessary to have recourse to the second. Therefore it is necessary for a prince to understand how to avail himself of the beast and the man. This has been figuratively taught to princes by ancient writers, who describe how Achilles and many other princes of old were given to the Centaur Chiron to nurse, who brought them up in his discipline; which means solely that, as they had for a teacher one who was half beast and half man, so it is necessary for a prince to know how to make use of both natures, and that one without the other is not durable. A prince, therefore, being compelled knowingly to adopt the beast, ought to choose the fox and the lion; because the lion cannot defend himself against snares and the fox cannot defend himself against wolves. Therefore, it is necessary to be a fox to discover the snares and a lion to terrify the wolves. Those who rely simply on the lion do not understand what they are about. Therefore a wise lord cannot, nor ought he to, keep faith when such observance may be turned against him, and when the reasons that caused him to pledge it exist no longer. If men were entirely good this precept would not hold, but because they are bad, and will not keep faith with you, you too are not bound to observe it with them. Nor will there ever be wanting to a prince legitimate reasons to excuse this non-observance. Of this endless modern examples could be given, showing how many treaties

and engagements have been made void and of no effect through the faithlessness of princes; and he who has known best how to employ the fox has succeeded best.

(\*) "Contesting," i.e. "striving for mastery." Mr Burd points out that this passage is imitated directly from Cicero's "De Officiis": "Nam cum sint duo genera decertandi, unum per disceptationem, alterum per vim; cumque illud proprium sit hominis, hoc beluarum; confugiendum est ad posterius, si uti non licet superiore."

But it is necessary to know well how to disguise this characteristic, and to be a great pretender and dissembler; and men are so simple, and so subject to present necessities, that he who seeks to deceive will always find someone who will allow himself to be deceived. One recent example I cannot pass over in silence. Alexander the Sixth did nothing else but deceive men, nor ever thought of doing otherwise, and he always found victims; for there never was a man who had greater power in asserting, or who with greater oaths would affirm a thing, yet would observe it less; nevertheless his deceits always succeeded according to his wishes, (\*) because he well understood this side of mankind.

(\*) "Nondimanco sempre gli succederono gli inganni (ad votum)." The words "ad votum" are omitted in the Testina addition, 1550.

Alexander never did what he said,  
Cesare never said what he did.

Italian Proverb.

Therefore it is unnecessary for a prince to have all the good qualities I have enumerated, but it is very necessary to appear to have them. And I shall dare to say this also, that to have them and always to observe them is injurious, and that to appear to have them is useful; to appear merciful, faithful, humane, religious, upright, and to be so, but with a mind so framed that should you require not to be so, you may be able and know how to change to the opposite.

And you have to understand this, that a prince, especially a new one, cannot observe all those things for which men are esteemed, being often forced, in order to maintain the state, to act contrary to fidelity, (\*) friendship, humanity, and religion. Therefore it is necessary for him to have a mind ready to turn itself accordingly as the winds and variations of fortune force it, yet, as I have said above, not to diverge from the good if he can avoid doing so, but, if compelled, then to know how to set about it.

(\*) "Contrary to fidelity" or "faith," "contro alla fede," and "tutto fede," "altogether faithful," in the next paragraph. It is noteworthy that these two phrases, "contro alla fede" and "tutto fede," were omitted in the Testina edition, which was published with the sanction of the papal authorities. It may be that the meaning attached to the word "fede" was "the faith," i.e. the Catholic creed, and not as rendered here "fidelity" and "faithful." Observe that the word "religione" was suffered to stand in the text of the Testina, being used to signify indifferently every shade of belief, as witness "the religion," a phrase inevitably employed to designate the Huguenot heresy. South in his Sermon IX, p. 69, ed. 1843, comments on this passage as follows: "That great patron and Coryphaeus of this tribe, Nicolo Machiavel, laid down this for a master rule in his political scheme: 'That the show of religion was helpful to the politician, but the reality of it hurtful and pernicious.'"

For this reason a prince ought to take care that he never lets anything slip from his lips that is not replete with the above-named five qualities, that he may appear to him who sees and hears him altogether merciful, faithful, humane, upright, and religious. There is nothing more necessary to appear to have than this last quality, inasmuch as men judge generally more by the eye than by the hand, because it belongs to everybody to see you, to few to come in touch with you. Every one sees what you appear to be, few really know what you are, and those few dare not oppose themselves to the opinion of the many, who have the majesty of the state to defend them; and in the actions of all men, and especially of princes, which it is not prudent to challenge, one judges by the result.

For that reason, let a prince have the credit of conquering and holding his state, the means will always be considered honest, and he will be praised by everybody; because the vulgar are always taken by what a thing seems to be and by what comes of it; and in the world there are only the vulgar, for the few find a place there only when the many have no ground to rest on.

One prince(\*) of the present time, whom it is not well to name, never preaches anything else but peace and good faith, and to both he is most hostile, and either, if he had kept it, would have deprived him of reputation and kingdom many a time.

(\*) Ferdinand of Aragon. "When Machiavelli was writing 'The Prince' it would have been clearly impossible to mention Ferdinand's name here without giving offence." Burd's "Il Principe," p. 308.

## CHAPTER XIX — THAT ONE SHOULD AVOID BEING DESPISED AND HATED

Now, concerning the characteristics of which mention is made above, I have spoken of the more important ones, the others I wish to discuss briefly under this generality, that the prince must consider, as has been in part said before, how to avoid those things which will make him hated or contemptible; and as often as he shall have succeeded he will have fulfilled his part, and he need not fear any danger in other reproaches.

It makes him hated above all things, as I have said, to be rapacious, and to be a violator of the property and women of his subjects, from both of which he must abstain. And when neither their property nor their honor is touched, the majority of men live content, and he has only to contend with the ambition of a few, whom he can curb with ease in many ways.

It makes him contemptible to be considered fickle, frivolous, effeminate, mean-spirited, irresolute, from all of which a prince should guard himself as from a rock; and he should endeavour to show in his actions greatness, courage, gravity, and fortitude; and in his private dealings with his subjects let him show that his judgments are irrevocable, and maintain himself in such reputation that no one can hope either to deceive him or to get round him.

That prince is highly esteemed who conveys this impression of himself, and he who is highly esteemed is not easily conspired against; for, provided it is well known that he is an excellent man and revered by his people, he can only be attacked with difficulty. For this reason a prince ought to have two fears, one from within, on account of his subjects, the other from without, on account of external powers. From the latter he is defended by being well armed and having good allies, and if he is well armed he will have good friends, and affairs will always remain quiet within when they are quiet without, unless they should have been already disturbed by conspiracy; and even should affairs outside be disturbed, if he has carried out his preparations and has lived as I have said, as long as he does not despair, he will resist every attack, as I said Nabis the Spartan did.

But concerning his subjects, when affairs outside are disturbed he has only to fear that they will conspire secretly, from which a prince can easily secure himself by avoiding being hated and despised, and by keeping the people satisfied with him, which it is most necessary for him to accomplish, as I said above at length. And one of the most efficacious remedies that a prince can have against conspiracies is not to be hated and despised by the people, for he who conspires against a prince always expects to please them by his removal; but when the conspirator can only look forward to offending them, he will not have the courage to take such a course, for the difficulties that confront a conspirator are infinite. And as experience shows, many have been the conspiracies, but few have been successful; because he who conspires cannot act alone, nor can he take a companion except from those whom he believes to be malcontents, and as soon as you have opened your mind to a malcontent you have given him the material with which to content himself, for by denouncing you he can look for every advantage; so that, seeing the gain from this course to be assured, and seeing the other to be doubtful and full of dangers, he must be a very rare friend, or a thoroughly obstinate enemy of the prince, to keep faith with you.

And, to reduce the matter into a small compass, I say that, on the side of the conspirator, there is nothing but fear, jealousy, prospect of punishment to terrify him; but on the side of the prince there is the majesty of the principality, the laws, the protection of friends and the state to defend him; so that, adding to all these things the popular goodwill, it is impossible that any one should be so rash as to conspire. For whereas in general the conspirator has to fear before the execution of his plot, in this case he has also to fear the sequel to the crime; because on account of it he has the people for an enemy, and thus cannot hope for any escape.

Endless examples could be given on this subject, but I will be content with one, brought to pass within the memory of our fathers. Messer Annibale Bentivogli, who was prince in Bologna (grandfather of the present Annibale), having been murdered by the Canneschi, who had conspired against him, not one of his family survived but Messer Giovanni, (\*) who was in childhood: immediately after his assassination the people rose and murdered all the Canneschi. This sprung from the popular goodwill which the house of Bentivogli enjoyed in those days in Bologna; which was so great that, although none remained there after the death of Annibale who

was able to rule the state, the Bolognese, having information that there was one of the Bentivogli family in Florence, who up to that time had been considered the son of a blacksmith, sent to Florence for him and gave him the government of their city, and it was ruled by him until Messer Giovanni came in due course to the government.

(\*) Giovanni Bentivogli, born in Bologna 1438, died at Milan 1508. He ruled Bologna from 1462 to 1506. Machiavelli's strong condemnation of conspiracies may get its edge from his own very recent experience (February 1513), when he had been arrested and tortured for his alleged complicity in the Boscoli conspiracy.

For this reason I consider that a prince ought to reckon conspiracies of little account when his people hold him in esteem; but when it is hostile to him, and bears hatred towards him, he ought to fear everything and everybody. And well-ordered states and wise princes have taken every care not to drive the nobles to desperation, and to keep the people satisfied and contented, for this is one of the most important objects a prince can have.

Among the best ordered and governed kingdoms of our times is France, and in it are found many good institutions on which depend the liberty and security of the king; of these the first is the parliament and its authority, because he who founded the kingdom, knowing the ambition of the nobility and their boldness, considered that a bit to their mouths would be necessary to hold them in; and, on the other side, knowing the hatred of the people, founded in fear, against the nobles, he wished to protect them, yet he was not anxious for this to be the particular care of the king; therefore, to take away the reproach which he would be liable to from the nobles for favouring the people, and from the people for favouring the nobles, he set up an arbiter, who should be one who could beat down the great and favour the lesser without reproach to the king. Neither could you have a better or a more prudent arrangement, or a greater source of security to the king and kingdom. From this one can draw another important conclusion, that princes ought to leave affairs of reproach to the management of others, and keep those of grace in their own hands. And further, I consider that a prince ought to cherish the nobles, but not so as to make himself hated by the people.

It may appear, perhaps, to some who have examined the lives and deaths of the Roman emperors that many of them would be an example contrary to my opinion, seeing that some of them lived nobly and showed great qualities of soul, nevertheless they have lost their empire or have been

killed by subjects who have conspired against them. Wishing, therefore, to answer these objections, I will recall the characters of some of the emperors, and will show that the causes of their ruin were not different to those alleged by me; at the same time I will only submit for consideration those things that are noteworthy to him who studies the affairs of those times.

It seems to me sufficient to take all those emperors who succeeded to the empire from Marcus the philosopher down to Maximinus; they were Marcus and his son Commodus, Pertinax, Julian, Severus and his son Antoninus Caracalla, Macrinus, Heliogabalus, Alexander, and Maximinus.

There is first to note that, whereas in other principalities the ambition of the nobles and the insolence of the people only have to be contended with, the Roman emperors had a third difficulty in having to put up with the cruelty and avarice of their soldiers, a matter so beset with difficulties that it was the ruin of many; for it was a hard thing to give satisfaction both to soldiers and people; because the people loved peace, and for this reason they loved the unambitious prince, whilst the soldiers loved the warlike prince who was bold, cruel, and rapacious, which qualities they were quite willing he should exercise upon the people, so that they could get double pay and give vent to their own greed and cruelty. Hence it arose that those emperors were always overthrown who, either by birth or training, had no great authority, and most of them, especially those who came new to the principality, recognizing the difficulty of these two opposing humours, were inclined to give satisfaction to the soldiers, caring little about injuring the people. Which course was necessary, because, as princes cannot help being hated by someone, they ought, in the first place, to avoid being hated by every one, and when they cannot compass this, they ought to endeavour with the utmost diligence to avoid the hatred of the most powerful. Therefore, those emperors who through inexperience had need of special favour adhered more readily to the soldiers than to the people; a course which turned out advantageous to them or not, accordingly as the prince knew how to maintain authority over them.

From these causes it arose that Marcus, Pertinax, and Alexander, being all men of modest life, lovers of justice, enemies to cruelty, humane, and benignant, came to a sad end except Marcus; he alone lived and died honoured, because he had succeeded to the throne by hereditary title, and

owed nothing either to the soldiers or the people; and afterwards, being possessed of many virtues which made him respected, he always kept both orders in their places whilst he lived, and was neither hated nor despised.

But Pertinax was created emperor against the wishes of the soldiers, who, being accustomed to live licentiously under Commodus, could not endure the honest life to which Pertinax wished to reduce them; thus, having given cause for hatred, to which hatred there was added contempt for his old age, he was overthrown at the very beginning of his administration. And here it should be noted that hatred is acquired as much by good works as by bad ones, therefore, as I said before, a prince wishing to keep his state is very often forced to do evil; for when that body is corrupt whom you think you have need of to maintain yourself—it may be either the people or the soldiers or the nobles—you have to submit to its humours and to gratify them, and then good works will do you harm.

But let us come to Alexander, who was a man of such great goodness, that among the other praises which are accorded him is this, that in the fourteen years he held the empire no one was ever put to death by him unjudged; nevertheless, being considered effeminate and a man who allowed himself to be governed by his mother, he became despised, the army conspired against him, and murdered him.

Turning now to the opposite characters of Commodus, Severus, Antoninus Caracalla, and Maximinus, you will find them all cruel and rapacious-men who, to satisfy their soldiers, did not hesitate to commit every kind of iniquity against the people; and all, except Severus, came to a bad end; but in Severus there was so much valour that, keeping the soldiers friendly, although the people were oppressed by him, he reigned successfully; for his valour made him so much admired in the sight of the soldiers and people that the latter were kept in a way astonished and awed and the former respectful and satisfied. And because the actions of this man, as a new prince, were great, I wish to show briefly that he knew well how to counterfeit the fox and the lion, which natures, as I said above, it is necessary for a prince to imitate.

Knowing the sloth of the Emperor Julian, he persuaded the army in Sclavonia, of which he was captain, that it would be right to go to Rome and avenge the death of Pertinax, who had been killed by the praetorian soldiers; and under this pretext, without appearing to aspire to the throne, he

moved the army on Rome, and reached Italy before it was known that he had started. On his arrival at Rome, the Senate, through fear, elected him emperor and killed Julian. After this there remained for Severus, who wished to make himself master of the whole empire, two difficulties; one in Asia, where Niger, head of the Asiatic army, had caused himself to be proclaimed emperor; the other in the west where Albinus was, who also aspired to the throne. And as he considered it dangerous to declare himself hostile to both, he decided to attack Niger and to deceive Albinus. To the latter he wrote that, being elected emperor by the Senate, he was willing to share that dignity with him and sent him the title of Caesar; and, moreover, that the Senate had made Albinus his colleague; which things were accepted by Albinus as true. But after Severus had conquered and killed Niger, and settled oriental affairs, he returned to Rome and complained to the Senate that Albinus, little recognizing the benefits that he had received from him, had by treachery sought to murder him, and for this ingratitude he was compelled to punish him. Afterwards he sought him out in France, and took from him his government and life. He who will, therefore, carefully examine the actions of this man will find him a most valiant lion and a most cunning fox; he will find him feared and respected by every one, and not hated by the army; and it need not be wondered at that he, a new man, was able to hold the empire so well, because his supreme renown always protected him from that hatred which the people might have conceived against him for his violence.

But his son Antoninus was a most eminent man, and had very excellent qualities, which made him admirable in the sight of the people and acceptable to the soldiers, for he was a warlike man, most enduring of fatigue, a despiser of all delicate food and other luxuries, which caused him to be beloved by the armies. Nevertheless, his ferocity and cruelties were so great and so unheard of that, after endless single murders, he killed a large number of the people of Rome and all those of Alexandria. He became hated by the whole world, and also feared by those he had around him, to such an extent that he was murdered in the midst of his army by a centurion. And here it must be noted that such-like deaths, which are deliberately inflicted with a resolved and desperate courage, cannot be avoided by princes, because any one who does not fear to die can inflict them; but a prince may fear them the less because they are very rare; he has only to be careful not to do any grave injury to those whom he employs or

has around him in the service of the state. Antoninus had not taken this care, but had contumeliously killed a brother of that centurion, whom also he daily threatened, yet retained in his bodyguard; which, as it turned out, was a rash thing to do, and proved the emperor's ruin.

But let us come to Commodus, to whom it should have been very easy to hold the empire, for, being the son of Marcus, he had inherited it, and he had only to follow in the footsteps of his father to please his people and soldiers; but, being by nature cruel and brutal, he gave himself up to amusing the soldiers and corrupting them, so that he might indulge his rapacity upon the people; on the other hand, not maintaining his dignity, often descending to the theatre to compete with gladiators, and doing other vile things, little worthy of the imperial majesty, he fell into contempt with the soldiers, and being hated by one party and despised by the other, he was conspired against and was killed.

It remains to discuss the character of Maximinus. He was a very warlike man, and the armies, being disgusted with the effeminacy of Alexander, of whom I have already spoken, killed him and elected Maximinus to the throne. This he did not possess for long, for two things made him hated and despised; the one, his having kept sheep in Thrace, which brought him into contempt (it being well known to all, and considered a great indignity by every one), and the other, his having at the accession to his dominions deferred going to Rome and taking possession of the imperial seat; he had also gained a reputation for the utmost ferocity by having, through his prefects in Rome and elsewhere in the empire, practised many cruelties, so that the whole world was moved to anger at the meanness of his birth and to fear at his barbarity. First Africa rebelled, then the Senate with all the people of Rome, and all Italy conspired against him, to which may be added his own army; this latter, besieging Aquileia and meeting with difficulties in taking it, were disgusted with his cruelties, and fearing him less when they found so many against him, murdered him.

I do not wish to discuss Heliogabalus, Macrinus, or Julian, who, being thoroughly contemptible, were quickly wiped out; but I will bring this discourse to a conclusion by saying that princes in our times have this difficulty of giving inordinate satisfaction to their soldiers in a far less degree, because, notwithstanding one has to give them some indulgence, that is soon done; none of these princes have armies that are veterans in the

governance and administration of provinces, as were the armies of the Roman Empire; and whereas it was then more necessary to give satisfaction to the soldiers than to the people, it is now more necessary to all princes, except the Turk and the Soldan, to satisfy the people rather the soldiers, because the people are the more powerful.

From the above I have excepted the Turk, who always keeps round him twelve thousand infantry and fifteen thousand cavalry on which depend the security and strength of the kingdom, and it is necessary that, putting aside every consideration for the people, he should keep them his friends. The kingdom of the Soldan is similar; being entirely in the hands of soldiers, it follows again that, without regard to the people, he must keep them his friends. But you must note that the state of the Soldan is unlike all other principalities, for the reason that it is like the Christian pontificate, which cannot be called either an hereditary or a newly formed principality; because the sons of the old prince are not the heirs, but he who is elected to that position by those who have authority, and the sons remain only noblemen. And this being an ancient custom, it cannot be called a new principality, because there are none of those difficulties in it that are met with in new ones; for although the prince is new, the constitution of the state is old, and it is framed so as to receive him as if he were its hereditary lord.

But returning to the subject of our discourse, I say that whoever will consider it will acknowledge that either hatred or contempt has been fatal to the above-named emperors, and it will be recognized also how it happened that, a number of them acting in one way and a number in another, only one in each way came to a happy end and the rest to unhappy ones. Because it would have been useless and dangerous for Pertinax and Alexander, being new princes, to imitate Marcus, who was heir to the principality; and likewise it would have been utterly destructive to Caracalla, Commodus, and Maximinus to have imitated Severus, they not having sufficient valour to enable them to tread in his footsteps. Therefore a prince, new to the principality, cannot imitate the actions of Marcus, nor, again, is it necessary to follow those of Severus, but he ought to take from Severus those parts which are necessary to found his state, and from Marcus those which are proper and glorious to keep a state that may already be stable and firm.

## **CHAPTER XX — ARE FORTRESSES, AND MANY OTHER THINGS TO WHICH PRINCES OFTEN RESORT, ADVANTAGEOUS OR HURTFUL?**

1. Some princes, so as to hold securely the state, have disarmed their subjects; others have kept their subject towns distracted by factions; others have fostered enmities against themselves; others have laid themselves out to gain over those whom they distrusted in the beginning of their governments; some have built fortresses; some have overthrown and destroyed them. And although one cannot give a final judgment on all of these things unless one possesses the particulars of those states in which a decision has to be made, nevertheless I will speak as comprehensively as the matter of itself will admit.

2. There never was a new prince who has disarmed his subjects; rather when he has found them disarmed he has always armed them, because, by arming them, those arms become yours, those men who were distrusted become faithful, and those who were faithful are kept so, and your subjects become your adherents. And whereas all subjects cannot be armed, yet when those whom you do arm are benefited, the others can be handled more freely, and this difference in their treatment, which they quite understand, makes the former your dependents, and the latter, considering it to be necessary that those who have the most danger and service should have the most reward, excuse you. But when you disarm them, you at once offend them by showing that you distrust them, either for cowardice or for want of loyalty, and either of these opinions breeds hatred against you. And because you cannot remain unarmed, it follows that you turn to mercenaries, which are of the character already shown; even if they should be good they would not be sufficient to defend you against powerful enemies and distrusted subjects. Therefore, as I have said, a new prince in a new principality has always distributed arms. Histories are full of examples. But when a prince acquires a new state, which he adds as a province to his old one, then it is necessary to disarm the men of that state, except those who have been his

adherents in acquiring it; and these again, with time and opportunity, should be rendered soft and effeminate; and matters should be managed in such a way that all the armed men in the state shall be your own soldiers who in your old state were living near you.

3. Our forefathers, and those who were reckoned wise, were accustomed to say that it was necessary to hold Pistoia by factions and Pisa by fortresses; and with this idea they fostered quarrels in some of their tributary towns so as to keep possession of them the more easily. This may have been well enough in those times when Italy was in a way balanced, but I do not believe that it can be accepted as a precept for to-day, because I do not believe that factions can ever be of use; rather it is certain that when the enemy comes upon you in divided cities you are quickly lost, because the weakest party will always assist the outside forces and the other will not be able to resist. The Venetians, moved, as I believe, by the above reasons, fostered the Guelph and Ghibelline factions in their tributary cities; and although they never allowed them to come to bloodshed, yet they nursed these disputes amongst them, so that the citizens, distracted by their differences, should not unite against them. Which, as we saw, did not afterwards turn out as expected, because, after the rout at Vaila, one party at once took courage and seized the state. Such methods argue, therefore, weakness in the prince, because these factions will never be permitted in a vigorous principality; such methods for enabling one the more easily to manage subjects are only useful in times of peace, but if war comes this policy proves fallacious.

4. Without doubt princes become great when they overcome the difficulties and obstacles by which they are confronted, and therefore fortune, especially when she desires to make a new prince great, who has a greater necessity to earn renown than an hereditary one, causes enemies to arise and form designs against him, in order that he may have the opportunity of overcoming them, and by them to mount higher, as by a ladder which his enemies have raised. For this reason many consider that a wise prince, when he has the opportunity, ought with craft to foster some animosity against himself, so that, having crushed it, his renown may rise higher.

5. Princes, especially new ones, have found more fidelity and assistance in those men who in the beginning of their rule were distrusted than among

those who in the beginning were trusted. Pandolfo Petrucci, Prince of Siena, ruled his state more by those who had been distrusted than by others. But on this question one cannot speak generally, for it varies so much with the individual; I will only say this, that those men who at the commencement of a principedom have been hostile, if they are of a description to need assistance to support themselves, can always be gained over with the greatest ease, and they will be tightly held to serve the prince with fidelity, inasmuch as they know it to be very necessary for them to cancel by deeds the bad impression which he had formed of them; and thus the prince always extracts more profit from them than from those who, serving him in too much security, may neglect his affairs. And since the matter demands it, I must not fail to warn a prince, who by means of secret favours has acquired a new state, that he must well consider the reasons which induced those to favour him who did so; and if it be not a natural affection towards him, but only discontent with their government, then he will only keep them friendly with great trouble and difficulty, for it will be impossible to satisfy them. And weighing well the reasons for this in those examples which can be taken from ancient and modern affairs, we shall find that it is easier for the prince to make friends of those men who were contented under the former government, and are therefore his enemies, than of those who, being discontented with it, were favourable to him and encouraged him to seize it.

6. It has been a custom with princes, in order to hold their states more securely, to build fortresses that may serve as a bridle and bit to those who might design to work against them, and as a place of refuge from a first attack. I praise this system because it has been made use of formerly. Notwithstanding that, Messer Nicolo Vitelli in our times has been seen to demolish two fortresses in Citta di Castello so that he might keep that state; Guido Ubaldo, Duke of Urbino, on returning to his dominion, whence he had been driven by Cesare Borgia, razed to the foundations all the fortresses in that province, and considered that without them it would be more difficult to lose it; the Bentivogli returning to Bologna came to a similar decision. Fortresses, therefore, are useful or not according to circumstances; if they do you good in one way they injure you in another. And this question can be reasoned thus: the prince who has more to fear from the people than from foreigners ought to build fortresses, but he who has more to fear from foreigners than from the people ought to leave them alone. The castle of Milan, built by Francesco Sforza, has made, and will make, more

trouble for the house of Sforza than any other disorder in the state. For this reason the best possible fortress is—not to be hated by the people, because, although you may hold the fortresses, yet they will not save you if the people hate you, for there will never be wanting foreigners to assist a people who have taken arms against you. It has not been seen in our times that such fortresses have been of use to any prince, unless to the Countess of Forli, (\*) when the Count Girolamo, her consort, was killed; for by that means she was able to withstand the popular attack and wait for assistance from Milan, and thus recover her state; and the posture of affairs was such at that time that the foreigners could not assist the people. But fortresses were of little value to her afterwards when Cesare Borgia attacked her, and when the people, her enemy, were allied with foreigners. Therefore, it would have been safer for her, both then and before, not to have been hated by the people than to have had the fortresses. All these things considered then, I shall praise him who builds fortresses as well as him who does not, and I shall blame whoever, trusting in them, cares little about being hated by the people.

(\*) Catherine Sforza, a daughter of Galeazzo Sforza and Lucrezia Landriani, born 1463, died 1509. It was to the Countess of Forli that Machiavelli was sent as envoy on 1499. A letter from Fortunati to the countess announces the appointment: "I have been with the signori," wrote Fortunati, "to learn whom they would send and when. They tell me that Nicolo Machiavelli, a learned young Florentine noble, secretary to my Lords of the Ten, is to leave with me at once." Cf. "Catherine Sforza," by Count Pasolini, translated by P. Sylvester, 1898.

## CHAPTER XXI — HOW A PRINCE SHOULD CONDUCT HIMSELF SO AS TO GAIN RENOWN

Nothing makes a prince so much esteemed as great enterprises and setting a fine example. We have in our time Ferdinand of Aragon, the present King of Spain. He can almost be called a new prince, because he has risen, by fame and glory, from being an insignificant king to be the foremost king in Christendom; and if you will consider his deeds you will find them all great and some of them extraordinary. In the beginning of his reign he attacked Granada, and this enterprise was the foundation of his dominions. He did this quietly at first and without any fear of hindrance, for he held the minds of the barons of Castile occupied in thinking of the war and not anticipating any innovations; thus they did not perceive that by these means he was acquiring power and authority over them. He was able with the money of the Church and of the people to sustain his armies, and by that long war to lay the foundation for the military skill which has since distinguished him. Further, always using religion as a plea, so as to undertake greater schemes, he devoted himself with pious cruelty to driving out and clearing his kingdom of the Moors; nor could there be a more admirable example, nor one more rare. Under this same cloak he assailed Africa, he came down on Italy, he has finally attacked France; and thus his achievements and designs have always been great, and have kept the minds of his people in suspense and admiration and occupied with the issue of them. And his actions have arisen in such a way, one out of the other, that men have never been given time to work steadily against him.

Again, it much assists a prince to set unusual examples in internal affairs, similar to those which are related of Messer Bernabo da Milano, who, when he had the opportunity, by any one in civil life doing some extraordinary thing, either good or bad, would take some method of rewarding or punishing him, which would be much spoken about. And a prince ought, above all things, always endeavour in every action to gain for himself the reputation of being a great and remarkable man.

A prince is also respected when he is either a true friend or a downright enemy, that is to say, when, without any reservation, he declares himself in favour of one party against the other; which course will always be more advantageous than standing neutral; because if two of your powerful neighbours come to blows, they are of such a character that, if one of them conquers, you have either to fear him or not. In either case it will always be more advantageous for you to declare yourself and to make war strenuously; because, in the first case, if you do not declare yourself, you will invariably fall a prey to the conqueror, to the pleasure and satisfaction of him who has been conquered, and you will have no reasons to offer, nor anything to protect or to shelter you. Because he who conquers does not want doubtful friends who will not aid him in the time of trial; and he who loses will not harbour you because you did not willingly, sword in hand, court his fate.

Antiochus went into Greece, being sent for by the Aetolians to drive out the Romans. He sent envoys to the Achaeans, who were friends of the Romans, exhorting them to remain neutral; and on the other hand the Romans urged them to take up arms. This question came to be discussed in the council of the Achaeans, where the legate of Antiochus urged them to stand neutral. To this the Roman legate answered: "As for that which has been said, that it is better and more advantageous for your state not to interfere in our war, nothing can be more erroneous; because by not interfering you will be left, without favour or consideration, the guerdon of the conqueror." Thus it will always happen that he who is not your friend will demand your neutrality, whilst he who is your friend will entreat you to declare yourself with arms. And irresolute princes, to avoid present dangers, generally follow the neutral path, and are generally ruined. But when a prince declares himself gallantly in favour of one side, if the party with whom he allies himself conquers, although the victor may be powerful and may have him at his mercy, yet he is indebted to him, and there is established a bond of amity; and men are never so shameless as to become a monument of ingratitude by oppressing you. Victories after all are never so complete that the victor must not show some regard, especially to justice. But if he with whom you ally yourself loses, you may be sheltered by him, and whilst he is able he may aid you, and you become companions on a fortune that may rise again.

In the second case, when those who fight are of such a character that you have no anxiety as to who may conquer, so much the more is it greater prudence to be allied, because you assist at the destruction of one by the aid of another who, if he had been wise, would have saved him; and conquering, as it is impossible that he should not do with your assistance, he remains at your discretion. And here it is to be noted that a prince ought to take care never to make an alliance with one more powerful than himself for the purposes of attacking others, unless necessity compels him, as is said above; because if he conquers you are at his discretion, and princes ought to avoid as much as possible being at the discretion of any one. The Venetians joined with France against the Duke of Milan, and this alliance, which caused their ruin, could have been avoided. But when it cannot be avoided, as happened to the Florentines when the Pope and Spain sent armies to attack Lombardy, then in such a case, for the above reasons, the prince ought to favour one of the parties.

Never let any Government imagine that it can choose perfectly safe courses; rather let it expect to have to take very doubtful ones, because it is found in ordinary affairs that one never seeks to avoid one trouble without running into another; but prudence consists in knowing how to distinguish the character of troubles, and for choice to take the lesser evil.

A prince ought also to show himself a patron of ability, and to honour the proficient in every art. At the same time he should encourage his citizens to practise their callings peaceably, both in commerce and agriculture, and in every other following, so that the one should not be deterred from improving his possessions for fear lest they be taken away from him or another from opening up trade for fear of taxes; but the prince ought to offer rewards to whoever wishes to do these things and designs in any way to honour his city or state.

Further, he ought to entertain the people with festivals and spectacles at convenient seasons of the year; and as every city is divided into guilds or into societies, (\*) he ought to hold such bodies in esteem, and associate with them sometimes, and show himself an example of courtesy and liberality; nevertheless, always maintaining the majesty of his rank, for this he must never consent to abate in anything.

(\*) "Guilds or societies," "in arti o in tribu." "Arti" were craft or trade guilds, cf. Florio: "Arte . . . a whole company of any trade in any city or corporation town." The guilds of Florence are most admirably described by Mr

Edgcumbe Staley in his work on the subject (Methuen, 1906). Institutions of a somewhat similar character, called "artel," exist in Russia to-day, cf. Sir Mackenzie Wallace's "Russia," ed. 1905: "The sons . . . were always during the working season members of an artel. In some of the larger towns there are artels of a much more complex kind—permanent associations, possessing large capital, and pecuniarily responsible for the acts of the individual members." The word "artel," despite its apparent similarity, has, Mr Aylmer Maude assures me, no connection with "ars" or "arte." Its root is that of the verb "rotisya," to bind oneself by an oath; and it is generally admitted to be only another form of "rota," which now signifies a "regimental company." In both words the underlying idea is that of a body of men united by an oath. "Tribu" were possibly gentile groups, united by common descent, and included individuals connected by marriage. Perhaps our words "sects" or "clans" would be most appropriate.

## CHAPTER XXII — CONCERNING THE SECRETARIES OF PRINCES

The choice of servants is of no little importance to a prince, and they are good or not according to the discrimination of the prince. And the first opinion which one forms of a prince, and of his understanding, is by observing the men he has around him; and when they are capable and faithful he may always be considered wise, because he has known how to recognize the capable and to keep them faithful. But when they are otherwise one cannot form a good opinion of him, for the prime error which he made was in choosing them.

There were none who knew Messer Antonio da Venafro as the servant of Pandolfo Petrucci, Prince of Siena, who would not consider Pandolfo to be a very clever man in having Venafro for his servant. Because there are three classes of intellects: one which comprehends by itself; another which appreciates what others comprehended; and a third which neither comprehends by itself nor by the showing of others; the first is the most excellent, the second is good, the third is useless. Therefore, it follows necessarily that, if Pandolfo was not in the first rank, he was in the second, for whenever one has judgment to know good and bad when it is said and done, although he himself may not have the initiative, yet he can recognize the good and the bad in his servant, and the one he can praise and the other correct; thus the servant cannot hope to deceive him, and is kept honest.

But to enable a prince to form an opinion of his servant there is one test which never fails; when you see the servant thinking more of his own interests than of yours, and seeking inwardly his own profit in everything, such a man will never make a good servant, nor will you ever be able to trust him; because he who has the state of another in his hands ought never to think of himself, but always of his prince, and never pay any attention to matters in which the prince is not concerned.

On the other hand, to keep his servant honest the prince ought to study him, honouring him, enriching him, doing him kindnesses, sharing with him the honours and cares; and at the same time let him see that he cannot stand

alone, so that many honours may not make him desire more, many riches make him wish for more, and that many cares may make him dread chances. When, therefore, servants, and princes towards servants, are thus disposed, they can trust each other, but when it is otherwise, the end will always be disastrous for either one or the other.

## CHAPTER XXIII — HOW FLATTERERS SHOULD BE AVOIDED

I do not wish to leave out an important branch of this subject, for it is a danger from which princes are with difficulty preserved, unless they are very careful and discriminating. It is that of flatterers, of whom courts are full, because men are so self-complacent in their own affairs, and in a way so deceived in them, that they are preserved with difficulty from this pest, and if they wish to defend themselves they run the danger of falling into contempt. Because there is no other way of guarding oneself from flatterers except letting men understand that to tell you the truth does not offend you; but when every one may tell you the truth, respect for you abates.

Therefore a wise prince ought to hold a third course by choosing the wise men in his state, and giving to them only the liberty of speaking the truth to him, and then only of those things of which he inquires, and of none others; but he ought to question them upon everything, and listen to their opinions, and afterwards form his own conclusions. With these councillors, separately and collectively, he ought to carry himself in such a way that each of them should know that, the more freely he shall speak, the more he shall be preferred; outside of these, he should listen to no one, pursue the thing resolved on, and be steadfast in his resolutions. He who does otherwise is either overthrown by flatterers, or is so often changed by varying opinions that he falls into contempt.

I wish on this subject to adduce a modern example. Fra Luca, the man of affairs to Maximilian, (\*) the present emperor, speaking of his majesty, said: He consulted with no one, yet never got his own way in anything. This arose because of his following a practice the opposite to the above; for the emperor is a secretive man—he does not communicate his designs to any one, nor does he receive opinions on them. But as in carrying them into effect they become revealed and known, they are at once obstructed by those men whom he has around him, and he, being pliant, is diverted from them. Hence it follows that those things he does one day he undoes the

next, and no one ever understands what he wishes or intends to do, and no one can rely on his resolutions.

(\*) Maximilian I, born in 1459, died 1519, Emperor of the Holy Roman Empire. He married, first, Mary, daughter of Charles the Bold; after her death, Bianca Sforza; and thus became involved in Italian politics.

A prince, therefore, ought always to take counsel, but only when he wishes and not when others wish; he ought rather to discourage every one from offering advice unless he asks it; but, however, he ought to be a constant inquirer, and afterwards a patient listener concerning the things of which he inquired; also, on learning that any one, on any consideration, has not told him the truth, he should let his anger be felt.

And if there are some who think that a prince who conveys an impression of his wisdom is not so through his own ability, but through the good advisers that he has around him, beyond doubt they are deceived, because this is an axiom which never fails: that a prince who is not wise himself will never take good advice, unless by chance he has yielded his affairs entirely to one person who happens to be a very prudent man. In this case indeed he may be well governed, but it would not be for long, because such a governor would in a short time take away his state from him.

But if a prince who is not inexperienced should take counsel from more than one he will never get united counsels, nor will he know how to unite them. Each of the counsellors will think of his own interests, and the prince will not know how to control them or to see through them. And they are not to be found otherwise, because men will always prove untrue to you unless they are kept honest by constraint. Therefore it must be inferred that good counsels, whencesoever they come, are born of the wisdom of the prince, and not the wisdom of the prince from good counsels.

## CHAPTER XXIV — WHY THE PRINCES OF ITALY HAVE LOST THEIR STATES

The previous suggestions, carefully observed, will enable a new prince to appear well established, and render him at once more secure and fixed in the state than if he had been long seated there. For the actions of a new prince are more narrowly observed than those of an hereditary one, and when they are seen to be able they gain more men and bind far tighter than ancient blood; because men are attracted more by the present than by the past, and when they find the present good they enjoy it and seek no further; they will also make the utmost defence of a prince if he fails them not in other things. Thus it will be a double glory for him to have established a new principality, and adorned and strengthened it with good laws, good arms, good allies, and with a good example; so will it be a double disgrace to him who, born a prince, shall lose his state by want of wisdom.

And if those seigniors are considered who have lost their states in Italy in our times, such as the King of Naples, the Duke of Milan, and others, there will be found in them, firstly, one common defect in regard to arms from the causes which have been discussed at length; in the next place, some one of them will be seen, either to have had the people hostile, or if he has had the people friendly, he has not known how to secure the nobles. In the absence of these defects states that have power enough to keep an army in the field cannot be lost.

Philip of Macedon, not the father of Alexander the Great, but he who was conquered by Titus Quintius, had not much territory compared to the greatness of the Romans and of Greece who attacked him, yet being a warlike man who knew how to attract the people and secure the nobles, he sustained the war against his enemies for many years, and if in the end he lost the dominion of some cities, nevertheless he retained the kingdom.

Therefore, do not let our princes accuse fortune for the loss of their principalities after so many years' possession, but rather their own sloth, because in quiet times they never thought there could be a change (it is a common defect in man not to make any provision in the calm against the

tempest), and when afterwards the bad times came they thought of flight and not of defending themselves, and they hoped that the people, disgusted with the insolence of the conquerors, would recall them. This course, when others fail, may be good, but it is very bad to have neglected all other expedients for that, since you would never wish to fall because you trusted to be able to find someone later on to restore you. This again either does not happen, or, if it does, it will not be for your security, because that deliverance is of no avail which does not depend upon yourself; those only are reliable, certain, and durable that depend on yourself and your valour.

## CHAPTER XXV — WHAT FORTUNE CAN EFFECT IN HUMAN AFFAIRS AND HOW TO WITHSTAND HER

It is not unknown to me how many men have had, and still have, the opinion that the affairs of the world are in such wise governed by fortune and by God that men with their wisdom cannot direct them and that no one can even help them; and because of this they would have us believe that it is not necessary to labour much in affairs, but to let chance govern them. This opinion has been more credited in our times because of the great changes in affairs which have been seen, and may still be seen, every day, beyond all human conjecture. Sometimes pondering over this, I am in some degree inclined to their opinion. Nevertheless, not to extinguish our free will, I hold it to be true that Fortune is the arbiter of one-half of our actions, (\*) but that she still leaves us to direct the other half, or perhaps a little less.

(\*) Frederick the Great was accustomed to say: "The older one gets the more convinced one becomes that his Majesty King Chance does three-quarters of the business of this miserable universe." Sorel's "Eastern Question."

I compare her to one of those raging rivers, which when in flood overflows the plains, sweeping away trees and buildings, bearing away the soil from place to place; everything flies before it, all yield to its violence, without being able in any way to withstand it; and yet, though its nature be such, it does not follow therefore that men, when the weather becomes fair, shall not make provision, both with defences and barriers, in such a manner that, rising again, the waters may pass away by canal, and their force be neither so unrestrained nor so dangerous. So it happens with fortune, who shows her power where valour has not prepared to resist her, and thither she turns her forces where she knows that barriers and defences have not been raised to constrain her.

And if you will consider Italy, which is the seat of these changes, and which has given to them their impulse, you will see it to be an open country without barriers and without any defence. For if it had been defended by proper valour, as are Germany, Spain, and France, either this invasion

would not have made the great changes it has made or it would not have come at all. And this I consider enough to say concerning resistance to fortune in general.

But confining myself more to the particular, I say that a prince may be seen happy to-day and ruined to-morrow without having shown any change of disposition or character. This, I believe, arises firstly from causes that have already been discussed at length, namely, that the prince who relies entirely on fortune is lost when it changes. I believe also that he will be successful who directs his actions according to the spirit of the times, and that he whose actions do not accord with the times will not be successful. Because men are seen, in affairs that lead to the end which every man has before him, namely, glory and riches, to get there by various methods; one with caution, another with haste; one by force, another by skill; one by patience, another by its opposite; and each one succeeds in reaching the goal by a different method. One can also see of two cautious men the one attain his end, the other fail; and similarly, two men by different observances are equally successful, the one being cautious, the other impetuous; all this arises from nothing else than whether or not they conform in their methods to the spirit of the times. This follows from what I have said, that two men working differently bring about the same effect, and of two working similarly, one attains his object and the other does not.

Changes in estate also issue from this, for if, to one who governs himself with caution and patience, times and affairs converge in such a way that his administration is successful, his fortune is made; but if times and affairs change, he is ruined if he does not change his course of action. But a man is not often found sufficiently circumspect to know how to accommodate himself to the change, both because he cannot deviate from what nature inclines him to do, and also because, having always prospered by acting in one way, he cannot be persuaded that it is well to leave it; and, therefore, the cautious man, when it is time to turn adventurous, does not know how to do it, hence he is ruined; but had he changed his conduct with the times fortune would not have changed.

Pope Julius the Second went to work impetuously in all his affairs, and found the times and circumstances conform so well to that line of action that he always met with success. Consider his first enterprise against Bologna, Messer Giovanni Bentivogli being still alive. The Venetians were

not agreeable to it, nor was the King of Spain, and he had the enterprise still under discussion with the King of France; nevertheless he personally entered upon the expedition with his accustomed boldness and energy, a move which made Spain and the Venetians stand irresolute and passive, the latter from fear, the former from desire to recover the kingdom of Naples; on the other hand, he drew after him the King of France, because that king, having observed the movement, and desiring to make the Pope his friend so as to humble the Venetians, found it impossible to refuse him. Therefore Julius with his impetuous action accomplished what no other pontiff with simple human wisdom could have done; for if he had waited in Rome until he could get away, with his plans arranged and everything fixed, as any other pontiff would have done, he would never have succeeded. Because the King of France would have made a thousand excuses, and the others would have raised a thousand fears.

I will leave his other actions alone, as they were all alike, and they all succeeded, for the shortness of his life did not let him experience the contrary; but if circumstances had arisen which required him to go cautiously, his ruin would have followed, because he would never have deviated from those ways to which nature inclined him.

I conclude, therefore that, fortune being changeful and mankind steadfast in their ways, so long as the two are in agreement men are successful, but unsuccessful when they fall out. For my part I consider that it is better to be adventurous than cautious, because fortune is a woman, and if you wish to keep her under it is necessary to beat and ill-use her; and it is seen that she allows herself to be mastered by the adventurous rather than by those who go to work more coldly. She is, therefore, always, woman-like, a lover of young men, because they are less cautious, more violent, and with more audacity command her.

## CHAPTER XXVI — AN EXHORTATION TO LIBERATE ITALY FROM THE BARBARIANS

Having carefully considered the subject of the above discourses, and wondering within myself whether the present times were propitious to a new prince, and whether there were elements that would give an opportunity to a wise and virtuous one to introduce a new order of things which would do honour to him and good to the people of this country, it appears to me that so many things concur to favour a new prince that I never knew a time more fit than the present.

And if, as I said, it was necessary that the people of Israel should be captive so as to make manifest the ability of Moses; that the Persians should be oppressed by the Medes so as to discover the greatness of the soul of Cyrus; and that the Athenians should be dispersed to illustrate the capabilities of Theseus: then at the present time, in order to discover the virtue of an Italian spirit, it was necessary that Italy should be reduced to the extremity that she is now in, that she should be more enslaved than the Hebrews, more oppressed than the Persians, more scattered than the Athenians; without head, without order, beaten, despoiled, torn, overrun; and to have endured every kind of desolation.

Although lately some spark may have been shown by one, which made us think he was ordained by God for our redemption, nevertheless it was afterwards seen, in the height of his career, that fortune rejected him; so that Italy, left as without life, waits for him who shall yet heal her wounds and put an end to the ravaging and plundering of Lombardy, to the swindling and taxing of the kingdom and of Tuscany, and cleanse those sores that for long have festered. It is seen how she entreats God to send someone who shall deliver her from these wrongs and barbarous insolencies. It is seen also that she is ready and willing to follow a banner if only someone will raise it.

Nor is there to be seen at present one in whom she can place more hope than in your illustrious house, (\*) with its valour and fortune, favoured by God and by the Church of which it is now the chief, and which could be

made the head of this redemption. This will not be difficult if you will recall to yourself the actions and lives of the men I have named. And although they were great and wonderful men, yet they were men, and each one of them had no more opportunity than the present offers, for their enterprises were neither more just nor easier than this, nor was God more their friend than He is yours.

(\*) Giuliano de Medici. He had just been created a cardinal by Leo X. In 1523 Giuliano was elected Pope, and took the title of Clement VII.

With us there is great justice, because that war is just which is necessary, and arms are hallowed when there is no other hope but in them. Here there is the greatest willingness, and where the willingness is great the difficulties cannot be great if you will only follow those men to whom I have directed your attention. Further than this, how extraordinarily the ways of God have been manifested beyond example: the sea is divided, a cloud has led the way, the rock has poured forth water, it has rained manna, everything has contributed to your greatness; you ought to do the rest. God is not willing to do everything, and thus take away our free will and that share of glory which belongs to us.

And it is not to be wondered at if none of the above-named Italians have been able to accomplish all that is expected from your illustrious house; and if in so many revolutions in Italy, and in so many campaigns, it has always appeared as if military virtue were exhausted, this has happened because the old order of things was not good, and none of us have known how to find a new one. And nothing honours a man more than to establish new laws and new ordinances when he himself was newly risen. Such things when they are well founded and dignified will make him revered and admired, and in Italy there are not wanting opportunities to bring such into use in every form.

Here there is great valour in the limbs whilst it fails in the head. Look attentively at the duels and the hand-to-hand combats, how superior the Italians are in strength, dexterity, and subtlety. But when it comes to armies they do not bear comparison, and this springs entirely from the insufficiency of the leaders, since those who are capable are not obedient, and each one seems to himself to know, there having never been any one so distinguished above the rest, either by valour or fortune, that others would yield to him. Hence it is that for so long a time, and during so much fighting

in the past twenty years, whenever there has been an army wholly Italian, it has always given a poor account of itself; the first witness to this is Il Taro, afterwards Alessandria, Capua, Genoa, Vaila, Bologna, Mestri.(\*)

(\* The battles of Il Taro, 1495; Alessandria, 1499; Capua, 1501; Genoa, 1507; Vaila, 1509; Bologna, 1511; Mestri, 1513.

If, therefore, your illustrious house wishes to follow these remarkable men who have redeemed their country, it is necessary before all things, as a true foundation for every enterprise, to be provided with your own forces, because there can be no more faithful, truer, or better soldiers. And although singly they are good, altogether they will be much better when they find themselves commanded by their prince, honoured by him, and maintained at his expense. Therefore it is necessary to be prepared with such arms, so that you can be defended against foreigners by Italian valour.

And although Swiss and Spanish infantry may be considered very formidable, nevertheless there is a defect in both, by reason of which a third order would not only be able to oppose them, but might be relied upon to overthrow them. For the Spaniards cannot resist cavalry, and the Switzers are afraid of infantry whenever they encounter them in close combat. Owing to this, as has been and may again be seen, the Spaniards are unable to resist French cavalry, and the Switzers are overthrown by Spanish infantry. And although a complete proof of this latter cannot be shown, nevertheless there was some evidence of it at the battle of Ravenna, when the Spanish infantry were confronted by German battalions, who follow the same tactics as the Swiss; when the Spaniards, by agility of body and with the aid of their shields, got in under the pikes of the Germans and stood out of danger, able to attack, while the Germans stood helpless, and, if the cavalry had not dashed up, all would have been over with them. It is possible, therefore, knowing the defects of both these infantries, to invent a new one, which will resist cavalry and not be afraid of infantry; this need not create a new order of arms, but a variation upon the old. And these are the kind of improvements which confer reputation and power upon a new prince.

This opportunity, therefore, ought not to be allowed to pass for letting Italy at last see her liberator appear. Nor can one express the love with which he would be received in all those provinces which have suffered so much from these foreign scourings, with what thirst for revenge, with what stubborn faith, with what devotion, with what tears. What door would be

closed to him? Who would refuse obedience to him? What envy would hinder him? What Italian would refuse him homage? To all of us this barbarous dominion stinks. Let, therefore, your illustrious house take up this charge with that courage and hope with which all just enterprises are undertaken, so that under its standard our native country may be ennobled, and under its auspices may be verified that saying of Petrarch:

Virtu contro al Furore  
Prendera l'arme, e fia il combatter corto:  
Che l'antico valore  
Negli italici cuor non e ancor morto.

Virtue against fury shall advance the fight,  
And it i' th' combat soon shall put to flight:  
For the old Roman valour is not dead,  
Nor in th' Italians' brests extinguished.

Edward Dacre, 1640.

**DESCRIPTION OF THE METHODS ADOPTED  
BY THE DUKE VALENTINO WHEN  
MURDERING VITELLOZZO VITELLI,  
OLIVEROTTO DA FERMO, THE SIGNOR  
PAGOLO, AND THE DUKE DI GRAVINA  
ORSINI**

**BY**

## NICOLO MACHIAVELLI

The Duke Valentino had returned from Lombardy, where he had been to clear himself with the King of France from the calumnies which had been raised against him by the Florentines concerning the rebellion of Arezzo and other towns in the Val di Chiana, and had arrived at Imola, whence he intended with his army to enter upon the campaign against Giovanni Bentivogli, the tyrant of Bologna: for he intended to bring that city under his domination, and to make it the head of his Romagnian duchy.

These matters coming to the knowledge of the Vitelli and Orsini and their following, it appeared to them that the duke would become too powerful, and it was feared that, having seized Bologna, he would seek to destroy them in order that he might become supreme in Italy. Upon this a meeting was called at Magione in the district of Perugia, to which came the cardinal, Pagolo, and the Duke di Gravina Orsini, Vitellozzo Vitelli, Oliverotto da Fermo, Gianpagolo Baglioni, the tyrant of Perugia, and Messer Antonio da Venafro, sent by Pandolfo Petrucci, the Prince of Siena. Here were discussed the power and courage of the duke and the necessity of curbing his ambitions, which might otherwise bring danger to the rest of being ruined. And they decided not to abandon the Bentivogli, but to strive to win over the Florentines; and they sent their men to one place and another, promising to one party assistance and to another encouragement to unite with them against the common enemy. This meeting was at once reported throughout all Italy, and those who were discontented under the duke, among whom were the people of Urbino, took hope of effecting a revolution.

Thus it arose that, men's minds being thus unsettled, it was decided by certain men of Urbino to seize the fortress of San Leo, which was held for the duke, and which they captured by the following means. The castellan was fortifying the rock and causing timber to be taken there; so the conspirators watched, and when certain beams which were being carried to the rock were upon the bridge, so that it was prevented from being drawn up by those inside, they took the opportunity of leaping upon the bridge and

thence into the fortress. Upon this capture being effected, the whole state rebelled and recalled the old duke, being encouraged in this, not so much by the capture of the fort, as by the Diet at Magione, from whom they expected to get assistance.

Those who heard of the rebellion at Urbino thought they would not lose the opportunity, and at once assembled their men so as to take any town, should any remain in the hands of the duke in that state; and they sent again to Florence to beg that republic to join with them in destroying the common firebrand, showing that the risk was lessened and that they ought not to wait for another opportunity.

But the Florentines, from hatred, for sundry reasons, of the Vitelli and Orsini, not only would not ally themselves, but sent Nicolo Machiavelli, their secretary, to offer shelter and assistance to the duke against his enemies. The duke was found full of fear at Imola, because, against everybody's expectation, his soldiers had at once gone over to the enemy and he found himself disarmed and war at his door. But recovering courage from the offers of the Florentines, he decided to temporize before fighting with the few soldiers that remained to him, and to negotiate for a reconciliation, and also to get assistance. This latter he obtained in two ways, by sending to the King of France for men and by enlisting men-at-arms and others whom he turned into cavalry of a sort: to all he gave money.

Notwithstanding this, his enemies drew near to him, and approached Fossombrone, where they encountered some men of the duke and, with the aid of the Orsini and Vitelli, routed them. When this happened, the duke resolved at once to see if he could not close the trouble with offers of reconciliation, and being a most perfect dissembler he did not fail in any practices to make the insurgents understand that he wished every man who had acquired anything to keep it, as it was enough for him to have the title of prince, whilst others might have the principality.

And the duke succeeded so well in this that they sent Signor Pagolo to him to negotiate for a reconciliation, and they brought their army to a standstill. But the duke did not stop his preparations, and took every care to provide himself with cavalry and infantry, and that such preparations might not be apparent to the others, he sent his troops in separate parties to every part of the Romagna. In the meanwhile there came also to him five hundred

French lancers, and although he found himself sufficiently strong to take vengeance on his enemies in open war, he considered that it would be safer and more advantageous to outwit them, and for this reason he did not stop the work of reconciliation.

And that this might be effected the duke concluded a peace with them in which he confirmed their former covenants; he gave them four thousand ducats at once; he promised not to injure the Bentivogli; and he formed an alliance with Giovanni; and moreover he would not force them to come personally into his presence unless it pleased them to do so. On the other hand, they promised to restore to him the duchy of Urbino and other places seized by them, to serve him in all his expeditions, and not to make war against or ally themselves with any one without his permission.

This reconciliation being completed, Guido Ubaldo, the Duke of Urbino, again fled to Venice, having first destroyed all the fortresses in his state; because, trusting in the people, he did not wish that the fortresses, which he did not think he could defend, should be held by the enemy, since by these means a check would be kept upon his friends. But the Duke Valentino, having completed this convention, and dispersed his men throughout the Romagna, set out for Imola at the end of November together with his French men-at-arms: thence he went to Cesena, where he stayed some time to negotiate with the envoys of the Vitelli and Orsini, who had assembled with their men in the duchy of Urbino, as to the enterprise in which they should now take part; but nothing being concluded, Oliverotto da Fermo was sent to propose that if the duke wished to undertake an expedition against Tuscany they were ready; if he did not wish it, then they would besiege Sinigalia. To this the duke replied that he did not wish to enter into war with Tuscany, and thus become hostile to the Florentines, but that he was very willing to proceed against Sinigalia.

It happened that not long afterwards the town surrendered, but the fortress would not yield to them because the castellan would not give it up to any one but the duke in person; therefore they exhorted him to come there. This appeared a good opportunity to the duke, as, being invited by them, and not going of his own will, he would awaken no suspicions. And the more to reassure them, he allowed all the French men-at-arms who were with him in Lombardy to depart, except the hundred lancers under Mons. di Candales, his brother-in-law. He left Cesena about the middle of December,

and went to Fano, and with the utmost cunning and cleverness he persuaded the Vitelli and Orsini to wait for him at Sinigalia, pointing out to them that any lack of compliance would cast a doubt upon the sincerity and permanency of the reconciliation, and that he was a man who wished to make use of the arms and councils of his friends. But Vitellozzo remained very stubborn, for the death of his brother warned him that he should not offend a prince and afterwards trust him; nevertheless, persuaded by Pagolo Orsini, whom the duke had corrupted with gifts and promises, he agreed to wait.

Upon this the duke, before his departure from Fano, which was to be on 30th December 1502, communicated his designs to eight of his most trusted followers, among whom were Don Michele and the Monsignor d'Euna, who was afterwards cardinal; and he ordered that, as soon as Vitellozzo, Pagolo Orsini, the Duke di Gravina, and Oliverotto should arrive, his followers in pairs should take them one by one, entrusting certain men to certain pairs, who should entertain them until they reached Sinigalia; nor should they be permitted to leave until they came to the duke's quarters, where they should be seized.

The duke afterwards ordered all his horsemen and infantry, of which there were more than two thousand cavalry and ten thousand footmen, to assemble by daybreak at the Metauro, a river five miles distant from Fano, and await him there. He found himself, therefore, on the last day of December at the Metauro with his men, and having sent a cavalcade of about two hundred horsemen before him, he then moved forward the infantry, whom he accompanied with the rest of the men-at-arms.

Fano and Sinigalia are two cities of La Marca situated on the shore of the Adriatic Sea, fifteen miles distant from each other, so that he who goes towards Sinigalia has the mountains on his right hand, the bases of which are touched by the sea in some places. The city of Sinigalia is distant from the foot of the mountains a little more than a bow-shot and from the shore about a mile. On the side opposite to the city runs a little river which bathes that part of the walls looking towards Fano, facing the high road. Thus he who draws near to Sinigalia comes for a good space by road along the mountains, and reaches the river which passes by Sinigalia. If he turns to his left hand along the bank of it, and goes for the distance of a bow-shot, he arrives at a bridge which crosses the river; he is then almost abreast of

the gate that leads into Sinigalia, not by a straight line, but transversely. Before this gate there stands a collection of houses with a square to which the bank of the river forms one side.

The Vitelli and Orsini having received orders to wait for the duke, and to honour him in person, sent away their men to several castles distant from Sinigalia about six miles, so that room could be made for the men of the duke; and they left in Sinigalia only Oliverotto and his band, which consisted of one thousand infantry and one hundred and fifty horsemen, who were quartered in the suburb mentioned above. Matters having been thus arranged, the Duke Valentino left for Sinigalia, and when the leaders of the cavalry reached the bridge they did not pass over, but having opened it, one portion wheeled towards the river and the other towards the country, and a way was left in the middle through which the infantry passed, without stopping, into the town.

Vitellozzo, Pagolo, and the Duke di Gravina on mules, accompanied by a few horsemen, went towards the duke; Vitellozzo, unarmed and wearing a cape lined with green, appeared very dejected, as if conscious of his approaching death—a circumstance which, in view of the ability of the man and his former fortune, caused some amazement. And it is said that when he parted from his men before setting out for Sinigalia to meet the duke he acted as if it were his last parting from them. He recommended his house and its fortunes to his captains, and advised his nephews that it was not the fortune of their house, but the virtues of their fathers that should be kept in mind. These three, therefore, came before the duke and saluted him respectfully, and were received by him with goodwill; they were at once placed between those who were commissioned to look after them.

But the duke noticing that Oliverotto, who had remained with his band in Sinigalia, was missing—for Oliverotto was waiting in the square before his quarters near the river, keeping his men in order and drilling them—signalled with his eye to Don Michelle, to whom the care of Oliverotto had been committed, that he should take measures that Oliverotto should not escape. Therefore Don Michele rode off and joined Oliverotto, telling him that it was not right to keep his men out of their quarters, because these might be taken up by the men of the duke; and he advised him to send them at once to their quarters and to come himself to meet the duke. And Oliverotto, having taken this advice, came before the duke, who, when he

saw him, called to him; and Oliverotto, having made his obeisance, joined the others.

So the whole party entered Sinigalia, dismounted at the duke's quarters, and went with him into a secret chamber, where the duke made them prisoners; he then mounted on horseback, and issued orders that the men of Oliverotto and the Orsini should be stripped of their arms. Those of Oliverotto, being at hand, were quickly settled, but those of the Orsini and Vitelli, being at a distance, and having a presentiment of the destruction of their masters, had time to prepare themselves, and bearing in mind the valour and discipline of the Orsinian and Vitellian houses, they stood together against the hostile forces of the country and saved themselves.

But the duke's soldiers, not being content with having pillaged the men of Oliverotto, began to sack Sinigalia, and if the duke had not repressed this outrage by killing some of them they would have completely sacked it. Night having come and the tumult being silenced, the duke prepared to kill Vitellozzo and Oliverotto; he led them into a room and caused them to be strangled. Neither of them used words in keeping with their past lives: Vitellozzo prayed that he might ask of the pope full pardon for his sins; Oliverotto cringed and laid the blame for all injuries against the duke on Vitellozzo. Pagolo and the Duke di Gravina Orsini were kept alive until the duke heard from Rome that the pope had taken the Cardinal Orsino, the Archbishop of Florence, and Messer Jacopo da Santa Croce. After which news, on 18th January 1502, in the castle of Pieve, they also were strangled in the same way.

**THE LIFE OF CASTRUCCIO CASTRACANI  
OF LUCCA**

**WRITTEN BY NICOLO MACHIAVELLI**

**And sent to his friends ZANOBI BUONDELMONTI And LUIGI  
ALAMANNI**

## CASTRUCCIO CASTRACANI 1284-1328

It appears, dearest Zanobi and Luigi, a wonderful thing to those who have considered the matter, that all men, or the larger number of them, who have performed great deeds in the world, and excelled all others in their day, have had their birth and beginning in baseness and obscurity; or have been aggrieved by Fortune in some outrageous way. They have either been exposed to the mercy of wild beasts, or they have had so mean a parentage that in shame they have given themselves out to be sons of Jove or of some other deity. It would be wearisome to relate who these persons may have been because they are well known to everybody, and, as such tales would not be particularly edifying to those who read them, they are omitted. I believe that these lowly beginnings of great men occur because Fortune is desirous of showing to the world that such men owe much to her and little to wisdom, because she begins to show her hand when wisdom can really take no part in their career: thus all success must be attributed to her. Castruccio Castracani of Lucca was one of those men who did great deeds, if he is measured by the times in which he lived and the city in which he was born; but, like many others, he was neither fortunate nor distinguished in his birth, as the course of this history will show. It appeared to be desirable to recall his memory, because I have discerned in him such indications of valour and fortune as should make him a great exemplar to men. I think also that I ought to call your attention to his actions, because you of all men I know delight most in noble deeds.

The family of Castracani was formerly numbered among the noble families of Lucca, but in the days of which I speak it had somewhat fallen in estate, as so often happens in this world. To this family was born a son Antonio, who became a priest of the order of San Michele of Lucca, and for this reason was honoured with the title of Messer Antonio. He had an only sister, who had been married to Buonaccorso Cenami, but Buonaccorso dying she became a widow, and not wishing to marry again went to live with her brother. Messer Antonio had a vineyard behind the house where he resided, and as it was bounded on all sides by gardens, any person could have access to it without difficulty. One morning, shortly after sunrise,

Madonna Dianora, as the sister of Messer Antonio was called, had occasion to go into the vineyard as usual to gather herbs for seasoning the dinner, and hearing a slight rustling among the leaves of a vine she turned her eyes in that direction, and heard something resembling the cry of an infant. Whereupon she went towards it, and saw the hands and face of a baby who was lying enveloped in the leaves and who seemed to be crying for its mother. Partly wondering and partly fearing, yet full of compassion, she lifted it up and carried it to the house, where she washed it and clothed it with clean linen as is customary, and showed it to Messer Antonio when he returned home. When he heard what had happened and saw the child he was not less surprised or compassionate than his sister. They discussed between themselves what should be done, and seeing that he was priest and that she had no children, they finally determined to bring it up. They had a nurse for it, and it was reared and loved as if it were their own child. They baptized it, and gave it the name of Castruccio after their father. As the years passed Castruccio grew very handsome, and gave evidence of wit and discretion, and learnt with a quickness beyond his years those lessons which Messer Antonio imparted to him. Messer Antonio intended to make a priest of him, and in time would have inducted him into his canonry and other benefices, and all his instruction was given with this object; but Antonio discovered that the character of Castruccio was quite unfitted for the priesthood. As soon as Castruccio reached the age of fourteen he began to take less notice of the chiding of Messer Antonio and Madonna Dianora and no longer to fear them; he left off reading ecclesiastical books, and turned to playing with arms, delighting in nothing so much as in learning their uses, and in running, leaping, and wrestling with other boys. In all exercises he far excelled his companions in courage and bodily strength, and if at any time he did turn to books, only those pleased him which told of wars and the mighty deeds of men. Messer Antonio beheld all this with vexation and sorrow.

There lived in the city of Lucca a gentleman of the Guinigi family, named Messer Francesco, whose profession was arms and who in riches, bodily strength, and valour excelled all other men in Lucca. He had often fought under the command of the Visconti of Milan, and as a Ghibelline was the valued leader of that party in Lucca. This gentleman resided in Lucca and was accustomed to assemble with others most mornings and evenings under the balcony of the Podesta, which is at the top of the square of San Michele,

the finest square in Lucca, and he had often seen Castruccio taking part with other children of the street in those games of which I have spoken. Noticing that Castruccio far excelled the other boys, and that he appeared to exercise a royal authority over them, and that they loved and obeyed him, Messer Francesco became greatly desirous of learning who he was. Being informed of the circumstances of the bringing up of Castruccio he felt a greater desire to have him near to him. Therefore he called him one day and asked him whether he would more willingly live in the house of a gentleman, where he would learn to ride horses and use arms, or in the house of a priest, where he would learn nothing but masses and the services of the Church. Messer Francesco could see that it pleased Castruccio greatly to hear horses and arms spoken of, even though he stood silent, blushing modestly; but being encouraged by Messer Francesco to speak, he answered that, if his master were agreeable, nothing would please him more than to give up his priestly studies and take up those of a soldier. This reply delighted Messer Francesco, and in a very short time he obtained the consent of Messer Antonio, who was driven to yield by his knowledge of the nature of the lad, and the fear that he would not be able to hold him much longer.

Thus Castruccio passed from the house of Messer Antonio the priest to the house of Messer Francesco Guinigi the soldier, and it was astonishing to find that in a very short time he manifested all that virtue and bearing which we are accustomed to associate with a true gentleman. In the first place he became an accomplished horseman, and could manage with ease the most fiery charger, and in all jousts and tournaments, although still a youth, he was observed beyond all others, and he excelled in all exercises of strength and dexterity. But what enhanced so much the charm of these accomplishments, was the delightful modesty which enabled him to avoid offence in either act or word to others, for he was deferential to the great men, modest with his equals, and courteous to his inferiors. These gifts made him beloved, not only by all the Guinigi family, but by all Lucca. When Castruccio had reached his eighteenth year, the Ghibellines were driven from Pavia by the Guelphs, and Messer Francesco was sent by the Visconti to assist the Ghibellines, and with him went Castruccio, in charge of his forces. Castruccio gave ample proof of his prudence and courage in this expedition, acquiring greater reputation than any other captain, and his

name and fame were known, not only in Pavia, but throughout all Lombardy.

Castruccio, having returned to Lucca in far higher estimation than he left it, did not omit to use all the means in his power to gain as many friends as he could, neglecting none of those arts which are necessary for that purpose. About this time Messer Francesco died, leaving a son thirteen years of age named Pagolo, and having appointed Castruccio to be his son's tutor and administrator of his estate. Before he died Francesco called Castruccio to him, and prayed him to show Pagolo that goodwill which he (Francesco) had always shown to HIM, and to render to the son the gratitude which he had not been able to repay to the father. Upon the death of Francesco, Castruccio became the governor and tutor of Pagolo, which increased enormously his power and position, and created a certain amount of envy against him in Lucca in place of the former universal goodwill, for many men suspected him of harbouring tyrannical intentions. Among these the leading man was Giorgio degli Opizi, the head of the Guelph party. This man hoped after the death of Messer Francesco to become the chief man in Lucca, but it seemed to him that Castruccio, with the great abilities which he already showed, and holding the position of governor, deprived him of his opportunity; therefore he began to sow those seeds which should rob Castruccio of his eminence. Castruccio at first treated this with scorn, but afterwards he grew alarmed, thinking that Messer Giorgio might be able to bring him into disgrace with the deputy of King Ruberto of Naples and have him driven out of Lucca.

The Lord of Pisa at that time was Ugucione of the Faggiuola of Arezzo, who being in the first place elected their captain afterwards became their lord. There resided in Paris some exiled Ghibellines from Lucca, with whom Castruccio held communications with the object of effecting their restoration by the help of Ugucione. Castruccio also brought into his plans friends from Lucca who would not endure the authority of the Opizi. Having fixed upon a plan to be followed, Castruccio cautiously fortified the tower of the Onesti, filling it with supplies and munitions of war, in order that it might stand a siege for a few days in case of need. When the night came which had been agreed upon with Ugucione, who had occupied the plain between the mountains and Pisa with many men, the signal was given, and without being observed Ugucione approached the gate of San Piero and set fire to the portcullis. Castruccio raised a great uproar within the city,

calling the people to arms and forcing open the gate from his side. Ugucione entered with his men, poured through the town, and killed Messer Giorgio with all his family and many of his friends and supporters. The governor was driven out, and the government reformed according to the wishes of Ugucione, to the detriment of the city, because it was found that more than one hundred families were exiled at that time. Of those who fled, part went to Florence and part to Pistoia, which city was the headquarters of the Guelph party, and for this reason it became most hostile to Ugucione and the Lucchese.

As it now appeared to the Florentines and others of the Guelph party that the Ghibellines absorbed too much power in Tuscany, they determined to restore the exiled Guelphs to Lucca. They assembled a large army in the Val di Nievole, and seized Montecatini; from thence they marched to Montecarlo, in order to secure the free passage into Lucca. Upon this Ugucione assembled his Pisan and Lucchese forces, and with a number of German cavalry which he drew out of Lombardy, he moved against the quarters of the Florentines, who upon the appearance of the enemy withdrew from Montecarlo, and posted themselves between Montecatini and Pescia. Ugucione now took up a position near to Montecarlo, and within about two miles of the enemy, and slight skirmishes between the horse of both parties were of daily occurrence. Owing to the illness of Ugucione, the Pisans and Lucchese delayed coming to battle with the enemy. Ugucione, finding himself growing worse, went to Montecarlo to be cured, and left the command of the army in the hands of Castruccio. This change brought about the ruin of the Guelphs, who, thinking that the hostile army having lost its captain had lost its head, grew over-confident. Castruccio observed this, and allowed some days to pass in order to encourage this belief; he also showed signs of fear, and did not allow any of the munitions of the camp to be used. On the other side, the Guelphs grew more insolent the more they saw these evidences of fear, and every day they drew out in the order of battle in front of the army of Castruccio. Presently, deeming that the enemy was sufficiently emboldened, and having mastered their tactics, he decided to join battle with them. First he spoke a few words of encouragement to his soldiers, and pointed out to them the certainty of victory if they would but obey his commands. Castruccio had noticed how the enemy had placed all his best troops in the centre of the line of battle, and his less reliable men on the wings of the army; whereupon he did

exactly the opposite, putting his most valiant men on the flanks, while those on whom he could not so strongly rely he moved to the centre. Observing this order of battle, he drew out of his lines and quickly came in sight of the hostile army, who, as usual, had come in their insolence to defy him. He then commanded his centre squadrons to march slowly, whilst he moved rapidly forward those on the wings. Thus, when they came into contact with the enemy, only the wings of the two armies became engaged, whilst the centre battalions remained out of action, for these two portions of the line of battle were separated from each other by a long interval and thus unable to reach each other. By this expedient the more valiant part of Castruccio's men were opposed to the weaker part of the enemy's troops, and the most efficient men of the enemy were disengaged; and thus the Florentines were unable to fight with those who were arrayed opposite to them, or to give any assistance to their own flanks. So, without much difficulty, Castruccio put the enemy to flight on both flanks, and the centre battalions took to flight when they found themselves exposed to attack, without having a chance of displaying their valour. The defeat was complete, and the loss in men very heavy, there being more than ten thousand men killed with many officers and knights of the Guelph party in Tuscany, and also many princes who had come to help them, among whom were Piero, the brother of King Ruberto, and Carlo, his nephew, and Filippo, the lord of Taranto. On the part of Castruccio the loss did not amount to more than three hundred men, among whom was Francesco, the son of Ugucione, who, being young and rash, was killed in the first onset.

This victory so greatly increased the reputation of Castruccio that Ugucione conceived some jealousy and suspicion of him, because it appeared to Ugucione that this victory had given him no increase of power, but rather than diminished it. Being of this mind, he only waited for an opportunity to give effect to it. This occurred on the death of Pier Agnolo Micheli, a man of great repute and abilities in Lucca, the murderer of whom fled to the house of Castruccio for refuge. On the sergeants of the captain going to arrest the murderer, they were driven off by Castruccio, and the murderer escaped. This affair coming to the knowledge of Ugucione, who was then at Pisa, it appeared to him a proper opportunity to punish Castruccio. He therefore sent for his son Neri, who was the governor of Lucca, and commissioned him to take Castruccio prisoner at a banquet and put him to death. Castruccio, fearing no evil, went to the governor in a

friendly way, was entertained at supper, and then thrown into prison. But Neri, fearing to put him to death lest the people should be incensed, kept him alive, in order to hear further from his father concerning his intentions. Ugucionne cursed the hesitation and cowardice of his son, and at once set out from Pisa to Lucca with four hundred horsemen to finish the business in his own way; but he had not yet reached the baths when the Pisans rebelled and put his deputy to death and created Count Gaddo della Gherardesca their lord. Before Ugucione reached Lucca he heard of the occurrences at Pisa, but it did not appear wise to him to turn back, lest the Lucchese with the example of Pisa before them should close their gates against him. But the Lucchese, having heard of what had happened at Pisa, availed themselves of this opportunity to demand the liberation of Castruccio, notwithstanding that Ugucione had arrived in their city. They first began to speak of it in private circles, afterwards openly in the squares and streets; then they raised a tumult, and with arms in their hands went to Ugucione and demanded that Castruccio should be set at liberty. Ugucione, fearing that worse might happen, released him from prison. Whereupon Castruccio gathered his friends around him, and with the help of the people attacked Ugucione; who, finding he had no resource but in flight, rode away with his friends to Lombardy, to the lords of Scale, where he died in poverty.

But Castruccio from being a prisoner became almost a prince in Lucca, and he carried himself so discreetly with his friends and the people that they appointed him captain of their army for one year. Having obtained this, and wishing to gain renown in war, he planned the recovery of the many towns which had rebelled after the departure of Ugucione, and with the help of the Pisans, with whom he had concluded a treaty, he marched to Serezana. To capture this place he constructed a fort against it, which is called to-day Zerezzanello; in the course of two months Castruccio captured the town. With the reputation gained at that siege, he rapidly seized Massa, Carrara, and Lavenza, and in a short time had overrun the whole of Lunigiana. In order to close the pass which leads from Lombardy to Lunigiana, he besieged Pontremoli and wrested it from the hands of Messer Anastagio Palavicini, who was the lord of it. After this victory he returned to Lucca, and was welcomed by the whole people. And now Castruccio, deeming it imprudent any longer to defer making himself a prince, got himself created the lord of Lucca by the help of Pazzino del Poggio, Puccinello dal Portico, Francesco Boccansacchi, and Cecco Guinigi, all of whom he had corrupted;

and he was afterwards solemnly and deliberately elected prince by the people. At this time Frederick of Bavaria, the King of the Romans, came into Italy to assume the Imperial crown, and Castruccio, in order that he might make friends with him, met him at the head of five hundred horsemen. Castruccio had left as his deputy in Lucca, Pagolo Guinigi, who was held in high estimation, because of the people's love for the memory of his father. Castruccio was received in great honour by Frederick, and many privileges were conferred upon him, and he was appointed the emperor's lieutenant in Tuscany. At this time the Pisans were in great fear of Gaddo della Gherardesca, whom they had driven out of Pisa, and they had recourse for assistance to Frederick. Frederick created Castruccio the lord of Pisa, and the Pisans, in dread of the Guelph party, and particularly of the Florentines, were constrained to accept him as their lord.

Frederick, having appointed a governor in Rome to watch his Italian affairs, returned to Germany. All the Tuscan and Lombardian Ghibellines, who followed the imperial lead, had recourse to Castruccio for help and counsel, and all promised him the governorship of his country, if enabled to recover it with his assistance. Among these exiles were Matteo Guidi, Nardo Scolari, Lapo Uberti, Gerozzo Nardi, and Piero Buonaccorsi, all exiled Florentines and Ghibellines. Castruccio had the secret intention of becoming the master of all Tuscany by the aid of these men and of his own forces; and in order to gain greater weight in affairs, he entered into a league with Messer Matteo Visconti, the Prince of Milan, and organized for him the forces of his city and the country districts. As Lucca had five gates, he divided his own country districts into five parts, which he supplied with arms, and enrolled the men under captains and ensigns, so that he could quickly bring into the field twenty thousand soldiers, without those whom he could summon to his assistance from Pisa. While he surrounded himself with these forces and allies, it happened at Messer Matteo Visconti was attacked by the Guelphs of Piacenza, who had driven out the Ghibellines with the assistance of a Florentine army and the King Ruberto. Messer Matteo called upon Castruccio to invade the Florentines in their own territories, so that, being attacked at home, they should be compelled to draw their army out of Lombardy in order to defend themselves. Castruccio invaded the Valdarno, and seized Fucecchio and San Miniato, inflicting immense damage upon the country. Whereupon the Florentines recalled

their army, which had scarcely reached Tuscany, when Castruccio was forced by other necessities to return to Lucca.

There resided in the city of Lucca the Poggio family, who were so powerful that they could not only elevate Castruccio, but even advance him to the dignity of prince; and it appearing to them they had not received such rewards for their services as they deserved, they incited other families to rebel and to drive Castruccio out of Lucca. They found their opportunity one morning, and arming themselves, they set upon the lieutenant whom Castruccio had left to maintain order and killed him. They endeavoured to raise the people in revolt, but Stefano di Poggio, a peaceable old man who had taken no hand in the rebellion, intervened and compelled them by his authority to lay down their arms; and he offered to be their mediator with Castruccio to obtain from him what they desired. Therefore they laid down their arms with no greater intelligence than they had taken them up. Castruccio, having heard the news of what had happened at Lucca, at once put Pagolo Guinigi in command of the army, and with a troop of cavalry set out for home. Contrary to his expectations, he found the rebellion at an end, yet he posted his men in the most advantageous places throughout the city. As it appeared to Stefano that Castruccio ought to be very much obliged to him, he sought him out, and without saying anything on his own behalf, for he did not recognize any need for doing so, he begged Castruccio to pardon the other members of his family by reason of their youth, their former friendships, and the obligations which Castruccio was under to their house. To this Castruccio graciously responded, and begged Stefano to reassure himself, declaring that it gave him more pleasure to find the tumult at an end than it had ever caused him anxiety to hear of its inception. He encouraged Stefano to bring his family to him, saying that he thanked God for having given him the opportunity of showing his clemency and liberality. Upon the word of Stefano and Castruccio they surrendered, and with Stefano were immediately thrown into prison and put to death. Meanwhile the Florentines had recovered San Miniato, whereupon it seemed advisable to Castruccio to make peace, as it did not appear to him that he was sufficiently secure at Lucca to leave him. He approached the Florentines with the proposal of a truce, which they readily entertained, for they were weary of the war, and desirous of getting rid of the expenses of it. A treaty was concluded with them for two years, by which both parties agreed to keep the conquests they had made. Castruccio thus released from

this trouble, turned his attention to affairs in Lucca, and in order that he should not again be subject to the perils from which he had just escaped, he, under various pretences and reasons, first wiped out all those who by their ambition might aspire to the principality; not sparing one of them, but depriving them of country and property, and those whom he had in his hands of life also, stating that he had found by experience that none of them were to be trusted. Then for his further security he raised a fortress in Lucca with the stones of the towers of those whom he had killed or hunted out of the state.

Whilst Castruccio made peace with the Florentines, and strengthened his position in Lucca, he neglected no opportunity, short of open war, of increasing his importance elsewhere. It appeared to him that if he could get possession of Pistoia, he would have one foot in Florence, which was his great desire. He, therefore, in various ways made friends with the mountaineers, and worked matters so in Pistoia that both parties confided their secrets to him. Pistoia was divided, as it always had been, into the Bianchi and Neri parties; the head of the Bianchi was Bastiano di Possente, and of the Neri, Jacopo da Gia. Each of these men held secret communications with Castruccio, and each desired to drive the other out of the city; and, after many threatenings, they came to blows. Jacopo fortified himself at the Florentine gate, Bastiano at that of the Lucchese side of the city; both trusted more in Castruccio than in the Florentines, because they believed that Castruccio was far more ready and willing to fight than the Florentines, and they both sent to him for assistance. He gave promises to both, saying to Bastiano that he would come in person, and to Jacopo that he would send his pupil, Pagolo Guinigi. At the appointed time he sent forward Pagolo by way of Pisa, and went himself direct to Pistoia; at midnight both of them met outside the city, and both were admitted as friends. Thus the two leaders entered, and at a signal given by Castruccio, one killed Jacopo da Gia, and the other Bastiano di Possente, and both took prisoners or killed the partisans of either faction. Without further opposition Pistoia passed into the hands of Castruccio, who, having forced the Signoria to leave the palace, compelled the people to yield obedience to him, making them many promises and remitting their old debts. The countryside flocked to the city to see the new prince, and all were filled with hope and quickly settled down, influenced in a great measure by his great valour.

About this time great disturbances arose in Rome, owing to the dearness of living which was caused by the absence of the pontiff at Avignon. The German governor, Enrico, was much blamed for what happened—murders and tumults following each other daily, without his being able to put an end to them. This caused Enrico much anxiety lest the Romans should call in Ruberto, the King of Naples, who would drive the Germans out of the city, and bring back the Pope. Having no nearer friend to whom he could apply for help than Castruccio, he sent to him, begging him not only to give him assistance, but also to come in person to Rome. Castruccio considered that he ought not to hesitate to render the emperor this service, because he believed that he himself would not be safe if at any time the emperor ceased to hold Rome. Leaving Pagolo Guinigi in command at Lucca, Castruccio set out for Rome with six hundred horsemen, where he was received by Enrico with the greatest distinction. In a short time the presence of Castruccio obtained such respect for the emperor that, without bloodshed or violence, good order was restored, chiefly by reason of Castruccio having sent by sea from the country round Pisa large quantities of corn, and thus removed the source of the trouble. When he had chastised some of the Roman leaders, and admonished others, voluntary obedience was rendered to Enrico. Castruccio received many honours, and was made a Roman senator. This dignity was assumed with the greatest pomp, Castruccio being clothed in a brocaded toga, which had the following words embroidered on its front: "I am what God wills." Whilst on the back was: "What God desires shall be."

During this time the Florentines, who were much enraged that Castruccio should have seized Pistoia during the truce, considered how they could tempt the city to rebel, to do which they thought would not be difficult in his absence. Among the exiled Pistoians in Florence were Baldo Cecchi and Jacopo Baldini, both men of leading and ready to face danger. These men kept up communications with their friends in Pistoia, and with the aid of the Florentines entered the city by night, and after driving out some of Castruccio's officials and partisans, and killing others, they restored the city to its freedom. The news of this greatly angered Castruccio, and taking leave of Enrico, he pressed on in great haste to Pistoia. When the Florentines heard of his return, knowing that he would lose no time, they decided to intercept him with their forces in the Val di Nievole, under the belief that by doing so they would cut off his road to Pistoia. Assembling a

great army of the supporters of the Guelph cause, the Florentines entered the Pistoian territories. On the other hand, Castruccio reached Montecarlo with his army; and having heard where the Florentines lay, he decided not to encounter it in the plains of Pistoia, nor to await it in the plains of Pescia, but, as far as he possibly could, to attack it boldly in the Pass of Serravalle. He believed that if he succeeded in this design, victory was assured, although he was informed that the Florentines had thirty thousand men, whilst he had only twelve thousand. Although he had every confidence in his own abilities and the valour of his troops, yet he hesitated to attack his enemy in the open lest he should be overwhelmed by numbers. Serravalle is a castle between Pescia and Pistoia, situated on a hill which blocks the Val di Nievole, not in the exact pass, but about a bowshot beyond; the pass itself is in places narrow and steep, whilst in general it ascends gently, but is still narrow, especially at the summit where the waters divide, so that twenty men side by side could hold it. The lord of Serravalle was Manfred, a German, who, before Castruccio became lord of Pistoia, had been allowed to remain in possession of the castle, it being common to the Lucchese and the Pistoians, and unclaimed by either—neither of them wishing to displace Manfred as long as he kept his promise of neutrality, and came under obligations to no one. For these reasons, and also because the castle was well fortified, he had always been able to maintain his position. It was here that Castruccio had determined to fall upon his enemy, for here his few men would have the advantage, and there was no fear lest, seeing the large masses of the hostile force before they became engaged, they should not stand. As soon as this trouble with Florence arose, Castruccio saw the immense advantage which possession of this castle would give him, and having an intimate friendship with a resident in the castle, he managed matters so with him that four hundred of his men were to be admitted into the castle the night before the attack on the Florentines, and the castellan put to death.

Castruccio, having prepared everything, had now to encourage the Florentines to persist in their desire to carry the seat of war away from Pistoia into the Val di Nievole, therefore he did not move his army from Montecarlo. Thus the Florentines hurried on until they reached their encampment under Serravalle, intending to cross the hill on the following morning. In the meantime, Castruccio had seized the castle at night, had also moved his army from Montecarlo, and marching from thence at

midnight in dead silence, had reached the foot of Serravalle: thus he and the Florentines commenced the ascent of the hill at the same time in the morning. Castruccio sent forward his infantry by the main road, and a troop of four hundred horsemen by a path on the left towards the castle. The Florentines sent forward four hundred cavalry ahead of their army which was following, never expecting to find Castruccio in possession of the hill, nor were they aware of his having seized the castle. Thus it happened that the Florentine horsemen mounting the hill were completely taken by surprise when they discovered the infantry of Castruccio, and so close were they upon it they had scarcely time to pull down their visors. It was a case of unready soldiers being attacked by ready, and they were assailed with such vigour that with difficulty they could hold their own, although some few of them got through. When the noise of the fighting reached the Florentine camp below, it was filled with confusion. The cavalry and infantry became inextricably mixed: the captains were unable to get their men either backward or forward, owing to the narrowness of the pass, and amid all this tumult no one knew what ought to be done or what could be done. In a short time the cavalry who were engaged with the enemy's infantry were scattered or killed without having made any effective defence because of their unfortunate position, although in sheer desperation they had offered a stout resistance. Retreat had been impossible, with the mountains on both flanks, whilst in front were their enemies, and in the rear their friends. When Castruccio saw that his men were unable to strike a decisive blow at the enemy and put them to flight, he sent one thousand infantrymen round by the castle, with orders to join the four hundred horsemen he had previously dispatched there, and commanded the whole force to fall upon the flank of the enemy. These orders they carried out with such fury that the Florentines could not sustain the attack, but gave way, and were soon in full retreat—conquered more by their unfortunate position than by the valour of their enemy. Those in the rear turned towards Pistoia, and spread through the plains, each man seeking only his own safety. The defeat was complete and very sanguinary. Many captains were taken prisoners, among whom were Bandini dei Rossi, Francesco Brunelleschi, and Giovanni della Tosa, all Florentine noblemen, with many Tuscans and Neapolitans who fought on the Florentine side, having been sent by King Ruberto to assist the Guelphs. Immediately the Pistoians heard of this defeat they drove out the friends of the Guelphs, and surrendered to

Castruccio. He was not content with occupying Prato and all the castles on the plains on both sides of the Arno, but marched his army into the plain of Peretola, about two miles from Florence. Here he remained many days, dividing the spoils, and celebrating his victory with feasts and games, holding horse races, and foot races for men and women. He also struck medals in commemoration of the defeat of the Florentines. He endeavoured to corrupt some of the citizens of Florence, who were to open the city gates at night; but the conspiracy was discovered, and the participators in it taken and beheaded, among whom were Tommaso Lupacci and Lambertuccio Frescobaldi. This defeat caused the Florentines great anxiety, and despairing of preserving their liberty, they sent envoys to King Ruberto of Naples, offering him the dominion of their city; and he, knowing of what immense importance the maintenance of the Guelph cause was to him, accepted it. He agreed with the Florentines to receive from them a yearly tribute of two hundred thousand florins, and he sent his son Carlo to Florence with four thousand horsemen.

Shortly after this the Florentines were relieved in some degree of the pressure of Castruccio's army, owing to his being compelled to leave his positions before Florence and march on Pisa, in order to suppress a conspiracy that had been raised against him by Benedetto Lanfranchi, one of the first men in Pisa, who could not endure that his fatherland should be under the dominion of the Lucchese. He had formed this conspiracy, intending to seize the citadel, kill the partisans of Castruccio, and drive out the garrison. As, however, in a conspiracy paucity of numbers is essential to secrecy, so for its execution a few are not sufficient, and in seeking more adherents to his conspiracy Lanfranchi encountered a person who revealed the design to Castruccio. This betrayal cannot be passed by without severe reproach to Bonifacio Cerchi and Giovanni Guidi, two Florentine exiles who were suffering their banishment in Pisa. Thereupon Castruccio seized Benedetto and put him to death, and beheaded many other noble citizens, and drove their families into exile. It now appeared to Castruccio that both Pisa and Pistoia were thoroughly disaffected; he employed much thought and energy upon securing his position there, and this gave the Florentines their opportunity to reorganize their army, and to await the coming of Carlo, the son of the King of Naples. When Carlo arrived they decided to lose no more time, and assembled a great army of more than thirty thousand infantry and ten thousand cavalry—having called to their aid every Guelph

there was in Italy. They consulted whether they should attack Pistoia or Pisa first, and decided that it would be better to march on the latter—a course, owing to the recent conspiracy, more likely to succeed, and of more advantage to them, because they believed that the surrender of Pistoia would follow the acquisition of Pisa.

In the early part of May 1328, the Florentines put in motion this army and quickly occupied Lastra, Signa, Montelupo, and Empoli, passing from thence on to San Miniato. When Castruccio heard of the enormous army which the Florentines were sending against him, he was in no degree alarmed, believing that the time had now arrived when Fortune would deliver the empire of Tuscany into his hands, for he had no reason to think that his enemy would make a better fight, or had better prospects of success, than at Pisa or Serravalle. He assembled twenty thousand foot soldiers and four thousand horsemen, and with this army went to Fucecchio, whilst he sent Pagolo Guinigi to Pisa with five thousand infantry. Fucecchio has a stronger position than any other town in the Pisan district, owing to its situation between the rivers Arno and Gusciana and its slight elevation above the surrounding plain. Moreover, the enemy could not hinder its being victualled unless they divided their forces, nor could they approach it either from the direction of Lucca or Pisa, nor could they get through to Pisa, or attack Castruccio's forces except at a disadvantage. In one case they would find themselves placed between his two armies, the one under his own command and the other under Pagolo, and in the other case they would have to cross the Arno to get to close quarters with the enemy, an undertaking of great hazard. In order to tempt the Florentines to take this latter course, Castruccio withdrew his men from the banks of the river and placed them under the walls of Fucecchio, leaving a wide expanse of land between them and the river.

The Florentines, having occupied San Miniato, held a council of war to decide whether they should attack Pisa or the army of Castruccio, and, having weighed the difficulties of both courses, they decided upon the latter. The river Arno was at that time low enough to be fordable, yet the water reached to the shoulders of the infantrymen and to the saddles of the horsemen. On the morning of 10 June 1328, the Florentines commenced the battle by ordering forward a number of cavalry and ten thousand infantry. Castruccio, whose plan of action was fixed, and who well knew what to do, at once attacked the Florentines with five thousand infantry and three

thousand horsemen, not allowing them to issue from the river before he charged them; he also sent one thousand light infantry up the river bank, and the same number down the Arno. The infantry of the Florentines were so much impeded by their arms and the water that they were not able to mount the banks of the river, whilst the cavalry had made the passage of the river more difficult for the others, by reason of the few who had crossed having broken up the bed of the river, and this being deep with mud, many of the horses rolled over with their riders and many of them had stuck so fast that they could not move. When the Florentine captains saw the difficulties their men were meeting, they withdrew them and moved higher up the river, hoping to find the river bed less treacherous and the banks more adapted for landing. These men were met at the bank by the forces which Castruccio had already sent forward, who, being light armed with bucklers and javelins in their hands, let fly with tremendous shouts into the faces and bodies of the cavalry. The horses, alarmed by the noise and the wounds, would not move forward, and trampled each other in great confusion. The fight between the men of Castruccio and those of the enemy who succeeded in crossing was sharp and terrible; both sides fought with the utmost desperation and neither would yield. The soldiers of Castruccio fought to drive the others back into the river, whilst the Florentines strove to get a footing on land in order to make room for the others pressing forward, who if they could but get out of the water would be able to fight, and in this obstinate conflict they were urged on by their captains. Castruccio shouted to his men that these were the same enemies whom they had before conquered at Serravalle, whilst the Florentines reproached each other that the many should be overcome by the few. At length Castruccio, seeing how long the battle had lasted, and that both his men and the enemy were utterly exhausted, and that both sides had many killed and wounded, pushed forward another body of infantry to take up a position at the rear of those who were fighting; he then commanded these latter to open their ranks as if they intended to retreat, and one part of them to turn to the right and another to the left. This cleared a space of which the Florentines at once took advantage, and thus gained possession of a portion of the battlefield. But when these tired soldiers found themselves at close quarters with Castruccio's reserves they could not stand against them and at once fell back into the river. The cavalry of either side had not as yet gained any decisive advantage over the other, because Castruccio, knowing his

inferiority in this arm, had commanded his leaders only to stand on the defensive against the attacks of their adversaries, as he hoped that when he had overcome the infantry he would be able to make short work of the cavalry. This fell out as he had hoped, for when he saw the Florentine army driven back across the river he ordered the remainder of his infantry to attack the cavalry of the enemy. This they did with lance and javelin, and, joined by their own cavalry, fell upon the enemy with the greatest fury and soon put him to flight. The Florentine captains, having seen the difficulty their cavalry had met with in crossing the river, had attempted to make their infantry cross lower down the river, in order to attack the flanks of Castruccio's army. But here, also, the banks were steep and already lined by the men of Castruccio, and this movement was quite useless. Thus the Florentines were so completely defeated at all points that scarcely a third of them escaped, and Castruccio was again covered with glory. Many captains were taken prisoners, and Carlo, the son of King Ruberto, with Michelagnolo Falconi and Taddeo degli Albizzi, the Florentine commissioners, fled to Empoli. If the spoils were great, the slaughter was infinitely greater, as might be expected in such a battle. Of the Florentines there fell twenty thousand two hundred and thirty-one men, whilst Castruccio lost one thousand five hundred and seventy men.

But Fortune growing envious of the glory of Castruccio took away his life just at the time when she should have preserved it, and thus ruined all those plans which for so long a time he had worked to carry into effect, and in the successful prosecution of which nothing but death could have stopped him. Castruccio was in the thick of the battle the whole of the day; and when the end of it came, although fatigued and overheated, he stood at the gate of Fucecchio to welcome his men on their return from victory and personally thank them. He was also on the watch for any attempt of the enemy to retrieve the fortunes of the day; he being of the opinion that it was the duty of a good general to be the first man in the saddle and the last out of it. Here Castruccio stood exposed to a wind which often rises at midday on the banks of the Arno, and which is often very unhealthy; from this he took a chill, of which he thought nothing, as he was accustomed to such troubles; but it was the cause of his death. On the following night he was attacked with high fever, which increased so rapidly that the doctors saw it must prove fatal. Castruccio, therefore, called Pagolo Guinigi to him, and addressed him as follows:

"If I could have believed that Fortune would have cut me off in the midst of the career which was leading to that glory which all my successes promised, I should have laboured less, and I should have left thee, if a smaller state, at least with fewer enemies and perils, because I should have been content with the governorships of Lucca and Pisa. I should neither have subjugated the Pistoians, nor outraged the Florentines with so many injuries. But I would have made both these peoples my friends, and I should have lived, if no longer, at least more peacefully, and have left you a state without a doubt smaller, but one more secure and established on a surer foundation. But Fortune, who insists upon having the arbitrament of human affairs, did not endow me with sufficient judgment to recognize this from the first, nor the time to surmount it. Thou hast heard, for many have told thee, and I have never concealed it, how I entered the house of thy father whilst yet a boy—a stranger to all those ambitions which every generous soul should feel—and how I was brought up by him, and loved as though I had been born of his blood; how under his governance I learned to be valiant and capable of availing myself of all that fortune, of which thou hast been witness. When thy good father came to die, he committed thee and all his possessions to my care, and I have brought thee up with that love, and increased thy estate with that care, which I was bound to show. And in

order that thou shouldst not only possess the estate which thy father left, but also that which my fortune and abilities have gained, I have never married, so that the love of children should never deflect my mind from that gratitude which I owed to the children of thy father. Thus I leave thee a vast estate, of which I am well content, but I am deeply concerned, inasmuch as I leave it thee unsettled and insecure. Thou hast the city of Lucca on thy hands, which will never rest contented under thy government. Thou hast also Pisa, where the men are of nature changeable and unreliable, who, although they may be sometimes held in subjection, yet they will ever disdain to serve under a Lucchese. Pistoia is also disloyal to thee, she being eaten up with factions and deeply incensed against thy family by reason of the wrongs recently inflicted upon them. Thou hast for neighbours the offended Florentines, injured by us in a thousand ways, but not utterly destroyed, who will hail the news of my death with more delight than they would the acquisition of all Tuscany. In the Emperor and in the princes of Milan thou canst place no reliance, for they are far distant, slow, and their help is very long in coming. Therefore, thou hast no hope in anything but in thine own abilities, and in the memory of my valour, and in the prestige which this latest victory has brought thee; which, as thou knowest how to use it with prudence, will assist thee to come to terms with the Florentines, who, as they are suffering under this great defeat, should be inclined to listen to thee. And whereas I have sought to make them my enemies, because I believed that war with them would conduce to my power and glory, thou hast every inducement to make friends of them, because their alliance will bring thee advantages and security. It is of the greatest important in this world that a man should know himself, and the measure of his own strength and means; and he who knows that he has not a genius for fighting must learn how to govern by the arts of peace. And it will be well for thee to rule thy conduct by my counsel, and to learn in this way to enjoy what my life-work and dangers have gained; and in this thou wilt easily succeed when thou hast learnt to believe that what I have told thee is true. And thou wilt be doubly indebted to me, in that I have left thee this realm and have taught thee how to keep it."

After this there came to Castruccio those citizens of Pisa, Pistoia, and Lucca, who had been fighting at his side, and whilst recommending Pagolo to them, and making them swear obedience to him as his successor, he died. He left a happy memory to those who had known him, and no prince of

those times was ever loved with such devotion as he was. His obsequies were celebrated with every sign of mourning, and he was buried in San Francesco at Lucca. Fortune was not so friendly to Pagolo Guinigi as she had been to Castruccio, for he had not the abilities. Not long after the death of Castruccio, Pagolo lost Pisa, and then Pistoia, and only with difficulty held on to Lucca. This latter city continued in the family of Guinigi until the time of the great-grandson of Pagolo.

From what has been related here it will be seen that Castruccio was a man of exceptional abilities, not only measured by men of his own time, but also by those of an earlier date. In stature he was above the ordinary height, and perfectly proportioned. He was of a gracious presence, and he welcomed men with such urbanity that those who spoke with him rarely left him displeased. His hair was inclined to be red, and he wore it cut short above the ears, and, whether it rained or snowed, he always went without a hat. He was delightful among friends, but terrible to his enemies; just to his subjects; ready to play false with the unfaithful, and willing to overcome by fraud those whom he desired to subdue, because he was wont to say that it was the victory that brought the glory, not the methods of achieving it. No one was bolder in facing danger, none more prudent in extricating himself. He was accustomed to say that men ought to attempt everything and fear nothing; that God is a lover of strong men, because one always sees that the weak are chastised by the strong. He was also wonderfully sharp or biting though courteous in his answers; and as he did not look for any indulgence in this way of speaking from others, so he was not angered with others did not show it to him. It has often happened that he has listened quietly when others have spoken sharply to him, as on the following occasions. He had caused a ducat to be given for a partridge, and was taken to task for doing so by a friend, to whom Castruccio had said: "You would not have given more than a penny." "That is true," answered the friend. Then said Castruccio to him: "A ducat is much less to me." Having about him a flatterer on whom he had spat to show that he scorned him, the flatterer said to him: "Fisherman are willing to let the waters of the sea saturate them in order that they may take a few little fishes, and I allow myself to be wetted by spittle that I may catch a whale"; and this was not only heard by Castruccio with patience but rewarded. When told by a priest that it was wicked for him to live so sumptuously, Castruccio said: "If that be a vice then you should not fare so splendidly at the feasts of our saints." Passing

through a street he saw a young man as he came out of a house of ill fame blush at being seen by Castruccio, and said to him: "Thou shouldst not be ashamed when thou comest out, but when thou goest into such places." A friend gave him a very curiously tied knot to undo and was told: "Fool, do you think that I wish to untie a thing which gave so much trouble to fasten." Castruccio said to one who professed to be a philosopher: "You are like the dogs who always run after those who will give them the best to eat," and was answered: "We are rather like the doctors who go to the houses of those who have the greatest need of them." Going by water from Pisa to Leghorn, Castruccio was much disturbed by a dangerous storm that sprang up, and was reproached for cowardice by one of those with him, who said that he did not fear anything. Castruccio answered that he did not wonder at that, since every man valued his soul for what it was worth. Being asked by one what he ought to do to gain estimation, he said: "When thou goest to a banquet take care that thou dost not seat one piece of wood upon another." To a person who was boasting that he had read many things, Castruccio said: "He knows better than to boast of remembering many things." Someone bragged that he could drink much without becoming intoxicated. Castruccio replied: "An ox does the same." Castruccio was acquainted with a girl with whom he had intimate relations, and being blamed by a friend who told him that it was undignified for him to be taken in by a woman, he said: "She has not taken me in, I have taken her." Being also blamed for eating very dainty foods, he answered: "Thou dost not spend as much as I do?" and being told that it was true, he continued: "Then thou art more avaricious than I am gluttonous." Being invited by Taddeo Bernardi, a very rich and splendid citizen of Luca, to supper, he went to the house and was shown by Taddeo into a chamber hung with silk and paved with fine stones representing flowers and foliage of the most beautiful colouring. Castruccio gathered some saliva in his mouth and spat it out upon Taddeo, and seeing him much disturbed by this, said to him: "I knew not where to spit in order to offend thee less." Being asked how Caesar died he said: "God willing I will die as he did." Being one night in the house of one of his gentlemen where many ladies were assembled, he was reproved by one of his friends for dancing and amusing himself with them more than was usual in one of his station, so he said: "He who is considered wise by day will not be considered a fool at night." A person came to demand a favour of Castruccio, and thinking he was not listening to his plea threw himself on

his knees to the ground, and being sharply reproved by Castruccio, said: "Thou art the reason of my acting thus for thou hast thy ears in thy feet," whereupon he obtained double the favour he had asked. Castruccio used to say that the way to hell was an easy one, seeing that it was in a downward direction and you travelled blindfolded. Being asked a favour by one who used many superfluous words, he said to him: "When you have another request to make, send someone else to make it." Having been wearied by a similar man with a long oration who wound up by saying: "Perhaps I have fatigued you by speaking so long," Castruccio said: "You have not, because I have not listened to a word you said." He used to say of one who had been a beautiful child and who afterwards became a fine man, that he was dangerous, because he first took the husbands from the wives and now he took the wives from their husbands. To an envious man who laughed, he said: "Do you laugh because you are successful or because another is unfortunate?" Whilst he was still in the charge of Messer Francesco Guinigi, one of his companions said to him: "What shall I give you if you will let me give you a blow on the nose?" Castruccio answered: "A helmet." Having put to death a citizen of Lucca who had been instrumental in raising him to power, and being told that he had done wrong to kill one of his old friends, he answered that people deceived themselves; he had only killed a new enemy. Castruccio praised greatly those men who intended to take a wife and then did not do so, saying that they were like men who said they would go to sea, and then refused when the time came. He said that it always struck him with surprise that whilst men in buying an earthen or glass vase would sound it first to learn if it were good, yet in choosing a wife they were content with only looking at her. He was once asked in what manner he would wish to be buried when he died, and answered: "With the face turned downwards, for I know when I am gone this country will be turned upside down." On being asked if it had ever occurred to him to become a friar in order to save his soul, he answered that it had not, because it appeared strange to him that Fra Lazerone should go to Paradise and Ugucione della Faggiuola to the Inferno. He was once asked when should a man eat to preserve his health, and replied: "If the man be rich let him eat when he is hungry; if he be poor, then when he can." Seeing one of his gentlemen make a member of his family lace him up, he said to him: "I pray God that you will let him feed you also." Seeing that someone had written upon his house in Latin the words: "May God preserve this house from the

wicked," he said, "The owner must never go in." Passing through one of the streets he saw a small house with a very large door, and remarked: "That house will fly through the door." He was having a discussion with the ambassador of the King of Naples concerning the property of some banished nobles, when a dispute arose between them, and the ambassador asked him if he had no fear of the king. "Is this king of yours a bad man or a good one?" asked Castruccio, and was told that he was a good one, whereupon he said, "Why should you suggest that I should be afraid of a good man?"

I could recount many other stories of his sayings both witty and weighty, but I think that the above will be sufficient testimony to his high qualities. He lived forty-four years, and was in every way a prince. And as he was surrounded by many evidences of his good fortune, so he also desired to have near him some memorials of his bad fortune; therefore the manacles with which he was chained in prison are to be seen to this day fixed up in the tower of his residence, where they were placed by him to testify forever to his days of adversity. As in his life he was inferior neither to Philip of Macedon, the father of Alexander, nor to Scipio of Rome, so he died in the same year of his age as they did, and he would doubtless have excelled both of them had Fortune decreed that he should be born, not in Lucca, but in Macedonia or Rome.

End of the Project Gutenberg EBook of The Prince, by Nicolo Machiavelli

\*\*\*\*\* This file should be named 1232-h.htm or 1232-h.zip \*\*\*\*\*

This and all associated files of various formats will be found in:  
<http://www.gutenberg.org/1/2/3/1232/>

Produced by John Bickers, David Widger and Others

Updated editions will replace the previous one--the old editions will be renamed.

Creating the works from public domain print editions means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules,

set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg-tm electronic works to protect the PROJECT GUTENBERG-tm concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for the eBooks, unless you receive specific permission. If you do not charge anything for copies of this eBook, complying with the rules is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. They may be modified and printed and given away--you may do practically ANYTHING with public domain eBooks. Redistribution is subject to the trademark license, especially commercial redistribution.

\*\*\* START: FULL LICENSE \*\*\*

THE FULL PROJECT GUTENBERG LICENSE  
PLEASE READ THIS BEFORE YOU DISTRIBUTE OR USE THIS WORK

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License (available with this file or online at <http://gutenberg.org/license>).

Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project

Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any

word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site (www.gutenberg.org), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.
- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain

"Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of

electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, is critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <http://www.pgla.org>.

### Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <http://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email [business@pglaf.org](mailto:business@pglaf.org). Email contact links and up to date contact information can be found at the Foundation's web site and official page at <http://pglaf.org>

For additional contact information:

Dr. Gregory B. Newby  
Chief Executive and Director  
[gbnewby@pglaf.org](mailto:gbnewby@pglaf.org)

### Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <http://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: <http://pglaf.org/donate>

Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

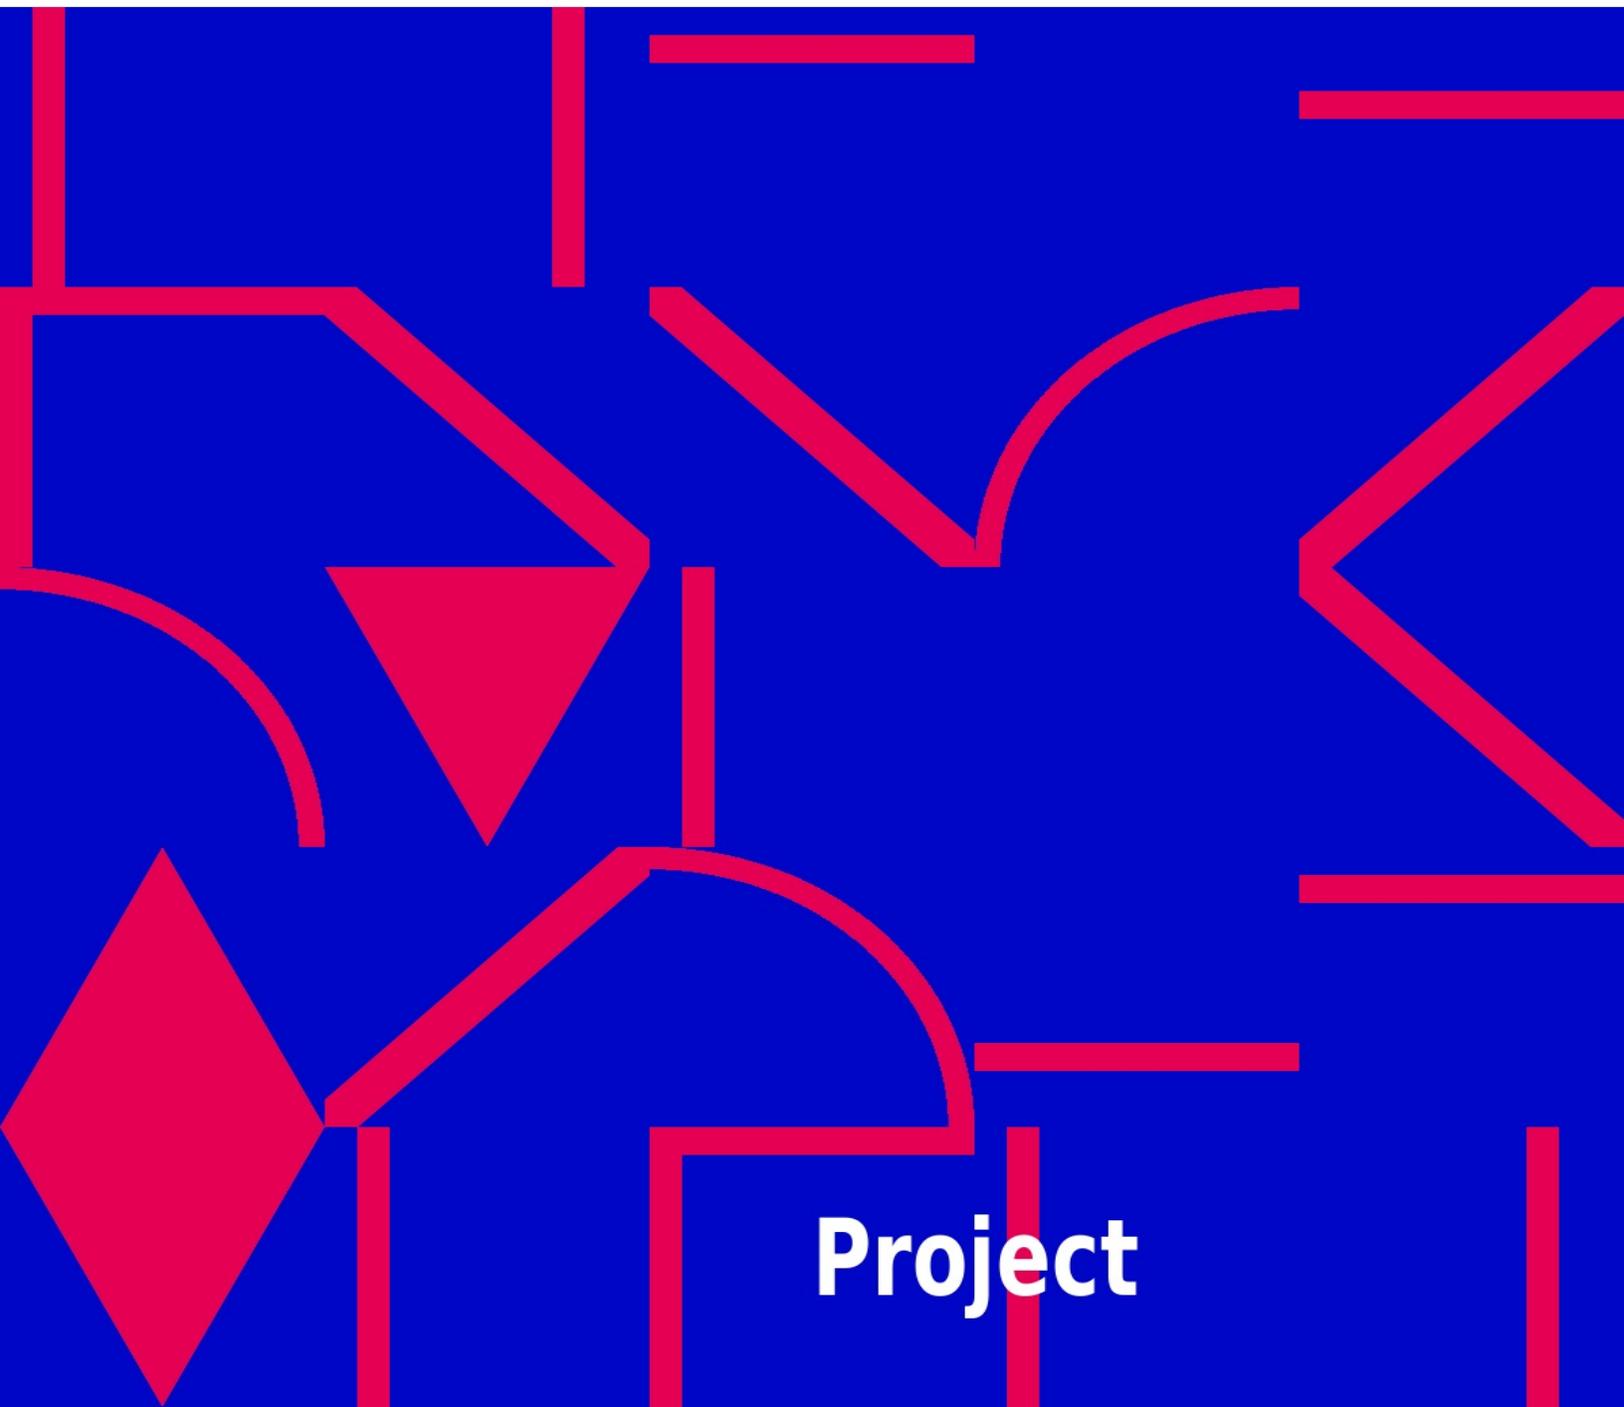

Most people start at our Web site which has the main PG search facility:

<http://www.gutenberg.org>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

# The Communist Manifesto

Friedrich Engels and Karl Marx

The lower half of the image features a complex, abstract geometric pattern. It consists of various red shapes and lines on a solid blue background. The shapes include rectangles, triangles, diamonds, and curved lines, some of which are solid and others are outlines. The lines vary in thickness and orientation, creating a dynamic and somewhat chaotic visual effect. The word "Project" is centered at the bottom of this pattern in a white, sans-serif font.

Project

The Project Gutenberg EBook of The Communist Manifesto by Karl Marx and Friedrich Engels

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.net](http://www.gutenberg.net)

Title: The Communist Manifesto

Author: Karl Marx and Friedrich Engels

Release Date: January 25, 2005 [EBook #61]

Language: English

\*\*\* START OF THIS PROJECT GUTENBERG EBOOK THE  
COMMUNIST MANIFESTO \*\*\*

Transcribed by Allen Lutins with assistance from Jim Tarzia.

# MANIFESTO OF THE COMMUNIST PARTY

[From the English edition of 1888, edited by Friedrich Engels]

A spectre is haunting Europe—the spectre of Communism. All the Powers of old Europe have entered into a holy alliance to exorcise this spectre: Pope and Czar, Metternich and Guizot, French Radicals and German police-spies.

Where is the party in opposition that has not been decried as Communistic by its opponents in power? Where is the Opposition that has not hurled back the branding reproach of Communism, against the more advanced opposition parties, as well as against its reactionary adversaries?

Two things result from this fact.

I. Communism is already acknowledged by all European Powers to be itself a Power.

II. It is high time that Communists should openly, in the face of the whole world, publish their views, their aims, their tendencies, and meet this nursery tale of the Spectre of Communism with a Manifesto of the party itself.

To this end, Communists of various nationalities have assembled in London, and sketched the following Manifesto, to be published in the English, French, German, Italian, Flemish and Danish languages.

## **I. BOURGEOIS AND PROLETARIANS**

The history of all hitherto existing societies is the history of class struggles.

Freeman and slave, patrician and plebeian, lord and serf, guild-master and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary re-constitution of society at large, or in the common ruin of the contending classes.

In the earlier epochs of history, we find almost everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, knights, plebeians, slaves; in the Middle Ages, feudal lords, vassals, guild-masters, journeymen, apprentices, serfs; in almost all of these classes, again, subordinate gradations.

The modern bourgeois society that has sprouted from the ruins of feudal society has not done away with class antagonisms. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones. Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms. Society as a whole is more and more splitting up into two great hostile camps, into two great classes, directly facing each other: Bourgeoisie and Proletariat.

From the serfs of the Middle Ages sprang the chartered burghers of the earliest towns. From these burgesses the first elements of the bourgeoisie were developed.

The discovery of America, the rounding of the Cape, opened up fresh ground for the rising bourgeoisie. The East-Indian and Chinese markets, the colonisation of America, trade with the colonies, the increase in the means of exchange and in commodities generally, gave to commerce, to navigation, to industry, an impulse never before known, and thereby, to the revolutionary element in the tottering feudal society, a rapid development.

The feudal system of industry, under which industrial production was monopolised by closed guilds, now no longer sufficed for the growing wants of the new markets. The manufacturing system took its place. The guild-masters were pushed on one side by the manufacturing middle class;

division of labour between the different corporate guilds vanished in the face of division of labour in each single workshop.

Meantime the markets kept ever growing, the demand ever rising. Even manufacture no longer sufficed. Thereupon, steam and machinery revolutionised industrial production. The place of manufacture was taken by the giant, Modern Industry, the place of the industrial middle class, by industrial millionaires, the leaders of whole industrial armies, the modern bourgeois.

Modern industry has established the world-market, for which the discovery of America paved the way. This market has given an immense development to commerce, to navigation, to communication by land. This development has, in its time, reacted on the extension of industry; and in proportion as industry, commerce, navigation, railways extended, in the same proportion the bourgeoisie developed, increased its capital, and pushed into the background every class handed down from the Middle Ages.

We see, therefore, how the modern bourgeoisie is itself the product of a long course of development, of a series of revolutions in the modes of production and of exchange.

Each step in the development of the bourgeoisie was accompanied by a corresponding political advance of that class. An oppressed class under the sway of the feudal nobility, an armed and self-governing association in the mediaeval commune; here independent urban republic (as in Italy and Germany), there taxable "third estate" of the monarchy (as in France), afterwards, in the period of manufacture proper, serving either the semi-feudal or the absolute monarchy as a counterpoise against the nobility, and, in fact, corner-stone of the great monarchies in general, the bourgeoisie has at last, since the establishment of Modern Industry and of the world-market, conquered for itself, in the modern representative State, exclusive political sway. The executive of the modern State is but a committee for managing the common affairs of the whole bourgeoisie.

The bourgeoisie, historically, has played a most revolutionary part.

The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, idyllic relations. It has pitilessly torn asunder the motley feudal ties that bound man to his "natural superiors," and has left remaining no other nexus between man and man than naked self-interest, than callous "cash payment." It has drowned the most heavenly ecstasies of religious fervour, of chivalrous enthusiasm, of philistine sentimentalism, in the icy water of egotistical calculation. It has resolved personal worth into exchange value, and in place of the numberless and indefeasible chartered freedoms, has set up that single, unconscionable freedom—Free Trade. In one word, for exploitation, veiled by religious and political illusions, naked, shameless, direct, brutal exploitation.

The bourgeoisie has stripped of its halo every occupation hitherto honoured and looked up to with reverent awe. It has converted the physician, the lawyer, the priest, the poet, the man of science, into its paid wage labourers.

The bourgeoisie has torn away from the family its sentimental veil, and has reduced the family relation to a mere money relation.

The bourgeoisie has disclosed how it came to pass that the brutal display of vigour in the Middle Ages, which Reactionists so much admire, found its fitting complement in the most slothful indolence. It has been the first to show what man's activity can bring about. It has accomplished wonders far surpassing Egyptian pyramids, Roman aqueducts, and Gothic cathedrals; it has conducted expeditions that put in the shade all former Exoduses of nations and crusades.

The bourgeoisie cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society. Conservation of the old modes of production in unaltered form, was, on the contrary, the first condition of existence for all earlier industrial classes. Constant revolutionising of production, uninterrupted disturbance of all social conditions, everlasting uncertainty and agitation distinguish the bourgeois epoch from all earlier ones. All fixed, fast-frozen relations, with their train of ancient and venerable prejudices and opinions, are swept away, all new-formed ones become antiquated before they can ossify. All that is solid melts into air, all

that is holy is profaned, and man is at last compelled to face with sober senses, his real conditions of life, and his relations with his kind.

The need of a constantly expanding market for its products chases the bourgeoisie over the whole surface of the globe. It must nestle everywhere, settle everywhere, establish connexions everywhere.

The bourgeoisie has through its exploitation of the world-market given a cosmopolitan character to production and consumption in every country. To the great chagrin of Reactionists, it has drawn from under the feet of industry the national ground on which it stood. All old-established national industries have been destroyed or are daily being destroyed. They are dislodged by new industries, whose introduction becomes a life and death question for all civilised nations, by industries that no longer work up indigenous raw material, but raw material drawn from the remotest zones; industries whose products are consumed, not only at home, but in every quarter of the globe. In place of the old wants, satisfied by the productions of the country, we find new wants, requiring for their satisfaction the products of distant lands and climes. In place of the old local and national seclusion and self-sufficiency, we have intercourse in every direction, universal inter-dependence of nations. And as in material, so also in intellectual production. The intellectual creations of individual nations become common property. National one-sidedness and narrow-mindedness become more and more impossible, and from the numerous national and local literatures, there arises a world literature.

The bourgeoisie, by the rapid improvement of all instruments of production, by the immensely facilitated means of communication, draws all, even the most barbarian, nations into civilisation. The cheap prices of its commodities are the heavy artillery with which it batters down all Chinese walls, with which it forces the barbarians' intensely obstinate hatred of foreigners to capitulate. It compels all nations, on pain of extinction, to adopt the bourgeois mode of production; it compels them to introduce what it calls civilisation into their midst, i.e., to become bourgeois themselves. In one word, it creates a world after its own image.

The bourgeoisie has subjected the country to the rule of the towns. It has created enormous cities, has greatly increased the urban population as

compared with the rural, and has thus rescued a considerable part of the population from the idiocy of rural life. Just as it has made the country dependent on the towns, so it has made barbarian and semi-barbarian countries dependent on the civilised ones, nations of peasants on nations of bourgeois, the East on the West.

The bourgeoisie keeps more and more doing away with the scattered state of the population, of the means of production, and of property. It has agglomerated production, and has concentrated property in a few hands. The necessary consequence of this was political centralisation. Independent, or but loosely connected provinces, with separate interests, laws, governments and systems of taxation, became lumped together into one nation, with one government, one code of laws, one national class-interest, one frontier and one customs-tariff. The bourgeoisie, during its rule of scarce one hundred years, has created more massive and more colossal productive forces than have all preceding generations together. Subjection of Nature's forces to man, machinery, application of chemistry to industry and agriculture, steam-navigation, railways, electric telegraphs, clearing of whole continents for cultivation, canalisation of rivers, whole populations conjured out of the ground—what earlier century had even a presentiment that such productive forces slumbered in the lap of social labour?

We see then: the means of production and of exchange, on whose foundation the bourgeoisie built itself up, were generated in feudal society. At a certain stage in the development of these means of production and of exchange, the conditions under which feudal society produced and exchanged, the feudal organisation of agriculture and manufacturing industry, in one word, the feudal relations of property became no longer compatible with the already developed productive forces; they became so many fetters. They had to be burst asunder; they were burst asunder.

Into their place stepped free competition, accompanied by a social and political constitution adapted to it, and by the economical and political sway of the bourgeois class.

A similar movement is going on before our own eyes. Modern bourgeois society with its relations of production, of exchange and of property, a society that has conjured up such gigantic means of production and of

exchange, is like the sorcerer, who is no longer able to control the powers of the nether world whom he has called up by his spells. For many a decade past the history of industry and commerce is but the history of the revolt of modern productive forces against modern conditions of production, against the property relations that are the conditions for the existence of the bourgeoisie and of its rule. It is enough to mention the commercial crises that by their periodical return put on its trial, each time more threateningly, the existence of the entire bourgeois society. In these crises a great part not only of the existing products, but also of the previously created productive forces, are periodically destroyed. In these crises there breaks out an epidemic that, in all earlier epochs, would have seemed an absurdity—the epidemic of over-production. Society suddenly finds itself put back into a state of momentary barbarism; it appears as if a famine, a universal war of devastation had cut off the supply of every means of subsistence; industry and commerce seem to be destroyed; and why? Because there is too much civilisation, too much means of subsistence, too much industry, too much commerce. The productive forces at the disposal of society no longer tend to further the development of the conditions of bourgeois property; on the contrary, they have become too powerful for these conditions, by which they are fettered, and so soon as they overcome these fetters, they bring disorder into the whole of bourgeois society, endanger the existence of bourgeois property. The conditions of bourgeois society are too narrow to comprise the wealth created by them. And how does the bourgeoisie get over these crises? On the one hand inforced destruction of a mass of productive forces; on the other, by the conquest of new markets, and by the more thorough exploitation of the old ones. That is to say, by paving the way for more extensive and more destructive crises, and by diminishing the means whereby crises are prevented.

The weapons with which the bourgeoisie felled feudalism to the ground are now turned against the bourgeoisie itself.

But not only has the bourgeoisie forged the weapons that bring death to itself; it has also called into existence the men who are to wield those weapons—the modern working class—the proletarians.

In proportion as the bourgeoisie, i.e., capital, is developed, in the same proportion is the proletariat, the modern working class, developed—a class of labourers, who live only so long as they find work, and who find work only so long as their labour increases capital. These labourers, who must sell themselves piece-meal, are a commodity, like every other article of commerce, and are consequently exposed to all the vicissitudes of competition, to all the fluctuations of the market.

Owing to the extensive use of machinery and to division of labour, the work of the proletarians has lost all individual character, and consequently, all charm for the workman. He becomes an appendage of the machine, and it is only the most simple, most monotonous, and most easily acquired knack, that is required of him. Hence, the cost of production of a workman is restricted, almost entirely, to the means of subsistence that he requires for his maintenance, and for the propagation of his race. But the price of a commodity, and therefore also of labour, is equal to its cost of production. In proportion therefore, as the repulsiveness of the work increases, the wage decreases. Nay more, in proportion as the use of machinery and division of labour increases, in the same proportion the burden of toil also increases, whether by prolongation of the working hours, by increase of the work exacted in a given time or by increased speed of the machinery, etc.

Modern industry has converted the little workshop of the patriarchal master into the great factory of the industrial capitalist. Masses of labourers, crowded into the factory, are organised like soldiers. As privates of the industrial army they are placed under the command of a perfect hierarchy of officers and sergeants. Not only are they slaves of the bourgeois class, and of the bourgeois State; they are daily and hourly enslaved by the machine, by the over-looker, and, above all, by the individual bourgeois manufacturer himself. The more openly this despotism proclaims gain to be its end and aim, the more petty, the more hateful and the more embittering it is.

The less the skill and exertion of strength implied in manual labour, in other words, the more modern industry becomes developed, the more is the labour of men superseded by that of women. Differences of age and sex have no longer any distinctive social validity for the working class. All are

instruments of labour, more or less expensive to use, according to their age and sex.

No sooner is the exploitation of the labourer by the manufacturer, so far at an end, that he receives his wages in cash, than he is set upon by the other portions of the bourgeoisie, the landlord, the shopkeeper, the pawnbroker, etc.

The lower strata of the middle class—the small tradespeople, shopkeepers, retired tradesmen generally, the handicraftsmen and peasants—all these sink gradually into the proletariat, partly because their diminutive capital does not suffice for the scale on which Modern Industry is carried on, and is swamped in the competition with the large capitalists, partly because their specialized skill is rendered worthless by the new methods of production. Thus the proletariat is recruited from all classes of the population.

The proletariat goes through various stages of development. With its birth begins its struggle with the bourgeoisie. At first the contest is carried on by individual labourers, then by the workpeople of a factory, then by the operatives of one trade, in one locality, against the individual bourgeois who directly exploits them. They direct their attacks not against the bourgeois conditions of production, but against the instruments of production themselves; they destroy imported wares that compete with their labour, they smash to pieces machinery, they set factories ablaze, they seek to restore by force the vanished status of the workman of the Middle Ages.

At this stage the labourers still form an incoherent mass scattered over the whole country, and broken up by their mutual competition. If anywhere they unite to form more compact bodies, this is not yet the consequence of their own active union, but of the union of the bourgeoisie, which class, in order to attain its own political ends, is compelled to set the whole proletariat in motion, and is moreover yet, for a time, able to do so. At this stage, therefore, the proletarians do not fight their enemies, but the enemies of their enemies, the remnants of absolute monarchy, the landowners, the non-industrial bourgeois, the petty bourgeoisie. Thus the whole historical movement is concentrated in the hands of the bourgeoisie; every victory so obtained is a victory for the bourgeoisie.

But with the development of industry the proletariat not only increases in number; it becomes concentrated in greater masses, its strength grows, and it feels that strength more. The various interests and conditions of life within the ranks of the proletariat are more and more equalised, in proportion as machinery obliterates all distinctions of labour, and nearly everywhere reduces wages to the same low level. The growing competition among the bourgeois, and the resulting commercial crises, make the wages of the workers ever more fluctuating. The unceasing improvement of machinery, ever more rapidly developing, makes their livelihood more and more precarious; the collisions between individual workmen and individual bourgeois take more and more the character of collisions between two classes. Thereupon the workers begin to form combinations (Trades Unions) against the bourgeois; they club together in order to keep up the rate of wages; they found permanent associations in order to make provision beforehand for these occasional revolts. Here and there the contest breaks out into riots.

Now and then the workers are victorious, but only for a time. The real fruit of their battles lies, not in the immediate result, but in the ever-expanding union of the workers. This union is helped on by the improved means of communication that are created by modern industry and that place the workers of different localities in contact with one another. It was just this contact that was needed to centralise the numerous local struggles, all of the same character, into one national struggle between classes. But every class struggle is a political struggle. And that union, to attain which the burghers of the Middle Ages, with their miserable highways, required centuries, the modern proletarians, thanks to railways, achieve in a few years.

This organisation of the proletarians into a class, and consequently into a political party, is continually being upset again by the competition between the workers themselves. But it ever rises up again, stronger, firmer, mightier. It compels legislative recognition of particular interests of the workers, by taking advantage of the divisions among the bourgeoisie itself. Thus the ten-hours' bill in England was carried.

Altogether collisions between the classes of the old society further, in many ways, the course of development of the proletariat. The bourgeoisie finds

itself involved in a constant battle. At first with the aristocracy; later on, with those portions of the bourgeoisie itself, whose interests have become antagonistic to the progress of industry; at all times, with the bourgeoisie of foreign countries. In all these battles it sees itself compelled to appeal to the proletariat, to ask for its help, and thus, to drag it into the political arena. The bourgeoisie itself, therefore, supplies the proletariat with its own instruments of political and general education, in other words, it furnishes the proletariat with weapons for fighting the bourgeoisie.

Further, as we have already seen, entire sections of the ruling classes are, by the advance of industry, precipitated into the proletariat, or are at least threatened in their conditions of existence. These also supply the proletariat with fresh elements of enlightenment and progress.

Finally, in times when the class struggle nears the decisive hour, the process of dissolution going on within the ruling class, in fact within the whole range of society, assumes such a violent, glaring character, that a small section of the ruling class cuts itself adrift, and joins the revolutionary class, the class that holds the future in its hands. Just as, therefore, at an earlier period, a section of the nobility went over to the bourgeoisie, so now a portion of the bourgeoisie goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole.

Of all the classes that stand face to face with the bourgeoisie today, the proletariat alone is a really revolutionary class. The other classes decay and finally disappear in the face of Modern Industry; the proletariat is its special and essential product. The lower middle class, the small manufacturer, the shopkeeper, the artisan, the peasant, all these fight against the bourgeoisie, to save from extinction their existence as fractions of the middle class. They are therefore not revolutionary, but conservative. Nay more, they are reactionary, for they try to roll back the wheel of history. If by chance they are revolutionary, they are so only in view of their impending transfer into the proletariat, they thus defend not their present, but their future interests, they desert their own standpoint to place themselves at that of the proletariat.

The "dangerous class," the social scum, that passively rotting mass thrown off by the lowest layers of old society, may, here and there, be swept into the movement by a proletarian revolution; its conditions of life, however, prepare it far more for the part of a bribed tool of reactionary intrigue.

In the conditions of the proletariat, those of old society at large are already virtually swamped. The proletarian is without property; his relation to his wife and children has no longer anything in common with the bourgeois family-relations; modern industrial labour, modern subjection to capital, the same in England as in France, in America as in Germany, has stripped him of every trace of national character. Law, morality, religion, are to him so many bourgeois prejudices, behind which lurk in ambush just as many bourgeois interests.

All the preceding classes that got the upper hand, sought to fortify their already acquired status by subjecting society at large to their conditions of appropriation. The proletarians cannot become masters of the productive forces of society, except by abolishing their own previous mode of appropriation, and thereby also every other previous mode of appropriation. They have nothing of their own to secure and to fortify; their mission is to destroy all previous securities for, and insurances of, individual property.

All previous historical movements were movements of minorities, or in the interests of minorities. The proletarian movement is the self-conscious, independent movement of the immense majority, in the interests of the immense majority. The proletariat, the lowest stratum of our present society, cannot stir, cannot raise itself up, without the whole superincumbent strata of official society being sprung into the air.

Though not in substance, yet in form, the struggle of the proletariat with the bourgeoisie is at first a national struggle. The proletariat of each country must, of course, first of all settle matters with its own bourgeoisie.

In depicting the most general phases of the development of the proletariat, we traced the more or less veiled civil war, raging within existing society, up to the point where that war breaks out into open revolution, and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat.

Hitherto, every form of society has been based, as we have already seen, on the antagonism of oppressing and oppressed classes. But in order to oppress a class, certain conditions must be assured to it under which it can, at least, continue its slavish existence. The serf, in the period of serfdom, raised himself to membership in the commune, just as the petty bourgeois, under the yoke of feudal absolutism, managed to develop into a bourgeois. The modern laborer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth. And here it becomes evident, that the bourgeoisie is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an over-riding law. It is unfit to rule because it is incompetent to assure an existence to its slave within his slavery, because it cannot help letting him sink into such a state, that it has to feed him, instead of being fed by him. Society can no longer live under this bourgeoisie, in other words, its existence is no longer compatible with society.

The essential condition for the existence, and for the sway of the bourgeois class, is the formation and augmentation of capital; the condition for capital is wage-labour. Wage-labour rests exclusively on competition between the laborers. The advance of industry, whose involuntary promoter is the bourgeoisie, replaces the isolation of the labourers, due to competition, by their revolutionary combination, due to association. The development of Modern Industry, therefore, cuts from under its feet the very foundation on which the bourgeoisie produces and appropriates products. What the bourgeoisie, therefore, produces, above all, is its own grave-diggers. Its fall and the victory of the proletariat are equally inevitable.

## **II. PROLETARIANS AND COMMUNISTS**

In what relation do the Communists stand to the proletarians as a whole?

The Communists do not form a separate party opposed to other working-class parties.

They have no interests separate and apart from those of the proletariat as a whole.

They do not set up any sectarian principles of their own, by which to shape and mould the proletarian movement.

The Communists are distinguished from the other working-class parties by this only: (1) In the national struggles of the proletarians of the different countries, they point out and bring to the front the common interests of the entire proletariat, independently of all nationality. (2) In the various stages of development which the struggle of the working class against the bourgeoisie has to pass through, they always and everywhere represent the interests of the movement as a whole.

The Communists, therefore, are on the one hand, practically, the most advanced and resolute section of the working-class parties of every country, that section which pushes forward all others; on the other hand, theoretically, they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the ultimate general results of the proletarian movement.

The immediate aim of the Communist is the same as that of all the other proletarian parties: formation of the proletariat into a class, overthrow of the bourgeois supremacy, conquest of political power by the proletariat.

The theoretical conclusions of the Communists are in no way based on ideas or principles that have been invented, or discovered, by this or that would-be universal reformer. They merely express, in general terms, actual relations springing from an existing class struggle, from a historical movement going on under our very eyes. The abolition of existing property relations is not at all a distinctive feature of Communism.

All property relations in the past have continually been subject to historical change consequent upon the change in historical conditions.

The French Revolution, for example, abolished feudal property in favour of bourgeois property.

The distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property. But modern bourgeois private property is the final and most complete expression of the system of producing and appropriating products, that is based on class antagonisms, on the exploitation of the many by the few.

In this sense, the theory of the Communists may be summed up in the single sentence: Abolition of private property.

We Communists have been reproached with the desire of abolishing the right of personally acquiring property as the fruit of a man's own labour, which property is alleged to be the groundwork of all personal freedom, activity and independence.

Hard-won, self-acquired, self-earned property! Do you mean the property of the petty artisan and of the small peasant, a form of property that preceded the bourgeois form? There is no need to abolish that; the development of industry has to a great extent already destroyed it, and is still destroying it daily.

Or do you mean modern bourgeois private property?

But does wage-labour create any property for the labourer? Not a bit. It creates capital, i.e., that kind of property which exploits wage-labour, and which cannot increase except upon condition of begetting a new supply of wage-labour for fresh exploitation. Property, in its present form, is based on the antagonism of capital and wage-labour. Let us examine both sides of this antagonism.

To be a capitalist, is to have not only a purely personal, but a social status in production. Capital is a collective product, and only by the united action of many members, nay, in the last resort, only by the united action of all members of society, can it be set in motion.

Capital is, therefore, not a personal, it is a social power.

When, therefore, capital is converted into common property, into the property of all members of society, personal property is not thereby

transformed into social property. It is only the social character of the property that is changed. It loses its class-character.

Let us now take wage-labour.

The average price of wage-labour is the minimum wage, i.e., that quantum of the means of subsistence, which is absolutely requisite in bare existence as a labourer. What, therefore, the wage-labourer appropriates by means of his labour, merely suffices to prolong and reproduce a bare existence. We by no means intend to abolish this personal appropriation of the products of labour, an appropriation that is made for the maintenance and reproduction of human life, and that leaves no surplus wherewith to command the labour of others. All that we want to do away with, is the miserable character of this appropriation, under which the labourer lives merely to increase capital, and is allowed to live only in so far as the interest of the ruling class requires it.

In bourgeois society, living labour is but a means to increase accumulated labour. In Communist society, accumulated labour is but a means to widen, to enrich, to promote the existence of the labourer.

In bourgeois society, therefore, the past dominates the present; in Communist society, the present dominates the past. In bourgeois society capital is independent and has individuality, while the living person is dependent and has no individuality.

And the abolition of this state of things is called by the bourgeois, abolition of individuality and freedom! And rightly so. The abolition of bourgeois individuality, bourgeois independence, and bourgeois freedom is undoubtedly aimed at.

By freedom is meant, under the present bourgeois conditions of production, free trade, free selling and buying.

But if selling and buying disappears, free selling and buying disappears also. This talk about free selling and buying, and all the other "brave words" of our bourgeoisie about freedom in general, have a meaning, if any, only in contrast with restricted selling and buying, with the fettered traders of the

Middle Ages, but have no meaning when opposed to the Communistic abolition of buying and selling, of the bourgeois conditions of production, and of the bourgeoisie itself.

You are horrified at our intending to do away with private property. But in your existing society, private property is already done away with for nine-tenths of the population; its existence for the few is solely due to its non-existence in the hands of those nine-tenths. You reproach us, therefore, with intending to do away with a form of property, the necessary condition for whose existence is the non-existence of any property for the immense majority of society.

In one word, you reproach us with intending to do away with your property. Precisely so; that is just what we intend.

From the moment when labour can no longer be converted into capital, money, or rent, into a social power capable of being monopolised, i.e., from the moment when individual property can no longer be transformed into bourgeois property, into capital, from that moment, you say individuality vanishes.

You must, therefore, confess that by "individual" you mean no other person than the bourgeois, than the middle-class owner of property. This person must, indeed, be swept out of the way, and made impossible.

Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation.

It has been objected that upon the abolition of private property all work will cease, and universal laziness will overtake us.

According to this, bourgeois society ought long ago to have gone to the dogs through sheer idleness; for those of its members who work, acquire nothing, and those who acquire anything, do not work. The whole of this objection is but another expression of the tautology: that there can no longer be any wage-labour when there is no longer any capital.

All objections urged against the Communistic mode of producing and appropriating material products, have, in the same way, been urged against the Communistic modes of producing and appropriating intellectual products. Just as, to the bourgeois, the disappearance of class property is the disappearance of production itself, so the disappearance of class culture is to him identical with the disappearance of all culture.

That culture, the loss of which he laments, is, for the enormous majority, a mere training to act as a machine.

But don't wrangle with us so long as you apply, to our intended abolition of bourgeois property, the standard of your bourgeois notions of freedom, culture, law, etc. Your very ideas are but the outgrowth of the conditions of your bourgeois production and bourgeois property, just as your jurisprudence is but the will of your class made into a law for all, a will, whose essential character and direction are determined by the economical conditions of existence of your class.

The selfish misconception that induces you to transform into eternal laws of nature and of reason, the social forms springing from your present mode of production and form of property—historical relations that rise and disappear in the progress of production—this misconception you share with every ruling class that has preceded you. What you see clearly in the case of ancient property, what you admit in the case of feudal property, you are of course forbidden to admit in the case of your own bourgeois form of property.

Abolition of the family! Even the most radical flare up at this infamous proposal of the Communists.

On what foundation is the present family, the bourgeois family, based? On capital, on private gain. In its completely developed form this family exists only among the bourgeoisie. But this state of things finds its complement in the practical absence of the family among the proletarians, and in public prostitution.

The bourgeois family will vanish as a matter of course when its complement vanishes, and both will vanish with the vanishing of capital.

Do you charge us with wanting to stop the exploitation of children by their parents? To this crime we plead guilty.

But, you will say, we destroy the most hallowed of relations, when we replace home education by social.

And your education! Is not that also social, and determined by the social conditions under which you educate, by the intervention, direct or indirect, of society, by means of schools, etc.? The Communists have not invented the intervention of society in education; they do but seek to alter the character of that intervention, and to rescue education from the influence of the ruling class.

The bourgeois clap-trap about the family and education, about the hallowed co-relation of parent and child, becomes all the more disgusting, the more, by the action of Modern Industry, all family ties among the proletarians are torn asunder, and their children transformed into simple articles of commerce and instruments of labour.

But you Communists would introduce community of women, screams the whole bourgeoisie in chorus.

The bourgeois sees in his wife a mere instrument of production. He hears that the instruments of production are to be exploited in common, and, naturally, can come to no other conclusion than that the lot of being common to all will likewise fall to the women.

He has not even a suspicion that the real point is to do away with the status of women as mere instruments of production.

For the rest, nothing is more ridiculous than the virtuous indignation of our bourgeois at the community of women which, they pretend, is to be openly and officially established by the Communists. The Communists have no need to introduce community of women; it has existed almost from time immemorial.

Our bourgeois, not content with having the wives and daughters of their proletarians at their disposal, not to speak of common prostitutes, take the

greatest pleasure in seducing each other's wives.

Bourgeois marriage is in reality a system of wives in common and thus, at the most, what the Communists might possibly be reproached with, is that they desire to introduce, in substitution for a hypocritically concealed, an openly legalised community of women. For the rest, it is self-evident that the abolition of the present system of production must bring with it the abolition of the community of women springing from that system, i.e., of prostitution both public and private.

The Communists are further reproached with desiring to abolish countries and nationality.

The working men have no country. We cannot take from them what they have not got. Since the proletariat must first of all acquire political supremacy, must rise to be the leading class of the nation, must constitute itself the nation, it is, so far, itself national, though not in the bourgeois sense of the word.

National differences and antagonisms between peoples are daily more and more vanishing, owing to the development of the bourgeoisie, to freedom of commerce, to the world-market, to uniformity in the mode of production and in the conditions of life corresponding thereto.

The supremacy of the proletariat will cause them to vanish still faster. United action, of the leading civilised countries at least, is one of the first conditions for the emancipation of the proletariat.

In proportion as the exploitation of one individual by another is put an end to, the exploitation of one nation by another will also be put an end to. In proportion as the antagonism between classes within the nation vanishes, the hostility of one nation to another will come to an end.

The charges against Communism made from a religious, a philosophical, and, generally, from an ideological standpoint, are not deserving of serious examination.

Does it require deep intuition to comprehend that man's ideas, views and conceptions, in one word, man's consciousness, changes with every change in the conditions of his material existence, in his social relations and in his social life?

What else does the history of ideas prove, than that intellectual production changes its character in proportion as material production is changed? The ruling ideas of each age have ever been the ideas of its ruling class.

When people speak of ideas that revolutionise society, they do but express the fact, that within the old society, the elements of a new one have been created, and that the dissolution of the old ideas keeps even pace with the dissolution of the old conditions of existence.

When the ancient world was in its last throes, the ancient religions were overcome by Christianity. When Christian ideas succumbed in the 18th century to rationalist ideas, feudal society fought its death battle with the then revolutionary bourgeoisie. The ideas of religious liberty and freedom of conscience merely gave expression to the sway of free competition within the domain of knowledge.

"Undoubtedly," it will be said, "religious, moral, philosophical and juridical ideas have been modified in the course of historical development. But religion, morality philosophy, political science, and law, constantly survived this change."

"There are, besides, eternal truths, such as Freedom, Justice, etc. that are common to all states of society. But Communism abolishes eternal truths, it abolishes all religion, and all morality, instead of constituting them on a new basis; it therefore acts in contradiction to all past historical experience."

What does this accusation reduce itself to? The history of all past society has consisted in the development of class antagonisms, antagonisms that assumed different forms at different epochs.

But whatever form they may have taken, one fact is common to all past ages, viz., the exploitation of one part of society by the other. No wonder,

then, that the social consciousness of past ages, despite all the multiplicity and variety it displays, moves within certain common forms, or general ideas, which cannot completely vanish except with the total disappearance of class antagonisms.

The Communist revolution is the most radical rupture with traditional property relations; no wonder that its development involves the most radical rupture with traditional ideas.

But let us have done with the bourgeois objections to Communism.

We have seen above, that the first step in the revolution by the working class, is to raise the proletariat to the position of ruling as to win the battle of democracy.

The proletariat will use its political supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production in the hands of the State, i.e., of the proletariat organised as the ruling class; and to increase the total of productive forces as rapidly as possible.

Of course, in the beginning, this cannot be effected except by means of despotic inroads on the rights of property, and on the conditions of bourgeois production; by means of measures, therefore, which appear economically insufficient and untenable, but which, in the course of the movement, outstrip themselves, necessitate further inroads upon the old social order, and are unavoidable as a means of entirely revolutionising the mode of production.

These measures will of course be different in different countries.

Nevertheless in the most advanced countries, the following will be pretty generally applicable.

1. Abolition of property in land and application of all rents of land to public purposes.
2. A heavy progressive or graduated income tax.

3. Abolition of all right of inheritance.
4. Confiscation of the property of all emigrants and rebels.
5. Centralisation of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly.
6. Centralisation of the means of communication and transport in the hands of the State.
7. Extension of factories and instruments of production owned by the State; the bringing into cultivation of waste-lands, and the improvement of the soil generally in accordance with a common plan.
8. Equal liability of all to labour. Establishment of industrial armies, especially for agriculture.
9. Combination of agriculture with manufacturing industries; gradual abolition of the distinction between town and country, by a more equable distribution of the population over the country.
10. Free education for all children in public schools.  
Abolition of children's factory labour in its present form.  
Combination of education with industrial production, &c., &c.

When, in the course of development, class distinctions have disappeared, and all production has been concentrated in the hands of a vast association of the whole nation, the public power will lose its political character. Political power, properly so called, is merely the organised power of one class for oppressing another. If the proletariat during its contest with the bourgeoisie is compelled, by the force of circumstances, to organise itself as a class, if, by means of a revolution, it makes itself the ruling class, and, as such, sweeps away by force the old conditions of production, then it will, along with these conditions, have swept away the conditions for the existence of class antagonisms and of classes generally, and will thereby have abolished its own supremacy as a class.

In place of the old bourgeois society, with its classes and class antagonisms, we shall have an association, in which the free development of each is the condition for the free development of all.

### **III. SOCIALIST AND COMMUNIST LITERATURE**

#### **1. REACTIONARY SOCIALISM**

##### **A. Feudal Socialism**

Owing to their historical position, it became the vocation of the aristocracies of France and England to write pamphlets against modern bourgeois society. In the French revolution of July 1830, and in the English reform agitation, these aristocracies again succumbed to the hateful upstart. Thenceforth, a serious political contest was altogether out of the question. A literary battle alone remained possible. But even in the domain of literature the old cries of the restoration period had become impossible.

In order to arouse sympathy, the aristocracy were obliged to lose sight, apparently, of their own interests, and to formulate their indictment against the bourgeoisie in the interest of the exploited working class alone. Thus the aristocracy took their revenge by singing lampoons on their new master, and whispering in his ears sinister prophecies of coming catastrophe.

In this way arose Feudal Socialism: half lamentation, half lampoon; half echo of the past, half menace of the future; at times, by its bitter, witty and incisive criticism, striking the bourgeoisie to the very heart's core; but always ludicrous in its effect, through total incapacity to comprehend the march of modern history.

The aristocracy, in order to rally the people to them, waved the proletarian alms-bag in front for a banner. But the people, so often as it joined them, saw on their hindquarters the old feudal coats of arms, and deserted with loud and irreverent laughter.

One section of the French Legitimists and "Young England" exhibited this spectacle.

In pointing out that their mode of exploitation was different to that of the bourgeoisie, the feudalists forget that they exploited under circumstances and conditions that were quite different, and that are now antiquated. In showing that, under their rule, the modern proletariat never existed, they forget that the modern bourgeoisie is the necessary offspring of their own form of society.

For the rest, so little do they conceal the reactionary character of their criticism that their chief accusation against the bourgeoisie amounts to this, that under the bourgeois regime a class is being developed, which is destined to cut up root and branch the old order of society.

What they upbraid the bourgeoisie with is not so much that it creates a proletariat, as that it creates a revolutionary proletariat.

In political practice, therefore, they join in all coercive measures against the working class; and in ordinary life, despite their high falutin phrases, they stoop to pick up the golden apples dropped from the tree of industry, and to barter truth, love, and honour for traffic in wool, beetroot-sugar, and potato spirits.

As the parson has ever gone hand in hand with the landlord, so has Clerical Socialism with Feudal Socialism.

Nothing is easier than to give Christian asceticism a Socialist tinge. Has not Christianity declaimed against private property, against marriage, against the State? Has it not preached in the place of these, charity and poverty, celibacy and mortification of the flesh, monastic life and Mother Church? Christian Socialism is but the holy water with which the priest consecrates the heart-burnings of the aristocrat.

## B. Petty-Bourgeois Socialism

The feudal aristocracy was not the only class that was ruined by the bourgeoisie, not the only class whose conditions of existence pined and perished in the atmosphere of modern bourgeois society. The mediaeval burgesses and the small peasant proprietors were the precursors of the modern bourgeoisie. In those countries which are but little developed, industrially and commercially, these two classes still vegetate side by side with the rising bourgeoisie.

In countries where modern civilisation has become fully developed, a new class of petty bourgeois has been formed, fluctuating between proletariat and bourgeoisie and ever renewing itself as a supplementary part of bourgeois society. The individual members of this class, however, are being constantly hurled down into the proletariat by the action of competition, and, as modern industry develops, they even see the moment approaching when they will completely disappear as an independent section of modern society, to be replaced, in manufactures, agriculture and commerce, by overlookers, bailiffs and shopmen.

In countries like France, where the peasants constitute far more than half of the population, it was natural that writers who sided with the proletariat against the bourgeoisie, should use, in their criticism of the bourgeois regime, the standard of the peasant and petty bourgeois, and from the standpoint of these intermediate classes should take up the cudgels for the working class. Thus arose petty-bourgeois Socialism. Sismondi was the head of this school, not only in France but also in England.

This school of Socialism dissected with great acuteness the contradictions in the conditions of modern production. It laid bare the hypocritical apologies of economists. It proved, incontrovertibly, the disastrous effects of machinery and division of labour; the concentration of capital and land in a few hands; overproduction and crises; it pointed out the inevitable ruin of the petty bourgeois and peasant, the misery of the proletariat, the anarchy in production, the crying inequalities in the distribution of wealth, the industrial war of extermination between nations, the dissolution of old moral bonds, of the old family relations, of the old nationalities.

In its positive aims, however, this form of Socialism aspires either to restoring the old means of production and of exchange, and with them the

old property relations, and the old society, or to cramping the modern means of production and of exchange, within the framework of the old property relations that have been, and were bound to be, exploded by those means. In either case, it is both reactionary and Utopian.

Its last words are: corporate guilds for manufacture, patriarchal relations in agriculture.

Ultimately, when stubborn historical facts had dispersed all intoxicating effects of self-deception, this form of Socialism ended in a miserable fit of the blues.

### C. German, or "True," Socialism

The Socialist and Communist literature of France, a literature that originated under the pressure of a bourgeoisie in power, and that was the expression of the struggle against this power, was introduced into Germany at a time when the bourgeoisie, in that country, had just begun its contest with feudal absolutism.

German philosophers, would-be philosophers, and beaux esprits, eagerly seized on this literature, only forgetting, that when these writings immigrated from France into Germany, French social conditions had not immigrated along with them. In contact with German social conditions, this French literature lost all its immediate practical significance, and assumed a purely literary aspect. Thus, to the German philosophers of the eighteenth century, the demands of the first French Revolution were nothing more than the demands of "Practical Reason" in general, and the utterance of the will of the revolutionary French bourgeoisie signified in their eyes the law of pure Will, of Will as it was bound to be, of true human Will generally.

The world of the German literate consisted solely in bringing the new French ideas into harmony with their ancient philosophical conscience, or rather, in annexing the French ideas without deserting their own philosophic point of view.

This annexation took place in the same way in which a foreign language is appropriated, namely, by translation.

It is well known how the monks wrote silly lives of Catholic Saints over the manuscripts on which the classical works of ancient heathendom had been written. The German literate reversed this process with the profane French literature. They wrote their philosophical nonsense beneath the French original. For instance, beneath the French criticism of the economic functions of money, they wrote "Alienation of Humanity," and beneath the French criticism of the bourgeois State they wrote "dethronement of the Category of the General," and so forth.

The introduction of these philosophical phrases at the back of the French historical criticisms they dubbed "Philosophy of Action," "True Socialism," "German Science of Socialism," "Philosophical Foundation of Socialism," and so on.

The French Socialist and Communist literature was thus completely emasculated. And, since it ceased in the hands of the German to express the struggle of one class with the other, he felt conscious of having overcome "French one-sidedness" and of representing, not true requirements, but the requirements of truth; not the interests of the proletariat, but the interests of Human Nature, of Man in general, who belongs to no class, has no reality, who exists only in the misty realm of philosophical fantasy.

This German Socialism, which took its schoolboy task so seriously and solemnly, and extolled its poor stock-in-trade in such mountebank fashion, meanwhile gradually lost its pedantic innocence.

The fight of the German, and especially, of the Prussian bourgeoisie, against feudal aristocracy and absolute monarchy, in other words, the liberal movement, became more earnest.

By this, the long wished-for opportunity was offered to "True" Socialism of confronting the political movement with the Socialist demands, of hurling the traditional anathemas against liberalism, against representative government, against bourgeois competition, bourgeois freedom of the press, bourgeois legislation, bourgeois liberty and equality, and of preaching to the

masses that they had nothing to gain, and everything to lose, by this bourgeois movement. German Socialism forgot, in the nick of time, that the French criticism, whose silly echo it was, presupposed the existence of modern bourgeois society, with its corresponding economic conditions of existence, and the political constitution adapted thereto, the very things whose attainment was the object of the pending struggle in Germany.

To the absolute governments, with their following of parsons, professors, country squires and officials, it served as a welcome scarecrow against the threatening bourgeoisie.

It was a sweet finish after the bitter pills of floggings and bullets with which these same governments, just at that time, dosed the German working-class risings.

While this "True" Socialism thus served the governments as a weapon for fighting the German bourgeoisie, it, at the same time, directly represented a reactionary interest, the interest of the German Philistines. In Germany the petty-bourgeois class, a relic of the sixteenth century, and since then constantly cropping up again under various forms, is the real social basis of the existing state of things.

To preserve this class is to preserve the existing state of things in Germany. The industrial and political supremacy of the bourgeoisie threatens it with certain destruction; on the one hand, from the concentration of capital; on the other, from the rise of a revolutionary proletariat. "True" Socialism appeared to kill these two birds with one stone. It spread like an epidemic.

The robe of speculative cobwebs, embroidered with flowers of rhetoric, steeped in the dew of sickly sentiment, this transcendental robe in which the German Socialists wrapped their sorry "eternal truths," all skin and bone, served to wonderfully increase the sale of their goods amongst such a public. And on its part, German Socialism recognised, more and more, its own calling as the bombastic representative of the petty-bourgeois Philistine.

It proclaimed the German nation to be the model nation, and the German petty Philistine to be the typical man. To every villainous meanness of this

model man it gave a hidden, higher, Socialistic interpretation, the exact contrary of its real character. It went to the extreme length of directly opposing the "brutally destructive" tendency of Communism, and of proclaiming its supreme and impartial contempt of all class struggles. With very few exceptions, all the so-called Socialist and Communist publications that now (1847) circulate in Germany belong to the domain of this foul and enervating literature.

## **2. CONSERVATIVE, OR BOURGEOIS, SOCIALISM**

A part of the bourgeoisie is desirous of redressing social grievances, in order to secure the continued existence of bourgeois society.

To this section belong economists, philanthropists, humanitarians, improvers of the condition of the working class, organisers of charity, members of societies for the prevention of cruelty to animals, temperance fanatics, hole-and-corner reformers of every imaginable kind. This form of Socialism has, moreover, been worked out into complete systems.

We may cite Proudhon's *Philosophie de la Misere* as an example of this form.

The Socialistic bourgeois want all the advantages of modern social conditions without the struggles and dangers necessarily resulting therefrom. They desire the existing state of society minus its revolutionary and disintegrating elements. They wish for a bourgeoisie without a proletariat. The bourgeoisie naturally conceives the world in which it is supreme to be the best; and bourgeois Socialism develops this comfortable conception into various more or less complete systems. In requiring the proletariat to carry out such a system, and thereby to march straightway into the social New Jerusalem, it but requires in reality, that the proletariat should remain within the bounds of existing society, but should cast away all its hateful ideas concerning the bourgeoisie.

A second and more practical, but less systematic, form of this Socialism sought to depreciate every revolutionary movement in the eyes of the working class, by showing that no mere political reform, but only a change

in the material conditions of existence, in economic relations, could be of any advantage to them. By changes in the material conditions of existence, this form of Socialism, however, by no means understands abolition of the bourgeois relations of production, an abolition that can be effected only by a revolution, but administrative reforms, based on the continued existence of these relations; reforms, therefore, that in no respect affect the relations between capital and labour, but, at the best, lessen the cost, and simplify the administrative work, of bourgeois government.

Bourgeois Socialism attains adequate expression, when, and only when, it becomes a mere figure of speech.

Free trade: for the benefit of the working class. Protective duties: for the benefit of the working class. Prison Reform: for the benefit of the working class. This is the last word and the only seriously meant word of bourgeois Socialism.

It is summed up in the phrase: the bourgeois is a bourgeois—for the benefit of the working class.

### **3. CRITICAL-UTOPIAN SOCIALISM AND COMMUNISM**

We do not here refer to that literature which, in every great modern revolution, has always given voice to the demands of the proletariat, such as the writings of Babeuf and others.

The first direct attempts of the proletariat to attain its own ends, made in times of universal excitement, when feudal society was being overthrown, these attempts necessarily failed, owing to the then undeveloped state of the proletariat, as well as to the absence of the economic conditions for its emancipation, conditions that had yet to be produced, and could be produced by the impending bourgeois epoch alone. The revolutionary literature that accompanied these first movements of the proletariat had necessarily a reactionary character. It inculcated universal asceticism and social levelling in its crudest form.

The Socialist and Communist systems properly so called, those of Saint-Simon, Fourier, Owen and others, spring into existence in the early undeveloped period, described above, of the struggle between proletariat and bourgeoisie (see Section 1. Bourgeois and Proletarians).

The founders of these systems see, indeed, the class antagonisms, as well as the action of the decomposing elements, in the prevailing form of society. But the proletariat, as yet in its infancy, offers to them the spectacle of a class without any historical initiative or any independent political movement.

Since the development of class antagonism keeps even pace with the development of industry, the economic situation, as they find it, does not as yet offer to them the material conditions for the emancipation of the proletariat. They therefore search after a new social science, after new social laws, that are to create these conditions.

Historical action is to yield to their personal inventive action, historically created conditions of emancipation to fantastic ones, and the gradual, spontaneous class-organisation of the proletariat to the organisation of society specially contrived by these inventors. Future history resolves itself, in their eyes, into the propaganda and the practical carrying out of their social plans.

In the formation of their plans they are conscious of caring chiefly for the interests of the working class, as being the most suffering class. Only from the point of view of being the most suffering class does the proletariat exist for them.

The undeveloped state of the class struggle, as well as their own surroundings, causes Socialists of this kind to consider themselves far superior to all class antagonisms. They want to improve the condition of every member of society, even that of the most favoured. Hence, they habitually appeal to society at large, without distinction of class; nay, by preference, to the ruling class. For how can people, when once they understand their system, fail to see in it the best possible plan of the best possible state of society?

Hence, they reject all political, and especially all revolutionary, action; they wish to attain their ends by peaceful means, and endeavour, by small experiments, necessarily doomed to failure, and by the force of example, to pave the way for the new social Gospel.

Such fantastic pictures of future society, painted at a time when the proletariat is still in a very undeveloped state and has but a fantastic conception of its own position correspond with the first instinctive yearnings of that class for a general reconstruction of society.

But these Socialist and Communist publications contain also a critical element. They attack every principle of existing society. Hence they are full of the most valuable materials for the enlightenment of the working class. The practical measures proposed in them—such as the abolition of the distinction between town and country, of the family, of the carrying on of industries for the account of private individuals, and of the wage system, the proclamation of social harmony, the conversion of the functions of the State into a mere superintendence of production, all these proposals, point solely to the disappearance of class antagonisms which were, at that time, only just cropping up, and which, in these publications, are recognised in their earliest, indistinct and undefined forms only. These proposals, therefore, are of a purely Utopian character.

The significance of Critical-Utopian Socialism and Communism bears an inverse relation to historical development. In proportion as the modern class struggle develops and takes definite shape, this fantastic standing apart from the contest, these fantastic attacks on it, lose all practical value and all theoretical justification. Therefore, although the originators of these systems were, in many respects, revolutionary, their disciples have, in every case, formed mere reactionary sects. They hold fast by the original views of their masters, in opposition to the progressive historical development of the proletariat. They, therefore, endeavour, and that consistently, to deaden the class struggle and to reconcile the class antagonisms. They still dream of experimental realisation of their social Utopias, of founding isolated "phalansteres," of establishing "Home Colonies," of setting up a "Little Icaria"—duodecimo editions of the New Jerusalem—and to realise all these castles in the air, they are compelled to appeal to the feelings and purses of

the bourgeois. By degrees they sink into the category of the reactionary conservative Socialists depicted above, differing from these only by more systematic pedantry, and by their fanatical and superstitious belief in the miraculous effects of their social science.

They, therefore, violently oppose all political action on the part of the working class; such action, according to them, can only result from blind unbelief in the new Gospel.

The Owenites in England, and the Fourierists in France, respectively, oppose the Chartists and the Reformistes.

#### **IV. POSITION OF THE COMMUNISTS IN RELATION TO THE VARIOUS EXISTING OPPOSITION PARTIES**

**Section II has made clear the relations of the Communists to the existing working-class parties, such as the Chartists in England and the Agrarian Reformers in America.**

The Communists fight for the attainment of the immediate aims, for the enforcement of the momentary interests of the working class; but in the movement of the present, they also represent and take care of the future of that movement. In France the Communists ally themselves with the Social-Democrats, against the conservative and radical bourgeoisie, reserving, however, the right to take up a critical position in regard to phrases and illusions traditionally handed down from the great Revolution.

In Switzerland they support the Radicals, without losing sight of the fact that this party consists of antagonistic elements, partly of Democratic Socialists, in the French sense, partly of radical bourgeois.

In Poland they support the party that insists on an agrarian revolution as the prime condition for national emancipation, that party which fomented the insurrection of Cracow in 1846.

In Germany they fight with the bourgeoisie whenever it acts in a revolutionary way, against the absolute monarchy, the feudal squirearchy, and the petty bourgeoisie.

But they never cease, for a single instant, to instil into the working class the clearest possible recognition of the hostile antagonism between bourgeoisie

and proletariat, in order that the German workers may straightaway use, as so many weapons against the bourgeoisie, the social and political conditions that the bourgeoisie must necessarily introduce along with its supremacy, and in order that, after the fall of the reactionary classes in Germany, the fight against the bourgeoisie itself may immediately begin.

The Communists turn their attention chiefly to Germany, because that country is on the eve of a bourgeois revolution that is bound to be carried out under more advanced conditions of European civilisation, and with a much more developed proletariat, than that of England was in the seventeenth, and of France in the eighteenth century, and because the bourgeois revolution in Germany will be but the prelude to an immediately following proletarian revolution.

In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things.

In all these movements they bring to the front, as the leading question in each, the property question, no matter what its degree of development at the time.

Finally, they labour everywhere for the union and agreement of the democratic parties of all countries.

The Communists disdain to conceal their views and aims.  
They openly declare that their ends can be attained only by  
the forcible overthrow of all existing social conditions.  
Let the ruling classes tremble at a Communistic revolution.  
The proletarians have nothing to lose but their chains.  
They have a world to win.

**WORKING MEN OF ALL COUNTRIES, UNITE!**

End of the Project Gutenberg EBook of The Communist Manifesto by Karl Marx and Friedrich Engels

**\*\*\* END OF THIS PROJECT GUTENBERG EBOOK THE  
COMMUNIST MANIFESTO \*\*\***

\*\*\*\*\* This file should be named 61.txt or 61.zip \*\*\*\*\* This and all associated files of various formats will be found in:  
<http://www.gutenberg.net/6/61/>

Transcribed by Allen Lutins with assistance from Jim Tarzia.

Updated editions will replace the previous one—the old editions will be renamed.

Creating the works from public domain print editions means that no one owns a United States copyright in these works, so the Foundation (and you!) can copy and distribute it in the United States without permission and without paying copyright royalties. Special rules, set forth in the General Terms of Use part of this license, apply to copying and distributing Project Gutenberg-tm electronic works to protect the PROJECT GUTENBERG-tm concept and trademark. Project Gutenberg is a registered trademark, and may not be used if you charge for the eBooks, unless you receive specific permission. If you do not charge anything for copies of this eBook, complying with the rules is very easy. You may use this eBook for nearly any purpose such as creation of derivative works, reports, performances and research. They may be modified and printed and given away—you may do practically ANYTHING with public domain eBooks. Redistribution is subject to the trademark license, especially commercial redistribution.

**\*\*\* START: FULL LICENSE \*\*\***

**THE FULL PROJECT GUTENBERG LICENSE PLEASE READ THIS BEFORE YOU  
DISTRIBUTE OR USE THIS WORK**

To protect the Project Gutenberg-tm mission of promoting the free distribution of electronic works, by using or distributing this work (or any other work associated in any way with the phrase "Project Gutenberg"), you agree to comply with all the terms of the Full Project Gutenberg-tm License (available with this file or online at <http://gutenberg.net/license>).

## **Section 1. General Terms of Use and Redistributing Project Gutenberg-tm electronic works**

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying,

distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.net](http://www.gutenberg.net)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the

phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1 through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.net](http://www.gutenberg.net)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."

- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.

- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

**1.F.**

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS', WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

## **Section 2. Information about the Mission of Project Gutenberg-tm**

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, is critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive

Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <http://www.pglaf.org>.

### **Section 3. Information about the Project Gutenberg Literary Archive Foundation**

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <http://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email [business@pglaf.org](mailto:business@pglaf.org). Email contact links and up to date contact information can be found at the Foundation's web site and official page at <http://pglaf.org>

For additional contact information:

Dr. Gregory B. Newby  
Chief Executive and Director  
[gbnewby@pglaf.org](mailto:gbnewby@pglaf.org)

### **Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation**

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to

\$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <http://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including including checks, online payments and credit card donations. To donate, please visit: <http://pglaf.org/donate>

## **Section 5. General Information About Project Gutenberg-tm electronic works.**

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a

copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

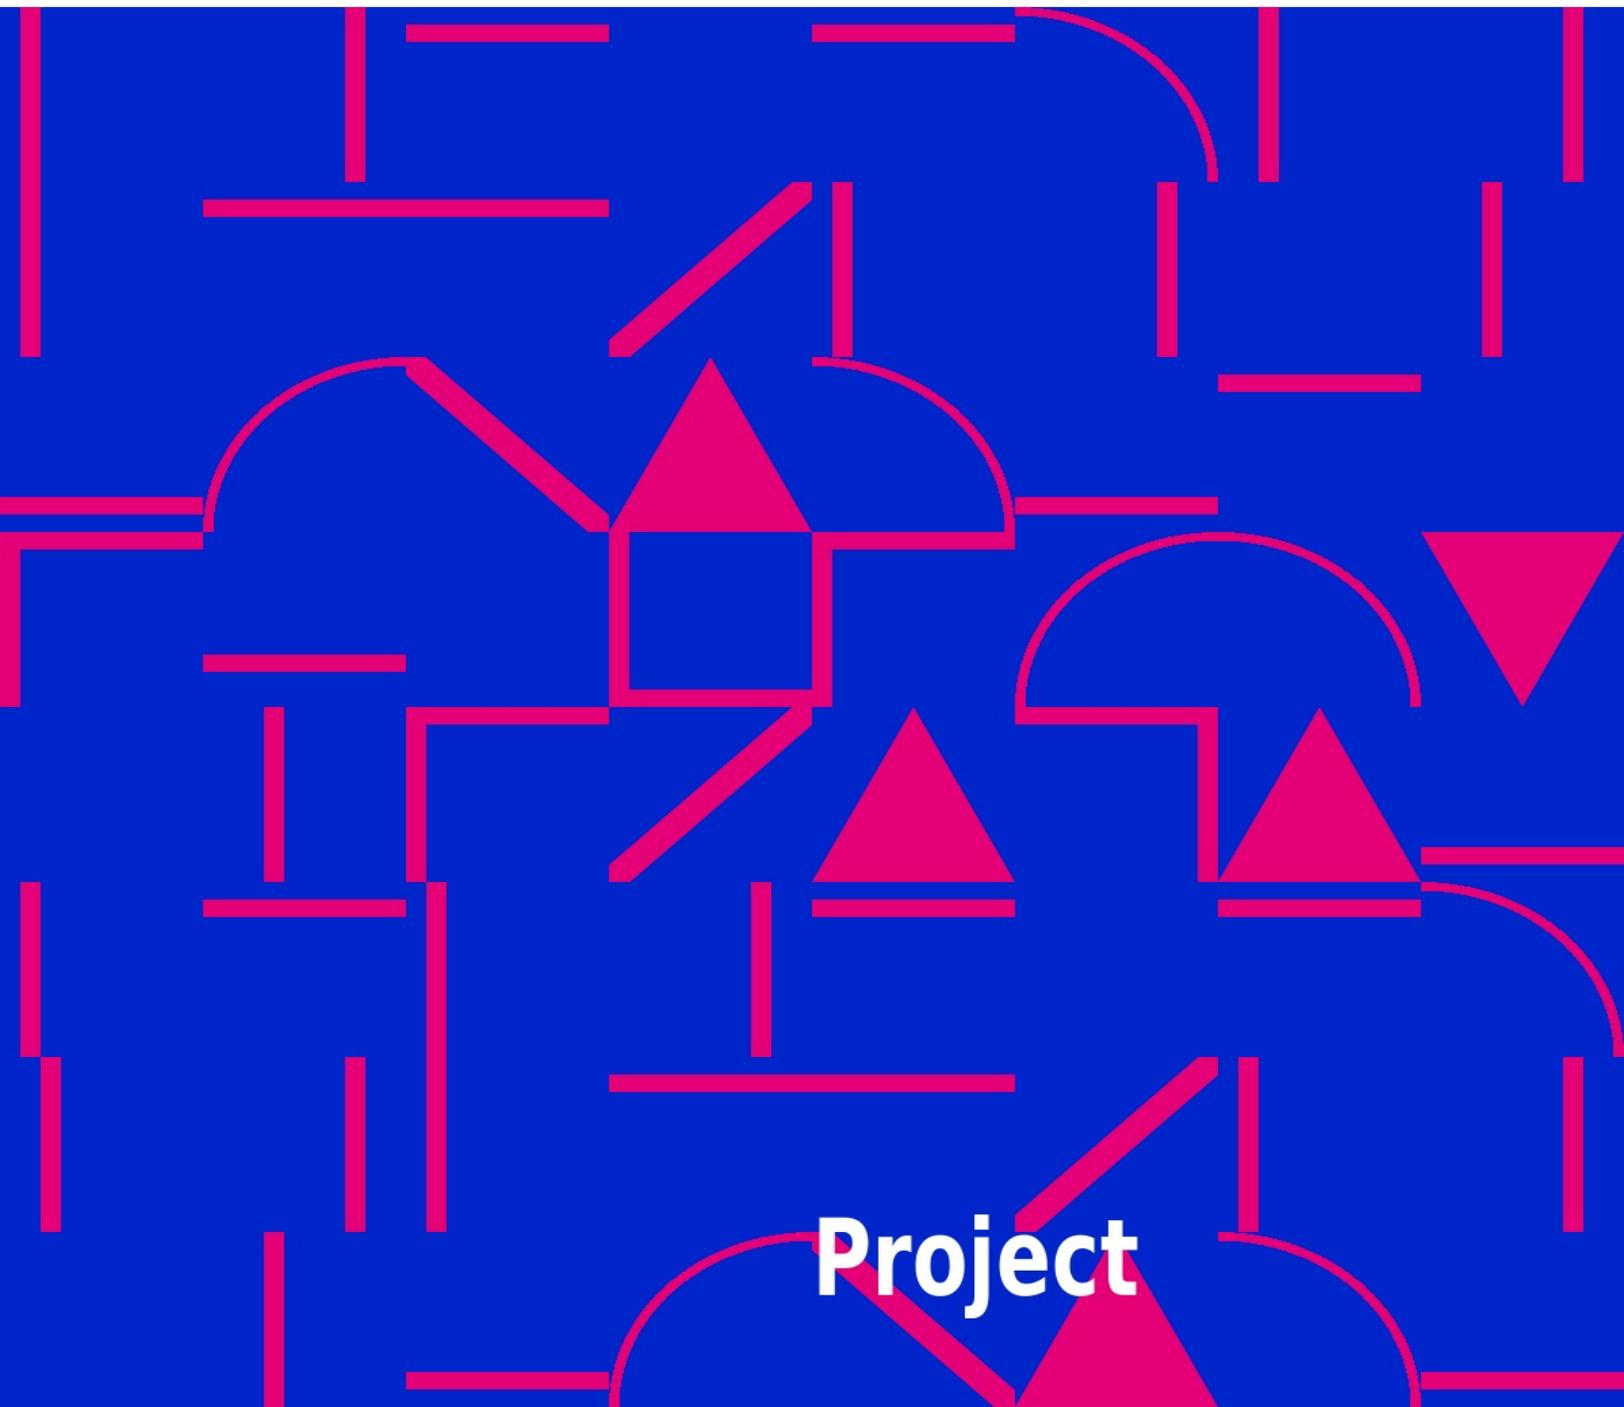

Most people start at our Web site which has the main PG search facility:

<http://www.gutenberg.net>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to subscribe to our email newsletter to hear about new eBooks.

# The Eighteenth Brumaire of Louis Bonaparte

Karl Marx

The lower half of the image features a complex, abstract pattern of bright red lines and shapes on a dark blue background. The shapes include various geometric forms such as rectangles, triangles, and semi-circles, some of which are interconnected to form larger, more complex structures. The overall effect is a dense, rhythmic, and somewhat chaotic visual texture.

Project

Project Gutenberg's The Eighteenth Brumaire of Louis Bonaparte, by Karl Marx

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

## Translator's Preface

"The Eighteenth Brumaire of Louis Bonaparte" is one of Karl Marx' most profound and most brilliant monographs. It may be considered the best work extant on the philosophy of history, with an eye especially upon the history of the Movement of the Proletariat, together with the bourgeois and other manifestations that accompany the same, and the tactics that such conditions dictate.

The recent populist uprising; the more recent "Debs Movement"; the thousand and one utopian and chimerical notions that are flaring up; the capitalist maneuvers; the hopeless, helpless grasping after straws, that characterize the conduct of the bulk of the working class; all of these, together with the empty-headed, ominous figures that are springing into notoriety for a time and have their day, mark the present period of the Labor Movement in the nation a critical one. The best information acquirable, the best mental training obtainable are requisite to steer through the existing chaos that the death-tainted social system of today creates all around us. To aid in this needed information and mental training, this instructive work is now made accessible to English readers, and is commended to the serious study of the serious.

The teachings contained in this work are hung on an episode in recent French history. With some this fact may detract of its value. A pedantic, supercilious notion is extensively abroad among us that we are an "Anglo Saxon" nation; and an equally pedantic, supercilious habit causes many to look to England for inspiration, as from a racial birthplace Nevertheless, for weal or for woe, there is no such thing extant as "Anglo-Saxon"—of all nations, said to be "Anglo-Saxon," in the United States least. What we still have from England, much as appearances may seem to point the other way, is not of our bone-and-marrow, so to speak, but rather partakes of the nature of "importations." We are no more English on account of them than we are Chinese because we all drink tea.

Of all European nations, France is the one to which we come nearest. Besides its republican form of government—the directness of its history, the unity of its actions, the sharpness that marks its internal development, are

all characteristics that find their parallel her best, and vice versa. In all essentials the study of modern French history, particularly when sketched by such a master hand as Marx', is the most valuable one for the acquisition of that historic, social and biologic insight that our country stands particularly in need of, and that will be inestimable during the approaching critical days.

For the assistance of those who, unfamiliar with the history of France, may be confused by some of the terms used by Marx, the following explanations may prove aidful:

On the 18th Brumaire (Nov. 9th), the post-revolutionary development of affairs in France enabled the first Napoleon to take a step that led with inevitable certainty to the imperial throne. The circumstance that fifty and odd years later similar events aided his nephew, Louis Bonaparte, to take a similar step with a similar result, gives the name to this work—"The Eighteenth Brumaire of Louis Bonaparte."

As to the other terms and allusions that occur, the following sketch will suffice:

Upon the overthrow of the first Napoleon came the restoration of the Bourbon throne (Louis XVIII, succeeded by Charles X). In July, 1830, an uprising of the upper tier of the bourgeoisie, or capitalist class—the aristocracy of finance—overthrew the Bourbon throne, or landed aristocracy, and set up the throne of Orleans, a younger branch of the house of Bourbon, with Louis Philippe as king. From the month in which this revolution occurred, Louis Philippe's monarchy is called the "July Monarchy." In February, 1848, a revolt of a lower tier of the capitalist class—the industrial bourgeoisie—against the aristocracy of finance, in turn dethroned Louis Philippe. The affair, also named from the month in which it took place, is the "February Revolution". "The Eighteenth Brumaire" starts with that event.

Despite the inapplicableness to our affairs of the political names and political leadership herein described, both these names and leaderships are to such an extent the products of an economic-social development that has here too taken place with even greater sharpness, and they have their present or threatened counterparts here so completely, that, by the light of this work of Marx', we are best enabled to understand our own history, to know whence we came, and whither we are going and how to conduct ourselves.

D.D.L. New York, Sept. 12, 1897

**THE EIGHTEENTH BRUMAIRE OF LOUIS  
BONAPARTE**

# I

Hegel says somewhere that that great historic facts and personages recur twice. He forgot to add: "Once as tragedy, and again as farce." Caussidiere for Danton, Louis Blanc for Robespierre, the "Mountain" of 1848-51 for the "Mountain" of 1793-05, the Nephew for the Uncle. The identical caricature marks also the conditions under which the second edition of the eighteenth Brumaire is issued.

Man makes his own history, but he does not make it out of the whole cloth; he does not make it out of conditions chosen by himself, but out of such as he finds close at hand. The tradition of all past generations weighs like an alp upon the brain of the living. At the very time when men appear engaged in revolutionizing things and themselves, in bringing about what never was before, at such very epochs of revolutionary crisis do they anxiously conjure up into their service the spirits of the past, assume their names, their battle cries, their costumes to enact a new historic scene in such time-honored disguise and with such borrowed language. Thus did Luther masquerade as the Apostle Paul; thus did the revolution of 1789-1814 drape itself alternately as Roman Republic and as Roman Empire; nor did the revolution of 1818 know what better to do than to parody at one time the year 1789, at another the revolutionary traditions of 1793-95. Thus does the beginner, who has acquired a new language, keep on translating it back into his own mother tongue; only then has he grasped the spirit of the new language and is able freely to express himself therewith when he moves in it without recollections of the old, and has forgotten in its use his own hereditary tongue.

When these historic configurations of the dead past are closely observed a striking difference is forthwith noticeable. Camille Desmoulins, Danton, Robespierre, St. Juste, Napoleon, the heroes as well as the parties and the masses of the old French revolution, achieved in Roman costumes and with Roman phrases the task of their time: the emancipation and the establishment of modern bourgeois society. One set knocked to pieces the old feudal groundwork and mowed down the feudal heads that had grown upon it; Napoleon brought about, within France, the conditions under which

alone free competition could develop, the partitioned lands be exploited the nation's unshackled powers of industrial production be utilized; while, beyond the French frontier, he swept away everywhere the establishments of feudality, so far as requisite, to furnish the bourgeois social system of France with fit surroundings of the European continent, and such as were in keeping with the times. Once the new social establishment was set on foot, the antediluvian giants vanished, and, along with them, the resuscitated Roman world—the Brutuses, Gracchi, Publicolas, the Tribunes, the Senators, and Caesar himself. In its sober reality, bourgeois society had produced its own true interpretation in the Says, Cousins, Royer-Collards, Benjamin Constants and Guizots; its real generals sat behind the office desks; and the mutton-head of Louis XVIII was its political lead. Wholly absorbed in the production of wealth and in the peaceful fight of competition, this society could no longer understand that the ghosts of the days of Rome had watched over its cradle. And yet, lacking in heroism as bourgeois society is, it nevertheless had stood in need of heroism, of self-sacrifice, of terror, of civil war, and of bloody battle fields to bring it into the world. Its gladiators found in the stern classic traditions of the Roman republic the ideals and the form, the self-deceptions, that they needed in order to conceal from themselves the narrow bourgeois substance of their own struggles, and to keep their passion up to the height of a great historic tragedy. Thus, at another stage of development a century before, did Cromwell and the English people draw from the Old Testament the language, passions and illusions for their own bourgeois revolution. When the real goal was reached, when the remodeling of English society was accomplished, Locke supplanted Habakuk.

Accordingly, the reviving of the dead in those revolutions served the purpose of glorifying the new struggles, not of parodying the old; it served the purpose of exaggerating to the imagination the given task, not to recoil before its practical solution; it served the purpose of rekindling the revolutionary spirit, not to trot out its ghost.

In 1848-51 only the ghost of the old revolution wandered about, from Marrast the "Republicain en gaunts jaunes," [#1 Silk-stocking republican] who disguised himself in old Baily, down to the adventurer, who hid his repulsively trivial features under the iron death mask of Napoleon. A whole people, that imagines it has imparted to itself accelerated powers of motion through a revolution, suddenly finds itself transferred back to a dead epoch,

and, lest there be any mistake possible on this head, the old dates turn up again; the old calendars; the old names; the old edicts, which long since had sunk to the level of the antiquarian's learning; even the old bailiffs, who had long seemed mouldering with decay. The nation takes on the appearance of that crazy Englishman in Bedlam, who imagines he is living in the days of the Pharaohs, and daily laments the hard work that he must do in the Ethiopian mines as gold digger, immured in a subterranean prison, with a dim lamp fastened on his head, behind him the slave overseer with a long whip, and, at the mouths of the mine a mob of barbarous camp servants who understand neither the convicts in the mines nor one another, because they do not speak a common language. "And all this," cries the crazy Englishman, "is demanded of me, the free-born Englishman, in order to make gold for old Pharaoh." "In order to pay off the debts of the Bonaparte family"—sobs the French nation. The Englishman, so long as he was in his senses, could not rid himself of the rooted thought making gold. The Frenchmen, so long as they were busy with a revolution, could not rid themselves of the Napoleonic memory, as the election of December 10th proved. They longed to escape from the dangers of revolution back to the flesh pots of Egypt; the 2d of December, 1851 was the answer. They have not merely the character of the old Napoleon, but the old Napoleon himself-caricatured as he needs must appear in the middle of the nineteenth century.

The social revolution of the nineteenth century can not draw its poetry from the past, it can draw that only from the future. It cannot start upon its work before it has stricken off all superstition concerning the past. Former revolutions require historic reminiscences in order to intoxicate themselves with their own issues. The revolution of the nineteenth century must let the dead bury their dead in order to reach its issue. With the former, the phrase surpasses the substance; with this one, the substance surpasses the phrase.

The February revolution was a surprisal; old society was taken unawares; and the people proclaimed this political stroke a great historic act whereby the new era was opened. On the 2d of December, the February revolution is jockeyed by the trick of a false player, and what is seer to be overthrown is no longer the monarchy, but the liberal concessions which had been wrung from it by centuries of struggles. Instead of society itself having conquered a new point, only the State appears to have returned to its oldest form, to the simply brazen rule of the sword and the club. Thus, upon the "coup de main" of February, 1848, comes the response of the "coup de tete"

December, 1851. So won, so lost. Meanwhile, the interval did not go by unutilized. During the years 1848-1851, French society retrieved in abbreviated, because revolutionary, method the lessons and teachings, which—if it was to be more than a disturbance of the surface—should have preceded the February revolution, had it developed in regular order, by rule, so to say. Now French society seems to have receded behind its point of departure; in fact, however, it was compelled to first produce its own revolutionary point of departure, the situation, circumstances, conditions, under which alone the modern revolution is in earnest.

Bourgeois revolutions, like those of the eighteenth century, rush onward rapidly from success to success, their stage effects outbid one another, men and things seem to be set in flaming brilliants, ecstasy is the prevailing spirit; but they are short-lived, they reach their climax speedily, then society relapses into a long fit of nervous reaction before it learns how to appropriate the fruits of its period of feverish excitement. Proletarian revolutions, on the contrary, such as those of the nineteenth century, criticize themselves constantly; constantly interrupt themselves in their own course; come back to what seems to have been accomplished, in order to start over anew; scorn with cruel thoroughness the half measures, weaknesses and meannesses of their first attempts; seem to throw down their adversary only in order to enable him to draw fresh strength from the earth, and again, to rise up against them in more gigantic stature; constantly recoil in fear before the undefined monster magnitude of their own objects—until finally that situation is created which renders all retreat impossible, and the conditions themselves cry out:

"Hic Rhodus, hic salta!" [#2 Here is Rhodes, leap here! An allusion to Aesop's Fables.]

Every observer of average intelligence; even if he failed to follow step by step the course of French development, must have anticipated that an unheard of fiasco was in store for the revolution. It was enough to hear the self-satisfied yelpings of victory wherewith the Messieurs Democrats mutually congratulated one another upon the pardons of May 2d, 1852. Indeed, May 2d had become a fixed idea in their heads; it had become a dogma with them—something like the day on which Christ was to reappear and the Millennium to begin had formed in the heads of the Chiliasts. Weakness had, as it ever does, taken refuge in the wonderful; it believed the

enemy was overcome if, in its imagination, it hocus-pocused him away; and it lost all sense of the present in the imaginary apotheosis of the future, that was at hand, and of the deeds, that it had "in petto," but which it did not yet want to bring to the scratch. The heroes, who ever seek to refute their established incompetence by mutually bestowing their sympathy upon one another and by pulling together, had packed their satchels, taken their laurels in advance payments and were just engaged in the work of getting discounted "in partibus," on the stock exchange, the republics for which, in the silence of their unassuming dispositions, they had carefully organized the government personnel. The 2d of December struck them like a bolt from a clear sky; and the 'peoples, who, in periods of timid despondency, gladly allow their hidden fears to be drowned by the loudest screamers, will perhaps have become convinced that the days are gone by when the cackling of geese could save the Capitol.

The constitution, the national assembly, the dynastic parties, the blue and the red republicans, the heroes from Africa, the thunder from the tribune, the flash-lightnings from the daily press, the whole literature, the political names and the intellectual celebrities, the civil and the criminal law, the "liberte', egalite', fraternite'," together with the 2d of May 1852—all vanished like a phantasmagoria before the ban of one man, whom his enemies themselves do not pronounce an adept at witchcraft. Universal suffrage seems to have survived only for a moment, to the end that, before the eyes of the whole world, it should make its own testament with its own hands, and, in the name of the people, declare: "All that exists deserves to perish."

It is not enough to say, as the Frenchmen do, that their nation was taken by surprise. A nation, no more than a woman, is excused for the unguarded hour when the first adventurer who comes along can do violence to her. The riddle is not solved by such shifts, it is only formulated in other words. There remains to be explained how a nation of thirty-six millions can be surprised by three swindlers, and taken to prison without resistance.

Let us recapitulate in general outlines the phases which the French revolution of February 24th, 1848, to December, 1851, ran through.

Three main periods are unmistakable:

First—The February period;

Second—The period of constituting the republic, or of the constitutive national assembly (May 4, 1848, to May 29th, 1849);

Third—The period of the constitutional republic, or of the legislative national assembly (May 29, 1849, to December 2, 1851).

The first period, from February 24, or the downfall of Louis Philippe, to May 4, 1848, the date of the assembling of the constitutive assembly—the February period proper—may be designated as the prologue of the revolution. It officially expressed its' own character in this, that the government which it improvised declared itself "provisional;" and, like the government, everything that was broached, attempted, or uttered, pronounced itself provisional. Nobody and nothing dared to assume the right of permanent existence and of an actual fact. All the elements that had prepared or determined the revolution—dynastic opposition, republican bourgeoisie, democratic-republican small traders' class, social-democratic labor element—all found "provisionally" their place in the February government.

It could not be otherwise. The February days contemplated originally a reform of the suffrage laws, whereby the area of the politically privileged among the property-holding class was to be extended, while the exclusive rule of the aristocracy of finance was to be overthrown. When however, it came to a real conflict, when the people mounted the barricades, when the National Guard stood passive, when the army offered no serious resistance, and the kingdom ran away, then the republic seemed self-understood. Each party interpreted it in its own sense. Won, arms in hand, by the proletariat, they put upon it the stamp of their own class, and proclaimed the social republic. Thus the general purpose of modern revolutions was indicated, a purpose, however, that stood in most singular contradiction to every thing that, with the material at hand, with the stage of enlightenment that the masses had reached, and under existing circumstances and conditions, could be immediately used. On the other hand, the claims of all the other elements, that had cooperated in the revolution of February, were recognized by the lion's share that they received in the government. Hence, in no period do we find a more motley mixture of high-sounding phrases together with actual doubt and helplessness; of more enthusiastic reform aspirations, together with a more slavish adherence to the old routine; more seeming harmony permeating the whole of society together with a deeper

alienation of its several elements. While the Parisian proletariat was still gloating over the sight of the great perspective that had disclosed itself to their view, and was indulging in seriously meant discussions over the social problems, the old powers of society had groomed themselves, had gathered together, had deliberated and found an unexpected support in the mass of the nation—the peasants and small traders—all of whom threw themselves on a sudden upon the political stage, after the barriers of the July monarchy had fallen down.

The second period, from May 4, 1848, to the end of May, 1849, is the period of the constitution, of the founding of the bourgeois republic immediately after the February days, not only was the dynastic opposition surprised by the republicans, and the republicans by the Socialists, but all France was surprised by Paris. The national assembly, that met on May 4, 1848, to frame a constitution, was the outcome of the national elections; it represented the nation. It was a living protest against the assumption of the February days, and it was intended to bring the results of the revolution back to the bourgeois measure. In vain did the proletariat of Paris, which forthwith understood the character of this national assembly, endeavor, a few days after its meeting; on May 15, to deny its existence by force, to dissolve it, to disperse the organic apparition, in which the reacting spirit of the nation was threatening them, and thus reduce it back to its separate component parts. As is known, the 15th of May had no other result than that of removing Blanqui and his associates, i.e. the real leaders of the proletarian party, from the public scene for the whole period of the cycle which we are here considering.

Upon the bourgeois monarchy of Louis Philippe, only the bourgeois republic could follow; that is to say, a limited portion of the bourgeoisie having ruled under the name of the king, now the whole bourgeoisie was to rule under the name of the people. The demands of the Parisian proletariat are utopian tom-fooleries that have to be done away with. To this declaration of the constitutional national assembly, the Paris proletariat answers with the June insurrection, the most colossal event in the history of European civil wars. The bourgeois republic won. On its side stood the aristocracy of finance, the industrial bourgeoisie; the middle class; the small traders' class; the army; the slums, organized as *Garde Mobile*; the intellectual celebrities, the parsons' class, and the rural population. On the side of the Parisian proletariat stood none but itself. Over 3,000 insurgents

were massacred, after the victory 15,000 were transported without trial. With this defeat, the proletariat steps to the background on the revolutionary stage. It always seeks to crowd forward, so soon as the movement seems to acquire new impetus, but with ever weaker effort and ever smaller results; So soon as any of the above lying layers of society gets into revolutionary fermentation, it enters into alliance therewith and thus shares all the defeats which the several parties successively suffer. But these succeeding blows become ever weaker the more generally they are distributed over the whole surface of society. The more important leaders of the Proletariat, in its councils, and the press, fall one after another victims of the courts, and ever more questionable figures step to the front. It partly throws itself it upon doctrinaire experiments, "co-operative banking" and "labor exchange" schemes; in other words, movements, in which it goes into movements in which it gives up the task of revolutionizing the old world with its own large collective weapons and on the contrary, seeks to bring about its emancipation, behind the back of society, in private ways, within the narrow bounds of its own class conditions, and, consequently, inevitably fails. The proletariat seems to be able neither to find again the revolutionary magnitude within itself nor to draw new energy from the newly formed alliances until all the classes, with whom it contended in June, shall lie prostrate along with itself. But in all these defeats, the proletariat succumbs at least with the honor that attaches to great historic struggles; not France alone, all Europe trembles before the June earthquake, while the successive defeats inflicted upon the higher classes are bought so easily that they need the brazen exaggeration of the victorious party itself to be at all able to pass muster as an event; and these defeats become more disgraceful the further removed the defeated party stands from the proletariat.

True enough, the defeat of the June insurgents prepared, leveled the ground, upon which the bourgeois republic could be founded and erected; but it, at the same time, showed that there are in Europe other issues besides that of "Republic or Monarchy." It revealed the fact that here the Bourgeois Republic meant the unbridled despotism of one class over another. It proved that, with nations enjoying an older civilization, having developed class distinctions, modern conditions of production, an intellectual consciousness, wherein all traditions of old have been dissolved through the work of centuries, that with such countries the republic means only the political revolutionary form of bourgeois society, not its conservative form

of existence, as is the case in the United States of America, where, true enough, the classes already exist, but have not yet acquired permanent character, are in constant flux and reflux, constantly changing their elements and yielding them up to one another where the modern means of production, instead of coinciding with a stagnant population, rather compensate for the relative scarcity of heads and hands; and, finally, where the feverishly youthful life of material production, which has to appropriate a new world to itself, has so far left neither time nor opportunity to abolish the illusions of old. [#3 This was written at the beginning of 1852.]

All classes and parties joined hands in the June days in a "Party of Order" against the class of the proletariat, which was designated as the "Party of Anarchy," of Socialism, of Communism. They claimed to have "saved" society against the "enemies of society." They gave out the slogans of the old social order—"Property, Family, Religion, Order"—as the passwords for their army, and cried out to the counter-revolutionary crusaders: "In this sign thou wilt conquer!" From that moment on, so soon as any of the numerous parties, which had marshaled themselves under this sign against the June insurgents, tries, in turn, to take the revolutionary field in the interest of its own class, it goes down in its turn before the cry: "Property, Family, Religion, Order." Thus it happens that "society is saved" as often as the circle of its ruling class is narrowed, as often as a more exclusive interest asserts itself over the general. Every demand for the most simple bourgeois financial reform, for the most ordinary liberalism, for the most commonplace republicanism, for the flattest democracy, is forthwith punished as an "assault upon society," and is branded as "Socialism." Finally the High Priests of "Religion and Order" themselves are kicked off their tripods; are fetched out of their beds in the dark; hurried into patrol wagons, thrust into jail or sent into exile; their temple is razed to the ground, their mouths are sealed, their pen is broken, their law torn to pieces in the name of Religion, of Family, of Property, and of Order. Bourgeois, fanatic on the point of "Order," are shot down on their own balconies by drunken soldiers, forfeit their family property, and their houses are bombarded for pastime—all in the name of Property, of Family, of Religion, and of Order. Finally, the refuse of bourgeois society constitutes the "holy phalanx of Order," and the hero Crapulinsky makes his entry into the Tuileries as the "Savior of Society."

## II

Let us resume the thread of events.

The history of the Constitutional National Assembly from the June days on, is the history of the supremacy and dissolution of the republican bourgeois party, the party which is known under several names of "Tricolor Republican," "True Republican," "Political Republican," "Formal Republican," etc., etc. Under the bourgeois monarchy of Louis Philippe, this party had constituted the Official Republican Opposition, and consequently had been a recognized element in the then political world. It had its representatives in the Chambers, and commanded considerable influence in the press. Its Parisian organ, the "National," passed, in its way, for as respectable a paper as the "Journal des Debats." This position in the constitutional monarchy corresponded to its character. The party was not a fraction of the bourgeoisie, held together by great and common interests, and marked by special business requirements. It was a coterie of bourgeois with republican ideas-writers, lawyers, officers and civil employees, whose influence rested upon the personal antipathies of the country for Louis Philippe, upon reminiscences of the old Republic, upon the republican faith of a number of enthusiasts, and, above all, upon the spirit of French patriotism, whose hatred of the treaties of Vienna and of the alliance with England kept them perpetually on the alert. The "National" owed a large portion of its following under Louis Philippe to this covert imperialism, that, later under the republic, could stand up against it as a deadly competitor in the person of Louis Bonaparte. The fought the aristocracy of finance just the same as did the rest of the bourgeois opposition. The polemic against the budget, which in France, was closely connected with the opposition to the aristocracy of finance, furnished too cheap a popularity and too rich a material for Puritanical leading articles, not to be exploited. The industrial bourgeoisie was thankful to it for its servile defense of the French tariff system, which, however, the paper had taken up, more out of patriotic than economic reasons the whole bourgeois class was thankful to it for its vicious denunciations of Communism and Socialism For the rest, the party of the "National" was purely republican,

i.e. it demanded a republican instead of a monarchic form of bourgeois government; above all, it demanded for the bourgeoisie the lion's share of the government. As to how this transformation was to be accomplished, the party was far from being clear. What, however, was clear as day to it and was openly declared at the reform banquets during the last days of Louis Philippe's reign, was its unpopularity with the democratic middle class, especially with the revolutionary proletariat. These pure republicans, as pure republicans go, were at first on the very point of contenting themselves with the regency of the Duchess of Orleans, when the February revolution broke out, and when it gave their best known representatives a place in the provisional government. Of course, they enjoyed from the start the confidence of the bourgeoisie and of the majority of the Constitutional National Assembly. The Socialist elements of the Provisional Government were promptly excluded from the Executive Committee which the Assembly had elected upon its convening, and the party of the "National" subsequently utilized the outbreak of the June insurrection to dismiss this Executive Committee also, and thus rid itself of its nearest rivals—the small traders' class or democratic republicans (Ledru-Rollin, etc.). Cavaignac, the General of the bourgeois republican party, who commanded at the battle of June, stepped into the place of the Executive Committee with a sort of dictatorial power. Marrast, former editor-in-chief of the "National", became permanent President of the Constitutional National Assembly, and the Secretaryship of State, together with all the other important posts, devolved upon the pure republicans.

The republican bourgeois party, which since long had looked upon itself as the legitimate heir of the July monarchy, thus found itself surpassed in its own ideal; but it came to power, not as it had dreamed under Louis Philippe, through a liberal revolt of the bourgeoisie against the throne, but through a grape-shot-and-canistered mutiny of the proletariat against Capital. That which it imagined to be the most revolutionary, came about as the most counter-revolutionary event. The fruit fell into its lap, but it fell from the Tree of Knowledge, not from the Tree of life.

The exclusive power of the bourgeois republic lasted only from June 24 to the 10th of December, 1848. It is summed up in the framing of a republican constitution and in the state of siege of Paris.

The new Constitution was in substance only a republicanized edition of the constitutional charter of 1830. The limited suffrage of the July monarchy, which excluded even a large portion of the bourgeoisie from political power, was irreconcilable with the existence of the bourgeois republic. The February revolution had forthwith proclaimed direct and universal suffrage in place of the old law. The bourgeois republic could not annul this act. They had to content themselves with tacking to it the limitation a six months' residence. The old organization of the administrative law, of municipal government, of court procedures of the army, etc., remained untouched, or, where the constitution did change them, the change affected their index, not their subject; their name, not their substance.

The inevitable "General Staff" of the "freedoms" of 1848—personal freedom, freedom of the press, of speech, of association and of assemblage, freedom of instruction, of religion, etc.—received a constitutional uniform that rendered them invulnerable. Each of these freedoms is proclaimed the absolute right of the French citizen, but always with the gloss that it is unlimited in so far only as it be not curtailed by the "equal rights of others," and by the "public safety," or by the "laws," which are intended to effect this harmony. For instance:

"Citizens have the right of association, of peaceful and unarmed assemblage, of petitioning, and of expressing their opinions through the press or otherwise. The enjoyment of these rights has no limitation other than the equal rights of others and the public safety." (Chap. II. of the French Constitution, Section 8.)

"Education is free. The freedom of education shall be enjoyed under the conditions provided by law, and under the supervision of the State." (Section 9.)

"The domicile of the citizen is inviolable, except under the forms prescribed by law." (Chap. I., Section 3), etc., etc.

The Constitution, it will be noticed, constantly alludes to future organic laws, that are to carry out the glosses, and are intended to regulate the enjoyment of these unabridged freedoms, to the end that they collide neither with one another nor with the public safety. Later on, the organic laws are called into existence by the "Friends of Order," and all the above named freedoms are so regulated that, in their enjoyment, the bourgeoisie

encounter no opposition from the like rights of the other classes. Wherever the bourgeoisie wholly interdicted these rights to "others," or allowed them their enjoyment under conditions that were but so many police snares, it was always done only in the interest of the "public safety," i. e., of the bourgeoisie, as required by the Constitution.

Hence it comes that both sides—the "Friends of Order," who abolished all those freedoms, as, well as the democrats, who had demanded them all—appeal with full right to the Constitution: Each paragraph of the Constitution contains its own antithesis, its own Upper and Lower House—freedom as a generalization, the abolition of freedom as a specification. Accordingly, so long as the name of freedom was respected, and only its real enforcement was prevented in a legal way, of course the constitutional existence of freedom remained uninjured, untouched, however completely its common existence might be extinguished.

This Constitution, so ingeniously made invulnerable, was, however, like Achilles, vulnerable at one point: not in its heel, but in its head, or rather, in the two heads into which it ran out—the Legislative Assembly, on the one hand, and the President on the other. Run through the Constitution and it will be found that only those paragraphs wherein the relation of the President to the Legislative Assembly is defined, are absolute, positive, uncontradictory, undistortable.

Here the bourgeois republicans were concerned in securing their own position. Articles 45-70 of the Constitution are so framed that the National Assembly can constitutionally remove the President, but the President can set aside the National Assembly only unconstitutionally, he can set it aside only by setting aside the Constitution itself. Accordingly, by these provisions, the National Assembly challenges its own violent destruction. It not only consecrates, like the character of 1830, the division of powers, but it extends this feature to an unbearably contradictory extreme. The "play of constitutional powers," as Guizot styled the clapper-clawings between the legislative and the executive powers, plays permanent "vabanque" in the Constitution of 1848. On the one side, 750 representatives of the people, elected and qualified for re-election by universal suffrage, who constitute an uncontrollable, indissoluble, indivisible National Assembly, a National Assembly that enjoys legislative omnipotence, that decides in the last instance over war, peace and commercial treaties, that alone has the power

to grant amnesties, and that, through its perpetuity, continually maintains the foreground on the stage; on the other, a President, clad with all the attributes of royalty, with the right to appoint and remove his ministers independently from the national assembly, holding in his hands all the means of executive power, the dispenser of all posts, and thereby the arbiter of at least one and a half million existences in France, so many being dependent upon the 500,000 civil employees and upon the officers of all grades. He has the whole armed power behind him. He enjoys the privilege of granting pardons to individual criminals; suspending the National Guards; of removing with the consent of the Council of State the general, cantonal and municipal Councilmen, elected by the citizens themselves. The initiative and direction of all negotiations with foreign countries are reserved to him. While the Assembly itself is constantly acting upon the stage, and is exposed to the critically vulgar light of day, he leads a hidden life in the Elysian fields, only with Article 45 of the Constitution before his eyes and in his heart daily calling out to him, "Frere, il faut mourir!" [#1 Brother, you must die!] Your power expires on the second Sunday of the beautiful month of May, in the fourth year after your election! The glory is then at an end; the play is not performed twice; and, if you have any debts, see to it betimes that you pay them off with the 600,000 francs that the Constitution has set aside for you, unless, perchance, you should prefer traveling to Clichy [#2 The debtors' prison.] on the second Monday of the beautiful month of May.

While the Constitution thus clothes the President with actual power, it seeks to secure the moral power to the National Assembly. Apart from the circumstance that it is impossible to create a moral power through legislative paragraphs, the Constitution again neutralizes itself in that it causes the President to be chosen by all the Frenchmen through direct suffrage. While the votes of France are splintered to pieces upon the 750 members of the National Assembly they are here, on the contrary, concentrated upon one individual. While each separate Representative represents only this or that party, this or that city, this or that dunghill, or possibly only the necessity of electing some one Seven-hundred-and-fiftieth or other, with whom neither the issue nor the man is closely considered, that one, the President, on the contrary, is the elect of the nation, and the act of his election is the trump card, that, the sovereign people plays out once every four years. The elected National Assembly stands in a metaphysical,

but the elected President in a personal, relation to the nation. True enough, the National Assembly presents in its several Representatives the various sides of the national spirit, but, in the President, this spirit is incarnated. As against the National Assembly, the President possesses a sort of divine right, he is by the grace of the people.

Thetis, the sea-goddess, had prophesied to Achilles that he would die in the bloom of youth. The Constitution, which had its weak spot, like Achilles, had also, like Achilles, the presentiment that it would depart by premature death. It was enough for the pure republicans, engaged at the work of framing a constitution, to cast a glance from the misty heights of their ideal republic down upon the profane world in order to realize how the arrogance of the royalists, of the Bonapartists, of the democrats, of the Communists, rose daily, together with their own discredit, and in the same measure as they approached the completion of their legislative work of art, without Thetis having for this purpose to leave the sea and impart the secret to them. They ought to outwit fate by means of constitutional artifice, through Section 111 of the Constitution, according to which every motion to revise the Constitution had to be discussed three successive times between each of which a full month was to elapse and required at least a three-fourths majority, with the additional proviso that not less than 500 members of the National Assembly voted. They thereby only made the impotent attempt, still to exercise as a parliamentary minority, to which in their mind's eye they prophetically saw themselves reduced, a power, that, at this very time, when they still disposed over the parliamentary majority and over all the machinery of government, was daily slipping from their weak hands.

Finally, the Constitution entrusts itself for safe keeping, in a melodramatic paragraph, "to the watchfulness and patriotism of the whole French people, and of each individual Frenchman," after having just before, in another paragraph entrusted the "watchful" and the "patriotic" themselves to the tender, inquisitorial attention of the High Court, instituted by itself.

That was the Constitution of 1848, which on, the 2d of December, 1851, was not overthrown by one head, but tumbled down at the touch of a mere hat; though, true enough, that hat was a three-cornered Napoleon hat.

While the bourgeois' republicans were engaged in the Assembly with the work of splicing this Constitution, of discussing and voting, Cavaignac, on

the outside, maintained the state of siege of Paris. The state of siege of Paris was the midwife of the constitutional assembly, during its republican pains of travail. When the Constitution is later on swept off the earth by the bayonet, it should not be forgotten that it was by the bayonet, likewise—and the bayonet turned against the people, at that—that it had to be protected in its mother's womb, and that by the bayonet it had to be planted on earth. The ancestors of these "honest republicans" had caused their symbol, the tricolor, to make the tour of Europe. These, in their turn also made a discovery, which all of itself, found its way over the whole continent, but, with ever renewed love, came back to France, until, by this time, it had acquired the right of citizenship in one-half of her Departments—the state of siege. A wondrous discovery this was, periodically applied at each succeeding crisis in the course of the French revolution. But the barrack and the bivouac, thus periodically laid on the head of French society, to compress her brain and reduce her to quiet; the sabre and the musket, periodically made to perform the functions of judges and of administrators, of guardians and of censors, of police officers and of watchmen; the military moustache and the soldier's jacket, periodically heralded as the highest wisdom and guiding stars of society;—were not all of these, the barrack and the bivouac, the sabre and the musket, the moustache and the soldier's jacket bound, in the end, to hit upon the idea that they might as well save, society once for all, by proclaiming their own regime as supreme, and relieve bourgeois society wholly of the care of ruling itself? The barrack and the bivouac, the sabre and the musket, the moustache and the soldier's jacket were all the more bound to hit upon this idea, seeing that they could then also expect better cash payment for their increased deserts, while at the merely periodic states of siege and the transitory savings of society at the behest of this or that bourgeois faction, very little solid matter fell to them except some dead and wounded, besides some friendly bourgeois grimaces. Should not the military, finally, in and for its own interest, play the game of "state of siege," and simultaneously besiege the bourgeois exchanges? Moreover, it must not be forgotten, and be it observed in passing, that Col. Bernard, the same President of the Military Committee, who, under Cavaignac, helped to deport 15,000 insurgents without trial, moves at this period again at the head of the Military Committees now active in Paris.

Although the honest, the pure republicans built with the state of siege the nursery in which the Praetorian guards of December 2, 1851, were to be reared, they, on the other hand, deserve praise in that, instead of exaggerating the feeling of patriotism, as under Louis Philippe, now; they themselves are in command of the national power, they crawl before foreign powers; instead of making Italy free, they allow her to be reconquered by Austrians and Neapolitans. The election of Louis Bonaparte for President on December 10, 1848, put an end to the dictatorship of Cavaignac and to the constitutional assembly.

In Article 44 of the Constitution it is said "The President of the French Republic must never have lost his status as a French citizen." The first President of the French Republic, L. N. Bonaparte, had not only lost his status as a French citizen, had not only been an English special constable, but was even a naturalized Swiss citizen.

In the previous chapter I have explained the meaning of the election of December 10. I shall not here return to it. Suffice it here to say that it was a reaction of the farmers' class, who had been expected to pay the costs of the February revolution, against the other classes of the nation: it was a reaction of the country against the city. It met with great favor among the soldiers, to whom the republicans of the "National" had brought neither fame nor funds; among the great bourgeoisie, who hailed Bonaparte as a bridge to the monarchy; and among the proletarians and small traders, who hailed him as a scourge to Cavaignac. I shall later have occasion to enter closer into the relation of the farmers to the French revolution.

The epoch between December 20, 1848, and the dissolution of the constitutional assembly in May, 1849, embraces the history of the downfall of the bourgeois republicans. After they had founded a republic for the bourgeoisie, had driven the revolutionary proletariat from the field and had meanwhile silenced the democratic middle class, they are themselves shoved aside by the mass of the bourgeoisie who justly appropriate this republic as their property. This bourgeois mass was Royalist, however. A part thereof, the large landed proprietors, had ruled under the restoration, hence, was Legitimist; the other part, the aristocrats of finance and the large industrial capitalists, had ruled under the July monarchy, hence, was Orleanist. The high functionaries of the Army, of the University, of the Church, in the civil service, of the Academy and of the press, divided

themselves on both sides, although in unequal parts. Here, in the bourgeois republic, that bore neither the name of Bourbon, nor of Orleans, but the name of Capital, they had found the form of government under which they could all rule in common. Already the June insurrection had united them all into a "Party of Order." The next thing to do was to remove the bourgeois republicans who still held the seats in the National Assembly. As brutally as these pure republicans had abused their own physical power against the people, so cowardly, low-spirited, disheartened, broken, powerless did they yield, now when the issue was the maintenance of their own republicanism and their own legislative rights against the Executive power and the royalists I need not here narrate the shameful history of their dissolution. It was not a downfall, it was extinction. Their history is at an end for all time. In the period that follows, they figure, whether within or without the Assembly, only as memories—memories that seem again to come to life so soon as the question is again only the word "Republic," and as often as the revolutionary conflict threatens to sink down to the lowest level. In passing, I might observe that the journal which gave to this party its name, the "National," goes over to Socialism during the following period.

Before we close this period, we must look back upon the two powers, one of destroys the other on December 2, 1851, while, from December 20, 1848, down to the departure of the constitutional assembly, they live marital relations. We mean Louis Bonaparte, on the one hand, on the other, the party of the allied royalists; of Order, and of the large bourgeoisie.

At the inauguration of his presidency, Bonaparte forthwith framed a ministry out of the party of Order, at whose head he placed Odillon Barrot, be it noted, the old leader of the liberal wing of the parliamentary bourgeoisie. Mr. Barrot had finally hunted down a seat in the ministry, the spook of which had been pursuing him since 1830; and what is more, he had the chairmanship in this ministry, although not, as he had imagined under Louis Philippe, the promoted leader of the parliamentary opposition, but with the commission to kill a parliament, and, moreover, as an ally of all his arch enemies, the Jesuits and the Legitimists. Finally he leads the bride home, but only after she has been prostituted. As to Bonaparte, he seemed to eclipse himself completely. The party of Order acted for him.

Immediately at the first session of the ministry the expedition to Rome was decided upon, which it was there agreed, was to be carried out behind I

the back of the National Assembly, and the funds for which, it was equally agreed, were to be wrung from the Assembly under false pretences. Thus the start was made with a swindle on the National Assembly, together with a secret conspiracy with the absolute foreign powers against the revolutionary Roman republic. In the same way, and with a similar maneuver, did Bonaparte prepare his stroke of December 2 against the royalist legislature and its constitutional republic. Let it not be forgotten that the same party, which, on December 20, 1848, constituted Bonaparte's ministry, constituted also, on December 2, 1851, the majority of the legislative National Assembly.

In August the constitutive assembly decided not to dissolve until it had prepared and promulgated a whole series of organic laws, intended to supplement the Constitution. The party of Order proposed to the assembly, through Representative Râteau, on January 6, 1849, to let the Organic laws go, and rather to order its own dissolution. Not the ministry alone, with Mr. Odillon Barrot at its head, but all the royalist members of the National Assembly were also at this time hectoring to it that its dissolution was necessary for the restoration of the public credit, for the consolidation of order, to put an end to the existing uncertain and provisional, and establish a definite state of things; they claimed that its continued existence hindered the effectiveness of the new Government, that it sought to prolong its life out of pure malice, and that the country was tired of it. Bonaparte took notice of all these invectives hurled at the legislative power, he learned them by heart, and, on December 21, 1851, he showed the parliamentary royalists that he had learned from them. He repeated their own slogans against themselves.

The Barrot ministry and the party of Order went further. They called all over France for petitions to the National Assembly in which that body was politely requested to disappear. Thus they led the people's unorganic masses to the fray against the National Assembly, i.e., the constitutionally organized expression of people itself. They taught Bonaparte, to appeal from the parliamentary body to the people. Finally, on January 29, 1849, the day arrived when the constitutional assembly was to decide about its own dissolution. On that day the body found its building occupied by the military; Changarnier, the General of the party of Order, in whose hands was joined the supreme command of both the National Guards and the regulars, held that day a great military review, as though a battle were

imminent; and the coalized royalists declared threateningly to the constitutional assembly that force would be applied if it did not act willingly. It was willing, and chattered only for a very short respite. What else was the 29th of January, 1849, than the "coup d'etat" of December 2, 1851, only executed by the royalists with Napoleon's aid against the republican National Assembly? These gentlemen did not notice, or did not want to notice, that Napoleon utilized the 29th of January, 1849, to cause a part of the troops to file before him in front of the Tuileries, and that he seized with avidity this very first open exercise of the military against the parliamentary power in order to hint at Caligula. The allied royalists saw only their own Changarnier.

Another reason that particularly moved the party of Order forcibly to shorten the term of the constitutional assembly were the organic laws, the laws that were to supplement the Constitution, as, for instance, the laws on education, on religion, etc. The allied royalists had every interest in framing these laws themselves, and not allowing them to be framed by the already suspicious republicans. Among these organic laws, there was, however, one on the responsibility of the President of the republic. In 1851 the Legislature was just engaged in framing such a law when Bonaparte forestalled that political stroke by his own of December 2. What all would not the coalized royalists have given in their winter parliamentary campaign of 1851, had they but found this "Responsibility law" ready made, and framed at that, by the suspicious, the vicious republican Assembly!

After, on January 29, 1849, the constitutive assembly had itself broken its last weapon, the Barrot ministry and the "Friends of Order" harassed it to death, left nothing undone to humiliate it, and wrung from its weakness, despairing of itself, laws that cost it the last vestige of respect with the public. Bonaparte, occupied with his own fixed Napoleonic idea, was audacious enough openly to exploit this degradation of the parliamentary power: When the National Assembly, on May 8, 1849, passed a vote of censure upon the Ministry on account of the occupation of Civita-Vecchia by Oudinot, and ordered that the Roman expedition be brought back to its alleged purpose, Bonaparte published that same evening in the "Moniteur" a letter to Oudinot, in which he congratulated him on his heroic feats, and already, in contrast with the quill-pushing parliamentarians, posed as the generous protector of the Army. The royalists smiled at this. They took him simply for their dupe. Finally, as Marrast, the President of the constitutional

assembly, believed on a certain occasion the safety of the body to be in danger, and, resting on the Constitution, made a requisition upon a Colonel, together with his regiment, the Colonel refused obedience, took refuge behind the "discipline," and referred Marrast to Changarnier, who scornfully sent him off with the remark that he did not like "bayonettes intelligentes." [#1 Intelligent bayonets] In November, 1851, as the coalized royalists wanted to begin the decisive struggle with Bonaparte, they sought, by means of their notorious "Questors Bill," to enforce the principle of the right of the President of the National Assembly to issue direct requisitions for troops. One of their Generals, Leflo, supported the motion. In vain did Changarnier vote for it, or did Thiers render homage to the cautious wisdom of the late constitutional assembly. The Minister of War, St. Arnaud, answered him as Changarnier had answered Marrast—and he did so amidst the plaudits of the Mountain.

Thus did the party of Order itself, when as yet it was not the National Assembly, when as yet it was only a Ministry, brand the parliamentary regime. And yet this party objects vociferously when the 2d of December, 1851, banishes that regime from France!

We wish it a happy journey.

### III

On May 29, 1849, the legislative National Assembly convened. On December 2, 1851, it was broken up. This period embraces the term of the Constitutional or Parliamentary public.

In the first French revolution, upon the reign of the Constitutionalists succeeds that of the Girondins; and upon the reign of the Girondins follows that of the Jacobins. Each of these parties in succession rests upon its more advanced element. So soon as it has carried the revolution far enough not to be able to keep pace with, much less march ahead of it, it is shoved aside by its more daring allies, who stand behind it, and it is sent to the guillotine. Thus the revolution moves along an upward line.

Just the reverse in 1848. The proletarian party appears as an appendage to the small traders' or democratic party; it is betrayed by the latter and allowed to fall on April 16, May 15, and in the June days. In its turn, the democratic party leans upon the shoulders of the bourgeois republicans; barely do the bourgeois republicans believe themselves firmly in power, than they shake off these troublesome associates for the purpose of themselves leaning upon the shoulders of the party of Order. The party of Order draws in its shoulders, lets the bourgeois republicans tumble down heels over head, and throws itself upon the shoulders of the armed power. Finally, still of the mind that it is sustained by the shoulders of the armed power, the party of Order notices one fine morning that these shoulders have turned into bayonets. Each party kicks backward at those that are pushing forward, and leans forward upon those that are crowding backward; no wonder that, in this ludicrous posture, each loses its balance, and, after having cut the unavoidable grimaces, breaks down amid singular somersaults. Accordingly, the revolution moves along a downward line. It finds itself in this retreating motion before the last February-barricade is cleared away, and the first governmental authority of the revolution has been constituted.

The period we now have before us embraces the motliest jumble of crying contradictions: constitutionalists, who openly conspire against the Constitution; revolutionists, who admittedly are constitutional; a National

Assembly that wishes to be omnipotent yet remains parliamentary; a Mountain, that finds its occupation in submission, that parries its present defeats with prophecies of future victories; royalists, who constitute the "patres conscripti" of the republic, and are compelled by the situation to uphold abroad the hostile monarchic houses, whose adherents they are, while in France they support the republic that they hate; an Executive power that finds its strength in its very weakness, and its dignity in the contempt that it inspires; a republic, that is nothing else than the combined infamy of two monarchies—the Restoration and the July Monarchy—with an imperial label; unions, whose first clause is disunion; struggles, whose first law is in-decision; in the name of peace, barren and hollow agitation; in the name of the revolution, solemn sermonizings on peace; passions without truth; truths without passion; heroes without heroism; history without events; development, whose only moving force seems to be the calendar, and tiresome by the constant reiteration of the same tensions and relaxes; contrasts, that seem to intensify themselves periodically, only in order to wear themselves off and collapse without a solution; pretentious efforts made for show, and bourgeois frights at the danger of the destruction of the world, simultaneous with the carrying on of the pettiest intrigues and the performance of court comedies by the world's saviours, who, in their "laissez aller," recall the Day of Judgment not so much as the days of the Fronde; the official collective genius of France brought to shame by the artful stupidity of a single individual; the collective will of the nation, as often as it speaks through the general suffrage, seeking its true expression in the prescriptive enemies of the public interests until it finally finds it in the arbitrary will of a filibuster. If ever a slice from history is drawn black upon black, it is this. Men and events appear as reversed "Schlemihls," [The hero In Chamisso's "Peter Schiemihl," who loses his own shadow.] as shadows, the bodies of which have been lost. The revolution itself paralyzes its own apostles, and equips only its adversaries with passionate violence. When the "Red Spectre," constantly conjured up and exorcised by the counter-revolutionists finally does appear, it does not appear with the Anarchist Phrygian cap on its head, but in the uniform of Order, in the Red Breeches of the French Soldier.

We saw that the Ministry, which Bonaparte installed on December 20, 1849, the day of his "Ascension," was a ministry of the party of Order, of the Legitimist and Orleanist coalition. The Barrot-Falloux ministry had

weathered the republican constitutive convention, whose term of life it had shortened with more or less violence, and found itself still at the helm. Changamier, the General of the allied royalists continued to unite in his person the command-in-chief of the First Military Division and of the Parisian National Guard. Finally, the general elections had secured the large majority in the National Assembly to the party of Order. Here the Deputies and Peers of Louis Phillipe met a saintly crowd of Legitimists, for whose benefit numerous ballots of the nation had been converted into admission tickets to the political stage. The Bonapartist representatives were too thinly sowed to be able to build an independent parliamentary party. They appeared only as "mauvaise queue" [#2 Practical joke] played upon the party of Order. Thus the party of Order was in possession of the Government, of the Army, and of the legislative body, in short, of the total power of the State, morally strengthened by the general elections, that caused their sovereignty to appear as the will of the people, and by the simultaneous victory of the counter-revolution on the whole continent of Europe.

Never did party open its campaign with larger means at its disposal and under more favorable auspices.

The shipwrecked pure republicans found themselves in the legislative National Assembly melted down to a clique of fifty men, with the African Generals Cavaignac, Lamorciere and Bedeau at its head. The great Opposition party was, however, formed by the Mountain. This parliamentary baptismal name was given to itself by the Social Democratic party. It disposed of more than two hundred votes out of the seven hundred and fifty in the National Assembly, and, hence, was at least just as powerful as any one of the three factions of the party of Order. Its relative minority to the total royalist coalition seemed counterbalanced by special circumstances. Not only did the Departmental election returns show that it had gained a considerable following among the rural population, but, furthermore, it numbered almost all the Paris Deputies in its camp; the Army had, by the election of three under-officers, made a confession of democratic faith; and the leader of the Mountain, Ledru-Rollin had in contrast to all the representatives of the party of Order, been raised to the rank of the "parliamentary nobility" by five Departments, who combined their suffrages upon him. Accordingly, in view of the inevitable collisions of the royalists among themselves, on the one hand, and of the whole party

of Order with Bonaparte, on the other, the Mountain seemed on May 29, 1849, to have before it all the elements of success. A fortnight later, it had lost everything, its honor included.

Before we follow this parliamentary history any further, a few observations are necessary, in order to avoid certain common deceptions concerning the whole character of the epoch that lies before us. According to the view of the democrats, the issue, during the period of the legislative National Assembly, was, the same as during the period of the constitutive assembly, simply the struggle between republicans and royalists; the movement itself was summed up by them in the catch-word Reaction—night, in which all cats are grey, and allows them to drawl out their drowsy commonplaces. Indeed, at first sight, the party of Order presents the appearance of a tangle of royalist factions, that, not only intrigue against each other, each aiming to raise its own Pretender to the throne, and exclude the Pretender of the Opposite party, but also are all united in a common hatred for and common attacks against the "Republic." On its side, the Mountain appears, in counter-distinction to the royalist conspiracy, as the representative of the "Republic." The party of Order seems constantly engaged in a "Reaction," which, neither more nor less than in Prussia, is directed against the press, the right of association and the like, and is enforced by brutal police interventions on the part of the bureaucracy, the police and the public prosecutor—just as in Prussia; the Mountain on the contrary, is engaged with equal assiduity in parrying these attacks, and thus in defending the "eternal rights of man"—as every so-called people's party has more or less done for the last hundred and fifty years. At a closer inspection, however, of the situation and of the parties, this superficial appearance, which veils the Class Struggle, together with the peculiar physiognomy of this period, vanishes wholly.

Legitimists and Orleanists constituted, as said before, the two large factions of the party of Order. What held these two factions to their respective Pretenders, and inversely kept them apart from each other, what else was it but the lily and the tricolor, the House of Bourbon and the house of Orleans, different shades of royalty? Under the Bourbons, Large Landed Property ruled together with its parsons and lackeys; under the Orleanist, it was the high finance, large industry, large commerce, i.e., Capital, with its retinue of lawyers, professors and orators. The Legitimate kingdom was but the political expression for the hereditary rule of the landlords, as the July

monarchy was but the political expression for the usurped rule of the bourgeois upstarts. What, accordingly, kept these two factions apart was no so-called set of principles, it was their material conditions for life—two different sorts of property—; it was the old antagonism of the City and the Country, the rivalry between Capital and Landed property. That simultaneously old recollections; personal animosities, fears and hopes; prejudices and illusions; sympathies and antipathies; convictions, faith and principles bound these factions to one House or the other, who denies it? Upon the several forms of property, upon the social conditions of existence, a whole superstructure is reared of various and peculiarly shaped feelings, illusions, habits of thought and conceptions of life. The whole class produces and shapes these out of its material foundation and out of the corresponding social conditions. The individual unit to whom they flow through tradition and education, may fancy that they constitute the true reasons for and premises of his conduct. Although Orleanists and Legitimists, each of these factions, sought to make itself and the other believe that what kept the two apart was the attachment of each to its respective royal House; nevertheless, facts proved later that it rather was their divided interest that forbade the union of the two royal Houses. As, in private life, the distinction is made between what a man thinks of himself and says, and that which he really is and does, so, all the more, must the phrases and notions of parties in historic struggles be distinguished from the real organism, and their real interests, their notions and their reality. Orleanists and Legitimists found themselves in the republic beside each other with equal claims. Each side wishing, in opposition to the other, to carry out the restoration of its own royal House, meant nothing else than that each of the two great Interests into which the bourgeoisie is divided—Land and Capital—sought to restore its own supremacy and the subordination of the other. We speak of two bourgeois interests because large landed property, despite its feudal coquetry and pride of race, has become completely bourgeois through the development of modern society. Thus did the Tories of England long fancy that they were enthusiastic for the Kingdom, the Church and the beauties of the old English Constitution, until the day of danger wrung from them the admission that their enthusiasm was only for Ground Rent.

The coalized royalists carried on their intrigues against each other in the press, in Ems, in Clarmont—outside of the parliament. Behind the scenes,

they don again their old Orleanist and Legitimist liveries, and conduct their old tourneys; on the public stage, however, in their public acts, as a great parliamentary party, they dispose of their respective royal houses with mere courtesies, adjourn "in infinitum" the restoration of the monarchy. Their real business is transacted as Party of Order, i. e., under a Social, not a Political title; as representatives of the bourgeois social system; not as knights of traveling princesses, but as the bourgeois class against the other classes; not as royalists against republicans. Indeed, as party of Order they exercised a more unlimited and harder dominion over the other classes of society than ever before either under the restoration or the July monarchy—a thing possible only under the form of a parliamentary republic, because under this form alone could the two large divisions of the French bourgeoisie be united; in other words, only under this form could they place on the order of business the sovereignty of their class, in lieu of the regime of a privileged faction of the same. If, this notwithstanding, they are seen as the party of Order to insult the republic and express their antipathy for it, it happened not out of royalist traditions only: Instinct taught them that while, indeed, the republic completes their authority, it at the same time undermined their social foundation, in that, without intermediary, without the mask of the crown, without being able to turn aside the national interest by means of its subordinate struggles among its own conflicting elements and with the crown, the republic is compelled to stand up sharp against the subjugated classes, and wrestle with them. It was a sense of weakness that caused them to recoil before the unqualified demands of their own class rule, and to retreat to the less complete, less developed, and, for that very reason, less dangerous forms of the same. As often, on the contrary, as the allied royalists come into conflict with the Pretender who stands before them—with Bonaparte—, as often as they believe their parliamentary omnipotence to be endangered by the Executive, in other words, as often as they must trot out the political title of their authority, they step up as Republicans, not as Royalists—and this is done from the Orleanist Thiers, who warns the National Assembly that the republic divides them least, down to Legitimist Berryer, who, on December 2, 1851, the scarf of the tricolor around him, harangues the people assembled before the Mayor's building of the Tenth Arrondissement, as a tribune in the name of the Republic; the echo, however, derisively answering back to him: "Henry V.! Henry V!" [#3 The candidate of the Bourbons, or Legitimists, for the throne.]

However, against the allied bourgeois, a coalition was made between the small traders and the workingmen—the so-called Social Democratic party. The small traders found themselves ill rewarded after the June days of 1848; they saw their material interests endangered, and the democratic guarantees, that were to uphold their interests, made doubtful. Hence, they drew closer to the workingmen. On the other hand, their parliamentary representatives—the Mountain—, after being shoved aside during the dictatorship of the bourgeois republicans, had, during the last half of the term of the constitutive convention, regained their lost popularity through the struggle with Bonaparte and the royalist ministers. They had made an alliance with the Socialist leaders. During February, 1849, reconciliation banquets were held. A common program was drafted, joint election committees were empanelled, and fusion candidates were set up. The revolutionary point was thereby broken off from the social demands of the proletariat and a democratic turn given to them; while, from the democratic claims of the small traders' class, the mere political form was rubbed off and the Socialist point was pushed forward. Thus came the Social Democracy about. The new Mountain, the result of this combination, contained, with the exception of some figures from the working class and some Socialist sectarians, the identical elements of the old Mountain, only numerically stronger. In the course of events it had, however, changed, together with the class that it represented. The peculiar character of the Social Democracy is summed up in this that democratic-republican institutions are demanded as the means, not to remove the two extremes—Capital and Wage-slavery—, but in order to weaken their antagonism and transform them into a harmonious whole. However different the methods may be that are proposed for the accomplishment of this object, however much the object itself may be festooned with more or less revolutionary fancies, the substance remains the same. This substance is the transformation of society upon democratic lines, but a transformation within the boundaries of the small traders' class. No one must run away with the narrow notion that the small traders' class means on principle to enforce a selfish class interest. It believes rather that the special conditions for its own emancipation are the general conditions under which alone modern society can be saved and the class struggle avoided. Likewise must we avoid running away with the notion that the Democratic Representatives are all "shopkeepers," or enthuse for these. They may—by education and

individual standing—be as distant from them as heaven is from earth. That which makes them representatives of the small traders' class is that they do not intellectually leap the bounds which that class itself does not leap in practical life; that, consequently, they are theoretically driven to the same problems and solutions, to which material interests and social standing practically drive the latter. Such, in fact, is at all times the relation of the "political" and the "literary" representatives of a class to the class they represent.

After the foregoing explanations, it goes with-out saying that, while the Mountain is constantly wrestling for the republic and the so-called "rights of man," neither the republic nor the "rights of man" is its real goal, as little as an army, whose weapons it is sought to deprive it of and that defends itself, steps on the field of battle simply in order to remain in possession of implements of warfare.

The party of Order provoked the Mountain immediately upon the convening of the assembly. The bourgeoisie now felt the necessity of disposing of the democratic small traders' class, just as a year before it had understood the necessity of putting an end to the revolutionary proletariat.

But the position of the foe had changed. The strength of the proletarian party was on the streets; that of the small traders' class was in the National Assembly itself. The point was, accordingly, to wheedle them out of the National Assembly into the street, and to have them break their parliamentary power themselves, before time and opportunity could consolidate them. The Mountain jumped with loose reins into the trap.

The bombardment of Rome by the French troops was the bait thrown at the Mountain. It violated Article V. of the Constitution, which forbade the French republic to use its forces against the liberties of other nations; besides, Article IV. forbade all declaration of war by the Executive without the consent of the National Assembly; furthermore, the constitutive assembly had censured the Roman expedition by its resolution of May 8. Upon these grounds, Ledru-Rollin submitted on June 11, 1849, a motion impeaching Bonaparte and his Ministers. Instigated by the wasp-stings of Thiers, he even allowed himself to be carried away to the point of threatening to defend the Constitution by all means, even arms in hand. The Mountain rose as one man, and repeated the challenge. On June 12, the National Assembly rejected the notion to impeach, and the Mountain left

the parliament. The events of June 13 are known: the proclamation by a part of the Mountain pronouncing Napoleon and his Ministers "outside the pale of the Constitution"; the street parades of the democratic National Guards, who, unarmed as they were, flew apart at contact with the troops of Changarnier; etc., etc. Part of the Mountain fled abroad, another part was assigned to the High Court of Bourges, and a parliamentary regulation placed the rest under the school-master supervision of the President of the National Assembly. Paris was again put under a state of siege; and the democratic portion of the National Guards was disbanded. Thus the influence of the Mountain in parliament was broken, together with the power; of the small traders' class in Paris.

Lyons, where the 13th of June had given the signal to a bloody labor uprising, was, together with the five surrounding Departments, likewise pronounced in state of siege, a condition that continues down to this moment. [#4 January, 1852]

The bulk of the Mountain had left its vanguard in the lurch by refusing their signatures to the proclamation; the press had deserted: only two papers dared to publish the pronunciamiento; the small traders had betrayed their Representatives: the National Guards stayed away, or, where they did turn up, hindered the raising of barricades; the Representatives had duped the small traders: nowhere were the alleged affiliated members from the Army to be seen; finally, instead of gathering strength from them, the democratic party had infected the proletariat with its own weakness, and, as usual with democratic feats, the leaders had the satisfaction of charging "their people" with desertion, and the people had the satisfaction of charging their leaders with fraud.

Seldom was an act announced with greater noise than the campaign contemplated by the Mountain; seldom was an event trumpeted ahead with more certainty and longer beforehand than the "inevitable victory of the democracy." This is evident: the democrats believe in the trombones before whose blasts the walls of Jericho fall together; as often as they stand before the walls of despotism, they seek to imitate the miracle. If the Mountain wished to win in parliament, it should not appeal to arms; if it called to arms in parliament, it should not conduct itself parliamentarily on the street; if the friendly demonstration was meant seriously, it was silly not to foresee that it would meet with a warlike reception; if it was intended for actual

war, it was rather original to lay aside the weapons with which war had to be conducted. But the revolutionary threats of the middle class and of their democratic representatives are mere attempts to frighten an adversary; when they have run themselves into a blind alley, when they have sufficiently compromised themselves and are compelled to execute their threats, the thing is done in a hesitating manner that avoids nothing so much as the means to the end, and catches at pretexts to succumb. The bray of the overture, that announces the fray, is lost in a timid growl so soon as this is to start; the actors cease to take themselves seriously, and the performance falls flat like an inflated balloon that is pricked with a needle.

No party exaggerates to itself the means at its disposal more than the democratic, none deceives itself with greater heedlessness on the situation. A part of the Army voted for it, thereupon the Mountain is of the opinion that the Army would revolt in its favor. And by what occasion? By an occasion, that, from the standpoint of the troops, meant nothing else than that the revolutionary soldiers should take the part of the soldiers of Rome against French soldiers. On the other hand, the memory of June, 1848, was still too fresh not to keep alive a deep aversion on the part of the proletariat towards the National Guard, and a strong feeling of mistrust on the part of the leaders of the secret societies for the democratic leaders. In order to balance these differences, great common interests at stake were needed. The violation of an abstract constitutional paragraph could not supply such interests. Had not the constitution been repeatedly violated, according to the assurances of the democrats themselves? Had not the most popular papers branded them as a counter-revolutionary artifice? But the democrat—by reason of his representing the middle class, that is to say, a Transition Class, in which the interests of two other classes are mutually dulled—, imagines himself above all class contrast. The democrats grant that opposed to them stands a privileged class, but they, together with the whole remaining mass of the nation, constitute the "PEOPLE." What they represent is the "people's rights"; their interests are the "people's interests." Hence, they do not consider that, at an impending struggle, they need to examine the interests and attitude of the different classes. They need not too seriously weigh their own means. All they have to do is to give the signal in order to have the "people" fall upon the "oppressors" with all its inexhaustible resources. If, thereupon, in the execution, their interests turn out to be uninteresting, and their power to be impotence, it is ascribed either to depraved sophists, who

split up the "undivisible people" into several hostile camps; or to the army being too far brutalized and blinded to appreciate the pure aims of the democracy as its own best; or to some detail in the execution that wrecks the whole plan; or, finally, to an unforeseen accident that spoiled the game this time. At all events, the democrat comes out of the disgraceful defeat as immaculate as he went innocently into it, and with the refreshed conviction that he must win; not that he himself and his party must give up their old standpoint, but that, on the contrary, conditions must come to his aid.

For all this, one must not picture to himself the decimated, broken, and, by the new parliamentary regulation, humbled Mountain altogether too unhappy. If June 13 removed its leaders, it, on the other hand, made room for new ones of inferior capacity, who are flattered by their new position. If their impotence in parliament could no longer be doubted, they were now justified to limit their activity to outbursts of moral indignation. If the party of Order pretended to see in them, as the last official representatives of the revolution, all the horrors of anarchy incarnated, they were free to appear all the more flat and modest in reality. Over June 13 they consoled themselves with the profound expression: "If they but dare to assail universal suffrage . . . then . . . then we will show who we are!" *Nous verrons.* [#5 We shall see.]

As to the "Mountaineers," who had fled abroad, it suffices here to say that Ledru-Rollin—he having accomplished the feat of hopelessly ruining, in barely a fortnight, the powerful party at whose head he stood—, found himself called upon to build up a French government "in partibus;" that his figure, at a distance, removed from the field of action, seemed to gain in size in the measure that the level of the revolution sank and the official prominences of official France became more and more dwarfish; that he could figure as republican Pretender for 1852, and periodically issued to the Wallachians and other peoples circulars in which "despot of the continent" is threatened with the feats that he and his allies had in contemplation. Was Proudhon wholly wrong when he cried out to these gentlemen: "Vous n'etes que des blaqueurs"? [#6 You are nothing but fakirs.]

The party of Order had, on June 13, not only broken up the Mountain, it had also established the Subordination of the Constitution to the Majority Decisions of the National Assembly. So, indeed, did the republic understand it, to—wit, that the bourgeois ruled here in parliamentary form, without, as

in the monarchy, finding a check in the veto of the Executive power, or the liability of parliament to dissolution. It was a "parliamentary republic," as Thiers styled it. But if, on June 13, the bourgeoisie secured its omnipotence within the parliament building, did it not also strike the parliament itself, as against the Executive and the people, with incurable weakness by excluding its most popular part? By giving up numerous Deputies, without further ceremony to the mercies of the public prosecutor, it abolished its own parliamentary inviolability. The humiliating regulation, that it subjected the Mountain to, raised the President of the republic in the same measure that it lowered the individual Representatives of the people. By branding an insurrection in defense of the Constitution as anarchy, and as a deed looking to the overthrow of society, it interdicted to itself all appeal to insurrection whenever the Executive should violate the Constitution against it. And, indeed, the irony of history wills it that the very General, who by order of Bonaparte bombarded Rome, and thus gave the immediate occasion to the constitutional riot of June 13, that Oudinot, on December 22, 1851, is the one imploringly and vainly to be offered to the people by the party of Order as the General of the Constitution. Another hero of June 13, Vieyra, who earned praise from the tribune of the National Assembly for the brutalities that he had committed in the democratic newspaper offices at the head of a gang of National Guards in the hire of the high finance—this identical Vieyra was initiated in the conspiracy of Bonaparte, and contributed materially in cutting off all protection that could come to the National Assembly, in the hour of its agony, from the side of the National Guard.

June 13 had still another meaning. The Mountain had wanted to place Bonaparte under charges. Their defeat was, accordingly, a direct victory of Bonaparte; it was his personal triumph over his democratic enemies. The party of Order fought for the victory, Bonaparte needed only to pocket it. He did so. On June 14, a proclamation was to be read on the walls of Paris wherein the President, as it were, without his connivance, against his will, driven by the mere force of circumstances, steps forward from his cloisterly seclusion like misjudged virtue, complains of the calumnies of his antagonists, and, while seeming to identify his own person with the cause of order, rather identifies the cause of order with his own person. Besides this, the National Assembly had subsequently approved the expedition against Rome; Bonaparte, however, had taken the initiative in the affair. After he had led the High Priest Samuel back into the Vatican, he could hope as King

David to occupy the Tuileries. He had won the parson-interests over to himself.

The riot of June 13 limited itself, as we have seen, to a peaceful street procession. There were, consequently, no laurels to be won from it. Nevertheless, in these days, poor in heroes and events, the party of Order converted this bloodless battle into a second Austerlitz. Tribune and press lauded the army as the power of order against the popular multitude, and the impotence of anarchy; and Changarnier as the "bulwark of society"—a mystification that he finally believed in himself. Underhand, however, the corps that seemed doubtful were removed from Paris; the regiments whose suffrage had turned out most democratic were banished from France to Algiers the restless heads among the troops were consigned to penal quarters; finally, the shutting out of the press from the barracks, and of the barracks from contact with the citizens was systematically carried out.

We stand here at the critical turning point in the history of the French National Guard. In 1830, it had decided the downfall of the restoration. Under Louis Philippe, every riot failed, at which the National Guard stood on the side of the troops. When, in the February days of 1848, it showed itself passive against the uprising and doubtful toward Louis Philippe himself, he gave himself up for lost. Thus the conviction cast root that a revolution could not win without, nor the Army against the National Guard. This was the superstitious faith of the Army in bourgeois omnipotence. The June days of 1848, when the whole National Guard, jointly with the regular troops, threw down the insurrection, had confirmed the superstition. After the inauguration of Bonaparte's administration, the position of the National Guard sank somewhat through the unconstitutional joining of their command with the command of the First Military Division in the person of Changarnier.

As the command of the National Guard appeared here merely an attribute of the military commander-in-chief, so did the Guard itself appear only as an appendage of the regular troops. Finally, on June 13, the National Guard was broken up, not through its partial dissolution only, that from that date forward was periodically repeated at all points of France, leaving only wrecks of its former self behind. The demonstration of June 13 was, above all, a demonstration of the National Guards. True, they had not carried their arms, but they had carried their uniforms against the Army—and the

talisman lay just in these uniforms. The Army then learned that this uniform was but a woolen rag, like any other. The spell was broken. In the June days of 1848, bourgeoisie and small traders were united as National Guard with the Army against the proletariat; on June 13, 1849, the bourgeoisie had the small traders' National Guard broken up; on December 2, 1851, the National Guard of the bourgeoisie itself vanished, and Bonaparte attested the fact when he subsequently signed the decree for its disbandment. Thus the bourgeoisie had itself broken its last weapon against the army, from the moment when the small traders' class no longer stood as a vassal behind, but as a rebel before it; indeed, it was bound to do so, as it was bound to destroy with its own hand all its means of defence against absolutism, so soon as itself was absolute.

In the meantime, the party of Order celebrated the recovery of a power that seemed lost in 1848 only in order that, freed from its trammels in 1849, it be found again through invectives against the republic and the Constitution; through the malediction of all future, present and past revolutions, that one included which its own leaders had made; and, finally, in laws by which the press was gagged, the right of association destroyed, and the stage of siege regulated as an organic institution. The National Assembly then adjourned from the middle of August to the middle of October, after it had appointed a Permanent Committee for the period of its absence. During these vacations, the Legitimists intrigued with Ems; the Orleanists with Claremont; Bonaparte through princely excursions; the Departmental Councilmen in conferences over the revision of the Constitution;—occurrences, all of which recurred regularly at the periodical vacations of the National Assembly, and upon which I shall not enter until they have matured into events. Be it here only observed that the National Assembly was impolitic in vanishing from the stage for long intervals, and leaving in view, at the head of the republic, only one, however sorry, figure—Louis Bonaparte's—, while, to the public scandal, the party of Order broke up into its own royalist component parts, that pursued their conflicting aspirations after the restoration. As often as, during these vacations the confusing noise of the parliament was hushed, and its body was dissolved in the nation, it was unmistakably shown that only one thing was still wanting to complete the true figure of the republic: to make the vacation of the National Assembly permanent, and substitute its inscription

—"Liberty, Equality, Fraternity"—by the unequivocal words, "Infantry, Cavalry, Artillery".

## IV

The National Assembly reconvened in the middle of October. On November 1, Bonaparte surprised it with a message, in which he announced the dismissal of the Barrot-Falloux Ministry, and the framing of a new. Never have lackeys been chased from service with less ceremony than Bonaparte did his ministers. The kicks, that were eventually destined for the National Assembly, Barrot & Company received in the meantime.

The Barrot Ministry was, as we have seen, composed of Legitimists and Orleanists; it was a Ministry of the party of Order. Bonaparte needed that Ministry in order to dissolve the republican constituent assembly, to effect the expedition against Rome, and to break up the democratic party. He had seemingly eclipsed himself behind this Ministry, yielded the reins to the hands of the party of Order, and assumed the modest mask, which, under Louis Philippe, had been worn by the responsible overseer of the newspapers—the mask of "homme de paille." [#1 Man of straw] Now he threw off the mask, it being no longer the light curtain behind which he could conceal, but the Iron Mask, which prevented him from revealing his own physiognomy. He had instituted the Barrot Ministry in order to break up the republican National Assembly in the name of the party of Order; he now dismissed it in order to declare his own name independent of the parliament of the party of Order.

There was no want of plausible pretexts for this dismissal. The Barrot Ministry had neglected even the forms of decency that would have allowed the president of the republic to appear as a power along with the National Assembly. For instance, during the vacation of the National Assembly, Bonaparte published a letter to Edgar Ney, in which he seemed to disapprove the liberal attitude of the Pope, just as, in opposition to the constitutive assembly, he had published a letter, in which he praised Oudinot for his attack upon the Roman republic; when the National Assembly came to vote on the budget for the Roman expedition, Victor Hugo, out of pretended liberalism, brought up that letter for discussion; the party of Order drowned this notion of Bonaparte's under exclamations of contempt and incredulity as though notions of Bonaparte could not possibly

have any political weight;—and none of the Ministers took up the gauntlet for him. On another occasion, Barrot, with his well-known hollow pathos, dropped, from the speakers' tribune in the Assembly, words of indignation upon the "abominable machinations," which, according to him, went on in the immediate vicinity of the President. Finally, while the Ministry obtained from the National Assembly a widow's pension for the Duchess of Orleans, it denied every motion to raise the Presidential civil list;—and, in Bonaparte, be it always remembered, the Imperial Pretender was so closely blended with the impecunious adventurer, that the great idea of his being destined to restore the Empire was ever supplemented by that other, to-wit, that the French people was destined to pay his debts.

The Barrot-Falloux Ministry was the first and last parliamentary Ministry that Bonaparte called into life. Its dismissal marks, accordingly, a decisive period. With the Ministry, the party of Order lost, never to regain, an indispensable post to the maintenance of the parliamentary regime,—the handle to the Executive power. It is readily understood that, in a country like France, where the Executive disposes over an army of more than half a million office-holders, and, consequently, keeps permanently a large mass of interests and existences in the completest dependence upon itself; where the Government surrounds, controls, regulates, supervises and guards society, from its mightiest acts of national life, down to its most insignificant motions; from its common life, down to the private life of each individual; where, due to such extraordinary centralization, this body of parasites acquires a ubiquity and omniscience, a quickened capacity for motion and rapidity that finds an analogue only in the helpless lack of self-reliance, in the unstrung weakness of the body social itself;—that in such a country the National Assembly lost, with the control of the ministerial posts, all real influence; unless it simultaneously simplified the administration; if possible, reduced the army of office-holders; and, finally, allowed society and public opinion to establish its own organs, independent of government censorship. But the Material Interest of the French bourgeoisie is most intimately bound up in maintenance of just such a large and extensively ramified governmental machine. There the bourgeoisie provides for its own superfluous membership; and supplies, in the shape of government salaries, what it can not pocket in the form of profit, interest, rent and fees. On the other hand, its Political Interests daily compel it to increase the power of repression, i.e., the means and the personnel of the

government; it is at the same time forced to conduct an uninterrupted warfare against public opinion, and, full of suspicion, to hamstring and lame the independent organs of society—whenever it does not succeed in amputating them wholly. Thus the bourgeoisie of France was forced by its own class attitude, on the one hand, to destroy the conditions for all parliamentary power, its own included, and, on the other, to render irresistible the Executive power that stood hostile to it.

The new Ministry was called the d'Hautpoul Ministry. Not that General d'Hautpoul had gained the rank of Ministerial President. Along with Barrot, Bonaparte abolished this dignity, which, it must be granted, condemned the President of the republic to the legal nothingness of a constitutional kind, of a constitutional king at that, without throne and crown, without sceptre and without sword, without irresponsibility, without the imperishable possession of the highest dignity in the State, and, what was most untoward of all—without a civil list. The d'Hautpoul Ministry numbered only one man of parliamentary reputation, the Jew Fould, one of the most notorious members of the high finance. To him fell the portfolio of finance. Turn to the Paris stock quotations, and it will be found that from November 1, 1849, French stocks fall and rise with the falling and rising of the Bonapartist shares. While Bonaparte had thus found his ally in the Bourse, he at the same time took possession of the Police through the appointment of Carlier as Prefect of Police.

But the consequences of the change of Ministry could reveal themselves only in the course of events. So far, Bonaparte had taken only one step forward, to be all the more glaringly driven back. Upon his harsh message, followed the most servile declarations of submissiveness to the National Assembly. As often as the Ministers made timid attempts to introduce his own personal hobbies as bills, they themselves seemed unwilling and compelled only by their position to run the comic errands, of whose futility they were convinced in advance. As often as Bonaparte blabbed out his plans behind the backs of his Ministers, and sported his "idees napoleoniennes," [#2 Napoleonic ideas.] his own Ministers disavowed him from the speakers' tribune in the National Assembly. His aspirations after usurpation seemed to become audible only to the end that the ironical laughter of his adversaries should not die out. He deported himself like an unappreciated genius, whom the world takes for a simpleton. Never did lie enjoy in fuller measure the contempt of all classes than at this period. Never

did the bourgeoisie rule more absolutely; never did it more boastfully display the insignia of sovereignty.

It is not here my purpose to write the history of its legislative activity, which is summed up in two laws passed during this period: the law reestablishing the duty on wine, and the laws on education, to suppress infidelity. While the drinking of wine was made difficult to the Frenchmen, all the more bounteously was the water of pure life poured out to them. Although in the law on the duty on wine the bourgeoisie declares the old hated French tariff system to be inviolable, it sought, by means of the laws on education, to secure the old good will of the masses that made the former bearable. One wonders to see the Orleanists, the liberal bourgeois, these old apostles of Voltarianism and of eclectic philosophy, entrusting the supervision of the French intellect to their hereditary enemies, the Jesuits. But, while Orleanists and Legitimists could part company on the question of the Pretender to the crown, they understood full well that their joint reign dictated the joining of the means of oppression of two distinct epochs; that the means of subjugation of the July monarchy had to be supplemented with and strengthened by the means of subjugation of the restoration.

The farmers, deceived in all their expectations, more than ever ground down by the law scale of the price of corn, on the one hand, and, on the other, by the growing load of taxation and mortgages, began to stir in the Departments. They were answered by the systematic baiting of the school masters, whom the Government subjected to the clergy; by the systematic baiting of the Mayors, whom it subjected to the Prefects; and by a system of espionage to which all were subjected. In Paris and the large towns, the reaction itself carries the physiognomy of its own epoch; it irritates more than it crows; in the country, it becomes low, moan, petty, tiresome, vexatious,—in a word, it becomes "gensdarme." It is easily understood how three years of the gensdarme regime, sanctified by the regime of the clergyman, was bound to demoralize unripe masses.

Whatever the mass of passion and declamation, that the party of Order expended from the speakers' tribune in the National Assembly against the minority, its speech remained monosyllabic, like that of the Christian, whose speech was to be "Aye, aye; nay, nay." It was monosyllabic, whether from the tribune or the press; dull as a conundrum, whose solution is known beforehand. Whether the question was the right of petition or the duty on

wine, the liberty of the press or free trade, clubs or municipal laws, protection of individual freedom or the regulation of national economy, the slogan returns ever again, the theme is monotonously the same, the verdict is ever ready and unchanged: Socialism! Even bourgeois liberalism is pronounced socialistic; socialistic, alike, is pronounced popular education; and, likewise, socialistic national financial reform. It was socialistic to build a railroad where already a canal was; and it was socialistic to defend oneself with a stick when attacked with a sword.

This was not a mere form of speech, a fashion, nor yet party tactics. The bourgeoisie perceives correctly that all the weapons, which it forged against feudalism, turn their edges against itself; that all the means of education, which it brought forth, rebel against its own civilization; that all the gods, which it made, have fallen away from it. It understands that all its so-called citizens' rights and progressive organs assail and menace its class rule, both in its social foundation and its political superstructure—consequently, have become "socialistic." It justly scents in this menace and assault the secret of Socialism, whose meaning and tendency it estimates more correctly than the spurious, so-called Socialism, is capable of estimating itself, and which, consequently, is unable to understand how it is that the bourgeoisie obdurately shuts up its ears to it, alike whether it sentimentally whines about the sufferings of humanity; or announces in Christian style the millennium and universal brotherhood; or twaddles humanistically about the soul, culture and freedom; or doctrinally matches out a system of harmony and wellbeing for all classes. What, however, the bourgeoisie does not understand is the consequence that its own parliamentary regime, its own political reign, is also of necessity bound to fall under the general ban of "socialistic." So long as the rule of the bourgeoisie is not fully organized, has not acquired its purely political character, the contrast with the other classes cannot come into view in all its sharpness; and, where it does come into view, it cannot take that dangerous turn that converts every conflict with the Government into a conflict with Capital. When, however, the French bourgeoisie began to realize in every pulsation of society a menace to "peace," how could it, at the head of society, pretend to uphold the regime of unrest, its own regime, the parliamentary regime, which, according to the expression of one of its own orators, lives in struggle, and through struggle? The parliamentary regime lives on discussion,—how can it forbid discussion? Every single interest, every single social institution is

there converted into general thoughts, is treated as a thought,—how could any interest or institution claim to be above thought, and impose itself as an article of faith? The orators' conflict in the tribune calls forth the conflict of the rowdies in the press the debating club in parliament is necessarily supplemented by debating clubs in the salons and the barrooms; the representatives, who are constantly appealing to popular opinion, justify popular opinion in expressing its real opinion in petitions. The parliamentary regime leaves everything to the decision of majorities,—how can the large majorities beyond parliament be expected not to wish to decide? If, from above, they hear the fiddle screeching, what else is to be expected than that those below should dance?

Accordingly, by now persecuting as Socialist what formerly it had celebrated as Liberal, the bourgeoisie admits that its own interest orders it to raise itself above the danger of self government; that, in order to restore rest to the land, its own bourgeois parliament must, before all, be brought to rest; that, in order to preserve its social power unhurt, its political power must be broken; that the private bourgeois can continue to exploit the other classes and rejoice in "property," "family," "religion" and "order" only under the condition that his own class be condemned to the same political nullity of the other classes, that, in order to save their purse, the crown must be knocked off their heads, and the sword that was to shield them, must at the same time be hung over their heads as a sword of Damocles.

In the domain of general bourgeois interests, the National Assembly proved itself so barren, that, for instance, the discussion over the Paris-Avignon railroad, opened in the winter of 1850, was not yet ripe for a vote on December 2, 1851. Wherever it did not oppress or was reactionary, the bourgeoisie was smitten with incurable barrenness.

While Bonaparte's Ministry either sought to take the initiative of laws in the spirit of the party of Order, or even exaggerated their severity in their enforcement and administration, he, on his part, sought to win popularity by means of childishly silly propositions, to exhibit the contrast between himself and the National Assembly, and to hint at a secret plan, held in reserve and only through circumstances temporarily prevented from disclosing its hidden treasures to the French people. Of this nature was the proposition to decree a daily extra pay of four sous to the under-officers; so, likewise, the proposition for a "word of honor" loan bank for working-men.

To have money given and money borrowed—that was the perspective that he hoped to cajole the masses with. Presents and loans—to that was limited the financial wisdom of the slums, the high as well as the low; to that were limited the springs which Bonaparte knew how to set in motion. Never did Pretender speculate more dully upon the dullness of the masses.

Again and again did the National Assembly fly into a passion at these unmistakable attempts to win popularity at its expense, and at the growing danger that this adventurer, lashed on by debts and unrestrained by reputation, might venture upon some desperate act. The strained relations between the party of Order and the President had taken on a threatening aspect, when an unforeseen event threw him back, rueful into its arms. We mean the supplementary elections of March, 1850. These elections took place to fill the vacancies created in the National Assembly, after June 13, by imprisonment and exile. Paris elected only Social-Democratic candidates; it even united the largest vote upon one of the insurgents of June, 1848,—Deflotte. In this way the small traders' world of Paris, now allied with the proletariat, revenged itself for the defeat of June 13, 1849. It seemed to have disappeared from the field of battle at the hour of danger only to step on it again at a more favorable opportunity, with increased forces for the fray, and with a bolder war cry. A circumstance seemed to heighten the danger of this electoral victory. The Army voted in Paris for a June insurgent against Lahitte, a Minister of Bonaparte's, and, in the Departments, mostly for the candidates of the Mountain, who, there also, although not as decisively as in Paris, maintained the upper hand over their adversaries.

Bonaparte suddenly saw himself again face to face with the revolution. As on January 29, 1849, as on June 13, 1849, on May 10, 1850, he vanished again behind the party of Order. He bent low; he timidly apologized; he offered to appoint any Ministry whatever at the behest of the parliamentary majority; he even implored the Orleanist and Legitimist party leaders—the Thiers, Berryers, Broglies, Moles, in short, the so-called burgraves—to take hold of the helm of State in person. The party of Order did not know how to utilize this opportunity, that was never to return. Instead of boldly taking possession of the proffered power, it did not even force Bonaparte to restore the Ministry dismissed on November 1; it contented itself with humiliating him with its pardon, and with affiliating Mr. Baroche to the d'Hautpoul Ministry. This Baroche had, as Public Prosecutor, stormed before the High

Court at Bourges, once against the revolutionists of May 15, another time against the Democrats of June 13, both times on the charge of "attentats" against the National Assembly. None of Bonaparte's Ministers contributed later more towards the degradation of the National Assembly; and, after December 2, 1851, we meet him again as the comfortably stalled and dearly paid Vice-President of the Senate. He had spat into the soup of the revolutionists for Bonaparte to eat it.

On its part, the Social Democratic party seemed only to look for pretexts in order to make its own victory doubtful, and to dull its edge. Vidal, one of the newly elected Paris representatives, was returned for Strassburg also. He was induced to decline the seat for Paris and accept the one for Strassburg. Thus, instead of giving a definite character to their victory at the hustings, and thereby compelling the party of Order forthwith to contest it in parliament; instead of thus driving the foe to battle at the season of popular enthusiasm and of a favorable temper in the Army, the democratic party tired out Paris with a new campaign during the months of March and April; it allowed the excited popular passions to wear themselves out in this second provisional electoral play it allowed the revolutionary vigor to satiate itself with constitutional successes, and lose its breath in petty intrigues, hollow declamation and sham moves; it gave the bourgeoisie time to collect itself and make its preparations finally, it allowed the significance of the March elections to find a sentimentally weakening commentary at the subsequent April election in the victory of Eugene Sue. In one word, it turned the 10th of March into an April Fool.

The parliamentary majority perceived the weakness of its adversary. Its seventeen burgraves—Bonaparte had left to it the direction of and responsibility for the attack—, framed a new election law, the moving of which was entrusted to Mr. Faucher, who had applied for the honor. On May 8, he introduced the new law whereby universal suffrage was abolished; a three years residence in the election district imposed as a condition for voting; and, finally, the proof of this residence made dependent, for the working-man, upon the testimony of his employer.

As revolutionarily as the democrats had agitated and stormed during the constitutional struggles, so constitutionally did they, now, when it was imperative to attest, arms in hand, the earnestness of their late electoral victories, preach order, "majestic calmness," lawful conduct, i. e., blind

submission to the will of the counter-revolution, which revealed itself as law. During the debate, the Mountain put the party of Order to shame by maintaining the passionless attitude of the law-abiding burger, who upholds the principle of law against revolutionary passions; and by twitting the party of Order with the fearful reproach of proceeding in a revolutionary manner. Even the newly elected deputies took pains to prove by their decent and thoughtful deportment what an act of misjudgment it was to decry them as anarchists, or explain their election as a victory of the revolution. The new election law was passed on May 31. The Mountain contented itself with smuggling a protest into the pockets of the President of the Assembly. To the election law followed a new press law, whereby the revolutionary press was completely done away with. It had deserved its fate. The "National" and the "Presse," two bourgeois organs, remained after this deluge the extreme outposts of the revolution.

We have seen how, during March and April, the democratic leaders did everything to involve the people of Paris in a sham battle, and how, after May 8, they did everything to keep it away from a real battle. We may not here forget that the year 1850 was one of the most brilliant years of industrial and commercial prosperity; consequently, that the Parisian proletariat was completely employed. But the election law of May 31, 1850 excluded them from all participation in political power; it cut the field of battle itself from under them; it threw the workingmen back into the state of pariahs, which they had occupied before the February revolution. In allowing themselves, in sight of such an occurrence, to be led by the democrats, and in forgetting the revolutionary interests of their class through temporary comfort, the workingmen abdicated the honor of being a conquering power; they submitted to their fate; they proved that the defeat of June, 1848, had incapacitated them from resistance for many a year to come finally, that the historic process must again, for the time being, proceed over their heads. As to the small traders' democracy, which, on June 13, had cried out: "If they but dare to assail universal suffrage . . . then . . . then we will show who we are!"—they now consoled themselves with the thought that the counter-revolutionary blow, which had struck them, was no blow at all, and that the law of May 31 was no law. On May 2, 1852, according to them, every Frenchman would appear at the hustings, in one hand the ballot, in the other the sword. With this prophecy they set their hearts at ease. Finally, the Army was punished by its superiors for the

elections of May and April, 1850, as it was punished for the election of May 29, 1849. This time, however, it said to itself determinately: "The revolution shall not cheat us a third time."

The law of May 31, 1850, was the "coup d'etat" of the bourgeoisie. All its previous conquests over the revolution had only a temporary character: they became uncertain the moment the National Assembly stepped off the stage; they depended upon the accident of general elections, and the history of the elections since 1848 proved irrefutably that, in the same measure as the actual reign of the bourgeoisie gathered strength, its moral reign over the masses wore off. Universal suffrage pronounced itself on May 10 pointedly against the reign of the bourgeoisie; the bourgeoisie answered with the banishment of universal suffrage. The law of May 31 was, accordingly, one of the necessities of the class struggle. On the other hand, the constitution required a minimum of two million votes for the valid ejection of the President of the republic. If none of the Presidential candidates polled this minimum, then the National Assembly was to elect the President out of the three candidates polling the highest votes. At the time that the constitutive body made this law, ten million voters were registered on the election rolls. In its opinion, accordingly, one-fifth of the qualified voters sufficed to make a choice for President valid. The law of May 31 struck at least three million voters off the rolls, reduced the number of qualified voters to seven millions, and yet, notwithstanding, it kept the lawful minimum at two millions for the election of a President. Accordingly, it raised the lawful minimum from a fifth to almost a third of the qualified voters, i.e., it did all it could to smuggle the Presidential election out of the hands of the people into those of the National Assembly. Thus, by the election law of May 31, the party of Order seemed to have doubly secured its empire, in that it placed the election of both the National Assembly and the President of the republic in the keeping of the stable portion of society.

## V

The strife immediately broke out again between the National Assembly and Bonaparte, so soon as the revolutionary crisis was weathered, and universal suffrage was abolished.

The Constitution had fixed the salary of Bonaparte at 600,000 francs. Barely half a year after his installation, he succeeded in raising this sum to its double: Odillon Barrot had wrung from the constitutive assembly a yearly allowance of 600,000 francs for so-called representation expenses. After June 13, Bonaparte hinted at similar solicitations, to which, however, Barrot then turned a deaf ear. Now, after May 31, he forthwith utilized the favorable moment, and caused his ministers to move a civil list of three millions in the National Assembly. A long adventurous, vagabond career had gifted him with the best developed antennae for feeling out the weak moments when he could venture upon squeezing money from his bourgeois. He carried on regular blackmail. The National Assembly had maimed the sovereignty of the people with his aid and his knowledge: he now threatened to denounce its crime to the tribunal of the people, if it did not pull out its purse and buy his silence with three millions annually. It had robbed three million Frenchmen of the suffrage: for every Frenchman thrown "out of circulation," he demanded a franc "in circulation." He, the elect of six million, demanded indemnity for the votes he had been subsequently cheated of. The Committee of the National Assembly turned the importunate fellow away. The Bonapartist press threatened: Could the National Assembly break with the President of the republic at a time when it had broken definitely and on principle with the mass of the nation? It rejected the annual civil list, but granted, for this once, an allowance of 2,160,000 francs. Thus it made itself guilty of the double weakness of granting the money, and, at the same time, showing by its anger that it did so only unwillingly. We shall presently see to what use Bonaparte put the money. After this aggravating after-play, that followed upon the heels of the abolition of universal suffrage, and in which Bonaparte exchanged his humble attitude of the days of the crisis of March and April for one of defiant impudence towards the usurping parliament, the National Assembly

adjourned for three months, from August 11, to November 11. It left behind in its place a Permanent Committee of 18 members that contained no Bonapartist, but did contain a few moderate republicans. The Permanent Committee of the year 1849 had numbered only men of order and Bonapartists. At that time, however, the party of Order declared itself in permanence against the revolution; now the parliamentary republic declared itself in permanence against the President. After the law of May 31, only this rival still confronted the party of Order.

When the National Assembly reconvened in November, 1850, instead of its former petty skirmishes with the President, a great headlong struggle, a struggle for life between the two powers, seemed to have become inevitable.

As in the year 1849, the party of Order had during this year's vacation, dissolved into its two separate factions, each occupied with its own restoration intrigues, which had received new impetus from the death of Louis Philippe. The Legitimist King, Henry V, had even appointed a regular Ministry, that resided in Paris, and in which sat members of the Permanent Committee. Hence, Bonaparte was, on his part, justified in making tours through the French Departments, and—according to the disposition of the towns that he happened to be gladdening with his presence—some times covertly, other times more openly blabbing out his own restoration plans, and gaining votes for himself. On these excursions, which the large official "Moniteur" and the small private "Moniteurs" of Bonaparte were, of course, bound to celebrate as triumphal marches, he was constantly accompanied by affiliated members of the "Society of December 10" This society dated from the year 1849. Under the pretext of founding a benevolent association, the slum-proletariat of Paris was organized into secret sections, each section led by Bonapartist agents, with a Bonapartist General at the head of all. Along with ruined rouses of questionable means of support and questionable antecedents, along with the foul and adventures-seeking dregs of the bourgeoisie, there were vagabonds, dismissed soldiers, discharged convicts, runaway galley slaves, sharpers, jugglers, lazzaroni, pickpockets, sleight-of-hand performers, gamblers, procurers, keepers of disorderly houses, porters, literati, organ grinders, rag pickers, scissors grinders, tinkers, beggars—in short, that whole undefined, dissolute, kicked-about mass that the Frenchmen style "la Boheme" With this kindred element, Bonaparte formed the stock of the "Society of December 10," a "benevolent association" in so

far as, like Bonaparte himself, all its members felt the need of being benevolent to themselves at the expense of the toiling nation. The Bonaparte, who here constitutes himself Chief of the Slum-Proletariat; who only here finds again in plenteous form the interests which he personally pursues; who, in this refuse, offal and wreck of all classes, recognizes the only class upon which he can depend unconditionally;—this is the real Bonaparte, the Bonaparte without qualification. An old and crafty rouse, he looks upon the historic life of nations, upon their great and public acts, as comedies in the ordinary sense, as a carnival, where the great costumes, words and postures serve only as masks for the pettiest chicaneries. So, on the occasion of his expedition against Strassburg when a trained Swiss vulture impersonated the Napoleonic eagle; so, again, on the occasion of his raid upon Boulogne, when he struck a few London lackeys into French uniform: they impersonated the army; [#1 Under the reign of Louis Philippe, Bonaparte made two attempts to restore the throne of Napoleon: one in October, 1836, in an expedition from Switzerland upon Strassburg and one in August, 1840, in an expedition from England upon Boulogne.] and so now, in his "Society of December 10," he collects 10,000 loafers who are to impersonate the people as Snug the Joiner does the lion. At a period when the bourgeoisie itself is playing the sheerest comedy, but in the most solemn manner in the world, without doing violence to any of the pedantic requirements of French dramatic etiquette, and is itself partly deceived by, partly convinced of, the solemnity of its own public acts, the adventurer, who took the comedy for simple comedy, was bound to win. Only after he has removed his solemn opponent, when he himself takes seriously his own role of emperor, and, with the Napoleonic mask on, imagines he impersonates the real Napoleon, only then does he become the victim of his own peculiar conception of history—the serious clown, who no longer takes history for a comedy, but a comedy for history. What the national work-shops were to the socialist workingmen, what the "Gardes mobiles" were to the bourgeois republicans, that was to Bonaparte the "Society of December 10,"—a force for partisan warfare peculiar to himself. On his journeys, the divisions of the Society, packed away on the railroads, improvised an audience for him, performed public enthusiasm, shouted "vive l'Empereur," insulted and clubbed the republicans,—all, of course, under the protection of the police. On his return stages to Paris, this rabble constituted his vanguard, it forestalled or dispersed counter-

demonstrations. The "Society of December 10" belonged to him, it was his own handiwork, his own thought. Whatever else he appropriates, the power of circumstances places in his hands; whatever else he does, either circumstances do for him, or he is content to copy from the deeds of others, but he posing before the citizens with the official phrases about "Order," "Religion," "Family," "Property," and, behind him, the secret society of skipjacks and picaroons, the society of disorder, of prostitution, and of theft,—that is Bonaparte himself as the original author; and the history of the "Society of December 10" is his own history. Now, then, it happened that Representatives belonging to the party of order occasionally got under the clubs of the Decembrists. Nay, more. Police Commissioner Yon, who had been assigned to the National Assembly, and was charged with the guardianship of its safety, reported to the Permanent Committee upon the testimony of one Alais, that a Section of the Decembrists had decided on the murder of General Changarnier and of Dupin, the President of the National Assembly, and had already settled upon the men to execute the decree. One can imagine the fright of Mr. Dupin. A parliamentary inquest over the "Society of December 10," i. e., the profanation of the Bonapartist secret world now seemed inevitable. Just before the reconvening of the National Assembly, Bonaparte circumspectly dissolved his Society, of course, on paper only. As late as the end of 1851, Police Prefect Carlier vainly sought, in an exhaustive memorial, to move him to the real dissolution of the Decembrists.

The "Society of December 10" was to remain the private army of Bonaparte until he should have succeeded in converting the public Army into a "Society of December 10." Bonaparte made the first attempt in this direction shortly after the adjournment of the National Assembly, and he did so with the money which he had just wrung from it. As a fatalist, he lives devoted to the conviction that there are certain Higher Powers, whom man, particularly the soldier, cannot resist. First among these Powers he numbers cigars and champagne, cold poultry and garlic-sausage. Accordingly, in the apartments of the Elysee, he treated first the officers and under-officers to cigars and champagne, to cold poultry and garlic-sausage. On October 3, he repeats this manoeuvre with the rank and file of the troops by the review of St. Maur; and, on October 10, the same manoeuvre again, upon a larger scale, at the army parade of Satory. The Uncle bore in remembrance the campaigns of Alexander in Asia: the Nephew bore in

remembrance the triumphal marches of Bacchus in the same country. Alexander was, indeed, a demigod; but Bacchus was a full-fledged god, and the patron deity, at that, of the "Society of December 10."

After the review of October 3, the Permanent Committee summoned the Minister of War, d'Hautpoul, before it. He promised that such breaches of discipline should not recur. We have seen how, on October 10th, Bonaparte kept d'Hautpoul's word. At both reviews Changarnier had commanded as Commander-in-chief of the Army of Paris. He, at once member of the Permanent Committee, Chief of the National Guard, the "Savior" of January 29, and June 13, the "Bulwark of Society," candidate of the Party of Order for the office of President, the suspected Monk of two monarchies,—he had never acknowledged his subordination to the Minister of War, had ever openly scoffed at the republican Constitution, and had pursued Bonaparte with a protection that was ambiguously distinguished. Now he became zealous for the discipline in opposition to Bonaparte. While, on October 10, a part of the cavalry cried: "Vive Napoleon! Vivent les saucissons;" [#2 Long live Napoleon! Long live the sausages!] Changarnier saw to it that at least the infantry, which filed by under the command of his friend Neumeyer, should observe an icy silence. In punishment, the Minister of War, at the instigation of Bonaparte, deposed General Neumeyer from his post in Paris, under the pretext of providing for him as Commander-in-chief of the Fourteenth and Fifteenth Military Divisions. Neumeyer declined the exchange, and had, in consequence, to give his resignation. On his part, Changarnier published on November 2, an order, wherein he forbade the troops to indulge, while under arms, in any sort of political cries or demonstrations. The papers devoted to the Elysee interests attacked Changarnier; the papers of the party of Order attacked Bonaparte; the Permanent Committee held frequent secret sessions, at which it was repeatedly proposed to declare the fatherland in danger; the Army seemed divided into two hostile camps, with two hostile staffs; one at the Elysee, where Bonaparte, the other at the Tuileries, where Changarnier resided. All that seemed wanting for the signal of battle to sound was the convening of the National Assembly. The French public looked upon the friction between Bonaparte and Changarnier in the light of the English journalist, who characterized it in these words: "The political servant girls of France are mopping away the glowing lava of the revolution with old mops, and they scold each other while doing their work."

Meanwhile, Bonaparte hastened to depose the Minister of War, d'Hautpoul; to expedite him heels over head to Algiers; and to appoint in his place General Schramm as Minister of War. On November 12, he sent to the National Assembly a message of American excursiveness, overloaded with details, redolent of order, athirst for conciliation, resignful to the Constitution, dealing with all and everything, only not with the burning questions of the moment. As if in passing he dropped the words that according to the express provisions of the Constitution, the President alone disposes over the Army. The message closed with the following high-sounding protestations:

"France demands, above all things, peace . . . Alone bound by an oath, I shall keep myself within the narrow bounds marked out by it to me . . . As to me, elected by the people, and owing my power to it alone, I shall always submit to its lawfully expressed will. Should you at this session decide upon the revision of the Constitution, a Constitutional Convention will regulate the position of the Executive power. If you do not, then, the people will, in 1852, solemnly announce its decision. But, whatever the solution may be that the future has in store, let us arrive at an understanding to the end that never may passion, surprise or violence decide over the fate of a great nation. . . . That which, above all, bespeaks my attention is, not who will, in 1852, rule over France, but to so devote the time at my disposal that the interval may pass by with-out agitation and disturbance. I have straightforwardly opened my heart to you, you will answer my frankness with your confidence, my good efforts with your co-operation. God will do the rest."

The honnete, hypocritically temperate, commonplace-virtuous language of the bourgeoisie reveals its deep meaning in the mouth of the self-appointed ruler of the "Society of December 10," and of the picnic-hero of St. Maur and Satory.

The burgraves of the party of Order did not for a moment deceive themselves on the confidence that this unbosoming deserved. They were long blase on oaths; they numbered among themselves veterans and virtuosi of perjury. The passage about the army did not, however, escape them. They observed with annoyance that the message, despite its prolix enumeration of the lately enacted laws, passed, with affected silence, over the most important of all, the election law, and, moreover, in case no revision of the

Constitution was held, left the choice of the President, in 1852, with the people. The election law was the ball-and-chain to the feet of the party of Order, that hindered them from walking, and now assuredly from storming. Furthermore, by the official disbandment of the "Society of December 10," and the dismissal of the Minister of War, d'Hautpoul, Bonaparte had, with his own hands, sacrificed the scapegoats on the altar of the fatherland. He had turned off the expected collision. Finally, the party of Order itself anxiously sought to avoid every decisive conflict with the Executive, to weaken and to blur it over. Fearing to lose its conquests over the revolution, it let its rival gather the fruits thereof. "France demands, above all things, peace," with this language had the party of Order been apostrophizing the revolution, since February; with this language did Bonaparte's message now apostrophize the party of Order: "France demands, above all things, peace." Bonaparte committed acts that aimed at usurpation, but the party of Order committed a "disturbance of the peace," if it raised the hue and cry, and explained them hypochondriacally. The sausages of Satory were mouse-still when nobody talked about them;—France demands, above all things, "peace." Accordingly, Bonaparte demanded that he be let alone; and the parliamentary party was lamed with a double fear: the fear of re-conjuring up the revolutionary disturbance of the peace, and the fear of itself appearing as the disturber of the peace in the eyes of its own class, of the bourgeoisie. Seeing that, above all things, France demanded peace, the party of Order did not dare, after Bonaparte had said "peace" in his message, to answer "war." The public, who had promised to itself the pleasure of seeing great scenes of scandal at the opening of the National Assembly, was cheated out of its expectations. The opposition deputies, who demanded the submission of the minutes of the Permanent Committee over the October occurrences, were outvoted. All debate that might excite was fled from on principle. The labors of the National Assembly during November and December, 1850, were without interest.

Finally, toward the end of December, began a guerilla warfare about certain prerogatives of the parliament. The movement sank into the mire of petty chicaneries on the prerogative of the two powers, since, with the abolition of universal suffrage, the bourgeoisie had done away with the class struggle.

A judgment for debt had been secured against Mauguin, one of the Representatives. Upon inquiry by the President of the Court, the Minister of

Justice, Rouher, declared that an order of arrest should be made out without delay. Manguin was, accordingly, cast into the debtors' prison. The National Assembly bristled up when it heard of the "attentat." It not only ordered his immediate release, but had him forcibly taken out of Clichy the same evening by its own greffier. In order, nevertheless, to shield its belief in the "sacredness of private property," and also with the ulterior thought of opening, in case of need, an asylum for troublesome Mountainers, it declared the imprisonment of a Representative for debt to be permissible upon its previous consent. It forgot to decree that the President also could be locked up for debt. By its act, it wiped out the last semblance of inviolability that surrounded the members of its own body.

It will be remembered that, upon the testimony of one Allais, Police Commissioner Yon had charged a Section of Decembrists with a plan to murder Dupin and Changarnier. With an eye upon that, the questors proposed at the very first session, that the parliament organize a police force of its own, paid for out of the private budget of the National Assembly itself, and wholly independent of the Police Prefects. The Minister of the Interior, Baroche, protested against this trespass on his preserves. A miserable compromise followed, according to which the Police Commissioner of the Assembly was to be paid out of its own private budget and was to be subject to the appointment and dismissal of its own questors, but only upon previous agreement with the Minister of the Interior. In the meantime Allais had been prosecuted by the Government. It was an easy thing in Court, to present his testimony in the light of a mystification, and, through the mouth of the Public Prosecutor, to throw Dupin, Changarnier, Yon, together with the whole National Assembly, into a ridiculous light. Thereupon, on December 29, Minister Baroche writes a letter to Dupin, in which he demands the dismissal of Yon. The Committee of the National Assembly decides to keep Yon in office; nevertheless, the National Assembly, frightened by its own violence in the affair of Manguin, and accustomed, every time it has shied a blow at the Executive, to receive back from it two in exchange, does not sanction this decision. It dismisses Yon in reward for his zeal in office, and robs itself of a parliamentary prerogative, indispensable against a person who does not decide by night to execute by day, but decides by day and executes by night.

We have seen how, during the months of November and December, under great and severe provocations, the National Assembly evaded and refused

the combat with the Executive power. Now we see it compelled to accept it on the smallest occasions. In the affair of Mauguin, it confirms in principle the liability of a Representative to imprisonment for debt, but to itself reserves the power of allowing the principle to be applied only to the Representatives whom it dislikes,—and for this infamous privilege we see it wrangling with the Minister of Justice. Instead of utilizing the alleged murder plan to the end of fastening an inquest upon the "Society of December 10," and of exposing Bonaparte beyond redemption before France and his true figure, as the head of the slum-proletariat of Paris, it allows the collision to sink to a point where the only issue between itself and the Minister of the Interior is. Who has jurisdiction over the appointment and dismissal of a Police Commissioner? Thus we see the party of Order, during this whole period, compelled by its ambiguous position to wear out and fritter away its conflict with the Executive power in small quarrels about jurisdiction, in chicaneries, in pettifoggings, in boundary disputes, and to turn the stalest questions of form into the very substance of its activity. It dares not accept the collision at the moment when it involves a principle, when the Executive power has really given itself a blank, and when the cause of the National Assembly would be the cause of the nation. It would thereby have issued to the nation an order of march; and it feared nothing so much as that the nation should move. Hence, on these occasions, it rejects the motions of the Mountain, and proceeds to the order of the day. After the issue has in this way lost all magnitude, the Executive power quietly awaits the moment when it can take it up again upon small and insignificant occasions; when, so to say, the issue offers only a parliamentary local interest. Then does the repressed valor of the party of Order break forth, then it tears away the curtain from the scene, then it denounces the President, then it declares the republic to be in danger,—but then all its pathos appears stale, and the occasion for the quarrel a hypocritical pretext, or not at all worth the effort. The parliamentary tempest becomes a tempest in a tea-pot, the struggle an intrigue, the collision a scandal. While the revolutionary classes gloat with sardonic laughter over the humiliation of the National Assembly—they, of course, being as enthusiastic for the prerogatives of the parliament as that body is for public freedom—the bourgeoisie, outside of the parliament, does not understand how the bourgeoisie, inside of the parliament, can squander its time with such petty bickerings, and can endanger peace by

such wretched rivalries with the President. It is puzzled at a strategy that makes peace the very moment when everybody expects battles, and that attacks the very moment everybody believes peace has been concluded.

On December 20, Pascal Duprat interpellated the Minister of the Interior on the "Goldbar Lottery." This lottery was a "Daughter from Elysium"; Bonaparte, together with his faithful, had given her birth; and Police Prefect Carlier had placed her under his official protection, although the French law forbade all lotteries, with the exception of games for benevolent purposes. Seven million tickets, a franc a piece, and the profit ostensibly destined to the shipping of Parisian vagabonds to California. Golden dreams were to displace the Socialist dreams of the Parisian proletariat; the tempting prospect of a prize was to displace the doctrinal right to labor. Of course, the workingmen of Paris did not recognize in the lustre of the California gold bars the lack-lustre francs that had been wheedled out of their pockets. In the main, however, the scheme was an unmitigated swindle. The vagabonds, who meant to open California gold mines without taking the pains to leave Paris, were Bonaparte himself and his Round Table of desperate insolvents. The three millions granted by the National Assembly were rioted away; the Treasury had to be refilled somehow or another. In vain did Bonaparte open a national subscription, at the head of which he himself figured with a large sum, for the establishment of so-called "cites ouvrières." [#3 Work cities.] The hard-hearted bourgeois waited, distrustful, for the payment of his own shares; and, as this, of course, never took place, the speculation in Socialist castles in the air fell flat. The gold bars drew better. Bonaparte and his associates did not content themselves with putting into their own pockets part of the surplus of the seven millions over and above the bars that were to be drawn; they manufactured false tickets; they sold, of Number 10 alone, fifteen to twenty lots—a financial operation fully in the spirit of the "Society of December 10"! The National Assembly did not here have before it the fictitious President of the Republic, but Bonaparte himself in flesh and blood. Here it could catch him in the act, not in conflict with the Constitution, but with the penal code. When, upon Duprat's interpellation, the National Assembly went over to the order of the day, this did not happen simply because Girardin's motion to declare itself "satisfied" reminded the party of Order of its own systematic corruption: the bourgeois, above all the bourgeois who has been inflated into a statesman, supplements his practical meanness with theoretical pompousness. As

statesman, he becomes, like the Government facing him, a superior being, who can be fought only in a higher, more exalted manner.

Bonaparte—who, for the very reason of his being a "bohemian," a princely slum-proletarian, had over the scampish bourgeois the advantage that he could carry on the fight after the Assembly itself had carried him with its own hands over the slippery ground of the military banquets, of the reviews, of the "Society of December 10," and, finally, of the penal code—now saw that the moment had arrived when he could move from the seemingly defensive to the offensive. He was but little troubled by the intermediate and trifling defeats of the Minister of Justice, of the Minister of War, of the Minister of the Navy, of the Minister of Finance, whereby the National Assembly indicated its growling displeasure. Not only did he prevent the Ministers from resigning, and thus recognizing the subordination of the executive power to the Parliament; he could now accomplish what during the vacation of the National Assembly he had commenced, the separation of the military power from the Assembly—the deposition of Changarnier.

An Elysee paper published an order, issued during the month of May, ostensibly to the First Military Division, and, hence, proceeding from Changarnier, wherein the officers were recommended, in case of an uprising, to give no quarter to the traitors in their own ranks, to shoot them down on the spot, and to refuse troops to the National Assembly, should it make a requisition for such. On January 3, 1851, the Cabinet was interpellated on this order. The Cabinet demands for the examination of the affair at first three months, then one week, finally only twenty-four hours' time. The Assembly orders an immediate explanation. Changarnier rises and declares that this order never existed; he adds that he would ever hasten to respond to the calls of the National Assembly, and that, in case of a collision, they could count upon him. The Assembly receives his utterances with inexpressible applause, and decrees a vote of confidence to him. It thereby resigns its own powers; it decrees its own impotence and the omnipotence of the Army by committing itself to the private protection of a general. But the general, in turn, deceives himself when he places at the Assembly's disposal and against Bonaparte a power that he holds only as a fief from that same Bonaparte, and when, on his part, he expects protection from this Parliament, from his protegee', itself needful of protection. But Changarnier has faith in the mysterious power with which since January,

1849, he had been clad by the bourgeoisie. He takes himself for the Third Power, standing beside the other Powers of Government. He shares the faith of all the other heroes, or rather saints, of this epoch, whose greatness consists but in the interested good opinion that their own party holds of them, and who shrink into every-day figures so soon as circumstances invite them to perform miracles. Infidelity is, indeed, the deadly enemy of these supposed heroes and real saints. Hence their virtuously proud indignation at the unenthusiastic wits and scoffers.

That same evening the Ministers were summoned to the Elysee; Bonaparte presses the removal of Changarnier; five Ministers refuse to sign the order; the "Moniteur" announces a Ministerial crisis; and the party of Order threatens the formation of a Parliamentary army under the command of Changarnier. The party of Order had the constitutional power hereto. It needed only to elect Changarnier President of the National Assembly in order to make a requisition for whatever military forces it needed for its own safety. It could do this all the more safely, seeing that Changarnier still stood at the head of the Army and of the Parisian National Guard, and only lay in wait to be summoned, together with the Army. The Bonapartist press did not even dare to question the right of the National Assembly to issue a direct requisition for troops;—a legal scruple, that, under the given circumstances, did not promise success. That the Army would have obeyed the orders of the National Assembly is probable, when it is considered that Bonaparte had to look eight days all over Paris to find two generals—Baraguay d'Hilliers and St. Jean d'Angley—who declared themselves ready to countersign the order cashiering Changarnier. That, however, the party of Order would have found in its own ranks and in the parliament the requisite vote for such a decision is more than doubtful, when it is considered that, eight days later, 286 votes pulled away from it, and that, as late as December, 1851, at the last decisive hour, the Mountain rejected a similar proposition. Nevertheless, the burgraves might still have succeeded in driving the mass of their party to an act of heroism, consisting in feeling safe behind a forest of bayonets, and in accepting the services of the Army, which found itself deserted in its camp. Instead of this, the Messieurs Burgraves betook themselves to the Elysee on the evening of January 6, with the view of inducing Bonaparte, by means of politic words and considerations, to drop the removal of Changarnier. Him whom we must convince we recognize as the master of the situation. Bonaparte, made to

feel secure by this step, appoints on January 12 a new Ministry, in which the leaders of the old, Fould and Baroche, are retained. St Jean d'Angley becomes Minister of War; the "Moniteur" announces the decree cashiering Changarnier; his command is divided up between Baraguay d'Hilliers, who receives the First Division, and Perrot, who is placed over the National Guard. The "Bulwark of Society" is turned down; and, although no dog barks over the event, in the Bourses the stock quotations rise.

By repelling the Army, that, in Changarnier's person, put itself at its disposal, and thus irrevocably stood up against the President, the party of Order declares that the bourgeoisie has lost its vocation to reign. Already there was no parliamentary Ministry. By losing, furthermore, the handle to the Army and to the National Guard, what instrument of force was there left to the National Assembly in order to maintain both the usurped power of the parliament over the people, and its constitutional power over the President? None. All that was left to it was the appeal to peaceful principles, that itself had always explained as "general rules" merely, to be prescribed to third parties, and only in order to enable itself to move all the more freely. With the removal of Changarnier, with the transfer of the military power to Bonaparte, closes the first part of the period that we are considering, the period of the struggle between the party of Order and the Executive power. The war between the two powers is now openly declared; it is conducted openly; but only after the party of Order has lost both arms and soldier. With-out a Ministry, without any army, without a people, without the support of public opinion; since its election law of May 31, no longer the representative of the sovereign nation sans eyes, sans ears, sans teeth, sans everything, the National Assembly had gradually converted itself into a French Parliament of olden days, that must leave all action to the Government, and content itself with growling remonstrances "post festum." [#4 After the act is done; after the fact.]

The party of Order receives the new Ministry with a storm of indignation. General Bedeau calls to mind the mildness of the Permanent Committee during the vacation, and the excessive prudence with which it had renounced the privilege of disclosing its minutes. Now, the Minister of the Interior himself insists upon the disclosure of these minutes, that have now, of course, become dull as stagnant waters, reveal no new facts, and fall without making the slightest effect upon the blase public. Upon Remusat's proposition, the National Assembly retreats into its Committees, and

appoints a "Committee on Extraordinary Measures." Paris steps all the less out of the ruts of its daily routine, seeing that business is prosperous at the time, the manufactories busy, the prices of cereals low, provisions abundant, the savings banks receiving daily new deposits. The "extraordinary measures," that the parliament so noisily announced fizzle out on January 18 in a vote of lack of confidence against the Ministry, without General Changarnier's name being even mentioned. The party of Order was forced to frame its motion in that way so as to secure the votes of the republicans, because, of all the acts of the Ministry, Changarnier's dismissal only was the very one they approved, while the party of Order cannot in fact, condemn the other Ministerial acts which it had itself dictated. The January 18 vote of lack of confidence was decided by 415 ayes against 286 nays. It was, accordingly put through by a coalition of the uncompromising Legitimists and Orleanists with the pure republicans and the Mountain. Thus it revealed the fact that, in its conflicts with Bonaparte, not only the Ministry, not only the Army, but also its independent parliamentary majority; that a troop of Representatives had deserted its camp out of a fanatic zeal for harmony, out of fear of fight, out of lassitude, out of family considerations for the salaries of relatives in office, out of speculations on vacancies in the Ministry (Odillon Barrot), or out of that unmitigated selfishness that causes the average bourgeois to be ever inclined to sacrifice the interests of his class to this or that private motive. The Bonapartist Representatives belonged from the start to the party of Order only in the struggle against the revolution. The leader of the Catholic party, Montalembert, already then threw his influence in the scale of Bonaparte, since he despaired of the vitality of the parliamentary party. Finally, the leaders of this party itself, Thiers and Berryer—the Orleanist and the Legitimist—were compelled to proclaim themselves openly as republicans; to admit that their heart favored royalty, but their head the republic; that their parliamentary republic was the only possible form for the rule of the bourgeoisie. Thus were they compelled to brand, before the eyes of the bourgeois class itself, as an intrigue—as dangerous as it was senseless—the restoration plans, which they continued to pursue indefatigably behind the back of the parliament.

The January 18 vote of lack of confidence struck the Ministers, not the President. But it was not the Ministry, it was the President who had deposed Changarnier. Should the party of Order place Bonaparte himself under charges? On account of his restoration hankerings? These only

supplemented their own. On account of his conspiracy at the military reviews and of the "Society of December 10"? They had long since buried these subjects under simple orders of business. On account of the discharge of the hero of January 29 and June 13, of the man who, in May, 1850, threatened, in case of riot, to set Paris on fire at all its four corners? Their allies of the Mountain and Cavaignac did not even allow them to console the fallen "Bulwark of Society" with an official testimony of their sympathy. They themselves could not deny the constitutional right of the President to remove a General. They stormed only because he made an unparliamentary use of his constitutional right. Had they not themselves constantly made an unconstitutional use of their parliamentary prerogative, notably by the abolition of universal suffrage? Consequently they were reminded to move exclusively within parliamentary bounds. Indeed, it required that peculiar disease, a disease that, since 1848, has raged over the whole continent, "Parliamentary Idiocy,"—that fetters those whom it infects to an imaginary world, and robs them of all sense, all remembrance, all understanding of the rude outside world;—it required this "Parliamentary Idiocy" in order that the party of Order, which had, with its own hands, destroyed all the conditions for parliamentary power, and, in its struggle with the other classes, was obliged to destroy them, still should consider its parliamentary victories as victories, and imagine it hit the President by striking his Ministers. They only afforded him an opportunity to humble the National Assembly anew in the eyes of the nation. On January 20, the "Moniteur" announced that the whole the dismissal of the whole Ministry was accepted. Under the pretext that none of the parliamentary parties had any longer the majority—as proved by the January 18 vote, that fruit of the coalition between mountain and royalists—, and, in order to await the re-formation of a majority, Bonaparte appointed a so-called transition Ministry, of whom no member belonged to the parliament-altogether wholly unknown and insignificant individuals; a Ministry of mere clerks and secretaries. The party of Order could now wear itself out in the game with these puppets; the Executive power no longer considered it worth the while to be seriously represented in the National Assembly. By this act Bonaparte concentrated the whole executive power all the more securely in his own person; he had all the freer elbow-room to exploit the same to his own ends, the more his Ministers became mere supernumeraries.

The party of Order, now allied with the Mountain, revenged itself by rejecting the Presidential endowment project of 1,800,000 francs, which the chief of the "Society of December 10" had compelled his Ministerial clerks to present to the Assembly. This time a majority of only 102 votes carried the day accordingly since January 18, 27 more votes had fallen off: the dissolution of the party of Order was making progress. Lest any one might for a moment be deceived touching the meaning of its coalition with the Mountain, the party of Order simultaneously scorned even to consider a motion, signed by 189 members of the Mountain, for a general amnesty to political criminals. It was enough that the Minister of the Interior, one Baisse, declared that the national tranquility was only in appearance, in secret there reigned deep agitation, in secret, ubiquitous societies were organized, the democratic papers were preparing to reappear, the reports from the Departments were unfavorable, the fugitives of Geneva conducted a conspiracy via Lyons through the whole of southern France, France stood on the verge of an industrial and commercial crisis, the manufacturers of Roubaix were working shorter hours, the prisoners of Belle Isle had mutinied;—it was enough that even a mere Baisse should conjure up the "Red Spectre" for the party of Order to reject without discussion a motion that would have gained for the National Assembly a tremendous popularity, and thrown Bonaparte back into its arms. Instead of allowing itself to be intimidated by the Executive power with the perspective of fresh disturbances, the party of Order should rather have allowed a little elbow-room to the class struggle, in order to secure the dependence of the Executive upon itself. But it did not feel itself equal to the task of playing with fire.

Meanwhile, the so-called transition Ministry vegetated along until the middle of April. Bonaparte tired out and fooled the National Assembly with constantly new Ministerial combinations. Now he seemed to intend constructing a republican Ministry with Lamartine and Billault; then, a parliamentary one with the inevitable Odillon Barrot, whose name must never be absent when a dupe is needed; then again, a Legitimist, with Batismenil and Lenoist d'Azy; and yet again, an Orleansist, with Malleville. While thus throwing the several factions of the party of Order into strained relations with one another, and alarming them all with the prospect of a republican Ministry, together with the there-upon inevitable restoration of universal suffrage, Bonaparte simultaneously raises in the bourgeoisie the

conviction that his sincere efforts for a parliamentary Ministry are wrecked upon the irreconcilable antagonism of the royalist factions. All the while the bourgeoisie was clamoring louder and louder for a "strong Government," and was finding it less and less pardonable to leave France "without an administration," in proportion as a general commercial crisis seemed to be under way and making recruits for Socialism in the cities, as did the ruinously low price of grain in the rural districts. Trade became daily duller; the unemployed hands increased perceptibly; in Paris, at least 10,000 workingmen were without bread; in Rouen, Muehlhausen, Lyons, Roubaix, Tourcoign, St. Etienne, Elbeuf, etc., numerous factories stood idle. Under these circumstances Bonaparte could venture to restore, on April 11, the Ministry of January 18; Messieurs Rouher, Fould, Baroche, etc., reinforced by Mr. Leon Faucher, whom the constitutive assembly had, during its last days, unanimously, with the exception of five Ministerial votes, branded with a vote of censure for circulating false telegraphic dispatches. Accordingly, the National Assembly had won a victory on January 18 over the Ministry, it had, for the period of three months, been battling with Bonaparte, and all this merely to the end that, on April 11, Fould and Baroche should be able to take up the Puritan Faucher as third in their ministerial league.

In November, 1849, Bonaparte had satisfied himself with an Unparliamentary, in January, 1851, with an Extra-Parliamentary, on April 11, he felt strong enough to form an Anti-Parliamentary Ministry, that harmoniously combined within itself the votes of lack of confidence of both assemblies—the constitutive and the legislative, the republican and the royalist. This ministerial progression was a thermometer by which the parliament could measure the ebbing temperature of its own life. This had sunk so low by the end of April that, at a personal interview, Persigny could invite Changarnier to go over to the camp of the President. Bonaparte, he assured Changarnier, considered the influence of the National Assembly to be wholly annihilated, and already the proclamation was ready, that was to be published after the steadily contemplated, but again accidentally postponed "coup d'etat." Changarnier communicated this announcement of its death to the leaders of the party of Order; but who was there to believe a bed-bug bite could kill? The parliament, however beaten, however dissolved, however death-tainted it was, could not persuade itself to see, in the duel with the grotesque chief of the "Society of December 10," anything

but a duel with a bed-bug. But Bonaparte answered the party of Order as Agesilaus did King Agis: "I seem to you an ant; but shall one day be a lion."

## VI

The coalition with the Mountain and the pure republicans, to which the party of Order found itself condemned in its fruitless efforts to keep possession of the military and to reconquer supreme control over the Executive power, proved conclusively that it had forfeited its independent parliamentary majority. The calendar and clock merely gave, on May 29, the signal for its complete dissolution. With May 29 commenced the last year of the life of the National Assembly. It now had to decide for the unchanged continuance or the revision of the Constitution. But a revision of the Constitution meant not only the definitive supremacy of either the bourgeoisie of the small traders' democracy, of either democracy or proletarian anarchy, of either a parliamentary republic or Bonaparte, it meant also either Orleans or Bourbon! Thus fell into the very midst of the parliament the apple of discord, around which the conflict of interests, that cut up the party of Order into hostile factions, was to kindle into an open conflagration. The party of Order was a combination of heterogeneous social substances. The question of revision raised a political temperature, in which the product was reduced to its original components.

The interest of the Bonapartists in the revision was simple: they were above all concerned in the abolition of Article 45, which forbade Bonaparte's reelection and the prolongation of his term. Not less simple seemed to be the position of the republicans; they rejected all revision, seeing in that only a general conspiracy against the republic; as they disposed over more than one-fourth of the votes in the National Assembly, and, according to the Constitution, a three-fourths majority was requisite to revise and to call a revisory convention, they needed only to count their own votes to be certain of victory. Indeed, they were certain of it.

Over and against these clear-cut positions, the party of Order found itself tangled in inextricable contradictions. If it voted against the revision, it endangered the "status quo," by leaving to Bonaparte only one expedient—that of violence and handing France over, on May 2, 1852, at the very time of election, a prey to revolutionary anarchy, with a President whose authority was at an end; with a parliament that the party had long ceased to

own, and with a people that it meant to re-conquer. If it voted constitutionally for a revision, it knew that it voted in vain and would constitutionally have to go under before the veto of the republicans. If, unconstitutionally, it pronounced a simple majority binding, it could hope to control the revolution only in case it surrendered unconditionally to the domination of the Executive power: it then made Bonaparte master of the Constitution, of the revision and of itself. A merely partial revision, prolonging the term of the President, opened the way to imperial usurpation; a general revision, shortening the existence of the republic, threw the dynastic claims into an inevitable conflict: the conditions for a Bourbon and those for an Orleanist restoration were not only different, they mutually excluded each other.

The parliamentary republic was more than a neutral ground on which the two factions of the French bourgeoisie—Legitimists and Orleanists, large landed property and manufacture—could lodge together with equal rights. It was the indispensable condition for their common reign, the only form of government in which their common class interest could dominate both the claims of their separate factions and all the other classes of society. As royalists, they relapsed into their old antagonism into the struggle for the overlordship of either landed property or of money; and the highest expression of this antagonism, its personification, were the two kings themselves, their dynasties. Hence the resistance of the party of Order to the recall of the Bourbons.

The Orleanist Representative Creton moved periodically in 1849, 1850 and 1851 the repeal of the decree of banishment against the royal families; as periodically did the parliament present the spectacle of an Assembly of royalists who stubbornly shut to their banished kings the door through which they could return home. Richard III murdered Henry VI, with the remark that he was too good for this world, and belonged in heaven. They declared France too bad to have her kings back again. Forced by the power of circumstances, they had become republicans, and repeatedly sanctioned the popular mandate that exiled their kings from France.

The revision of the Constitution, and circumstances compelled its consideration, at once made uncertain not only the republic itself, but also the joint reign of the two bourgeois factions; and it revived, with the possibility of the monarchy, both the rivalry of interests which these two

factions had alternately allowed to preponderate, and the struggle for the supremacy of the one over the other. The diplomats of the party of Order believed they could allay the struggle by a combination of the two dynasties through a so-called fusion of the royalist parties and their respective royal houses. The true fusion of the restoration and the July monarchy was, however, the parliamentary republic, in which the Orleanist and Legitimist colors were dissolved, and the bourgeois species vanished in the plain bourgeois, in the bourgeois genus. Now however, the plan was to turn the Orleanist Legitimist and the Legitimist Orleanist. The kingship, in which their antagonism was personified, was to incarnate their unity, the expression of their exclusive faction interests was to become the expression of their common class interest; the monarchy was to accomplish what only the abolition of two monarchies—the republic could and did accomplish. This was the philosopher's stone, for the finding of which the doctors of the party of Order were breaking their heads. As though the Legitimate monarchy ever could be the monarchy of the industrial bourgeoisie, or the bourgeois monarchy the monarchy of the hereditary landed aristocracy! As though landed property and industry could fraternize under one crown, where the crown could fall only upon one head, the head of the older or the younger brother! As though industry could at all deal upon a footing of equality with landed property, so long as landed property did not decide itself to become industrial. If Henry V were to die tomorrow, the Count of Paris would not, therefore, become the king of the Legitimists, unless he ceased to be the King of the Orleanists. Nevertheless, the fusion philosophers, who became louder in the measure that the question of revision stepped to the fore, who had provided themselves with a daily organ in the "Assemblée Nationale," who, even at this very moment (February, 1852) are again at work, explained the whole difficulty by the opposition and rivalries of the two dynasties. The attempts to reconcile the family of Orleans with Henry V., begun since the death of Louis Philippe, but, as all these dynastic intrigues carried on only during the vacation of the National Assembly, between acts, behind the scenes, more as a sentimental coquetry with the old superstition than as a serious affair, were now raised by the party of Order to the dignity of a great State question, and were conducted upon the public stage, instead of, as heretofore in the amateurs' theater. Couriers flew from Paris to Venice, from Venice to Claremont, from Claremont to Paris. The Duke of Chambord issues a manifesto in which he

announces not his own, but the "national" restoration, "with the aid of all the members of his family." The Oleanist Salvandy throws himself at the feet of Henry V. The Legitimist leaders Berryer, Benoit d'Azy, St. Priest travel to Claremont, to persuade the Orleans; but in vain. The fusionists learn too late that the interests of the two bourgeois factions neither lose in exclusiveness nor gain in pliancy where they sharpen to a point in the form of family interests, of the interests of the two royal houses. When Henry V. recognized the Count of Paris as his successor—the only success that the fusion could at best score—the house of Orleans acquired no claim that the childlessness of Henry V. had not already secured to it; but, on the other hand, it lost all the claims that it had conquered by the July revolution. It renounced its original claims, all the title, that, during a struggle nearly one hundred years long, it had wrested from the older branch of the Bourbons; it bartered away its historic prerogative, the prerogative of its family-tree. Fusion, accordingly, amounted to nothing else than the resignation of the house of Orleans, its Legitimist resignation, a repentful return from the Protestant State Church into the Catholic;—a return, at that, that did not even place it on the throne that it had lost, but on the steps of the throne on which it was born. The old Oleanist Ministers Guizot, Duchatel, etc., who likewise hastened to Claremont, to advocate the fusion, represented in fact only the nervous reaction of the July monarchy; despair, both in the citizen kingdom and the kingdom of citizens; the superstitious belief in legitimacy as the last amulet against anarchy. Mediators, in their imagination, between Orleans and Bourbon, they were in reality but apostate Oleanists, and as such were they received by the Prince of Joinville. The virile, bellicose part of the Oleanists, on the contrary—Thiers, Baze, etc.—, persuaded the family of Louis Philippe all the easier that, seeing every plan for the immediate restoration of the monarchy presupposed the fusion of the two dynasties, and every plan for fusion the resignation of the house of Orleans, it corresponded, on the contrary, wholly with the tradition of its ancestors to recognize the republic for the time being, and to wait until circumstances permitted I the conversion of the Presidential chair into a throne. Joinville's candidacy was set afloat as a rumor, public curiosity was held in suspense, and a few months later, after the revision was rejected, openly proclaimed in September.

Accordingly, the essay of a royalist fusion between Oleanists and Legitimists did not miscarry only, it broke up their parliamentary fusion, the

republican form that they had adopted in common, and it decomposed the party of Order into its original components. But the wider the breach became between Venice and Claremont, the further they drifted away from each other, and the greater the progress made by the Joinville agitation, all the more active and earnest became the negotiations between Faucher, the Minister of Bonaparte, and the Legitimists.

The dissolution of the party of Order went beyond its original elements. Each of the two large factions fell in turn into new fragments. It was as if all the old political shades, that formerly fought and crowded one another within each of the two circles—be it that of the Legitimists or that of the Orleanists—, had been thawed out like dried infusoria by contact with water; as if they had recovered enough vitality to build their own groups and assert their own antagonisms. The Legitimists dreamed they were back amidst the quarrels between the Tuileries and the pavilion Marsan, between Villele and Polignac; the Orleanists lived anew through the golden period of the tourneys between Guizot, Mole, Broglie, Thiers, and Odillon Barrot.

That portion of the party of Order—eager for a revision of the Constitution but disagreed upon the extent of revision—made up of the Legitimists under Berryer and Falloux and of those under Laroche Jacquelin, together with the tired-out Orleanists under Mole, Broglie, Montalembert and Odillon Barrot, united with the Bonapartist Representatives in the following indefinite and loosely drawn motion:

"The undersigned Representatives, with the end in view of restoring to the nation the full exercise of her sovereignty, move that the Constitution be revised."

At the same time, however, they unanimously declared through their spokesman, Tocqueville, that the National Assembly had not the right to move the abolition of the republic, that right being vested only in a Constitutional Convention. For the rest, the Constitution could be revised only in a "legal" way, that is to say, only in case a three-fourths majority decided in favor of revision, as prescribed by the Constitution. After a six days' stormy debate, the revision was rejected on July 19, as was to be foreseen. In its favor 446 votes were cast, against it 278. The resolute Orleanists, Thiers, Changarnier, etc., voted with the republicans and the Mountain.

Thus the majority of the parliament pronounced itself against the Constitution, while the Constitution itself pronounced itself for the minority, and its decision binding. But had not the party of Order on May 31, 1850, had it not on June 13, 1849, subordinated the Constitution to the parliamentary majority? Did not the whole republic they had been hitherto having rest upon the subordination of the Constitutional clauses to the majority decisions of the parliament? Had they not left to the democrats the Old Testament superstitious belief in the letter of the law, and had they not chastised the democrats therefor? At this moment, however, revision meant nothing else than the continuance of the Presidential power, as the continuance of the Constitution meant nothing else than the deposition of Bonaparte. The parliament had pronounced itself for him, but the Constitution pronounced itself against the parliament. Accordingly, he acted both in the sense of the parliament when he tore up the Constitution, and in the sense of the Constitution when he chased away the parliament.

The parliament pronounced the Constitution, and, thereby, also, its own reign, "outside of the pale of the majority"; by its decision, it repealed the Constitution, and continued the Presidential power, and it at once declared that neither could the one live nor the other die so long as itself existed. The feet of those who were to bury it stood at the door. While it was debating the subject of revision, Bonaparte removed General Baraguay d'Hilliers, who showed himself irresolute, from the command of the First Military Division, and appointed in his place General Magnan, the conqueror of Lyon; the hero of the December days, one of his own creatures, who already under Louis Philippe, on the occasion of the Boulogne expedition, had somewhat compromised himself in his favor.

By its decision on the revision, the party of Order proved that it knew neither how to rule nor how to obey; neither how to live nor how to die; neither how to bear with the republic nor how to overthrow it; neither how to maintain the Constitution nor how to throw it overboard; neither how to co-operate with the President nor how to break with him. From what quarter did it then, look to for the solution of all the existing perplexities? From the calendar, from the course of events. It ceased to assume the control of events. It, accordingly, invited events to don its authority and also the power to which in its struggle with the people, it had yielded one attribute after another until it finally stood powerless before the same. To the end that the Executive be able all the more freely to formulate his plan of campaign

against it, strengthen his means of attack, choose his tools, fortify his positions, the party of Order decided, in the very midst of this critical moment, to step off the stage, and adjourn for three months, from August 10 to November 4.

Not only was the parliamentary party dissolved into its two great factions, not only was each of these dissolved within itself, but the party of Order, inside of the parliament, was at odds with the party of Order, outside of the parliament. The learned speakers and writers of the bourgeoisie, their tribunes and their press, in short, the ideologists of the bourgeoisie and the bourgeoisie itself, the representatives and the represented, stood estranged from, and no longer understood one another.

The Legitimists in the provinces, with their cramped horizon and their boundless enthusiasm, charged their parliamentary leaders Berryer and Falloux with desertion to the Bonapartist camp, and with apostacy from Henry V. Their lilymind [#1 An allusion to the lilies of the Bourbon coat-of-arms] believed in the fall of man, but not in diplomacy.

More fatal and completer, though different, was the breach between the commercial bourgeoisie and its politicians. It twitted them, not as the Legitimists did theirs, with having apostatized from their principle, but, on the contrary, with adhering to principles that had become useless.

I have already indicated that, since the entry of Fould in the Ministry, that portion of the commercial bourgeoisie that had enjoyed the lion's share in Louis Philippe's reign, to-wit, the aristocracy of finance, had become Bonapartist. Fould not only represented Bonaparte's interests at the Bourse, he represented also the interests of the Bourse with Bonaparte. A passage from the London "Economist," the European organ of the aristocracy of finance, described most strikingly the attitude of this class. In its issue of February 1, 1851, its Paris correspondent writes: "Now we have it stated from numerous quarters that France wishes above all things for repose. The President declares it in his message to the Legislative Assembly; it is echoed from the tribune; it is asserted in the journals; it is announced from the pulpit; it is demonstrated by the sensitiveness of the public funds at the least prospect of disturbance, and their firmness the instant it is made manifest that the Executive is far superior in wisdom and power to the factious ex-officials of all former governments."

In its issue of November 29, 1851, the "Economist" declares editorially: "The President is now recognized as the guardian of order on every Stock Exchange of Europe." Accordingly, the Aristocracy of Finance condemned the parliamentary strife of the party of Order with the Executive as a "disturbance of order," and hailed every victory of the President over its reputed representatives as a "victory of order." Under "aristocracy of finance" must not, however, be understood merely the large bond negotiators and speculators in government securities, of whom it may be readily understood that their interests and the interests of the Government coincide. The whole modern money trade, the whole banking industry, is most intimately interwoven with the public credit. Part of their business capital requires to be invested in interest-bearing government securities that are promptly convertible into money; their deposits, i. e., the capital placed at their disposal and by them distributed among merchants and industrial establishments, flow partly out of the dividends on government securities. The whole money market, together with the priests of this market, is part and parcel of this "aristocracy of finance" at every epoch when the stability of the government is to them synonymous with "Moses and his prophets." This is so even before things have reached the present stage when every deluge threatens to carry away the old governments themselves.

But the industrial Bourgeoisie also, in its fanaticism for order, was annoyed at the quarrels of the Parliamentary party of Order with the Executive. Thiers, Anglas, Sainte Beuve, etc., received, after their vote of January 18, on the occasion of the discharge of Changarnier, public reprimands from their constituencies, located in the industrial districts, branding their coalition with the Mountain as an act of high treason to the cause of order. Although, true enough, the boastful, vexatious and petty intrigues, through which the struggle of the party of Order with the President manifested itself, deserved no better reception, yet notwithstanding, this bourgeois party, that expects of its representatives to allow the military power to pass without resistance out of the hands of their own Parliament into those of an adventurous Pretender, is not worth even the intrigues that were wasted in its behalf. It showed that the struggle for the maintenance of their public interests, of their class interests, of their political power only incommoded and displeased them, as a disturbance of their private business.

The bourgeois dignitaries of the provincial towns, the magistrates, commercial judges, etc., with hardly any exception, received Bonaparte everywhere on his excursions in the most servile manner, even when, as in Dijon, he attacked the National Assembly and especially the party of Order without reserve.

Business being brisk, as still at the beginning of 1851, the commercial bourgeoisie stormed against every Parliamentary strife, lest business be put out of temper. Business being dull, as from the end of February, 1851, on, the bourgeoisie accused the Parliamentary strifes as the cause of the stand-still, and clamored for quiet in order that business may revive. The debates on revision fell just in the bad times. Seeing the question now was the to be or not to be of the existing form of government, the bourgeoisie felt itself all the more justified in demanding of its Representatives that they put an end to this tormenting provisional status, and preserve the "status quo." This was no contradiction. By putting an end to the provisional status, it understood its continuance, the indefinite putting off of the moment when a final decision had to be arrived at. The "status quo" could be preserved in only one of two ways: either by the prolongation of Bonaparte's term of office or by his constitutional withdrawal and the election of Cavaignac. A part of the bourgeoisie preferred the latter solution, and knew no better advice to give their Representatives than to be silent, to avoid the burning point. If their Representatives did not speak, so argued they, Bonaparte would not act. They desired an ostrich Parliament that would hide its head, in order not to be seen. Another part of the bourgeoisie preferred that Bonaparte, being once in the Presidential chair, be left in the Presidential chair, in order that everything might continue to run in the old ruts. They felt indignant that their Parliament did not openly break the Constitution and resign without further ado. The General Councils of the Departments, these provisional representative bodies of the large bourgeoisie, who had adjourned during the vacation of the National Assembly since August 25, pronounced almost unanimously for revision, that is to say, against the Parliament and for Bonaparte.

Still more unequivocally than in its falling out with its Parliamentary Representatives, did the bourgeoisie exhibit its wrath at its literary Representatives, its own press. The verdicts of the bourgeois juries, inflicting excessive fines and shameless sentences of imprisonment for every attack of the bourgeois press upon the usurping aspirations of

Bonaparte, for every attempt of the press to defend the political rights of the bourgeoisie against the Executive power, threw, not France alone, but all Europe into amazement.

While on the one hand, as I have indicated, the Parliamentary party of Order ordered itself to keep the peace by screaming for peace; and while it pronounced the political rule of the bourgeoisie irreconcilable with the safety and the existence of the bourgeoisie, by destroying with its own hands in its struggle with the other classes of society all the conditions for its own, the Parliamentary regime; on the other hand, the mass of the bourgeoisie, outside of the Parliament, urged Bonaparte—by its servility towards the President, by its insults to the Parliament, by the brutal treatment of its own press—to suppress and annihilate its speaking and writing organs, its politicians and its literati, its orators' tribune and its press, to the end that, under the protection of a strong and unhampered Government, it might ply its own private pursuits in safety. It declared unmistakably that it longed to be rid of its own political rule, in order to escape the troubles and dangers of ruling.

And this bourgeoisie, that had rebelled against even the Parliamentary and literary contest for the supremacy of its own class, that had betrayed its leaders in this contest, it now has the effrontery to blame the proletariat for not having risen in its defence in a bloody struggle, in a struggle for life! Those bourgeois, who at every turn sacrificed their common class interests to narrow and dirty private interests, and who demanded a similar sacrifice from their own Representatives, now whine that the proletariat has sacrificed their idea-political to its own material interests! This bourgeois class now strikes the attitude of a pure soul, misunderstood and abandoned, at a critical moment, by the proletariat, that has been misled by the Socialists. And its cry finds a general echo in the bourgeois world. Of course, I do not refer to German crossroad politicians and kindred blockheads. I refer, for instance, to the "Economist," which, as late as November 29, 1851, that is to say, four days before the "coup d'etat" pronounced Bonaparte the "Guardian of Order" and Thiers and Berryer "Anarchists," and as early as December 27, 1851, after Bonaparte had silenced those very Anarchists, cries out about the treason committed by "the ignorant, untrained and stupid proletaires against the skill, knowledge, discipline, mental influence, intellectual resources and moral weight of the

middle and upper ranks." The stupid, ignorant and contemptible mass was none other than the bourgeoisie itself.

France had, indeed; experienced a sort of commercial crisis in 1851. At the end of February, there was a falling off of exports as compared with 1850; in March, business languished and factories shut down; in April, the condition of the industrial departments seemed as desperate as after the February days; in May, business did not yet pick up; as late as June 28, the reports of the Bank of France revealed through a tremendous increase of deposits and an equal decrease of loans on exchange notes, the standstill of production; not until the middle of October did a steady improvement of business set in. The French bourgeoisie accounted for this stagnation of business with purely political reasons; it imputed the dull times to the strife between the Parliament and the Executive power, to the uncertainty of a provisional form of government, to the alarming prospects of May 2, 1852. I shall not deny that all these causes did depress some branches of industry in Paris and in the Departments. At any rate, this effect of political circumstances was only local and trifling. Is there any other proof needed than that the improvement in business set in at the very time when the political situation was growing worse, when the political horizon was growing darker, and when at every moment a stroke of lightning was expected out of the Elysee—in the middle of October? The French bourgeois, whose "skill, knowledge, mental influence and intellectual resources," reach no further than his nose, could, moreover, during the whole period of the Industrial Exposition in London, have struck with his nose the cause of his own business misery. At the same time that, in France, the factories were being closed, commercial failures broke out in England. While the industrial panic reached its height during April and May in France, in England the commercial panic reached its height in April and May. The same as the French, the English woolen industries suffered, and, as the French, so did the English silk manufacture. Though the English cotton factories went on working, it, nevertheless, was not with the same old profit of 1849 and 1850. The only difference was this: that in France, the crisis was an industrial, in England it was a commercial one; that while in France the factories stood still, they spread themselves in England, but under less favorable circumstances than they had done the years just previous; that, in France, the export, in England, the import trade suffered the heaviest blows. The common cause, which, as a matter of fact, is not to

be looked for with-in the bounds of the French political horizon, was obvious. The years 1849 and 1850 were years of the greatest material prosperity, and of an overproduction that did not manifest itself until 1851. This was especially promoted at the beginning of 1851 by the prospect of the Industrial Exposition; and, as special causes, there were added, first, the failure of the cotton crop of 1850 and 1851; second, the certainty of a larger cotton crop than was expected: first, the rise, then the sudden drop; in short, the oscillations of the cotton market. The crop of raw silk in France had been below the average. Finally, the manufacture of woollen goods had received such an increment since 1849, that the production of wool could not keep step with it, and the price of the raw material rose greatly out of proportion to the price of the manufactured goods. Accordingly, we have here in the raw material of three staple articles a threefold material for a commercial crisis. Apart from these special circumstances, the seeming crisis of the year 1851 was, after all, nothing but the halt that overproduction and overspeculation make regularly in the course of the industrial cycle, before pulling all their forces together in order to rush feverishly over the last stretch, and arrive again at their point of departure—the General Commercial Crisis. At such intervals in the history of trade, commercial failures break out in England, while, in France, industry itself is stopped, partly because it is compelled to retreat through the competition of the English, that, at such times becomes resistless in all markets, and partly because, as an industry of luxuries, it is affected with preference by every stoppage of trade. Thus, besides the general crisis, France experiences her own national crises, which, how-ever, are determined by and conditioned upon the general state of the world's market much more than by local French influences. It will not be devoid of interest to contrast the prejudgment of the French bourgeois with the judgment of the English bourgeois. One of the largest Liverpool firms writes in its yearly report of trade for 1851: "Few years have more completely disappointed the expectations entertained at their beginning than the year that has just passed; instead of the great prosperity, that was unanimously looked forward to, it proved itself one of the most discouraging years during the last quarter of a century. This applies, of course, only to the mercantile, not to the industrial classes. And yet, surely there were grounds at the beginning of the year from which to draw a contrary conclusion; the stock of products was scanty, capital was abundant, provisions cheap, a rich

autumn was assured, there was uninterrupted peace on the continent and no political and financial disturbances at home; indeed, never were the wings of trade more unshackled. . . . What is this unfavorable result to be ascribed to? We believe to excessive trade in imports as well as exports. If our merchants do not themselves rein in their activity, nothing can keep us going, except a panic every three years."

Imagine now the French bourgeois, in the midst of this business panic, having his trade-sick brain tortured, buzzed at and deafened with rumors of a "coup d'etat" and the restoration of universal suffrage; with the struggle between the Legislature and the Executive; with the Fronde warfare between Orleanists and Legitimists; with communistic conspiracies in southern France; with alleged Jacqueries [#2 Peasant revolts] in the Departments of Nièvre and Cher; with the advertisements of the several candidates for President; with "social solutions" huckstered about by the journals; with the threats of the republicans to uphold, arms in hand, the Constitution and universal suffrage; with the gospels, according to the emigrant heroes "in partibus," who announced the destruction of the world for May 2,—imagine that, and one can understand how the bourgeois, in this unspeakable and noisy confusion of fusion, revision, prorogation, constitution, conspiracy, coalition, emigration, usurpation and revolution, blurts out at his parliamentary republic: "Rather an End With Fright, Than a Fright Without End."

Bonaparte understood this cry. His perspicacity was sharpened by the growing anxiety of the creditors' class, who, with every sunset, that brought nearer the day of payment, the 2d of May, 1852, saw in the motion of the stars a protest against their earthly drafts. They had become regular astrologers. The National Assembly had cut off Bonaparte's hope of a constitutional prolongation of his term; the candidature of the Prince of Joinville tolerated no further vacillation.

If ever an event cast its shadow before it long before its occurrence, it was Bonaparte's "coup d'etat." Already on January 29, 1849, barely a month after his election, he had made to Changarnier a proposition to that effect. His own Prime Minister, Odillon Barrot, had covertly, in 1849, and Thiers openly in the winter of 1850, revealed the scheme of the "coup d'etat." In May, 1851, Persigny had again sought to win Changarnier over to the "coup," and the "Miessager de l'Assemblée" newspaper had published this

conversation. At every parliamentary storm, the Bonapartist papers threatened a "coup," and the nearer the crisis approached, all the louder grew their tone. At the orgies, that Bonaparte celebrated every night with a swell mob of males and females, every time the hour of midnight drew nigh and plenteous libations had loosened the tongues and heated the minds of the revelers, the "coup" was resolved upon for the next morning. Swords were then drawn, glasses clinked, the Representatives were thrown out at the windows, the imperial mantle fell upon the shoulders of Bonaparte, until the next morning again drove away the spook, and astonished Paris learned, from not very reserved Vestals and indiscreet Paladins, the danger it had once more escaped. During the months of September and October, the rumors of a "coup d'etat" tumbled close upon one another's heels. At the same time the shadow gathered color, like a confused daguerreotype. Follow the issues of the European daily press for the months of September and October, and items like this will be found literally:

"Rumors of a 'coup' fill Paris. The capital, it is said, is to be filled with troops by night and the next morning decrees are to be issued dissolving the National Assembly, placing the Department of the Seine in state of siege restoring universal suffrage, and appealing to the people. Bonaparte is rumored to be looking for Ministers to execute these illegal decrees."

The newspaper correspondence that brought this news always close ominously with "postponed." The "coup" was ever the fixed idea of Bonaparte. With this idea he had stepped again upon French soil. It had such full possession of him that he was constantly betraying and blabbing it out. He was so weak that he was as constantly giving it up again. The shadow of the "coup" had become so familiar a spectre to the Parisians, that they refused to believe it when it finally did appear in flesh and blood. Consequently, it was neither the reticent backwardness of the chief of the "Society of December 10," nor an unthought of surprise of the National Assembly that caused the success of the "coup." When it succeeded, it did so despite his indiscretion and with its anticipation—a necessary, unavoidable result of the development that had preceded.

On October 10, Bonaparte announced to his Ministers his decision to restore universal suffrage; on the 16th day they handed in their resignations; on the 26th Paris learned of the formation of the Thorigny Ministry. The Prefect of Police, Carlier, was simultaneously replaced by Maupas; and the chief of the First Military Division Magnan, concentrated the most reliable regiments in the capital. On November 4, the National Assembly re-opened its sessions. There was nothing left for it to do but to repeat, in short recapitulation, the course it had traversed, and to prove that it had been buried only after it had expired. The first post that it had forfeited in the struggle with the Executive was the Ministry. It had solemnly to admit this loss by accepting as genuine the Thorigny Ministry, which was but a pretence. The permanent Committee had received Mr. Giraud with laughter when he introduced himself in the name of the new Ministers. So weak a Ministry for so strong a measure as the restoration of universal suffrage! The question, however, then was to do nothing in, everything against the parliament.

On the very day of its re-opening, the National Assembly received the message from Bonaparte demanding the restoration of universal suffrage and the repeal of the law of May 31, 1850. On the same day, his Ministers

introduced a decree to that effect. The Assembly promptly rejected the motion of urgency made by the Ministers, but repealed the law itself, on November 13, by a vote of 355 against 348. Thus it once more tore to pieces its own mandate, once more certified to the fact that it had transformed itself from a freely chosen representative body of the nation into the usurpatory parliament of a class; it once more admitted that it had itself severed the muscles that connected the parliamentary head with the body of the nation.

While the Executive power appealed from the National Assembly to the people by its motion for the restoration of universal suffrage, the Legislative power appealed from the people to the Army by its "Questors' Bill." This bill was to establish its right to immediate requisitions for troops, to build up a parliamentary army. By thus appointing the Army umpire between itself and the people, between itself and Bonaparte; by thus recognizing the Army as the decisive power in the State, the National Assembly was constrained to admit that it had long given up all claim to supremacy. By debating the right to make requisitions for troops, instead of forthwith collecting them, it betrayed its own doubts touching its own power. By thus subsequently rejecting the "Questors' Bill," it publicly confessed its impotence. The bill fell through with a minority of 108 votes; the Mountain had, accordingly, thrown the casting vote. It now found itself in the predicament of Buridan's donkey, not, indeed, between two sacks of hay, forced to decide which of the two was the more attractive, but between two showers of blows, forced to decide which of the two was the harder; fear of Changarnier, on one side, fear of Bonaparte, on the other. It must be admitted the position was not a heroic one.

On November 18, an amendment was moved to the Act, passed by the party of Order, on municipal elections to the effect that, instead of three years, a domicile of one year should suffice. The amendment was lost by a single vote—but this vote, it soon transpired, was a mistake. Owing to the divisions within its own hostile factions, the party of Order had long since forfeited its independent parliamentary majority. It was now plain that there was no longer any majority in the parliament. The National Assembly had become impotent even to decide. Its atomic parts were no longer held together by any cohesive power; it had expended its last breath, it was dead.

Finally, the mass of the bourgeoisie outside of the parliament was once more solemnly to confirm its rupture with the bourgeoisie inside of the parliament a few days before the catastrophe. Thiers, as a parliamentary hero conspicuously smitten by that incurable disease—Parliamentary Idiocy—, had hatched out jointly with the Council of State, after the death of the parliament, a new parliamentary intrigue in the shape of a "Responsibility Law," that was intended to lock up the President within the walls of the Constitution. The same as, on September 15, Bonaparte bewitched the fishwives, like a second Massaniello, on the occasion of laying the cornerstone for the Market of Paris,—though, it must be admitted, one fishwife was equal to seventeen Burgraves in real power—; the same as, after the introduction of the "Questors' Bill," he enthused the lieutenants, who were being treated at the Elysee;—so, likewise, did he now, on November 25, carry away with him the industrial bourgeoisie, assembled at the Circus, to receive from his hands the prize-medals that had been awarded at the London Industrial Exposition. I here reproduce the typical part of his speech, from the "Journal des Debats":

"With such unhoped for successes, I am justified to repeat how great the French republic would be if she were only allowed to pursue her real interests, and reform her institutions, instead of being constantly disturbed in this by demagogues, on one side, and, on the other, by monarchic hallucinations. (Loud, stormy and continued applause from all parts of the amphitheater). The monarchic hallucinations hamper all progress and all serious departments of industry. Instead of progress, we have struggle only. Men, formerly the most zealous supporters of royal authority and prerogative, become the partisans of a convention that has no purpose other than to weaken an authority that is born of universal suffrage. (Loud and prolonged applause). We see men, who have suffered most from the revolution and complained bitterest of it, provoking a new one for the sole purpose of putting fetters on the will of the nation. . . . I promise you peace for the future." (Bravo! Bravo! Stormy bravos.)

Thus the industrial bourgeoisie shouts its servile "Bravo!" to the "coup d'etat" of December 2, to the destruction of the parliament, to the downfall of their own reign, to the dictatorship of Bonaparte. The rear of the applause of November 25 was responded to by the roar of cannon on December 4, and the house of Mr. Sallandrouze, who had been loudest in applauding, was the one demolished by most of the bombs.

Cromwell, when he dissolved the Long Parliament, walked alone into its midst, pulled out his watch in order that the body should not continue to exist one minute beyond the term fixed for it by him, and drove out each individual member with gay and humorous invectives. Napoleon, smaller than his prototype, at least went on the 18th Brumaire into the legislative body, and, though in a tremulous voice, read to it its sentence of death. The second Bonaparte, who, moreover, found himself in possession of an executive power very different from that of either Cromwell or Napoleon, did not look for his model in the annals of universal history, but in the annals of the "Society of December 10," in the annals of criminal jurisprudence. He robs the Bank of France of twenty-five million francs; buys General Magnan with one million and the soldiers with fifteen francs and a drink to each; comes secretly together with his accomplices like a thief by night; has the houses of the most dangerous leaders in the parliament broken into; Cavagnac, Lamorciere, Leflo, Changarnier, Charras, Thiers, Baze, etc., taken out of their beds; the principal places of Paris, the building of the parliament included, occupied with troops; and, early the next morning, loud-sounding placards posted on all the walls proclaiming the dissolution of the National Assembly and of the Council of State, the restoration of universal suffrage, and the placing of the Department of the Seine under the state of siege. In the same way he shortly after sneaked into the "Moniteur" a false document, according to which influential parliamentary names had grouped themselves round him in a Committee of the Nation.

Amidst cries of "Long live the Republic!", the rump-parliament, assembled at the Mayor's building of the Tenth Arrondissement, and composed mainly of Legitimists and Orleanists, resolves to depose Bonaparte; it harangues in vain the gaping mass gathered before the building, and is finally dragged first, under the escort of African sharpshooters, to the barracks of Orsay, and then bundled into convicts' wagons and transported to the prisons of Mazas, Ham and Vincennes. Thus ended the party of Order, the Legislative Assembly and the February revolution.

Before hastening to the end, let us sum up shortly the plan of its history:

I.—First Period. From February 24 to May 4, 1848. February period. Prologue. Universal fraternity swindle.

II.—Second Period. Period in which the republic is constituted, and of the Constitutive National Assembly.

1. May 4 to June 25, 1848. Struggle of all the classes against the house of Mr. proletariat. Defeat of the proletariat in the June days.

2. June 25 to December 10, 1848. Dictatorship of the pure bourgeois republicans. Drafting of the Constitution. The state of siege hangs over Paris. The Bourgeois dictatorship set aside on December 10 by the election of Bonaparte as President.

3. December 20, 1848, to May 20, 1849. Struggle of the Constitutive Assembly with Bonaparte and with the united party of Order. Death of the Constitutive Assembly. Downfall of the republican bourgeoisie.

III.—Third Period. Period of the constitutional republic and of the Legislative National Assembly.

1. May 29 to June 13, 1849. Struggle of the small traders', middle class with the bourgeoisie and with Bonaparte. Defeat of the small traders' democracy.

2. June 13, 1849, to May, 1850. Parliamentary dictatorship of the party of Order. Completes its reign by the abolition of universal suffrage, but loses the parliamentary Ministry.

3. May 31, 1850, to December 2, 1851. Struggle between the parliamentary bourgeoisie and Bonaparte.

a. May 31, 1850, to January 12, 1851. The parliament loses the supreme command over the Army.

b. January 12 to April 11, 1851. The parliament succumbs in the attempts to regain possession of the administrative power. The party of Order loses its independent parliamentary majority. Its coalition with the republicans and the Mountain.

c. April 11 to October 9, 1851. Attempts at revision, fusion and prorogation. The party of Order dissolves into its component parts. The breach between the bourgeois parliament and the bourgeois press, on the one hand, and the bourgeois mass, on the other, becomes permanent.

d. October 9 to December 2, 1851. Open breach between the parliament and the executive power. It draws up its own decree of death, and goes under, left in the lurch by its own class, by the Army, and by all the other

classes. Downfall of the parliamentary regime and of the reign of the bourgeoisie. Bonaparte's triumph. Parody of the imperialist restoration.

## VII

The Social Republic appeared as a mere phrase, as a prophecy on the threshold of the February Revolution; it was smothered in the blood of the Parisian proletariat during the days of 1848 but it stalks about as a spectre throughout the following acts of the drama. The Democratic Republic next makes its bow; it goes out in a fizzle on June 13, 1849, with its runaway small traders; but, on fleeing, it scatters behind it all the more bragging announcements of what it means do to. The Parliamentary Republic, together with the bourgeoisie, then appropriates the whole stage; it lives its life to the full extent of its being; but the 2d of December, 1851, buries it under the terror-stricken cry of the allied royalists: "Long live the Republic!"

The French bourgeoisie reared up against the reign of the working proletariat;—it brought to power the slum-proletariat, with the chief of the "Society of December 10" at its head. It kept France in breathless fear over the prospective terror of "red anarchy;"—Bonaparte discounted the prospect when, on December 4, he had the leading citizens of the Boulevard Montmartre and the Boulevard des Italiens shot down from their windows by the grog-inspired "Army of Order." It made the apotheosis of the sabre; now the sabre rules it. It destroyed the revolutionary press;—now its own press is annihilated. It placed public meetings under police surveillance;—now its own salons are subject to police inspection. It disbanded the democratic National Guards;—now its own National Guard is disbanded. It instituted the state of siege;—now itself is made subject thereto. It supplanted the jury by military commissions;—now military commissions supplant its own juries. It subjected the education of the people to the parsons' interests;—the parsons' interests now subject it to their own systems. It ordered transportations without trial;—now itself is transported without trial. It suppressed every movement of society with physical force;—now every movement of its own class is suppressed by physical force. Out of enthusiasm for the gold bag, it rebelled against its own political leaders and writers;—now, its political leaders and writers are set aside, but the gold hag is plundered, after the mouth of the bourgeoisie has been

gagged and its pen broken. The bourgeoisie tirelessly shouted to the revolution, in the language of St. Orsenius to the Christians: "Fuge, Tace, Quiesce!"—flee, be silent, submit!—; Bonaparte shouts to the bourgeoisie: "Fuge, Tace, Oniesce!"—flee, be silent, submit!

The French bourgeoisie had long since solved Napoleon's dilemma: "Dans cinquante ans l'Europe sera republicaine ou cosaque." [#1 Within fifty years Europe will be either republican or Cossack.] It found the solution in the "republique cosaque." [#2 Cossack republic.] No Circe distorted with wicked charms the work of art of the bourgeois republic into a monstrosity. That republic lost nothing but the appearance of decency. The France of to-day was ready-made within the womb of the Parliamentary republic. All that was wanted was a bayonet thrust, in order that the bubble burst, and the monster leap forth to sight.

Why did not the Parisian proletariat rise after the 2d of December?

The downfall of the bourgeoisie was as yet merely decreed; the decree was not yet executed. Any earnest uprising of the proletariat would have forthwith revived this bourgeoisie, would have brought on its reconciliation with the army, and would have insured a second June rout to the workingmen.

On December 4, the proletariat was incited to fight by Messrs. Bourgeois & Small-Trader. On the evening of that day, several legions of the National Guard promised to appear armed and uniformed on the place of battle. This arose from the circumstance that Messrs. Bourgeois & Small-Trader had got wind that, in one of his decrees of December 2, Bonaparte abolished the secret ballot, and ordered them to enter the words "Yes" and "No" after their names in the official register. Bonaparte took alarm at the stand taken on December 4. During the night he caused placards to be posted on all the street corners of Paris, announcing the restoration of the secret ballot. Messrs. Bourgeois & Small-Trader believed they had gained their point. The absentees, the next morning, were Messieurs. Bourgeois & Small-Trader.

During the night of December 1 and 2, the Parisian proletariat was robbed of its leaders and chiefs of barricades by a raid of Bonaparte's. An army without officers, disinclined by the recollections of June, 1848 and 1849, and May, 1850, to fight under the banner of the Montagnards, it left to its vanguard, the secret societies, the work of saving the insurrectionary

honor of Paris, which the bourgeoisie had yielded to the soldiery so submissively that Bonaparte was later justified in disarming the National Guard upon the scornful ground that he feared their arms would be used against themselves by the Anarchists!

"C'est le triomphe complet et définitif du Socialisme!" Thus did Guizot characterize the 2d of December. But, although the downfall of the parliamentary republic carries with it the germ of the triumph of the proletarian revolution, its immediate and tangible result was the triumph of Bonaparte over parliament, of the Executive over the Legislative power, of force without phrases over the force of phrases. In the parliament, the nation raised its collective will to the dignity of law, i.e., it raised the law of the ruling class to the dignity of its collective will. Before the Executive power, the nation abdicates all will of its own, and submits to the orders of an outsider of Authority. In contrast with the Legislative, the Executive power expresses the heteronomy of the nation in contrast with its autonomy. Accordingly, France seems to have escaped the despotism of a class only in order to fall under the despotism of an individual, under the authority, at that of an individual without authority. The struggle seems to settle down to the point where all classes drop down on their knees, equally impotent and equally dumb.

All the same, the revolution is thoroughgoing. It still is on its passage through purgatory. It does its work methodically: Down to December 2, 1851, it had fulfilled one-half of its programme, it now fulfils the other half. It first ripens the power of the Legislature into fullest maturity in order to be able to overthrow it. Now that it has accomplished that, the revolution proceeds to ripen the power of the Executive into equal maturity; it reduces this power to its purest expression; isolates it; places it before itself as the sole subject for reproof in order to concentrate against it all the revolutionary forces of destruction. When the revolution shall have accomplished this second part of its preliminary programme, Europe will jump up from her seat to exclaim: "Well hast thou grubbed, old mole!"

The Executive power, with its tremendous bureaucratic and military organization; with its wide-spreading and artificial machinery of government—an army of office-holders, half a million strong, together with a military force of another million men—; this fearful body of parasites, that coils itself like a snake around French society, stopping all its pores,

originated at the time of the absolute monarchy, along with the decline of feudalism, which it helped to hasten. The princely privileges of the landed proprietors and cities were transformed into so many at-tributes of the Executive power; the feudal dignitaries into paid office-holders; and the confusing design of conflicting medieval seignories, into the well regulated plan of a government, work is subdivided and centralized as in the factory. The first French revolution, having as a mission to sweep away all local, territorial, urban and provincial special privileges, with the object of establishing the civic unity of the nation, was hound to develop what the absolute monarchy had begun—the work of centralization, together with the range, the attributes and the menials of government. Napoleon completed this governmental machinery. The Legitimist and the July Monarchy contribute nothing thereto, except a greater subdivision of labor, that grew in the same measure as the division and subdivision of labor within bourgeois society raised new groups and interests, i.e., new material for the administration of government. Each Common interest was in turn forthwith removed from society, set up against it as a higher Collective interest, wrested from the individual activity of the members of society, and turned into a subject for governmental administration, from the bridges, the school house and the communal property of a village community, up to the railroads, the national wealth and the national University of France. Finally, the parliamentary republic found itself, in its struggle against the revolution, compelled, with its repressive measures, to strengthen the means and the centralization of the government. Each overturn, instead of breaking up, carried this machine to higher perfection. The parties, that alternately wrestled for supremacy, looked upon the possession of this tremendous governmental structure as the principal spoils of their victory.

Nevertheless, under the absolute monarchy, was only the means whereby the first revolution, and under Napoleon, to prepare the class rule of the bourgeoisie; under the restoration, under Louis Philippe, and under the parliamentary republic, it was the instrument of the ruling class, however eagerly this class strained after autocracy. Not before the advent of the second Bonaparte does the government seem to have made itself fully independent. The machinery of government has by this time so thoroughly fortified itself against society, that the chief of the "Society of December 10" is thought good enough to be at its head; a fortune-hunter, run in from abroad, is raised on its shield by a drunken soldiery, bought by himself with

liquor and sausages, and whom he is forced ever again to throw sops to. Hence the timid despair, the sense of crushing humiliation and degradation that oppresses the breast of France and makes her to choke. She feels dishonored.

And yet the French Government does not float in the air. Bonaparte represents an economic class, and that the most numerous in the commonweal of France—the Allotment Farmer. [#4 The first French Revolution distributed the bulk of the territory of France, held at the time by the feudal lords, in small patches among the cultivators of the soil. This allotment of lands created the French farmer class.]

As the Bourbons are the dynasty of large landed property, as the Orleans are the dynasty of money, so are the Bonapartes the dynasty of the farmer, i.e. of the French masses. Not the Bonaparte, who threw himself at the feet of the bourgeois parliament, but the Bonaparte, who swept away the bourgeois parliament, is the elect of this farmer class. For three years the cities had succeeded in falsifying the meaning of the election of December 10, and in cheating the farmer out of the restoration of the Empire. The election of December 10, 1848, is not carried out until the "coup d'etat" of December 2, 1851.

The allotment farmers are an immense mass, whose individual members live in identical conditions, without, however, entering into manifold relations with one another. Their method of production isolates them from one another, instead of drawing them into mutual intercourse. This isolation is promoted by the poor means of communication in France, together with the poverty of the farmers themselves. Their field of production, the small allotment of land that each cultivates, allows no room for a division of labor, and no opportunity for the application of science; in other words, it shuts out manifoldness of development, diversity of talent, and the luxury of social relations. Every single farmer family is almost self-sufficient; itself produces directly the greater part of what it consumes; and it earns its livelihood more by means of an interchange with nature than by intercourse with society. We have the allotted patch of land, the farmer and his family; alongside of that another allotted patch of land, another farmer and another family. A bunch of these makes up a village; a bunch of villages makes up a Department. Thus the large mass of the French nation is constituted by the simple addition of equal magnitudes—much as a bag with potatoes

constitutes a potato-bag. In so far as millions of families live under economic conditions that separate their mode of life, their interests and their culture from those of the other classes, and that place them in an attitude hostile toward the latter, they constitute a class; in so far as there exists only a local connection among these farmers, a connection which the individuality and exclusiveness of their interests prevent from generating among them any unity of interest, national connections, and political organization, they do not constitute a class. Consequently, they are unable to assert their class interests in their own name, be it by a parliament or by convention. They can not represent one another, they must themselves be represented. Their representative must at the same time appear as their master, as an authority over them, as an unlimited governmental power, that protects them from above, bestows rain and sunshine upon them. Accordingly, the political influence of the allotment farmer finds its ultimate expression in an Executive power that subjugates the commonweal to its own autocratic will.

Historic tradition has given birth to the superstition among the French farmers that a man named Napoleon would restore to them all manner of glory. Now, then, an individual turns I up, who gives himself out as that man because, obedient to the "Code Napoleon," which provides that "La recherche de la paternite est interdite," [#5 The inquiry into paternity is forbidden.] he carries the name of Napoleon. [#6 L. N. Bonaparte is said to have been an illegitimate son.] After a vagabondage of twenty years, and a series of grotesque adventures, the myth is verified, and that man becomes the Emperor of the French. The rooted thought of the Nephew becomes a reality because it coincided with the rooted thought of the most numerous class among the French.

"But," I shall be objected to, "what about the farmers' uprisings over half France, the raids of the Army upon the farmers, the wholesale imprisonment and transportation of farmers?"

Indeed, since Louis XIV., France has not experienced such persecutions of the farmer on the ground of his demagogic machinations.

But this should be well understood: The Bonaparte dynasty does not represent the revolutionary, it represents the conservative farmer; it does not represent the farmer, who presses beyond his own economic conditions, his little allotment of land it represents him rather who would confirm these

conditions; it does not represent the rural population, that, thanks to its own inherent energy, wishes, jointly with the cities to overthrow the old order, it represents, on the contrary, the rural population that, hide-bound in the old order, seeks to see itself, together with its allotments, saved and favored by the ghost of the Empire; it represents, not the intelligence, but the superstition of the farmer; not his judgment, but his bias; not his future, but his past; not his modern Cevennes; [#7 The Cevennes were the theater of the most numerous revolutionary uprisings of the farmer class.] but his modern Vendee. [#8 La Vendee was the theater of protracted reactionary uprisings of the farmer class under the first Revolution.]

The three years' severe rule of the parliamentary republic had freed a part of the French farmers from the Napoleonic illusion, and, though even only superficially; had revolutionized them. The bourgeoisie threw them, however, violently back every time that they set themselves in motion. Under the parliamentary republic, the modern wrestled with the traditional consciousness of the French farmer. The process went on in the form of a continuous struggle between the school teachers and the parsons;—the bourgeoisie knocked the school teachers down. For the first time, the farmer made an effort to take an independent stand in the government of the country; this manifested itself in the prolonged conflicts of the Mayors with the Prefects;—the bourgeoisie deposed the Mayors. Finally, during period of the parliamentary republic, the farmers of several localities rose against their own product, the Army;—the bourgeoisie punished them with states of siege and executions. And this is the identical bourgeoisie, that now howls over the "stupidity of the masses," over the "vile multitude," which, it claims, betrayed it to Bonaparte. Itself has violently fortified the imperialism of the farmer class; it firmly maintained the conditions that constitute the birth-place of this farmer-religion. Indeed, the bourgeoisie has every reason to fear the stupidity of the masses—so long as they remain conservative; and their intelligence—so soon as they become revolutionary.

In the revolts that took place after the "coup d'etat" a part of the French farmers protested, arms in hand, against their own vote of December 10, 1848. The school house had, since 1848, sharpened their wits. But they had bound themselves over to the nether world of history, and history kept them to their word. Moreover, the majority of this population was still so full of prejudices that, just in the "reddest" Departments, it voted openly for Bonaparte. The National Assembly prevented, as it thought, this population

from walking; the farmers now snapped the fetters which the cities had struck upon the will of the country districts. In some places they even indulged the grotesque hallucination of a "Convention together with a Napoleon."

After the first revolution had converted the serf farmers into freeholders, Napoleon fixed and regulated the conditions under which, unmolested, they could exploit the soil of France, that had just fallen into their hands, and expiate the youthful passion for property. But that which now bears the French farmer down is that very allotment of land, it is the partition of the soil, the form of ownership, which Napoleon had consolidated. These are the material condition that turned French feudal peasant into a small or allotment farmer, and Napoleon into an Emperor. Two generations have sufficed to produce the inevitable result the progressive deterioration of agriculture, and the progressive encumbering of the agriculturist. The "Napoleonic" form of ownership, which, at the beginning of the nineteenth century was the condition for the emancipation and enrichment of the French rural population, has, in the course of the century, developed into the law of their enslavement and pauperism. Now, then, this very law is the first of the "idees Napoleoniennes," which the second Bonaparte must uphold. If he still shares with the farmers the illusion of seeking, not in the system of the small allotment itself, but outside of that system, in the influence of secondary conditions, the cause of their ruin, his experiments are bound to burst like soap-bubbles against the modern system of production.

The economic development of the allotment system has turned bottom upward the relation of the farmer to the other classes of society. Under Napoleon, the parceling out of the agricultural lands into small allotments supplemented in the country the free competition and the incipient large production of the cities. The farmer class was the ubiquitous protest against the aristocracy of land, just then overthrown. The roots that the system of small allotments cast into the soil of France, deprived feudalism of all nutriment. Its boundary-posts constituted the natural buttress of the bourgeoisie against every stroke of the old overlords. But in the course of the nineteenth century, the City Usurer stepped into the shoes of the Feudal Lord, the Mortgage substituted the Feudal Duties formerly yielded by the soil, bourgeois Capital took the place of the aristocracy of Landed Property. The former allotments are now only a pretext that allows the capitalist class to draw profit, interest and rent from agricultural lands, and to leave to the

farmer himself the task of seeing to it that he knock out his wages. The mortgage indebtedness that burdens the soil of France imposes upon the French farmer class the payment of an interest as great as the annual interest on the whole British national debt. In this slavery of capital, whither its development drives it irresistibly, the allotment system has transformed the mass of the French nation into troglodytes. Sixteen million farmers (women and children included), house in hovels most of which have only one opening, some two, and the few most favored ones three. Windows are to a house what the five senses are to the head. The bourgeois social order, which, at the beginning of the century, placed the State as a sentinel before the newly instituted allotment, and that manured this with laurels, has become a vampire that sucks out its heart-blood and its very brain, and throws it into the alchemist's pot of capital. The "Code Napoleon" is now but the codex of execution, of sheriff's sales and of intensified taxation. To the four million (children, etc., included) official paupers, vagabonds, criminals and prostitutes, that France numbers, must be added five million souls who hover over the precipice of life, and either sojourn in the country itself, or float with their rags and their children from the country to the cities, and from the cities back to the country. Accordingly, the interests of the farmers are no longer, as under Napoleon, in harmony but in conflict with the interests of the bourgeoisie, i.e., with capital; they find their natural allies and leaders among the urban proletariat, whose mission is the overthrow of the bourgeois social order. But the "strong and unlimited government"—and this is the second of the "idees Napoleoniennes," which the second Napoleon has to carried out—, has for its mission the forcible defence of this very "material" social order, a "material order" that furnishes the slogan in Bonaparte's proclamations against the farmers in revolt.

Along with the mortgage, imposed by capital upon the farmer's allotment, this is burdened by taxation. Taxation is the fountain of life to the bureaucracy, the Army, the parsons and the court, in short to the whole apparatus of the Executive power. A strong government, and heavy taxes are identical. The system of ownership, involved in the system of allotments lends itself by nature for the groundwork of a powerful and numerous bureaucracy: it produces an even level of conditions and of persons over the whole surface of the country; it, therefore, allows the exercise of an even influence upon all parts of this even mass from a high central point downwards: it annihilates the aristocratic gradations between the popular

masses and the Government; it, consequently, calls from all sides for the direct intervention of the Government and for the intervention of the latter's immediate organs; and, finally, it produces an unemployed excess of population, that finds no room either in the country or in the cities, that, consequently, snatches after public office as a sort of dignified alms, and provokes the creation of further offices. With the new markets, which he opened at the point of the bayonet, and with the plunder of the continent, Napoleon returned to the farmer class with interest the taxes wrung from them. These taxes were then a goad to the industry of the farmer, while now, on the contrary, they rob his industry of its last source of support, and completely sap his power to resist poverty. Indeed, an enormous bureaucracy, richly gallooned and well fed is that "idee Napoleonienne" that above all others suits the requirements of the second Bonaparte. How else should it be, seeing he is forced to raise alongside of the actual classes of society, an artificial class, to which the maintenance of his own regime must be a knife-and-fork question? One of his first financial operations was, accordingly, the raising of the salaries of the government employees to their former standard and the creation of new sinecures.

Another "idee Napoleonienne" is the rule of the parsons as an instrument of government. But while the new-born allotment, in harmony with society, in its dependence upon the powers of nature, and in its subordination to the authority that protected it from above, was naturally religious, the debt-broken allotment, on the contrary, at odds with society and authority, and driven beyond its own narrow bounds, becomes as naturally irreligious. Heaven was quite a pretty gift thrown in with the narrow strip of land that had just been won, all the more as it makes the weather; it, however, becomes an insult from the moment it is forced upon the farmer as a substitute for his allotment. Then the parson appears merely as the anointed blood-hound of the earthly police,—yet another "idee Napoleonienne." The expedition against Rome will next time take place in France, but in a reverse sense from that of M. de Montalembert.

Finally, the culminating point of the "idees Napoleoniennes" is the preponderance of the Army. The Army was the "point of honor" with the allotment farmers: it was themselves turned into masters, defending abroad their newly established property, glorifying their recently conquered nationality, plundering and revolutionizing the world. The uniform was their State costume; war was their poetry; the allotment, expanded and

rounded up in their phantasy, was the fatherland; and patriotism became the ideal form of property. But the foe, against whom the French farmer must now defend his property, are not the Cossacks, they are the sheriffs and the tax collectors. The allotment no longer lies in the so-called fatherland, but in the register of mortgages. The Army itself no longer is the flower of the youth of the farmers, it is the swamp-blossom of the slum-proletariat of the farmer class. It consists of "remplacants," substitutes, just as the second Bonaparte himself is but a "remplacant," a substitute, for Napoleon. Its feats of heroism are now performed in raids instituted against farmers and in the service of the police;—and when the internal contradictions of his own system shall drive the chief of the "Society of December 10" across the French frontier, that Army will, after a few bandit-raids, gather no laurels but only hard knocks.

It is evident that all the "idees Napoleoniennes" are the ideas of the undeveloped and youthfully fresh allotment; they are an absurdity for the allotment that now survives. They are only the hallucinations of its death struggle; words turned to hollow phrases, spirits turned to spooks. But this parody of the Empire was requisite in order to free the mass of the French nation from the weight of tradition, and to elaborate sharply the contrast between Government and Society. Along with the progressive decay of the allotment, the governmental structure, reared upon it, breaks down. The centralization of Government, required by modern society, rises only upon the ruins of the military and bureaucratic governmental machinery that was forged in contrast to feudalism.

The conditions of the French farmers' class solve to us the riddle of the general elections of December 20 and 21, that led the second Bonaparte to the top of Sinai, not to receive, but to decree laws.

The bourgeoisie had now, manifestly, no choice but to elect Bonaparte. When at the Council of Constance, the puritans complained of the sinful life of the Popes, and moaned about the need of a reform in morals, Cardinal d'Ailly thundered into their faces: "Only the devil in his Own person can now save the Catholic Church, and you demand angels." So, likewise, did the French bourgeoisie cry out after the "coup d'etat": "Only the chief of the 'Society of December 10' can now save bourgeois society, only theft can save property, only perjury religion, only bastardy the family, only disorder order!"

Bonaparte, as autocratic Executive power, fulfills his mission to secure "bourgeois order." But the strength of this bourgeois order lies in the middle class. He feels himself the representative of the middle class, and issues his decrees in that sense. Nevertheless, he is something only because he has broken the political power of this class, and daily breaks it anew. Hence he feels himself the adversary of the political and the literary power of the middle class. But, by protecting their material, he nourishes anew their political power. Consequently, the cause must be kept alive, but the result, wherever it manifests itself, swept out of existence. But this procedure is impossible without slight mistakings of causes and effects, seeing that both, in their mutual action and reaction, lose their distinctive marks. Thereupon, new decrees, that blur the line of distinction. Bonaparte, furthermore, feels himself, as against the bourgeoisie, the representative of the farmer and the people in general, who, within bourgeois society, is to render the lower classes of society happy. To this end, new decrees, intended to exploit the "true Socialists," together with their governmental wisdom. But, above all, Bonaparte feels himself the chief of the "Society of December 10," the representative of the slum-proletariat, to which he himself, his immediate surroundings, his Government, and his army alike belong, the main object with all of whom is to be good to themselves, and draw Californian tickets out of the national treasury. An he affirms his chieftainship of the "Society of December 10" with decrees, without decrees, and despite decrees.

This contradictory mission of the man explains the contradictions of his own Government, and that confused groping about, that now seeks to win, then to humiliate now this class and then that, and finishes by arraying against itself all the classes; whose actual insecurity constitutes a highly comical contrast with the imperious, categoric style of the Government acts, copied closely from the Uncle.

Industry and commerce, i.e., the business of the middle class, are to be made to blossom in hot-house style under the "strong Government." Loans for a number of railroad grants. But the Bonapartist slum-proletariat is to enrich itself. Peculation is carried on with railroad concessions on the Bourse by the initiated; but no capital is forthcoming for the railroads. The bank then pledges itself to make advances upon railroad stock; but the bank is itself to be exploited; hence, it must be cajoled; it is released of the obligation to publish its reports weekly. Then follows a leonine treaty between the bank and the Government. The people are to be occupied:

public works are ordered; but the public works raise the tax rates upon the people; thereupon the taxes are reduced by an attack upon the national bond-holders through the conversion of the five per cent "rentes" [#9 The name of the French national bonds.] into four-and-halves. Yet the middle class must again be tipped: to this end, the tax on wine is doubled for the people, who buy it at retail, and is reduced to one-half for the middle class, that drink it at wholesale. Genuine labor organizations are dissolved, but promises are made of future wonders to accrue from organization. The farmers are to be helped: mortgage-banks are set up that must promote the indebtedness; of the farmer and the concentration of property but again, these banks are to be utilized especially to the end of squeezing money out of the confiscated estates of the House of Orleans; no capitalist will listen to this scheme, which, moreover, is not mentioned in the decree; the mortgage bank remains a mere decree, etc., etc.

Bonaparte would like to appear as the patriarchal benefactor of all classes; but he can give to none without taking from the others. As was said of the Duke of Guise, at the time of the Fronde, that he was the most obliging man in France because he had converted all his estates into bonds upon himself for his Parisians, so would Napoleon like to be the most obliging man in France and convert all property and all labor of France into a personal bond upon himself. He would like to steal the whole of France to make a present thereof to France, or rather to be able to purchase France back again with French money;—as chief of the "Society of December 10," he must purchase that which is to be his. All the State institutions, the Senate, the Council of State, the Legislature, the Legion of Honor, the Soldiers' decorations, the public baths, the public buildings, the railroads, the General Staff of the National Guard, exclusive of the rank and file, the confiscated estates of the House of Orleans,—all are converted into institutions for purchase and sale. Every place in the Army and the machinery of Government becomes a purchasing power. The most important thing, however, in this process, whereby France is taken to be given back to herself, are the percentages that, in the transfer, drop into the hands of the chief and the members of the "Society of December 10." The witticisms with which the Countess of L., the mistress of de Morny, characterized the confiscations of the Orleanist estates: "C'est le premier vol de l'aigle," [#10 "It is the first flight of the eagle" The French word "vol" means theft as well as flight.] fits every flight of the eagle that is rather a

crow. He himself and his followers daily call out to themselves, like the Italian Carthusian monk in the legend does to the miser, who displayfully counted the goods on which he could live for many years to come: "Tu fai conto sopra i beni, bisogna prima far il conto sopra gli anni." [#11 "You count your property you should rather count the years left to you."] In order not to make a mistake in the years, they count by minutes. A crowd of fellows, of the best among whom all that can be said is that one knows not whence he comes—a noisy, restless "Boheme," greedy after plunder, that crawls about in gallooned frocks with the same grotesque dignity as Soulonque's [#12 Soulonque was the negro Emperor of the short-lived negro Empire of Hayti.] Imperial dignitaries—, thronged the court crowded the ministries, and pressed upon the head of the Government and of the Army. One can picture to himself this upper crust of the "Society of December 10" by considering that Veron Crevel [#13 Crevel is a character of Balzac, drawn after Dr. Veron, the proprietor of the "Constitutional" newspaper, as a type of the dissolute Parisian Philistine.] is their preacher of morality, and Granier de Cassagnac their thinker. When Guizot, at the time he was Minister, employed this Granier on an obscure sheet against the dynastic opposition, he used to praise him with the term: "C'est le roi des droles." [#14 "He Is the king of the clowns."] It were a mistake to recall the days of the Regency or of Louis XV. by the court and the kit of Louis Bonaparte's: "Often did France have a mistress-administration, but never yet an administration of kept men." [#15 Madame de Girardin.]

Harassed by the contradictory demands of his situation, and compelled, like a sleight-of-hands performer, to keep, by means of constant surprises, the eyes of the public riveted upon himself as the substitute of Napoleon, compelled, consequently, everyday to accomplish a sort of "coup" on a small scale, Bonaparte throws the whole bourgeois social system into disorder; he broaches everything that seemed unbroachable by the revolution of 1848; he makes one set people patient under the revolution and another anxious for it; he produces anarchy itself in the name of order by rubbing off from the whole machinery of Government the veneer of sanctity, by profaning it, by rendering it at once nauseating and laughable. He rehearses in Paris the cult of the sacred coat of Trier with the cult of the Napoleonic Imperial mantle. But when the Imperial Mantle shall have finally fallen upon the shoulders of Louis Bonaparte, then will also the iron statue of Napoleon drop down from the top of the Vendome column. [#16 A

prophecy that a few years later, after Bonaparte's coronation as Emperor, was literally fulfilled. By order of Emperor Louis Napoleon, the military statue of the Napoleon that originally surmounted the Vendome was taken down and replaced by one of first Napoleon in imperial robes.]

1.A. By reading or using any part of this Project Gutenberg-tm electronic work, you indicate that you have read, understand, agree to and accept all the terms of this license and intellectual property (trademark/copyright) agreement. If you do not agree to abide by all the terms of this agreement, you must cease using and return or destroy all copies of Project Gutenberg-tm electronic works in your possession. If you paid a fee for obtaining a copy of or access to a Project

Gutenberg-tm electronic work and you do not agree to be bound by the terms of this agreement, you may obtain a refund from the person or entity to whom you paid the fee as set forth in paragraph 1.E.8.

1.B. "Project Gutenberg" is a registered trademark. It may only be used on or associated in any way with an electronic work by people who agree to be bound by the terms of this agreement. There are a few things that you can do with most Project Gutenberg-tm electronic works even without complying with the full terms of this agreement. See paragraph 1.C below. There are a lot of things you can do with Project Gutenberg-tm electronic works if you follow the terms of this agreement and help preserve free future access to Project Gutenberg-tm electronic works. See paragraph 1.E below.

1.C. The Project Gutenberg Literary Archive Foundation ("the Foundation" or PGLAF), owns a compilation copyright in the collection of Project Gutenberg-tm electronic works. Nearly all the individual works in the collection are in the public domain in the United States. If an individual work is in the public domain in the United States and you are located in the United States, we do not claim a right to prevent you from copying, distributing, performing, displaying or creating derivative works based on the work as long as all references to Project Gutenberg are removed. Of course, we hope that you will support the Project Gutenberg-tm mission of promoting free access to electronic works by freely sharing Project Gutenberg-tm works in compliance with the terms of this agreement for keeping the Project Gutenberg-tm name associated with the work. You can easily comply with the terms of this agreement by keeping this work in the same format with its attached full Project Gutenberg-tm License when you share it without charge with others.

1.D. The copyright laws of the place where you are located also govern what you can do with this work. Copyright laws in most countries are in a constant state of change. If you are outside the United States, check the laws of your country in addition to the terms of this agreement before downloading, copying, displaying, performing, distributing or creating derivative works based on this work or any other Project Gutenberg-tm work. The Foundation makes no representations concerning the copyright status of any work in any country outside the United States.

1.E. Unless you have removed all references to Project Gutenberg:

1.E.1. The following sentence, with active links to, or other immediate access to, the full Project Gutenberg-tm License must appear prominently whenever any copy of a Project Gutenberg-tm work (any work on which the phrase "Project Gutenberg" appears, or with which the phrase "Project Gutenberg" is associated) is accessed, displayed, performed, viewed, copied or distributed:

This eBook is for the use of anyone anywhere at no cost and with almost no restrictions whatsoever. You may copy it, give it away or re-use it under the terms of the Project Gutenberg License included with this eBook or online at [www.gutenberg.org](http://www.gutenberg.org)

1.E.2. If an individual Project Gutenberg-tm electronic work is derived from the public domain (does not contain a notice indicating that it is posted with permission of the copyright holder), the work can be copied and distributed to anyone in the United States without paying any fees or charges. If you are redistributing or providing access to a work with the phrase "Project Gutenberg" associated with or appearing on the work, you must comply either with the requirements of paragraphs 1.E.1

through 1.E.7 or obtain permission for the use of the work and the Project Gutenberg-tm trademark as set forth in paragraphs 1.E.8 or 1.E.9.

1.E.3. If an individual Project Gutenberg-tm electronic work is posted with the permission of the copyright holder, your use and distribution must comply with both paragraphs 1.E.1 through 1.E.7 and any additional terms imposed by the copyright holder. Additional terms will be linked to the Project Gutenberg-tm License for all works posted with the permission of the copyright holder found at the beginning of this work.

1.E.4. Do not unlink or detach or remove the full Project Gutenberg-tm License terms from this work, or any files containing a part of this work or any other work associated with Project Gutenberg-tm.

1.E.5. Do not copy, display, perform, distribute or redistribute this electronic work, or any part of this electronic work, without prominently displaying the sentence set forth in paragraph 1.E.1 with active links or immediate access to the full terms of the Project Gutenberg-tm License.

1.E.6. You may convert to and distribute this work in any binary, compressed, marked up, nonproprietary or proprietary form, including any word processing or hypertext form. However, if you provide access to or distribute copies of a Project Gutenberg-tm work in a format other than "Plain Vanilla ASCII" or other format used in the official version posted on the official Project Gutenberg-tm web site ([www.gutenberg.org](http://www.gutenberg.org)), you must, at no additional cost, fee or expense to the user, provide a copy, a means of exporting a copy, or a means of obtaining a copy upon request, of the work in its original "Plain Vanilla ASCII" or other form. Any alternate format must include the full Project Gutenberg-tm License as specified in paragraph 1.E.1.

1.E.7. Do not charge a fee for access to, viewing, displaying, performing, copying or distributing any Project Gutenberg-tm works unless you comply with paragraph 1.E.8 or 1.E.9.

1.E.8. You may charge a reasonable fee for copies of or providing access to or distributing Project Gutenberg-tm electronic works provided that

- You pay a royalty fee of 20% of the gross profits you derive from the use of Project Gutenberg-tm works calculated using the method you already use to calculate your applicable taxes. The fee is owed to the owner of the Project Gutenberg-tm trademark, but he has agreed to donate royalties under this paragraph to the Project Gutenberg Literary Archive Foundation. Royalty payments must be paid within 60 days following each date on which you prepare (or are legally required to prepare) your periodic tax returns. Royalty payments should be clearly marked as such and sent to the Project Gutenberg Literary Archive Foundation at the address specified in Section 4, "Information about donations to the Project Gutenberg Literary Archive Foundation."
- You provide a full refund of any money paid by a user who notifies you in writing (or by e-mail) within 30 days of receipt that s/he does not agree to the terms of the full Project Gutenberg-tm License. You must require such a user to return or destroy all copies of the works possessed in a physical medium and discontinue all use of and all access to other copies of Project Gutenberg-tm works.

- You provide, in accordance with paragraph 1.F.3, a full refund of any money paid for a work or a replacement copy, if a defect in the electronic work is discovered and reported to you within 90 days of receipt of the work.
- You comply with all other terms of this agreement for free distribution of Project Gutenberg-tm works.

1.E.9. If you wish to charge a fee or distribute a Project Gutenberg-tm electronic work or group of works on different terms than are set forth in this agreement, you must obtain permission in writing from both the Project Gutenberg Literary Archive Foundation and Michael Hart, the owner of the Project Gutenberg-tm trademark. Contact the Foundation as set forth in Section 3 below.

#### 1.F.

1.F.1. Project Gutenberg volunteers and employees expend considerable effort to identify, do copyright research on, transcribe and proofread public domain works in creating the Project Gutenberg-tm collection. Despite these efforts, Project Gutenberg-tm electronic works, and the medium on which they may be stored, may contain "Defects," such as, but not limited to, incomplete, inaccurate or corrupt data, transcription errors, a copyright or other intellectual property infringement, a defective or damaged disk or other medium, a computer virus, or computer codes that damage or cannot be read by your equipment.

1.F.2. LIMITED WARRANTY, DISCLAIMER OF DAMAGES - Except for the "Right of Replacement or Refund" described in paragraph 1.F.3, the Project Gutenberg Literary Archive Foundation, the owner of the Project Gutenberg-tm trademark, and any other party distributing a Project Gutenberg-tm electronic work under this agreement, disclaim all liability to you for damages, costs and expenses, including legal fees. YOU AGREE THAT YOU HAVE NO REMEDIES FOR NEGLIGENCE, STRICT LIABILITY, BREACH OF WARRANTY OR BREACH OF CONTRACT EXCEPT THOSE PROVIDED IN PARAGRAPH F3. YOU AGREE THAT THE FOUNDATION, THE TRADEMARK OWNER, AND ANY DISTRIBUTOR UNDER THIS AGREEMENT WILL NOT BE LIABLE TO YOU FOR ACTUAL, DIRECT, INDIRECT, CONSEQUENTIAL, PUNITIVE OR INCIDENTAL DAMAGES EVEN IF YOU GIVE NOTICE OF THE POSSIBILITY OF SUCH DAMAGE.

1.F.3. LIMITED RIGHT OF REPLACEMENT OR REFUND - If you discover a defect in this electronic work within 90 days of receiving it, you can receive a refund of the money (if any) you paid for it by sending a written explanation to the person you received the work from. If you received the work on a physical medium, you must return the medium with your written explanation. The person or entity that provided you with the defective work may elect to provide a replacement copy in lieu of a refund. If you received the work electronically, the person or entity providing it to you may choose to give you a second opportunity to receive the work electronically in lieu of a refund. If the second copy is also defective, you may demand a refund in writing without further opportunities to fix the problem.

1.F.4. Except for the limited right of replacement or refund set forth in paragraph 1.F.3, this work is provided to you 'AS-IS' WITH NO OTHER WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE.

1.F.5. Some states do not allow disclaimers of certain implied warranties or the exclusion or limitation of certain types of damages. If any disclaimer or limitation set forth in this agreement violates the law of the state applicable to this agreement, the agreement shall be interpreted to make the maximum disclaimer or limitation permitted by the applicable state law. The invalidity or unenforceability of any provision of this agreement shall not void the remaining provisions.

1.F.6. INDEMNITY - You agree to indemnify and hold the Foundation, the trademark owner, any agent or employee of the Foundation, anyone providing copies of Project Gutenberg-tm electronic works in accordance with this agreement, and any volunteers associated with the production, promotion and distribution of Project Gutenberg-tm electronic works, harmless from all liability, costs and expenses, including legal fees, that arise directly or indirectly from any of the following which you do or cause to occur: (a) distribution of this or any Project Gutenberg-tm work, (b) alteration, modification, or additions or deletions to any Project Gutenberg-tm work, and (c) any Defect you cause.

## Section 2. Information about the Mission of Project Gutenberg-tm

Project Gutenberg-tm is synonymous with the free distribution of electronic works in formats readable by the widest variety of computers including obsolete, old, middle-aged and new computers. It exists because of the efforts of hundreds of volunteers and donations from people in all walks of life.

Volunteers and financial support to provide volunteers with the assistance they need, is critical to reaching Project Gutenberg-tm's goals and ensuring that the Project Gutenberg-tm collection will remain freely available for generations to come. In 2001, the Project Gutenberg Literary Archive Foundation was created to provide a secure and permanent future for Project Gutenberg-tm and future generations. To learn more about the Project Gutenberg Literary Archive Foundation and how your efforts and donations can help, see Sections 3 and 4 and the Foundation web page at <http://www.pglaf.org>.

## Section 3. Information about the Project Gutenberg Literary Archive Foundation

The Project Gutenberg Literary Archive Foundation is a non profit 501(c)(3) educational corporation organized under the laws of the state of Mississippi and granted tax exempt status by the Internal Revenue Service. The Foundation's EIN or federal tax identification number is 64-6221541. Its 501(c)(3) letter is posted at <http://pglaf.org/fundraising>. Contributions to the Project Gutenberg Literary Archive Foundation are tax deductible to the full extent permitted by U.S. federal laws and your state's laws.

The Foundation's principal office is located at 4557 Melan Dr. S. Fairbanks, AK, 99712., but its volunteers and employees are scattered throughout numerous locations. Its business office is located at 809 North 1500 West, Salt Lake City, UT 84116, (801) 596-1887, email [business@pglaf.org](mailto:business@pglaf.org). Email contact links and up to date contact information can be found at the Foundation's web site and official page at <http://pglaf.org>

For additional contact information:

Dr. Gregory B. Newby

Chief Executive and Director  
gbnewby@pglaf.org

#### Section 4. Information about Donations to the Project Gutenberg Literary Archive Foundation

Project Gutenberg-tm depends upon and cannot survive without wide spread public support and donations to carry out its mission of increasing the number of public domain and licensed works that can be freely distributed in machine readable form accessible by the widest array of equipment including outdated equipment. Many small donations (\$1 to \$5,000) are particularly important to maintaining tax exempt status with the IRS.

The Foundation is committed to complying with the laws regulating charities and charitable donations in all 50 states of the United States. Compliance requirements are not uniform and it takes a considerable effort, much paperwork and many fees to meet and keep up with these requirements. We do not solicit donations in locations where we have not received written confirmation of compliance. To SEND DONATIONS or determine the status of compliance for any particular state visit <http://pglaf.org>

While we cannot and do not solicit contributions from states where we have not met the solicitation requirements, we know of no prohibition against accepting unsolicited donations from donors in such states who approach us with offers to donate.

International donations are gratefully accepted, but we cannot make any statements concerning tax treatment of donations received from outside the United States. U.S. laws alone swamp our small staff.

Please check the Project Gutenberg Web pages for current donation methods and addresses. Donations are accepted in a number of other ways including checks, online payments and credit card donations. To donate, please visit: <http://pglaf.org/donate>

#### Section 5. General Information About Project Gutenberg-tm electronic works.

Professor Michael S. Hart is the originator of the Project Gutenberg-tm concept of a library of electronic works that could be freely shared with anyone. For thirty years, he produced and distributed Project Gutenberg-tm eBooks with only a loose network of volunteer support.

Project Gutenberg-tm eBooks are often created from several printed editions, all of which are confirmed as Public Domain in the U.S. unless a copyright notice is included. Thus, we do not necessarily keep eBooks in compliance with any particular paper edition.

Most people start at our Web site which has the main PG search facility:

<http://www.gutenberg.org>

This Web site includes information about Project Gutenberg-tm, including how to make donations to the Project Gutenberg Literary Archive Foundation, how to help produce our new eBooks, and how to

subscribe to our email newsletter to hear about new eBooks.

## Works of Karl Marx 1844

# On The Jewish Question

---

**Written:** Autumn 1843;

**First Published:** February, 1844 in *Deutsch-Französische Jahrbücher*;

**Proofed and Corrected:** by Andy Blunden, Matthew Grant and Matthew Carmody, 2008/9.

See [Citizen](#) in the Encyclopedia of Marxism, for an explanation of the various words for “citizen.”

---

## I

**Bruno Bauer,**  
*The Jewish Question,*  
**Braunschweig, 1843**

The German Jews desire emancipation. What kind of emancipation do they desire? *Civic, political* emancipation.

Bruno Bauer replies to them: No one in Germany is politically emancipated. We ourselves are not free. How are we to free you? You Jews are *egoists* if you demand a special emancipation for yourselves as Jews. As Germans, you ought to work for the political emancipation of Germany, and as human beings, for the emancipation of mankind, and you should feel the particular kind of your oppression and your shame not as an exception to the rule, but on the contrary as a confirmation of the rule.

Or do the Jews demand the same status as *Christian subjects of the state*? In that case, they recognize that the *Christian state* is justified and they recognize, too, the regime of general oppression. Why should they disapprove of their special yoke if they approve of the general yoke? Why should the German be interested in the liberation of the Jew, if the Jew is not interested in the liberation of the German?

The *Christian state* knows only *privileges*. In this state, the Jew has the privilege of being a Jew. As a Jew, he has rights which the Christians do not have. Why should he want rights which he does not have, but which the Christians enjoy?

In wanting to be emancipated from the Christian state, the Jew is demanding that the Christian state should give up its *religious* prejudice. Does he, the Jew, give up *his* religious prejudice? Has he, then, the right to demand that someone else should renounce his religion?

*By its very nature*, the Christian state is incapable of emancipating the Jew; but, adds Bauer, by his very nature the Jew cannot be emancipated. So long as the state is Christian and the Jew is Jewish, the one is as incapable of granting emancipation as the other is of receiving it.

The Christian state can behave towards the Jew only in the way characteristic of the Christian state – that is, by granting privileges, by permitting the separation of the Jew from the other subjects, but making him feel the pressure of all the other separate spheres of society, and feel it all the more intensely because he is in *religious* opposition to the dominant religion. But the Jew, too, can behave towards the state only in a Jewish way – that is, by treating it as something alien to him, by counterposing his imaginary nationality to the real nationality, by counterposing his illusory law to the real law, by deeming himself justified in separating himself from mankind, by abstaining on principle from taking part in the historical movement, by putting his trust in a future which has nothing in common with the future of mankind in general, and by seeing himself as a member of the Jewish people, and the Jewish people as the chosen people.

On what grounds, then, do you Jews want emancipation? On account of your religion? It is the mortal enemy of the state religion. As citizens? In Germany, there are no citizens. As human beings? But you are no more human beings than those to whom you appeal.

Bauer has posed the question of Jewish emancipation in a new form, after giving a critical analysis of the previous formulations and solutions of the question. What, he asks, is the *nature* of the Jew who is to be emancipated and of the Christian state that is to emancipate him? He replies by a critique of the Jewish religion, he analyzes the *religious* opposition between Judaism and Christianity, he elucidates the essence of the Christian state – and he does all this audaciously, trenchantly, wittily, and with profundity, in a style of writing that is as precise as it is pithy and vigorous.

How, then, does Bauer solve the Jewish question? What is the result? The formulation of a question is its solution. The critique of the Jewish question is the answer to the Jewish question. The summary, therefore, is as follows:

We must emancipate ourselves before we can emancipate others.

The most rigid form of the opposition between the Jew and the Christian is the *religious* opposition. How is an opposition resolved? By making it impossible. How is *religious* opposition made impossible? By *abolishing religion*. As soon as Jew and Christian recognize that their respective religions are no more than *different stages in the development of the human mind*, different snake skins cast off by *history*, and that man is the snake who sloughed them, the relation of Jew and Christian is no longer religious

but is only a critical, *scientific*, and human relation. *Science*, then, constitutes their unity. But, contradictions in science are resolved by science itself.

The *German Jew*, in particular, is confronted by the general absence of political emancipation and the strongly marked Christian character of the state. In Bauer's conception, however, the Jewish question has a universal significance, independent of specifically German conditions. It is the question of the relation of religion to the state, of the *contradiction between religious constraint and political emancipation*. Emancipation from religion is laid down as a condition, both to the Jew who wants to be emancipated politically, and to the state which is to effect emancipation and is itself to be emancipated.

“Very well,” it is said, and the Jew himself says it, “the Jew is to become emancipated not as a Jew, not because he is a Jew, not because he possesses such an excellent, universally human principle of morality; on the contrary, the *Jew* will retreat behind the *citizen* and be a *citizen*, although he is a Jew and is to remain a Jew. That is to say, he is and remains a *Jew*, although he is a *citizen* and lives in universally human conditions: his Jewish and restricted nature triumphs always in the end over his human and political obligations. The *prejudice* remains in spite of being outstripped by *general* principles. But if it remains, then, on the contrary, it outstrips everything else.”

“Only sophisticatedly, only apparently, would the Jew be able to remain a Jew in the life of the state. Hence, if he wanted to remain a Jew, the mere appearance would become the essential and would triumph; that is to say, his *life in the state* would be only a semblance or only a temporary exception to the essential and the rule.” (“The Capacity of Present-Day Jews and Christians to Become Free,” *Einundzwanzig Bogen*, pp. 57)

Let us hear, on the other hand, how Bauer presents the task of the state.

“France,” he says, “has recently shown us” (Proceedings of the Chamber of Deputies, December 26, 1840) “in the connection with the Jewish question – just as it has continually done in all other *political* questions – the spectacle of a life which is free, but which revokes its freedom by law, hence declaring it to be an appearance, and on the other hand contradicting its free laws by its action.” (*The Jewish Question*, p. 64)

“In France, universal freedom is not yet the law, the Jewish question too has *not* yet been solved, because legal freedom – the fact that all citizens are equal – is restricted in actual life, which is still dominated and divided by religious privileges, and this lack of freedom in actual life reacts on law and compels the latter to sanction the division of the citizens, who as such are free, into oppressed and oppressors.” (p. 65)

When, therefore, would the Jewish question be solved for France?

“The Jew, for example, would have ceased to be a Jew if he did not allow himself to be prevented by his laws from fulfilling his duty to the state and his fellow citizens, that is, for example, if on the Sabbath he attended the Chamber of Deputies and took

part in the official proceedings. Every *religious privilege*, and therefore also the monopoly of a privileged church, would have been abolished altogether, and if some or many persons, or even the overwhelming majority, still believed themselves bound to fulfil religious duties, this fulfilment ought to be left to them as a purely private matter.” (p. 65)

“There is no longer any religion when there is no longer any privileged religion. Take from religion its exclusive power and it will no longer exist.” (p. 66)

“Just as M. Martin du Nord saw the proposal to omit mention of Sunday in the law as a motion to declare that Christianity has ceased to exist, with equal reason (and this reason is very well founded) the declaration that the law of the Sabbath is no longer binding on the Jew would be a proclamation abolishing Judaism.” (p. 71)

Bauer, therefore, demands, on the one hand, that the Jew should renounce Judaism, and that mankind in general should renounce religion, in order to achieve *civic* emancipation. On the other hand, he quite consistently regards the *political* abolition of religion as the abolition of religion as such. The state which presupposes religion is not yet a true, real state.

“Of course, the religious notion affords security to the state. But to what state? To what kind of state?” (p. 97)

At this point, the *one-sided* formulation of the Jewish question becomes evident.

It was by no means sufficient to investigate: Who is to emancipate? Who is to be emancipated? Criticism had to investigate a third point. It had to inquire: *What kind of emancipation* is in question? What conditions follow from the very nature of the emancipation that is demanded? Only the criticism of *political emancipation* itself would have been the conclusive criticism of the Jewish question and its real merging in the “*general question of time*.”

Because Bauer does not raise the question to this level, he becomes entangled in contradictions. He puts forward conditions which are not based on the nature of *political* emancipation itself. He raises questions which are not part of his problem, and he solves problems which leave this question unanswered. When Bauer says of the opponents of Jewish emancipation: “Their error was only that they assumed the Christian state to be the only true one and did not subject it to the same criticism that they applied to Judaism” (op. cit., p. 3), we find that his error lies in the fact that he subjects to criticism *only* the “Christian state,” not the “state as such,” that he does not investigate *the relation of political emancipation to human emancipation* and, therefore, puts forward conditions which can be explained only by uncritical confusion of political emancipation with general human emancipation. If Bauer asks the Jews: Have you, from your standpoint, the right to want *political emancipation*? We ask the converse question: Does the standpoint of *political* emancipation give the right to demand from the Jew the abolition of Judaism and from man the abolition of religion?

The Jewish question acquires a different form depending on the state in which the Jew lives. In Germany, where there is no political state, no state as such, the Jewish question is a purely *theological* one. The Jew finds himself in *religious* opposition to the state, which recognizes Christianity as its basis. This state is a theologian *ex professo*. Criticism here is criticism of theology, a double-edged criticism – criticism of Christian theology and of Jewish theology. Hence, we continue to operate in the sphere of theology, however much we may operate *critically* within it.

In France, a *constitutional* state, the Jewish question is a question of constitutionalism, the question of the *incompleteness of political emancipation*. Since the *semblance* of a state religion is retained here, although in a meaningless and self-contradictory formula, that of a *religion of the majority*, the relation of the Jew to the state retains the *semblance* of a religious, theological opposition.

Only in the North American states – at least, in some of them – does the Jewish question lose its *theological* significance and become a really *secular* question. Only where the political state exists in its completely developed form can the relation of the Jew, and of the religious man in general, to the political state, and therefore the relation of religion to the state, show itself in its specific character, in its purity. The criticism of this relation ceases to be theological criticism as soon as the state ceases to adopt a theological attitude toward religion, as soon as it behaves towards religion as a state – *i.e., politically*. Criticism, then, becomes criticism of the political state. At this point, where the question ceases to be theological, Bauer's criticism ceases to be critical.

“In the United States there is neither a state religion nor a religion declared to be that of the majority, nor the predominance of one cult over another. The state stands aloof from all cults.” (*Marie ou l'esclavage aux Etats-Unis, etc.*, by G. de Beaumont, Paris, 1835, p. 214)

Indeed, there are some North American states where “the constitution does not impose any religious belief or religious practice as a condition of political rights.” (op. cit., p. 225)

Nevertheless, “in the United States people do not believe that a man without religion could be an honest man.” (op. cit., p. 224)

Nevertheless, North America is pre-eminently the country of religiosity, as Beaumont, Tocqueville, and the Englishman Hamilton unanimously assure us. The North American states, however, serve us only as an example. The question is: What is the relation of complete political emancipation to religion? If we find that even in the country of complete political emancipation, religion not only exists, but displays a fresh and vigorous vitality, that is proof that the existence of religion is not in contradiction to the perfection of the state. Since, however, the existence of religion is the existence of defect, the source of this defect can only be sought in the nature of the state itself. We no longer regard

religion as the *cause*, but only as the manifestation of secular narrowness. Therefore, we explain the religious limitations of the free citizen by their secular limitations. We do not assert that they must overcome their religious narrowness in order to get rid of their secular restrictions, we assert that they will overcome their religious narrowness once they get rid of their secular restrictions. We do not turn secular questions into theological ones. History has long enough been merged in superstition, we now merge superstition in history. The question of the relation of political emancipation to religion becomes for us the question of the relation of political emancipation to human emancipation. We criticize the religious weakness of the political state by criticizing the political state in its secular form, apart from its weaknesses as regards religion. The contradiction between the state and a particular religion, for instance Judaism, is given by us a human form as the contradiction between the state and *particular* secular elements; the contradiction between the state and religion in general as the contradiction between the state and its presuppositions in general.

The political emancipation of the Jew, the Christian, and, in general, of religious man, is the emancipation of the *state* from Judaism, from Christianity, from religion in general. In its own form, in the manner characteristic of its nature, the state as a state emancipates itself from religion by emancipating itself from the state religion – that is to say, by the state as a state not professing any religion, but, on the contrary, asserting itself as a state. The *political* emancipation from religion is not a religious emancipation that has been carried through to completion and is free from contradiction, because political emancipation is not a form of *human* emancipation which has been carried through to completion and is free from contradiction.

The limits of political emancipation are evident at once from the fact that the state can free itself from a restriction without man being really free from this restriction, that the state can be a *free state* [pun on word Freistaat, which also means republic] without man being a *free man*. Bauer himself tacitly admits this when he lays down the following condition for political emancipation:

“Every religious privilege, and therefore also the monopoly of a privileged church, would have been abolished altogether, and if some or many persons, or even the overwhelming majority, still believed themselves bound to fulfil religious duties, this fulfilment ought to be left to them as a purely private matter.” [*The Jewish Question*, p. 65]

It is possible, therefore, for the *state* to have emancipated itself from religion even if the *overwhelming majority* is still religious. And the overwhelming majority does not cease to be religious through being religious in private.

But, the attitude of the state, and of the *republic* [free state] in particular, to religion is, after all, only the attitude to religion of the *men* who compose the state. It follows from

this that man frees himself through the *medium of the state*, that he frees himself *politically* from a limitation when, in contradiction with himself, he raises himself above this limitation in an *abstract, limited*, and partial way. It follows further that, by freeing himself *politically*, man frees himself in a *roundabout way*, through an *intermediary*, although an *essential intermediary*. It follows, finally, that man, even if he proclaims himself an atheist through the medium of the state – that is, if he proclaims the state to be atheist – still remains in the grip of religion, precisely because he acknowledges himself only by a roundabout route, only through an *intermediary*. Religion is precisely the recognition of man in a roundabout way, through an intermediary. The state is the intermediary between man and man's freedom. Just as Christ is the intermediary to whom man transfers the burden of all his divinity, all his *religious constraint*, so the state is the intermediary to whom man transfers all his non-divinity and all his *human unconstraint*.

The *political* elevation of man above religion shares all the defects and all the advantages of political elevation in general. The state as a state annuls, for instance, private property, man declares by political means that private property is abolished as soon as the property qualification for the right to elect or be elected is abolished, as has occurred in many states of North America. Hamilton quite correctly interprets this fact from a political point of view as meaning:

“the masses have won a victory over the property owners and financial wealth.”  
[Thomas Hamilton, *Men and Manners in America*, 2 vols, Edinburgh, 1833, p. 146]

Is not private property abolished in idea if the non-property owner has become the legislator for the property owner? The property qualification for the suffrage is the last political form of giving recognition to private property.

Nevertheless, the political annulment of private property not only fails to abolish private property but even presupposes it. The state abolishes, in its own way, distinctions of birth, social rank, education, occupation, when it declares that birth, social rank, education, occupation, are non-political distinctions, when it proclaims, without regard to these distinction, that every member of the nation is an *equal* participant in national sovereignty, when it treats all elements of the real life of the nation from the standpoint of the state. Nevertheless, the state allows private property, education, occupation, to *act in their way* – *i.e.*, as private property, as education, as occupation, and to exert the influence of their *special* nature. Far from abolishing these real distinctions, the state only exists on the presupposition of their existence; it feels itself to be a political state and asserts its universality only in opposition to these elements of its being. Hegel, therefore, defines the relation of the political state to religion quite correctly when he says:

“In order [...] that the state should come into existence as the self-knowing, moral reality of the mind, its distinction from the form of authority and faith is essential.

But this distinction emerges only insofar as the ecclesiastical aspect arrives at a separation within itself. It is only in this way that the state, above the particular churches, has achieved and brought into existence universality of thought, which is the principle of its form” (Hegel’s *Philosophy of Right*, 1st edition, p. 346).

Of course! Only in this way, *above* the *particular* elements, does the state constitute itself as universality.

The perfect political state is, by its nature, man’s species-life, as opposed to his material life. All the preconditions of this egoistic life continue to exist in *civil society* outside the sphere of the state, but as qualities of civil society. Where the political state has attained its true development, man – not only in thought, in consciousness, but in reality, in life – leads a twofold life, a heavenly and an earthly life: life in the political community, in which he considers himself a communal being, and life in civil society, in which he acts as a private individual, regards other men as a means, degrades himself into a means, and becomes the plaything of alien powers. The relation of the political state to civil society is just as spiritual as the relations of heaven to earth. The political state stands in the same opposition to civil society, and it prevails over the latter in the same way as religion prevails over the narrowness of the secular world – *i.e.*, by likewise having always to acknowledge it, to restore it, and allow itself to be dominated by it. In his most immediate reality, in civil society, man is a secular being. Here, where he regards himself as a real individual, and is so regarded by others, he is a fictitious phenomenon. In the state, on the other hand, where man is regarded as a species-being, he is the imaginary member of an illusory sovereignty, is deprived of his real individual life and endowed with an unreal universality.

Man, as the adherent of a *particular* religion, finds himself in conflict with his citizenship and with other men as members of the community. This conflict reduces itself to the *secular* division between the *political* state and *civil society*. For man as a *bourgeois* [*i.e.*, as a member of civil society, “bourgeois society” in German], “life in the state” is “only a semblance or a temporary exception to the essential and the rule.” Of course, the *bourgeois*, like the Jew, remains only sophistically in the sphere of political life, just as the *citoyen* [‘citizen’ in French, *i.e.*, the participant in *political* life] only sophistically remains a Jew or a *bourgeois*. But, this sophistry is not personal. It is the *sophistry of the political state* itself. The difference between the merchant and the citizen [*Staatsbürger*], between the day-laborer and the citizen, between the landowner and the citizen, between the merchant and the citizen, between the *living individual* and the *citizen*. The contradiction in which the religious man finds himself with the political man is the same contradiction in which the bourgeois finds himself with the *citoyen*, and the member of civil society with his *political lion’s skin*.

This secular conflict, to which the Jewish question ultimately reduces itself, the relation between the political state and its preconditions, whether these are material elements,

such as private property, etc., or spiritual elements, such as culture or religion, the conflict between the general interest and private interest, the schism between the political state and civil society – these secular antitheses Bauer allows to persist, whereas he conducts a polemic against their religious expression.

“It is precisely the basis of civil society, the need that ensures the continuance of this society and guarantees its necessity, which exposes its existence to continual dangers, maintains in it an element of uncertainty, and produces that continually changing mixture of poverty and riches, of distress and prosperity, and brings about change in general.” (p. 8)

Compare the whole section: “Civil Society” (pp. 8-9), which has been drawn up along the basic lines of Hegel’s philosophy of law. Civil society, in its opposition to the political state, is recognized as necessary, because the political state is recognized as necessary.

Political emancipation is, of course, a big step forward. True, it is not the final form of human emancipation in general, but it is the final form of human emancipation within the hitherto existing world order. It goes without saying that we are speaking here of real, practical emancipation.

Man emancipates himself *politically* from religion by banishing it from the sphere of public law to that of private law. Religion is no longer the spirit of the state, in which man behaves – although in a limited way, in a particular form, and in a particular sphere – as a species-being, in community with other men. Religion has become the spirit of *civil society*, of the sphere of egoism, of *bellum omnium contra omnes*. It is no longer the essence of *community*, but the essence of *difference*. It has become the expression of man’s *separation* from his *community*, from himself and from other men – as it was originally. It is only the abstract avowal of specific perversity, *private whimsy*, and arbitrariness. The endless fragmentation of religion in North America, for example, gives it even *externally* the form of a purely individual affair. It has been thrust among the multitude of private interests and ejected from the community as such. But one should be under no illusion about the limits of political emancipation. The division of the human being into a *public man* and a *private man*, the *displacement* of religion from the state into civil society, this is not a stage of political emancipation but its completion; this emancipation, therefore, neither abolished the *real* religiousness of man, nor strives to do so.

The *decomposition* of man into Jew and citizen, Protestant and citizen, religious man and citizen, is neither a deception directed *against* citizenship, nor is it a circumvention of political emancipation, it is *political emancipation itself*, the *political* method of emancipating oneself from religion. Of course, in periods when the political state as such is born violently out of civil society, when political liberation is the form in which men strive to achieve their liberation, the state can and must go as far as the *abolition of*

*religion*, the *destruction* of religion. But it can do so only in the same way that it proceeds to the abolition of private property, to the maximum, to confiscation, to progressive taxation, just as it goes as far as the abolition of life, the *guillotine*. At times of special self-confidence, political life seeks to suppress its prerequisite, civil society and the elements composing this society, and to constitute itself as the real species-life of man, devoid of contradictions. But, it can achieve this only by coming into *violent* contradiction with its own conditions of life, only by declaring the revolution to be permanent, and, therefore, the political drama necessarily ends with the re-establishment of religion, private property, and all elements of civil society, just as war ends with peace.

Indeed, the perfect Christian state is not the so-called *Christian* state – which acknowledges Christianity as its basis, as the state religion, and, therefore, adopts an exclusive attitude towards other religions. On the contrary, the perfect Christian state is the *atheistic* state, the *democratic* state, the state which relegates religion to a place among the other elements of civil society. The state which is still theological, which still officially professes Christianity as its creed, which still does not dare to proclaim itself *as a state*, has, in its *reality* as a state, not yet succeeded in expressing the *human* basis – of which Christianity is the high-flown expression – in a *secular, human* form. The so-called Christian state is simply nothing more than a non-state, since it is not Christianity as a religion, but only the *human background* of the Christian religion, which can find its expression in actual human creations.

The so-called Christian state is the Christian negation of the state, but by no means the political realization of Christianity. The state which still professes Christianity in the form of religion, does not yet profess it in the form appropriate to the state, for it still has a religious attitude towards religion – that is to say, it is not the *true implementation* of the human basis of religion, because it still relies on the *unreal, imaginary* form of this human core. The so-called Christian state is the *imperfect* state, and the Christian religion is regarded by it as the *supplementation* and *sanctification* of its imperfection. For the Christian state, therefore, religion necessarily becomes a *means*; hence, it is a *hypocritical* state. It makes a great difference whether the *complete* state, because of the defect inherent in the general *nature* of the state, counts religion among its *presuppositions*, or whether the *incomplete* state, because of the defect inherent in its *particular existence* as a defective state, declares that religion is its basis. In the latter case, religion becomes *imperfect politics*. In the former case, the imperfection even of consummate *politics* becomes evident in religion. The so-called Christian state needs the Christian religion in order to complete itself *as a state*. The democratic state, the real state, does not need religion for its political completion. On the contrary, it can disregard religion because in it the human basis of religion is realized in a secular manner. The so-called Christian state, on the other hand, has a political attitude to religion and a religious attitude to politics. By

degrading the forms of the state to mere semblance, it equally degrades religion to mere semblance.

In order to make this contradiction clearer, let us consider Bauer's projection of the Christian state, a projection based on his observation of the Christian-German state.

“Recently,” says Bauer, “in order to prove the *impossibility* or *non-existence* of a Christian state, reference has frequently been made to those sayings in the Gospel with which the [present-day] state *not only does not* comply, but *cannot possibly comply, if it does not want to dissolve itself completely* [as a state].” “But the matter cannot be disposed of so easily. What do these Gospel sayings demand? Supernatural renunciation of self, submission to the authority of revelation, a turning-away from the state, the abolition of secular conditions. Well, the Christian state demands and accomplishes all that. It has assimilated the *spirit of the Gospel*, and if it does not reproduce this spirit in the same terms as the Gospel, that occurs only because it expresses this spirit in political forms, *i.e.*, in forms which, it is true, are taken from the political system in this world, but which in the religious rebirth that they have to undergo become degraded to a mere semblance. This is a turning-away from the state while making use of political forms for its realization.” (p. 55)

Bauer then explains that the people of a Christian state is only a non-people, no longer having a will of its own, but whose true existence lies in the leader to whom it is subjected, although this leader by his origin and nature is alien to it – *i.e.*, given by God and imposed on the people without any co-operation on its part. Bauer declares that the laws of such a people are not its own creation, but are actual revelations, that its supreme chief needs privileged intermediaries with the people in the strict sense, with the masses, and that the masses themselves are divided into a multitude of particular groupings which are formed and determined by chance, which are differentiated by their interests, their particular passions and prejudices, and obtain permission as a privilege, to isolate themselves from one another, etc. (p. 56)

However, Bauer himself says:

“Politics, if it is to be nothing but religion, ought not to be politics, just as the cleaning of saucepans, if it is to be accepted as a religious matter, ought not to be regarded as a matter of domestic economy.” (p. 108)

In the Christian-German state, however, religion is an “economic matter” just as “economic matters” belong to the sphere of religion. The domination of religion in the Christian-German state is the religion of domination.

The separation of the “spirit of the Gospel” from the “letter of the Gospel” is an *irreligious* act. A state which makes the Gospel speak in the language of politics – that is, in another language than that of the Holy Ghost – commits sacrilege, if not in human eyes, then in the eyes of its own religion. The state which acknowledges Christianity as its supreme criterion, and the *Bible* as its *Charter*, must be confronted with the *words* of

Holy Scripture, for every word of Scripture is holy. This state, as well as the *human rubbish* on which it is based, is caught in a painful contradiction that is insoluble from the standpoint of religious consciousness when it is referred to those sayings of the Gospel with which it “not only does not comply, but *cannot possibly comply, if it does not want to dissolve itself completely as a state.*” And why does it not want to dissolve itself completely? The state itself cannot give an answer either to itself or to others. In its *own consciousness*, the official Christian state is an *imperative*, the realization of which is unattainable, the state can assert the reality of its existence only by lying to itself, and therefore always remains in its own eyes an object of doubt, an unreliable, problematic object. Criticism is, therefore, fully justified in forcing the state that relies on the Bible into a mental derangement in which it no longer knows whether it is an *illusion* or a *reality*, and in which the infamy of its *secular* aims, for which religion serves as a cloak, comes into insoluble conflict with the sincerity of its *religious* consciousness, for which religion appears as the aim of the world. This state can only save itself from its inner torment if it becomes the *police agent* of the Catholic Church. In relation to the church, which declares the *secular* power to be its servant, the state is powerless, the secular power which claims to be the rule of the religious spirit is powerless.

It is, indeed, *estrangement* which matters in the so-called Christian state, but not *man*. The only man who counts, the king, is a being specifically different from other men, and is, moreover, a religious being, directly linked with heaven, with God. The relationships which prevail here are still relationships dependent of *faith*. The religious spirit, therefore, is still not really secularized.

But, furthermore, the religious spirit cannot be *really* secularized, for what is it in itself but the *non-secular* form of a stage in the development of the human mind? The religious spirit can only be secularized insofar as the stage of development of the human mind of which it is the religious expression makes its appearance and becomes constituted in its *secular* form. This takes place in the democratic state. Not Christianity, but the *human basis* of Christianity is the basis of this state. Religion remains the ideal, non-secular consciousness of its members, because religion is the ideal form of the *stage of human development* achieved in this state.

The members of the political state are religious owing to the dualism between individual life and species-life, between the life of civil society and political life. They are religious because men treat the political life of the state, an area beyond their real individuality, as if it were their true life. They are religious insofar as religion here is the spirit of civil society, expressing the separation and remoteness of man from man. Political democracy is Christian since in it man, not merely one man but everyman, ranks as *sovereign*, as the highest being, but it is man in his uncivilized, unsocial form, man in his fortuitous existence, man just as he is, man as he has been corrupted by the whole organization of

our society, who has lost himself, been alienated, and handed over to the rule of inhuman conditions and elements – in short, man who is not yet a *real* species-being. That which is a creation of fantasy, a dream, a postulate of Christianity, *i.e.*, the sovereignty of man – but man as an alien being different from the real man – becomes, in democracy, tangible reality, present existence, and secular principle.

In the perfect democracy, the religious and theological consciousness itself is in its own eyes the more religious and the more theological because it is apparently without political significance, without worldly aims, the concern of a disposition that shuns the world, the expression of intellectual narrow-mindedness, the product of arbitrariness and fantasy, and because it is a life that is really of the other world. Christianity attains, here, the *practical* expression of its universal-religious significance in that the most diverse world outlooks are grouped alongside one another in the form of Christianity and still more because it does not require other people to profess Christianity, but only religion in general, any kind of religion (cf. Beaumont's work quoted above). The religious consciousness revels in the wealth of religious contradictions and religious diversity.

We have, thus, shown that political emancipation from religion leaves religion in existence, although not a privileged religion. The contradiction in which the adherent of a particular religion finds himself involved in relation to his citizenship is only *one aspect* of the universal *secular contradiction between the political state and civil society*. The consummation of the Christian state is the state which acknowledges itself as a state and disregards the religion of its members. The emancipation of the state from religion is not the emancipation of the real man from religion.

Therefore, we do not say to the Jews, as Bauer does: You cannot be emancipated politically without emancipating yourselves radically from Judaism. On the contrary, we tell them: Because you can be emancipated politically without renouncing Judaism completely and incontrovertibly, *political emancipation* itself is not *human* emancipation. If you Jews want to be emancipated politically, without emancipating yourselves humanly, the half-hearted approach and contradiction is not in you alone, it is inherent in the *nature* and *category* of political emancipation. If you find yourself within the confines of this category, you share in a general confinement. Just as the state *evangelizes* when, although it is a state, it adopts a Christian attitude towards the Jews, so the Jew *acts politically* when, although a Jew, he demands civic rights.

[ \* ]

But, if a man, although a Jew, can be emancipated politically and receive civic rights, can he lay claim to the so-called *rights of man* and receive them? Bauer *denies* it.

“The question is whether the Jew as such, that is, the Jew who himself admits that he is compelled by his true nature to live permanently in separation from other men, is

capable of receiving the *universal rights of man* and of conceding them to others.”

“For the Christian world, the idea of the rights of man was only discovered in the last century. It is not innate in men; on the contrary, it is gained only in a struggle against the historical traditions in which hitherto man was brought up. Thus the rights of man are not a gift of nature, not a legacy from past history, but the reward of the struggle against the accident of birth and against the privileges which up to now have been handed down by history from generation to generation. These rights are the result of culture, and only one who has earned and deserved them can possess them.”

“Can the Jew really take possession of them? As long as he is a Jew, the restricted nature which makes him a Jew is bound to triumph over the human nature which should link him as a man with other men, and will separate him from non-Jews. He declares by this separation that the particular nature which makes him a Jew is his true, highest nature, before which human nature has to give way.”

“Similarly, the Christian as a Christian cannot grant the rights of man.” (p. 19-20)

According to Bauer, man has to sacrifice the “*privilege of faith*” to be able to receive the universal rights of man. Let us examine, for a moment, the so-called rights of man – to be precise, the rights of man in their authentic form, in the form which they have among those who *discovered* them, the North Americans and the French. These rights of man are, in part, *political* rights, rights which can only be exercised in community with others. Their content is *participation* in the *community*, and specifically in the *political* community, in the *life of the state*. They come within the category of *political freedom*, the category of *civic rights*, which, as we have seen, in no way presuppose the incontrovertible and positive abolition of religion – nor, therefore, of Judaism. There remains to be examined the other part of the rights of man – the *droits de l’homme*, insofar as these differ from the *droits du citoyen*.

Included among them is freedom of conscience, the right to practice any religion one chooses. The *privilege of faith* is expressly recognized either as a *right of man* or as the consequence of a right of man, that of liberty.

*Déclaration des droits de l’homme et du citoyen*, 1791, Article 10: “No one is to be subjected to annoyance because of his opinions, even religious opinions.” “The freedom of every man to practice the religion of which he is an adherent.”

*Declaration of the Rights of Man*, etc., 1793, includes among the rights of man, Article 7: “The free exercise of religion.” Indeed, in regard to man’s right to express his thoughts and opinions, to hold meetings, and to exercise his religion, it is even stated: “The necessity of proclaiming these rights presupposes either the existence or the recent memory of despotism.” Compare the Constitution of 1795, Section XIV, Article 354.

*Constitution of Pennsylvania*, Article 9, § 3: “All men have received from nature the imprescriptible right to worship the Almighty according to the dictates of their conscience, and no one can be legally compelled to follow, establish, or support against his will any religion or religious ministry. No human authority can, in any circumstances, intervene in a matter of conscience or control the forces of the soul.”

*Constitution of New Hampshire*, Article 5 and 6: “Among these natural rights some are by nature inalienable since nothing can replace them. The rights of conscience are among them.” (Beaumont, op. cit., pp. 213,214)

Incompatibility between religion and the rights of man is to such a degree absent from the concept of the rights of man that, on the contrary, a man’s *right to be religious*, in any way he chooses, to practise his own particular religion, is expressly included among the rights of man. The *privilege of faith* is a *universal right of man*.

The *droits de l’homme*, the rights of man, are, as such, distinct from the *droits du citoyen*, the rights of the citizen. Who is *homme* as distinct from *citoyen*? None other than the *member of civil society*. Why is the member of civil society called “man,” simply man; why are his rights called the *rights of man*? How is this fact to be explained? From the relationship between the political state and civil society, from the nature of political emancipation.

Above all, we note the fact that the so-called rights of man, the *droits de l’homme* as distinct from the *droits du citoyen*, are nothing but the rights of a *member of civil society* – *i.e.*, the rights of egoistic man, of man separated from other men and from the community. Let us hear what the most radical Constitution, the Constitution of 1793, has to say:

*Declaration of the Rights of Man and of the Citizen.*

Article 2. “These rights, etc., (the natural and imprescriptible rights) are: equality, liberty, security, property.”

What constitutes liberty?

Article 6. “Liberty is the power which man has to do everything that does not harm the rights of others,” or, according to the *Declaration of the Rights of Man* of 1791: “Liberty consists in being able to do everything which does not harm others.”

Liberty, therefore, is the right to do everything that harms no one else. The limits within which anyone can act *without harming* someone else are defined by law, just as the boundary between two fields is determined by a boundary post. It is a question of the

liberty of man as an isolated monad, withdrawn into himself. Why is the Jew, according to Bauer, incapable of acquiring the rights of man?

“As long as he is a Jew, the restricted nature which makes him a Jew is bound to triumph over the human nature which should link him as a man with other men, and will separate him from non-Jews.”

But, the right of man to liberty is based not on the association of man with man, but on the separation of man from man. It is the *right* of this separation, the right of the *restricted* individual, withdrawn into himself.

The practical application of man’s right to liberty is man’s right to *private property*.

What constitutes man’s right to private property?

Article 16. (Constitution of 1793): “The right of property is that which every citizen has of enjoying and of disposing at his discretion of his goods and income, of the fruits of his labor and industry.”

The right of man to private property is, therefore, the right to enjoy one’s property and to dispose of it at one’s discretion (*à son gré*), without regard to other men, independently of society, the right of self-interest. This individual liberty and its application form the basis of civil society. It makes every man see in other men not the realization of his own freedom, but the *barrier* to it. But, above all, it proclaims the right of man

“of enjoying and of disposing at his discretion of his goods and income, of the fruits of his labor and industry.”

There remain the other rights of man: *égalité* and *sûreté*.

Equality, used here in its non-political sense, is nothing but the equality of the *liberté* described above – namely: each man is to the same extent regarded as such a self-sufficient monad. The Constitution of 1795 defines the concept of this equality, in accordance with this significance, as follows:

Article 3 (Constitution of 1795): “Equality consists in the law being the same for all, whether it protects or punishes.”

And security?

Article 8 (Constitution of 1793): “Security consists in the protection afforded by society to each of its members for the preservation of his person, his rights, and his property.”

Security is the highest social concept of civil society, the concept of *police*, expressing the fact that the whole of society exists only in order to guarantee to each of its members the

preservation of his person, his rights, and his property. It is in this sense that Hegel calls civil society “the state of need and reason.”

The concept of security does not raise civil society above its egoism. On the contrary, security is the *insurance* of egoism.

None of the so-called rights of man, therefore, go beyond egoistic man, beyond man as a member of civil society – that is, an individual withdrawn into himself, into the confines of his private interests and private caprice, and separated from the community. In the rights of man, he is far from being conceived as a species-being; on the contrary, species-life itself, society, appears as a framework external to the individuals, as a restriction of their original independence. The sole bond holding them together is natural necessity, need and private interest, the preservation of their property and their egoistic selves.

It is puzzling enough that a people which is just beginning to liberate itself, to tear down all the barriers between its various sections, and to establish a political community, that such a people solemnly proclaims (*Declaration of 1791*) the rights of egoistic man separated from his fellow men and from the community, and that indeed it repeats this proclamation at a moment when only the most heroic devotion can save the nation, and is therefore imperatively called for, at a moment when the sacrifice of all the interest of civil society must be the order of the day, and egoism must be punished as a crime. (*Declaration of the Rights of Man, etc., of 1793*) This fact becomes still more puzzling when we see that the political emancipators go so far as to reduce citizenship, and the *political community*, to a mere means for maintaining these so-called rights of man, that, therefore, the *citoyen* is declared to be the servant of egotistic *homme*, that the sphere in which man acts as a communal being is degraded to a level below the sphere in which he acts as a partial being, and that, finally, it is not man as *citoyen*, but man as private individual [*bourgeois*] who is considered to be the *essential* and *true* man.

“The aim of all political association is the preservation of the natural and imprescriptible rights of man.” (*Declaration of the Rights, etc., of 1791, Article 2*)

“Government is instituted in order to guarantee man the enjoyment of his natural and imprescriptible rights.” (*Declaration, etc., of 1793, Article 1*)

Hence, even in moments when its enthusiasm still has the freshness of youth and is intensified to an extreme degree by the force of circumstances, political life declares itself to be a mere *means*, whose purpose is the life of civil society. It is true that its revolutionary practice is in flagrant contradiction with its theory. Whereas, for example, security is declared one of the rights of man, violation of the privacy of correspondence is openly declared to be the order of the day. Whereas “unlimited freedom of the press” (*Constitution of 1793, Article 122*) is guaranteed as a consequence of the right of man to individual liberty, freedom of the press is totally destroyed, because “freedom of the press

should not be permitted when it endangers public liberty.” (“Robespierre jeune,” *Historie parlementaire de la Révolution française* by Buchez and Roux, vol.28, p. 159) That is to say, therefore: The right of man to liberty ceases to be a right as soon as it comes into conflict with *political* life, whereas in theory political life is only the guarantee of human rights, the rights of the individual, and therefore must be abandoned as soon as it comes into contradiction with its *aim*, with these rights of man. But, practice is merely the exception, theory is the rule. But even if one were to regard revolutionary practice as the correct presentation of the relationship, there would still remain the puzzle of why the relationship is turned upside-down in the minds of the political emancipators and the aim appears as the means, while the means appears as the aim. This optical illusion of their consciousness would still remain a puzzle, although now a psychological, a theoretical puzzle.

The puzzle is easily solved.

Political emancipation is, at the same time, the *dissolution* of the old society on which the state alienated from the people, the sovereign power, is based. What was the character of the old society? It can be described in one word – *feudalism*. The character of the old civil society was *directly political* – that is to say, the elements of civil life, for example, property, or the family, or the mode of labor, were raised to the level of elements of political life in the form of seigniorship, estates, and corporations. In this form, they determined the relation of the individual to the *state as a whole* – *i.e.*, his *political* relation, that is, his relation of separation and exclusion from the other components of society. For that organization of national life did not raise property or labor to the level of social elements; on the contrary, it completed their *separation* from the state as a whole and constituted them as *discrete* societies within society. Thus, the vital functions and conditions of life of civil society remained, nevertheless, political, although political in the feudal sense – that is to say, they secluded the individual from the state as a whole and they converted the *particular* relation of his corporation to the state as a whole into his general relation to the life of the nation, just as they converted his particular civil activity and situation into his general activity and situation. As a result of this organization, the unity of the state, and also the consciousness, will, and activity of this unity, the general power of the state, are likewise bound to appear as the *particular* affair of a ruler and of his servants, isolated from the people.

The political revolution which overthrew this sovereign power and raised state affairs to become affairs of the people, which constituted the political state as a matter of *general* concern, that is, as a real state, necessarily smashed all estates, corporations, guilds, and privileges, since they were all manifestations of the separation of the people from the community. The political revolution thereby *abolished* the *political character of civil society*. It broke up civil society into its simple component parts; on the one hand, the

*individuals*; on the other hand, the *material* and *spiritual* elements constituting the content of the life and social position of these individuals. It set free the political spirit, which had been, as it were, split up, partitioned, and dispersed in the various blind alleys of feudal society. It gathered the dispersed parts of the political spirit, freed it from its intermixture with civil life, and established it as the sphere of the community, the *general* concern of the nation, ideally independent of those *particular* elements of civil life. A person's *distinct* activity and distinct situation in life were reduced to a merely individual significance. They no longer constituted the general relation of the individual to the state as a whole. Public affairs as such, on the other hand, became the general affair of each individual, and the political function became the individual's general function.

But, the completion of the idealism of the state was at the same time the completion of the materialism of civil society. Throwing off the political yoke meant at the same time throwing off the bonds which restrained the egoistic spirit of civil society. Political emancipation was, at the same time, the emancipation of civil society from politics, from having even the *semblance* of a universal content.

Feudal society was resolved into its basic element – *man*, but man as he really formed its basis – *egoistic* man.

This *man*, the member of civil society, is thus the basis, the precondition, of the *political* state. He is recognized as such by this state in the rights of man.

The liberty of egoistic man and the recognition of this liberty, however, is rather the recognition of the *unrestrained* movement of the spiritual and material elements which form the content of his life.

Hence, man was not freed from religion, he received religious freedom. He was not freed from property, he received freedom to own property. He was not freed from the egoism of business, he received freedom to engage in business.

The *establishment of the political state* and the dissolution of civil society into independent *individuals* – whose relation with one another depend on *law*, just as the relations of men in the system of estates and guilds depended on *privilege* – is accomplished by *one and the same act*. Man as a member of civil society, unpolitical man, inevitably appears, however, as the *natural* man. The “rights of man” appears as “natural rights,” because *conscious activity* is concentrated on the *political act*. *Egoistic* man is the *passive* result of the dissolved society, a result that is simply *found in existence*, an object of *immediate certainty*, therefore a *natural* object. The *political revolution* resolves civil life into its component parts, without *revolutionizing* these components themselves or subjecting them to criticism. It regards civil society, the world of needs, labor, private interests, civil law, as the *basis of its existence*, as a *precondition* not requiring further

substantiation and therefore as its *natural basis*. Finally, man as a member of civil society is held to be man in the proper sense, *homme* as distinct from *citoyen*, because he is man in his sensuous, individual, *immediate* existence, whereas *political* man is only abstract, artificial man, man as an *allegorical, juridical* person. The real man is recognized only in the shape of the *egoistic* individual, the *true* man is recognized only in the shape of the *abstract citizen*.

Therefore, Rousseau correctly described the abstract idea of political man as follows:

“Whoever dares undertake to establish a people’s institutions must feel himself capable of changing, as it were, human nature, of transforming each individual, who by himself is a complete and solitary whole, into a part of a larger whole, from which, in a sense, the individual receives his life and his being, of substituting a limited and mental existence for the physical and independent existence. He has to take from man his own powers, and give him in exchange alien powers which he cannot employ without the help of other men.”

All emancipation is a *reduction* of the human world and relationships to *man himself*.

Political emancipation is the reduction of man, on the one hand, to a member of civil society, to an *egoistic, independent* individual, and, on the other hand, to a *citizen*, a juridical person.

Only when the real, individual man re-absorbs in himself the abstract citizen, and as an individual human being has become a *species-being* in his everyday life, in his particular work, and in his particular situation, only when man has recognized and organized his “own powers” as *social* powers, and, consequently, no longer separates social power from himself in the shape of *political* power, only then will human emancipation have been accomplished.

## II

**Bruno Bauer,**

**“The Capacity of Present-day Jews and Christians to Become Free,”**

***Einundzwanzig Bogen aus der Schweiz, pp. 56-71***

It is in this form that Bauer deals with the relation between the Jewish and the Christian religions, and also with their relation to criticism. Their relation to criticism is their relation “to the capacity to become free.”

The result arrived at is:

“The Christian has to surmount only one stage, namely, that of his religion, in order to give up religion altogether,”

and therefore become free.

“The Jew, on the other hand, has to break not only with his Jewish nature, but also with the development towards perfecting his religion, a development which has remained alien to him.” (p. 71)

Thus, Bauer here transforms the question of Jewish emancipation into a purely religious question. The theological problem as to whether the Jew or the Christian has the better prospect of salvation is repeated here in the enlightened form: which of them is *more capable of emancipation*. No longer is the question asked: Is it Judaism or Christianity that makes a man free? On the contrary, the question is now: Which makes man freer, the negation of Judaism or the negation of Christianity?

“If the Jews want to become free, they should profess belief not in Christianity, but in the dissolution of Christianity, in the dissolution of religion in general, that is to say, in enlightenment, criticism, and its consequences, free humanity.” (p. 70)

For the Jew, it is still a matter of a profession of faith, but no longer a profession of belief in Christianity, but of belief in Christianity in dissolution.

Bauer demands of the Jews that they should break with the essence of the Christian religion, a demand which, as he says himself, does not arise out of the development of Judaism.

Since Bauer, at the end of his work on the Jewish question, had conceived Judaism only as crude religious criticism of Christianity, and therefore saw in it “merely” a religious significance, it could be foreseen that the emancipation of the Jews, too, would be transformed into a philosophical-theological act.

Bauer considers that the *ideal*, abstract nature of the Jew, his *religion*, is his *entire* nature. Hence, he rightly concludes:

“The Jew contributes nothing to mankind if he himself disregards his narrow law,” if he invalidates his entire Judaism. (p. 65)

Accordingly, the relation between Jews and Christians becomes the following: the sole interest of the Christian in the emancipation of the Jew is a general human interest, a *theoretical* interest. Judaism is a fact that offends the religious eye of the Christian. As soon as his eye ceases to be religious, this fact ceases to be offensive. The emancipation of the Jew is, in itself, not a task for the Christian.

The Jew, on the other hand, in order to emancipate himself, has to carry out not only his own work, but also that of the Christian – *i.e.*, the *Critique of the Evangelical History of the Synoptics* and the *Life of Jesus*, etc.

“It is up to them to deal with it: they themselves will decide their fate; but history is not to be trifled with.” (p. 71)

We are trying to break with the theological formulation of the question. For us, the question of the Jew's capacity for emancipation becomes the question: What particular *social* element has to be overcome in order to abolish Judaism? For the present-day Jew's capacity for emancipation is the relation of Judaism to the emancipation of the modern world. This relation necessarily results from the special position of Judaism in the contemporary enslaved world.

Let us consider the actual, worldly Jew – not the *Sabbath Jew*, as Bauer does, but the *everyday Jew*.

Let us not look for the secret of the Jew in his religion, but let us look for the secret of his religion in the real Jew.

What is the secular basis of Judaism? *Practical* need, *self-interest*. What is the worldly religion of the Jew? *Huckstering*. What is his worldly God? *Money*.

Very well then! Emancipation from *huckstering* and *money*, consequently from practical, real Judaism, would be the self-emancipation of our time.

An organization of society which would abolish the preconditions for huckstering, and therefore the possibility of huckstering, would make the Jew impossible. His religious consciousness would be dissipated like a thin haze in the real, vital air of society. On the other hand, if the Jew recognizes that this *practical* nature of his is futile and works to abolish it, he extricates himself from his previous development and works for *human emancipation* as such and turns against the supreme practical expression of human self-estrangement.

We recognize in Judaism, therefore, a general *anti-social* element of the *present time*, an element which through historical development – to which in this harmful respect the Jews have zealously contributed – has been brought to its present high level, at which it must necessarily begin to disintegrate.

In the final analysis, the *emancipation of the Jews* is the emancipation of mankind from *Judaism*.

The Jew has already emancipated himself in a Jewish way.

“The Jew, who in Vienna, for example, is only tolerated, determines the fate of the whole Empire by his financial power. The Jew, who may have no rights in the smallest German state, decides the fate of Europe. While corporations and guilds refuse to admit Jews, or have not yet adopted a favorable attitude towards them, the audacity of industry mocks at the obstinacy of the material institutions.” (Bruno Bauer, *The Jewish Question*, p. 114)

This is no isolated fact. The Jew has emancipated himself in a Jewish manner, not only because he has acquired financial power, but also because, through him and also apart from him, *money* has become a world power and the practical Jewish spirit has become the practical spirit of the Christian nations. The Jews have emancipated themselves insofar as the Christians have become Jews.

Captain Hamilton, for example, reports:

“The devout and politically free inhabitant of New England is a kind of *Laocoön* who makes not the least effort to escape from the serpents which are crushing him. *Mammon* is his idol which he adores not only with his lips but with the whole force of his body and mind. In his view the world is no more than a Stock Exchange, and he is convinced that he has no other destiny here below than to become richer than his neighbor. Trade has seized upon all his thoughts, and he has no other recreation than to exchange objects. When he travels he carries, so to speak, his goods and his counter on his back and talks only of interest and profit. If he loses sight of his own business for an instant it is only in order to pry into the business of his competitors.”

Indeed, in North America, the practical domination of Judaism over the Christian world has achieved as its unambiguous and normal expression that the *preaching of the Gospel* itself and the Christian ministry have become articles of trade, and the bankrupt trader deals in the Gospel just as the Gospel preacher who has become rich goes in for business deals.

“The man who you see at the head of a respectable congregation began as a trader; his business having failed, he became a minister. The other began as a priest but as soon as he had some money at his disposal he left the pulpit to become a trader. In the eyes of very many people, the religious ministry is a veritable business career.” (Beaumont, op. cit., pp. 185,186)

According to Bauer, it is

“a fictitious state of affairs when in theory the Jew is deprived of political rights, whereas in practice he has immense power and exerts his political influence *en gros*, although it is curtailed *en détail*.” (*Die Judenfrage*, p. 114)

The contradiction that exists between the practical political power of the Jew and his political rights is the contradiction between politics and the power of money in general. Although theoretically the former is superior to the latter, in actual fact politics has become the serf of financial power.

Judaism has held its own *alongside* Christianity, not only as religious criticism of Christianity, not only as the embodiment of doubt in the religious derivation of Christianity, but equally because the practical Jewish spirit, Judaism, has maintained itself and even attained its highest development in Christian society. The Jew, who exists as a distinct member of civil society, is only a particular manifestation of the Judaism of civil society.

Judaism continues to exist not in spite of history, but owing to history.

The Jew is perpetually created by civil society from its own entrails.

What, in itself, was the basis of the Jewish religion? Practical need, egoism.

The monotheism of the Jew, therefore, is in reality the polytheism of the many needs, a polytheism which makes even the lavatory an object of divine law. **Practical need, egoism**, is the principle of *civil society*, and as such appears in pure form as soon as civil society has fully given birth to the political state. The god of *practical need and self-interest* is *money*.

Money is the jealous god of Israel, in face of which no other god may exist. Money degrades all the gods of man – and turns them into commodities. Money is the universal self-established *value* of all things. It has, therefore, robbed the whole world – both the world of men and nature – of its specific value. Money is the estranged essence of man's work and man's existence, and this alien essence dominates him, and he worships it.

The god of the Jews has become secularized and has become the god of the world. The bill of exchange is the real god of the Jew. His god is only an illusory bill of exchange.

The view of nature attained under the domination of private property and money is a real contempt for, and practical debasement of, nature; in the Jewish religion, nature exists, it is true, but it exists only in imagination.

It is in this sense that [in a 1524 pamphlet] Thomas Münzer declares it intolerable

“that all creatures have been turned into property, the fishes in the water, the birds in the air, the plants on the earth; the creatures, too, must become free.”

Contempt for theory, art, history, and for man as an end in himself, which is contained in an abstract form in the Jewish religion, is the real, conscious standpoint, the virtue of the man of money. The species-relation itself, the relation between man and woman, etc., becomes an object of trade! The woman is bought and sold.

The *chimerical* nationality of the Jew is the nationality of the merchant, of the man of money in general.

The groundless law of the Jew is only a religious caricature of groundless morality and right in general, of the purely *formal* rites with which the world of self-interest surrounds itself.

Here, too, man's supreme relation is the *legal* one, his relation to laws that are valid for him not because they are laws of his own will and nature, but because they are the *dominant* laws and because departure from them is *avenged*.

Jewish Jesuitism, the same practical Jesuitism which Bauer discovers in the Talmud, is the relation of the world of self-interest to the laws governing that world, the chief art of which consists in the cunning circumvention of these laws.

Indeed, the movement of this world within its framework of laws is bound to be a continual suspension of law.

*Judaism* could not develop further as a *religion*, could not develop further theoretically, because the world outlook of practical need is essentially limited and is completed in a few strokes.

By its very nature, the religion of practical need could find its consummation not in theory, but only in *practice*, precisely because its truth is practice.

Judaism could not create a new world; it could only draw the new creations and conditions of the world into the sphere of its activity, because practical need, the rationale of which is self-interest, is passive and does not expand at will, but *finds* itself enlarged as a result of the continuous development of social conditions.

Judaism reaches its highest point with the perfection of civil society, but it is only in the *Christian* world that civil society attains perfection. Only under the dominance of Christianity, which makes *all* national, natural, moral, and theoretical conditions *extrinsic* to man, could civil society separate itself completely from the life of the state, sever all the species-ties of man, put egoism and selfish need in the place of these species-ties, and dissolve the human world into a world of atomistic individuals who are inimically opposed to one another.

Christianity sprang from Judaism. It has merged again in Judaism.

From the outset, the Christian was the theorizing Jew, the Jew is, therefore, the practical Christian, and the practical Christian has become a Jew again.

Christianity had only in semblance overcome real Judaism. It was too *noble-minded*, too spiritualistic to eliminate the crudity of practical need in any other way than by elevation to the skies.

Christianity is the sublime thought of Judaism, Judaism is the common practical application of Christianity, but this application could only become general after Christianity as a developed religion had completed *theoretically* the estrangement of man from himself and from nature.

Only then could Judaism achieve universal dominance and make alienated man and alienated nature into *alienable*, vendible objects subjected to the slavery of egoistic need and to trading.
