A Feasibility Study on a Men’s Cancer Support Group at the Mayo Clinic Health System, Mankato Andreas Cancer Center

Nicolette Giersdorf, BS
Mayo Clinic Health Systems, Mankato Andreas Cancer Center
Field Instructor: Sharon Dexheimer, MSW, LGSW
Academic Advisor: Nancy M. Fitzsimons, PhD., MSW, Professor

Key Findings

- Thirty-five men, of eighty-three potential participants, completed the survey, which was a response rate of 42.16%.
- 15 of the 35 participants (42.9%) indicated they were interested in participating in a men’s cancer support group if one were made available to them at the Mayo Clinic Health System, Mankato Andreas Cancer Center.
- Only 1 of the 15 participants (6.7%) who stated they would be interested in a men’s cancer support group indicated they would not have access to transportation to and from a cancer support group as a barrier to their ability to participate in a support group.
- 15 of the 35 participants (42.9%) were not aware that the Andreas Cancer Center offered a cancer support group.
- Most of the men would utilize a support group for both support from others and for educational topics related to their cancer diagnosis.
- The majority of patients (82.83%) indicated they had complete support from family and friends.
