Mental Health Services Among Children Involved in Child Welfare: Identifying Parental Views and Barriers to Accessing Services

Katrina Ohmann-Thai
MSW Student, Minnesota State University, Mankato

Purpose & Significance

- In the child welfare field there is a growing need for mental health support for children. This need is due to exposure to or victimization of abuse and neglect. On average only 15-25% of children identified as needing services are actually participating in some type of mental health support. This may be due to the many barriers that exist when seeking mental health support.
- This research project surveyed parents in Independent School District (ISD) 196 regarding potential mental health services offered through the School-Linked Mental Health Services grant. Information was collected through a survey of parents from two schools within the district; Parkview and Cedar Park Elementary.

Methodology

- A needs assessment was conducted using an electronic survey. The survey was developed by completing a literature review and collaborating with Parkview and Cedar Park Elementary school social workers, Clinical Director of FACTS therapeutic agency, and MNSU Faculty Advisor.
- The survey was distributed via email to all parents with children enrolled at Parkview & Cedar Park Elementary.
- Total recruitment count was 727 participants.
- The survey included 12 questions.
- The questions identified:
  - History of mental health services
  - Participants' interest in future supportive services
  - Specific barriers to accessing services
  - Views on school involvement in mental health support

Limitations

- Specific data for target population of child welfare recipients was not captured within the results.
- Lower response rate from Cedar Park possibly due to:
  - One data collection method used which limited some parents from participating
  - Lack of internet/not checking emails regularly
  - Language barriers

Key Findings

Response Rates:
- Parkview’s response rate was 143 out of 500 = 29%
- Cedar Park’s response rate was 37 out of 227 = 16%
- Results showed a substantial interest in future services from both schools with 75% interest, despite that more than half of the participants had never accessed mental health services for their children in the past.
- Parents’ perceived barriers to accessing services:
  - Employment-unable to take off work
  - Unsure what services to access
  - Lack of appointments
  - High cost of co-pay/deductible
- School involvement in mental health support:
  - Parkview results showed 73% of the participants either agreed or strongly agreed with schools being involved in mental health support
  - 60% of the Cedar Park respondents either agreed or strongly agreed

Figure 3. Specific services parents indicated an interested for.

- Interested Services
  - Parent Education
  - Group Work at child’s school
  - Diagnostic Assessments
  - Education on behaviors/concerns
  - Family Therapy at clinic
  - Family Therapy in-home
  - Individual Therapy at school
  - Individual Therapy at clinic

Recommendations

- That ISD 196 utilize the survey tool with other schools within the district to collect individual data.
- To train referring district staff on the SLMHS grant.
- To engage participants, each school should invite parents to meetings which include a FACTS staff member to ensure that parents fully understand the intention of the grant, services offered, financial details, availability, and individual school policies.
- Provide parent education evenings at each school throughout the year.

Acknowledgements

Agency: Independent School District 196
Field Instructors:
Renea Bethke, MSW, LICSW, Parkview Elementary
Diane Johnson, BSW, Cedar Park Elementary
Academic Advisor: David Beimers, PhD, LISW

A special thanks to ISD 196 and Field Instructors Renea and Diane for the continued support and guidance throughout the completion of this needs assessment.
