

PLACEBO NOCEBO

Charles Francis Duda

Tragedy, terrorism, chemical warfare, bombs. These are all pressing issues today. However, if one wants to look at killers that dwarf any terror attack, than look no further than your kitchen table. Diseases, such as obesity, diabetes, and hypertension are true terrors because they are silent killers.

Placebo Nocebo is an investigation of lifestyle, culture, personal choices and the positive or negative potential they have in the context of their environment.

Warning:

This exhibition contains common, commercial, mundane, and everyday objects. Subject matter is suitable for all viewers
